VOLUME 1

INTRODUCTORY INFORMATION

000107	Seals Page	Sept. 1, 2017	
000110	Table of Contents	Sept. 1, 2017	<i>March 23, 2018</i>

DIVISION 00 - BIDDING REQUIREMENTS AND CONTRACT FORMS

003132	Geotechnical Data	Sept. 1, 2017	
	Geotechnical Report		
	Geotechnical Report Addendum		
007000	Uniform General and Supplementary Conditions	2010	
007400	Architect's Special Conditions	Sept. 1, 2017	
008900	Finish Selection Summary	Sept. 1, 2017	<i>March 23, 2018</i>

DIVISION 01 - GENERAL REQUIREMENTS

011000	Summary	Sept. 1, 2017	
012100	Allowances	Sept. 1, 2017	<i>March 23, 2018</i>
012200	Unit Prices	Sept. 1, 2017	
022300	Alternates	Sept. 1, 2017	<i>March 23, 2018</i>
012500	Substitution Procedures	Sept. 1, 2017	
012500.13	Substitution Request Form	Sept. 1, 2017	
012600	Contract Modification Procedures	Sept. 1, 2017	
012900	Payment Procedures	Sept. 1, 2017	
013100	Project Management and Coordination	Sept. 1, 2017	
013200	Construction Progress Documentation	Sept. 1, 2017	
013233	Photographic Documentation	Sept. 1, 2017	
013300	Submittal Procedures	Sept. 1, 2017	
014000	Quality Requirements	Sept. 1, 2017	
014200	References	Sept. 1, 2017	
015000	Temporary Facilities and Controls	Sept. 1, 2017	
015300	Mold Prevention Measures	Sept. 1, 2017	
015534	Tree and Plant Protection, Removal, and Pruning	Sept. 1, 2017	
016000	Product Requirements	Sept. 1, 2017	
017300	Execution	Sept. 1, 2017	
017700	Closeout Procedures	Sept. 1, 2017	
017823	Operation and Maintenance Data	Sept. 1, 2017	
017839	Project Record Documents	Sept. 1, 2017	
017900	Demonstration and Training	Sept. 1, 2017	

DIVISION 03 - CONCRETE

030540	Concrete Pigments (Integral Color) (Deleted)	Sept. 1, 2017	<i>March 23, 2018</i>
033000	Cast-in-Place Concrete	Sept. 1, 2017	
033300	Architectural Concrete (Deleted)	Sept. 1, 2017	<i>March 23, 2018</i>
033500	Concrete Floor Finishing	Sept. 1, 2017	
033536	Clear Concrete Sealer	Sept. 1, 2017	

DIVISION 04 - MASONRY

042000	Unit Masonry	Sept. 1, 2017	
047200	Cast Stone Masonry	Sept. 1, 2017	

DIVISION 05 - METALS

051200	Structural Steel	Sept. 1, 2017	
--------	------------------------	---------------	--

SECTION NUMBER	SECTION NAME	ORIGINAL ISSUE DATE	LATEST REV. DATE
051213	Architecturally Exposed Structural Steel Framing <i>(Deleted)</i>	Sept. 1, 2017	March 23, 2018
053100	Steel Deck	Sept. 1, 2017	
054000	Cold-Formed Metal Framing	Sept. 1, 2017	
055000	Metal Fabrications	Sept. 1, 2017	
055100	Metal Stairs	Sept. 1, 2017	
055213	Pipe and Tube Railings	Sept. 1, 2017	
057300	Decorative Railings	Sept. 1, 2017	March 23, 2018
057353	Smoke Barrier Curtain	March 23, 2018	
DIVISION 06 - WOOD AND PLASTICS			
061013	Miscellaneous Rough Carpentry	Sept. 1, 2017	
061600	Sheathing	Sept. 1, 2017	March 23, 2018
062023	Interior Finish Carpentry	Sept. 1, 2017	
064100	Custom Casework	Sept. 1, 2017	
068213	Glass Fiber Reinforced Plastic Paneling	Sept. 1, 2017	
DIVISION 07 - THERMAL AND MOISTURE PROTECTION			
071417	Fluid-Applied Waterproofing System	Sept. 1, 2017	
071616	Crystalline Waterproofing	Sept. 1, 2017	
071823	Floor Waterproofing	Sept. 1, 2017	
072100	Thermal Building Insulation	Sept. 1, 2017	
072423	Direct-Applied Finish System	March 23, 2018	
072616	Below-Grade Vapor Retarders	Sept. 1, 2017	
072726	Fluid-Applied Membrane Air Barriers <i>(Deleted)</i>	Sept. 1, 2017	March 23, 2018
073213	Clay Roof Tiles	Sept. 1, 2017	
074213	Metal Wall Panels	Sept. 1, 2017	March 23, 2018
074229	Terra Cotta Rainscreen Cladding <i>(Deleted)</i>	Sept. 1, 2017	March 23, 2018
074244	Composite Aluminum Wall Panels	Sept. 1, 2017	
075216	SBS Modified Bituminous Membrane Roofing <i>(Deleted)</i>	Sept. 1, 2017	March 23, 2018
075400	Thermoplastic Membrane Roofing	March 23, 2018	
076200	Sheet Metal Flashing and Trim	Sept. 1, 2017	
077100	Manufactured Roof Specialties	Sept. 1, 2017	
077200	Roof Accessories	Sept. 1, 2017	
078100	Applied Fireproofing	Sept. 1, 2017	
078123	Intumescent Fireproofing <i>(Deleted)</i>	Sept. 1, 2017	March 23, 2018
078400	Firestopping	Sept. 1, 2017	
078443	Joint Firestopping	Sept. 1, 2017	
079200	Joint Sealants	Sept. 1, 2017	
DIVISION 08 - DOORS AND WINDOWS			
081113	Hollow Metal Doors and Frames	Sept. 1, 2017	
081216	Interior Aluminum Frames	Sept. 1, 2017	
081416	Flush Wood Doors	Sept. 1, 2017	
083113	Access Doors and Frames	Sept. 1, 2017	
083483	Elevator Door Smoke Containment Curtain <i>(Deleted)</i>	Sept. 1, 2017	March 23, 2018
083495	Automatic Perimeter Fabric Fire Barrier Enclosure <i>(Deleted)</i>	Sept. 1, 2017	March 23, 2018
084113	Aluminum-Framed Entrances and Storefronts	Sept. 1, 2017	
084126	All-Glass Entrances and Storefronts <i>(Deleted)</i>	Sept. 1, 2017	March 23, 2018
084413	Glazed Aluminum Curtain Walls	Sept. 1, 2017	
084511	Translucent Linear Channel Glazing System	Sept. 1, 2017	
087100	Door Hardware	Sept. 1, 2017	March 23, 2018
087113	Automatic Door Operators	Sept. 1, 2017	March 23, 2018
088000	Glazing	Sept. 1, 2017	
088733	Decorative Glazing Film <i>(Deleted)</i>	Sept. 1, 2017	March 23, 2018
089100	Louvers	Sept. 1, 2017	
DIVISION 09 - FINISHES			
092423	Portland Cement Stucco <i>(Deleted)</i>	Sept. 1, 2017	March 23, 2018
092900	Gypsum Board Assemblies	Sept. 1, 2017	March 23, 2018
093000	Tiling	Sept. 1, 2017	March 23, 2018
095113	Acoustical Panel Ceilings	Sept. 1, 2017	

SECTION NUMBER	SECTION NAME	ORIGINAL ISSUE DATE	LATEST REV. DATE
095133	Acoustical Metal Ceilings	Sept. 1, 2017	
096513	Resilient Base and Accessories	Sept. 1, 2017	
096516	Resilient Sheet Flooring	Sept. 1, 2017	
096519	Resilient Tile Flooring	Sept. 1, 2017	
096566	Rubber Flooring	Sept. 1, 2017	
096623	Resinous Matrix Terrazzo Flooring	Sept. 1, 2017	
096813	Tile Carpeting	Sept. 1, 2017	
097200	Wall Covering	Sept. 1, 2017

END OF TABLE OF CONTENTS

SECTION 007400

ARCHITECT'S SPECIAL CONDITIONS

1.1 SPECIAL CONDITIONS

- A. The following special conditions shall apply to this project.

ARTICLE 1 GENERAL PROVISIONS

1.1.9 MISCELLANEOUS DEFINITIONS

1.1.9.1 The term "Product" as used in these Contract Documents includes materials, systems, and equipment.

1.1.9.2 The term "provide" as used in this Project Manual means to furnish and install.

1.2 CORRELATION AND INTENT OF THE CONTRACT DOCUMENTS

1.2.4 The inter-relation of the Project Manual, the Drawings and the schedules is as follows: The Project Manual determines the quality, nature and setting of the several materials; the Drawings establish the quantities, dimensions and details; and the schedules give the location. **The documents are to be considered as one and whatever is called for by any one shall be as binding as if called for by all.**

1.2.5 Should the drawings disagree in themselves, or with the Project Manual, or if proprietary information disagrees with performance requirements in either the Drawings or the Project Manual, the better quality or greater quantity of the Work or materials shall be estimated upon, and unless otherwise ordered by the Architect in writing, shall be performed or furnished. Should discrepancies or doubt occur, do not proceed with the Work without clarification from the Architect. Contractor shall request clarification in sufficient time to avoid delays and increases in the contract sum.

ARTICLE 3 CONTRACTOR

3.2 REVIEW OF CONTRACT DOCUMENTS AND FIELD CONDITIONS BY CONTRACTOR

3.2.2.1 If a dimensional discrepancy exists, Contractor shall take field measurements required for proper fabrication and installation of work. Upon commencement of any item of work, Contractor shall be responsible for dimensions related to such item of Work and shall make any corrections necessary to make work properly fit at no additional cost to Owner.

3.2.2.2 Before ordering any material or doing any work, Contractor shall verify dimensions and check conditions in order to assure himself that they properly reflect those on the Drawings. Any inconsistency shall be brought to attention of the Architect. In the event that discrepancies occur between ordered material and actual conditions, of which Architect was not notified beforehand, costs to correct such discrepancies shall be borne by Contractor.

3.4 LABOR AND MATERIALS

3.4.4 After the Contractor's Contract and a Notice to Proceed have been executed, the Owner and the Architect will consider a formal request for the substitution of products in place of those specified only in the event that the originally specified product becomes unavailable from the manufacturer due to unforeseen hardship (verification of which shall be determined by the Architect) or acts of God. Note: Contractor not ordering long lead items in time for properly sequenced installation per the schedule is not an acceptable reason for requesting a substitution

and will be denied in such situations. Contractor shall order the originally specified product, paying required expediting fees, and cover all costs required for a recovery schedule. Refer to Section 016000, Product Requirements for supplemental information.

ARTICLE 6 CONSTRUCTION BY OWNER OR BY SEPARATE CONTRACTORS

6.1.5 Coordinated construction work under this Contract includes, but is not to be limited to, providing concealed blocking as noted for attachment of separate contract items in locations necessary for the actual items to be installed. Providing proper dimensional coordination of separate contract supplied items for general construction work and trim that is to meet and/or adjoin Furniture, Fixtures, Equipment and Accessories.

6.1.6 It is a requirement of the Contractor's work schedule to provide the cooperation, coordination and exchange of information necessary for a timely execution of separate contract work.

ARTICLE 7 CHANGES IN THE WORK

7.1 GENERAL

7.1.4 Except as provided in this article, no oral statement, or direction of Architect shall be treated as a Change Order or entitle Contractor to an adjustment to the Contract Sum or the Contract Time.

7.1.5 Unit prices shall be inclusive of all costs including mark-up for overhead and profit and shall be applied to units of measure as defined in the Contract Documents for each category of Work.

MOCK-UPS

1. Before installing portions of the Work requiring mock-ups, build mock-ups for each form of construction and finish required, using materials indicated for the completed Work.
2. Build mock-ups in location and of size indicated or, if not indicated, as directed by Architect. The mock-up may be work in place that is intended to remain, unless otherwise directed by the Owner.
3. Notify Architect and Owner five (5) working days in advance of dates and times when mock-ups will be constructed.
4. Demonstrate the proposed range of aesthetic effects and workmanship. Include anticipated repairs in mock-up, such as stone veneer.
5. Obtain Architect's and Owner's approval of mock-ups before starting work, fabrication, or construction.
6. Maintain mock-ups during construction in an undisturbed condition as a standard for judging the completed Work.
7. Demolish and remove mock-ups when directed, unless otherwise indicated.
8. For any of the following work items included in the project, a mock-up shall be prepared whether required by the technical section or not:
 - a. Exterior Wall: 10 ft high by 8 ft wide to include: substructure, air barrier, flashing, weeps, ties, sheathing, masonry, cast stone, sealants, terra-cotta, plaster, soffits, edge trim, architectural concrete, metal coping, and a 2 ft square curtainwall window with the specified vision and fritted glass panels.
 - b. Roof:
 1. Clay roof tiles.
 2. Modified bitumen.
 - c. Interior wall finishes: 8 ft wide by 8 ft high.
 - d. Ceramic tile: 6 ft wide by 6 ft high.
 - e. Finished flooring: 8 ft square.

Weather Delays: Weather delays will only be granted for days that are more than the quantity for a given time period exceeding NOAA data for that given time period.

END OF SECTION

SECTION 008900

FINISH SELECTION SUMMARY

PART 1 - GENERAL

1.1 DESCRIPTION

- A. The following list is a compilation of materials and products that are standards for this Project.
 - 1. It is intended to extend information in the technical specification sections by giving specific texture, finish, manufacturer, and model number of finish products, and to link the Specifications with the Drawings.
- B. Where other manufacturers are listed herein or in other sections of the Project Manual/Specifications as acceptable, products of these may be submitted **for evaluation by the Architect. However, determination by the Architect regarding equivalency will be made on a product-by-product basis and the listing of a manufacturer as acceptable may not necessarily imply that the particular product submitted will be accepted as an equivalent.** Refer to section 012500 Substitutions for additional information.

PART 2 - SUMMARY OF FINISHES

DIVISION 03 - CONCRETE

DIVISION 04 - MASONRY

2.1 04 20 00 Unit Masonry

- A. **Face Brick**
 - 1. **Description:** 8" modular face brick. Provide solid brick and special shapes as required to construct the project.
 - 2. **Acceptable Products:**
 - a. **BR-1 (Option 1):** Brick product by Cloud Ceramics.
 - 1) 40% Driftwood Grey
 - 2) 40% Terra Cotta
 - 3) 10% Cimarron
 - 4) 5% Old Rose
 - 5) 5% Cameo
 - b. **BR-2 (Option 2):** Brick product by Acme Brick, Ft. Worth, TX
 - 1) Brick product by Acme Brick, Ft. Worth, TX that matches the campus blend to be determined between the Architect, CMAR and Acme Brick Co.
 - 3. **Joint Type:** Concave, tooled.
 - 4. **Joint Size:** 3/8" maximum. No exceptions!
 - 5. **Bond:** Place units in running bond unless noted otherwise on the drawings.
 - a. Provide accents in soldier, rowlock and stretcher courses where indicated on drawings.
 - 6. Provide samples and mock-up
- B. **Mortar Color:** To be selected by Architect from any manufacturers' full and complete color lines. Provide four mortar colors on mock-up as directed by Architect for selection. Upon final selection, rake unapproved mortar colors from mock-up and replace with approved color for Architect's final approval. Generally, the intent is to match the campus standard mortar color.

2.2 04 72 00 Cast Stone Masonry

- A. **Cast Stone Plinths, Belt Courses, Banding, Sills, Headers, Coping and Miscellaneous Trim Pieces** as indicated on the drawings.
- B. **Color and Texture:** Custom color to match Architect's sample.
- C. **Samples and Mock-up:** Submit partial and/or full sized samples of each shape and size in the approved color for Architect's approval. Install approved color pieces on mock-up for Architect's approval prior to fabricating pieces to be installed on the project.
- D. **Mortar Color:** To be selected by Architect from any manufacturers' full and complete color lines. Provide four mortar colors on mock-up as directed by Architect for selection. Upon final selection, rake unapproved mortar colors from mock-up and replace with approved color for Architect's final approval. Generally, the intent is to match the campus standard mortar color.

DIVISION 05 – METALS

2.3 05 50 00 Metal Fabrications

- A. Refer to Sections 05 50 00, 09 91 00 and 09 97 13.
- B. **Finish:** Paint. Refer to individual spec sections, section 055000 schedule, finish plans and other drawings for type of painted finish.
- C. **Color:** to be selected by Architect.

2.4 05 51 00 Metal Stairs

- A. Refer to Sections 05 51 00 and 09 97 13.
- B. **Finish:** Epoxy paint, ref. 09 97 13
- C. **Color:** to be selected by Architect.
- D. **Offset:** Offset top riser one tread width to allow continuous curved handrail and guardrail at inside switchbacks.

2.5 05 51 33 Metal Ladders:

- A. Refer to Sections 05 51 33 and 09 97 13.
- B. **Finish:** Epoxy paint, ref. 09 97 13
- C. **Color:** to be selected by Architect.

2.6 05 52 13 Pipe and Tube Railings

- A. Refer to Sections 05 52 13 and 09 97 13.
- B. **Finish:** Epoxy paint, ref. 09 97 13
- C. **Colors:** to be selected by Architect. Note: all pipe and tube railings shall be two color paint combination. Confirm final colors and locations of each color with Architect.

2.7 05 73 00 Decorative Railings

- A. **Exterior Handrails and Guardrails at Entrance Steps and other locations as indicated on drawings:**
 - 1. **Design:** refer to drawings for type and locations.
 - a. **Handrails at Building Entrances:** Stainless steel 1 ½" diameter handrails meeting required codes at all entrances.
 - b. **Guardrails at Grade Changes or Entrances:** Stainless steel 1 ½" diameter guardrails and handrails with intermediate members as required to meet required codes and 4" sphere limitation. If intermediate members are not indicated on drawings, submit request to Architect for clarification.
 - 2. **Finish:** Brushed stainless steel, # 4 finish.
- B. **Interior Grand Stair & Elevated Balcony Railings:**
 - 1. **Basis of Design:** Viva Modular Railing Systems, 1454 Halsey Way, Carrollton, TX 75007, Ph. 972.353.8482. "Blade - Cable Rail" stainless steel combination Guardrail/Handrail System with 3/16" diameter stainless steel horizontal tension

cable infill at 3 1/4" on center. Substitutions will be considered by the Architect on a case by case basis.

- a. **Materials:** Type 304 or 316 (as recommended by manufacturer) 1-1/2-inch stainless steel guardrail and handrails.
- b. **Mounting at Base:**
 - 1) **First Floor Grand Stair and Second Floor Balcony Railing at East Atrium 100** - Install with four 1" diameter brushed stainless steel standoffs attached to side of stringer or concrete slab edge using 6"W x 8"H x 1/4" thick stainless steel plates welded to verticals.
 - 2) **All other locations U.N.O.** – *Employ railing manufacturer's standard fascia mount details for mounting vertical posts to concrete structure. Insure embed plates or mounting studs, cast into the concrete, do not interfere with the structural reinforcing in the concrete. (Addendum #10)*
- c. **Verticals:** Two 2" wide vertical stainless steel bars with cube cap top and side mount base as described in item b. at bottom. Locate posts no further than 4' on center at equal distances.
- d. **Infill panels:** 1 x 19 type weave, 3/16" stainless steel horizontal rope cables in SS316 alloy at 3 1/4" on center. Provide tensioners at ends and other locations as required to maintain a tight horizontal look with no cable deflection between verticals.
- e. **Finish:** # 4 brushed stainless steel.
- f. **Power:** N/A.
- g. **Lighting:** N/A.
- h. **Below Staircase Base (Cane) Railing:** N/A.
- i. **Height:** 42" to top of guardrail. Refer to drawings and TAS requirements for handrail heights.

2.8 Smoke Barrier Curtain

A. Draft Curtain at Main Stair 3STRW4:

- 1. *Basis of Design: Viva Modular Railing Systems, 1454 Halsey Way, Carrollton, TX 75007, Ph. 972.353.8482. "Smoke Baffle System (SBS)", 18" tall exposed height x 1/2" tempered glass w/SBS-2, concealed clamp mounting. (Addendum #10)*

DIVISION 06 - WOOD, PLASTICS, AND COMPOSITES

2.9 06 20 23 Interior Finish Carpentry: Refer to "INTERIOR FINISH SPREADSHEET (Addendum #10)."

A. Stain Grade Wood Millwork and Trim:

- 1. **Species:** Select American Cherry AWI Premium Grade A wood to match Architect's sample.
- 2. **Cut & Grain:**
 - a. **Select American Cherry:**
 - 1) 80% sap free on finish side of wood
- 3. **Finish:** Shop (paint booth) applied oil based stain with catalyzed lacquer finish; level 80 sheen to match Architect's sample. Refer 09 91 00 and Architect's Finish Selection Summary Spreadsheet. *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*
 - a. Project requires the highest quality millwork finish available with finish applied at a millwork shop in a paint booth, not field applied.
 - b. **Approved hardwood suppliers:**
 - 1) The Wood Gallery – 10724 Goodnight Ln., Dallas 75220, ph. 972.869.9161
 - 2) Dakota Hardwoods – 641 W. Mockingbird Ln., Dallas, TX 75247, ph. 972.677.7437, contact: Scott Brant
 - 3) Substitutions – to be approved by Architect.

- c. **Approved finishers:**
 - 1) Submit qualifications and samples of work from proposed finishing sub for Architect approval.
 - 4. **WP-4: 4" Stain Grade Wood Chairrail – TWC # CH066.** *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*
- B. **Paint-Grade Millwork and Trim:**
 - 1. **Species:** Poplar above 8' AFF; Maple below 8' AFF.
 - 2. **Finish:** Oil based enamel sprayed-on finish including final touchup (no brush marks; no exceptions!). Refer 09 91 00.
 - 3. **Color & Sheen:** Refer to Architect's Finish Selection Summary Spreadsheet. *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*
- C. **Stain Grade Wood Micro-Perforated Acoustical and Non-Perforated Wood Paneling (for use on East Atrium/Lobby 100 walls):** *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*
 - 1. **Basis of Design:** Architectural Components Group, Inc. Marshfield, MO, Ph. 417.869.6777. Local Rep., Blake Peterson of Designed Performance Associates, Richardson, TX, Ph. 972.381.9100.
 - 2. Other manufacturers' products of equal quality will be considered by the Architect. Submit substitution request.
 - 3. **Acceptable Product:** SS1-1215-C Quarter Sawn Cherry. Matching wood panels to match Architect's sample with and without micro-perforations/acoustical backing at locations indicated on drawings.
 - 4. **Species & Finish:** Quarter Sawn Select American Cherry stained and with clear satin sheen to match Architect's sample; turn grain vertically.
 - 5. **Perforation Pattern:** Offset pattern to be selected by Architect from manufacturer's full and complete product lines and patterns.
 - 6. **Perforation:** .05 mm holes spaces 1.9 mm on center offset.
 - 7. **Overall Perforated Acoustical Panel Thickness:** 2 inches
 - a. Thickness of Wood Panel: 3/4 inches
 - b. Thickness of Acoustical Backing: 1 1/2 inches
 - 8. Provide light gage metal framing, blocking and shims as required to install panels and align face of acoustical panels with non-acoustical panels
 - 9. **AWI Quality Level Required:** Premium Grade
 - 10. **Panel Sizes:** Refer to drawings.
 - 11. **Acoustical Backing:** Factory attach to back of panels.
 - 12. **Fire Rating:** Class 1(A)
 - 13. **FSC Certification Requirement:** none required.
 - 14. **Construction:** No urea formaldehyde allowed in the construction of panels.
 - 15. **Attachment:** Standard Z clips.
- D. **Wood Paneling and Flooring at Learning Stair**
 - 1. **Species:** American Cherry to match Architect's sample.
 - 2. **Grade:** AWI premium grade.
 - 3. **Risers:** Veneered 3/4" plywood.
 - 4. **Treads:** Matching 25/32" random length tongue and groove wood flooring.
 - 5. **Finish:** Match Architect's sample. Provide appropriate clear coat finish and thickness for heavy foot traffic. *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

2.10 06 41 00 Custom Casework: *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

- A. **Stain Grade Wood Casework:** meet same requirements including shop (paint booth) finishing (not field applied) as stipulated in 06 20 23 Interior Finish Carpentry.
- B. **Plastic Laminate:**
 - 1. **Laminate:** Refer to Section 06 41 00.
 - 2. **Products:** *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

3. **Sheen:** to be selected by the Architect from the full line of sheens available from any of the manufacturers listed in this section. Refer to Architect's Finish Selection Summary Spreadsheet. *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*
 4. **Quality:** AWI Custom Grade.
- 2.11 06 61 16 Solid Polymer Fabrications:** *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*
- A. **Material Only Allowance:** \$35/SF
 - B. **Thickness:** 3 CM
- 2.12 06 82 13 Glass Fiber Reinforced Plastic Paneling:** *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*
- A. **Basis of Design:** Marlite
 - B. **Fire Rating:** Fire rated paneling and trim meeting Class I/A and Low Flame/Low Smoke (LF&S) requirements of ASTM E84.
 - C. **Color:** Bright white # P 199
 - D. **Surface:** Pebbled
 - E. **Trim:** Match color and type for specified paneling.
 - F. Refer Section 06 82 13 and Architect's Finish Selection Summary Spreadsheet.

DIVISION 07 - THERMAL AND MOISTURE PROTECTION

- 2.1 07 18 23 Floor Waterproofing**
- A. Refer to Section 07 18 23 and drawings.
 - B. **FW-P:** Provide and install at penthouse floor and dropped mechanical room floors at northeast quadrant of building.
 1. **Color:** to be selected by Architect from manufacturer's full and complete lines of colors. *Refer to INTERIOR FINISHES SPREADSHEET (Addendum #10).*
- 2.2 072423 – Direct Applied Finish System**
- A. *Refer to 07 24 23 and drawings.*
 - B. *Provide and install at exterior exposed soffits of colonnades and other locations as indicated on drawings.*
 - C. *Finish: Ultra-smooth.*
 - D. *Color: White as approved by Architect.*
- 2.3 07 32 13 Clay Roof Tiles**
- A. Refer to Section 07 32 13 and drawings.
 - B. **Basis of Design:** Ludowici Spanish Clay Tiles, New Lexington, OH, ph. 800.945.8453, local contact, Peter Heinz, Tola Architectural Sales, Ph 214.770.0895.
 1. **Acceptable Product:** Ludowici 13 ¼" Full Cornered Spanish-S high profile tile with single barrel design which provides a distinctive ripple pattern across the roof.
 2. **Nominal Size:** 9.75 inches wide x 13.25 inches long. Average exposure 8.25 inches center to center by 10.25 inches long.
 3. **Colors:** custom weathered reddish clay mixture with smooth textured finish to **match Spanish tile roof on the existing Hardin Administration Building.** The intent is to match the existing weathered appearance of the Hardin Building clay tile roof with new tile utilizing antiquing treatments on the new Health Science Center.
 4. **Fire Rating:** Class A with Ludowici Pro 70 underlayment over min. 40 mil WR Grace Ice and Water Shield HT.
 5. **Accessory Tile Pieces:** as recommended by manufacturer including full corner eave tile, eave closure tile, top fixture tile, end band tile, detached gable rake tile, circular cover hip tiles, circular cover ridge tile and circular cover ridge end tiles.

6. **Mockup:**
 - a. **Initial:** 100 SF of tiles laid on the ground for initial selection and positioning
 - b. **Final:** 100 SF of tiles on an elevated sloped roof mockup with the specified substrate, underlayment and final trim pieces for Architect's final approval.

2.4 07 42 13 Metal Wall Panels (*Previous Prefinished Uninsulated Metal Panels is deleted.*)

- A. *Refer to Section 07 42 13 and drawings.*
- B. *Basis of Design for Prefinished Perforated Screenwall for Rooftop AHU's. Confirm final panel layout with Architect prior to ordering and preparing shop drawings.*
 1. *MP – 1: Centria Ecoscreen Ecolap ¾" Perforated Wall Panel.*
- C. *Finish: To be selected by Architect from one of the following:*
 1. *High performance organic two coat 70% fluoropolymer painted finish.*
 2. *Class I Clear Anodized aluminum finish.*
- D. *Color: To be selected by Architect from manufacturer's full and complete lines of colors including metallic and mica colors. (Addendum #9)*

2.5 07 42 29 Terra Cotta Rainscreen Cladding: *This section is deleted. (Addendum #10)*

2.6 07 42 44 Composite (Aluminum) Wall Panels: *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

- A. *Refer to Section 07 42 44 and drawings.*
- B. **Basis of Design:** Rainscreen Rout and Return Dry-Seal System for installation at exterior of curved east atrium walls (exterior application) and at elevator shaft enclosure in the Atrium (interior application).
 1. **MP-5 (for exterior applications):** Alpolic/HD/fr (heavy duty/fire retardant) as required by code.
 - a. **Aluminum Skin Thickness:** .032"
 - b. **Core:** type FR (fire resistive)
 2. **MP-6 (for interior applications):** Alpolic/fr/PE (fire retardant) as required by code.
 - a. **Aluminum Skin Thickness:** .020"
 - b. **Core:** type PE (polyethylene)
- C. **Colors:** To be selected by Architect from manufacturer's full and complete lines of colors including metallic and mica colors. Generally, the Architect's design intent is to select a white color on the exterior and a silver metallic color for the interior locations.
- D. **Joint and Reveal Size:** 5/8" wide x 1" deep reveals fabricated in color to match panels. Final reveal size to be confirmed between Architect and selected fabricator.
Panel Finish: High performance organic two coat 70% fluoropolymer painted finish at exterior white panels and metallic silver finish at interior locations.

2.7 07 52 16 Modified Bituminous Membrane Roofing: *This section is deleted. (Addendum #10).*

2.8 07 54 00 Thermoplastic Membrane Roofing:

- A. *Refer to Section 07 54 00 and drawings.*
- B. *Color: White.*

2.9 07 62 00 Sheet Metal Flashing and Trim

- A. *Refer to Section 07 62 00.*
- B. **Basis of Design:** Peterson Pac-Clad
- C. **Finishes:**
 1. **At Clay Tile Roof:** Copper.
 2. **All other Locations:** High performance organic two coat 70% fluoropolymer painted finish.
- D. **Colors:**

1. **At locations exposed to view:** To be selected by Architect from manufacturer's full and complete lines of all available finishes including upgraded metallic and mica finishes. Generally, Architect anticipates the colors to match the adjacent materials.
2. **At locations not exposed to view:** Silver or white to match adjacent materials.

2.10 07 71 00 Manufactured Roof Specialties

- A. Refer to Section 07 71 00.
- B. **Basis of Design:**
 1. **Prefinished Metal Copings:** Pac-Tite tapered coping by Pac-Clad/Peterson
 - a. **Finish:** High performance organic two coat 70% fluoropolymer painted finish.
 2. **Gutters, Collection Boxes, Downspouts and Flashing Associated with Clay Tile Roof:**
 - a. **Finish:** Copper

2.11 07 81 23 Intumescent Fireproofing: *This section is deleted. (Addendum #10)*

2.12 07 92 00 Joint Sealants

- A. **Finishes:**
 1. **Joints in counter tops and between counter tops and adjacent materials:** Custom color to match countertop material. Verify color with Architect prior to ordering sealant material.
 2. **Joints in masonry:** Custom color to match adjacent brick, terra cotta or cast stone. Verify final color with Architect on mock-up.
 3. **Joints between aluminum door and window frames and adjacent materials:** Custom color to match color of aluminum frame.
 4. **Other joint sealant colors:** Match color of adjacent materials with custom color sealant as required. Verify colors with Architect prior to installation.
- B. **Samples:** Submit actual samples to Architect for approval prior to installation.

2.13 07 95 00 Expansion Control (Not Used)

DIVISION 08 – DOORS AND WINDOWS

2.14 08 11 13 Hollow Metal Doors and Frames

- A. Refer Sections 08 11 13 and 09 91 00.
- B. **Finish:**
 1. Galvanized G90 primer.
 2. **Oil based enamel paint.** Spray-paint only, including touch-up paint (do not brush; no exceptions!).
- C. **Color:** Refer to Architect's Finish Selection Summary Spreadsheet.

2.15 08 12 16 Interior Aluminum Frames (for interior locations other than those at the atrium)

- A. **Finish:**
 1. Clear anodized, Class II aluminum finish
 2. Note: Refer to Section 08 41 13 for finish on storefront at entry vestibules of Lobbies.

2.16 08 14 16 Flush Wood Doors

- A. **Species:** Select American Cherry to match Architect's sample.
- B. **Finish:** Stain to match Architect's sample.
- C. **Cut:** Plain sliced to match Architect's sample
- D. **Grade:** AWI Premium Grade.

2.17 08 31 13 Access Doors and Frames

- A. Refer Sections 08 31 13 and 09 91 00.
- B. **At Restroom and exterior walls:** Polished stainless steel.
- C. **All other locations:**
 - 1. **Factory finish:** Prime painted with field applied painted finish.
 - 2. **Field finish:** Spray-painted with oil-based enamel to match adjacent wall or ceiling.

2.18 08 34 80 Automatic Overhead Coiling Fabric Smoke Curtains: *This section is deleted. (Addendum #10)*

2.19 08 41 13 Aluminum-Framed Entrances and Storefronts (for covered entrances, exterior doors and ALL interior glazed frames in the atrium)

- A. **Frame Finish:** Clear anodized, Class I aluminum finish
- B. **Finish for exposed hardware:** # 4 brushed stainless steel or polished chrome (verify with Architect prior to ordering).

2.20 08 41 26 All-Glass Entrances and Storefronts: *This section is deleted (Addendum #10)*

2.21 08 44 13 Glazed Aluminum Curtain Walls

- A. **Frame Finish:** Clear anodized, Class I aluminum

2.22 08 45 11 Translucent Linear Channel Glazing System

- A. **GL-7: Basis of Design:** Pilkington Profilit K25/60/7 Dual Channel Glazing System for exterior applications. Supplied by Technical Glass Products, Snoqualmie, WA, Ph. 800.426.0279.
 - 1. **Face Width:** K25 - 10.31"
 - 2. **Flange Height:** 2.36"
 - 3. **Glass Thickness:** .28"
 - 4. **Color Coating:** Amethyst (slight blue transparent)
 - 5. **Surface Texture:** Clear translucent (submit samples for final selection)
 - 6. **Coating:** Low-E
 - 7. **Insulation:** 16 mm Lumira aerogel insulation
 - 8. **U-Value:** .19
 - 9. **Light Transmission:** 70%-75%
 - 10. **Solar Heat Gain Coefficient:** .31
 - 11. **STC Rating Required:** STC 44
 - 12. **Frame:** Thermally broken aluminum perimeter frame
 - 13. **Glazing Type:** Tempered,
 - 14. **Connections:** Concealed type

2.23 08 71 00 Door Hardware

- A. Refer Section 08 71 00
- B. **Finish:**
 - 1. **Exterior Hardware:** To be selected by Architect from one of the following:
 - a. # 4 brushed stainless steel
 - b. Clear anodized, Class I or thicker
 - c. Satin nickel.
 - 2. **Interior Hardware:** To be selected by Architect from one of the following:
 - a. # 4 brushed stainless steel
 - b. Clear anodized, Class I or thicker

2.24 08 71 13 Automatic Door Operators

- A. **Finish:** Door operator cover finish to match Aluminum Entrances and Storefront frame finish.

2.25 08 80 00 Glazing

- A. Refer Section 08 80 00 and drawings.
- B. **Exterior Glazing & Building Entrances Basis of Design – 1" Insulated Panels: Vitro PPG Solarban 90 XL.**
 - 1. **GL-1 (Exterior Insulated Vision Panels):**
 - a. **Exterior Lite:** ¼ inch thick Solarban 90XL
 - b. **Interior Lite:** ¼ inch thick clear
 - c. **Glass Tint:** To be selected by Architect from manufacturer's full and complete line of tinted glass products.
 - d. **Air Space:** 1/2 inch
 - e. **Coating:** Low-E on second surface.
 - f. **SHGC:** 0.23
 - g. **VLT:** 51%
 - h. **Exterior Reflectance:** 12%
 - i. **U-Value (winter):** 0.29
 - 2. **GL-2 (Exterior Insulated Vision Panels with Ceramic Frit or Etched Pattern):**
 - a. **Exterior Lite:** ¼ inch thick Solarban 90XL.
 - b. **Interior Lite:** ¼ inch thick clear.
 - c. **Glass Tint:** To be selected by Architect from manufacturer's full and complete line of glass products.
 - d. **Ceramic Frit or Etched Pattern:** Ceramic "Line" frit or etched pattern finish on surface number to be selected by the Architect. Confirm dimensions, pattern and color of ceramic frit or etching with Architect prior to fabrication.
 - e. **Air Space:** 1/2 inch
 - f. **Coating:** Low-E on second surface.
 - g. **SHGC:** 0.23
 - h. **VLT:** 51%
 - i. **Exterior Reflectance:** 12%
 - j. **U-Value (winter):** 0.29
 - 3. **GL-3 (Exterior Insulated Spandrel Panels):**
 - a. **Exterior Lite:** ¼ inch thick Solarban 90XL.
 - b. **Interior Lite:** ¼ inch thick clear.
 - c. **Glass Tint:** To be selected by Architect from manufacturer's full and complete line of glass products
 - d. **Ceramic Frit or Etched Pattern:** Ceramic "Line" frit or etched pattern finish on surface number to be selected by the Architect. Confirm dimensions, pattern and color of ceramic frit or etching with Architect prior to fabrication.
 - e. **Air Space:** 1/2 inch
 - f. **Coating:** Low-E on second surface.
 - g. **SHGC:** 0.23
 - h. **VLT:** 51%
 - i. **Exterior Reflectance:** 12%
 - j. **U-Value (winter):** 0.29
 - 4. **Note:** Provide tempered glazing only where required by code and heat strengthened glazing in all other locations. Do not use tempered glass at restroom glazing where drywall inside is painted black or where spandrel frit is a dark color.
 - 5. **Performance Characteristics:**
 - a. **Visible Light Transmittance:** 51 percent
 - b. **Outside Light Reflectance:** 12 percent
 - c. **Winter Nighttime U-Value:** 0.29
 - d. **Summer Daytime U-Value:** Manufacturers standard
 - e. **Shading Coefficient:** 0.27
 - f. **Solar Heat Gain Coefficient:** 0.23
- C. **Interior Glazing Units:**
 - 1. **GL-4 (Interior 1" Insulated Acoustical Panels):**

- a. **Exterior Lite (atrium side):** 1/4 inch thick clear tempered glass.
- b. **Interior Lite (instruction side):** 1/4 inch thick clear laminated safety glass.
- c. **Air Space:** 1/2 inch
- 2. **GL-5 (Interior Spandrel Glass Panels):**
 - a. **Glass Lite:** 1/4 inch thick clear tempered glass. Provide **high iron content glass** with a slight greenish cast.
 - b. **Ceramic Frit or Etched finish:**
 - 1) Apply to second surface.
 - 2) **Color:** To be selected by Architect from manufacturer's full and complete line of colors. General intent is to provide a white ceramic frit or etching which, when combined with the heavy iron content glass, will result in a greenish-white colored glass.
- 3. **GL-6 (Decorative Laminated Safety Glass for use at base of open elevator shaft in Atrium).** *This glazing is deleted (Addendum #10)*
- 4. **GL-8 (Leaded Glass):** 1/16" lead shielded glass for Radiology Rooms 231, 232, 233, 234, and 235.

2.26 08 87 33 Decorative Glazing Film: *This section is deleted (Addendum #10).*

2.27 08 91 00 Louvers

- A. **Finish:**
 - 1. High performance organic two coat 70% fluoropolymer painted finish.
 - 2. Custom color to be selected by Architect. Architect's general intent is to match the adjacent materials louvers are installed in.

DIVISION 09 - FINISHES

2.28 09 29 00 Gypsum Board

- A. Refer to Section 09 29 00, drawings and Architect's Finish Selection Summary Spreadsheet.
- B. **Wall Texture:**
 - 1. Light orange peel. Submit samples for Architect review.
 - 2. *Locations receiving W.WS Writable Surface Paint are to have a minimum level 4 finish texture. (Addendum #10).*
- C. **X-ray Room Lead Shielding:** Per the Owner's Physicist Report, provide 1/16" thick lead lined Gypsum Wall Board to 7' AFF on all walls in each of the five energized X-ray Rooms in Radiological Sciences on the second floor. Where there is a demising wall between two X-ray rooms, lead lined GWB only needs to be applied to one side of the demising wall.

2.29 09 30 00 Tiling

- A. **Tile Products:** *Refer to INTERIOR FINISHES SPREADSHEET (Addendum #10) for specific tile selections.*
 - 1. **CT-1:** \$12/SF material only allowance
 - 2. **CT-2:** \$12/SF material only allowance
 - 3. **CT-3:** \$12/SF material only allowance
 - 4. **CT-4:** \$12/SF material only allowance
 - 5. **CT-5:** \$12/SF material only allowance
 - 6. **CT-6: (Mosaic Wall Tile):** Preliminary selection - Daltile Caprice Series F172 "Crimson Blend" 12 x 12. For GMP Include \$30/SF material only allowance for mosaic wall tile.
 - 7. *B.CT.01: as selected by Architect. Refer to spreadsheet (Addendum #10).*
 - 8. *B.CT.03: as selected by Architect. Refer to spreadsheet (Addendum #10).*
- B. **Grout:**
 - 1. **Floor Tile:** Epoxy grout.
 - 2. **Wall Tile:** Sanded grout.

3. Colors to be selected by Architect from any manufacturer listed in the specifications full and complete lines of products, including designer colors.
- C. **Tile Trim pieces:** as required by Architect to match floor and wall tile.
- D. **Joint Size:** Not to exceed 1/16" wide maximum unless otherwise approved by Architect. Confirm with manufacturer and Architect prior to installation.

2.30 09 51 13 Acoustical Panel Ceilings: Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).

- A. **ACT-1:** Armstrong World Industries; "TechZone" # 3256
 1. **Tile Product:** Optima
 2. **Tile Panel Size:** 48 x 48 x 1 inches and other sizes (refer to drawings)
 3. **Technical Zone Size:** 6 inches wide (refer to drawings)
 4. **Color:** White Diamond.
 5. **Edge:** Square Tegular.
 6. **Grid:** 9/16 inch Interlude XL.
 7. **NRC (Sound Absorption):** 0.95
 8. **AC (Articulation Class):** 190
 9. **CAC (Sound Blocking):** 26
 10. **Light Reflectance:** 90%
 11. **Fire Performance:** Class A (UL)
 12. **Material:** DuraBrite Scrim surface with mineral fiber backing
- B. **ACT-2:** Armstrong World Industries; Dune # 1775.
 1. **Size:** 24 x 24 x 5/8 inches.
 2. **Color:** White Diamond.
 3. **Edge:** Beveled Tegular.
 4. **Grid:** Suprafine 9/16 inches.
 5. **NRC (Sound Absorption):** 0.50
 6. **AC (Articulation Class):** 170
 7. **CAC (Sound Blocking):** 35
 8. **Light Reflectance:** 83%
 9. **Fire Performance:** Class A (UL)
 10. **Material:** Mineral fiber
 11. **Surface Finish:** Factory applied latex paint
- C. **ACT-3:** Armstrong World Industries; Cortega #770 for non-fire rated applications and #824 for fire rated applications.
 1. **Size:** 24 x 24 x 5/8 inches.
 2. **Color:** White Diamond.
 3. **Edge:** Square Lay-In.
 4. **Grid:** Prelude XL 15/16 inch for non-fire rated applications and XL Fire Guard for fire rated applications.
 5. **NRC (Sound Absorption):** 0.55
 6. **AC (Articulation Class):** N/A
 7. **CAC (Sound Blocking):** 35
 8. **Light Reflectance:** 82%
 9. **Fire Performance:** Class A (UL)
 10. **Material:** Mineral fiber
 11. **Surface Finish:** Factory applied latex paint
 12. **Recycled Content:** 43%
- D. **ACT-4 (for use at Grand Stair soffit above the first floor level):** Painted Perforated Metal Panels with 1/8" reveals on all edges.
 1. **Acceptable Manufacturer:** Gordon, Inc., Bossier City, LA, Ph. 800.747.8954
 2. **Acceptable Product:** Aluma Vault 3000E
 3. **Size:** Refer to drawings.

4. **Perforation Pattern:** 1 ½" unperforated borders around the perimeter of each panel with perforations occurring inside of border. Perforation pattern to be selected by Architect from manufacturer's full and complete perforation options.
5. **Method of Attachment:** Torsion Spring
6. **Color:** Custom paint color to be selected by Architect. *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*
7. **Finish:** Factory applied high performance organic two coat 70% fluoropolymer painted finish.
8. **Edge:** 1/8" painted reveals to match panels.

2.31 09 65 13 Resilient Base and Accessories *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

- A. Refer to section 09 65 13 for full specification.
- B. **Resilient Base:**
 1. **RB-1:** 4" Cove base.
- C. **Colors:** To be selected by Architect from any manufacturer listed in this section's full and complete lines of all available finishes including upgraded colors and finishes.

2.32 09 65 16 Resilient Sheet Flooring: *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

- A. **Basis of Design:**
 1. **Approved Product:** Forbo, Marmoleum Real Series. Other manufacturers' products of equal quality will be considered by the Architect.
 2. **Size:** 32M x 200CM;
 3. **Color:**
 - a. **RS-1 (field color):** "Serene Grey" 3146
 - b. **RS-2 (accent color):** "Lava" 3139
 - c. **RS-3 (accent color):** "Fresno Blue" 3055
 - d. **RS-4 (accent color):** "Dove Blue" 3053
 - e. Other colors as selected by Architect from manufacturer's full and complete color and product lines.

2.33 09 65 19 Resilient Tile Flooring: *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

- A. **Luxury Vinyl Tile (LVT):**
 1. **Material only allowance:** \$10/SF
 2. **Products and Colors:** To be selected by Architect.

2.34 09 65 66 Rubber Flooring: *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

- A. **Basis of Design:** Norament Round by Nora Flooring with raised coin shaped profiles on horizontal surfaces and Norament Stair treads for use in the 3 fire stairs on the project.
- B. **Colors:**
 1. **RF-1:** Preliminary selection Norament Round # 0882, "Platinum Gray" or approved equal. Final color to be selected by Architect from manufacturer's full and complete color lines including premium colors.
 2. Other colors as selected by Architect from manufacturer's full and complete color and product lines.
- C. **Size:** 19.72" (501mm) x 19.72" x .13" (3.2mm)

2.35 09 66 23 Resinous Matrix Terrazzo Flooring: *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

- A. **Colors and aggregate:**
 1. **TR-1:** Color and aggregate to match Architect's sample
 2. **TR-2:** Color and aggregate to match Architect's sample

3. **TR-3:** Color and aggregate to match Architect's sample
 4. **TR-4:** Color and aggregate to match Architect's sample
 - a. Other colors and aggregates as selected by Architect from manufacturer's full and complete color and product lines.
 - B. **Pattern/Design:** Refer to drawings. Provide shop drawings for Architect approval.
 - C. **Metal Dividers:** 1/32" 1/16" and 1/8" zinc. Use double back to back 1/32" wide dividers at control joints
 - D. **Flooring:** 3/8" thick poured epoxy.
 - E. **Base, Stair Treads and Risers:** 3/4 inch thick precast units to match floor. Base shall not be less than 10' sections. Refer to drawings for patterning.
 1. Install 3 abrasive strips on leading edge of each tread. Ref 09 66 23.
- 2.36 09 68 13 Tile Carpeting:** *Refer to INTERIOR FINISHES SPREADSHEET (Addendum #10).*
- A. **Carpet Tile applied with Adhesive Discs (do not use adhesive):**
1. **CPT-1:** Shaw Contract Custom Carpet
 - a. **Collection:** "Beyond the Fold"
 - b. **Style:** "Folded Edge Tile" 5T062
 - c. **Custom Sample Number:** X078S-0; request date April 28, 2017
 - d. **Color Reference:** Paprika 00157 and "Sundried Ecru" matching custom sample number above.
 - e. **Colors Listed on Sample:** A:C1644; B:CJ118; C:6180; D:5652D
 - f. **Size:** 18" x 36" plank
 - g. **Weight:** 24 oz.
 - h. **Backing:** Ecoworx
 - i. **Installation Method:** Confirm in field with Architect. It is anticipated that a monolithic pattern will be utilized using mixed plank products specified in this section as well as others from this and related collections.
 2. **CPT-2:** Shaw Contract
 - a. **Collection:** "Beyond the Fold"
 - b. **Style:** "Expand Tile" 5T059
 - c. **Color:** "Ecru"59105
 - d. **Size:** 18" x 36" plank
 - e. **Weight:** 24 oz.
 - f. **Backing:** Ecoworx
 - g. **Installation Method:** Confirm in field with Architect. It is anticipated that a monolithic pattern will be utilized using mixed plank products specified in this section as well as others from this and related collections.
 3. **CPT-3:** *Not Used, Addendum #10)*
 4. **CPT-4:** Shaw Contract Custom Carpet
 - a. **Collection:** "Beyond the Fold"
 - b. **Style:** "Folded Tile" EW18x36
 - c. **Custom Sample Number:** X434Y-0; request date July 28, 2017
 - d. **Color Reference:** *"Sundried Ecru" matching custom sample number above. (Addendum #10)*
 - e. **Colors Listed on Sample:** A:C1644; B:CJ118; C:6180; D:5652D
 - f. **Size:** 18" x 36" plank
 - g. **Weight:** 24 oz.
 - h. **Backing:** Ecoworx
 - i. **Installation Method:** Confirm in field with Architect. It is anticipated that a monolithic pattern will be utilized using mixed plank products specified in this section as well as others from this and related collections.
 5. **CPT-5:** *Not Used, Addendum #10)*
 6. **CPT-6:** Shaw Contract Custom Carpet
 - a. **Collection:** "Beyond the Fold"
 - b. **Style:** "Folded Tile" EW18x36

- c. **Custom Sample Number:** X436Y-0
- d. **Color Reference:** Shimmer, Ecru
- e. **Colors Listed on Sample:** A:C1644, B:CJ118, C:6180, D:5790D
- f. **Size:** 18" x 36" plank
- g. **Weight:** 24 oz.
- h. **Backing:** Ecoworx
- i. **Installation Method:** Confirm in field with Architect. It is anticipated that a monolithic pattern will be utilized using mixed plank products specified in this section as well as others from this and related collections.
- 7. **CPT-7:** To be selected by Architect. Provide material only allowance of \$32/SY.
- 8. **WT-1: Walk off carpet tile: (Addendum #10)**
 - a. **Manufacturer:** Milliken,
 - b. **Collection:** "Quadrus"
 - c. **Pattern:** Gravity
 - d. **Color:** Streamline
 - e. **Color #:** GRA118-119
 - f. **Size:** 24"x24"

2.37 09 72 00 Wall Covering: Refer to 12 30 00 Alternates and INTERIOR FINISH SPREADSHEET, (Addendum #10).

- A. Refer to Section 09 72 00 and drawings
- B. **Basis of Design:** Tri-kes Digital Graphic wall covering.
- C. **Location:** Atrium 100, north wall first floor.
- D. **VWC Material & Graphic Design Assistance Allowance:** \$15/SF + \$1,000 for graphic design assistance.
- E. **Initial Digital Graphics Design and File:** To be provided by Architect.

2.38 09 77 63 Digital Graphic Wall Panels: Refer to 12 30 00 Alternates, (Addendum #10).

- A. Refer to Section 09 77 63 and drawings
- B. **Basis of Design:** Koroseal Interior Products
 - 1. **Series:** Digital Print Media
 - 2. **Panel Type:** Acrylic
- C. **Location:** West Atrium east wall first and second floor. Floor to ceiling digital graphic panels.
- D. **Basic Digital Graphics Design and File:** To be provided by Architect. Additional graphic design assistance will be required by the manufacturer.
- E. **Mounting Method:** Lumaline Flex-Display.
- F. **Size:** refer section 09 77 63.
- G. **Material only allowance:** \$45/SF.

2.39 09 84 36 Fabric Wrapped Acoustical Wall Units

- A. **Thickness:** 2 inches thick.
- B. **Reveals:** Refer to drawings for locations.
- C. **Fabric Material Only Allowance:** \$42/SY
- D. **Location:** Dean's Conference Room walls from top of chairrail to bottom of ceiling.

2.40 09 91 00 Painting

- A. **Acceptable Manufacturers:**
 - 1. Sherwin Williams
 - 2. Glidden
 - 3. Kelly Moore
 - 4. PPG Industries
- B. **Colors: Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10)**
 - 1. **PT-1:** Sherwin Williams; **Color:** SW9170 "Acier"

2. **PT-2:** Sherwin Williams; **Color:** to match SW1901 "Glamorous White"
 3. **PT-3:** Sherwin Williams; **Color:** *SW7607 "Santorini Blue"*
 4. **PT-4:** Sherwin Williams; **Color:** *SW2802 Rockwood Red"*
 5. **PT-5:** Sherwin Williams; **Color:** *SW2811 Rockwood Blue Green"*
 6. **PT-6:** Sherwin Williams; **Color:** SW7046 "Anonymous"
 7. **PT-7:** *Sherwin Williams, Color: SW9112 "Song Thrush"*
 8. **PT-8:** *Sherwin Williams, Color: To Be Determined*
- C. **Staining:** All staining to be performed in controlled conditions in millwork shop paint booth by highly qualified millwork finishers. Staining shall **NOT** be done in the field (no exceptions). Staining shall match Architect's control samples.
- D. **Dry Erase Walls:** Sherwin Williams Dry Erase Coating over two coats of flat latex and primer coat. Install per manufacturer's recommendations.
1. **W.WS:** *Color same as PT-1. See above and refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*
 2. *Locations receiving W.WS Writable Surface Paint are to have a minimum level 4 finish texture.*

2.41 09 97 13 Steel Coatings

- A. **Epoxy Colors:** Custom colors to be selected by Architect.

DIVISION 10 - SPECIALTIES

2.42 10 11 03 Visual Display Boards

- A. **Glass Dry-Erase Markerboards:**
1. **GL-8:** Clarus, Glass Float Series; **Color:** "Pure White" # C100. Provide a quantity of (1) in a location to be determined.
- B. **Porcelain Dry-Erase Markerboard:**
1. **Rails and Frames:** Clear anodized.
 2. **Markerboard Surface:** Bright white semi-gloss finish.
 3. Provide at locations called for on plans.
- C. **Cabinet White Boards**
1. **Cabinet Finish:** American Cherry.
 2. **White Board:** Bright white semi-gloss finish
 3. **Tackboard Fabric:** Color to be selected from manufacturer's full and complete lines of all fabrics and products including premium grades.
 4. Provide one at Dean's Suite at location to be determined.
- D. **Vinyl Dry Erase Wall Covering**
1. **Finish:** Bright white, semi-gloss finish, non-magnetic type.
 2. **Installation:** Install over 20 ga. sheet metal fully adhered to wall for magnetic properties.
 3. Provide at locations called for on plans.
- E. **Glass Enclosed Display Case**
1. **Size:** 30"T x 36"W x 4"D
 2. **Finish:** Clear glass with clear anodized Class I finish.
 3. **Location:** Confirm final location with Architect at Atrium Lobby

2.43 10 14 00 Signage

- A. Refer to section 10 14 00 and drawings.
- B. **Colors:** To be selected by Architect
- C. **Signage Design:** refer to drawings
- D. **Handicap Parking Sign Frame & Metal Mesh Finish:** Powder coated frame and metal mesh with blue and white signage.
- E. **Building Plaques:** Bronze pebbled background with raised satin bronze copy and border. Refer to signage drawings for sizes. Provide (2) in the building: one at west Atrium and one at southeast vestibule.

- F. **Monument Sign:** Campus standard. Relocate existing monument sign from demolished MaGaha Building. Re-letter and refurbish as required to meet campus standard requirements. Provide ground mounted flood light on each of the (2) long sides of sign with required power and circuiting, connect to BMS system.

2.44 10 21 13 Stainless Steel Toilet Compartments

- A. Refer to section 10 21 13 and drawings.
B. **Basis of Design:** Hadrian, Inc., Mentor, OH, Ph. 800.536.1469.
C. **Style:** No Sight Line, Standard Series, floor mounted overhead braced partitions.
D. **Finish:** # 4 brushed stainless steel
E. **Design:** Zero sight lines. **No gaps between panels.**

2.45 10 21 23 Cubicle Curtains and Tracks:

- A. Refer to section 10 21 23 and drawings.
B. Basis of Design: *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

2.46 10 22 26 Operable Partitions: *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

- A. Refer to section 10 22 26 and drawings.
B. **Basis of Design:**
1. **Partition:** Modernfold Acousti-Seal 931 Single Panel Series.
2. **Operation:** Manual.
3. **STC:** 52 min.
4. **Location:** Between Dental Lab Classrooms 103A and 103B.
5. **Finishes:** COM fabric with material only allowance of \$42/SY. Metal trim shall be manufacturer's painted finish, color to be selected by Architect from manufacturer's full and complete lines including premium colors.

2.47 10 26 13 Wall and Corner Guards: *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

- A. Refer to section 10 26 13 for products and drawings for locations.
B. **Corner Guard Products:**
1. **WP-1 (Corner Guard):** 1 ½" x 1 ½" x 60"H angle; # 4 brushed stainless steel finish.
2. **WP-2 (End Wall Protector):** channel sized to encapsulate end of wall x full height fo wall; # 4 brushed stainless steel finish.
3. **WP-3 (Vinyl Wall Guard Railing):** *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*
4. **WP-4 (Wood Chairrail):** 4"H continuous American Cherry chairrail. Refer to drawings for profile and Section 06 20 23. *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

2.48 10 28 13 Toilet Accessories

- A. **Finish:** Stainless steel # 4 finish or polished chrome. Refer to 10 28 13

2.49 10 44 00 Fire Protection Specialties

- A. **Recessed FEC Cabinet Door and Trim Finish:** Stainless steel # 4 finish on door with red lettering and clear glass.
B. **Knox Boxes:**
1. **Type:** as required by local fire marshal
2. **Number and locations:** Provide one box at the west Atrium vestibule entrance and the second at one of the east vestibule entrances to the building as determined by the local fire marshal.

2.50 10 51 23 Plastic Laminate Clad Lockers

- A. **Finish:** Plastic laminate cladding to be selected by Architect from any major laminate manufacturer listed in section 064100. Sheen to be selected from manufacturer's full and complete line of sheens.

2.51 10 81 13 Bird Control Devices

1. **Basis of Design:** Bird-B-Gone metallic spike type. Provide a minimum of 500 LF of installed product in locations as directed by Architect.

2.52 10 821 23 Grilles: *This section is deleted, (Addendum #10).*

DIVISION 11 - EQUIPMENT

2.53 11 31 00 Residential Appliances

- A. **Finish:** # 4 brushed stainless steel finish with black trim.

2.54 117300 Patient Care Equipment

- A. **Finish:** Architect to select from manufacturer's full and complete lines of finishes. *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

DIVISION 12 - FURNISHINGS

2.55 12 24 13 Roller Shades

- A. **Schedule:**
1. **Motorized:** Provide at all exterior windows in all Classrooms and at Dean's Suite Conference Room. Provide power and circuiting as required for fully operational system.
 2. **Manual Chain Type:** Provide at all other perimeter windows except at west Building Lobby/Atrium, Lobby Atrium 100, vestibules and stairwells. Confirm final locations with Architect.
 3. **Shade Material:** To be selected by Architect from manufacturer's full and complete lines of shading material, perforation patterns and light transmittance percentages.

2.56 12 36 40 Quartz Countertops: *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*

- A. Refer to Sections 06 61 16, 12 36 40 and Architect's Finish Selection Summary Spreadsheet.
- B. **Material:** 3cm slab product with 1 ½" exposed edges.
- C. **Edge profile:** Verify with Architect.
- D. **Products:** *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*
- E. **Quality:** AWI Custom Grade.
- F. **Finish:** Polished

- 2.57 123643 Stone Countertops: *This section is deleted, (Addendum #10).*
- 2.58 123646 Solid Surfacing Countertops: *Refer to INTERIOR FINISH SPREADSHEET, (Addendum #10).*
- 2.59 12 48 13 Entrance Floor Mats: *This section is deleted, (Addendum #10). Refer to Carpet Tile.*

DIVISION 14 - CONVEYING SYSTEMS

- 2.60 14 21 00 Electric Traction Elevators: *This section is deleted, (Addendum #10).*
- 2.61 14 24 00 Hydraulic Elevators: *(Addendum #10). Refer to section 14 24 00 for manufacturer's standard cab finishes.*
- A. Elevator Cab Floors to be 3/8" Resinous Matrix Terrazzo Flooring to match Architect's sample.

DIVISION 21 - FIRE SUPPRESSION

- 2.62 Division 21
- A. Fire Alarm and Strobe Covers: Bright white

DIVISION 21 - FIRE SUPPRESSION

- 2.63 211000 Water-based Fire-suppression Systems
- A. Valve cabinets: Stainless steel

DIVISION 22 – PLUMBING

- 2.64 224000 Plumbing Fixtures
- A. Porcelain water closets, urinals and wall hung lavatories: White with chrome or stainless steel trim and accessories.
- B. Lavatory bowls: White porcelain with under counter mounting unless noted otherwise.
- C. Break room sinks: Stainless steel under counter mounted unless noted otherwise.
- D. Lab sinks: Stainless steel under counter mounted unless noted otherwise.
- E. EWC's and hydration stations: Stainless steel
- F. Mop sinks: White
- G. Floor drain strainers: Satin nickel

DIVISION 22 - HEATING VENTILATING AND AIR CONDITIONING

- 2.65 233713 Diffusers, Registers, and Grilles
- A. Square mechanical grilles, registers and diffusers in ceilings: Bright white
- B. Slotted mechanical grilles and registers: Clear anodized aluminum.
- C. Eyeball mechanical supply grilles: Bright white or silver, confirm final color with Architect.
- D. Thermostats: Bright White, unless on wood paneling, then match wood paneling

DIVISION 26 - ELECTRICAL

- 2.66 260923 Lighting Control Devices
- A. Bright white nylon Designer series (Leviton Decora or equal) with matching screw heads, typical unless on wood paneling, then match wood paneling.
- B. Stainless steel in mechanical and service areas.

2.67 262726 Wiring Devices

- A. Wall plates including telephone and data plates and other wall mounted controls: Bright white nylon Designer series (Leviton Decora or equal) with matching screw heads except where located in wood paneling at the Learning Stair. At Learning Stair in east Atrium 100, match wood veneer or provide receptacle and cover plate in a color that is visually compatible.
- B. Wall plates in mechanical and service areas: Stainless steel
- C. Floor Devices: To be selected.

2.68 26 51 00 Interior Lighting

- A. Finishes to be selected.

2.69 26 56 00 Exterior lighting

- Finishes to be selected.

DIVISION 28 - ELECTRONIC SAFETY AND SECURITY

2.70 283111 Digital, Addressable Fire-alarm System

- A. White alarms and pull stations

2.71 28 23 00 Video Surveillance

- A. Colors to be selected by Architect

DIVISION 32 - EXTERIOR IMPROVEMENTS

2.72 32 17 23 Pavement Markings

- A. **Stall Striping**
 - 1. **Standard parking:** White
 - 2. **Visitors parking:** White
 - 3. **Accessible Parking:** White and Blue
- B. **Curb Painting**
 - 1. **Service Parking:** White curb with blue letters.
 - 2. **Fire Lanes:** Verify with Fire Marshal.
 - 3. **Other:** Confirm with Owner.

2.73 32 17 26 Tactile Warning Surface Tile

- A. Color to be selected.

2.74 Site Brick and Concrete Pavers.

- A. Type and color to be selected. Refer to landscape drawings.

SECTION 011000

SUMMARY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

A. Section Includes:

1. **Project information.**
2. **Work covered by Contract Documents.**
3. **Phased construction.**
4. **Work by Owner.**
5. **Work under separate contracts.**
6. **Access to site.**
7. **Coordination with occupants.**
8. **Work restrictions.**

1.3 PROJECT INFORMATION

- A. **Project Description:** The Project is known as Midwestern State University Health Science and Human Services Center (HSHSC) Building. It is an 88,000 GSF 4 story concrete framed building consisting of brick veneer, terra cotta rain screen, cast stone, composite aluminum panels, ribbed metal panels, plaster soffits, insulated glazed curtain wall, storefront entrances, sitework, modified bitumen roofing, Spanish tile roofing, penthouses and equipment, medical gases, various interior finishes, elevators, smoke evacuation systems, audio visual equipment, mechanical equipment, electrical systems, IT equipment and cabling, structural concrete, and other types of construction.
- B. **Owner:**
 1. **Owner's Designated Representative:** Kyle Owen, Associate Vice President for Facilities Services, 3410 Taft Blvd., Wichita Falls, TX 76308; ph. 940.397.4648.
- C. **Architect:** Randall Scott Architects, Inc., ph. 972.664.9100, address: 2140 Lake Park Blvd., Suite 300, Richardson, TX 75080.
 1. **Architect's Designated Representative:** Vance Lazar, AIA - Vice President, ph. 972.664.9100, address: 2401 Lake Park Blvd., Suite 300, Richardson, TX 75080.
- D. **Construction Manager at Risk:**
 1. Construction Manager at Risk for this Project is Sundt Construction, 2421 W. 7th Street, Suite 300, Ft. Worth, TX 76107, ph., 817.349.2910; Project Manager is Bob Aniol, ph. 210.328.9661; and is also the Project's constructor. In Division 01 through 49 Sections, the terms "Construction Manager" and "Contractor" are synonymous.
- E. **Project Web Site:** A Project Management Web Site (Newforma) administered by the Architect will be used for purposes of managing communication and documents during this project.
 1. See Section 013100 "Project Management and Coordination." for Construction Manager's requirements for utilizing the Project Web Site.

1.4 WORK COVERED BY CONTRACT DOCUMENTS

- A. The Work of Project is defined by the Contract Documents and consists of the following:
- B. **Type of Contract:**
 1. Project will be constructed under a **Construction Manager at Risk** contract.

1.5 PHASED CONSTRUCTION

- A. Before commencing Work, submit an updated copy of Construction Manager's construction schedule showing the sequence, commencement and completion dates, and move-in dates of Owner's personnel for the Work.

1.6 WORK BY OWNER

- A. General: Cooperate fully with Owner so work may be carried out smoothly, without interfering with or delaying work under this Contract or work by Owner. Coordinate the Work of this Contract with work performed by Owner.
- B. **Subsequent Work:** Owner will perform the following additional work at site while work on this project is underway. Completion of that work will depend on successful coordination and preparatory work under this Contract.
 - 1. Relocation of certain equipment from the existing Bridwell Building to the new HSHSC Building.

1.7 WORK UNDER SEPARATE CONTRACTS

- A. General: Cooperate fully with separate contractors so work on those contracts may be carried out smoothly, without interfering with or delaying Work under this Contract or other contracts. Coordinate the Work of this Contract with work performed under separate contracts.
- B. **Preceding Work:** Owner will award separate contract(s) for the following construction operations at Project site. Those operations are scheduled to be ongoing during the course of this Contract.
 - 1. Redevelopment of the quad area to the east of the HSHSC Building.

1.8 ACCESS TO SITE

- A. General: Construction Manager shall have full use of Project site for construction operations during construction period. Construction Manager's use of Project site is limited only by Owner's right to perform work or to retain other contractors on portions of Project.
- B. No existing building will remain or limit the Construction Manager's use of the site.

1.9 COORDINATION WITH OCCUPANTS

- A. **Owner Limited Occupancy of Completed Areas of Construction:** Owner reserves the right to occupy and to place and install equipment in completed portions of the Work, prior to Substantial Completion of the Work, provided such occupancy does not interfere with completion of the Work. Such placement of equipment and limited occupancy shall not constitute acceptance of the total Work.
 - 1. Architect will prepare a punch list and a Certificate of Substantial Completion for each specific portion of the Work to be occupied prior to Owner acceptance of the completed Work.
 - 2. Obtain a Certificate of Occupancy from authorities having jurisdiction before limited Owner occupancy.
 - 3. Before limited Owner occupancy, mechanical and electrical systems shall be fully operational, and required tests and inspections shall be successfully completed. On occupancy, Owner will operate and maintain mechanical and electrical systems serving occupied portions of Work.
 - 4. On occupancy, Owner will assume responsibility for maintenance and custodial service for occupied portions of Work.

1.10 WORK RESTRICTIONS

- A. **Work Restrictions, General:** Comply with restrictions on construction operations.
 - 1. Comply with limitations on use of public streets and with other requirements of authorities having jurisdiction.
- B. **Existing Utility Interruptions:** Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after providing temporary utility services according to requirements indicated:
 - 1. **Notify Owner not less than two days in advance of proposed utility interruptions.**

2. Obtain Owner's written permission before proceeding with utility interruptions.
- C. **Noise, Vibration, and Odors:** Coordinate operations that may result in high levels of noise and vibration, odors, or other disruption to Owner occupancy with Owner.
 1. **Notify Owner not less than two days in advance of proposed disruptive operations.**
 2. Obtain Owner's written permission before proceeding with disruptive operations.

SECTION 012100

ALLOWANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Administrative and procedural requirements governing allowances.**
 - 1. **Certain items are specified in the Contract Documents by allowances. Allowances have been established in lieu of additional requirements and to defer selection of actual materials and equipment to a later date when direction will be provided to Construction Manager. If necessary, additional requirements will be issued by Change Order.**
- B. **Types of allowances include the following:**
 - 1. **Lump-sum allowances.**
 - 2. **Unit-cost allowances.**
 - 3. **Quantity allowances.**
 - 4. **Contingency allowances.**
 - 5. **Testing and inspecting allowances.**

1.3 SELECTION AND PURCHASE

- A. **At the earliest practical date after award of the Contract, advise Architect of the date when final selection and purchase of each product or system described by an allowance must be completed to avoid delaying the Work.**
- B. At Architect's request, obtain proposals for each allowance for use in making final selections. Include recommendations that are relevant to performing the Work.
- C. Purchase products and systems selected by Architect from the designated supplier.

1.4 SUBMITTALS

- A. Submit proposals for purchase of products or systems included in allowances, in the form specified for Change Orders.
- B. Submit invoices or delivery slips to show actual quantities of materials delivered to the site for use in fulfillment of each allowance.
- C. Submit time sheets and other documentation to show labor time and cost for installation of allowance items that include installation as part of the allowance.
- D. Coordinate and process submittals for allowance items in same manner as for other portions of the Work.

1.5 COORDINATION

- A. Coordinate allowance items with other portions of the Work. Furnish templates as required to coordinate installation.

1.6 LUMP-SUM, UNIT-COST, AND QUANTITY ALLOWANCES

- A. **Allowance shall include cost to Construction Manager of specific products and materials ordered by Owner or selected by Architect under allowance and shall include taxes, freight, and delivery to Project site.**
- B. Unless otherwise indicated, Construction Manager's costs for receiving and handling at Project site, labor, installation, overhead and profit, and similar costs related to products and materials (selected by Architect under allowance) shall be included as part of the Contract Sum and not part of the allowance.
- C. **Unused Materials:** Return unused materials purchased under an allowance to manufacturer or

supplier for credit to Owner, after installation has been completed and accepted.

1. If requested by Architect, retain and prepare unused material for storage by Owner. Deliver unused material to Owner's storage space as directed.

1.7 CONTINGENCY ALLOWANCES

- A. Change Orders authorizing use of funds from the contingency allowance will include Construction Manager's related costs and reasonable overhead and profit margins.
- B. At Project closeout, credit unused amounts remaining in the contingency allowance to Owner by Change Order.

1.8 TESTING AND INSPECTING ALLOWANCES

- A. Testing and inspecting allowances include the cost of engaging testing agencies, actual tests and inspections, and reporting results.
- B. The allowance does not include incidental labor required to assist the testing agency or costs for retesting if previous tests and inspections result in failure. The cost for incidental labor to assist the testing agency shall be included in the Contract Sum.
- C. Costs of services not required by the Contract Documents are not included in the allowance.
- D. At Project closeout, credit unused amounts remaining in the testing and inspecting allowance to Owner by Change Order.

1.9 ADJUSTMENT OF ALLOWANCES

- A. **Allowance Adjustment: To adjust allowance amounts, Architect will prepare a Change Order proposal based on the difference between purchase amount and the allowance,** multiplied by final measurement of work-in-place where applicable. If applicable, include reasonable allowances for cutting losses, tolerances, mixing wastes, normal product imperfections, and similar margins.
 1. Include installation costs in purchase amount only where indicated as part of the allowance.
 2. If requested, prepare explanation and documentation to substantiate distribution of overhead costs and other margins claimed.
 3. Submit substantiation of a change in scope of work, if any, claimed in Change Orders related to unit-cost allowances.
 4. Owner reserves the right to establish the quantity of work-in-place by independent quantity survey, measure, or count.
- B. Submit claims for increased costs because of a change in scope or nature of the allowance described in the Contract Documents, whether for the purchase order amount or Contractor's handling, labor, installation, overhead, and profit.
 1. Do not include Contractor's or subcontractor's indirect expense in the Change Order cost amount unless it is clearly shown that the nature or extent of work has changed from what could have been foreseen from information in the Contract Documents.
 2. No change to Contractor's indirect expense is permitted for selection of higher- or lower-priced materials or systems of the same scope and nature as originally indicated.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine products covered by an allowance promptly on delivery for damage or defects. Return damaged or defective products to manufacturer for replacement.

3.2 PREPARATION

- A. Coordinate materials and their installation for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related work.

3.3 SCHEDULE OF ALLOWANCES

- A. ~~Allowance No. 1: Exterior Building Mockup - \$30,000.~~
- B. Allowance No. 1: Exterior Building Mockup - \$30,000.
- C. ~~Allowance No. 2: Interior Open Wall Photographic Documentation - \$2,500.~~
- D. ~~Allowance No. 3: Window Testing - \$40,000.~~
- E. Allowances No. 4 through 11: \$13,100.00:
 - 1. **Allowance No. 4:** Liebert CRAC Units: (5) Unity Communications Cards with Programming/ Graphics tied into Andover BACnet MSTP - \$6,000.00.
 - 2. **Allowance No. 5:** Fulton Condensing Boilers: (1) Gateway Communications (serves multiple boilers) Card with Programming/ Graphics tied into Andover BACnet MSTP - \$3,500.00.
 - 3. **Allowance No. 6:** Mitsubishi Split System:
 - 4. **Allowance No. 7:** Marlowe Domestic Water Softeners:
 - 5. **Allowance No. 8:** Syncroflo Domestic Water Packaged Booster Pump: (1) BACnet MS/TP serial interface card with on-site programming from startup tech.
 - 6. **Allowance No. 9:** Beacon Medeas Medical Vacuum Pump: (1) BACnet option: \$1,200.00.
 - 7. **Allowance No. 10:** Beacon Medeas Instrument Air Comprssor: (1) BACnet option: \$1,200.00.
 - 8. **Allowance No. 11:** Beacon Medeas Med Gas Alarm: (1) BACnet option: \$1,200.00.

END OF SECTION

SECTION 012200

UNIT PRICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Administrative and procedural requirements for unit prices.**

1.3 DEFINITIONS

- A. **Unit price is an amount incorporated in the Agreement, applicable during the duration of the Work as a price per unit of measurement for materials, equipment, or services, or a portion of the Work, added to or deducted from the Contract Sum by appropriate modification, if the scope of Work or estimated quantities of Work required by the Contract Documents are increased or decreased.**

1.4 PROCEDURES

- A. **Unit prices include all necessary material, plus cost for delivery, installation, insurance, applicable taxes, overhead, and profit.**
- B. Measurement and Payment: See individual Specification Sections for work that requires establishment of unit prices. Methods of measurement and payment for unit prices are specified in those Sections.
- C. Owner reserves the right to reject Construction Manager's measurement of work-in-place that involves use of established unit prices and to have this work measured, at Owner's expense, by an independent surveyor acceptable to Construction Manager.
- D. List of Unit Prices: A schedule of unit prices is included in Part 3. Specification Sections referenced in the schedule contain requirements for materials described under each unit price.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 SCHEDULE OF UNIT PRICES

- A. **Unit Price No. 1:** 18" Auger Cast Piles Add per foot of length \$_____ per lineal foot; Deduct per foot of length \$_____ per lineal foot.
- B. **Unit Price No. 2:** 30" Auger Cast Piles Add per foot of length \$_____ per lineal foot; Deduct per foot of length \$_____ per lineal foot.
- C. **Unit Price No. 3:** 36" Auger Cast Piles Add per foot of length \$_____ per lineal foot; Deduct per foot of length \$_____ per lineal foot.
- D. **Unit Price No. 4:** 48" Auger Cast Piles Add per foot of length \$_____ per lineal foot; Deduct per foot of length \$_____ per lineal foot.

END OF SECTION

SECTION 012300

ALTERNATES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Administrative and procedural requirements for alternates.**

1.3 DEFINITIONS

- A. **Alternate: An amount proposed by bidders and stated on the Bid Form for certain work defined in the bidding requirements that may be added to or deducted from the base bid amount if Owner decides to accept a corresponding change either in the amount of construction to be completed or in the products, materials, equipment, systems, or installation methods described in the Contract Documents.**
 - 1. Alternates described in this Section are part of the Work only if enumerated in the Agreement.
 - 2. The cost or credit for each alternate is the net addition to or deduction from the Contract Sum to incorporate alternate into the Work. No other adjustments are made to the Contract Sum.

1.4 PROCEDURES

- A. **Coordination: Revise or adjust affected adjacent work as necessary to completely integrate work of the alternate into Project.**
 - 1. Include as part of each alternate, miscellaneous devices, accessory objects, and similar items incidental to or required for a complete installation whether or not indicated as part of alternate.
- B. Notification: Immediately following award of the Contract, notify each party involved, in writing, of the status of each alternate. Indicate if alternates have been accepted, rejected, or deferred for later consideration. Include a complete description of negotiated revisions to alternates.
- C. Execute accepted alternates under the same conditions as other work of the Contract.
- D. Schedule: A schedule of alternates is included at the end of this Section. Specification Sections referenced in schedule contain requirements for materials necessary to achieve the work described under each alternate.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 SCHEDULE OF ALTERNATES

- A. **Alternate No. 1 – ~~Terra Cotta~~: Not Used**
 - 1. ~~Base Bid: Provide 18 mil thickness terra cotta exterior cladding.~~
 - 2. ~~Alternate Bid: Provide 30 mil thickness terra cotta in lieu of base bid thickness.~~
- B. **Alternate No. 2 – ~~Parking and paving~~: Not Used**
 - 1. ~~Base Bid: Provide north parking lot drive/fire lane and parking spaces only on the south side of the drive.~~
 - 2. ~~Alternate Bid: In addition to base bid paving, add parking spaces on the north side of the drive.~~

- C. **Alternate No. 3 – Stair tower roofs: Not Used**
1. ~~**Base Bid:** Provide flat roofs on 3 stair towers with Mod. Bit. roofing. Include two scuppers per stair tower to drain to main roof.~~
 2. ~~**Alternate Bid:** Provide Spanish tile roofs at all 3 stair towers.~~
- D. **Alternate No. 4 - Hospital Headwalls:**
1. **Base Bid:** Provide all devices shown to be mounted in headwalls to be directly mounted in the drywall partitions in lieu of manufactured headwalls at bed stations in 201E, 201F, 201G, 201H, 255A, 255B, 350A, 350B, 350C, 350D, 350E, 350F, 350G, 350H, 360F, 360G, and 360H. Bed stations with windows onto the atrium at 201A, 201B, 201C, 201D, 255C, 255D, 260, 360A, 360B, 360C, 360D, and 360E will be furnished as manufactured headwalls as part of base bid.
 2. **Alternate Bid:** In addition to the manufactured base bid headwalls, provide manufactured headwall units at all locations in lieu of the simulated headwalls provided in base bid.
- E. **Alternate No. 5 – ITV Classroom Equipment:**
1. **Base Bid:** Delete all ITV equipment. Provide infrastructure as required for future equipment.
 2. **Alternate Bid:** Provide all ITV Equipment in addition to infrastructure.
- F. **Alternate No. 6: Not Used.**
- G. **Alternate No. 7 – Internal office suite partitions heights at all interior offices: Not Used**
1. ~~**Base Bid:** Construct all internal partitions within office suites to deck with acoustic insulation to full height of all walls. Acoustic insulation is not required at ceilings.~~
 2. ~~**Alternate Bid:** Where indicated in the drawings by partition type designations revise internal partitions to be constructed to 6" above finish ceiling. At such locations provide acoustic batts to top of such partitions. Provide batt insulation to minimum of 4 feet either side of partitions that do not go to deck.~~
- H. **Alternate No. 8: Not Used.**
- I. **Alternate No. 9: Not Used.**
- J. **Alternate No. 10 – Brick specification:**
1. **Base Bid:** Use campus standard Cloud Brick as specified.
 2. **Alternate:** Use Acme Brick in lieu of campus standard brick.
- K. **Alternate No. 11 – Countertops: Not Used**
1. ~~**Base Bid:** Provide quartz countertops at all locations. Public restroom lavatory tops are stone.~~
 2. ~~**Alternate Bid:** Provide plastic laminate countertops at all locations in lieu of quartz. Public restroom lavatory tops remain as stone.~~
- L. **Alternate No. 12 – Copings: Not Used**
1. ~~**Base Bid:** Cast stone copings to be provided as indicated on current drawings.~~
 2. ~~**Alternate Bid:** Metal copings to be provided where current drawings indicate cast stone copings.~~
- M. **Alternate No. 13 – Shell in Social Work office suite: Not Used**
1. ~~**Base Bid:** Provide the complete finish out of the Social Work office suite as indicated on the drawings.~~
 2. ~~**Alternate Bid:** The Social Work office suite to be constructed as shell space. Interior partitions, finishes, ceiling, lighting, and infrastructure are not provided. Note: This assumes that Social Work would remain in its current location until such time as the Social Work office finish out can be completed. Provide minimal lighting, egress door and mechanical trunk lines to space as part of shell construction.~~
- N. **Alternate No. 14 – Shell in the Advising office suite: Not Used**

1. ~~**Base Bid:** Provide the complete finish out of the Advising office suite as indicated on the drawings.~~
2. ~~**Alternate Bid:** The Advising office suite to be constructed as shell space. Interior partitions, finishes, ceiling, lighting, and infrastructure are not provided. Note: This assumes that Advising would remain in its current location until such time as the Advising office finish out can be completed. Provide minimal lighting, egress door and mechanical trunk lines to space as part of shell construction.~~
- O. **Alternate No. 15 – Shell in the third floor Breakroom: Not Used**
 1. ~~**Base Bid:** Provide the complete finish out of the 3rd floor Breakroom as indicated on the drawings.~~
 2. ~~**Alternate Bid:** The 3rd floor Breakroom to be constructed as shell space. Interior partitions, finishes, ceiling, lighting, and infrastructure are not provided. Note: This assumes that the Breakroom would be finished out when funds are available. Provide minimal lighting, egress door and mechanical trunk lines to space as part of shell construction.~~
- P. **Alternate No. 16 – Shell in the Dental Hygiene suite: Not Used**
 1. ~~**Base Bid:** Provide the complete finish out of the Dental Hygiene Department as indicated on the drawings.~~
 2. ~~**Alternate Bid:** The Dental Hygiene Suite is to be constructed as shell space. Interior partitions, finishes, ceiling, lighting, and infrastructure are not provided. Note: This assumes that Dental Hygiene would remain in its current location until such time as the Dental Hygiene suite finish out can be completed. Provide minimal lighting, egress door and mechanical trunk lines to space as part of shell construction.~~
- Q. **Alternate No. 17 – Shell in 1/3 of the office space on the 4th floor: Not Used**
 1. ~~**Base Bid:** Provide the complete finish out of all 4th floor office areas as indicated on the drawings.~~
 2. ~~**Alternate Bid:** Identify 1/3 of the 4th floor office spaces to remain as shell space. Note: This assumes that the 4th floor shell spaces would be finished out when funds are available. Provide minimal lighting, egress doors and mechanical trunk lines to spaces as part of shell construction.~~
- R. **Alternate No. 18 – Floor finishes in public corridors: Not Used**
 1. ~~**Base Bid:** Provide terrazzo flooring at public circulation area on 1st, 2nd, 3rd, and 4th floors. Substitute LVT flooring in lieu of terrazzo at 2nd, 3rd, and 4th floors.~~
 2. ~~**Alternate Bid:** Provide terrazzo flooring at public circulation areas on on 1st, 2nd, 3rd, and 4th floors. Floor patterns are to remain as indicated on drawings regardless of whether base bid or alternate floor material is used.~~
- S. **Alternate No. 19 - Digital Graphic Wall Covering:**
 1. **Base Bid:** As indicated on the drawings.
 2. **Alternate Bid:** Provide Digital Graphic Wall Covering as described in Section 008900, 097200 - Wall Covering.
- T. **Alternate No. 20: Digital Graphic Wall Panels:**
 1. **Base Bid:** As indicated on the drawings.
 2. **Alternate Bid:** Provide Digital Graphic Wall Panels as described in Section 008900, 097763 - Digital Graphic Wall Panels.
- U. **Alternate No. 21 - Sand-Oil Separator at Hydraulic Elevators:**
 1. **Base Bid:** As indicated on the drawings and in Section 142400 - Hydraulic Elevators.
 2. **Alternate Bid:** Provide sand-oil separator at each hydraulic elevator.

END OF SECTION

SECTION 012500

SUBSTITUTION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. **Section Includes: Administrative and procedural requirements for substitutions.**

1.3 DEFINITIONS

- A. **Substitutions:** Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Construction Manager.
 - 1. **Substitutions for Cause:** Changes proposed by Construction Manager that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.
 - 2. **Substitutions for Convenience:** Changes proposed by Construction Manager or Owner that are not required in order to meet other Project requirements but may offer advantage to the Owner.

1.4 SUBMITTALS

- A. **Substitution Requests:** Submit one PDF file of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
 - 1. **Substitution Request Form: Use form at end of this Section.**
 - 2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:
 - a. **Statement** indicating why specified product, fabrication, or installation cannot be provided, if applicable.
 - b. **Coordination information**, including a list of changes or modifications needed to other parts of the Work and to construction performed by Owner and separate contractors, which will be necessary to accommodate proposed substitution.
 - c. **Detailed comparison** of significant qualities of proposed substitution with those of the Work specified. Include annotated copy of applicable specification section. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
 - d. **Product Data:** including drawings and descriptions of products and fabrication and installation procedures for both the originally specified products and the proposed substitution products.
 - e. **Samples**, where applicable or requested
 - f. **Certificates and qualification data**, where applicable or requested
 - g. **List of similar installations** for completed projects with project names and addresses and names and addresses of architects and owners.
 - h. **Material test reports** from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
 - i. **Research reports** evidencing compliance with building code in effect for Project, from ICC-ES.
 - j. **Detailed comparison of Construction Manager's construction schedule** using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be

provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.

- k. **Cost information**, including a proposal of change, if any, in the Contract Sum.
 - l. **Construction Manager's certification that proposed substitution complies** with requirements in the Contract Documents except as indicated in substitution request, is compatible with related materials, and is appropriate for applications indicated.
 - m. **Construction Manager's waiver of rights to additional payment** or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.
3. **Architect's Action:** If necessary, Architect will request additional information or documentation for evaluation within seven days of receipt of a request for substitution. Architect will notify Construction Manager of acceptance or rejection of proposed substitution within 15 days of receipt of request, or seven days of receipt of additional information or documentation, whichever is later.
- a. Forms of Acceptance: Change Order, Construction Change Directive, or Architect's Supplemental Instructions for minor changes in the Work.
 - b. **Use product originally specified if Architect does not issue a decision on use of a proposed substitution within time allocated.**

1.5 QUALITY ASSURANCE

- A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage qualified testing agency to perform compatibility tests recommended by manufacturers.

1.6 PROCEDURES

- A. Coordination: Modify or adjust affected work as necessary to integrate work of the approved substitutions.

PART 2 - PRODUCTS

2.1 SUBSTITUTIONS

- A. **Substitutions for Cause:** Submit requests for substitution immediately upon discovery of need for change, but not later than 15 days prior to time required for preparation and review of related submittals.
 - 1. Conditions: Architect will consider Construction Manager's request for substitution only when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:
 - a. **Requested substitution is required due to changed project conditions, unavailability of product, regulatory changes, or unavailability of required warranty items.**
 - b. Requested substitution is consistent with the Contract Documents and will produce indicated results.
 - c. Substitution request is fully documented and properly submitted.
 - d. Requested substitution will not adversely affect Construction Manager's construction schedule.
 - e. Requested substitution has received necessary approvals of authorities having jurisdiction.
 - f. Requested substitution is compatible with other portions of the Work.
 - g. Requested substitution has been coordinated with other portions of the Work.
 - h. Requested substitution provides specified warranty.
 - i. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is

compatible with other products, and is acceptable to all contractors involved.

- B. **Substitutions for Convenience: Not allowed, unless otherwise indicated.** If allowed, Architect will consider requests for substitution only if received **within 7 days prior to bid date or date of Guaranteed Maximum Price** being provided to the Owner.

1. Conditions: Architect will consider Construction Manager's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:
 - a. Requested substitution offers Owner a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Owner must assume. **Owner's additional responsibilities shall include compensation to Architect for redesign and evaluation services**, increased cost of other construction by Owner, and similar considerations.
 - b. Requested substitution does not require extensive revisions to the Contract Documents.
 - c. Requested substitution is consistent with the Contract Documents and will produce indicated results.
 - d. Substitution request is fully documented and properly submitted.
 - e. Requested substitution will not adversely affect Construction Manager's construction schedule.
 - f. Requested substitution has received necessary approvals of authorities having jurisdiction.
 - g. Requested substitution is compatible with other portions of the Work.
 - h. Requested substitution has been coordinated with other portions of the Work.
 - i. Requested substitution provides specified warranty.
 - j. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 012500.13

SUBSTITUTION REQUEST FORM

PROJECT: _____

TO: _____

NO. _____

DATE: _____

Construction Manager hereby requests acceptance of the following product or system as a substitution in accordance with provisions of Division 01 Section 012500 "Substitution Procedures":

1. SPECIFIED PRODUCT OR SYSTEM

Substitution request for: _____

Specification Section No.: _____ Article/ Paragraph: _____

2. REASON FOR SUBSTITUTION REQUEST

SPECIFIED PRODUCT

- ☐ Is no longer available
- ☐ Is unable to meet project schedule
- ☐ Is unsuitable for the designated application
- ☐ Cannot interface with adjacent materials
- ☐ Is not compatible with adjacent materials
- ☐ Cannot provide the specified warranty
- ☐ Cannot be constructed as indicated
- ☐ Cannot be obtained due to one or more of the following:

- ☐ Strike
- ☐ Bankruptcy of manufacturer or supplier
- ☐ Lockout
- ☐ Similar occurrence (explain below)

PROPOSED PRODUCT

- ☐ Will reduce construction time
- ☐ Will result in cost savings of \$ _____ to Project
- ☐ Is for supplier's convenience
- ☐ Is for subcontractor's convenience
- ☐ Other: _____

3. SUPPORTING DATA

- ☐ Drawings, specifications, product data, performance data, test data, and any other necessary information to facilitate review of the Substitution Request are attached.
- ☐ Sample is attached
- ☐ Sample will be sent if requested

4. QUALITY COMPARISON

Provide all necessary side-by-side comparative data as required to facilitate review of Substitution Request:

SPECIFIED PRODUCT

PROPOSED PRODUCT

Manufacturer: _____

Name / Brand: _____

Catalog No.: _____

Vendor: _____

Variations: _____

(Add Additional Sheets If Necessary)

Local Distributor or Supplier: _____

Maintenance Service Available: ☐ Yes ☐ No

Spare Parts Source: _____

Warranty: ☐ Yes ☐ No _____ Years

5. PREVIOUS INSTALLATIONS

Identification of at least three (3) similar projects on which proposed substitution was used:

PROJECT #1

Project: _____

Address: _____

Architect: _____

Owner: _____

Contractor: _____

Date Installed: _____

PROJECT #2

Project: _____

Address: _____

Architect: _____

Owner: _____

Contractor: _____

Date Installed: _____

PROJECT #3

Project: _____

Address: _____

Architect: _____

Owner: _____

Contractor: _____

Date Installed: _____

6. EFFECT OF SUBSTITUTION

Proposed substitution affects other work or trades: ☐ No ☐ Yes (if yes, explain)

Proposed substitution requires dimensional revisions or redesign of architectural, structural, M-E-P, life safety, or other work:

☐ No ☐ Yes (if yes, attach data explaining revisions)

7. STATEMENT OF CONFORMANCE OF REQUEST TO CONTRACT REQUIREMENTS

Construction Manager and Subcontractor have investigated the proposed substitution and hereby represent that:

- A. They have personally investigated the proposed substitution and believe that it is equal to or superior in all respects to specified product, except as stated above;
- B. The proposed substitution is in compliance with applicable codes and ordinances;
- C. The proposed substitution will provide same warranty as specified for specified product;
- D. They will coordinate the incorporation of the proposed substitution into the Work, and will include modifications to the Work as required to fully integrate the substitution;
- E. They have included complete cost data and implications of the substitution (attached);
- F. They will pay any redesign fees incurred by the Architect or any of the Architect's consultants, and any special inspection costs incurred by the Owner, caused by the use of this product;
- G. They waive all future claims for added cost or time to the Contract related to the substitution, or that become known after substitution is accepted.
- H. The Architect's approval, if granted, will be based upon reliance upon data submitted and the opinion, knowledge, information, and belief of the Architect at the time decision is rendered and Addendum is issued; and that Architect's approval therefore is interim in nature and subject to reevaluation and reconsideration as additional data, materials, workmanship, and coordination with other work are observed and reviewed.

Contractor: _____
(Name of Contractor)

Date: _____ By: _____

Subcontractor: _____
(Name of Subcontractor)

Date: _____ By: _____

Note: Unresponsive or incomplete requests will be rejected and returned without review.

8. ARCHITECT'S REVIEW AND ACTION

- ☐ Substitution is accepted.
- ☐ Substitution is accepted, with the following comments: _____

- ☐ Resubmit Substitution Request:
 - ☐ Provide more information in the following areas: _____

 - ☐ Provide proposal indicating amount of savings / credit to Owner
 - ☐ Bidding Contractor shall sign Bidder's Statement of Conformance
 - ☐ Bidding Subcontractor shall sign Bidder's Statement of Conformance
- ☐ Substitution is not accepted:
 - ☐ Substitution Request received too late.
 - ☐ Substitution Request received directly from subcontractor or supplier.
 - ☐ Substitution Request not submitted in accordance with requirements.
 - ☐ Substitution Request Form is not properly executed.
 - ☐ Substitution Request does not indicate what item is being proposed.
 - ☐ Insufficient information submitted to facilitate proper evaluation.
 - ☐ Proposed product does not appear to comply with specified requirements.
 - ☐ Proposed product will require substantial revisions to Contract Documents.

By: _____

Date: _____

Architect has relied upon the information provided by the Contractor, and makes no claim as to the accuracy, completeness, or validity of such information. If an accepted substitution is later found to be not in compliance with the Contract Documents, Contractor shall provide the specified product.

END OF FORM

SECTION 012600

CONTRACT MODIFICATION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Administrative and procedural requirements for handling and processing Contract modifications:**
 - 1. **Minor changes in the Work.**
 - 2. **Proposal requests.**
 - 3. **Change orders.**
 - 4. **Construction change directive.**

1.3 MINOR CHANGES IN THE WORK

- A. Architect will issue supplemental instructions authorizing minor changes in the Work, not involving adjustment to the Contract Sum or the Contract Time, on AIA Document G710, Architect's Supplemental Instructions.

1.4 PROPOSAL REQUESTS

- A. **Owner-Initiated Proposal Requests:** Architect will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.
 - 1. Proposal Requests issued by Architect are not instructions either to stop work in progress or to execute the proposed change.
 - 2. **Within 20 days, when not otherwise specified, after receipt of Proposal Request, submit a quotation estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change.**
 - a. **Include a list of quantities of products required or eliminated and detailed unit costs**, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
 - b. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
 - c. Include costs of labor and supervision directly attributable to the change.
 - d. Include an updated Construction Manager's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
 - e. **Quotation Form: Use forms acceptable to Architect.**
- B. **Construction Manager-Initiated Proposals:** If latent or changed conditions require modifications to the Contract, Construction Manager may initiate a claim by submitting a request for a change to Architect.
 - 1. **Include a statement outlining reasons for the change and the effect of the change on the Work.** Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.
 - 2. **Include a list of quantities of products required or eliminated and detailed unit costs**, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
 - 3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.

4. Include costs of labor and supervision directly attributable to the change.
5. Include an updated Construction Manager's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
6. Comply with requirements in Section 012500 "Substitution Procedures" if the proposed change requires substitution of one product or system for product or system specified.
7. **Proposal Request Form: Use form acceptable to Architect.**

1.5 ADMINISTRATIVE CHANGE ORDERS

- A. **Allowance Adjustment:** See Section 012100 "Allowances" for administrative procedures for preparation of Change Order Proposal for adjusting the Contract Sum to reflect actual costs of allowances.
- B. **Unit-Price Adjustment:** See Section 012200 "Unit Prices" for administrative procedures for preparation of Change Order Proposal for adjusting the Contract Sum to reflect measured scope of unit-price work.

1.6 CHANGE ORDER PROCEDURES

- A. On Owner's approval of a Proposal Request, Architect will issue a Change Order for signatures of Owner and Construction Manager on AIA Document G701, Change Order.

1.7 CONSTRUCTION CHANGE DIRECTIVE

- A. Construction Change Directive: Architect may issue a Construction Change Directive on AIA Document G714, Construction Change Directive. Construction Change Directive instructs Construction Manager to proceed with a change in the Work, for subsequent inclusion in a Change Order.
 1. Construction Change Directive contains a complete description of change in the Work. It also designates method to be followed to determine change in the Contract Sum or the Contract Time.
- B. Documentation: Maintain detailed records on a time and material basis of work required by the Construction Change Directive.
 1. After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 012900

PAYMENT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Administrative and procedural requirements necessary to prepare and process payments:**
 - 1. **Schedule of values.**
 - 2. **Applications for payment.**

1.3 DEFINITIONS

- A. Schedule of Values: A statement furnished by Construction Manager allocating portions of the Contract Sum to various portions of the Work and used as the basis for reviewing Construction Manager's Applications for Payment.

1.4 SCHEDULE OF VALUES

- A. Coordination: Coordinate preparation of the schedule of values with preparation of Construction Manager's construction schedule.
 - 1. Coordinate line items in the schedule of values with other required administrative forms and schedules, including the following:
 - a. Application for Payment forms with continuation sheets.
 - b. Submittal schedule.
 - c. Items required to be indicated as separate activities in Construction Manager's construction schedule.
 - 2. **Submit the schedule of values to Architect at earliest possible date, but no later than 15 days before the date scheduled for submittal of initial Applications for Payment.**
- B. **Format and Content: Use Project Manual table of contents as a guide to establish line items for the schedule of values. Provide at least one line item for each Specification Section.**
 - 1. Identification: Include the following Project identification on the schedule of values:
 - a. Project name and location.
 - b. Name of Architect.
 - c. Architect's project number.
 - d. Construction Manager's name and address.
 - e. Date of submittal.
 - 2. Arrange schedule of values consistent with format of AIA Document G703, Continuation Sheet.
 - 3. Arrange the schedule of values in tabular form with separate columns to indicate the following for each item listed:
 - a. Related Specification Section or Division.
 - b. Description of the Work.
 - c. Name of subcontractor.
 - d. Name of manufacturer or fabricator.
 - e. Name of supplier.
 - f. Change Orders (numbers) that affect value.
 - g. Dollar value of the following, as a percentage of the Contract Sum to nearest one-hundredth percent, adjusted to total 100 percent.
 - 1) Labor.

- 2) Materials.
- 3) Equipment.
4. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Coordinate with Project Manual table of contents. **Provide multiple line items for principal subcontract amounts in excess of five percent of the Contract Sum.**
 - a. Include separate line items under principal subcontracts for Project closeout requirements in an amount totaling five percent of the Contract Sum and subcontract amount.
5. Round amounts to nearest whole dollar; total shall equal the Contract Sum.
6. **Provide a separate line item in the schedule of values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not yet installed.**
 - a. Differentiate between items stored on-site and items stored off-site. If required, include evidence of insurance.
7. **Allowances:** Provide a separate line item in the schedule of values for each allowance. Show line-item value of unit-cost allowances, as a product of the unit cost, multiplied by measured quantity. Use information indicated in the Contract Documents to determine quantities.
8. **Purchase Contracts:** Provide a separate line item in the schedule of values for each purchase contract. Show line-item value of purchase contract. Indicate owner payments or deposits, if any, and balance to be paid by Construction Manager.
9. Each item in the schedule of values and Applications for Payment shall be complete.
10. **Schedule Updating:** Update and resubmit the schedule of values before the next Applications for Payment when Change Orders or Construction Change Directives result in a change in the Contract Sum.

1.5 APPLICATIONS FOR PAYMENT

- A. Each Application for Payment following the initial Application for Payment shall be consistent with previous applications and payments as certified by Architect and paid for by Owner.
 1. Initial Application for Payment, Application for Payment at time of Substantial Completion, and final Application for Payment involve additional requirements.
 2. Submit electronically.
 3. Submit updated HUB report with each applications for payment.
- B. **Payment Application Times:** The date for each progress payment is indicated in the Agreement between Owner and Construction Manager. The period of construction work covered by each Application for Payment is the period indicated in the Agreement.
 1. Submit draft copy of Application for Payment **on or before the 20th of each month** for review by Architect.
- C. **Application for Payment Forms:** Use AIA Document G702, Application and Certificate for Payment, and AIA Document G703, Continuation Sheet, as form for Applications for Payment.
- D. Application Preparation: Complete every entry on form. Notarize and execute by a person authorized to sign legal documents on behalf of Construction Manager. Architect will return incomplete applications without action.
 1. Entries shall match data on the schedule of values and Construction Manager's construction schedule. Use updated schedules if revisions were made.
 2. Include amounts for work completed following previous Application for Payment, whether or not payment has been received. Include only amounts for work completed at time of Application for Payment.
 3. Include amounts of Change Orders and Construction Change Directives issued before last day of construction period covered by application.
 4. Indicate separate amounts for work being carried out under Owner-requested project acceleration.
- E. **Stored Materials: Include in Application for Payment, amounts applied for materials or equipment purchased or fabricated and stored, but not yet installed. Differentiate**

between items stored on-site and items stored off-site.

1. Provide certificate of insurance, evidence of transfer of title to Owner, and consent of surety to payment, for stored materials.
 2. Provide supporting documentation that verifies amount requested, such as paid invoices. Match amount requested with amounts indicated on documentation; do not include overhead and profit on stored materials.
 3. Provide summary documentation for stored materials indicating the following:
 - a. Value of materials previously stored and remaining stored as of date of previous Applications for Payment.
 - b. Value of previously stored materials put in place after date of previous Application for Payment and on or before date of current Application for Payment.
 - c. Value of materials stored since date of previous Application for Payment and remaining stored as of date of current Application for Payment.
- F. Waivers of Mechanic's Lien: With each Application for Payment, submit waivers of mechanic's liens from subcontractors, sub-subcontractors, and suppliers for construction period covered by the previous application.**
1. Submit partial waivers on each item for amount requested in previous application, after deduction for retainage, on each item.
 2. When an application shows completion of an item, submit conditional final or full waivers.
 3. Owner reserves the right to designate which entities involved in the Work must submit waivers.
 4. Submit final Application for Payment with or preceded by conditional final waivers from every entity involved with performance of the Work covered by the application who is lawfully entitled to a lien.
 5. Waiver Forms: Submit executed waivers of lien on forms, acceptable to Owner.
- G. Initial Application for Payment:** Submit electronically. Administrative actions and submittals that must precede or coincide with submittal of first Application for Payment include the following:
1. List of subcontractors.
 2. Schedule of values.
 3. Construction Manager 's construction schedule (preliminary if not final).
 4. Schedule of unit prices.
 5. Submittal schedule (preliminary if not final).
 6. List of Construction Manager's staff assignments.
 7. List of Construction Manager's principal consultants.
 8. Copies of building permits.
 9. Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work.
 10. Initial progress report.
 11. Report of preconstruction conference.
 12. Certificates of insurance and insurance policies.
 13. Performance and payment bonds.
 14. Data needed to acquire Owner's insurance.
- H. Application for Payment at Substantial Completion:** Submit electronically. After Architect issues the Certificate of Substantial Completion, submit an Application for Payment showing 100 percent completion, less 100% retainage, for portion of the Work claimed as substantially complete.
1. Include documentation supporting claim that the Work is substantially complete and a statement showing an accounting of changes to the Contract Sum.
 2. This application shall reflect Certificate(s) of Substantial Completion issued previously for Owner occupancy of designated portions of the Work.
- I. Final Payment Application:** Submit electronically. After completing Project closeout requirements, submit final Application for Payment with releases and supporting documentation not previously submitted and accepted, including, but not limited, to the following:
1. Evidence of completion of Project closeout requirements.

2. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.
3. Updated final statement, accounting for final changes to the Contract Sum.
4. Affidavit of Payment of Debts and Claims.
5. Construction Manager's Affidavit of Release of Liens.
6. Consent of Surety to Final Payment.
7. Evidence that claims have been settled.
8. Final meter readings for utilities, a measured record of stored fuel, and similar data as of date of Substantial Completion or when Owner took possession of and assumed responsibility for corresponding elements of the Work.
9. Final liquidated damages settlement statement.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 013100

PROJECT MANAGEMENT AND COORDINATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Administrative provisions for coordinating construction operations on Project including, but not limited to, the following:**
 - 1. **General coordination procedures.**
 - 2. **Coordination drawings.**
 - 3. **Requests for Information (RFIs).**
 - 4. **Project Web site.**
 - 5. **Project meetings.**

1.3 DEFINITIONS

- A. RFI: Request from Owner, Architect, or Construction Manager seeking information required by or clarifications of the Contract Documents.

1.4 INFORMATIONAL SUBMITTALS

- A. **Subcontract List:** Prepare a written summary identifying individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular form:
 - 1. Name, address, and telephone number of entity performing subcontract or supplying products.
 - 2. Number and title of related Specification Section(s) covered by subcontract.
 - 3. Drawing number and detail references, as appropriate, covered by subcontract.
- B. **Key Personnel Names:** Within 15 days of starting construction operations, submit a list of key personnel assignments, including superintendent and other personnel in attendance at Project site. Identify individuals and their duties and responsibilities; list addresses and telephone numbers, including home, office, and cellular telephone numbers and e-mail addresses. Provide names, addresses, and telephone numbers of individuals assigned as alternates in the absence of individuals assigned to Project.

1.5 GENERAL COORDINATION PROCEDURES

- A. **Coordination: Coordinate construction operations included in different Sections of the Specifications to ensure efficient and orderly installation of each part of the Work.** Coordinate construction operations, included in different Sections, which depend on each other for proper installation, connection, and operation.
 - 1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
 - 2. Coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair.
 - 3. Make adequate provisions to accommodate items scheduled for later installation.
- B. **Administrative Procedures:** Coordinate scheduling and timing of required administrative procedures with other construction activities to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:
 - 1. Preparation of Construction Manager's construction schedule.
 - 2. Preparation of the schedule of values.
 - 3. Installation and removal of temporary facilities and controls.

4. Delivery and processing of submittals.
5. Progress meetings.
6. Preinstallation conferences.
7. Project closeout activities.
8. Startup and adjustment of systems.

1.6 COORDINATION DRAWINGS

- A. Coordination Drawings, General: Prepare coordination drawings according to requirements in individual Sections, and additionally where installation is not completely shown on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one entity.
 1. Content: Project-specific information, drawn accurately to a scale large enough to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:
 - a. Use applicable Drawings as a basis for preparation of coordination drawings. Prepare sections, elevations, and details as needed to describe relationship of various systems and components.
 - b. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
 - c. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
 - d. Show location and size of access doors required for access to concealed dampers, valves, and other controls.
 - e. Indicate required installation sequences.
 - f. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Architect indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.
- B. Coordination Drawing Organization: Organize coordination drawings as follows:
 1. Floor Plans and Reflected Ceiling Plans: Show architectural and structural elements, and mechanical, plumbing, fire-protection, fire-alarm, and electrical Work. Show locations of visible ceiling-mounted devices relative to acoustical ceiling grid. Supplement plan drawings with section drawings where required to adequately represent the Work.
 2. Plenum Space: Indicate subframing for support of ceiling and wall systems, mechanical and electrical equipment, and related Work. Locate components within ceiling plenum to accommodate layout of light fixtures indicated on Drawings. Indicate areas of conflict between light fixtures and other components.
 3. Mechanical Rooms: Provide coordination drawings for mechanical rooms showing plans and elevations of mechanical, plumbing, fire-protection, fire-alarm, and electrical equipment.
 4. Structural Penetrations: Indicate penetrations and openings required for all disciplines.
 5. Slab Edge and Embedded Items: Indicate slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.
 6. Mechanical and Plumbing Work: Show the following:
 - a. Sizes and bottom elevations of ductwork, piping, and conduit runs, including insulation, bracing, flanges, and support systems.
 - b. Dimensions of major components, such as dampers, valves, diffusers, access doors, cleanouts and electrical distribution equipment.
 - c. Fire-rated enclosures around ductwork.
 7. Electrical Work: Show the following:
 - a. Runs of vertical and horizontal conduit 1-1/4 inches in diameter and larger.

- b. Light fixture, exit light, emergency battery pack, smoke detector, and other fire-alarm locations.
 - c. Panel board, switch board, switchgear, transformer, busway, generator, and motor control center locations.
 - d. Location of pull boxes and junction boxes, dimensioned from column center lines.
- 8. Fire-Protection System: Show the following:
 - a. Locations of standpipes, mains piping, branch lines, pipe drops, and sprinkler heads.
- 9. Review: Architect will review coordination drawings to confirm that the Work is being coordinated, but not for the details of the coordination, which are Construction Manager's responsibility. If Architect determines that coordination drawings are not being prepared in sufficient scope or detail, or are otherwise deficient, Architect will so inform Construction Manager, who shall make changes as directed and resubmit.
- C. **Coordination Digital Data Files:** Prepare coordination digital data files according to the following requirements:
 - 1. **File Preparation Format:** AutoDesk NavisWorks using Revit digital data software program, version, and operating system as original Drawings.
 - 2. **File Submittal Format:** Submit or post coordination drawing files using format same as file preparation format.
 - 3. **BIM File Incorporation:** Develop and incorporate coordination drawing files into Building Information Model established for Project.
 - a. Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Architect.
 - 4. **Architect will furnish Construction Manager one set of digital data files of BIM Model for use in preparing coordination digital data files in NavisWorks.**
 - a. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
 - b. Construction Manager shall execute a data licensing agreement in the form of Agreement form acceptable to Owner and Architect.

1.7 REQUESTS FOR INFORMATION (RFIs)

- A. General: Immediately on discovery of the need for additional information or interpretation of the Contract Documents, Construction Manager shall prepare and submit an RFI in the form specified.
 - 1. Architect will return RFIs submitted to Architect by other entities controlled by Construction Manager with no response.
 - 2. Coordinate and submit RFIs in a prompt manner so as to avoid delays in Construction Manager's work or work of subcontractors.
- B. **Content of the RFI:** Include a detailed, legible description of item needing information or interpretation and the following:
 - 1. Project name.
 - 2. Project number.
 - 3. Date.
 - 4. Name of Construction Manager.
 - 5. Name of Architect.
 - 6. RFI number, numbered sequentially.
 - 7. RFI subject.
 - 8. Specification Section number and title and related paragraphs, as appropriate.
 - 9. Drawing number and detail references, as appropriate.
 - 10. Field dimensions and conditions, as appropriate.
 - 11. Construction Manager's suggested resolution. If Construction Manager's suggested resolution impacts the Contract Time or the Contract Sum, Construction Manager shall state impact in the RFI.
 - 12. Construction Manager's signature.

13. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.
 - a. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.
- C. **RFI Forms:** Software-generated form with substantially the same content as indicated above, acceptable to Architect.
 1. Attachments shall be electronic files in Adobe Acrobat PDF format.
- D. **Architect's Action:** Architect will review each RFI, determine action required, and respond. **Allow 10 working days for Architect's response** for each RFI. RFIs received by Architect after 1:00 p.m. will be considered as received the following working day.
 1. The following Construction Manager-generated RFIs will be returned without action:
 - a. Requests for approval of submittals.
 - b. Requests for approval of substitutions.
 - c. Requests for approval of Construction Manager's means and methods.
 - d. Requests for coordination information already indicated in the Contract Documents.
 - e. Requests for adjustments in the Contract Time or the Contract Sum.
 - f. Requests for interpretation of Architect's actions on submittals.
 - g. Incomplete RFIs or inaccurately prepared RFIs.
 2. Architect's action may include a request for additional information, in which case Architect's time for response will date from time of receipt of additional information.
 3. Architect's action on RFIs that may result in a change to the Contract Time or the Contract Sum may be eligible for Construction Manager to submit Change Proposal according to Section 012600 - Contract Modification Procedures.
 - a. If Construction Manager believes the RFI response warrants change in the Contract Time or the Contract Sum, notify Architect in writing within 10 days of receipt of the RFI response and prior to beginning of work.
- E. **RFI Log:** Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number. Software log with not less than the following:
 1. Project name.
 2. Name and address of Construction Manager.
 3. Name and address of Architect.
 4. RFI number including RFIs that were returned without action or withdrawn.
 5. RFI description.
 6. Date the RFI was submitted.
 7. Date Architect's response was received.
- F. On receipt of Architect's action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Architect within seven days if Construction Manager disagrees with response.
 1. Identification of related Minor Change in the Work, Construction Change Directive, and Proposal Request, as appropriate.

1.8 PROJECT WEB SITE

- A. **Architect will provide and administer a Newforma Project Web site for purposes of hosting and managing project communication and documentation until Final Completion.** Project Web site will include the following functions:
 1. Project directory.
 2. Project correspondence.
 3. Meeting minutes.
 4. Contract modifications forms and logs.
 5. RFI forms and logs.
 6. Task and issue management.
 7. Photo documentation.
 8. Schedule and calendar management.

9. Submittals forms and logs.
 10. Payment application forms.
 11. Drawing and specification document hosting, viewing, and updating.
 12. Online document collaboration.
 13. Reminder and tracking functions.
 14. Archiving functions.
- B. Construction Manager, subcontractors, and other parties granted access by Architect to Project Web site shall execute a data licensing agreement in the form of Agreement acceptable to Architect and Architect.

1.9 PROJECT MEETINGS

- A. **Preconstruction Conference:** Architect will schedule and conduct a preconstruction conference before starting construction, at a time convenient to Owner and Architect.
1. Architect will conduct the conference to review responsibilities and personnel assignments.
 2. **Attendees:** Authorized representatives of Owner, Architect, and their consultants; Construction Manager and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
 3. **Agenda:** Discuss items of significance that could affect progress, including the following:
 - a. Designation of key personnel and their duties.
 - b. Lines of communications.
 - c. Tentative construction schedule.
 - d. Critical work sequencing and long-lead items.
 - e. **Development of BIM coordination model in NavisWorks for coordination of work between trades, G. C., and A/E team.**
 - f. Procedures for processing field decisions and Change Orders.
 - g. Procedures for RFIs.
 - h. Procedures for testing and inspecting.
 - i. Procedures for processing Applications for Payment.
 - j. Submittal procedures.
 - k. Preparation of record documents.
 - l. Use of the premises.
 - m. Work restrictions.
 - n. Working hours.
 - o. Owner's occupancy requirements.
 - p. Responsibility for temporary facilities and controls.
 - q. Procedures for moisture and mold control.
 - r. Procedures for disruptions and shutdowns.
 - s. Construction waste management.
 - t. Parking availability.
 - u. Office, work, and storage areas.
 - v. Equipment deliveries and priorities.
 - w. Security.
 - x. Progress cleaning.
 4. **Minutes:** Architect will record and distribute meeting minutes to each party present and to parties requiring information
- B. **Preinstallation Conferences:** Conduct a preinstallation conference at Project site before each construction activity that requires coordination with other construction and as required by individual Specification Sections.
1. **Attendees:** Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Owner and Architect of scheduled meeting dates.
 2. **Agenda:** Review progress of other construction activities and preparations for the

particular activity under consideration, including requirements for the following:

- a. Contract Documents.
 - b. Options.
 - c. Related RFIs.
 - d. Related Change Orders.
 - e. Purchases.
 - f. Deliveries.
 - g. Submittals.
 - h. Review of mockups.
 - i. Possible conflicts.
 - j. Compatibility requirements.
 - k. Time schedules.
 - l. Weather limitations.
 - m. Manufacturer's written instructions.
 - n. Warranty requirements.
 - o. Compatibility of materials.
 - p. Acceptability of substrates.
 - q. Temporary facilities and controls.
 - r. Space and access limitations.
 - s. Regulations of authorities having jurisdiction.
 - t. Testing and inspecting requirements.
 - u. Installation procedures.
 - v. Coordination with other work.
 - w. Required performance results.
 - x. Protection of adjacent work.
 - y. Protection of construction and personnel.
3. **Minutes:** Construction Manager shall record and distribute meeting minutes containing significant conference discussions, agreements, and disagreements, including required corrective measures and actions. Distribute minutes of the meeting to each party present and to other parties requiring information.
 4. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.
- C. **Project Closeout Conference:** Schedule and conduct a project closeout conference, at a time convenient to Owner and Architect, but no later than 90 days prior to the scheduled date of Substantial Completion.
1. Conduct the conference to review requirements and responsibilities related to Project closeout.
 2. **Attendees:** Authorized representatives of Owner, Architect, and their consultants; Construction Manager and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the meeting. Participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
 3. **Agenda:** Discuss items of significance that could affect or delay Project closeout, including the following:
 - a. Preparation of record documents.
 - b. Procedures required prior to inspection for Substantial Completion and for final inspection for acceptance.
 - c. Submittal of written warranties.
 - d. Requirements for preparing operations and maintenance data.
 - e. Requirements for delivery of material samples, attic stock, and spare parts.
 - f. Requirements for demonstration and training.
 - g. Preparation of Construction Manager's punch list.
 - h. Procedures for processing Applications for Payment at Substantial Completion and for final payment.
 - i. Submittal procedures.

- j. Owner's partial occupancy requirements.
 - k. Installation of Owner's furniture, fixtures, and equipment.
 - l. Responsibility for removing temporary facilities and controls.
- 4. **Minutes: Construction Manager shall record and distribute the meeting minutes** to each party present and to parties requiring information.
- D. **Owner-Architect-Construction Manager Meetings:** Conduct Owner-Architect-Construction Manager (OAC) meetings at regular intervals.
 - 1. Coordinate dates of meetings with preparation of payment requests.
 - 2. **Attendees:** In addition to representatives of Owner and Architect, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
 - 3. **Agenda:** Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
 - a. Construction Manager's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Construction Manager's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
 - 1) Review schedule for next period.
 - b. Review present and future needs of each entity present, including the following:
 - 1) Interface requirements.
 - 2) Sequence of operations.
 - 3) Status of submittals.
 - 4) Temporary facilities and controls.
 - 5) Progress cleaning.
 - 6) Quality and work standards.
 - 7) Status of correction of deficient items.
 - 8) Field observations.
 - 9) Status of RFIs.
 - 10) Status of proposal requests.
 - 11) Pending changes.
 - 12) Status of Change Orders.
 - 13) Pending claims and disputes.
 - 14) Documentation of information for payment requests.
 - 4. **Minutes: Construction Manager shall record and distribute the meeting minutes** to each party present and to parties requiring information unless otherwise directed by the Architect.
 - a. **Schedule Updating: Revise Construction Manager's construction schedule after each progress meeting** where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 013200

CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes:** Administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:
 - 1. **Startup construction schedule.**
 - 2. **Construction Manager's construction schedule.**
 - 3. **Construction schedule updating reports.**
 - 4. **Daily construction reports.**
 - 5. **Material location reports.**
 - 6. **Site condition reports.**
 - 7. **Special reports.**

1.3 DEFINITIONS

- A. **Activity:** A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction project. Activities included in a construction schedule consume time and resources.
 - 1. **Critical Activity:** An activity on the critical path that must start and finish on the planned early start and finish times.
 - 2. **Predecessor Activity:** An activity that precedes another activity in the network.
 - 3. **Successor Activity:** An activity that follows another activity in the network.
- B. **CPM:** Critical path method, which is a method of planning and scheduling a construction project where activities are arranged based on activity relationships. Network calculations determine when activities can be performed and the critical path of Project.
- C. **Critical Path:** The longest connected chain of interdependent activities through the network schedule that establishes the minimum overall Project duration and contains no float.
- D. **Event:** The starting or ending point of an activity.
- E. **Float:** The measure of leeway in starting and completing an activity.
 - 1. Float time is not for the exclusive use or benefit of either Owner or Construction Manager, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date.
 - 2. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.
 - 3. Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned Project completion date.

1.4 INFORMATIONAL SUBMITTALS

- A. Format for Submittals: Submit required submittals in the following format:
 - 1. PDF electronic file.
- B. **Startup construction schedule.**
- C. **Construction Manager's Construction Schedule: Initial schedule, of size required to display entire schedule for entire construction period.**
- D. Construction Schedule Updating Reports: Submit with Applications for Payment.
- E. Daily Construction Reports: Submit at weekly intervals.
- F. Material Location Reports: Submit at weekly intervals.
- G. Site Condition Reports: Submit at time of discovery of differing conditions.
- H. Special Reports: Submit at time of unusual event.

1.5 QUALITY ASSURANCE

- A. **Prescheduling Conference: Conduct conference at Project site** to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to the preliminary construction schedule and Construction Manager's construction schedule, including, but not limited to, the following:
1. Review software limitations and content and format for reports.
 2. Discuss constraints, including phasing, work stages, area separations, interim milestones, and partial Owner occupancy.
 3. Review delivery dates for Owner-furnished products.
 4. Review schedule for work of Owner's separate contracts.
 5. Review submittal requirements and procedures.
 6. Review time required for review of submittals and resubmittals.
 7. Review requirements for tests and inspections by independent testing and inspecting agencies.
 8. Review time required for Project closeout and Owner startup procedures.
 9. Review and finalize list of construction activities to be included in schedule.
 10. Review procedures for updating schedule.

PART 2 - PRODUCTS

2.1 CONSTRUCTION MANAGER'S CONSTRUCTION SCHEDULE, GENERAL

- A. **Time Frame: Extend schedule from date established for the Notice to Proceed to date of Substantial Completion and Final Completion.**
- B. **Activities:** Comply with the following:
1. Activity Duration: Define activities so no activity is longer than 10 days, unless specifically allowed by Architect.
 2. Procurement Activities: Include procurement process activities for long lead items and major items, requiring a cycle of more than 60 days, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.
 3. Substantial Completion: Indicate completion in advance of date established for Substantial Completion, and allow time for Architect's administrative procedures necessary for certification of Substantial Completion.
- C. **Constraints:** Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule, and show how the sequence of the Work is affected.
1. Phasing: Arrange list of activities on schedule by phase.
 2. Work by Owner: Include a separate activity for each portion of the Work performed by Owner.
 3. Owner-Furnished Products: Include a separate activity for each product. Include delivery date indicated in Section 011000 "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
 4. Work Restrictions: Show the effect of the following items on the schedule:
 - a. Coordination with existing construction.
 - b. Limitations of continued occupancies.
 - c. Uninterruptible services.
 - d. Partial occupancy before Substantial Completion.
 - e. Use of premises restrictions.
 - f. Provisions for future construction.
 - g. Seasonal variations.
 - h. Environmental control.
 5. Work Stages: Indicate important stages of construction for each major portion of the Work, including, but not limited to, the following:
 - a. Subcontract awards.
 - b. Submittals.
 - c. Purchases.

- d. Mockups.
 - e. Fabrication.
 - f. Sample testing.
 - g. Deliveries.
 - h. Installation.
 - i. Tests and inspections.
 - j. Adjusting.
 - k. Curing.
 - l. Startup and placement into final use and operation.
- D. **Milestones:** Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed, Substantial Completion, and final completion.
 - E. **Upcoming Work Summary:** Prepare summary report indicating activities scheduled to occur or commence prior to submittal of next schedule update.
 - F. **Recovery Schedule:** When periodic update indicates the Work is 14 or more calendar days behind the current approved schedule, submit a separate recovery schedule indicating means by which Construction Manager intends to regain compliance with the schedule. Indicate changes to working hours, working days, crew sizes, and equipment required to achieve compliance, and date by which recovery will be accomplished.

2.2 STARTUP CONSTRUCTION SCHEDULE

- A. **Bar-Chart Schedule:** Submit startup, horizontal, bar-chart-type construction schedule within seven days of date established for the Notice to Proceed.
- B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line. Outline significant construction activities for first 90 days of construction.

2.3 CONSTRUCTION MANAGER'S CONSTRUCTION SCHEDULE (CPM SCHEDULE)

- A. General: Prepare network diagrams using AON (activity-on-node) format.
- B. **CPM Schedule:** Prepare Construction Manager's construction schedule using a time-scaled CPM network analysis diagram for the Work.
 - 1. Develop network diagram in sufficient time to submit CPM schedule so it can be accepted for use no later than 60 days after date established for the Notice to Proceed.
 - a. Failure to include any work item required for performance of this Contract shall not excuse Construction Manager from completing all work within applicable completion dates, regardless of Architect's approval of the schedule.
 - 2. Establish procedures for monitoring and updating CPM schedule and for reporting progress. Coordinate procedures with progress meeting and payment request dates.
 - 3. Use "one workday" as the unit of time for individual activities. Indicate nonworking days and holidays incorporated into the schedule in order to coordinate with the Contract Time.
- C. **CPM Schedule Preparation:** Prepare a list of all activities required to complete the Work. Using the startup network diagram, prepare a skeleton network to identify probable critical paths.
 - 1. **Activities:** Indicate the estimated time duration, sequence requirements, and relationship of each activity in relation to other activities. Include estimated time frames for the following activities:
 - a. Mobilization and demobilization.
 - b. Purchase of materials.
 - c. Delivery.
 - d. Fabrication.
 - e. Utility interruptions.
 - f. Installation.
 - g. Work by Owner that may affect or be affected by Construction Manager's activities.
 - h. Testing.
 - i. Punch list and final completion.
 - 2. **Critical Path Activities:** Identify critical path activities, including those for interim

- completion dates. Scheduled start and completion dates shall be consistent with Contract milestone dates.
3. Processing: Process data to produce output data on a computer-drawn, time-scaled network. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the CPM schedule within the limitations of the Contract Time.
 4. Format: Mark the critical path. Locate the critical path near center of network; locate paths with most float near the edges.
- D. **Contract Modifications:** For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using a network fragment to demonstrate the effect of the proposed change on the overall project schedule.
- E. **Initial Issue of Schedule: Prepare initial network diagram from a sorted activity list indicating straight "early start-total float."** Identify critical activities. Prepare tabulated reports showing the following:
1. Construction Manager or subcontractor and the Work or activity.
 2. Description of activity.
 3. Main events of activity.
 4. Immediate preceding and succeeding activities.
 5. Early and late start dates.
 6. Early and late finish dates.
 7. Activity duration in workdays.
 8. Total float or slack time.
 9. Average size of workforce.
 10. Dollar value of activity (coordinated with the schedule of values).
- F. **Schedule Updating:** Concurrent with making revisions to schedule, prepare tabulated reports showing the following:
1. Identification of activities that have changed.
 2. Changes in early and late start dates.
 3. Changes in early and late finish dates.
 4. Changes in activity durations in workdays.
 5. Changes in the critical path.
 6. Changes in total float or slack time.
 7. Changes in the Contract Time.

2.4 THREE WEEK LOOK-AHEAD SCHEDULE

- A. Prepare Construction Manager's 3 Week Look Ahead Schedule outlining each trade that will be working on the site on each day and for each phase of the project. Review at each OAC meeting.

2.5 REPORTS

- A. **Daily Construction Reports:** Prepare a daily construction report recording the following information concerning events at Project site:
1. List of subcontractors at Project site.
 2. Approximate count of personnel at Project site.
 3. Equipment at Project site.
 4. Material deliveries.
 5. High and low temperatures and general weather conditions, including presence of rain or snow.
 6. Accidents.
 7. Meetings and significant decisions.
 8. Unusual events (see special reports).
 9. Stoppages, delays, shortages, and losses.
 10. Meter readings and similar recordings.
 11. Emergency procedures.
 12. Orders and requests of authorities having jurisdiction.
 13. Change Orders received and implemented.

14. Construction Change Directives received and implemented.
 15. Services connected and disconnected.
 16. Equipment or system tests and startups.
 17. Partial completions and occupancies.
 18. Substantial Completions authorized.
- B. **Material Location Reports:** At weekly intervals, prepare and submit a comprehensive list of materials delivered to and stored at Project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a statement of progress on and delivery dates for materials or items of equipment fabricated or stored away from Project site. Indicate the following categories for stored materials:
1. Material stored prior to previous report and remaining in storage.
 2. Material stored prior to previous report and since removed from storage and installed.
 3. Material stored following previous report and remaining in storage.
- C. **Site Condition Reports:** Immediately on discovery of a difference between site conditions and the Contract Documents, prepare and submit a detailed report. Submit with a Request for Information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

2.6 SPECIAL REPORTS

- A. General: Submit special reports directly to Owner within one day of an occurrence. Distribute copies of report to parties affected by the occurrence.
- B. **Reporting Unusual Events:** When an event of an unusual and significant nature occurs at Project site, whether or not related directly to the Work, prepare and submit a special report. List chain of events, persons participating, response by Construction Manager's personnel, evaluation of results or effects, and similar pertinent information. Advise Owner in advance when these events are known or predictable.

PART 3 - EXECUTION

3.1 CONSTRUCTION MANAGER'S CONSTRUCTION SCHEDULE

- A. **Construction Manager's Construction Schedule Updating:** At monthly intervals, update schedule to reflect actual construction progress and activities. Issue schedule one week before each regularly scheduled progress meeting.
1. Revise schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
 2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
 3. As the Work progresses, indicate final completion percentage for each activity.
- B. Distribution: Distribute copies of approved schedule to Architect, Owner, separate contractors, testing and inspecting agencies, and other parties identified by Construction Manager with a need-to-know schedule responsibility.
1. Post copies in Project meeting rooms and temporary field offices.
 2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.

END OF SECTION

SECTION 013233

PHOTOGRAPHIC DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Administrative and procedural requirements for the following:**
 - 1. **Preconstruction photographs.**
 - 2. **Periodic construction photographs.**
 - 3. ~~**Open wall photographs.**~~
 - 4. **Final completion construction photographs.**

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 CONSTRUCTION PHOTOGRAPHS

- A. General: Take photographs using the maximum range of depth of field, and that are in focus, to clearly show the Work. Photographs with blurry or out-of-focus areas will not be accepted.
 - 1. **Maintain key plan in latest version of BlueBeam software with each set of construction photographs that identifies each photographic location.**
- B. **Key Plan:** Key plan of Project site and building shall be maintained in latest version of BlueBeam software with notation of vantage points marked for location and direction of each photograph. Indicate elevation or story of construction. Include same information as corresponding photographic documentation.
- C. **Digital Images: Digital images in JPG format exactly as originally recorded in the digital camera, without alteration, manipulation, editing, or modifications using image-editing software.**
 - 1. **Digital Camera: Minimum sensor resolution of 8 megapixels.**
 - 2. **Format: Minimum 3200 by 2400 pixels with same aspect ratio as the sensor, uncropped, date and time stamped, in folder named by date of photograph, accompanied by key plan file.**
 - 3. **Identification:** Provide the following information with each image description in file metadata tag:
 - a. Name of Project.
 - b. Name and contact information for photographer.
 - c. Name of Architect.
 - d. Name of Construction Manager.
 - e. Date and time photograph was taken.
 - f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
 - g. Unique sequential identifier keyed to accompanying key plan.
 - 4. **Field Office Images:** Maintain one set of images accessible in the field office at Project site, available at all times for reference. Identify images in the same manner as those submitted to Architect.
- D. **Preconstruction Photographs:** Before starting construction, take not less than 30 digital photographs of Project site and surrounding properties, including existing items to remain during construction, from different vantage points, as directed by Architect.
 - 1. Flag construction limits before taking construction photographs.
 - 2. Take not less than 20 photographs to show existing conditions adjacent to property before

- starting the Work.
3. Take not less than 20 photographs of existing buildings either on or adjoining property to accurately record physical conditions at start of construction.
 4. Take additional photographs as required to record settlement or cracking of adjacent structures, pavements, and improvements.
- E. **Periodic Construction Photographs:** Take not less than 30 digital photographs monthly, coinciding with the cutoff date associated with each Application for Payment. During each of the following construction phases, take not less than four of the required shots from same vantage point each time to create a time-lapse sequence as follows:
1. Commencement of the Work, through completion of subgrade construction.
 2. Above-grade structural framing.
 3. Exterior building enclosure.
 4. Interior Work, through date of Substantial Completion.
- F. ~~**Open Wall Photographs:** Allow \$1,500 for an independent photographer to take digital photographs of exterior walls prior to installation of specified cladding and interior walls prior to closing up walls. Capture all utilities and blocking in walls. Attach photos to final PDF as-builts electronically in Bluebeam or similar program. Locate keys geographically correctly on plans.~~
- G. **Final Completion Construction Photographs:** Take not less than 30 digital photographs after date of Substantial Completion for submission as project record documents.
1. Do not include date stamp.
- H. **Additional Photographs:** Owner and Architect may request digital photographs in addition to periodic photographs specified.
1. Three days' notice will be given, where feasible.
 2. In emergency situations, take additional digital photographs within 24 hours of request.
 3. Circumstances that could require additional digital photographs include, but are not limited to, the following:
 - a. Special events planned at Project site.
 - b. Immediate follow-up when on-site events result in construction damage or losses.
 - c. Photographs to be taken at fabrication locations away from Project site. These photographs are not subject to unit prices or unit-cost allowances.
 - d. Substantial Completion of a major phase or component of the Work.
 - e. Extra record photographs at time of final acceptance.
 - f. Owner's request for special publicity photographs.

END OF SECTION

SECTION 013300

SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Requirements for the submittal schedule and administrative and procedural requirements for submitting following:**
 - 1. **Product Data.**
 - 2. **Shop Drawings.**
 - 3. **Samples**
 - 4. **Other submittals.**

1.3 DEFINITIONS

- A. Action Submittals: Written and graphic information and physical samples that require Architect's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."
- B. Informational Submittals: Written and graphic information and physical samples that do not require Architect's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

1.4 ACTION SUBMITTALS

- A. **Submittal Schedule:** Submit a schedule of submittals **within 21 days of the notice to proceed**, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Architect and additional time for handling and reviewing submittals required by those corrections.
 - 1. Coordinate submittal schedule with list of subcontracts, the schedule of values, and Construction Manager's construction schedule.
 - 2. **Initial Submittal Schedule: Submit concurrently with startup construction schedule. Include submittals required during the first 60 days of construction.** List those submittals required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
 - 3. **Final Submittal: Submit concurrently with the first complete submittal of Construction Manager's construction schedule.**
 - a. Submit revised submittal schedule to reflect changes in current status and timing for submittals.
 - 4. **Format:** Arrange the following information in a tabular format:
 - a. Scheduled date for first submittal.
 - b. Specification Section number and title.
 - c. Submittal category: Action; informational.
 - d. Name of subcontractor.
 - e. Description of the Work covered.
 - f. Scheduled date for Architect's final release or approval.
 - g. Scheduled date of fabrication.
 - h. Scheduled dates for purchasing.
 - i. Scheduled dates for installation.
 - j. Activity or event number.

1.5 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

- A. **All Submittals shall be prepared by qualified personnel within the continental United States (no exceptions).** Construction Manager shall require all shop drawings and submittals to be prepared by individuals and firms located within in the Continental United States. Submittals provided by individuals and firms located outside the United States will not be reviewed by the Design Team and will be returned for resubmittal.
- B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
 2. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
 3. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
 - a. **Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.**
- C. **Processing Time:** Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
1. **Initial Review: Allow 15 days for initial review of each submittal.** Allow additional time if coordination with subsequent submittals is required. Architect will advise Construction Manager when a submittal being processed must be delayed for coordination.
 2. **Intermediate Review:** If intermediate submittal is necessary, process it in same manner as initial submittal.
 3. **Resubmittal Review: Allow another 15 days for review of each resubmittal.**
 4. **Sequential Review: Where sequential review of submittals by Architect's consultants, Owner, or other parties is indicated, allow 30 days for initial review of each submittal.**
 5. **Concurrent Consultant Review: Where the Contract Documents indicate that submittals may be transmitted simultaneously to Architect and to Architect's consultants, allow 21 days for review of each submittal.** Submittal will be returned to Architect before being returned to Construction Manager.
- D. **Electronic Submittals: Submit submittals, except samples, only via Newforma or agreed upon project management software in PDF electronic formatted file.** Architect will return annotated file. Annotate and retain one copy of file as an electronic Project record document file. Identify and incorporate information in each electronic submittal file as follows:
1. Assemble complete submittal package into a single indexed file incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
 2. **Name file with submittal number or other unique identifier, including revision identifier.**
 - a. **File name shall use project identifier and Specification Section number followed by a hyphen and revision number. (ex. 063000-01r1, 063000-01r2)**
 3. Provide means for insertion to permanently record Construction Manager's review and approval markings and action taken by Architect.
 4. **Transmittal Form for Electronic Submittals:** Use electronic form acceptable to Architect, containing the following information:
 - a. Project name.
 - b. Date.
 - c. Name and address of Architect.
 - d. Name of Construction Manager.
 - e. Name of firm or entity that prepared submittal.
 - f. Names of subcontractor, manufacturer, and supplier.

- g. Category and type of submittal.
 - h. Submittal purpose and description.
 - i. Specification Section number and title.
 - j. Specification paragraph number or drawing designation and generic name for each of multiple items.
 - k. Drawing number and detail references, as appropriate.
 - l. Location(s) where product is to be installed, as appropriate.
 - m. Related physical samples submitted directly.
 - n. Indication of full or partial submittal.
 - o. Transmittal number.
 - p. Submittal and transmittal distribution record.
 - q. Other necessary identification.
 - r. Remarks.
5. **Metadata:** Include the following information as keywords in the electronic submittal file metadata:
- a. Project name.
 - b. Number and title of appropriate Specification Section.
 - c. Manufacturer name.
 - d. Product name.
- E. **Options:** Identify options requiring selection by Architect.
- F. **Deviations and Additional Information:** On an attached separate sheet, prepared on Construction Manager's letterhead, record relevant information, requests for data, revisions other than those requested by Architect on previous submittals, and deviations from requirements in the Contract Documents, including minor variations and limitations. Include same identification information as related submittal.
- G. **Resubmittals:** Make resubmittals in same form as initial submittal.
- 1. Note date and content of previous submittal.
 - 2. Note date and content of revision in label or title block and clearly indicate extent of revision.
 - 3. Resubmit submittals until they are marked with approval notation from Architect's action stamp.
- H. **Use for Construction:** Retain complete copies of submittals on Project site. Use only final action submittals that are marked with approval notation from Architect's action stamp.

PART 2 - PRODUCTS

2.1 SUBMITTAL PROCEDURES

- A. **General Submittal Procedure Requirements:** Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.
- 1. **Post electronic submittals as PDF electronic files directly to Newforma or approved Project Web site specifically established for Project.**
 - 2. **Certificates and Certifications Submittals:** Provide a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity and shown in color.
 - 3. Schedule submittals to expedite Project in accordance with approved Construction Schedules and in such sequence as to cause no delay in the Work or in the activities of Owner.
 - 4. **Do not submit bulk or large numbers of submittals at one time, if so submitted, the review time will be extended to length of time required by Architect to properly review bulk submittals.**
 - 5. **Submit related groups of work components such as interior finishes, mechanical, electrical, structural steel, rebar, and concrete together for cross coordination.**
 - 6. **Submittals will be returned without processing if, in the opinion of the Architect:**
 - a. **Submittals were not prepared within the continental United States.**

- b. **Construction Manager has not thoroughly reviewed and coordinated submittal.**
 - c. **Submittals have not been stamped by Construction Manager for coordination of the Work and conformance with the Drawings and Specifications prior to submission to Architect.**
 - d. **Submittals are not initialed or signed by authorized person.**
 - e. **Submittals are not dated.**
 - f. **Submittals are not provided in related groups.**
 - g. **Large and multiple submittals are submitted to the A/E not allowing adequate time to review them all with the prescribed time limits.**
 - h. **Items to be used are not specifically marked as being the selected product.**
- 7. **Do not perform Work on any element of the Work requiring submittal and review of shop drawings, product data, samples, or other similar submittals until respective submittal has been approved by Architect (No Exceptions!).**
- B. **Product Data:** Collect information into a single submittal for each element of construction and type of product or equipment.
 - 1. If information must be specially prepared for submittal because standard published data are not suitable for use, submit as Shop Drawings, not as Product Data.
 - 2. **Mark each submittal to show which specific products and options are being submitted for use on this project.**
 - 3. Include the following information, as applicable:
 - a. Manufacturer's catalog cuts.
 - b. Manufacturer's product specifications.
 - c. Standard color charts.
 - d. Statement of compliance with specified referenced standards.
 - e. Testing by recognized testing agency.
 - f. Application of testing agency labels and seals.
 - g. Notation of coordination requirements.
 - 4. For equipment, include the following in addition to the above, as applicable:
 - a. Wiring diagrams showing factory-installed wiring.
 - b. Printed performance curves.
 - c. Operational range diagrams.
 - d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.
- C. **Shop Drawings:** Prepare Project-specific information, drawn accurately to scale. **Do not base Shop Drawings on reproductions of the Contract Documents** or standard printed data, unless submittal based on Architect's digital data drawing files is otherwise permitted on a signed licensing agreement and \$25.00 transfer fee has been provided.
 - 1. **Preparation:** Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:
 - a. Identification of products.
 - b. Schedules.
 - c. Compliance with specified standards.
 - d. Notation of coordination requirements.
 - e. Notation of dimensions established by field measurement.
 - f. Relationship and attachment to adjoining construction clearly indicated.
 - g. Seal and signature of professional engineer if specified.
 - 2. **Sheet Size:** Except for templates, patterns, and similar full-size drawings, submit Shop Drawings on sheets at least 8-1/2 by 11 inches, but no larger than 30 by 42 inches.
- D. **Samples:** Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.
 - 1. **Where samples and final products are required to match Architect's sample, obtain sample from Architect prior to matching and selecting of final vendor.**
 - 2. **Transmit Samples that contain multiple, related components such as accessories**

- together in one submittal package.**
3. **Identification:** Attach label on unexposed side of Samples that includes the following:
 - a. Generic description of Sample.
 - b. Product name and name of manufacturer.
 - c. Sample source.
 - d. **Number and title of applicable Specification Section.**
 - e. Specification paragraph number and generic name of each item.
 4. For projects where electronic submittals are required, provide corresponding electronic submittal of Sample transmittal, digital image file illustrating Sample characteristics, and identification information for record.
 5. **Disposition:** Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.
 - a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
 - b. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Construction Manager.
 6. **Samples for Initial Selection:** Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.
 - a. **Number of Samples:** Submit at least **three full sets** of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Architect will return submittal with options selected.
 7. **Samples for Verification:** Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.
 - a. **Number of Samples:** Submit at least **three sets** of Samples. Architect will retain one Sample sets; remainder will be returned. Mark up and retain one returned Sample set as a project record sample.
 - 1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
 - 2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three sets of paired units that show approximate limits of variations.
 - E. **Coordination Drawing Submittals:** Comply with requirements specified in Section 013100 "Project Management and Coordination."
 - F. **Construction Manager's Construction Schedule:** Comply with requirements specified in Section 013200 "Construction Progress Documentation."
 - G. **Application for Payment and Schedule of Values:** Comply with requirements specified in Section 012900 "Payment Procedures."
 - H. **Test and Inspection Reports and Schedule of Tests and Inspections Submittals:** Comply with requirements specified in Section 014000 "Quality Requirements."
 - I. **Closeout Submittals and Maintenance Material Submittals:** Comply with requirements specified in Section 017700 "Closeout Procedures."
 - J. **Maintenance Data:** Comply with requirements specified in Section 017823 "Operation and Maintenance Data."
 - K. **Qualification Data:** Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.

- L. **Welding Certificates:** Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification and Procedure Qualification Record on AWS forms. Include names of firms and personnel certified.
- M. **Installer Certificates:** Submit written statements on manufacturer's letterhead certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.
- N. **Manufacturer Certificates:** Submit written statements on manufacturer's letterhead certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.
- O. **Product Certificates:** Submit written statements on manufacturer's letterhead certifying that product complies with requirements in the Contract Documents.
- P. **Material Certificates:** Submit written statements on manufacturer's letterhead certifying that material complies with requirements in the Contract Documents.
- Q. **Material Test Reports:** Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.
- R. **Product Test Reports:** Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.
- S. **Research Reports:** Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:
 - 1. Name of evaluation organization.
 - 2. Date of evaluation.
 - 3. Time period when report is in effect.
 - 4. Product and manufacturers' names.
 - 5. Description of product.
 - 6. Test procedures and results.
 - 7. Limitations of use.
- T. **Preconstruction Test Reports:** Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.
- U. **Compatibility Test Reports:** Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.
- V. **Field Test Reports:** Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.
- W. **Design Data:** Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers.

2.2 DELEGATED-DESIGN SERVICES

- A. **Performance and Design Criteria:** Where professional design services or certifications by a design professional are specifically required of Construction Manager by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
 - 1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.
- B. **Delegated-Design Services Certification:** In addition to Shop Drawings, Product Data, and

other required submittals, submit digitally signed PDF electronic file of certificate, signed in color and sealed by the responsible design professional, for each product and system specifically assigned to Construction Manager to be designed or certified by a design professional.

1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

PART 3 - EXECUTION

3.1 CONSTRUCTION MANAGER'S REVIEW

- A. **Action and Informational Submittals:** Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Architect.
- B. **Project Closeout and Maintenance Material Submittals:** See requirements in Section 017700 "Closeout Procedures."
- C. **Approval Stamp:** Stamp each submittal with a uniform, approval stamp. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of Construction Manager's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.2 ARCHITECT'S ACTION

- A. **Action Submittals:** Architect will review each submittal, make marks to indicate corrections or revisions required, and return it. Architect will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action.
 1. Submittals stamped **"No Exception Taken"**: No corrections or resubmittal required; fabrication may proceed.
 2. Submittals stamped **"Make Corrections Noted"**: Comply with noted corrections and modifications; and proceed with the Work. If for any reason noted corrections and modifications cannot be fully complied with, resubmit for review requesting clarification; do not proceed with fabrication. When submittals are returned with "Make Corrections Noted" stamp, do not resubmit the noted corrections for re-review unless the original submittal contains additional information, revisions, or the original noted corrections cannot be incorporated.
 3. Submittals stamped **"Rejected"** or **"Revise and Resubmit"**: Revise and resubmit for review; do not proceed with fabrication. Clearly indicate revisions, including corrections, to previous submittal. **Disapproved submittals will not be considered valid cause for construction delay.**
- B. **Informational Submittals:** Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.
- C. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.
- D. **Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned for resubmittal without review.**
- E. Catalog cuts or product selection pages that are not fully marked as to the exact model, size, color, or other information specific to the item being used on this project will be returned as incomplete.
- F. Submittals not required by the Contract Documents may be returned by the Architect without action.

END OF SECTION

SECTION 014000

QUALITY REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Administrative and procedural requirements for quality assurance and quality control.**
- B. **Mock-ups.**

1.3 DEFINITIONS

- A. **Quality-Assurance Services:** Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.
- B. **Quality-Control Services:** Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Services do not include contract enforcement activities performed by Architect.
- C. **Mockups:** Full-size physical assemblies that are constructed on-site. Mockups are constructed to verify selections made under Sample submittals; to demonstrate aesthetic effects and, where indicated, qualities of materials and execution; to review coordination, testing, or operation; to show interface between dissimilar materials; and to demonstrate compliance with specified installation tolerances. Mockups are not Samples. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.
- D. **Preconstruction Testing:** Tests and inspections performed specifically for Project before products and materials are incorporated into the Work, to verify performance or compliance with specified criteria.
- E. **Product Testing:** Tests and inspections that are performed by an NRTL, an NVLAP, or a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with specified requirements.
- F. **Source Quality-Control Testing:** Tests and inspections that are performed at the source, e.g., plant, mill, factory, or shop.
- G. **Field Quality-Control Testing:** Tests and inspections that are performed on-site for installation of the Work and for completed Work.
- H. **Testing Agency:** An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.
- I. **Installer/Applicator/Erector:** Construction Manager or another entity engaged by Construction Manager as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations.
 - 1. Use of trade-specific terminology in referring to a trade or entity does not require that certain construction activities be performed by accredited or unionized individuals, or that requirements specified apply exclusively to specific trade(s).
- J. **Experienced:** When used with an entity or individual, "experienced" means having successfully completed a minimum of five previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

1.4 TESTING AND INSPECTING SERVICES

- A. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Construction Manager of responsibility for compliance

with the Contract Document requirements.

1. Specific quality-assurance and quality-control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.
2. Specified tests, inspections, and related actions do not limit Construction Manager's other quality-assurance and quality-control procedures that facilitate compliance with the Contract Document requirements.
3. Requirements for Construction Manager to provide quality-assurance and quality-control services required by Architect, Owner, or authorities having jurisdiction are not limited by provisions of this Section.
4. Specific test and inspection requirements are not specified in this Section.

1.5 CONFLICTING REQUIREMENTS

- A. Referenced Standards: **If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement.** Refer conflicting requirements that are different, but apparently equal, to Architect for a decision before proceeding.
- B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Architect for a decision before proceeding.

1.6 INFORMATIONAL SUBMITTALS

- A. Construction Manager's Quality-Control Plan: For quality-assurance and quality-control activities and responsibilities.
- B. Qualification Data: For Construction Manager's quality-control personnel.

1.7 CONSTRUCTION MANAGER'S QUALITY-CONTROL PLAN

- A. **Quality-Control Plan, General: Submit quality-control plan within 10 days of Notice to Proceed, and not less than five days prior to preconstruction conference.** Submit in format acceptable to Architect. Identify personnel, procedures, controls, instructions, tests, records, and forms to be used to carry out Construction Manager's quality-assurance and quality-control responsibilities. Coordinate with Construction Manager's construction schedule.
- B. Quality-Control Personnel Qualifications: Engage qualified full-time personnel trained and experienced in managing and executing quality-assurance and quality-control procedures similar in nature and extent to those required for Project.
- C. Submittal Procedure: Describe procedures for ensuring compliance with requirements through review and management of submittal process. Indicate qualifications of personnel responsible for submittal review.
- D. Continuous Inspection of Workmanship: Describe process for continuous inspection during construction to identify and correct deficiencies in workmanship in addition to testing and inspection specified. Indicate types of corrective actions to be required to bring work into compliance with standards of workmanship established by Contract requirements and approved mockups.
- E. Monitoring and Documentation: Maintain testing and inspection reports including log of approved and rejected results. Include work Architect has indicated as nonconforming or defective. Indicate corrective actions taken to bring nonconforming work into compliance with requirements. Comply with requirements of authorities having jurisdiction.

1.8 REPORTS AND DOCUMENTS

- A. **Test and Inspection Reports:** Prepare and submit certified written reports specified in other Sections. Include the following:
 1. Date of issue.

2. Project title and number.
 3. Name, address, and telephone number of testing agency.
 4. Dates and locations of samples and tests or inspections.
 5. Names of individuals making tests and inspections.
 6. Description of the Work and test and inspection method.
 7. Identification of product and Specification Section.
 8. Complete test or inspection data.
 9. Test and inspection results and an interpretation of test results.
 10. Record of temperature and weather conditions at time of sample taking and testing and inspecting.
 11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
 12. Name and signature of laboratory inspector.
 13. Recommendations on retesting and reinspecting.
- B. **Manufacturer's Technical Representative's Field Reports:** Prepare written information documenting manufacturer's technical representative's tests and inspections specified in other Sections. Include the following:
1. Name, address, and telephone number of technical representative making report.
 2. Statement on condition of substrates and their acceptability for installation of product.
 3. Statement that products at Project site comply with requirements.
 4. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
 5. Results of operational and other tests and a statement of whether observed performance complies with requirements.
 6. Statement whether conditions, products, and installation will affect warranty.
 7. Other required items indicated in individual Specification Sections.
- C. **Factory-Authorized Service Representative's Reports:** Prepare written information documenting manufacturer's factory-authorized service representative's tests and inspections specified in other Sections. Include the following:
1. Name, address, and telephone number of factory-authorized service representative making report.
 2. Statement that equipment complies with requirements.
 3. Results of operational and other tests and a statement of whether observed performance complies with requirements.
 4. Statement whether conditions, products, and installation will affect warranty.
 5. Other required items indicated in individual Specification Sections.
- D. **Permits, Licenses, and Certificates:** For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

1.9 QUALITY ASSURANCE

- A. General: Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.
- B. **Manufacturer Qualifications:** A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- C. **Fabricator Qualifications:** A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- D. **Installer Qualifications:** A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.
- E. **Professional Engineer Qualifications:** A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing

engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that are similar in material, design, and extent to those indicated for this Project.

- F. **Testing Agency Qualifications:** An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspecting indicated, as documented according to ASTM E 329; and with additional qualifications specified in individual Sections; and, where required by authorities having jurisdiction, that is acceptable to authorities.
 - 1. NRTL: A nationally recognized testing laboratory according to 29 CFR 1910.7.
 - 2. NVLAP: A testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program.
- G. **Manufacturer's Technical Representative Qualifications:** An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
- H. **Factory-Authorized Service Representative Qualifications:** An authorized representative of manufacturer who is trained and approved by manufacturer to inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
- I. **Preconstruction Testing:** Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following:
 - 1. Construction Manager responsibilities include the following:
 - a. Provide test specimens representative of proposed products and construction.
 - b. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
 - c. Provide sizes and configurations of test assemblies, mockups, and laboratory mockups to adequately demonstrate capability of products to comply with performance requirements.
 - d. Build site-assembled test assemblies and mockups using installers who will perform same tasks for Project.
 - 2. **Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect,** with copy to Construction Manager. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.
- J. **Mockups:** Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:
 - 1. Build mockups in location and of size indicated or, if not indicated, as directed by Architect.
 - 2. Notify Architect seven days in advance of dates and times when mockups will be constructed.
 - 3. Employ supervisory personnel who will oversee mockup construction. Employ workers that will be employed during the construction at Project.
 - 4. Demonstrate the proposed range of aesthetic effects and workmanship.
 - 5. Obtain Architect's approval of mockups before starting work, fabrication, or construction.
 - a. Allow seven days for initial review and each re-review of each mockup.
 - 6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 - 7. Demolish and remove mockups when directed unless otherwise indicated.
 - 8. **Integrated Exterior Mockup:** Provide mockup of the exterior envelope erected separately from the building but on the project site. Mockup consists of multiple products, assemblies, and sub-assemblies. At a minimum, the Integrated Exterior Mockup shall include each type of exterior finish including brick, terra cotta cast stone, curtain wall, fixed aluminum windows, glazing, coping, Spanish tile roofing, metal panels, gutter, downspout, mortar and sealants. Mock-up shall include stud backup materials, with

sheathing, air barrier, flashings, masonry ties, etc. Refer to drawings for other requirements. **Allowance for Integrated Exterior Mockup shall be \$30,000.00.**

9. **Interior Finishes Mockups:** Provide a separate 8' by 8' mockup of each interior painted wall color used on the project depicting the paint. Include backup construction in the mock-up.

1.10 QUALITY CONTROL

- A. **Owner Responsibilities:** Where quality-control services are indicated as Owner's responsibility, Owner will engage a qualified testing agency to perform these services.
 1. Owner will furnish Construction Manager with names, addresses, and telephone numbers of testing agencies engaged and a description of types of testing and inspecting they are engaged to perform.
 2. Costs for retesting and reinspecting construction that replaces or is necessitated by work that failed to comply with the Contract Documents will be charged to Construction Manager, and the Contract Sum will be adjusted by Change Order.
- B. **Construction Manager Responsibilities:** Tests and inspections not explicitly assigned to Owner are Construction Manager's responsibility. Perform additional quality-control activities required to verify that the Work complies with requirements, whether specified or not.
 1. Unless otherwise indicated, provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Construction Manager by authorities having jurisdiction, whether specified or not.
 2. Where services are indicated as Construction Manager's responsibility, engage a qualified testing agency to perform these quality-control services.
 - a. Construction Manager shall not employ same entity engaged by Owner, unless agreed to in writing by Owner.
 3. Notify testing agencies at least 24 hours in advance of time when Work that requires testing or inspecting will be performed.
 4. Where quality-control services are indicated as Construction Manager's responsibility, submit a certified written report, in duplicate, of each quality-control service.
 5. Testing and inspecting requested by Construction Manager and not required by the Contract Documents are Construction Manager's responsibility.
 6. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.
- C. **Manufacturer's Field Services:** Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Section 013300 "Submittal Procedures."
- D. **Manufacturer's Technical Services:** Where indicated, engage a manufacturer's technical representative to observe and inspect the Work. Manufacturer's technical representative's services include participation in preinstallation conferences, examination of substrates and conditions, verification of materials, observation of Installer activities, inspection of completed portions of the Work, and submittal of written reports.
- E. **Retesting/Reinspecting:** Regardless of whether original tests or inspections were Construction Manager's responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.
- F. **Testing Agency Responsibilities:** Cooperate with Architect and Construction Manager in performance of duties. Provide qualified personnel to perform required tests and inspections.
 1. Notify Architect and Construction Manager promptly of irregularities or deficiencies observed in the Work during performance of its services.
 2. Determine the location from which test samples will be taken and in which in-situ tests are conducted.
 3. Conduct and interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from requirements.
 4. Submit a certified written report of each test, inspection, and similar quality-control service through Construction Manager.

5. Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
6. Do not perform any duties of Construction Manager.
- G. **Associated Services:** Cooperate with agencies performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:
 1. Access to the Work.
 2. Incidental labor and facilities necessary to facilitate tests and inspections.
 3. Adequate quantities of representative samples of materials that require testing and inspecting. Assist agency in obtaining samples.
 4. Facilities for storage and field curing of test samples.
 5. Delivery of samples to testing agencies.
 6. Preliminary design mix proposed for use for material mixes that require control by testing agency.
 7. Security and protection for samples and for testing and inspecting equipment at Project site.
- H. **Coordination:** Coordinate sequence of activities to accommodate required quality-assurance and quality-control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.
 1. Schedule times for tests, inspections, obtaining samples, and similar activities.
- I. **Schedule of Tests and Inspections:** Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents as a component of Construction Manager's quality-control plan. Coordinate and submit concurrently with Construction Manager's construction schedule. Update as the Work progresses.

1.11 **BUILDING ENVELOPE CONSULTANT AND TESTING AGENCIES**

- A. **If not provided by Owner, Construction Manager shall engage a qualified and experienced building envelope consultant** to review the envelope details and specifications and to provide periodic testing and inspections of the building envelope.
- B. The purpose of the building envelope consultant is to provide an independent, third-party verification that the installed performance of the building enclosure meets or exceeds the minimum performance requirements set forth by the Contract Documents.
- C. Responsibilities of Consultant:
 1. Review Contract Documents detailing and specifications and make recommendations if needed.
 2. Review building envelope submittals for compliance with Contract Documents.
 3. Periodically witness installation of various aspects of the building envelope assembly.
 4. **Components to be tested and inspected:**
 - a. **Vertical waterproofing.**
 - b. **Below grade vapor retarder.**
 - c. **Cold-formed metal framing with sheathing and fluid-applied membrane air barrier.**
 - d. **Unit masonry, terra cotta cladding, and cast stone masonry.**
 - e. **Glazed aluminum curtain walls, entrances, storefronts, fixed aluminum windows, and glazing.**
 - f. **Joint sealants.**
 - g. **Spanish clay tiles, modified bitumen and metal roofing, associated flashings, and metal wall panels.**
 5. Prepare and maintain the exterior enclosure construction deficiencies log. Promptly notify Architect and Construction Manager of irregularities or deficiencies in work that are observed during the performance of services.

1.12 **SPECIAL TESTS AND INSPECTIONS**

- A. **Special Tests and Inspections: Conducted by a qualified testing agency or special**

inspector as required by the Project Specifications or the Authorities Having Jurisdiction (AHJ), as indicated in individual Specification Sections, and as follows:

1. Verifying that manufacturer maintains detailed fabrication and quality-control procedures and reviews the completeness and adequacy of those procedures to perform the Work.
2. Notifying Architect and Construction Manager promptly of irregularities and deficiencies observed in the Work during performance of its services.
3. Submitting a certified written report of each test, inspection, and similar quality-control service to Architect with copy to Construction Manager and to authorities having jurisdiction.
4. Submitting a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
5. Interpreting tests and inspections and stating in each report whether tested and inspected work complies with or deviates from the Contract Documents.
6. Retesting and reinspecting corrected work.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 TEST AND INSPECTION LOG

- A. **Test and Inspection Log:** Prepare a record of tests and inspections. Include the following:
 1. Date test or inspection was conducted.
 2. Description of the Work tested or inspected.
 3. Date test or inspection results were transmitted to Architect.
 4. Identification of testing agency or special inspector conducting test or inspection.
- B. Maintain log at Project site. Post changes and revisions as they occur. Provide access to test and inspection log for Architect's reference during normal working hours.

3.2 REPAIR AND PROTECTION

- A. General: On completion of testing, inspecting, sample taking, and similar services, repair damaged construction and restore substrates and finishes.
 1. Provide materials and comply with installation requirements specified in other Specification Sections or matching existing substrates and finishes. Restore patched areas and extend restoration into adjoining areas with durable seams that are as invisible as possible. Comply with the Contract Document requirements for cutting and patching in Section 017300 - Execution.
- B. Protect construction exposed by or for quality-control service activities.
- C. Repair and protection are Construction Manager's responsibility, regardless of the assignment of responsibility for quality-control services.

3.3 SCHEDULE OF TESTING

- A. Provide all testing required in individual specification sections including, but not limited to:
 1. Masonry grout.
 2. Air barrier membrane thickness and air leakage.
 3. Cast-in-place concrete: slump, air entrainment, temperature as required by ACI, structural engineer and codes.
 4. Below and above grade waterproofing and dampproofing.
 5. Window testing (vacuum chamber and hose stream as specified).
 6. Slab surface moisture testing.
 7. Grout slump and compressive strength.
 8. Mortar slump and compressive strength.

END OF SECTION

SECTION 014200

REFERENCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 DEFINITIONS

- A. General: Basic Contract definitions are included in the Conditions of the Contract.
- B. **"Approved"**: When used to convey Architect's action on Construction Manager's submittals, applications, and requests, "approved" is limited to Architect's duties and responsibilities as stated in the Conditions of the Contract.
- C. **"Directed"**: A command or instruction by Architect. Other terms including "requested," "authorized," "selected," "required," and "permitted" have the same meaning as "directed."
- D. **"Indicated"**: Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."
- E. **"Regulations"**: Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.
- F. **"Furnish"**: Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.
- G. **"Install"**: Unload, temporarily store, unpack, assemble, erect, place, anchor, apply, work to dimension, finish, cure, protect, clean, and similar operations at Project site.
- H. **"Provide"**: Furnish and install, complete and ready for the intended use.
- I. **"Project Site"**: Space available for performing construction activities. The extent of Project site is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.

1.3 INDUSTRY STANDARDS

- A. Applicability of Standards: Unless the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.
- B. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.
- C. Copies of Standards: Each entity engaged in construction on Project should be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.
 - 1. Where copies of standards are needed to perform a required construction activity, obtain copies directly from publication source.

1.4 ABBREVIATIONS AND ACRONYMS

- A. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities indicated in Gale's "Encyclopedia of Associations: National Organizations of the U.S." or in Columbia Books' "National Trade & Professional Associations of the United States."
- B. Code Agencies: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities. Retain "Federal Government Agencies" Paragraph below if required. The Section Text in MasterSpec Sections is prepared assuming list is retained.

- C. Federal Government Agencies: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities.
- D. Standards and Regulations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the standards and regulations.
- E. State Government Agencies: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities.

TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Requirements for following:**

1. **Temporary utilities.**
2. **Support facilities.**
3. **Security and protection facilities.**

1.3 USE CHARGES

- A. General: Installation and removal of and use charges for temporary facilities shall be included in the Contract Sum unless otherwise indicated. Allow other entities to use temporary services and facilities without cost, including, but not limited to, Owner's construction forces, testing agencies, and authorities having jurisdiction.
- B. **Sewer Service:** Owner will pay sewer-service use charges for sewer usage by all entities for construction operations.
- C. **Water Service:** Owner will pay water-service use charges for water used by all entities for construction operations.
- D. **Electric Power Service:** Owner will pay electric-power-service use charges for electricity used by all entities for construction operations.

1.4 QUALITY ASSURANCE

- A. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.
- B. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.
- C. **Accessible Temporary Egress: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines, ICC/ANSI A117.1, and applicable accessibility standards.**

1.5 PROJECT CONDITIONS

- A. Temporary Use of Permanent Facilities: Engage Installer of each permanent service to assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Owner's acceptance, regardless of previously assigned responsibilities.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. **Portable Chain-Link Fencing:** Minimum 2 inch, 0.148 inch thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet high with galvanized-steel pipe posts; minimum 2-3/8 inch OD line posts and 2-7/8 inch OD corner and pull posts, with 1-5/8 inch OD top and bottom rails. Provide galvanized-steel bases for supporting posts.

2.2 TEMPORARY FACILITIES

- A. **Field Offices,** General: Prefabricated or mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading.

- B. **Common-Use Field Office:** Of sufficient size to accommodate needs of Owner, Architect, and construction personnel office activities and to accommodate Project meetings specified in other Division 01 Sections. Keep office clean and orderly. Furnish and equip offices as follows:
 - 1. Furniture required for Project-site documents including file cabinets, plan tables, plan racks, and bookcases.
 - 2. **Conference room of sufficient size to comfortably accommodate meetings of 10 individuals or more.** Provide electrical power service and 120-V ac duplex receptacles, with no fewer than two receptacles on each wall. Furnish room with conference table, 10 chairs, 4 foot square tack and marker boards, **60 inch flat screen monitor and computer with BlueBeam, Revit, NavisWorks, and other applicable software** to view drawings and specifications during OAC meetings.
 - 3. Drinking water and private toilet.
 - 4. Coffee machine and supplies.
 - 5. Heating and cooling equipment necessary to maintain a uniform indoor temperature of 68 to 72 deg F.
 - 6. Lighting fixtures capable of maintaining average illumination of 40 fc at desk height.
- C. **Storage and Fabrication Sheds:** Provide sheds sized, furnished, and equipped to accommodate materials and equipment for construction operations.
 - 1. Store combustible materials apart from building.

2.3 EQUIPMENT

- A. **Fire Extinguishers:** Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.
- B. **HVAC Equipment:** Unless Owner authorizes use of permanent HVAC system, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.
 - 1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
 - 2. **Heating Units:** Listed and labeled for type of fuel being consumed, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
 - 3. **Permanent HVAC System: If Owner authorizes use of permanent HVAC system** for temporary use during construction, provide filter with MERV of 8 at each return-air grille in system and remove at end of construction and clean HVAC system as required in Section 017700 - Closeout Procedures.
 - 4. **Dehumidification Equipment:** Refer to Section 015300 for type and required use.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Work.
- B. **Provide each facility ready for use when needed to avoid delay.** Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.2 TEMPORARY UTILITY INSTALLATION

- A. General: Arrange with utility company, Owner, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.
- B. **Sewers and Drainage:** Provide temporary utilities to remove effluent lawfully.
 - 1. Connect temporary sewers to municipal system as directed by authorities having jurisdiction.
- C. **Water Service:** Install water service and distribution piping in sizes and pressures adequate for construction.
- D. **Sanitary Facilities:** Provide temporary toilets, wash facilities, and drinking water for use of

construction personnel. Comply with requirements of authorities having jurisdiction for type, number, location, operation, and maintenance of fixtures and facilities.

- E. **Heating:** Provide temporary heating required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of low temperatures or high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed.
- F. **Ventilation and Humidity Control:** Provide temporary ventilation and dehumidification equipment as required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce ambient condition required and minimize energy consumption.
- G. **Electric Power Service:** Provide electric power service and distribution system of sufficient size, capacity, and power characteristics required for construction operations.
- H. **Lighting:** Provide temporary lighting with local switching that provides adequate illumination for construction operations, observations, inspections, and traffic conditions.
 - 1. Install and operate temporary lighting that fulfills security and protection requirements without operating entire system.
 - 2. Install lighting for Project identification sign.
 - 3. **Lighting during tile installation: Provide a minimum of 70 fc during installation of all tile work.**
- I. **Telephone Service:** Provide temporary telephone service in common-use facilities for use by all construction personnel. Install one telephone line(s) for each field office.
 - 1. Provide additional telephone lines for the following:
 - a. Provide a dedicated telephone line for each facsimile machine in each field office.
 - b. Provide one telephone line(s) for Owner's use.
 - 2. At each telephone, post a list of important telephone numbers.
 - a. Police and fire departments.
 - b. Ambulance service.
 - c. Construction Manager's home office.
 - d. Construction Manager's emergency after-hours telephone number.
 - e. Architect's office.
 - f. Owner's office.
 - g. Principal subcontractors' field and home offices.
 - 3. Provide superintendent with cellular telephone or portable two-way radio for use when away from field office.
- J. **Electronic Communication Service:** Provide a desktop computer in the primary field office adequate for use by Architect and Owner to access Project electronic documents and maintain electronic communications. Equip computer with not less than the following:
 - 1. Processor: Intel Pentium D or Intel CoreDuo, 3.0 GHz processing speed.
 - 2. Memory: 4 gigabyte.
 - 3. Disk Storage: 500 gigabyte hard-disk drive and combination DVD-RW/CD-RW drive.
 - 4. **Display: 60 inch LCD monitor with 256-Mb dedicated video RAM.**
 - 5. Full-size keyboard and mouse.
 - 6. **Network Connectivity: 10/100BaseT Ethernet hard wired to ISP network (not satellite based).**
 - 7. Operating System: Microsoft Windows Vista Business.
 - 8. **Productivity Software:**
 - a. Microsoft Office, including Word, Excel, and Outlook.
 - b. Adobe Reader 7.0 or higher.
 - c. WinZip 7.0 or higher.
 - d. **BlueBeam drawing and document management software.**
 - e. **AutoDesk Revit, latest editions.**
 - f. **AutoDesk NavisWorks, latest edition.**
 - 9. Printer: "All-in-one" unit equipped with printer server, combining color printing,

- photocopying, scanning, and faxing, or separate units for each of these three functions.
10. Internet Service: Broadband modem, router and ISP, equipped with hardware firewall, providing minimum 384 Kbps upload and 1 Mbps download speeds at each computer.
 11. Internet Security: Integrated software, providing software firewall, virus, spyware, phishing, and spam protection in a combined application.
 12. Backup: External hard drive, minimum 40 gigabyte, with automated backup software providing daily backups.

3.3 SUPPORT FACILITIES INSTALLATION

- A. General: Comply with the following:
 1. Provide construction for temporary offices, shops, and sheds located within construction area or within 30 feet of building lines that is noncombustible according to ASTM E 136. Comply with NFPA 241.
 2. Maintain support facilities until Architect schedules Substantial Completion inspection. Remove before Substantial Completion. Personnel remaining after Substantial Completion will be permitted to use permanent facilities, under conditions acceptable to Owner.
- B. **Temporary Roads and Paved Areas:** Construct and maintain temporary roads and paved areas adequate for construction operations. Locate temporary roads and paved areas within construction limits indicated on Drawings.
 1. Provide dust-control treatment that is nonpolluting and nontracking. Reapply treatment as required to minimize dust.
- C. **Traffic Controls:** Comply with requirements of authorities having jurisdiction.
 1. Protect existing site improvements to remain including curbs, pavement, and utilities.
 2. Maintain access for fire-fighting equipment and access to fire hydrants.
- D. **Parking:** Provide temporary parking areas for construction personnel.
- E. **Project Signs:** Provide Project signs as specified herein. Unauthorized signs are not permitted.
 1. **Identification Signs:** Provide **two Project identification signs** of the type indicated on Drawings located at the corners of the site as directed by the Architect.
 - a. Signs shall be **8 foot square** and constructed of 2 sheets of 4' by 8' CDX plywood with **three 15' tall 4 inch by 4 inch treated wood posts** set in 36 inch deep by 12 inch diameter concrete piers. Sign shall be printed on exterior media by a reputable sign maker with the high resolution graphics file provided by the Architect.
 2. Temporary Signs: Provide other signs as indicated and as required to inform public and individuals seeking entrance to Project.
 - a. Provide temporary, directional signs for construction personnel and visitors.
 3. Maintain and touchup signs so they are legible at all times.
- F. **Waste Disposal Facilities:** Provide waste-collection containers in sizes adequate to handle waste from construction operations. Comply with requirements of authorities having jurisdiction. Comply with progress cleaning requirements in Section 017300 - Execution.
- G. **Existing Elevator Use (Where Applicable):** Use of Owner's existing elevators will be permitted, provided elevators are cleaned and maintained in a condition acceptable to Owner. At Substantial Completion, restore elevators to condition existing before initial use, including replacing worn cables, guide shoes, and similar items of limited life.
 1. Do not load elevators beyond their rated weight capacity.
 2. Provide protective coverings, barriers, devices, signs, or other procedures to protect elevator car and entrance doors and frame. If, despite such protection, elevators become damaged, engage elevator Installer to restore damaged work so no evidence remains of correction work. Return items that cannot be refinished in field to the shop, make required repairs and refinish entire unit, or provide new units as required.
- H. **Temporary Use of Permanent Stairs:** Use of new stairs for construction traffic will be permitted, provided stairs are protected and finishes restored to new condition at time of Substantial Completion.

3.4 SECURITY AND PROTECTION FACILITIES INSTALLATION

- A. **Protection of Existing Facilities:** Protect existing vegetation, equipment, structures, utilities, and other improvements at Project site and on adjacent properties, except those indicated to be removed or altered. Repair damage to existing facilities.
- B. **Environmental Protection:** Provide protection, operate temporary facilities, and conduct construction as required to comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects.
- C. **Temporary Erosion and Sedimentation Control:** Provide measures to prevent soil erosion and discharge of soil-bearing water runoff and airborne dust to undisturbed areas and to adjacent properties and walkways, according to erosion- and sedimentation-control Drawings.
 - 1. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross tree- or plant- protection zones.
 - 2. Inspect, repair, and maintain erosion- and sedimentation-control measures during construction until permanent vegetation has been established.
 - 3. Clean, repair, and restore adjoining properties and roads affected by erosion and sedimentation from Project site during the course of Project.
 - 4. Remove erosion and sedimentation controls and restore and stabilize areas disturbed during removal.
- D. **Stormwater Control:** Comply with requirements of authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of stormwater from heavy rains.
- E. **Tree and Plant Protection:** Install fixed (non-movable) temporary fencing located as indicated or outside the drip line of trees to protect vegetation from damage from construction operations. Protect tree root systems from damage, flooding, and erosion.
- F. **Pest Control:** Engage pest-control service to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests and to perform extermination and control procedures at regular intervals so Project will be free of pests and their residues at Substantial Completion. Perform control operations lawfully, using environmentally safe materials.
- G. **Site Enclosure Fence:** Before construction operations begin, furnish and install site enclosure fence in a manner that will prevent people and animals from easily entering site except by entrance gates.
 - 1. Extent of Fence: As required to enclose entire Project site or portion determined sufficient to accommodate construction operations.
 - 2. Maintain security by limiting number of keys and restricting distribution to authorized personnel. Furnish one set of keys to Owner.
- H. **Security Enclosure and Lockup:** Install temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security. Lock entrances at end of each work day.
- I. **Barricades, Warning Signs, and Lights:** Comply with requirements of authorities having jurisdiction for erecting structurally adequate barricades, including warning signs and lighting.
- J. **Temporary Egress:** Maintain temporary egress from existing occupied facilities as indicated and as required by authorities having jurisdiction.
- K. **Temporary Enclosures:** Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.
 - 1. Where heating or cooling is needed and permanent enclosure is incomplete, insulate temporary enclosures.
- L. **Temporary Partitions:** Provide floor-to-ceiling dustproof partitions to limit dust and dirt migration and to separate occupied areas from fumes and noise.
 - 1. Construct dustproof partitions with gypsum wallboard with joints taped on occupied side, and fire-retardant-treated plywood on construction operations side.
 - 2. Construct dustproof partitions with two layers of 6 mil polyethylene sheet on each side. Overlap and tape full length of joints.
 - 3. Protect air-handling equipment.
 - 4. Provide walk-off mats at each entrance through temporary partition.

- M. **Temporary Fire Protection:** Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241; manage fire-prevention program.
1. Prohibit smoking in construction areas.
 2. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition according to requirements of authorities having jurisdiction.
 3. Develop and supervise an overall fire-prevention and -protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.
 4. Provide temporary standpipes and hoses for fire protection. Hang hoses with a warning sign stating that hoses are for fire-protection purposes only and are not to be removed. Match hose size with outlet size and equip with suitable nozzles.

3.5 OPERATION, TERMINATION, AND REMOVAL

- A. Maintenance: Maintain facilities in good operating condition until removal.
1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.
- B. Operate Project-identification-sign lighting daily from dusk until 12:00 midnight.
- C. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until Substantial Completion.
- D. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.
1. Materials and facilities that constitute temporary facilities are property of Construction Manager. Owner reserves right to take possession of Project identification signs.
 2. Remove temporary roads and paved areas not intended for or acceptable for integration into permanent construction. Where area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil. Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns. Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by authorities having jurisdiction.
 3. At Substantial Completion, repair, renovate, and clean permanent facilities used during construction period. Comply with final cleaning requirements specified in Section 017700 - Closeout Procedures.

END OF SECTION

SECTION 015300

MOLD PREVENTION MEASURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

- 1. **Administrative and procedural requirements to help prevent mold contamination during and after construction.**

1.3 SUBMITTALS

- A. Reports: Submit reports required in this Section, including but not limited to the following:
 - 1. Sightings of existing mold.
 - 2. Moisture contents of materials.
 - 3. Exterior sealant cracks, damage, and deterioration.

1.4 QUALITY ASSURANCE

- A. **Preconstruction Meeting: Review requirements of this Section at Preconstruction Meeting.**

1.5 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft. Comply with manufacturer's written instructions.
- B. **Do not bring gypsum board and other finishes materials into building until building is "dried in" or in an environmentally conditioned state. Protect finish materials stored within building. Stage materials off the floor and cover with waterproof covering. Examples of these materials include, but are not limited to, insulation, gypsum products, wall coverings, carpet, acoustical ceiling panels, millwork, wood products, etc.**
- C. **Remove damaged materials or materials that have become wet from construction, such as wood, insulation, gypsum board or finishes within 24 hours. Do not install or allow such materials to remain in the building after getting wet.**

1.6 PROJECT CONDITIONS

- A. **Remove water found within building during construction immediately, but no later than 24 hours.**
 - 1. Energize lift stations and sump pumps as early in Project as possible. Use temporary pumps if necessary to get water out of building and drain lines.
- B. **Ventilation: Provide temporary outside air ventilation as building becomes enclosed.**
- C. **Maintain a clean project site, free from hazards, garbage, food, and debris.**
- D. **Eating, drinking, and smoking are not permitted within building.**
- E. **Slope perimeter grades, both temporary and final, away from the building structure to provide positive drainage during construction.**
- F. Verify that condensate pans drain properly beginning with initial installation.
- G. Flash roof penetrations immediately. Do not allow water to penetrate through them to areas below.
- H. **Seal window openings prior to window installation with plastic to prevent entry of rain.**
- I. **Cover stored and installed ductwork and installed duct openings with plastic to prevent dust, debris, and moisture from entering ductwork. Repair damaged plastic protection on a daily basis.**

- J. Do not operate air handling equipment below 60 degrees F supply air temperature until building is 100 percent enclosed.
- K. Monitor humidity and temperature for conformance to installation requirements defined by material and equipment manufacturers.
- L. **Check moisture content of gypsum board prior to applying finishes. Record findings and forward to the Architect prior to installing finishes.**

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Installation shall be by trained professional
- B. **Floor Drains:** Connect floor drains as soon as possible. Do not cover floor drains with tape or other obstructions during construction. Clean out floor drain lines to mains prior to Substantial Completion.
- C. **Moisture-Resistant Gypsum Wall Board (GWB):** Install fiberglass faced moisture resistant GWB on room side of all exterior walls where GWB is called for on documents. Provide fiberglass faced moisture resistant GWB at all restrooms, janitor closets and other areas where moisture and/or plumbing fixtures are present.
- D. **Wall Assemblies:**
 - 1. Install exterior batt insulation (if specified), vapor retarder, and interior gypsum board only after building is dried in.
 - 2. Keep bottom of installed gypsum board off floor 1/2 inch so as not to wick moisture off the slab.
- E. **Cavity Conditions: Clean and inspect cavity conditions prior to covering, sealing, or restricting access. Vacuum cavity spaces prior to enclosing.**
- F. **Plumbing:** Pressure test plumbing piping identified as insulated on Project prior to installation of insulation.
- G. **Roof Mounted Equipment:** Inspect rooftop units and other roof-mounted equipment for rain leaks immediately after first rain. **Water test base flashings and roof curbs in the presence of Architect with hose immediately after installation.** Seal leaks immediately.
- H. **Sealants:** Inspect exterior sealants for cracks, damage, or deterioration. Record findings and forward to Architect. Repair as needed.
- I. **HVAC Equipment (Permanent HVAC Equipment Used for Temporary Conditioning of Building During Construction Phases):** Install manufacturer approved HEPA or MERV filters when used for temporary conditioning activities. Provide MERV of 8 filters on return air grilles until Substantial Completion or testing of equipment occurs. Change filters and clean ductwork interior to remove dirt, dust, debris, and moisture buildup during construction.
- J. **Water test 25% of exterior windows and 100% of curtainwall installations in building. Leave drywall finishes off of interior side of window, curtainwall and storefront heads, jams, and sills until testing is complete to allow for visual inspection of leaks. Perform hose stream tests on the windows, storefronts and curtain walls. Employ window testing firm approved by the Owner and Architect.**

3.2 ADJUSTING

- A. Remove damaged materials or materials that have become wet. Replace with new materials.

3.3 DEMONSTRATION, WARRANTY AND TRAINING

- A. **Train and educate Owner's maintenance personnel on proper use of building systems. Explain how improper operation and shutting down systems during off periods (such as warmer summer months) can create mold problems.**
- B. Review building for mold problems during the 1-year warranty walk-through. Inspect exterior sealants and masonry joints for cracks and other damage or deterioration where water can penetrate building envelope, during the 1-year warranty walk-through

- C. Explain to Owner the need to establish annual building review for mold and roof maintenance.

END OF SECTION

SECTION 015634

TREE AND PLANT PROTECTION, REMOVAL, AND PRUNING

PART 1 - GENERAL

1.1 DESCRIPTION

- A. The Contractor shall provide protection of existing trees or other designated plant material in order to maintain a healthy, vigorous condition.
- B. The Contractor shall perform tree removal and pruning as specified, utilizing acceptable horticultural standards as adopted by the Texas Association of Landscape Contractors (TALC) or Texas Nurseryman Association. Such work shall include, but is not limited to, the following:
 - 1. Protection of existing trees to remain.
 - 2. Root pruning of existing trees to remain adjacent to new pavement construction.
 - 3. Pruning of tree branches and canopy adjacent to allow construction and access.
 - 4. Transplanting of trees to new locations on site. - NOT USED
 - 5. Pruning or repairing trees damaged due to site demolition operations.
 - 6. Replacement of trees severely damaged by construction work.
 - 7. Watering and fertilizing of existing trees to remain and transplanted trees.
- C. Alternates: Refer to the drawings and Division 1 Section "Alternates" for description of Work in this Section affected by alternates.

1.2 INSPECTION OF THE SITE

- A. The Contractor shall visit the site to inspect the conditions with the Owner's Representative prior to commencing work.
- B. The Contractor shall verify with the Owner's Representative the extent of existing tree protective fencing and addition or replacement of the existing protection fencing.
- C. Utilities: Determine locations of underground utilities and perform work in a manner which is intended to avoid possible damage. Hand excavate, where required, to minimize possibility of damage to underground utilities.

1.3 SEQUENCING

Coordinate installation of protection devices and other related units of Work specified in other Sections to ensure that protection of existing trees is complete prior to any on site staging or construction.

1.4 SUBMITTAL – PHOTO DOCUMENTATION

Submit a written and photographic inspection report of status of each tree to be preserved including, but not limited to, observed status of health, damage, and signs of insect, disease, mite, pests, mistletoe, mosses, lichen. Submit four (4) copies in 8-1/2 x11 format with trees numbered to corresponding site plan. Use a digital camera with at least 5.0 megapixels of resolution to document observations. Submit photo documentation prior to commencing demolition in three-hole binder.

PART 2 - PRODUCTS

2.1 WOUND PAINT

For trees within protection fencing area that may have received damage due to adjacent clearing. Petroleum or latex base tree wound paint, dark gray, brown or black in color. Spray type paints are acceptable for use on genus Quercus only.

2.2 TREE PROTECTION FENCING

Refer to the drawings for the location of proposed tree protection fencing. If not noted on the plans, then the Contractor to provide type of fencing at his discretion to preserve trees and maintain access for maintenance and inspection.

Types of fencing:

A. Non-movable fencing:

1. All elements hot dip galvanized unless otherwise shown.
2. All elements consist of the following:
 - a. Chain link fencing: Nine gauge, 2 inch mesh, 4 foot height.
 - b. Posts: 2-3/8 inches outside diameter, minimum, set 2 foot into ground.
 - c. Brace rails: 1-5/8 inches outside diameter, minimum.
 - d. Stretcher bars: 1/4 inch by 3/4 inch, minimum.

B. Movable Chain Link fencing:

1. All elements hot dip galvanized unless otherwise shown.
2. All elements consist of the following:
 - a. Chain link fencing: Nine gauge, 2 inch mesh, 4 foot height.
 - b. Posts: 2-3/8 inches outside diameter, minimum, 5 foot long.
 - c. Brace rails: 1-5/8 inches outside diameter, minimum.
 - d. Stretcher bars: 1/4 inch by 3/4 inch, minimum.
 - e. Footing: Old tire filled with concrete for setting of posts.
3. Movable Chain Link fencing: Contractor may provide alternate approved type of movable chain link fencing.

C. Orange safety netting:

1. 4' orange safety netting
2. Metal T-posts minimum four (4) foot length placed a minimum eight (8) feet on center

D. Temporary enclosures and wrapping

1. The Contractor shall protect tree trunks and root zones from damage. If fencing is not possible due to proximity of construction, then the Contractor is obligated to wrap the trunk with material sufficient to protect the trunk from any damage. The Contractor is obligated to protect the root zone from compaction and damage. The Contractor may use 2x4 pieces wired together to protect the trunk to a minimum height of eight (8) feet above grade. Mulch, gravel and plywood boards may be used to cover 100% of the root zone.

E. Miscellaneous materials: burlap, coarsely shredded hardwood mulch, septic (rounded) gravel.

2.3 MATERIALS

- A. Mulch: Coarsely shredded hardwood mulch that has been decomposing or composting for a minimum of 60 days and graded to eliminate large size materials from passing the screen.
- B. Fertilizers for Trees: Fertilize all trees with a combination of PHC for trees 27-9-9 and Mycor

Tree Injectable. Mix 8 pounds of PHC for trees and A and B packets of Mycor Tree Injectable per one hundred (100) gallons of water.

- C. Herbicides, Insecticides, Miticides and Fungicides: Legal commercial quality non-staining materials with original manufacturers' containers, properly labeled with guaranteed analysis, least toxic required.
- D. Water: Clean fresh, free of substances toxic to plant growth.
- E. Sterilant: Use a horticultural accepted sterilant for sterilizing pruning equipment.

2.4 MACHINERY AND EQUIPMENT

Machinery or tools requirements listed under this Section are NOT intended to be restrictive of specific manufacturers or models, unless so stated. Specific mention of the manufacturers is intended as a guide to illustrate the final product of the maintenance operations desired. All equipment used shall be and maintained in top working condition at all times

- A. Pruning tools shall be maintained in safe, working condition, cutting edges shall be sharp at all times.
- B. Use sharp axe for root pruning.

2.5 REPLACEMENT TREES

- A. Trees that are designated to remain or transplant and that are severely damaged, in significant decline or have died during construction shall be replaced by the Contractor at the Contractor's expense according to the values below. The Owner's Representative shall determine if replacement is necessary.
- B. Trees determined to be replaced that are 8 inch caliper or less shall be replaced with a new tree of same size and species. Owner's representative will assess the following damages for damaged, dead or dying, or removed trees to be paid by the Contractor to the Owner.

<u>Tree size – Diameter</u>	<u>Replacement Value</u>
<u>In inches</u>	<u>Each tree</u>
Greater than 8 and up to 12	\$3,000.00
Greater than 12 and up to 15	\$4,000.00
Greater than 15 inches	\$ 300.00 per caliper inch

- C. Size will be determined by measuring caliper at 12 inches above grade for trees from 4 to 12 inch caliper and at 6 inches above grade for trees from 0 to 4 inch in caliper. Trees determined to be replaced that are larger than 12 inch in caliper shall be measured at 4 feet above natural ground elevation, or from top of stump, if removed.

PART 3 - EXECUTION

3.1 PERSONNEL

The Contractor shall furnish personnel licensed in the removal of trees cleared from the site.

3.2 FIELD VERIFICATION

The Contractor shall field verify with the Owner's Representative trees to be removed prior to commencing work.

3.3 TREE PRESERVATION

- A. Protect trees with tree protective fencing prior to tree removal. Install tree protective fencing past the tree drip line to protect limbs from trucks and moving objects, unless designated

otherwise on the drawing. Provide gate for access to monitor and maintain tree. Install posts eight (8) feet on center.

B. TREE PROTECTION MUST OCCUR PRIOR TO ANY SITE WORK, DEMOLITION OR GRADING.

- C. Tree protection must receive approval of the Owner's Representative prior to starting any site work.
- D. Repair injuries, abrasions and other damage to plants by cleanly removing broken members, loose and torn bark, and shape edges in order to permit drainage of rain water from wounds. Paint wounds with an approved tree wound paint.
- E. Prune branches of trees adjacent to equipment access route and equipment adjacency to trees to remain to prevent damage to canopy per approved horticultural practices.
- F. Where depth of soil over root system of existing plantings is to be modified by final grading, provide the following:
 - 1. Where increase of one (1) foot or more in elevation is shown, spread continuous layer of rock aggregate, graded one-quarter (1/4) inch to two (2) inches, six (6) inches deep from trunk to drip line of branches prior to installation of fill.
 - 2. Provide proper aeration by installing within perimeter of spread, a system of four (4) inch clay drain tile. Install vertically flush with soil surface and penetrating into layer of aggregate fill.
- G. Do not clean construction equipment, dump liquids, nor perform field maintenance on vehicles in the vicinity of the trees to be preserved.
- H. Root prune all trees adjacent to new construction at line of tree protection fencing as shown on the drawings. Use an irrigation trencher set at eighteen (18) inch depth to trench across area parallel to the extent of the tree protection fence location. Maintain fifteen (15) foot clear minimum from tree trunk unless shown otherwise on drawings.
- I. Apply two (2) inches of coarsely shredded hardwood mulch over tree root zone within fencing.

3.4 BORING NEAR TREES

- A. Bores within the root zone of large trees shall be horizontal directional bores. For pipe installation, mechanically bore the tunnel under the roots with a horizontal directional drill and hydraulic or pneumatic air excavation technology. In all cases, install the utility pipe immediately, backfill with soil and soak within the same day. Installation shall be tunnel bored beneath the tree and roots per the following chart:

Trenching Distance	
When the Tree Diameter (at 4.5' height) is	Trenching will be Replaced with Boring at this Min. Distance (10x tree diameter) from the Face of the Tree in any Direction
6-9" measured at 6"	5- 8'
10-14" measured at 54"	10 - 13'
15-19" measured at 54"	14- 16'
19-24" measured at 54"	17-19'
Over 25" measured at 54"	20'+

Depth of Tunneling	
9" or less measured at 6"	2.0'

10-14" measured at 54"	2.5'
15-19" measured at 54"	3.0'
More than 19" measured at 54" depth of tunnel	3.5'

Bore pits shall be located at a minimum distance as specified by trenching distance table above.

3.5 TREE REMOVAL

- A. Obtain Tree Removal Permit as required by the City trees to be removed as shown on the drawings.
- B. Receive approval from the Owner's Representative in the field for trees to be removed. Trees that have died or have been approved for removal shall be removed by felling with chain saws. Fell trees to avoid injuring protected trees and undergrowth or damaging utilities. Use felling methods that comply with OSHA and American Association of Nurserymen.
- C. Burning and burying debris on the Worksite is prohibited.
- D. Grind stumps and roots to depth of eighteen (18) to twenty-four (24) inches within four (4) feet radius of tree.
- E. Haul off and legally dispose of debris.

3.6 WATERING

- A. Deep root water existing tree(s) with protection fencing once every two weeks during the summer and once a month during the winter, during the duration of the project and until final acceptance. This should be adjusted to the amount of rain. However, unless it has rained at least one-half (1/2) inches since the last watering, continue to deep root water.
- B. Using a soil probe to check root ball moisture and surrounding soil moisture at each tree at least twice a week.
- C. Maintain watering saucers around trees so that enough water can be applied to establish moisture through root zones. Open saucers to allow surface drainage away from the root crown when excess water accumulates. Restore watering saucers when needed to adequately water root balls. Remove watering saucer berms at the end of the maintenance period and form mulch area around trees.
- D. Adjust frequency and length of time for watering cycles according to changing soil and weather conditions. Apply supplemental water to watering saucers by hand using a hose and water wand to break the water force if for any reason the temporary irrigation system is not providing adequate moisture.
- E. Do not permit crown roots to become exposed to air through dislodging of soil and mulch. Maintain depth of four (4) inches of mulch to reduce evaporation and frequency of watering.

3.7 MAINTENANCE OF EXISTING TREES

- A. Trees shall be continuously and routinely inspected for distress caused by construction activities. Notify Owner's representative at first sign of distress.
- B. Any Fire Ant mounds around or on top of a tree root zone shall be treated immediately and the mound removed physically. Do not allow the mound to build on the tree trunk as this will cover the tree root flare and possibly cause injury or death. Insure that any chemical application to the Fire Ant mound is safe for application atop tree root zones. Ant mounds do not need to be treated in tree masses.
- C. Trees: Pruning will be carried out by experienced pruning personnel.
 1. Receive approval in the field for extent of pruning of damaged trees from Owner's Representative.

2. Sterilize pruning tools with hydrogen peroxide or alcohol between individual plants, especially in the genus *Quercus*. Paint all wounds on plants of the genus *Quercus* with wound paint as soon as possible. Paint deliberate wounds (pruning) within 1 hour. Paint accidental wounds (storm or equipment damage or vandalism) as soon as they are observed.
3. Remove branches larger than two (2) inch in diameter with three (3) step cut.
4. Pruning will be carried out by experienced pruning personnel.
5. Raise limbs to an acceptable height as approved by the Owner's Representative. Raise limbs to seven foot height for trees within 10 feet of parking or sidewalk.
6. No weed-eaters or edgers are to be used within fifteen (15) inches of any tree. Should the need for trimming be necessary within fifteen (15) inches of any tree, it shall be done so by hand trimming only.
7. Meet requirements of ANSI A300 for Definitions, Pruning Tools and Equipment, Pruning Cuts, and Wound Treatment.
8. Perform crown cleaning to eliminate weak branches, water sprouts, dead growth, dying growth, diseased growth, and damaged growth.
9. Perform crown thinning to reduce toppling and wind damage.
10. Perform crown reduction and shaping to maintain growth within space limitations and maintain a natural appearance.
11. Retain lower branches in a "tipped back" or pinched condition to promote caliper trunk growth.
12. Do not cut back to fewer than six buds or leaves on branches.
13. Prune damaged trees or those that constitute health or safety hazards at any time of year.

3.8 WEED REMOVAL

- A. Keep mulched areas between trees and inside protection fencing and watering saucers weed free. Hand weeding weekly is preferred but as a last resort, use least toxic herbicides.
- B. Contractor shall obtain prior approval from the Owner's representative before applying the herbicides.
- C. The Contractor shall be held solely responsible for plant loss due to the application of herbicides. Any loss of plant material shall be replaced at Contractor's sole expense and all plant replacements shall be of the same species and size of the existing plant materials.
- D. Regard all herbicides as hazardous to health and dangerous to the environment; chemicals should be handled with extreme caution and only by experienced personnel. Read and follow all label directions and apply in manner to comply with local, state and federal guidelines. Limit public access to any area recently treated with herbicides.

3.9 INSECT, DISEASE, MITE AND BALL MOSS CONTROL

- A. General: Employ principles of IPM in the selection of preventative and control measures for plant pests and diseases. Insignificant pests will be tolerated providing they do not seriously threaten planting health and appearance. Monitor the site closely and take timely action to address problems identified. Use personnel licensed and experienced using materials approved by the EPA and conform to applicable laws, codes and regulations, under the direction of a licensed certified pest control operator. When necessary apply the least toxic material required for the existing problem. Apply sprays only if a pest or disease is a serious threat and cease application after problem is under control. Spray with extreme care to avoid hazards to any person, pet, or automobile in the area or adjacent areas. Meet requirements of manufacturer's current printed label and application instructions. The Contractor shall be held liable for plant damage due to the use of pesticides.

- B. Plant Condition Inspection: Inspect plant material weekly for damage and signs of insect, disease, mite and ball moss. Submit a written and photographic inspection report of observed damage, and signs of insect, disease, mite and ball moss immediately upon observation via e-mail to the Owner's Designated Representative. Use a digital camera with at least 5.0 megapixels of resolution to document observations.
- C. Spraying: When necessary apply the least toxic material required for the existing problem. Meet requirements of manufacturer's current printed instructions. Apply sprays only as approved in writing by Owner's Designated Representative.
- D. Treatment for Fire Ants: In the tree protection zone, broadcast spread Fipronil, Logic, or Award and spot treat with Orthene granules when present.

3.10 FERTILIZING AND OTHER TREATMENT

- A. Tree Fertilization Program:
 - 1. Fertilize trees on February 1, April 1, June 1, and August 1.
 - 2. Fertilize all trees with a combination of PHC for trees 27-9-9 and Mycor Tree Injectable. Mix 8 pounds of PHC for trees and A and B packets of Mycor Tree Injectable per 100 gallons of water. Apply this solution as a drench at the rate of five gallons per inch trunk diameter measured at breast height over the top of the root ball. Irrigate trees on same day of fertilizer application by operating spray heads or manually watering for 20–30 minutes. Water in short cycles so that run-off does not occur.

3.11 CLEAN-UP

Remove and dispose of protective materials, enclosures and fencing upon completion of the Work.

3.12 FINAL ACCEPTANCE

Receive approval from the Owner's Representative for the work of this section.

END OF SECTION

SECTION 016000

PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Administrative and procedural requirements for following:**

1. **Selection of products.**
2. **Product delivery, storage, and handling.**
3. **Manufacturers' standard warranties.**
4. **Special warranties.**
5. **Comparable products.**

1.3 DEFINITIONS

- A. **Products:** Items obtained for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.
 1. **Named Products:** Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature, that is current as of date of the Contract Documents.
 2. **New Products:** Items that have not previously been incorporated into another project or facility. Products salvaged or recycled from other projects are not considered new products.
 3. **Comparable Product:** Product that is demonstrated and approved through submittal process to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.
- B. **Basis-of-Design Product Specification:** A specification in which a specific manufacturer's product is named and accompanied by the words "Basis-of-Design product," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of additional manufacturers named in the specification.

1.4 SUBMITTALS

- A. **Comparable Product Requests:** Submit request for consideration of each comparable product. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
 1. Refer to Section 012500 - Substitution Procedures.
 2. **Include data to indicate compliance with the requirements specified in "Comparable Products" Article.**
 3. **Architect's Action:** If necessary, Architect will request additional information or documentation for evaluation within one week of receipt of a comparable product request. Architect will notify Construction Manager of approval or rejection of proposed comparable product request within 15 days of receipt of request, or seven days of receipt of additional information or documentation, whichever is later.
 - a. Use product specified if Architect does not issue a decision on use of a comparable product request within time allocated.
- B. **Basis-of-Design Product Specification Submittal:** Comply with requirements in

Section 013300 - Submittal Procedures. Show compliance with requirements.

1.5 QUALITY ASSURANCE

- A. Compatibility of Options: If Construction Manager is given option of selecting between two or more products for use on Project, select product compatible with products previously selected, even if previously selected products were also options.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. **Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft and vandalism. Comply with manufacturer's written instructions.**

B. **Delivery and Handling:**

1. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
2. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
3. Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
4. Inspect products on delivery to determine compliance with the Contract Documents and to determine that products are undamaged and properly protected.

C. **Storage:**

1. Store products to allow for inspection and measurement of quantity or counting of units.
2. Store materials in a manner that will not endanger Project structure.
3. Store products that are subject to damage by the elements, under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation.
4. Protect foam plastic from exposure to sunlight, except to extent necessary for period of installation and concealment.
5. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.
6. Protect stored products from damage and liquids from freezing.

1.7 PRODUCT WARRANTIES

- A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Construction Manager of obligations under requirements of the Contract Documents.

1. **Manufacturer's Warranty:** Written warranty furnished by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.
2. **Special Warranty:** Written warranty required by the Contract Documents to provide specific rights for Owner.

- B. **Special Warranties:** Prepare a written document that contains appropriate terms and identification, ready for execution.

1. **Manufacturer's Standard Form:** Modified to include Project-specific information and properly executed.
2. **Specified Form:** When specified forms are included with the Specifications, prepare a written document using indicated form properly executed.
3. See other Sections for specific content requirements and particular requirements for submitting special warranties.

- C. **Submittal Time:** Comply with requirements in Section 017700 - Closeout Procedures.

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION PROCEDURES

- A. **General Product Requirements: Provide products that comply with the Contract Documents**, are undamaged and, unless otherwise indicated, are new at time of installation.
1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
 2. **Standard Products:** If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
 3. **Architect reserves the right to limit selection to products with warranties that do not conflict with requirements of the Contract Documents.**
 4. **Where products are accompanied by the term "as selected," Architect will make selection.**
 5. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.
 6. **Or Equal: For products specified by name and accompanied by the term "or equal," or "or approved equal," or "or approved," comply with requirements in "Comparable Products" Article to obtain approval for use of an unnamed product.**
- B. **Product Selection Procedures:**
1. **Product:** Where Specifications name a single manufacturer and product, provide the named product that complies with requirements. **Comparable products or substitutions for Construction Manager's convenience will not be considered.**
 2. **Manufacturer/Source:** Where Specifications name a single manufacturer or source, provide a product by the named manufacturer or source that complies with requirements. **Comparable products or substitutions for Construction Manager's convenience will not be considered.**
 3. **Products:**
 - a. **Restricted List:** Where Specifications include a list of names of both manufacturers and products, provide one of the products listed that complies with requirements. Comparable products or substitutions for Construction Manager's convenience will not be considered .
 - b. **Non-restricted List:** Where Specifications include a list of names of both available manufacturers and products, provide one of the products listed, or an unnamed product, that complies with requirements. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product.
 4. **Manufacturers:**
 - a. **Restricted List:** Where Specifications include a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with requirements. Comparable products or substitutions for Construction Manager 's convenience will not be considered .
 - b. **Nonrestricted List:** Where Specifications include a list of available manufacturers, provide a product by one of the manufacturers listed, or a product by an unnamed manufacturer, that complies with requirements. Comply with requirements in "Comparable Products" Article for consideration of an unnamed manufacturer's product.
 5. **Basis-of-Design Product:** Where Specifications name a product, or refer to a product indicated on Drawings, and include a list of manufacturers, provide the specified or indicated product or a comparable product by one of the other named manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product by one of the other named manufacturers.
- C. **Visual Matching Specification: Where Specifications require "match Architect's sample", provide a product that complies with requirements and matches Architect's sample. Architect's decision will be final on whether a proposed product matches.**
1. If no product available within specified category matches and complies with other specified requirements, comply with requirements in Section 012500 - Substitution

Procedures for proposal of product.

- D. **Visual Selection Specification:** Where Specifications include the phrase "as selected by Architect from manufacturer's full range" or similar phrase, select products that comply with requirements. Architect will select color, gloss, pattern, density, or texture from manufacturer's full and complete product lines including both standard and premium items.

2.2 COMPARABLE PRODUCTS

- A. **Conditions for Consideration:** Architect may consider Construction Manager's request for comparable product when all of the following conditions are satisfied. If the following conditions are not satisfied, Architect may return requests without action, except to record noncompliance with these requirements:
1. Evidence that the proposed product does not require revisions to the Contract Documents, that it is consistent with the Contract Documents, and will produce the indicated results, and that it is compatible with other portions of the Work.
 2. **Comparison of the original and proposed comparable products does not require significant time on the Architect's, or Architect's consultants' part to approve the product.**
 3. **A detailed comparison of the significant qualities of proposed product and those named in the Specifications is provided for the Architect's review. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.**
 4. Evidence that proposed product provides specified warranty.
 5. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners, is provided to the Architect.
 6. Samples of the proposed product are provided, if requested.
 7. Provisions under Substitutions Section of the Specifications have been met.

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 017300

EXECUTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes:** General administrative and procedural requirements governing execution of the Work including, but not limited to, the following:
 - 1. Construction layout.
 - 2. Field engineering.
 - 3. Installation of the Work.
 - 4. Cutting and patching.
 - 5. Owner-installed products.
 - 6. Progress cleaning.
 - 7. Starting and adjusting.
 - 8. Protection of installed construction.

1.3 DEFINITIONS

- A. Cutting: Removal of in-place construction necessary to permit installation or performance of other work.
- B. Patching: Fitting and repair work required to restore construction to original conditions after installation of other work.

1.4 SUBMITTALS

- A. **Certificates:** Submit certificate signed by land surveyor certifying that location and elevation of improvements comply with requirements.
- B. **Certified Surveys:** Submit two compact disks of drawings in PDF electronic file format.

1.5 QUALITY ASSURANCE

- A. **Land Surveyor Qualifications:** A professional land surveyor who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing land-surveying services of the kind indicated.
- B. **Cutting and Patching:** Comply with requirements for and limitations on cutting and patching of construction elements.
 - 1. **Structural Elements:** When cutting and patching structural elements, notify Architect of locations and details of cutting and await directions from Architect before proceeding. Shore, brace, and support structural elements during cutting and patching. Do not cut and patch structural elements in a manner that could change their load-carrying capacity or increase deflection
 - 2. **Operational Elements:** Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety. Operational elements include but are not limited to the following:
 - a. Primary operational systems and equipment.
 - b. Fire separation assemblies.
 - c. Air or smoke barriers.
 - d. Fire-suppression systems.
 - e. Mechanical systems piping and ducts.
 - f. Control systems.

- g. Communication systems.
- h. Fire-detection and -alarm systems.
- i. Conveying systems.
- j. Electrical wiring systems.
- k. Operating systems of special construction.
- 3. **Other Construction Elements:** Do not cut and patch other construction elements or components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety. Other construction elements include but are not limited to the following:
 - a. Water, moisture, or vapor barriers.
 - b. Membranes and flashings.
 - c. Exterior wall construction.
 - d. Sprayed fire-resistive material.
 - e. Equipment supports.
 - f. Piping, ductwork, vessels, and equipment.
 - g. Noise- and vibration-control elements and systems.
 - h. Structural elements.
- 4. **Visual Elements:** Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch exposed construction in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.
- C. Manufacturer's Installation Instructions: Obtain and maintain on-site manufacturer's written recommendations and instructions for installation of products and equipment.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. General: Comply with requirements specified in other Sections.
- B. In-Place Materials: Use materials for patching identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.
 - 1. If identical materials are unavailable or cannot be used, use materials that, when installed, will provide a match acceptable to Architect for the visual and functional performance of in-place materials.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. **Existing Conditions:** The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities, mechanical and electrical systems, and other construction affecting the Work.
 - 1. **Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, and water-service piping; underground electrical services, and other utilities.**
 - 2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.
- B. **Examination and Acceptance of Conditions:** Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.
 - 1. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.

2. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
 3. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
- C. **Written Report:** Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:
1. Description of the Work.
 2. List of detrimental conditions, including substrates.
 3. List of unacceptable installation tolerances.
 4. Recommended corrections.
- D. **Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.**

3.2 PREPARATION

- A. **Existing Utility Information:** Furnish information to Owner that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.
- B. **Field Measurements:** Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
- C. **Space Requirements:** Verify space requirements and dimensions of items shown diagrammatically on Drawings.
- D. **Review of Contract Documents and Field Conditions:** Immediately on discovery of the need for clarification of the Contract Documents caused by differing field conditions outside the control of Construction Manager, submit a request for information (RFI) to Architect according to requirements in Section 013100 - Project Management and Coordination.

3.3 CONSTRUCTION LAYOUT

- A. **Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks.** If discrepancies are discovered, notify Architect promptly.
- B. **General: Engage a land surveyor to lay out the Work using accepted surveying practices.**
1. Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.
 2. Establish limits on use of Project site.
 3. Establish dimensions within tolerances indicated. **Do not scale Drawings to obtain required dimensions.**
 4. Inform installers of lines and levels to which they must comply.
 5. Check the location, level and plumb, of every major element as the Work progresses.
 6. Notify Architect when deviations from required lines and levels exceed allowable tolerances.
 7. Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.
- C. **Site Improvements:** Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and rim and invert elevations.
- D. **Building Lines and Levels:** Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.
- E. **Record Log:** Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by Architect.

3.4 FIELD ENGINEERING

- A. **Reference Points:** Locate a minimum of two existing permanent benchmarks, control points, and similar reference points in relation to USGS GIS waypoints before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.
 - 1. Do not change or relocate existing benchmarks or control points without prior written approval of Architect. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to Architect before proceeding.
 - 2. Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.
- B. **Benchmarks:** Establish and maintain a minimum of two permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.
 - 1. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.
 - 2. Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.
 - 3. Remove temporary reference points when no longer needed. Restore marked construction to its original condition.
- C. **Certified Survey:** On completion of foundation walls, major site improvements, and other work requiring field-engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.

3.5 INSTALLATION OF THE WORK

- A. General: Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.
 - 1. Make vertical work plumb and make horizontal work level.
 - 2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
 - 3. Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.
- B. **Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.**
- C. Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.
- D. Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.
- E. Sequence the Work and allow adequate clearances to accommodate movement of construction items on site and placement in permanent locations.
- F. Tools and Equipment: Do not use tools or equipment that produce harmful noise levels.
- G. Templates: Obtain and distribute to the parties involved templates for work specified to be factory prepared and field installed. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.
- H. **Blocking and Attachment:** Provide blocking as required and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work **whether or not shown on the drawings**. Where size and type of attachments are not indicated, verify size and type required for load conditions.
 - 1. **Mounting Heights:** Where mounting heights are not indicated, mount components at heights directed by Architect.
 - 2. Allow for building movement, including thermal expansion and contraction.
 - 3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to

Project site in time for installation.

- I. Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.
- J. Hazardous Materials: Use products, cleaners, and installation materials that are not considered hazardous.

3.6 CUTTING AND PATCHING

- A. **Cutting and Patching, General:** Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.
 - 1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.
- B. **Existing Warranties:** Remove, replace, patch, and repair materials and surfaces cut or damaged during installation or cutting and patching operations, by methods and with materials so as not to void existing warranties.
- C. **Temporary Support:** Provide temporary support of work to be cut.
- D. **Protection:** Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.
- E. **Adjacent Occupied Areas:** Where interference with use of adjoining areas or interruption of free passage to adjoining areas is unavoidable, coordinate cutting and patching according to requirements in Section 011000 - Summary.
- F. **Existing Utility Services and Mechanical/Electrical Systems:** Where existing services/systems are required to be removed, relocated, or abandoned, bypass such services/systems before cutting to prevent interruption to occupied areas.
- G. **Cutting:** Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.
 - 1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots neatly to minimum size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
 - 2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
 - 3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.
 - 4. Excavating and Backfilling: Comply with requirements in applicable Sections where required by cutting and patching operations.
 - 5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
 - 6. Proceed with patching after construction operations requiring cutting are complete.
- H. **Patching:** Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other work. Patch with durable seams that are as invisible as practicable. Provide materials and comply with installation requirements specified in other Sections, where applicable.
 - 1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate physical integrity of installation.
 - 2. **Exposed Finishes:** Restore exposed finishes of patched areas and extend finish restoration to finished edges of wall, ceiling or object being patched in a manner that will minimize evidence of patching and refinishing.
 - a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
 - b. Restore damaged pipe covering to its original condition.
 - 3. **Floors and Walls:** Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even

surface of uniform finish, color, texture, and appearance to edges of walls or ceilings. Remove in-place floor and wall coverings and replace with new materials to edges of walls and floors to achieve uniform color and appearance.

- a. Where patching occurs in a painted surface, prepare substrate and apply primer and intermediate paint coats appropriate for substrate over the patch, and apply final paint coat over entire surface to the nearest adjacent surface edges or corners. Provide additional coats until patch blends with adjacent surfaces.
4. **Ceilings:** Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance. At painted surfaces, paint entire surface to nearest adjacent ceiling termination or edge
5. **Exterior Building Enclosure:** Patch components in a manner that restores enclosure to a weathertight condition and ensures thermal and moisture integrity of building enclosure.
- I. **Cleaning:** Clean areas and spaces where cutting and patching are performed. Remove paint, mortar, oils, putty, and similar materials from adjacent finished surfaces.

3.7 OWNER-INSTALLED PRODUCTS

- A. Site Access: Provide access to Project site for Owner's construction personnel.
- B. Coordination: Coordinate construction and operations of the Work with work performed by Owner's construction personnel.
 1. Construction Schedule: Inform Owner of Construction Manager's preferred construction schedule for Owner's portion of the Work. Adjust construction schedule based on a mutually agreeable timetable. Notify Owner if changes to schedule are required due to differences in actual construction progress.
 2. Preinstallation Conferences: Include Owner's construction personnel at preinstallation conferences covering portions of the Work that are to receive Owner's work. Attend preinstallation conferences conducted by Owner's construction personnel if portions of the Work depend on Owner's construction.

3.8 PROGRESS CLEANING

- A. General: Clean Project site and work areas daily, including common areas. Enforce requirements strictly. Dispose of materials lawfully.
 1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
 2. Do not hold waste materials more than seven days during normal weather or three days if the temperature is expected to rise above 80 deg F.
 3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.
 - a. Use containers intended for holding waste materials of type to be stored.
- B. **Site:**
 1. **Maintain Project site free of waste materials and debris.**
 2. **Maintain positive drainage and slope away from building slab.**
- C. **Work Areas:** Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.
 1. Remove liquid spills promptly.
 2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.
- D. **Installed Work:** Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.
- E. **Concealed Spaces: Remove debris from concealed spaces before enclosing the space.**
- F. **Exposed Surfaces in Finished Areas:** Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.
- G. **Waste Disposal:** Do not bury or burn waste materials on-site. Do not wash waste materials

- down sewers or into waterways.
- H. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.
 - I. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.
 - J. Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.
- 3.9 **STARTING AND ADJUSTING**
- A. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.
 - B. Adjust equipment for proper operation. Adjust operating components for proper operation without binding.
 - C. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - D. Manufacturer's Field Service: Comply with qualification requirements in Section 014000 - Quality Requirements.
- 3.10 **PROTECTION OF INSTALLED CONSTRUCTION**
- A. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.
 - B. Comply with manufacturer's written instructions for temperature and relative humidity.

END OF SECTION

SECTION 017700

CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Administrative and procedural requirements for contract closeout, including, but not limited to, the following:**
 - 1. **Substantial Completion procedures.**
 - 2. **Final completion procedures.**
 - 3. **Warranties.**
 - 4. **Final cleaning.**
 - 5. **Repair of the Work.**

1.3 SUBMITTALS

- A. Construction Manager's List of Incomplete Items: Initial submittal at Substantial Completion.
- B. Certified List of Incomplete Items: Final submittal at Final Completion.

1.4 SUBSTANTIAL COMPLETION PROCEDURES

- A. **Construction Manager's List of Incomplete Items: Prepare and submit a list of items to be completed and corrected (Construction Manager's punch list).**
- B. **Submittals Prior to Substantial Completion:** Complete the following a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.
 - 1. Certificates of Release: Obtain and submit releases from authorities having jurisdiction permitting Owner unrestricted use of the Work and access to services and utilities. **Include certificates of occupancy, operating certificates, and similar releases from authorities having jurisdiction and utility companies.**
 - 2. Submit closeout submittals specified in other Division 01 Sections, including project record documents, operation and maintenance manuals, final completion construction photographic documentation, damage or settlement surveys, property surveys, and similar final record information.
 - 3. Submit closeout submittals specified in individual Sections, including specific warranties, maintenance service agreements, final certifications, and similar documents.
 - 4. Submit maintenance material submittals specified in individual Sections, including tools, spare parts, extra materials, and similar items, and deliver to location designated by Architect. Label with manufacturer's name and model number where applicable.
 - 5. Submit test/adjust/balance records.
 - 6. Submit changeover information related to Owner's occupancy, use, operation, and maintenance.
- C. **Procedures Prior to Substantial Completion:** Complete the following a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.
 - 1. Advise Owner of pending insurance changeover requirements.
 - 2. Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's personnel of changeover in security provisions.
 - 3. Complete startup and testing of systems and equipment.
 - 4. Perform preventive maintenance on equipment used prior to Substantial Completion.
 - 5. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Submit demonstration and training video recordings specified in

Section 017900 - Demonstration and Training.

6. Advise Owner of changeover in heat and other utilities.
7. Participate with Owner in conducting inspection and walkthrough with local emergency responders.
8. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.
9. Complete final cleaning requirements, including touchup painting.
10. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects.

D. **Inspection:** Submit a written request for inspection to determine Substantial Completion a minimum of 10 days prior to date the work will be completed and ready for final inspection and tests. On receipt of request, Architect will either proceed with inspection or notify Construction Manager of unfulfilled requirements. Architect will prepare the Certificate of Substantial Completion after inspection or will notify Construction Manager of items, either on Construction Manager's list or additional items identified by Architect, that must be completed or corrected before certificate will be issued.

1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
2. Results of completed inspection will form the basis of requirements for final completion.

1.5 FINAL COMPLETION PROCEDURES

A. **Submittals Prior to Final Completion:** Before requesting final inspection for determining final completion, complete the following:

1. Submit a final Application for Payment according to Section 012900 - Payment Procedures.
2. Certified List of Incomplete Items: Submit certified copy of Architect's Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by Architect. Certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
3. Certificate of Insurance: Submit evidence of final, continuing insurance coverage complying with insurance requirements.
4. Submit pest-control final inspection report.

B. **Inspection:** Submit a written request for final inspection to determine acceptance a minimum of 10 days prior to date the work will be completed and ready for final inspection and tests. On receipt of request, Architect will either proceed with inspection or notify Construction Manager of unfulfilled requirements. Architect will prepare a final Certificate for Payment after inspection or will notify Construction Manager of construction that must be completed or corrected before certificate will be issued.

1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

1.6 LIST OF INCOMPLETE ITEMS (PUNCH LIST)

A. **Organization of List:** Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Construction Manager that are outside the limits of construction.

1. Organize list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor.
2. Organize items applying to each space by major element, including categories for ceiling, individual walls, floors, equipment, and building systems.
3. Include the following information at the top of each page:
 - a. Project name.
 - b. Date.
 - c. Name of Architect.
 - d. Name of Construction Manager.
 - e. Page number.

4. Submit list of incomplete items in the following format:
 - a. MS Excel electronic file. Architect will return annotated file.

1.7 REINSPECTION FEES

- A. **Should status of completion of Work require reinspection by Architect due to failure of Work to comply with Construction Manager's claims on initial inspection, Owner will deduct the amount of Architect's and appropriate consultants' compensation and reimbursable expenses for reinspection services from final payment to Construction Manager.**

1.8 SUBMITTAL OF PROJECT WARRANTIES

- A. Time of Submittal: Submit written warranties on request of Architect for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated, or when delay in submittal of warranties might limit Owner's rights under warranty.
- B. Partial Occupancy: Submit properly executed warranties within 15 days of completion of designated portions of the Work that are completed and occupied or used by Owner during construction period by separate agreement with Construction Manager.
- C. Organize warranty documents into an orderly sequence based on the table of contents of Project Manual.
 1. Bind warranties and bonds in heavy-duty, three-ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2-by-11-inch paper.
 2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.
 3. Identify each binder on the front and spine with the typed or printed title "WARRANTIES," Project name, and name of Construction Manager.
 4. Warranty Electronic File: Scan warranties and bonds and assemble complete warranty and bond submittal package into a single indexed electronic PDF file with links enabling navigation to each item. Provide bookmarked table of contents at beginning of document.
- D. Provide additional copies of each warranty to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

PART 3 - EXECUTION

3.1 FINAL CLEANING

- A. General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.
- B. **Cleaning: Employ experienced workers or professional cleaners for final cleaning.** Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.
 1. Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a designated portion of Project:
 - a. Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.

- b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
 - c. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.
 - d. Remove tools, construction equipment, machinery, and surplus material from Project site.
 - e. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
 - f. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
 - g. Sweep concrete floors broom clean in unoccupied spaces.
 - h. Vacuum carpet and similar soft surfaces, removing debris and excess nap; clean according to manufacturer's recommendations if visible soil or stains remain.
 - i. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Polish mirrors and glass, taking care not to scratch surfaces.
 - j. Remove labels that are not permanent.
 - k. Wipe surfaces of mechanical and electrical equipment, elevator equipment, and similar equipment. Remove excess lubrication, paint droppings, and other foreign substances.
 - l. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
 - m. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.
 - n. Clean ducts, blowers, and coils if units were operated without filters during construction or that display contamination with particulate matter on inspection.
 - o. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency.
 - p. Leave Project clean and ready for occupancy.
- C. Pest Control: Comply with pest control requirements in Section 015000 - Temporary Facilities and Controls. Prepare written report.

3.2 REPAIR OF THE WORK

- A. Complete repair and restoration operations before requesting inspection for determination of Substantial Completion.
- B. **Repair or remove and replace defective construction.** Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment. Where damaged or worn items cannot be repaired or restored, provide replacements. Remove and replace operating components that cannot be repaired. Restore damaged construction and permanent facilities used during construction to specified condition.
 - 1. Remove and replace chipped, scratched, and broken glass, reflective surfaces, and other damaged transparent materials.
 - 2. Touch up and otherwise repair and restore marred or exposed finishes and surfaces. Replace finishes and surfaces that already show evidence of repair or restoration.
 - a. Do not paint over "UL" and other required labels and identification, including mechanical and electrical nameplates. Remove paint applied to required labels and identification.
 - 3. Replace parts subject to operating conditions during construction that may impede operation or reduce longevity.
 - 4. Replace burned-out bulbs, bulbs noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.

END OF SECTION

SECTION 017823

OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Administrative and procedural requirements for preparing operation and maintenance manuals, including the following:**
 - 1. **Operation and maintenance documentation directory.**
 - 2. **Emergency manuals.**
 - 3. **Operation manuals for systems, subsystems, and equipment.**
 - 4. **Product maintenance manuals.**
 - 5. **Systems and equipment maintenance manuals.**

1.3 SUBMITTALS

- A. **Manual Content:** Operations and maintenance manual content is specified in individual Specification Sections to be reviewed at the time of Section submittals. Submit reviewed manual content formatted and organized as required by this Section.
 - 1. Architect will comment on whether content of operations and maintenance submittals are acceptable.
 - 2. Where applicable, clarify and update reviewed manual content to correspond to revisions and field conditions.
- B. **Format: Submit operations and maintenance manuals in the following format:**
 - 1. **PDF Electronic Files.**
 - 2. **Paper copies.**
- C. **Initial Manual Submittal:** Submit PDF electronic files of each manual at least 30 days before commencing demonstration and training. Architect will comment on whether general scope and content of manual are acceptable and return one copy.
- D. **Final Manual Submittal:** Submit PDF electronic files of each manual in final form prior to requesting inspection for Substantial Completion and at least 15 days before commencing demonstration and training. Architect will return one copy with comments.
 - 1. Correct or revise each manual to comply with Architect's comments. Submit PDF electronic files and paper copies of each corrected manual within 15 days of receipt of Architect's comments and prior to commencing demonstration and training.

PART 2 - PRODUCTS

2.1 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY

- A. **Directory:** Prepare a single, comprehensive directory of emergency, operation, and maintenance data and materials, listing items and their location to facilitate ready access to desired information. Include a section in the directory for each of the following:
 - 1. List of documents.
 - 2. List of systems.
 - 3. List of equipment.
 - 4. Table of contents.
- B. **List of Systems and Subsystems:** List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.
- C. **List of Equipment:** List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.

- D. **Tables of Contents:** Include a table of contents for each emergency, operation, and maintenance manual.
- E. **Identification:** In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the Contract Documents. If no designation exists, assign a designation according to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."

2.2 REQUIREMENTS FOR EMERGENCY, OPERATION, AND MAINTENANCE MANUALS

- A. **Organization:** Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:
 - 1. Title page.
 - 2. Table of contents.
 - 3. Manual contents.
- B. **Title Page:** Include the following information:
 - 1. Subject matter included in manual.
 - 2. Name and address of Project.
 - 3. Name and address of Owner.
 - 4. Date of submittal.
 - 5. Name and contact information for Construction Manager.
 - 6. Name and contact information for Architect.
 - 7. Names and contact information for major consultants to the Architect that designed the systems contained in the manuals.
 - 8. Cross-reference to related systems in other operation and maintenance manuals.
- C. **Table of Contents:** List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.
 - 1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.
- D. **Manual Contents:** Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.
- E. **Manuals, Electronic Files:** Assemble manuals in the form of a multiple file composite electronic PDF file for each manual type required.
 - 1. **Electronic Files:** Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.
 - 2. **File Names and Bookmarks:** Enable bookmarking of individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel on opening file.

2.3 EMERGENCY MANUALS

- A. **Content:** Organize manual into a separate section for each of the following:
 - 1. Type of emergency.
 - 2. Emergency instructions.
 - 3. Emergency procedures.
- B. **Type of Emergency:** Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:
 - 1. Fire.

2. Flood.
 3. Gas leak.
 4. Water leak.
 5. Power failure.
 6. Water outage.
 7. System, subsystem, or equipment failure.
 8. Chemical release or spill.
- C. **Emergency Instructions:** Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.
- D. **Emergency Procedures:** Include the following, as applicable:
1. Instructions on stopping.
 2. Shutdown instructions for each type of emergency.
 3. Operating instructions for conditions outside normal operating limits.
 4. Required sequences for electric or electronic systems.
 5. Special operating instructions and procedures.

2.4 OPERATION MANUALS

- A. **Content:** In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:
1. System, subsystem, and equipment descriptions. Use designations for systems and equipment indicated on Contract Documents.
 2. Performance and design criteria if Construction Manager has delegated design responsibility.
 3. Operating standards.
 4. Operating procedures.
 5. Operating logs.
 6. Wiring diagrams.
 7. Control diagrams.
 8. Piped system diagrams.
 9. Precautions against improper use.
 10. License requirements including inspection and renewal dates.
- B. **Descriptions:** Include the following:
1. Product name and model number. Use designations for products indicated on Contract Documents.
 2. Manufacturer's name.
 3. Equipment identification with serial number of each component.
 4. Equipment function.
 5. Operating characteristics.
 6. Limiting conditions.
 7. Performance curves.
 8. Engineering data and tests.
 9. Complete nomenclature and number of replacement parts.
- C. **Operating Procedures:** Include the following, as applicable:
1. Startup procedures.
 2. Equipment or system break-in procedures.
 3. Routine and normal operating instructions.
 4. Regulation and control procedures.
 5. Instructions on stopping.
 6. Normal shutdown instructions.
 7. Seasonal and weekend operating instructions.
 8. Required sequences for electric or electronic systems.
 9. Special operating instructions and procedures.
- D. **Systems and Equipment Controls:** Describe the sequence of operation, and diagram controls as installed.

- E. **Piped Systems:** Diagram piping as installed, and identify color-coding where required for identification.

2.5 PRODUCT MAINTENANCE MANUALS

- A. **Content:** Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.
- B. **Source Information:** List each product included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.
- C. **Product Information:** Include the following, as applicable:
 - 1. Product name and model number.
 - 2. Manufacturer's name.
 - 3. Color, pattern, and texture.
 - 4. Material and chemical composition.
 - 5. Reordering information for specially manufactured products.
- D. **Maintenance Procedures:** Include manufacturer's written recommendations and the following:
 - 1. Inspection procedures.
 - 2. Types of cleaning agents to be used and methods of cleaning.
 - 3. List of cleaning agents and methods of cleaning detrimental to product.
 - 4. Schedule for routine cleaning and maintenance.
 - 5. Repair instructions.
- E. **Repair Materials and Sources:** Include lists of materials and local sources of materials and related services.
- F. **Warranties and Bonds:** Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.
 - 1. Include procedures to follow and required notifications for warranty claims.

2.6 SYSTEMS AND EQUIPMENT MAINTENANCE MANUALS

- A. **Content:** For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranty and bond information, as described below.
- B. **Source Information:** List each system, subsystem, and piece of equipment included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.
- C. **Manufacturers' Maintenance Documentation:** Manufacturers' maintenance documentation including the following information for each component part or piece of equipment:
 - 1. Standard maintenance instructions and bulletins.
 - 2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
 - 3. Identification and nomenclature of parts and components.
 - 4. List of items recommended to be stocked as spare parts.
- D. **Maintenance Procedures:** Include the following information and items that detail essential maintenance procedures:
 - 1. Test and inspection instructions.
 - 2. Troubleshooting guide.
 - 3. Precautions against improper maintenance.
 - 4. Disassembly; component removal, repair, and replacement; and reassembly instructions.
 - 5. Aligning, adjusting, and checking instructions.
 - 6. Demonstration and training video recording, if available.

- E. **Maintenance and Service Schedules:** Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.
 - 1. Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies.
 - 2. Maintenance and Service Record: Include manufacturers' forms for recording maintenance.
- F. **Spare Parts List and Source Information:** Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.
- G. **Maintenance Service Contracts:** Include copies of maintenance agreements with name and telephone number of service agent.
- H. **Warranties and Bonds:** Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.
 - 1. Include procedures to follow and required notifications for warranty claims.

PART 3 - EXECUTION

3.1 MANUAL PREPARATION

- A. **Operation and Maintenance Documentation Directory:** Prepare a separate manual that provides an organized reference to emergency, operation, and maintenance manuals.
- B. **Emergency Manual:** Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.
- C. **Product Maintenance Manual:** Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.
- D. **Operation and Maintenance Manuals:** Assemble a complete set of operation and maintenance data indicating operation and maintenance of each system, subsystem, and piece of equipment not part of a system.
 - 1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
 - 2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.
- E. **Manufacturers' Data:** Where manuals contain manufacturers' standard printed data, include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.
 - 1. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.
- F. **Drawings:** Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in record Drawings to ensure correct illustration of completed installation.
 - 1. Do not use original project record documents as part of operation and maintenance manuals.
- G. Comply with Section 017700 - Closeout Procedures for schedule for submitting operation and maintenance documentation.

END OF SECTION

SECTION 017839

PROJECT RECORD DOCUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Administrative and procedural requirements for project record documents, including the following:**
 - 1. **Record Drawings.**
 - 2. **Record Specifications.**
 - 3. **Record Product Data.**
 - 4. **Miscellaneous record submittals.**

1.3 SUBMITTALS

- A. **Record Drawings:** Comply with the following:
 - 1. **Initial Submittal:**
 - a. Submit PDF electronic files of scanned original marked-up record prints.
 - b. Architect will indicate whether general scope of changes, additional information recorded, and quality of drafting are acceptable.
 - 2. **Final Submittal:**
 - a. **Submit PDF electronic files of scanned record prints.** Print each drawing, whether or not changes and additional information were recorded.
 - b. **Submit original marked-up record prints.**
- B. **Record Specifications:** Submit annotated PDF electronic files of Project's Specifications, including addenda and contract modifications.
- C. **Record Product Data:** Submit annotated PDF electronic files and directories of each submittal.
 - 1. Where record Product Data are required as part of operation and maintenance manuals, submit duplicate marked-up Product Data as a component of manual.
- D. **Miscellaneous Record Submittals:** See other Specification Sections for miscellaneous record-keeping requirements and submittals in connection with various construction activities. Submit annotated PDF electronic files and directories of each submittal.

PART 2 - PRODUCTS

2.1 RECORD DRAWINGS

- A. **Record Prints:** Maintain one set of marked-up paper copies of the Contract Drawings and Shop Drawings, incorporating new and revised drawings as modifications are issued.
 - 1. **Preparation: Mark record prints to show the actual installation where installation varies from that shown originally.** Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to provide information for preparation of corresponding marked-up record prints.
 - a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.
 - b. Accurately record information in an acceptable drawing technique.
 - c. Record data as soon as possible after obtaining it.
 - d. Record and check the markup before enclosing concealed installations.
 - e. Cross-reference record prints to corresponding archive photographic documentation.
 - 2. **Content:** Types of items requiring marking include, but are not limited to, the following:

- a. Dimensional changes to Drawings.
 - b. Revisions to details shown on Drawings.
 - c. Depths of foundations below first floor.
 - d. Locations and depths of underground utilities.
 - e. Revisions to routing of piping and conduits.
 - f. Revisions to electrical circuitry.
 - g. Actual equipment locations.
 - h. Duct size and routing.
 - i. Locations of concealed internal utilities.
 - j. Changes made by Change Order or Construction Change Directive.
 - k. Changes made following Architect's written orders.
 - l. Details not on the original Contract Drawings.
 - m. Field records for variable and concealed conditions.
 - n. Record information on the Work that is shown only schematically.
3. **Mark the Contract Drawings and Shop Drawings completely and accurately.** Use personnel proficient at recording graphic information in production of marked-up record prints.
 4. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at same location.
 5. **Mark important additional information that was either shown schematically or omitted from original Drawings.**
 6. Note the following, along with the sequence numbers:
 - a. Requests for information.
 - b. Architect's Supplemental Instructions.
 - c. Construction Change Directives.
 - d. Alternates.
 - e. Change Orders.
- B. **Record Digital Data Files:** Immediately before inspection for Certificate of Substantial Completion, review marked-up record prints with Architect. When authorized, prepare a full set of corrected digital data files of the Contract Drawings, as follows:
1. Format: Same digital data software program, version, and operating system as the original Contract Drawings.
 2. Format: Annotated PDF electronic file with comment function enabled.
 3. Incorporate changes and additional information previously marked on record prints. Delete, redraw, and add details and notations where applicable.
 4. Refer instances of uncertainty to Architect for resolution.
 5. Architect will furnish Construction Manager one set of digital data files of the Contract Drawings for use in recording information.
 - a. See Section 013300 - Submittal Procedures for requirements related to use of Architect's digital data files.
 - b. Architect will provide data file layer information. Record markups in separate layers.
- C. **Format:** Identify and date each record Drawing; include the designation "PROJECT RECORD DRAWING" in a prominent location.
1. Record Prints: Organize record prints into manageable sets. Bind each set with durable paper cover sheets. Include identification on cover sheets.
 2. Format: Annotated PDF electronic file with comment function enabled.
 3. Identification: As follows:
 - a. Project name.
 - b. Date.
 - c. Designation "PROJECT RECORD DRAWINGS."
 - d. Name of Architect.
 - e. Name of Construction Manager.

2.2 RECORD SPECIFICATIONS

- A. **Preparation:** Mark Specifications to indicate the actual product installation where installation varies from that indicated in Specifications, addenda, and contract modifications.
 - 1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
 - 2. Mark copy with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
 - 3. Record the name of manufacturer, supplier, Installer, and other information necessary to provide a record of selections made.
 - 4. For each principal product, indicate whether record Product Data has been submitted in operation and maintenance manuals instead of submitted as record Product Data.
 - 5. Note related Change Orders, record Product Data, and record Drawings where applicable.
- B. **Format:** Submit record Specifications as scanned PDF electronic file(s) of marked-up paper copy of Specifications.

2.3 RECORD PRODUCT DATA

- A. **Preparation:** Mark Product Data to indicate the actual product installation where installation varies substantially from that indicated in Product Data submittal.
 - 1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
 - 2. Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.
 - 3. Note related Change Orders, record Specifications, and record Drawings where applicable.
- B. **Format:** Submit record Product Data as annotated PDF electronic file.
 - 1. Include record Product Data directory organized by Specification Section number and title, electronically linked to each item of record Product Data.

2.4 MISCELLANEOUS RECORD SUBMITTALS

- A. Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.
- B. **Format:** Submit miscellaneous record submittals as PDF electronic file.
 - 1. Include miscellaneous record submittals directory organized by Specification Section number and title, electronically linked to each item of miscellaneous record submittals.

PART 3 - EXECUTION

3.1 RECORDING AND MAINTENANCE

- A. **Recording:** Maintain one copy of each submittal during the construction period for project record document purposes. Post changes and revisions to project record documents as they occur; do not wait until end of Project.
- B. **Maintenance of Record Documents and Samples:** Store record documents and Samples in the field office apart from the Contract Documents used for construction. Do not use project record documents for construction purposes. Maintain record documents in good order and in a clean, dry, legible condition, protected from deterioration and loss. Provide access to project record documents for Architect's reference during normal working hours.

END OF SECTION

SECTION 017900

DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes: Administrative and procedural requirements for instructing Owner's personnel, including the following:**
 - 1. **Demonstration of operation of systems, subsystems, and equipment.**
 - 2. **Training in operation and maintenance of systems, subsystems, and equipment.**
 - 3. **Demonstration and training video recordings.**

1.3 SUBMITTALS

- A. **Instruction Program:** Submit outline of instructional program for demonstration and training, including a list of training modules and a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.
 - 1. Indicate proposed training modules using manufacturer-produced demonstration and training video recordings for systems, equipment, and products in lieu of video recording of live instructional module.
- B. **Attendance Record:** For each training module, submit list of participants and length of instruction time.
- C. **Demonstration and Training Video Recordings: Submit electronic files within seven days of end of each training module.**
 - 1. Identification: On each copy, provide an applied label with the following information:
 - a. Name of Project.
 - b. Name and address of videographer.
 - c. Name of Architect.
 - d. Name of Construction Manager.
 - e. Date of video recording.
 - 2. Transcript: Prepared in PDF electronic format. Include a cover sheet with same label information as the corresponding video recording and a table of contents with links to corresponding training components. Include name of Project and date of video recording on each page.
 - 3. At completion of training, submit complete training manual(s) for Owner's use in PDF electronic file format.

1.4 QUALITY ASSURANCE

- A. **Instructor Qualifications: A factory-authorized service representative, complying with requirements in Section 014000 - Quality Requirements, experienced in operation and maintenance procedures and training.**
- B. **Preinstruction Conference:** Conduct conference at Project site to comply with requirements in Section 013100 - Project Management and Coordination. Review methods and procedures related to demonstration and training including, but not limited to, the following:
 - 1. Inspect and discuss locations and other facilities required for instruction.
 - 2. Review and finalize instruction schedule and verify availability of educational materials, instructors' personnel, audiovisual equipment, and facilities needed to avoid delays.
 - 3. Review required content of instruction.
 - 4. For instruction that must occur outside, review weather and forecasted weather

conditions and procedures to follow if conditions are unfavorable.

1.5 COORDINATION

- A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations and to ensure availability of Owner's personnel.
- B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.
- C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data has been reviewed and approved by Architect.

PART 2 - PRODUCTS

2.1 INSTRUCTION PROGRAM

- A. **Program Structure:** Develop an instruction program that includes individual training modules for each system and for equipment not part of a system, as required by individual Specification Sections.
- B. **Training Modules:** Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following as applicable to the system, equipment, or component:
 - 1. **Basis of System Design, Operational Requirements, and Criteria:** Include the following:
 - a. System, subsystem, and equipment descriptions.
 - b. Operating standards.
 - c. Regulatory requirements.
 - d. Equipment function.
 - e. Operating characteristics.
 - f. Limiting conditions.
 - g. Performance curves.
 - 2. **Documentation:** Review the following items in detail:
 - a. Emergency manuals.
 - b. Operations manuals.
 - c. Maintenance manuals.
 - d. Maintenance service agreements and similar continuing commitments.
 - 3. **Emergencies:** Include the following, as applicable:
 - a. Instructions on meaning of warnings, trouble indications, and error messages.
 - b. Instructions on stopping.
 - c. Shutdown instructions for each type of emergency.
 - d. Operating instructions for conditions outside of normal operating limits.
 - e. Sequences for electric or electronic systems.
 - f. Special operating instructions and procedures.
 - 4. **Operations:** Include the following, as applicable:
 - a. Startup procedures.
 - b. Equipment or system break-in procedures.
 - c. Routine and normal operating instructions.
 - d. Regulation and control procedures.
 - e. Control sequences.
 - f. Safety procedures.
 - g. Instructions on stopping.
 - h. Normal shutdown instructions.
 - i. Operating procedures for emergencies.
 - j. Operating procedures for system, subsystem, or equipment failure.
 - k. Seasonal and weekend operating instructions.
 - l. Required sequences for electric or electronic systems.

- m. Special operating instructions and procedures.
- 5. **Adjustments:** Include the following:
 - a. Alignments.
 - b. Checking adjustments.
 - c. Noise and vibration adjustments.
 - d. Economy and efficiency adjustments.
- 6. **Troubleshooting:** Include the following:
 - a. Diagnostic instructions.
 - b. Test and inspection procedures.
- 7. **Maintenance:** Include the following:
 - a. Inspection procedures.
 - b. Types of cleaning agents to be used and methods of cleaning.
 - c. List of cleaning agents and methods of cleaning detrimental to product.
 - d. Procedures for routine cleaning
 - e. Procedures for preventive maintenance.
 - f. Procedures for routine maintenance.
 - g. Instruction on use of special tools.
- 8. **Repairs:** Include the following:
 - a. Diagnosis instructions.
 - b. Repair instructions.
 - c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
 - d. Instructions for identifying parts and components.
 - e. Review of spare parts needed for operation and maintenance.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a training manual organized in coordination with requirements in Section 017823 - Operation and Maintenance Data.

3.2 INSTRUCTION

- A. **Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Construction Manager and Owner for number of participants, instruction times, and location.**
- B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.
- C. Scheduling: Provide instruction at mutually agreed on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.
 - 1. Schedule training with Owner with at least seven days' advance notice.
- D. Training Location and Reference Material: Conduct training on-site in the completed and fully operational facility using the actual equipment in-place. Conduct training using final operation and maintenance data submittals.
- E. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of a demonstration performance-based test.

END OF SECTION

SECTION 03 30 00
CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section specifies cast-in place concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, and finishes, for the following:
 - 1. Suspended slabs.
 - 2. Building frame members.
 - 3. Building walls.
 - 4. Drilled Piers
- B. WORK INCLUDED
 - 1. Design, fabrication, erection, and stripping of formwork for cast-in-place concrete including shoring, reshoring, falsework, bracing, proprietary forming systems, prefabricated forms, void forms, permanent metal forms, bulkheads, keys, blockouts, sleeves, pockets, and accessories. Erection shall include installation in formwork of items furnished by other trades.
 - 2. Furnish all labor and materials required to fabricate, deliver and install reinforcement and embedded metal assemblies for cast-in-place concrete, including steel bars, welded steel wire fabric, ties and supports.
 - 3. Furnish all labor and materials required to perform the following:
 - a. Cast-in-place concrete
 - b. Concrete mix designs
 - c. Grouting structural steel baseplates
 - d. Concrete for drilled piers
- C. Related Sections include the following:
 - 1. Division 3 Section "Cast-in-Place Architectural Concrete" for general building applications of specially finished formed concrete.
 - 2. Division 31 Section "Drilled Piers" for drilled concrete piers.

1.3 DEFINITIONS

- A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash and other pozzolans, ground granulated blast-furnace slag, and silica fume; subject to compliance with requirements.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Design Mixtures: For each concrete mixture submit proposed mix designs in accordance with ACI 318, chapter 5. Each proposed mix design shall be accompanied by a record of past performance.
 - 1. Indicate amounts of mixing water to be withheld for later addition at Project site.
- C. Steel Reinforcement Shop Drawings: Placing drawings that detail fabrication, bending, and placement. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement.
 - 1. Do not reproduce the structural drawings for use as shop drawings.
 - 2. Embedded metal assemblies: Submit shop drawings for fabrication and placement. Use standard AWS welding symbols.
- D. Steel Reinforcement Submittals for Information: Mill test certificates of supplied concrete reinforcing, indicating physical and chemical analysis.
- E. Material Test Reports: For the following, from a qualified testing agency, indicating compliance with requirements:
 - 1. Aggregates.
- F. Material Certificates: For each of the following, signed by manufacturers:
 - 1. Cementitious materials
 - 2. Admixtures
 - 3. Moisture Vapor Reduction Admixture
 - 4. Form materials and form-release agents
 - 5. Steel reinforcement and accessories
 - 6. Fiber reinforcement
 - 7. Waterstops
 - 8. Curing compounds
 - 9. Floor and slab treatments
 - 10. Vapor retarders
 - 11. Repair materials
- G. Submit manufacturer's certification of maximum chloride ion content in admixtures.
- H. Fly ash: Submit certification attesting to carbon content and compliance with ASTM C618.
- I. Construction Joint Layout: Submit a diagram of proposed construction joint locations for horizontal framing that exceed the limits of a single placement as stated in the structural notes, other than those indicated on the Drawings.
- J. Floor surface flatness and levelness measurements to determine compliance with specified tolerances.
- K. Field quality-control test and inspection reports.

- L. Minutes of preinstallation conference.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.
- B. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.
 - 1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."
- C. Testing Agency Qualifications: An independent agency, qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.
 - 1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-01 or an equivalent certification program.
 - 2. Personnel performing laboratory tests shall be ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician - Grade I. Testing Agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician - Grade II.
- D. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from one source, and obtain admixtures through one source from a single manufacturer.
- E. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:
 - 1. ACI 301, "Specification for Structural Concrete," Sections 1 through 5.
 - 2. ACI 117, "Specifications for Tolerances for Concrete Construction and Materials."
- F. Concrete Testing Service: Owner may engage a qualified independent testing agency to perform material evaluation tests.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage.
- B. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.
- C. Store all proprietary materials in accordance with manufacturer's recommendations.

1.7 WARRANTY

- A. Moisture Vapor Reduction Admixture (MVRA)

1. Manufacturer's Warranty: Manufacturer's standard form warranty document executed by an authorized company official. Manufacturer's warranty is in addition to, and not a limitation of, other rights the Owner may have under provisions of the Contract Documents.
 - a. Warranty Period: 10 years from date of Substantial Completion.
 - b. Warranty covers performance of concrete water vapor reducing admixture as well as labor and material for flooring replacement in accordance with manufacturer's current standards and applicable test results performed in accordance with ASTM D5084.

PART 2 - PRODUCTS

2.1 FORM-FACING MATERIALS

- A. Smooth-Formed Finished Concrete: Form-facing panels that will provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.
 1. Plywood, metal, or other approved panel materials.
 2. Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1, and as follows:
 - a. High-density overlay, Class 1 or better.
 3. Steel Forms
- B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.
- C. Forms for Cylindrical Columns, Pedestals, and Supports: Metal, glass-fiber-reinforced plastic, paper, or fiber tubes that will produce surfaces with gradual or abrupt irregularities not exceeding specified formwork surface class. Provide units with sufficient wall thickness to resist plastic concrete loads without detrimental deformation.
- D. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to resist plastic concrete loads without detrimental deformation.
 1. Pans shall be free of dents, irregularities, sag, or other deterioration.
- E. Void Forms: Shall be the product of a reputable manufacturer regularly engaged in the commercial production of void forms.
 1. Void form composition shall be of corrugated paper material with a moisture resistant exterior and an interior fabrication of a uniform cellular configuration, composed of components constructed of double-faced wax-impregnated (partially or fully), corrugated fiberboard that is laminated with moisture resistant adhesive.
 2. Design and maintain void forms to support all vertical and lateral loads that might be applied during construction until such loads can be supported by the concrete structure.
 3. Form material shall be designed to lose its strength under prolonged contact with the moisture which normally accumulates beneath slabs and beams on grade.
 4. Void forms shall be used around the circular edges of all drilled piers at the intersection of the gradebeams and/or structural slabs by using premanufactured, non-field cut, sealed void forms with curved edges adjacent to drilled piers.

5. Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, VoidForm Products, Inc., Englewood, Colorado.
- F. Protection Board: For use over void forms under structural slabs. Hard-pressed cellulose fiber board, 1/4 inch minimum thickness.
- G. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 inch, minimum.
- H. Rustication Strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal.
- I. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent treatments of concrete surfaces.
 1. Formulate form-release agent with rust inhibitor for steel form-facing materials.
- J. Form Ties: Factory-fabricated, removable or snap-off metal or glass-fiber-reinforced plastic form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.
 1. Furnish units that will leave no corrodible metal closer than 1 inch to the plane of exposed concrete surface.
- K. Form Ties for Exposed Finishes: Water seal coil type internally disconnecting ties with tapered plastic cone spreader designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal. Plugs to fill tie cone to be in plastic or mortar to match surrounding concrete. Plugs to be recessed 1/4 inch from surface of finished concrete.
 1. Furnish ties that, when removed, will leave holes no larger than 1 inch in diameter in concrete surface.
- L. Soil Retainers: Shall be provided where specified and shown on the drawings to prevent migration of backfill under suspended foundation elements:
 1. Retainers shall be composed of high density polypropylene materials that are not adversely affected by moisture. They must be flexible, impact resistant and have sufficient strength to resist lateral loads applied by soil.
 - a. Thickness: 3/8" for void spaces of 8" or less.
 - b. Soil retainers shall extend six inches above the void forms and a minimum of 3 inches below the void forms.
 2. Retainers shall be ribbed and made from high density polyethylene. Refer to the Drawings for additional information. Soil retainers shall be Motzblock by VoidForm Products, Inc.

2.2 STEEL REINFORCEMENT

- A. Any iron or steel product produced through a manufacturing process shall be produced in the United States.
- B. Reinforcing Bars: ASTM A 615/A 615M, Grade 60, deformed.
- C. Low-Alloy-Steel Reinforcing Bars: ASTM A 706/A 706M, deformed.

- D. Plain-Steel Wire: ASTM A 82, as drawn.
- E. Deformed-Steel Wire: ASTM A 496.
- F. Plain-Steel Welded Wire Reinforcement: ASTM A 185, plain, fabricated from as-drawn steel wire into flat sheets.

2.3 REINFORCEMENT ACCESSORIES

- A. Any iron or steel product produced through a manufacturing process shall be produced in the United States.
- B. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain-steel bars, cut bars true to length with ends square and free of burrs.
- C. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete and as follows:
 - 1. For concrete surfaces exposed to view where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.
 - 2. For slabs on grade and slabs on void forms, provide sand plates, horizontal runners, or precast concrete blocks on bottom where base material will not support chair legs or where vapor barrier has been specified.

2.4 MECHANICAL SPLICES

- A. Any iron or steel product produced through a manufacturing process shall be produced in the United States.
- B. Provide mechanical splices designed to develop, in tension and compression, 125 percent of the minimum ASTM specified yield strength of the smaller bar being spliced. The following splicing systems are acceptable:
 - 1. Erico "Cadweld T-Series"
 - 2. Erico "Lenton"
 - 3. Dayton Barsplice "Bar-Grip"
 - 4. Dayton Barsplice "Grip-Twist"

2.5 DOWEL BAR ANCHORS

- A. Any iron or steel product produced through a manufacturing process shall be produced in the United States.
- B. Provide dowel bar anchors and threaded dowels designed to develop, in tension and compression, 125 percent of the minimum ASTM specified yield strength of the dowel bars. Unless otherwise indicated, anchors shall be furnished with ACI standard 90 degree hooks. Dowels shall be furnished by the anchor supplier. The following dowel splicing systems are acceptable:

1. Richmond Screw Anchor "Dowel Bar Splicer"
2. Erico "Lenton Form Saver"
3. Dayton Barsplice "Grip-Twist"

2.6 EMBEDDED METAL ASSEMBLIES

- A. Any iron or steel product produced through a manufacturing process shall be produced in the United States.
- B. Steel Shapes and Plates: ASTM A36
- C. Headed Studs: Heads welded by full-fusion process, as furnished by TRW Nelson Stud Welding Division.
- D. Welded Deformed Bar Anchors: Welded by full fusion process, as furnished by TRW Nelson Stud Welding Division.
- E. Reinforcing Bars to be Welded: ASTM A706.

2.7 INSERTS

- A. Any iron or steel product produced through a manufacturing process shall be produced in the United States.
- B. Provide metal inserts required for anchorage of materials or equipment to concrete construction where not supplied by other trades:
 1. In vertical concrete surfaces for transfer of direct shear loads only, provide adjustable inserts, complete with bolts, nuts, and washers. Provide 3/4" bolt size unless otherwise indicated. Adjustable inserts shall be one of the following:
 - a. Malleable iron wedge inserts:
 - 1) Hohmann & Barnard, Inc.: #HW-340 and LW-340
 - 2) Heckmann Building Products, Inc.: #425-6 and 425-6L
 - 3) Peerless Hardware, Inc.: #250-3/4 and 250-3/4L
 - b. Hohmann & Barnard, Inc. Sharktooth inserts ST-3 or ST-4 (hot-dip galvanized finish).
 - c. Provide the long versions of the inserts at beam and slab soffit conditions, unless noted otherwise.
 2. In horizontal concrete surfaces and whenever inserts are subject to tension forces, provide threaded inserts of malleable cast iron, furnished with full depth bolts, 3/4" bolt size unless otherwise indicated.

2.8 CONCRETE MATERIALS

- A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:
 1. Portland Cement: ASTM C 150, Type I/II, gray.
 - a. Fly Ash: ASTM C 618, Class F.

- B. Normal-Weight Aggregates: ASTM C 33, Class 3M coarse aggregate or better, graded. Provide aggregates from a single source.
 - 1. Maximum Coarse-Aggregate Size: As indicated on drawings.
 - 2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.
- C. Water: ASTM C 94/C 94M and potable.

2.9 ADMIXTURES

- A. Air-Entraining Admixture: ASTM C 260.
- B. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and that will not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.
 - 1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
 - 2. Retarding Admixture: ASTM C 494/C 494M, Type B.
 - 3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
 - 4. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
 - 5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
 - 6. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.
- C. Moisture Vapor Reduction Admixture: For use in all interior slabs, slabs on deck, and roof decks.
 - 1. Basis-of-Design Product: The concrete water vapor reducing admixture is based on Vapor Lock 20/20 manufactured by Specialty Products Group (SPG), or comparable product by one of the following:
 - a. Barrier One by Barrier One, Incorporated.
 - b. Xypex by Xypex Chemical Corporation.
 - c. Aridus SDA 30 by USC Technologies.
 - d. MVRA 900 by ISE Logik Industries.
 - 2. Concrete Water Vapor Reducing Admixture (WVRA): A complex admixture for cementitious materials, free of volatile organic compounds (VOC), designed to naturally chemically react with pre-existing elements within the cementitious material to eliminate the route of moisture vapor emission by integrally and permanently closing the capillary system in the concrete with the following characteristics:
 - a. Waterproofing: Minimum 1×10^{-8} cm/s in accordance with ASTM D5084.
 - b. Toxicity: None.
 - c. Flammability: None.
 - d. Solvent: Water.
 - e. Acid Resistance: Excellent.
 - f. Hazardous Vapors: None.
 - g. Capillary Break: Calcium Silicate Hydrate.
 - h. Installation: All cementitious materials.
 - i. VOC Levels: Zero (0).
 - j. Inhibit mold and bacteria growth by eliminating moisture vapor emission.

2.10 WATERSTOPS

- A. Waterstops: At all construction joints below grade. "Synko-Flex" Preformed Plastic Waterstop by the Henry Company, Inc., meeting the requirements of Federal Specification SSS-210.

2.11 VAPOR RETARDERS

- A. Plastic Vapor Retarder: ASTM E 1745, Class A.

1. Membrane shall have the following properties:

- a. Minimum 15 mils thickness.
- b. Permeance Rating: ASTM E96, 0.01 Perms or lower as tested after mandatory conditioning (ASTM E 154 sections 8, 11, 12, 13)
- c. Installation shall be in accordance with ASTM E1643 and manufacturer's instructions.

2. Products:

- a. Carlisle Coatings & Waterproofing, Inc.: Blackline 400.
- b. Epro; Ecoshield-E 15 mil.
- c. Inteplast Group; Barrier Bac VBC-350 Composite Vapor Retarder
- d. Reef Industries; Vaporguard.
- e. Stego Wrap 15 mil, by Stego.
- f. W.R. Meadows, Inc.: Premolded Membrane with Plasmatic Core (PMPC).

3. Accessories

- a. Perimeter/seam sealing tape for use with membranes that are not self-adhering to the underside of concrete slabs on void forms:
 - 1) Crete Claw detail tape by Stego Industries, LLC, for adhering vapor retarder membrane to the underside of concrete surface at slabs on carton void forms, 3-inch and 6-inch widths as noted in Part 3.
 - 2) StegoTack double-sided adhesive tape by Stego Industries, LLC, for adhering membrane to concrete at gradebeams.
- b. Manufacturer's recommended standard adhesive or pressure sensitive tape for general use.

2.12 CURING MATERIALS

- A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.

1. Products:

- a. Axim Concrete Technologies; CATEXOL Cimfilm.
- b. BASF Construction Chemicals – Building Systems; Confilm.
- c. ChemMasters; Spray-Film.
- d. Conspec by Dayton Superior; Aquafilm.
- e. Dayton Superior Corporation; Sure Film (J-74).
- f. Edoco by Dayton Superior; BurkeFilm.
- g. Euclid Chemical Company (The), an RPM company; Eucobar.

- h. Kaufman Products, Inc.; Vapor Aid.
 - i. Lambert Corporation; LAMBCO Skin.
 - j. L&M Construction Chemicals, Inc.; E-Con.
 - k. Meadows, W. R., Inc.; EVAPRE.
 - l. Metalcrete Industries; Waterhold.
 - m. Nox-Crete Products Group; Monofilm.
 - n. Sika Corporation, Inc.; SikaFilm.
 - o. SpecChem, LLC; Spec Film.
 - p. Symons by Dayton Superior; Finishing Aid.
 - q. TK Products, Division of Sierra Corporation; TK-2120 TRI-FILM.
 - r. Unitex; Pro-Film.
 - s. Vexcon Chemicals, Inc.; Certi-Vex Envio Set.
- B. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.
- C. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.
- D. Water: Potable.
- E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, dissipating.
1. Products:
- a. Anti-Hydro International, Inc.; AH Curing Compound #2 DR WB.
 - b. BASF Construction Chemicals – Building Systems; Kure 200.
 - c. ChemMasters; Safe-Cure Clear.
 - d. Conspec by Dayton Superior; W.B. Resin Cure.
 - e. Dayton Superior Corporation; Day Chem Rez Cure (J-11-W).
 - f. Edoco by Dayton Superior; Res X Cure WB.
 - g. Euclid Chemical Company (The), an RPM company; Kurez W VOX; TAMMSCURE WB 30C.
 - h. Kaufman Products, Inc.; Thinfilm 420.
 - i. Lambert Corporation; Aqua Kure-Clear.
 - j. L&M Construction Chemicals, Inc.; L&M Cure R.
 - k. Meadows, W. R., Inc.; 1100 Clear.
 - l. Nox-Crete Products Group; Resin Cure E.
 - m. Right Pointe; Clear Water Resin.
 - n. SpecChem, LLC; Spec Rez Clear.
 - o. Symons by Dayton Superior; Resi-Chem Clear.
 - p. TK Products, Division of Sierra Corporation; TK-2519 DC WB.
 - q. Vexcon Chemicals, Inc.; Certi-Vex Enviocure 100.

2.13 RELATED MATERIALS

- A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber.
- B. Bonding Agent: ASTM C 1059, Type II, non-redispersible, acrylic emulsion or styrene butadiene.
- C. Reglets: Fabricate reglets of not less than 0.0217-inch-thick, galvanized steel sheet. Temporarily fill or cover face opening of reglet to prevent intrusion of concrete or debris.

- D. Dovetail Anchor Slots: Hot-dip galvanized steel sheet, not less than 0.0336 inch thick, with bent tab anchors. Temporarily fill or cover face opening of slots to prevent intrusion of concrete or debris.
- E. Adjustable wedge inserts: For attachment of masonry shelf angles to spandrel beams. Provide Hohmann & Barnard wedge inserts by Hohmann & Barnard, Inc., or approved equal. Type, size and capacity shall be as shown on the Drawings.
- F. Sleeves and Blockouts: Formed with galvanized metal, galvanized pipe, polyvinyl chloride pipe, fiber tubes, or wood.
- G. Nails, Spikes, Lag Bolts, Through Bolts, Anchorages: Sized as required; of strength and character to maintain formwork in place while placing concrete.

2.14 REPAIR MATERIALS

- A. Repair Mortar – Hand-Applied: Pre-packaged, cement-based, two-component, polymer-modified, trowel-grade mortar, enhanced with penetrating corrosion inhibitor.
 - 1. Compressive Strength: 1200 psi minimum at 1 day; 6000 psi minimum at 28 days when tested according to ASTM C 109.
 - 2. Bond Strength: 1800 psi minimum at 28 days when tested according to ASTM C 882 (Modified).
 - 3. Product / Manufacturer: SikaTop 122 Plus or SikaTop 123 Plus, Sika Corporation, or approved equal.
- B. Repair Mortar – Form and Pour or Pump: Pre-packaged, cement-based, single-component, polymer-modified, silica-fume-enhanced, cementitious mortar.
 - 1. Compressive Strength: 3000 psi minimum at 1 day; 6500 psi at 28 days when tested according to ASTM C 109.
 - 2. Bond Strength: 2200 psi at 28 days when tested according to ASTM C 882 (modified).
 - 3. Product / Manufacturer: Sika MonoTop 611, Sika Corporation, or approved equal.

2.15 CONCRETE MIXTURES, GENERAL

- A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.
 - 1. Use a qualified independent testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures.
 - 2. Required average strength above specified strength:
 - a. Based on a record of past performance: Determination of required average strength above specified strength shall be based on the standard deviation record of the results of at least 30 consecutive strength tests in accordance with ACI 318, Chapter 5.3 by the larger amount defined by formulas 5-1 and 5-2.
 - b. Based on laboratory trial mixtures: Proportions shall be selected on the basis of laboratory trial batches prepared in accordance with ACI 318, Chapter 5.3.3.2 to produce an average strength greater than the specified strength f'_c by the amount defined in table 5.3.2.2.

- 1) Proportions of ingredients for concrete mixes shall be determined by an independent testing laboratory or qualified concrete supplier.
 - 2) For each proposed mixture, at least three compressive test cylinders shall be made and tested for strength at the specified age. Additional cylinders may be made for testing for information at earlier ages.
- B. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:
1. Fly Ash: 25 percent.
 2. Combined Fly Ash and Pozzolan: 25 percent.
 3. Ground Granulated Blast-Furnace Slag: 50 percent.
 4. Combined Fly Ash or Pozzolan and Ground Granulated Blast-Furnace Slag: 50 percent portland cement minimum, with fly ash or pozzolan not exceeding 25 percent.
- C. Limit water-soluble, chloride-ion content in hardened concrete to 0.06 percent by weight of cement.
- D. Admixtures: Use admixtures according to manufacturer's written instructions.
1. Do not use admixtures which have not been incorporated and tested in accepted mixes.
 2. Use water-reducing, high-range water-reducing, or plasticizing admixture in concrete, as required, for placement and workability.
 3. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
 4. Use water-reducing admixture in pumped concrete and concrete with a water-cementitious materials ratio below 0.50.

2.16 CONCRETE MIXTURES FOR BUILDING ELEMENTS

- A. Proportion normal-weight concrete mixture as indicated on drawings.

2.17 FABRICATING REINFORCEMENT

- A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

2.18 FABRICATION OF EMBEDDED METAL ASSEMBLIES

- A. Fabricate metal assemblies in the shop. Holes shall be made by drilling or punching. Holes shall not be made by or enlarged by burning. Welding shall be in accordance with AWS D1.1.
- B. Welding of deformed bar anchors and headed stud anchors shall be done by full fusion process equal to that of TRW Nelson Stud Welding Division. A minimum of two headed studs shall be tested at the start of each production period for proper quality control. The studs shall be capable of being bent 45 degrees without failure.
- C. Welding of reinforcement shall be done in accordance with AWS D1.4, using the recommended preheat temperature and electrode for the type of reinforcement being welded. Bars larger than no. 9 shall not be welded. Welding shall be subject to the observance and testing of the Testing Laboratory.

- D. Metal assemblies exposed to earth, weather or moisture shall be hot dip galvanized. All other metal assemblies shall be either hot dip galvanized or painted with an epoxy paint. Repair galvanizing after welding with a Cold Galvanizing compound installed in accordance with the manufacturer's instructions. Repair painted assemblies after welding with same type of paint.

2.19 CONCRETE MIXING

- A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M, and furnish batch ticket information.
 - 1. **Maximum delivery time from batch plant to placement is 90 minutes.**
 - 2. When air temperature is between 85 and 95 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 95 deg F, reduce mixing and delivery time to 60 minutes.
 - 3. **Maximum allowable concrete temperature at delivery is 90 degrees.**

PART 3 - EXECUTION

3.1 FORMWORK

- A. Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads.
- B. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117.
 - 1. Vertical alignment:
 - a. Lines, surfaces and arises less than 100 feet in height - 1 inch.
 - b. Outside corner of exposed corner columns and control joints in concrete exposed to view less than 100 feet in height - 1/2 inch.
 - 2. Lateral alignment:
 - a. Members - 1 inch.
 - b. Centerline of openings 12 inches or smaller and edge location of larger openings in slabs - 1/2 inch.
 - c. Sawcuts, joints, and weakened plane embedments in slabs - 3/4 inch.
 - 3. Level alignment:
 - a. Elevation of slabs-on-grade - 3/4 inch.
 - b. Elevation of top surfaces of formed slabs before removal of shores - 3/4 inch.
 - c. Elevation of formed surfaces before removal of shores - 3/4 inch.
 - d. Lintels, sills, parapets, horizontal grooves, and other lines exposed to view - 1/2 inch.
 - 4. Cross-sectional dimensions: Overall dimensions of beams, joists, and columns and thickness of walls and slabs.

- a. 12 inch dimension or less - plus 3/8 inch to minus 1/4 inch.
 - b. Greater than 12 inch to 3 foot dimension - plus 1/2 inch to minus 3/8 inch.
 - c. Greater than 3 foot dimension - plus 1 inch to minus 3/4 inch.
- 5. Relative alignment:
 - a. Stairs:
 - 1) Difference in height between adjacent risers - 1/8 inch.
 - 2) Difference in width between adjacent treads - 1/4 inch.
 - 3) Maximum difference in height between risers in a flight of stairs - 3/8 inch.
 - 4) Maximum difference in width between treads in a flight of stairs - 3/8 inch.
 - b. Grooves:
 - 1) Specified width 2 inches or less - 1/8 inch.
 - 2) Specified width between 2 inches and 12 inches - 1/4 inch.
 - c. Vertical alignment of outside corner of exposed corner columns and control joint grooves in concrete exposed to view - 1/4 inch in 10 feet.
 - d. All other conditions - 3/8 inch in 10 feet.
- C. Limit concrete surface irregularities, designated by ACI 347R as abrupt or gradual, as follows:
 - 1. Class A, 1/8 inch for smooth-formed finished surfaces.
 - 2. Class C, 1/2 inch for rough-formed finished surfaces.
- D. Construct forms tight enough to prevent loss of concrete mortar.
- E. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.
 - 1. Install keyways, reglets, recesses, and the like, for easy removal.
 - 2. Do not use rust-stained steel form-facing material.
- F. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off templates or compacting-type screeds.
- G. Construct formwork to cambers shown or specified on the Drawings to allow for structural deflection of the hardened concrete. Provide additional elevation or camber in formwork as required for anticipated formwork deflections due to weight and pressures of concrete and construction loads.
- H. Forms for Exposed Concrete:
 - 1. Drill forms from the contact face to the outside to suit form ties used. Do not splinter forms by driving ties through improperly prepared holes.
 - 2. Provide sharp, clean corners at intersecting planes without visible edges or offsets. Back joints with extra studs or girts if required to maintain corners.
 - 3. Provide extra studs, girts, walers, and bracing to prevent bowing of forms.
 - 4. Form shapes, recesses and projections with smooth finish materials, and install in forms with sealed joints.

5. Locate form ties in level horizontal rows, plumbed vertically, and in symmetrical arrangements, unless noted otherwise.
- I. Foundation Elements: The sides of all below grade portions of beams, pier caps, walls, and columns shall be formed straight and to the lines and grades specified. Foundation elements shall not be earth formed unless specifically indicated on the Drawings.
- J. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.
- K. Chamfer exterior corners and edges of permanently exposed concrete.
- L. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.
- M. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.
- N. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.
- O. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement, anchoring devices, and embedded items.
 1. Do not apply form release agent where concrete surfaces are scheduled to receive subsequent finishes which may be affected by agent. Soak contact surfaces of untreated forms with clean water. Keep surfaces wet prior to placing concrete.

3.2 EMBEDDED ITEMS

- A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 1. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC's "Code of Standard Practice for Steel Buildings and Bridges."
 - a. Spacing within a bolt group: 1/8"
 - b. Location of bolt group (center): 1/2"
 - c. Rotation of bolt group: 5 degrees
 - d. Angle off vertical: 5 degrees
 - e. Bolt projection: $\pm 3/8$ "
 2. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
 3. Install dovetail anchor slots in concrete structures as indicated.

3.3 VOID FORMS

- A. Install void forms in all locations shown on the Drawings. In general, void forms shall be placed below all structural elements supported by piers to separate these elements from the earth.
- B. Seal discontinuous ends of void forms and tape all joints with waterproof tape so that concrete will not enter the void space during placement of concrete. Do not leave gaps between void form sections.
- C. Premanufactured void forms with circular edges shall be used around all drilled piers. Field fabrication of pier void forms is not permitted.
- D. Do not allow any portion of void forms to fall within the circumference of piers causing a reduction in the bearing area.
- E. Protect void forms from water. Do not install void forms during wet weather or on wet ground. Void forms which become saturated prior to placement of concrete shall be removed and replaced. Void forms shall not be wrapped in plastic, or other similar material to protect from moisture when installed.
- F. Exercise care in placement of concrete to avoid collapse of void form. If void forms collapse, soil beneath the concrete shall be dug out and a proper void space shall be created by installing soil retainers on each side of element.
- G. Void forms under slabs shall be protected by a layer of one-quarter inch thick protection board followed by a vapor barrier or retarder per the specifications. Do not install void forms under soil supported slabs on grade.

3.4 SOIL RETAINERS

- A. Install soil retainers in straight, clean trenches at sides of void forms prior to concrete placement. The gaps between the trench and retainers must be properly positioned or backfilled prior to the placement of concrete. Do not cast the sides of concrete beams directly against the soil.
- B. Affix the soil retainers to the concrete beam with adhesive, pin/washer/load, or concrete hard nails spaced on 24 inch centers.

3.5 REMOVING AND REUSING FORMS

- A. General: Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F for 24 hours after placing concrete, if concrete is hard enough to not be damaged by form-removal operations and curing and protection operations are maintained.
 - 1. Leave formwork for beam soffits, joists, slabs, and other structural elements that supports weight of concrete in place until concrete has achieved at least 70 percent of its 28-day design compressive strength.
 - 2. Minimum cumulative curing times may be reduced by the use of high-early strength cement or forming systems which allow form removal without disturbing shores, but only after the Contractor has demonstrated to the satisfaction of the Architect that the early removal of forms will not cause excessive sag, distortion or damage to the concrete elements.
 - 3. Wood forms shall be completely removed. Provide temporary openings if required.

4. Provide adequate methods of curing and thermal protection of exposed concrete if forms are removed prior to completion of specified curing time.
 5. Areas required to support construction loads in excess of 20 psf shall be reshored to properly distribute construction loading. Construction loads up to the rated live load capacity may be placed on unshored construction provided the concrete has attained the specified 28-day compressive strength.
 6. Obtaining concrete compressive strength tests for the purposes of form removal shall be the responsibility of the Contractor.
 7. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.
- B. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material will not be acceptable for exposed surfaces. Apply new form-release agent.
- C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

3.6 SHORES AND RESHORES

- A. The Contractor shall be solely responsible for proper shoring and reshoring.
- B. Comply with ACI 318 (ACI 318M) and ACI 301 for design, installation, and removal of shoring and reshoring.
1. Do not remove shoring or reshoring until measurement of slab tolerances is complete.
- C. In multistory construction, extend shoring or reshoring over a sufficient number of stories to distribute loads in such a manner that no floor or member will be excessively loaded or will induce tensile stress in concrete members without sufficient steel reinforcement.
1. All structural framing required to support one or more subsequent levels of construction shall be reshored. Reshores shall be located in the same position on each floor. No construction loads shall be placed on the new construction until all supporting reshores have been installed.
 2. Extend shores or reshored from ground to top level in structure three stories or less in height, unless noted otherwise.
 3. In structures over three stories in height, extend reshores at least three levels under the level being placed. Extend shores beyond the minimum number of levels if required to ensure proper distribution of loads throughout the structure.
 4. In crawl spaces or basements, shores or reshores shall extend to mud pads seated firmly on the soil or to on-grade construction.
 5. Bottom tier of reshores shall remain in place until the supported concrete (at the uppermost level) has attained at least 85 percent of the specified 28 day compressive strength and construction loads in excess of 20 psf have been removed.
 6. Conventionally reinforced uppermost floors do not need to be reshored provided forms supporting concrete are not removed until concrete has attained 85 percent of its specified 28 day compressive strength as established by tests of field cured cylinders.
 7. All levels of reshores may be removed after formwork for the uppermost floor has been removed in accordance with these specifications.

- D. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.

3.7 VAPOR RETARDERS

- A. Plastic Vapor Retarders: Place, protect, and repair vapor retarders according to ASTM E 1643 and manufacturer's written instructions.
- B. Lap joints 6 inches (150 mm) and seal with tape as noted below.
 - 1. Vapor retarder membrane seal at slabs on void forms for use with membranes that are not self-adhering to the underside of concrete slabs: Seal vapor retarder membrane to underside of slab using perimeter/seam seal tape applied continuously to perimeter of vapor retarder membrane at grade beams (3in. tape) and at the seams at interior conditions (6in. tape).
 - a. Apply double-sided adhesive tape top surface of gradebeam and adhere membrane to tape. Refer to the drawings for detail.
 - b. Remove any dirt or debris from membrane prior to application of sealing tape.
 - 2. General sealing and at slabs on grade: Use manufacturer's standard adhesive or pressure sensitive tape for sealing membrane at seams, pipe penetrations, tears, etc.

3.8 STEEL REINFORCEMENT

- A. General: Comply with CRSI's "Manual of Standard Practice" for placing reinforcement.
 - 1. Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete.
- B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that would reduce bond to concrete.
- C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcement with bar supports to maintain minimum concrete cover. Do not tack weld crossing reinforcing bars.
 - 1. Weld reinforcing bars according to AWS D1.4, where indicated. Only steel conforming to ASTM A706 may be welded.
- D. Installation tolerances:
 - 1. Top and bottom bars in slabs, girders, beams and joists:
 - a. Members 8" deep or less: $\pm 3/8"$
 - b. Members more than 8" deep: $\pm 1/2"$
 - 2. Concrete Cover to Formed or Finished Surfaces: $\pm 3/8"$ for members 8" deep or less; $\pm 1/2"$ for members over 8" deep, except that tolerance for cover shall not exceed 1/3 of the specified cover.

- E. Concrete Cover: Refer to the Structural Notes.
- F. Splices: Provide standard reinforcement splices by lapping and tying ends. Comply with ACI 318 for minimum lap of spliced bars where not specified on the documents. No. 14 and 18 bars shall not be lap spliced.
- G. Mechanical Splices: Use for splicing of bars larger than no. 11 or where no. 11 bars are spliced to larger size bars and where indicated on the drawings. Comply with manufacturer's instructions for preparation of bars and installation procedures.
- H. Field Welding of Embedded Metal Assemblies: All paint and galvanizing shall be removed in areas to receive field welds. All areas where paint or galvanizing has been removed shall be field repaired with the specified paint or cold galvanizing compound, respectively.
- I. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.
- J. Install welded wire reinforcement in longest practicable lengths on bar supports spaced to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.

3.9 JOINTS

- A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.
- B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.
 - 1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints, unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.
 - 2. Form keyed joints as indicated. Embed keys at least 1-1/2 inches (38 mm) into concrete.
 - 3. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
 - 4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
 - 5. Space vertical joints in walls as indicated. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
 - 6. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
 - 7. Use epoxy-bonding adhesive at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
- C. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length to prevent concrete bonding to one side of joint.

3.10 WATERSTOPS

- A. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated, according to manufacturer's written instructions, adhesive bonding, mechanically fastening, and firmly pressing into place. Install in longest lengths practicable.

3.11 CONCRETE PLACEMENT

- A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections have been performed.
- B. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301, and only if specifically noted as withheld on the batch ticket, and **only if specifically approved by Architect, Engineer, or Testing Agency.**
 - 1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.
 - 2. Water content shall not exceed the maximum specified water/cement ratio for the mix.
- C. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete will be placed on concrete that has hardened enough to cause seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as indicated. Deposit concrete to avoid segregation.
 - 1. Deposit concrete in horizontal layers of depth to not exceed formwork design pressures and in a manner to avoid inclined construction joints.
 - 2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 301.
 - 3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches (150 mm) into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.
 - 4. Do not permit concrete to drop freely any distance greater than 20'-0" for concrete containing a high range water reducing admixture (superplasticizer) or 5'-0" for other concrete. Provide chute or tremie to place concrete where longer drops are necessary. Do not place concrete into excavations with standing water. If place of deposit cannot be pumped dry, pour concrete through a tremie with its outlet near the bottom of the place of deposit.
 - 5. Pump priming grout shall be discarded and not used in the structure.
- D. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.
 - 1. Consolidate concrete during placement operations so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
 - 2. Maintain reinforcement in position on chairs during concrete placement.
 - 3. Screed slab surfaces with a straightedge and strike off to correct elevations.
 - 4. Slope surfaces uniformly to drains where required.
 - 5. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.
- E. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
 - 1. When average high and low temperature is expected to fall below 40 deg F for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.

2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.

F. Hot-Weather Placement: Comply with ACI 305.1 and as follows:

1. **Maintain concrete temperature below 90 deg F** at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

3.12 FINISHING FORMED SURFACES

- A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.
1. Apply to concrete surfaces not exposed to public view.
- B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.
1. Apply to concrete surfaces exposed to public view, to be covered with a coating, or covering material applied directly to concrete.

3.13 MISCELLANEOUS CONCRETE ITEMS

- A. Filling In: Fill in holes and openings left in concrete structures, unless otherwise indicated, after work of other trades is in place. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.
- B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.
- C. Equipment Bases and Foundations: Provide machine and equipment bases and foundations as shown on Drawings. Set anchor bolts for machines and equipment at correct elevations, complying with diagrams or templates from manufacturer furnishing machines and equipment.
1. Housekeeping pads: Concrete fill shall be normal weight concrete, reinforced with 4x4-W2.1xW2.1 welded wire mesh set at middepth of pad. Trowel concrete to a dense, smooth finish. Set anchor bolts for securing mechanical or electrical equipment during pouring of concrete fill.

- D. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel-finish concrete surfaces.
1. Mix one part Portland Cement and two parts crushed stone or gravel passing 3/8" sieve and retained on a 1/8" sieve, measured by volume with only sufficient water to produce a dry consistency for proper placing and finishing.
 2. Placing: Place fill and reinforcement in all steel pan treads and landings. Reinforcement shall be 2"x2" by 14 gauge welded wire fabric extending over the area of each tread and landings. Support reinforcement 3/4" above bottom of steel pans. After sufficient hardening of the concrete fill, steel trowel the exposed surface to a smooth finish.
 3. Abrasive aggregate: Sprinkle abrasive aggregate into the troweled concrete fill in two shakes at the rate of 1/4 pound per square foot and trowel lightly into the surface.

3.14 INSTALLATION OF NON-SHRINK GROUT UNDER BASE PLATES

- A. Grout under all bearing and baseplates. Comply with manufacturer's instructions. Do not dry pack.
- B. Mixing: Use a mechanical mixer. Add only enough water to make grout placeable. Do not mix more grout than can be used in 20 minutes. Under no circumstances shall grout be retempered.

3.15 CONCRETE PROTECTING AND CURING

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 305.1 for hot-weather protection during curing.
- B. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.
- C. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for the remainder of the curing period.
- D. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.
- E. Cure concrete according to ACI 308.1, by one or a combination of the following methods:
1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:
 - a. Water.
 - b. Continuous water-fog spray.
 - c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.
 2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least

12 inches, and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period using cover material and waterproof tape.

- a. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.
 - b. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.
 - c. Cure concrete surfaces to receive floor coverings with either a moisture-retaining cover or a curing compound that the manufacturer certifies will not interfere with bonding of floor covering used on Project.
3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.
- a. After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound will not interfere with bonding of floor covering used on Project.
4. Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.

3.16 CONCRETE SURFACE REPAIRS

- A. Surface Defects in Concrete: Repair and patch defective areas when approved by Engineer. Remove and replace concrete that cannot be repaired and patched to Owner's approval.
- B. Contractor shall submit a detailed, descriptive procedure listing proposed pre-packaged repair materials and methods for the repair of surface defects prior to the start of repair work.
- C. Patching Mortar: Mix, place and finish pre-packaged repair mortar in accordance with manufacturer's instructions.
- D. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, minor honeycombs and rock pockets with no exposed reinforcement, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.
 1. Immediately after form removal, cut out minor honeycombs, rock pockets, and voids more than 1/2 inch in any dimension in solid concrete, but not less than 1 inch in depth. Make edges of cuts perpendicular to concrete surface, 1/4 inch deep minimum. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
 2. Repair defects on surfaces exposed to view using pre-packaged repair mortar so that, when dry, patching mortar will match surrounding color. Patch a test area at inconspicuous

locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.

- E. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.
1. Repair finished surfaces containing defects. Surface defects include minor spalls, pop outs, honeycombs and rock pockets with no exposed reinforcement, crazing and cracks in excess of 0.01 inch (0.25 mm) wide that do not penetrate to reinforcement, and other objectionable conditions.
 2. After concrete has cured at least 14 days, correct high areas by grinding.
 3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.
 4. Correct other low areas scheduled to receive floor coverings with a repair underlayment. Prepare, mix, and apply repair underlayment and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.
 5. Correct other low areas scheduled to remain exposed with a repair topping. Cut out low areas to ensure a minimum repair topping depth of 1/4 inch (6 mm) to match adjacent floor elevations. Prepare, mix, and apply repair topping and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.
 6. Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with patching mortar. Remove defective areas with clean, square cuts, 1/4" deep minimum. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Place, compact, and finish patching mortar to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
 7. Repair random cracks and single holes 1 inch or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.
 8. Unapproved and defective repairs shall be removed and replaced in accordance with requirements provided by the Engineer at no additional cost to the Owner.

3.17 STRUCTURAL REPAIRS

- A. Structurally Defective Concrete: Structural defects include spalls, honeycombs or rock pockets with exposed reinforcement, hollow-sounding concrete, cracks that penetrate to the reinforcement or completely through concrete elements, inadequate cover over reinforcement, and other conditions that affect the structural performance or durability of the concrete as determined by the Engineer.
- B. Repair structural defects in concrete in accordance with plans, specifications, details, etc. provided by the Engineer.
1. The cost of the additional services provided by the Engineer to prepare the repair documents, and to oversee the repair work shall be borne by the Contractor.
- C. Unapproved and defective repairs shall be removed and replaced in accordance with requirements provided by the Engineer at no additional cost to the Owner.

3.18 CLEANUP

- A. Imperfect or damaged work or any material damaged or determined to be defective before final completion and acceptance of the entire job shall be satisfactorily replaced at the Contractor's expense, and in conformity with all of the requirements of the Drawings and Specifications. Removal and replacement of concrete work shall be done in such manner as not to impair the appearance or strength of the structure in any way.
- B. Cleaning: Upon completion of the work all forms, equipment, protective coverings and any rubbish resulting therefrom shall be removed from the site. After sweeping floors, wash floors with clean water. Finished concrete surfaces shall be left in a clean condition, satisfactory to the Owner.

3.19 FIELD QUALITY CONTROL

- A. Testing and Inspecting: Owner may engage a qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Inspections may include:
 - 1. Steel reinforcement placement.
 - 2. Steel reinforcement welding.
 - 3. Headed bolts and studs.
 - 4. Verification of use of required design mixture.
 - 5. Concrete placement, including conveying and depositing.
 - 6. Curing procedures and maintenance of curing temperature.
 - 7. Verification of concrete strength before removal of shores and forms from beams and slabs.
- C. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:
 - 1. Testing Frequency: Obtain one composite sample for each day's pour of each concrete mixture exceeding 5 cu. yd., but less than 25 cu. yd., plus one set for each additional 50 cu. yd. or fraction thereof.
 - 2. Testing Frequency: Obtain at least one composite sample for each 100 cu. yd. or fraction thereof of each concrete mixture placed each day.
 - a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
 - 3. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
 - 4. Air Content: ASTM C 231, pressure method, for normal-weight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
 - 5. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F and below and when 80 deg F and above, and one test for each composite sample.
 - 6. Compression Test Specimens: ASTM C 31/C 31M.
 - a. Cast and laboratory cure four cylinders for each composite sample.

- 1) Do not transport field-cast cylinders until they have cured for a minimum of 24 hours.
 - b. Cast and field cure four cylinders for each composite sample.
 7. Compressive-Strength Tests: ASTM C 39/C 39M;
 - a. Test one cylinder at 7 days
 - b. Test two cylinders at 28 days
 - c. Test one cylinder at 56 days
 - d. If 4" by 8" cylinders are used, provide 1 additional cylinder at each stage
 8. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.
 9. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
 10. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
 11. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by Architect.
 - a. When the strength level of the concrete for any portion of the structure, as indicated by cylinder tests, falls below the specified requirements, the Contractor shall provide improved curing conditions and/or adjustments to the mix design as required to obtain the required strength. If the average strength of the laboratory control cylinders falls so low as to be deemed unacceptable, the Contractor shall follow the core test procedure set forth in ACI 301, Section 1.6. Locations of core tests shall be approved by the Architect. Core sampling and testing shall be at Contractors expense.
 - b. If the results of the core tests indicate that the strength of the structure is inadequate, any replacement, load testing, or strengthening as may be ordered by the Architect shall be provided by the Contractor without cost to the Owner.
 12. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
 13. Correct deficiencies in the Work that test reports and inspections indicate does not comply with the Contract Documents.
- D. Testing of Slabs Containing MVRA:
1. Testing: Retain a qualified testing agency to perform tests and to submit reports.
 2. Concrete Tests:

- a. Maintain four (4) inch concrete cylinders for a minimum of one (1) year from date of Substantial Completion.
- b. Test cylinders as required by warranty or in accordance with supplier's recommendations.
- c. Test cylinders to demonstrate that the minimum waterproofing is 61×10^{-8} cm/s in accordance with ASTM D5084.
- d. Frequency: Test one (1) cylinder per project with the cost borne by the admixture supplier.
- e. Moisture Testing: The WVRA supplier will perform all field moisture testing using ASTM D 4263-83(2102) Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method-Modified for Numerical Value. Ambient conditions shall be 70 F and 50% Relative Humidity and the moisture rise shall be no more than 0.5%. Consult with manufacturer for testing protocols.
- f. Bond Testing: Warranted moisture sensitive coatings and adhesives must be installed by each subcontractor in coordination with WVRA manufacturer. Bond test results will be evaluated by WVRA manufacturer as part of the Warranty process.
- g. Report test results in writing to Architect, WVRA supplier, and Contractor within 48 hours of testing. Test reports shall contain project name and number, date of WVRA application, name of testing agency, location of concrete batch in Work, concrete mix proportions and materials, and waterproofing capability.
- h. Additional Tests: Testing agency shall make additional tests of concrete when test results indicate that water vapor reducing admixture capability requirements have not been met, as directed by Architect. Testing agency may conduct tests to determine adequacy of concrete by cored cylinders or by other methods as directed by Architect.
- i. Additional testing, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- j. Correct deficiencies in the Work that test reports indicate do not comply with the Contract Documents.

- E. Measure floor and slab flatness and levelness according to ASTM E 1155 (ASTM E 1155M) within 48 hours of finishing.

END OF SECTION 03 30 00

SECTION 03 35 00
CONCRETE FLOOR FINISHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Finishing slabs-on-grade, monolithic floor slabs, and separate floor toppings.
 - 2. Surface treatment with concrete hardener, sealer, and slip resistant coatings.
- B. Related Sections include the following:
 - 1. Division 3 Section "Cast-in-Place Concrete" for concrete slab construction and finish.
 - 2. Division 7 Section "Joint Sealers"
 - 3. Division 9 Section "Ceramic Tile" for medium-set and thickset mortar beds for tile.

1.3 REFERENCES

- A. The latest adopted edition of all standards referenced in this section shall apply, unless noted otherwise.
 - 1. ACI 301 - Specifications for Structural Concrete for Buildings
 - 2. ACI 302 - Guide for Concrete Floor and Slab Construction
 - 3. ASTM E1155 - Determining Floor Flatness and Levelness Using the F-Number System (Inch-Pound Units).

1.4 QUALITY ASSURANCE

- A. Testing Agency Qualifications: An independent agency qualified according to ASTM C 1077 and ASTM E 329 for testing indicated, as documented according to ASTM E 548.
- B. Submittals
 - 1. Product Data: Submit manufacturer's data showing compliance with the specifications for the following products:
 - a. Concrete hardener
 - b. Sealer
 - c. Slip resistant treatments

- C. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Meetings."
 - 1. The Contractor shall call a meeting to review the detailed requirements for floor construction, including the concrete placing techniques, finishing techniques, curing techniques, and the application of floor finishing materials. All contractors involved in the floor installation shall attend the conference.
 - 2. The Contractor shall notify the Owner, Architect and the Structural Engineer at least 10 business days prior to the scheduled date of the conference.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage, mixing with other components, and application.
- B. Store materials to comply with manufacturer's written instructions to prevent deterioration from moisture or other detrimental effects.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:

2.2 FLOOR AND SLAB TREATMENTS

- A. Penetrating Liquid Floor Treatment: Clear, chemically reactive, waterborne solution of inorganic silicate or silicate materials and proprietary components; odorless; colorless; that penetrates, hardens, and densifies concrete surfaces.
 - 1. Products:
 - a. Burke by Edoco; Titan Hard.
 - b. ChemMasters; Chemisil Plus.
 - c. ChemTec International; ChemTec One.
 - d. Conspec Marketing & Manufacturing Co., Inc., a Dayton Superior Company; Intraseal.
 - e. Curecrete Distribution Inc.; Ashford Formula.
 - f. Dayton Superior Corporation; Day-Chem Sure Hard.
 - g. Euclid Chemical Company (The); Euco Diamond Hard.
 - h. Kaufman Products, Inc.; SureHard.
 - i. L&M Construction Chemicals, Inc.; Seal Hard.
 - j. Meadows, W. R., Inc.; Liqui-Hard.
 - k. Metalcrete Industries; Floorsaver.
 - l. Nox-Crete Products Group, Kinsman Corporation; Duranox.
 - m. Symons Corporation, a Dayton Superior Company; Buff Hard.
 - n. US Mix Products Company; US Spec Industraseal.
 - o. Vexcon Chemicals, Inc.; Vexcon StarSeal PS.

B. Penetrating sealer:

1. Penetrating sealer shall be a low viscosity, urethane based sealer having at least 35 percent solids. Acceptable products include "Iso-Flex 611", by Master Builders, "Eucothane" by the Euclid Chemical Company, or approved equivalent.

2.3 RELATED MATERIALS

- A. Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber.

PART 3 - EXECUTION

3.1 FINISHING FLOORS AND SLABS

- A. General: Comply with ACI 302.1R recommendations for screeding, restraighening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.
- B. Concrete slabs shall be finished as specified below, within the tolerances specified elsewhere in this Section.
1. Highway straightedges are recommended for use in lieu of bullfloats for all slab placement and finishing operations.
 2. Screeding: Immediately after placing, slab shall be vibrated and struck off true by double screeding to the required level, at or below the elevation or grade of the finished slabs as indicated on the Drawings. Vibrators shall not be used to spread the concrete. When camber is indicated for slabs supported on formwork, screed to the required camber. Fixed screed guides are recommended where specified surface tolerance exceeds FF25/FL20.
 3. Floating: Immediately after screeding, before any excess bleed water is present on the surface, float the surface using long-handled bull floats or darbies.
 4. Straightedging: Immediately after screeding and before excess bleed water is present on the surface, straighten the surface using a highway straightedge.
 5. Edging and jointing, where required, shall be done after bleed water has evaporated and before further finishing.
- C. Float Finish: Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power driven floats. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraighening until surface is left with a uniform, smooth, granular texture.
1. Apply float finish to surfaces to receive trowel finish.
 2. Locations: All concrete surfaces under waterproofing membrane, setting beds for brick, mud-set tile, pavers, or terrazzo, and noncomposite topping slabs.
- D. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.
1. Apply a trowel finish to surfaces exposed to view.
 2. Locations: Exposed concrete floors not otherwise specified, concrete surfaces under carpets, vinyl tile, thin set tile, wood flooring, elastomeric coatings, and painted concrete floors, and roof slabs that are future floors.

- E. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces where ceramic or quarry tile is to be installed by either thickset or thin-set method. While concrete is still plastic, slightly scarify surface with a fine broom.
 - 1. Comply with flatness and levelness tolerances for trowel finished floor surfaces.
- F. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, and ramps, and elsewhere as indicated.
 - 1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Architect before application.
- G. Slip-Resistive Finish: Before final floating, apply slip-resistive aggregate finish where indicated and to concrete stair treads, platforms, and ramps. Apply according to manufacturer's written instructions and as follows:
 - 1. Uniformly spread 25 lb/100 sq. ft. of dampened slip-resistive aggregate over surface in 1 or 2 applications. Tamp aggregate flush with surface, but do not force below surface.
 - 2. After broadcasting and tamping, apply float finish.
 - 3. After curing, lightly work surface with a steel wire brush or an abrasive stone and water to expose slip-resistive aggregate.

3.2 FINISHING CONCRETE TOPPING SLABS

- A. Place concrete floor topping continuously in a single layer, tamping and consolidating to achieve tight contact with bonding surface. Do not permit cold joints or seams to develop within pour strip.
 - 1. Screed surface with a straightedge and strike off to correct elevations.
 - 2. Slope surfaces uniformly where indicated.
 - 3. Begin initial floating using bull floats to form a uniform and open-textured surface plane free of humps or hollows.
- B. Finishing: Consolidate surface with power-driven floats as soon as concrete floor topping can support equipment and operator. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraightening until concrete floor topping surface has a uniform, smooth, granular texture.
 - 1. Hard Trowel Finish: After floating surface, apply first trowel finish and consolidate concrete floor topping by power-driven trowel without allowing blisters to develop. Continue troweling passes and restraighten until surface is smooth and uniform in texture.
 - a. Finish surfaces to specified overall values of flatness, F(F) 25; and levelness, F(L) 20; with minimum local values of flatness, F(F) 17; and levelness, F(L) 15, and measure within 24 hours according to ASTM E 1155 for a randomly trafficked floor surface.
 - b. Finish and measure surface so gap at any point between surface and an unleveled freestanding 10-foot- long straightedge, resting on 2 high spots and placed anywhere on the surface, does not exceed 1/4 inch.

3.3 LIQUID FLOOR TREATMENTS

- A. Penetrating Liquid Floor Treatment: Prepare, apply, and finish penetrating liquid floor treatment according to manufacturer's written instructions.
 - 1. Remove curing compounds, sealers, oil, dirt, laitance, and other contaminants and complete surface repairs.
 - 2. Do not apply to concrete that is less than seven days' old.
 - 3. Apply liquid until surface is saturated, scrubbing into surface until a gel forms; rewet; and repeat brooming or scrubbing. Rinse with water; remove excess material until surface is dry. Apply a second coat in a similar manner if surface is rough or porous.
- B. Sealing Coat: Uniformly apply a continuous sealing coat of curing and sealing compound to hardened concrete by power spray or roller according to manufacturer's written instructions.

3.4 CONCRETE FINISH MEASUREMENT AND TOLERANCES

- A. All floors are subject to measurement for flatness and levelness and shall comply with the following:
 - 1. Slabs shall be flat within a tolerance of 5/16" in 10'-0" when tested with a ten foot long straightedge. Apply straightedge to the slab at 3'-0" intervals in both directions, lapping straightedge 3'-0" on areas previously checked. Low spots shall not exceed the above dimension anywhere along the straightedge. Flatness shall be checked the next work day after finishing.
 - 2. Slabs shall be level within a tolerance of plus or minus 1/4" in 10'-0", not to exceed 3/4" total variation, anywhere on the floor, from elevations indicated on the Drawings. Levelness shall be checked on a 10'-0" grid using a level after removal of forms.
 - 3. Measurement Standard: All floors are subject to measurement for flatness and levelness, according to ASTM E1155, "Standard Test Method for Determining Floor Flatness and Levelness Using the F-Number System."
- B. Two Tiered Measurement Standard: Each floor test section and the overall floor area shall conform to the two-tiered measurement standard as specified herein.
 - 1. Minimum Local Value: The minimum local FF/FL values represent the absolute minimum surface profile that will be acceptable for any one test sample (line of measurements) anywhere within the test area.
 - 2. Specified Overall Value: The specified overall FF/FL values represent the minimum values acceptable for individual floor sections as well as the floor as a whole.
- C. Floor Test Sections
 - 1. A floor test section is defined as the smaller of the following areas:
 - a. The area bounded by column and/or wall lines.
 - b. The area bounded by construction and/or control joint lines.
 - c. Any combination of column lines and/or control joint lines.
 - 2. Test sample measurement lines within each test section shall be multidirectional along two orthogonal lines, as defined by ASTM E1155, at a spacing to be determined by the Owner's testing agency.
 - 3. The precise layout of each test section shall be determined by the Owner's testing agency.

D. Concrete Floor Finish Tolerance

1. The following values apply before removal of shores. Levelness values (FL) do not apply to intentionally sloped or cambered areas, nor to slabs poured on metal deck or precast concrete.
 - a. Suspended/Structured Slabs:
 - 1) Floors to be covered with carpet or vinyl tile, unless otherwise specified:
 - a) Overall Value FF25/FL20
 - b) Minimum Local Value FF17/FL15
 - 2) Floors to be covered with thin-set tile:
 - a) Overall Value FF35/FL20
 - b) Minimum Local Value FF24/FL15
 - 3) Mechanical rooms, thickset tile, recessed floors and roof slabs:
 - a) Overall Value FF20/FL15
 - b) Minimum Local Value FF15/FL10

E. Floor Elevation Tolerance Envelope:

1. The acceptable tolerance envelope for absolute elevation of any point on the slab surface, with respect to the elevation shown on the Drawings, is as follows:
 - a. Slab-on-Grade Construction: $\pm 3/4"$ Typ. U.N.O.
 - b. Top surfaces of formed slabs measured prior to removal of supporting shores: $\pm 3/4"$
 - c. Top surfaces of all other slabs: $\pm 3/4"$
 - d. Slabs specified to slope shall have a tolerance from the specified slope of $3/8"$ in 10'-0" at any point, up to $3/4"$ from theoretical elevation at any point.

3.5 FIELD QUALITY CONTROL

A. Concrete Floor Flatness and Levelness:

1. Measurement Standard: Floors shall be measured for flatness and levelness according to ASTM E1155, "Standard Test Method for Determining Floor Flatness and Levelness Using the F-Number System." Tolerances are specified in Section 033000.
2. Time Period for Measuring and Reporting: All measurements shall be made by the testing laboratory or designated agency before the end of the next workday after the completion of finishing operations. For structural elevated floors, measurement shall also be made prior to removal of forms and shores. The Contractor shall be notified immediately after the measurements of any section are complete, and a written report of the floor measurement results shall be submitted within 72 hours after finishing operations are complete. The Contractor shall take immediate action to correct any work that is outside the specified tolerances.
3. Measuring Equipment: The concrete surface profile shall be measured using equipment manufactured for the purpose, such as the Dipstick Floor Profiler, as manufactured by the Edward W. Face Company, Norfolk, Virginia, or by other methods specified in ASTM E1155.
4. Floor Test Sections:
 - a. A floor test section is defined as the smaller of the following areas:
 - 1) The area bounded by column and/or wall lines.

- 2) The area bounded by construction and/or control joint lines.
 - 3) Any combination of column lines and/or control joint lines.
- b. Test sample measurement lines within each test section shall be multidirectional along two orthogonal lines.
 - c. The precise layout of each test section shall be determined by the testing agency and shall be submitted for the Architect's review and approval.

3.6 REPAIRS

- A. Defective Topping: Repair and patch defective concrete floor topping areas, including areas that have not bonded to concrete substrate.
- B. Remedial Measures for Slab Finish Construction not Meeting Specified Tolerances:
 - 1. Application of Remedial Measures. Remedial measures specified herein are required whenever either or both of the following occur:
 - a. The composite overall values of flatness or levelness of any test section or the entire floor installation measure less than specified values.
 - b. Any individual test sample (line of measurements) measures less than the specified absolute minimum flatness or levelness value.
 - 2. Modification of Existing Surface:
 - a. If, in the opinion of the Architect or Owner's representative, all or any portion of the substandard work can be repaired without sacrifice to the appearance or serviceability of the area, the Contractor shall immediately undertake the approved repair method.
 - b. The Contractor shall submit for review and approval a detailed work plan of the proposed repair showing areas to be repaired, method of repair, and time required to make the repair.
 - c. Repair method(s), at the sole discretion of the Architect or Owner's Representative, may include grinding (floor stoning), planing, retopping with specified floor leveling compound, or any combination of the above.
 - d. All repair work shall be performed at no additional cost to the Owner and with no extension to the construction schedule.
 - 3. Removal and Replacement:
 - a. If, in the opinion of the Architect/Engineer or Owner's Representative, all or any portion of the substandard work cannot be satisfactorily repaired without sacrifice to the appearance or serviceability of the area, the Contractor shall remove and replace the defective work as directed.
 - b. Replacement sections may be retested for compliance at the discretion of the Architect/Engineer or Owner's Representative.
 - c. All replacement work shall be performed at no additional cost to the Owner and with no extension to the construction schedule.

END OF SECTION 03 35 00

SECTION 033536

CLEAR CONCRETE SEALER

PART 1 - GENERAL

1.1 SUMMARY

- A. Related Documents: Conditions of the Contract, Division 01 - General Requirements, and Drawings are applicable to Work of this Section.
- B. Related Sections:
 - 1. Section 03300 - Cast-in-Place Concrete.
- C. **Section Includes:**
 - 1. **Clear sealer to be applied to all exposed concrete floors inside building unless otherwise indicated on finishes plans and contract documents.**

1.2 SUBMITTALS

- A. General: Submit in accordance with Section 007013 and Section 013100.
- B. **Product Data:** Submit manufacturer's technical literature, including chemical properties and percentage of solids, for each product.

1.3 QUALITY ASSURANCE

- A. **Applicator Qualifications:** Performed by firm with **10 years minimum experience** in application of sealer required for Project.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Comply with requirements of Division 1.
- B. Store products above 50°F, but no greater than 85°F, unless otherwise recommended by manufacturer.

1.5 ENVIRONMENTAL REQUIREMENTS

- A. **Do not apply materials when ambient or substrate surface temperatures are below 40 degrees F or higher than 100 degrees F.**
- B. **Do not apply during inclement weather** or when forecasted conditions will not permit compliance with manufacturer's printed instructions.
- C. Provide mechanical ventilation during and after application to dissipate fumes if natural ventilation is insufficient.

1.6 SEQUENCING AND SCHEDULING

- A. Schedule application of products at proper time intervals after concrete finishing and curing operations.
- B. Maintain proper moisture content of concrete before, during, and after application of specified products.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. **Liquid Membrane-Forming Sealer (for use on concrete floor slabs intended to be left exposed):**
 - 1. **Acceptable products:**
 - a. The Euclid Chemical Company; Eucocure VOX, Acrylic Curing and Sealing Compound.
 - b. Dayton Superior Corporation; Safe Cure & Seal (J-18).

- c. Lambert Corporation; Exposite WB.
- 2. Substitutions: Submit in accordance with Section 016000.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions and proceed with Work in accordance with Section 014300.
- B. Verify that surfaces are clean, dry, dust free, and free of efflorescence, oil or other matter detrimental to sealer application. If required, mechanically abrade surfaces to be coated for proper substrate characteristics.
- C. Verify that joint sealant work in adjoining surfaces is complete prior to applications of sealers. Delay application until sealants have cured.
- D. **Ensure concrete has cured for time period required by manufacturer of product to be applied (28 days minimum before application of products).**
- E. Verify that damage and defects in concrete surface have been repaired as specified in Section 03 30 00 and accepted by Architect.

3.2 PREPARATION

- A. Remove loose particles, foreign matter, and oil by method which will not affect sealer application.
- B. Prepare surfaces in accordance with manufacturer's directions.
- C. Provide protection as necessary to protect adjacent materials and surfaces from dirt, dust, spillage, overspray and other surface or physical damage.

3.3 APPLICATION

- A. General:
 - 1. Provide finishes to match approved samples at locations indicated.
 - 2. Apply materials in accordance with manufacturer's printed instructions.
- B. **Liquid Membrane-Forming Sealer:**
 - 1. **Apply sealer using low pressure airless sprayer in single coat** at 250 ft/gal (6.0-7.0 WFT) coverage unless greater amount is recommended by manufacturer to obtain penetration and full coverage.
 - 2. Do not allow flooding or puddling of material on surface.
 - 3. Do not dilute or alter material as packaged.
 - 4. **Locations: As indicated on plans and on all exposed concrete flooring inside of building.**

3.4 ADJUSTING

- A. Repair or replace adjacent Work which has been damaged by finishing operations.

3.5 CLEANING

- A. Clean spillage, overspray, or drift from adjacent surfaces; remove immediately in accordance with manufacturer's instructions.

3.6 PROTECTION

- A. Protect finished concrete surfaces from damage by construction equipment, operations and from adverse weather conditions.

END OF SECTION

SECTION 042000

UNIT MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. **Concrete masonry units and burnished units.**
 - 2. **Face brick and special shapes.**
 - 3. **Thin brick and backup panels.**
 - 4. **Mortar and grout.**
 - 5. **Steel reinforcing bars.**
 - 6. **Masonry joint reinforcement.**
 - 7. **Ties and anchors.**
 - 8. **Embedded flashing.**
 - 9. **Miscellaneous masonry accessories.**

1.3 DEFINITIONS

- A. CMU(s): Concrete masonry unit(s).
- B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.4 SUBMITTALS

- A. **Product Data:** For each type of product indicated.
- B. **Samples for Verification:** For each type and color of the following:
 - 1. **Face brick.**
 - 2. **Special brick shapes and solid brick units.**
 - 3. **Thin brick.**
 - 4. **Pigmented mortar.** Make Samples using same sand and mortar ingredients to be used on Project.
 - 5. **Weep holes and vents.**
 - 6. **Accessories embedded in masonry.**
- C. **Qualification Data:** For testing agency.
- D. **Material Certificates:** For each type and size of the following:
 - 1. **Masonry units:**
 - a. Include data on material properties.
 - b. For brick, include size-variation data verifying that actual range of sizes falls within specified tolerances.
 - c. For exposed brick, include test report for efflorescence according to ASTM C 67.
 - d. For masonry units, include data and calculations establishing average net-area compressive strength of units.
 - 2. **Cementitious materials.** Include brand, type, and name of manufacturer.
 - 3. **Pre-blended, dry mortar mixes.** Include description of type and proportions of ingredients.
 - 4. **Grout mixes.** Include description of type and proportions of ingredients.
 - 5. **Reinforcing bars.**
 - 6. **Joint reinforcement.**
 - 7. **Anchors, ties, and metal accessories.**
- E. **Statement of Compressive Strength of Masonry:** For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units,

mortar type, and resulting net-area compressive strength of masonry determined according to Tables 1 and 2 in ACI 530.1/ASCE 6/TMS 602.

- F. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.
- G. Shop drawings showing size, placement, and location of reinforcing steel.

1.5 **QUALITY ASSURANCE**

- A. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.
- B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.
- C. Masonry Standard: Comply with ACI 530.1/ASCE 6/TMS 602 unless modified by requirements in the Contract Documents.
- D. Mockups: Refer to mockup requirements in Section 014000. Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Construct masonry in mock-up with correct substrate backup, mortar, special shapes, solid units, bonding, joint work, reinforcement, grouting, mortar colors, expansion and control joints, window, and accessories specified in the Contract Documents for the project.
 - 2. Where masonry is to match existing, erect mockups adjacent and parallel to existing surface.
 - 3. **Clean only one-half of exposed faces** of mockups with masonry cleaner as specified for Architect's initial approval. Then clean remainder.
 - 4. Protect accepted mockups from the elements with weather-resistant membrane.
 - 5. Approval of mockups is for color, texture, and blending of masonry units; relationship of mortar and sealant colors to masonry unit colors; tooling of joints; and aesthetic qualities of workmanship.
 - a. Approval of mockups is also for other material and construction qualities specifically approved by Architect in writing.
 - b. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless such deviations are specifically approved by Architect, in writing.
- E. Pre-installation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination."

1.6 **DELIVERY, STORAGE, AND HANDLING**

- A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.
- B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
- D. Deliver preblended, dry mortar mix in moisture-resistant containers designed for use with dispensing silos. Store preblended, dry mortar mix in delivery containers on elevated platforms, under cover, and in a dry location or in covered weatherproof dispensing silos.
- E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.7 PROJECT CONDITIONS

- A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
 - 1. Extend cover a minimum of 24 inches down both sides of walls and hold cover securely in place.
 - 2. Where one wythe of multi-wythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches down face next to unconstructed wythe and hold cover in place.
- B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.
- C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
 - 1. **Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface by covering wall surfaces below with plastic or other appropriate materials.**
 - 2. Protect sills, ledges, and projections from mortar droppings.
 - 3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
 - 4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.
- D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.
 - 1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.
- E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

PART 2 - PRODUCTS

2.1 MASONRY UNITS, GENERAL

- A. **Defective Units:** Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated in the standard. Do not use units where such defects will be exposed in the completed Work.
- B. **Fire-Resistance Ratings:** Where indicated, provide units that comply with requirements for fire-resistance ratings indicated as determined by testing according to ASTM E 119, by equivalent masonry thickness, or by other means, as acceptable to authorities having jurisdiction.

2.2 CONCRETE MASONRY UNITS

- A. Regional Materials: Provide CMUs that have been manufactured within 500 miles of Project site from aggregates and cement that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site.
- B. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.
 - 1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
 - 2. Provide square-edged units for outside corners unless otherwise indicated.
- C. Burnished CMU: Not used.
- D. Integral Water Repellent: Provide units made with integral water repellent for exposed units.

1. Integral Water Repellent: Liquid polymeric, integral water-repellent admixture that does not reduce flexural bond strength. Units made with integral water repellent, when tested according to ASTM E 514 as a wall assembly made with mortar containing integral water-repellent manufacturer's mortar additive, with test period extended to 24 hours, shall show no visible water or leaks on the back of test specimen.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) ACM Chemistries; RainBloc.
 - 2) BASF Aktiengesellschaft; Rheopel Plus.
 - 3) Grace Construction Products, W. R. Grace & Co. - Conn.; Dry-Block.
 - E. CMUs: ASTM C 90.
 1. **Unit Compressive Strength:** Provide units with minimum average net-area compressive strength of 2150 psi.
 2. **Density Classification:** Lightweight.
 3. **Size (Width):** Manufactured to dimensions 3/8 inch less than nominal dimensions.
 4. **Exposed Faces:** Provide color and texture matching the range represented by Architect's sample.
- 2.3 **CONCRETE AND BURNISHED CMU BLOCK LINTELS**
- A. General: Provide one of the following:
 - B. Concrete Lintels: ASTM C 1623, matching CMUs in color, texture, and density classification; and with reinforcing bars indicated. Provide lintels with net-area compressive strength not less than CMUs.
 - C. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs with reinforcing bars placed as indicated and filled with coarse grout. Cure precast lintels before handling and installing. Temporarily support built-in-place lintels until cured.
- 2.4 **BRICK**
- A. General: Provide shapes indicated and as follows, with exposed surfaces matching finish and color of exposed faces of adjacent units:
 1. For ends of sills and caps and for similar applications that would otherwise expose unfinished brick surfaces, provide units without cores or frogs and with exposed surfaces finished.
 2. Provide special shapes for applications where stretcher units cannot accommodate special conditions, including those at corners, movement joints, bond beams, sashes, and lintels.
 3. Steel shelf angles as specified in Section 055000.
 4. Provide special shapes for applications requiring brick of size, form, color, and texture on exposed surfaces that cannot be produced by sawing.
 5. Provide special shapes for applications where shapes produced by sawing would result in sawed surfaces being exposed to view.
 6. **Provide solid brick units where brick coursing is corbeled or offset from courses above and below.**
 - B. Face Brick: Facing brick complying with ASTM C 216 or hollow brick complying with ASTM C 652, Class H40V (void areas between 25 and 40 percent of gross cross-sectional area).
 1. **Products:** Refer to Section 008900 – Finish Selection Summary.
 2. **Grade:** Refer to Section 008900 – Finish Selection Summary.
 3. **Type:** Refer to Section 008900 – Finish Selection Summary.
 4. **Unit Compressive Strength:** Provide units with minimum average net-area compressive strength of 3350 psi.
 5. **Initial Rate of Absorption:** Less than 30 g/30 sq. in. per minute when tested per ASTM C 67.
 6. **Efflorescence:** Provide brick that has been tested according to ASTM C 67 and is rated "not effloresced."
 7. **Size:** Refer to Section 008900 – Finish Selection Summary.

8. **Application:** Use where brick is exposed unless otherwise indicated.
 9. Where shown to "match existing," provide face brick matching color range, texture, and size of existing adjacent brickwork.
 10. **Color and Texture:** Refer to 008900 – Finish Selection Summary.
 11. **Special Shapes:** Provide shelf angle units at continuous shelf angle locations.
- C. Thin Brick:
1. **Thin Brick:** Refer to Section 008900 – Finish Selection Summary.
 2. **Mounting System:** TABS Wall Systems, LLC; TABS II.

2.5 MORTAR AND GROUT MATERIALS

- A. Regional Materials: Provide aggregate for mortar and grout, cement, and lime that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site.
- B. Portland Cement: ASTM C 150, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.
- C. Hydrated Lime: ASTM C 207, Type S.
- D. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.
- E. Masonry Cement: ASTM C 91.
- F. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C 979. Use only pigments with a record of satisfactory performance in masonry mortar.
 1. **Acceptable Product:** To be selected by Architect from any manufacturer's full and complete lines of products, including custom colors.
- G. Aggregate for Mortar: ASTM C 144.
 1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
 2. For joints less than 1/4 inch thick, use aggregate graded with 100 percent passing the No. 16 sieve.
- H. Aggregate for Grout: ASTM C 404.
- I. Water-Repellent Admixture: Liquid water-repellent mortar admixture intended for use with CMUs containing integral water repellent by same manufacturer.
- J. Water: Potable.

2.6 REINFORCEMENT

- A. Uncoated Steel Reinforcing Bars: ASTM A 615 or ASTM A 996, Grade 60.
- B. Masonry Joint Reinforcement, General: ASTM A 951.
 1. Interior Walls: Hot-dip galvanized, carbon steel.
 2. Exterior Walls: Hot-dip galvanized, carbon steel.
 3. Wire Size for Side Rods: 0.187-inch diameter.
 4. Wire Size for Cross Rods: 0.187-inch diameter.
 5. Wire Size for Veneer Ties: 0.187-inch diameter.
 6. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches o.c.
 7. Provide in lengths of not less than 10 feet, with prefabricated corner and tee units.
- C. Masonry Joint Reinforcement for Single-Wythe Masonry: Either ladder or truss type with single pair of side rods.

2.7 TIES AND ANCHORS

- A. Materials: Provide ties and anchors specified in this article that are made from materials that comply with the following unless otherwise indicated.
 1. **Hot-Dip Galvanized, Carbon-Steel Wire:** ASTM A 82; with ASTM A 153, Class B-2 coating.
 2. **Galvanized Steel Sheet:** ASTM A 653, Commercial Steel, G60 Z180 zinc coating.
 3. **Steel Sheet, Galvanized after Fabrication:** ASTM A 1008, Commercial Steel, with ASTM A 153, Class B coating.

4. **Steel Plates, Shapes, and Bars:** ASTM A 36.
- B. Wire Ties, General: Unless otherwise indicated, size wire ties to extend at least halfway through veneer but with at least 5/8-inch cover on outside face. Outer ends of wires are bent 90 degrees and extend 2 inches parallel to face of veneer.
- C. Individual Wire Ties: Rectangular units with closed ends and not less than 4 inches wide.
 1. Where wythes do not align, use adjustable ties with pintle-and-eye connections having a maximum adjustment of 1-1/4 inches.
 2. Wire: Fabricate from 3/16-inch diameter, hot-dip galvanized steel wire. Mill-galvanized wire ties may be used in interior walls unless otherwise indicated.
- D. Partition Top Anchors: 0.105-inch-thick metal plate with 3/8-inch-diameter metal rod 6 inches long welded to plate and with closed-end plastic tube fitted over rod that allows rod to move in and out of tube. Fabricate from steel, hot-dip galvanized after fabrication.
- E. Rigid Anchors: Fabricate from steel bars 1-1/2 inches wide by 1/4 inch thick by 24 inches long, with ends turned up 2 inches or with cross pins unless otherwise indicated bent to configuration indicated.
 1. Corrosion Protection: Hot-dip galvanized to comply with ASTM A 153.
- F. **Adjustable Masonry-Veneer Anchors:**
 1. **General:** Provide anchors that allow vertical adjustment but resist tension and compression forces perpendicular to plane of wall, for attachment over sheathing to wood or metal studs, and as follows:
 - a. **Structural Performance Characteristics:** Capable of withstanding a 100-lbf load in both tension and compression without deforming or developing play in excess of 0.05 inch.
 2. **Screw-Attached, Masonry-Veneer Anchors:** Units consisting of a wire tie and a metal anchor section.
 - a. **Acceptable Products:** Subject to compliance with requirements, provide one of the following:
 - 1) Hohmann & Barnard, Inc.; HB-213-2X with X-Seal Tape beneath anchors.
 - b. **Anchor Section:** Gasketed sheet metal anchor section, 1-1/4 inches (32 mm) wide by 6 inches (152 mm) long, with screw holes top and bottom; top and bottom ends bent to form pronged legs of length to match thickness of insulation or sheathing; and raised rib-stiffened strap, 5/8 inch (16 mm) wide by 6 inches (152 mm) long, stamped into center to provide a slot between strap and base for inserting wire tie. Self-adhering, modified bituminous tape fits behind anchor plate and extends beyond pronged legs.
 - c. Fabricate sheet metal anchor sections and other sheet metal parts from 0.105-inch-thick, steel sheet, galvanized after fabrication.
 - d. **Wire Ties:** Triangular-, rectangular-, or T-shaped wire ties fabricated from 0.187-inch-diameter, hot-dip galvanized steel wire.
 3. **Polymer-Coated, Steel Drill Screws for Steel Studs:** ASTM C 954 except manufactured with hex washer head and neoprene or EPDM washer, No. 10 diameter by length required to penetrate steel stud flange with not less than three exposed threads, and with organic polymer coating with salt-spray resistance to red rust of more than 800 hours per ASTM B 117.
 - a. **Acceptable Products:** Subject to compliance with requirements, provide one of the following:
 - 1) ITW Buildex; Teks Maxiseal with Climaseal finish.
 - 2) Textron Inc., Textron Fastening Systems; Elco Drill-Flex with Stalgard finish.

2.8 **EMBEDDED FLASHING MATERIALS**

- A. Refer to Section 076210, Flexible Flashing.
- B. Rubberized Asphalt Flashing:
 1. Basis of Design: Henry Blueskin TWF.
 2. Other Acceptable Manufacturers:
 - a. GBP.

- b. Polyguard.
- c. Protectowrap.
- 3. Sheet Membrane: Rubberized asphaltic sheet laminated to a polypropylene film, 32 mil minimum total thickness, width as required for joints and flashing conditions.
- 4. Primer: Rubber based solvent type recommended by membrane manufacturer.
- 5. Mastic: Rubberized asphaltic type recommended by membrane manufacturer.
- 6. Liquid Membrane: Two component elastomeric, mastic grade.

2.9 MISCELLANEOUS MASONRY ACCESSORIES

- A. **Compressible Filler:** Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene urethane or PVC.
- B. **Preformed Control-Joint Gaskets:** Made from styrene-butadiene-rubber compound, complying with ASTM D 2000, Designation M2AA-805 or PVC, complying with ASTM D 2287, Type PVC-65406 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.
- C. **Bond-Breaker Strips:** Asphalt-saturated, organic roofing felt complying with ASTM D 226, Type I (No. 15 asphalt felt).
- D. **Weep/Vent Products:** Use one of the following unless otherwise indicated:
 - 1. **Cellular Plastic Weep/Vent:** One-piece, flexible extrusion made from UV-resistant polypropylene copolymer, full height and width of head joint and depth 1/8 inch less than depth of outer wythe, in color selected from manufacturer's standard.
 - a. **Acceptable Products:** Subject to compliance with requirements, provide one of the following:
 - 1) Advanced Building Products Inc.; Mortar Maze weep vent.
 - 2) Blok-Lok Limited; Cell-Vent.
 - 3) Dayton Superior Corporation, Dur-O-Wal Division; Cell Vents.
 - 4) Heckmann Building Products Inc.; No. 85 Cell Vent.
 - 5) Hohmann & Barnard, Inc.; Quadro-Vent.
 - 6) Wire-Bond; Cell Vent.
- E. **Cavity Drainage Material:** Free-draining mesh, made from polymer strands that will not degrade within the wall cavity.
 - 1. **Acceptable Products:** Subject to compliance with requirements, provide one of the following:
 - a. Advanced Building Products Inc.; Mortar Break.
 - b. Archovations, Inc.; CavClear Masonry Mat.
 - c. Mortar Net USA, Ltd.; Mortar Net.
 - 2. **Provide one of the following configurations:**
 - a. Strips, full-depth of cavity and 10 inches high, with dovetail shaped notches 7 inches deep that prevent clogging with mortar droppings.
 - b. Strips, not less than 3/4 inch thick and 10 inches high, with dimpled surface designed to catch mortar droppings and prevent weep holes from clogging with mortar.
 - c. Sheets or strips full depth of cavity and installed to full height of cavity.
 - d. Sheets or strips not less than 3/4 inch thick and installed to full height of cavity with additional strips 4 inches high at weep holes and thick enough to fill entire depth of cavity and prevent weep holes from clogging with mortar.
- F. **Reinforcing Bar Positioners:** Wire units designed to fit into mortar bed joints spanning masonry unit cells and hold reinforcing bars in center of cells. Units are formed from 0.148-inch steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.
 - 1. **Acceptable Products:** Subject to compliance with requirements, provide one of the following:
 - a. Dayton Superior Corporation, Dur-O-Wal Division; D/A 810, D/A 812 or D/A 817.
 - b. Heckmann Building Products Inc.; No. 376 Rebar Positioner.

- c. Hohmann & Barnard, Inc.; #RB or #RB-Twin Rebar Positioner.
- d. Wire-Bond; O-Ring or Double O-Ring Rebar Positioner.

2.10 MASONRY CLEANERS

- A. Proprietary Non-Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.
 - 1. **Basis of Design:** ProSoCo, Inc.; Sure Klean.
 - 2. **Acceptable Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Diedrich Technologies, Inc.
 - b. EaCo Chem, Inc.
 - c. ProSoCo, Inc.
 - 3. **Do not use muratic acid under any circumstances!**

2.11 MORTAR AND GROUT MIXES

- A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures, unless otherwise indicated.
 - 1. **Do not use calcium chloride in mortar or grout.**
 - 2. Use portland cement-lime masonry cement mortar unless otherwise indicated.
 - 3. For exterior masonry, use portland cement-lime masonry cement mortar.
 - 4. For reinforced masonry, use portland cement-lime masonry cement mortar.
- B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.
- C. **Mortar for Unit Masonry:** Comply with ASTM C 270, Property Specification. Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry.
 - 1. **For masonry below grade or in contact with earth, use Type M.**
 - 2. **For reinforced masonry, use Type S.**
 - 3. **For exterior, above-grade, load-bearing and non-load-bearing walls and parapet walls; for interior load-bearing walls; for interior non-load-bearing partitions; and for other applications where another type is not indicated, use Type N.**
- D. Pigmented Mortar: Use colored cement product or select and proportion pigments with other ingredients to produce color required. Do not add pigments to colored cement products.
 - 1. Pigments shall not exceed 10 percent of portland cement by weight.
 - 2. Pigments shall not exceed 5 percent of masonry cement by weight.
 - 3. Mix to match Architect's sample.
 - 4. Application: Use pigmented mortar for exposed mortar joints with the following units:
 - a. Face brick.
- E. Grout for Unit Masonry: Comply with ASTM C 476.
 - 1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with Table 1.15.1 in ACI 530.1/ASCE 6/TMS 602 for dimensions of grout spaces and pour height.
 - 2. Proportion grout in accordance with ASTM C 476, Table 1 or paragraph 4.2.2 for specified **28-day compressive strength indicated, but not less than 2000 psi.**
 - 3. **Provide grout with a slump of 8 to 11 inches as measured according to ASTM C 143.**

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 - 1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.
 - 2. Verify that foundations are within tolerances specified.
 - 3. Verify that reinforcing dowels are properly placed.
- B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Thickness: Build cavity and composite walls and other masonry construction to full thickness shown. Build single-wythe walls to actual widths of masonry units, using units of widths indicated.
- B. Build chases and recesses to accommodate items specified in this and other Sections.
- C. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match the construction immediately adjacent to opening.
- D. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.
- E. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures. Do not allow discernible patterns such as chevrons to occur.
- F. Mix units from several pallets or cubes as they are placed.
- G. Matching Existing Masonry: Where called for on Drawings or Section 008900 Finish Selection Summary match coursing, bonding, color, and texture of existing masonry where applicable.
- H. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 30 g/30 sq. in. per minute when tested per ASTM C 67. Allow units to absorb water so they are damp but not wet at time of laying.

3.3 TOLERANCES

- A. **Dimensions and Locations of Elements:**
 - 1. **For dimensions in cross section or elevation:** Do not vary by more than plus 1/2 inch or minus 1/4 inch.
 - 2. **For location of elements in plan:** Do not vary from that indicated by more than plus or minus 1/2 inch.
 - 3. **For location of elements in elevation:** Do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2 inch total.
- B. **Lines and Levels:**
 - 1. **For bed joints and top surfaces of bearing walls:** Do not vary from level by more than 1/4 inch in 10 feet, or 1/2 inch maximum.
 - 2. **For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals:** Do not vary from level by more than 1/4 inch in 20 feet, or 1/2 inch maximum.
 - 3. **For vertical lines and surfaces:** Do not vary from plumb by more than 3/8 inch in 20 feet, or 1/2 inch maximum.
 - 4. **For conspicuous vertical lines:** Such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/4 inch in 20 feet, or 1/2 inch maximum.
 - 5. **For lines and surfaces:** Do not vary from straight by more than 3/8 inch in 20 feet, or 1/2 inch maximum.
 - 6. **For vertical alignment of exposed head joints:** Do not vary from plumb by more than 1/4 inch in 10 feet, or 1/2 inch maximum.

7. **For faces of adjacent exposed masonry units:** Do not vary from flush alignment by more than **1/16 inch** except due to warpage of masonry units within tolerances specified for warpage of units.
- C. **Joints:**
 1. **For bed joints:** Do not vary from thickness indicated by more than **plus or minus 1/8 inch, with a maximum thickness limited to 3/8 inch.**
 2. **For exposed bed joints:** Do not vary from bed-joint thickness of adjacent courses by more than **1/8 inch with a maximum thickness limited to 3/8 inch.**
 3. **For head and collar joints:** Do not vary from thickness indicated by more than plus 3/8 inch or minus 1/4 inch.
 4. **For exposed head joints:** Do not vary from thickness indicated by more than plus or minus **1/8 inch with a maximum thickness of 3/8 inch.** Do not vary from adjacent bed-joint and head-joint thicknesses by more than 1/8 inch.
 5. **For exposed bed joints and head joints of stacked bond:** Do not vary from a straight line by more than **1/16 inch** from one masonry unit to the next.

3.4 LAYING MASONRY WALLS

- A. Mortar joints shall not exceed 3/8" in width or height.
- B. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.
- C. Bond Pattern for Exposed Masonry: Refer to Section 008900 – Finish Selection Summary; do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.
- D. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than 4-inches. Bond and interlock each course of each wythe at corners. Do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.
- E. Stopping and Resuming Work: Stop work by racking back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.
- F. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.
- G. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.
- H. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below and rod mortar or grout into core.
- I. Fill cores in hollow CMUs with grout 24 inches under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.
- J. Build non-load-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.

Install compressible filler in joint between top of partition and underside of structure above.

 1. Fasten partition top anchors to structure above and build into top of partition. Grout cells of CMUs solidly around plastic tubes of anchors and push tubes down into grout to provide 1/2-inch clearance between end of anchor rod and end of tube. Space anchors 48 inches o.c. unless otherwise indicated.
 2. Wedge non-load-bearing partitions against structure above with small pieces of tile, slate, or metal. Fill joint with mortar after dead-load deflection of structure above approaches final position.
 3. At fire-rated partitions, treat joint between top of partition and underside of structure above to comply with Division 07 Section "Fire-Resistive Joint Systems."
- K. **Install brick units consisting of blended units such that patterning is not visible.** Any distinct patterns such as chevrons or heavy groupings of one or more colors shall be removed and reinstalled to eliminate patterns.
- L. **Use of Solid Masonry Units:** Use solid bricks shapes at rustication (recessed) courses, corners and corbelled courses. Solid units shall match typical units in appearance.

3.5 MORTAR BEDDING AND JOINTING

- A. Lay hollow brick and CMUs as follows:
 - 1. With face shells fully bedded in mortar and with head joints of depth equal to bed joints.
 - 2. With webs fully bedded in mortar in all courses of piers, columns, and pilasters.
 - 3. With webs fully bedded in mortar in grouted masonry, including starting course on footings.
 - 4. With entire units, including areas under cells, fully bedded in mortar at starting course on footings where cells are not grouted.
- B. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.
- C. **Tool exposed joints slightly concave** when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.
- D. Joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.

3.6 ANCHORING MASONRY VENEERS

- A. Anchor masonry veneers to wall framing with masonry-veneer anchors to comply with the following requirements:
 - 1. **Fasten screw-attached anchors through sheathing to wall framing** with metal fasteners of type indicated. Use two fasteners per anchor unless anchor design only uses one fastener.
 - 2. **Embed tie sections in masonry joints.** Provide not less than 2 inches of air space between back of masonry veneer and face of sheathing unless shown otherwise on Drawings.
 - 3. Locate anchor sections to allow maximum vertical differential movement of ties up and down.
 - 4. **Space anchors as indicated, but not more than 16 inches o.c. vertically and 24 inches o.c. horizontally** (or 12 inches on center vertically and 32 inches on center horizontally) with not less than 1 anchor for each 2.67 sq. ft. of wall area. Install additional anchors within 12 inches of openings and at intervals, not exceeding 36 inches, around perimeter.

3.7 CONTROL AND EXPANSION JOINTS

- A. General: Install control and expansion joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.
- B. Form control joints in concrete masonry using one of the following methods:
 - 1. Fit bond-breaker strips into hollow contour in ends of CMUs on one side of control joint. Fill resultant core with grout and rake out joints in exposed faces for application of sealant.
 - 2. Install preformed control-joint gaskets designed to fit standard sash block.
 - 3. Install interlocking units designed for control joints. Install bond-breaker strips at joint. Keep head joints free and clear of mortar or rake out joint for application of sealant.
 - 4. Install temporary foam-plastic filler in head joints and remove filler when unit masonry is complete for application of sealant.
- C. Form expansion joints in brick as follows:
 - 1. Build flanges of metal expansion strips into masonry. Lap each joint 4 inches in direction of water flow. Seal joints below grade and at junctures with horizontal expansion joints if any.
 - 2. Build flanges of factory-fabricated, expansion-joint units into masonry.
 - 3. Build in compressible joint fillers where indicated.
 - 4. Form open joint full depth of brick wythe and of width indicated, but **not less than 3/8 inch** for installation of sealant and backer rod specified in Division 07 Section "Joint Sealants."

- D. Provide horizontal, pressure-relieving joints by inserting a compressible filler of width required for installing sealant and backer rod specified in Division 07 Section "Joint Sealants," but not less than **3/8 inch (larger where indicated)**.
 - 1. Locate horizontal, pressure-relieving joints beneath shelf angles supporting masonry.
- E. **Vertical control joints shall be installed not more than 20 ft. O.C. and as recommended by BIA standards whichever is more restrictive.** Coordinate final locations with Architect prior to installation of masonry.

3.8 LINTELS AND SHELF ANGLES

- A. Install steel lintels where indicated and as otherwise required by structural engineer, and per best practices.
- B. Provide concrete masonry lintels where shown and as required where openings of more than 12 inches for brick-size units and 24 inches for block-size units are shown without structural steel or other supporting lintels.
- C. Provide minimum bearing of **8 inches** at each jamb unless otherwise indicated.
- D. Provide continuous steel shelf angles at 30' maximum above first floor slab and at each floor above that height. Provide whether or not shown on Drawings.

3.9 FLASHING, WEEP HOLES, CAVITY DRAINAGE

- A. General: Install embedded flashing and weep holes in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated.
- B. Install flashing as follows unless otherwise indicated:
 - 1. Prepare masonry surfaces so they are smooth and free from projections that could puncture flashing. **Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar.** Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or tape as recommended by flashing manufacturer.
 - 2. **At masonry-veneer walls, extend flashing through veneer, across air space behind veneer, and up face of sheathing at least 8 inches; with upper edge tucked under building paper, air barrier, or building wrap, lapping at least 4 inches.**
 - 3. **At lintels and shelf angles,** extend flashing a minimum of 6 inches into masonry at each end. At heads and sills, extend flashing 6 inches at ends and **turn up not less than 2 inches to form end dams.**
 - 4. Interlock end joints of ribbed sheet metal flashing by overlapping ribs not less than 1-1/2 inches or as recommended by flashing manufacturer, and seal lap with elastomeric sealant complying with requirements in Division 07 Section "Joint Sealants" for application indicated.
 - 5. Install metal drip edges and sealant stops where required, with ribbed sheet metal flashing by interlocking hemmed edges to form hooked seam. Seal seam with elastomeric sealant complying with requirements in Division 07 Section "Joint Sealants" for application indicated.
 - 6. Cut flexible flashing off flush with face of wall after masonry wall construction is completed.
- C. Install single-wythe CMU flashing system in bed joints of CMU walls where indicated to comply with manufacturer's written instructions. Install CMU cell pans with upturned edges located below face shells and webs of CMUs above and with weep spouts aligned with face of wall. Install CMU web covers so that they cover upturned edges of CMU cell pans at CMU webs and extend from face shell to face shell.
- D. Install reglets and nailers for flashing and other related construction where they are shown to be built into masonry.
- E. Install weep holes in head joints in exterior wythes of first course of masonry immediately above embedded flashing and as follows:
 - 1. Use specified weep/vent products to form weep holes.
 - 2. Space weep holes 24 inches o.c. unless otherwise indicated.

- F. Place cavity drainage material in cavities to comply with configuration requirements for cavity drainage material in "Miscellaneous Masonry Accessories" Article.

3.10 INSTALLING THIN BRICK MOUNTING PANEL

- A. Backup Panels:
 - 1. Attach to wall substrate with screws into metal studs.
 - 2. Attach the anchors near the pocket edges so that prongs are visible with thin brick units in place.
 - 3. Apply adhesive beads over the adhesive locks.
- B. Thin Brick Units: Place thin brick on the brick supports and push adhesive through the backup panel.
- C. Work Pattern: Begin work at bottom of wall and proceed up according to manufacturer's instructions.
- D. Joints:
 - 1. Using a grout bag, fill joints with mortar.
 - 2. Finish joints that will remain exposed with a tool slightly larger than joint width to form a concave profile. Tool joints after mortar has taken its initial set and in such a manner as to squeeze mortar back into joint.

3.11 REINFORCED UNIT MASONRY INSTALLATION

- A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.
 - 1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
 - 2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other loads that may be placed on them during construction.
- B. Placing Reinforcement: Comply with requirements in ACI 530.1.
- C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.
 - 1. Comply with requirements in ACI 530.1 for cleanouts and for grout placement, including minimum grout space and maximum pour height.
 - 2. **Limit height of vertical grout pours to not more than 60 inches.**

3.12 FIELD QUALITY CONTROL

- A. Testing and Inspecting: Owner will engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas, as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.
- B. Inspections: Level 1 special inspections according to the "International Building Code."
 - 1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
 - 2. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
 - 3. Place grout only after inspectors have verified proportions of site-prepared grout.
- C. Testing Prior to Construction: One set of tests.
- D. Mortar and Grout Testing Frequency: One set of tests for each 5000 sq. ft. of wall area or portion thereof.
- E. Clay Masonry Unit Test: For each type of unit provided, according to ASTM C 67 for compressive strength.
- F. Concrete Masonry Unit Test: For each type of unit provided, according to ASTM C 140 for compressive strength.

- G. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, according to ASTM C 780.
- H. Mortar Test (Property Specification): For each mix provided, according to ASTM C 780. Test mortar for mortar air content and compressive strength.
- I. Grout Test (Compressive Strength): For each mix provided, according to ASTM C 1019.
- J. Prism Test: For each type of construction provided, according to ASTM C 1314 at 7 days and at 28 days.

3.13 **REPAIRING, POINTING, AND CLEANING**

- A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.
- B. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.
- C. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
 1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
 2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
 3. **Protect adjacent stone and non-masonry surfaces from contact with cleaner** by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
 4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
 5. Clean brick by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.
 6. Clean masonry with a proprietary acidic cleaner applied according to manufacturer's written instructions.
 7. Clean concrete masonry by cleaning method indicated in NCMA TEK 8-2A applicable to type of stain on exposed surfaces.
 8. **Clean stone trim to comply with stone supplier's written instructions.**
 9. **Do not used muratic acid. No exceptions!**

3.14 **MASONRY WASTE DISPOSAL**

- A. Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.
- B. Waste Disposal as Fill Material: Dispose of clean masonry waste, including excess or soil-contaminated sand, waste mortar, and broken masonry units, by crushing and mixing with fill material as fill is placed.
 1. Crush masonry waste to less than 4 inches in each dimension.
 2. Mix masonry waste with at least two parts of specified fill material for each part of masonry waste. Fill material is specified in Division 31 Section "Earth Moving."
 3. Do not dispose of masonry waste as fill within 18 inches of finished grade.
- C. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above, and other masonry waste, and legally dispose of off Owner's property.

END OF SECTION

SECTION 047200

CAST STONE MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SECTION INCLUDES

- A. **Custom cast stone wall caps, copings, watermarks, base courses, and belt courses.**
- B. **Custom cast stone units, shapes, and fabrications.**
- C. **Reinforcement, anchorages and accessories.**

1.3 PERFORMANCE REQUIREMENTS

- A. **Delegated Design:** Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," licensed in the state where the work is being performed to design anchorages to back-up walls for each condition indicated, including detailed reinforcing and stainless steel pinned connection requirements.

1.4 SUBMITTALS

- A. General: Submit in accordance with Section 013300.
- B. **Shop Drawings:**
 - 1. Provide Shop Drawings, signed and sealed by professional engineer.
 - 2. Indicate sizes, shapes, materials, reinforcement, joint details, locations, and anchorage.
- C. **Samples:** Submit two – 24" long samples of each cast stone shape and finish for Architect's approval.
- D. Submit manufacturer's installation instructions.
- E. Provide mockup at site.

1.5 QUALITY ASSURANCE

- A. **Manufacturer: Minimum 10 years experience** fabricating similar work. Submit list of recently completed projects if requested.
- B. **Installer: Minimum of 10 years experience** in similar types of work and is able to furnish a list of previous projects and references if requested by the Architect.
- C. **Manufactured Units:** Meet requirements of FS SS-S- 721C.
- D. **Standards:** Comply with Cast Stone Institute and Brick Industry of American recommendations and standards.

1.6 CERTIFICATES

- A. Submit manufacturer's certificates that materials meet or exceed specified requirements.
 - 1. **Manufacturer is a producing member of the Cast Stone Institute** and has on file and follows a written quality-control plan that includes all elements of the Cast Stone Institute's "Quality Control Procedures Required for Plant Inspection."

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Maintain materials and surrounding air temperatures to minimum 50 degrees F prior to, during, and 48 hours after, installation. In hot weather (above 99 degrees with less than 50% relative humidity), protect construction from direct exposure to the sun and wind.
- B. **Cold weather requirements:** IMIAC - Recommended Practices and Specifications for Cold Weather Masonry Construction.

1.8 DELIVERY AND STORAGE

- A. Deliver, store and handle materials in accordance with Section 016000.

- B. After curing, store, stack, and transport in a manner to prevent cracking, chipping, spalling, staining, and other injuries.
 - C. Store stone off the ground and under cover.
- 1.9 PROTECTION
- A. Protect stone to prevent concrete, asphalt, rainwater, and other foreign material from defacing stone surfaces.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Advanced Cast Stone.
- B. United Commercial Cast Stone
- C. Better Cast Stone
- D. Continental Cast Stone
- E. Substitutions: Under provisions of Section 016000.

2.2 BASIS-OF-DESIGN PRODUCT

- A. **As indicated in Section 008900 – Finish Selection Summary.**
- B. Appearance: Cast stone units appearance shall be a consistent color with no black particles or sand on the surface.

2.3 MATERIALS

- A. **Portland Cement:** ASTM C 150, Type 1, in **color required to achieve basis of design selection.**
- B. Coarse Aggregates: ASTM C 33, color as necessary to obtain final approved color of stone.
- C. **Sand:** ASTM C 144, as required to match Architect's control sample.
- D. **Lime Putty:** Hydrated lime, Type S, ASTM C 207.
- E. **Reinforcement Steel:** ASTM A 615, Grade 60, domestic deformed steel bars, and ASTM A 82 plain, cold-drawn steel. Hot dip galvanize after fabrication, per ASTM A 153.
- F. **Anchors: Type 303 stainless steel wire and rods,** sizes as detailed.
- G. **Water:** Clean and free from deleterious substances.
- H. **Clear Sealer:** Non-yellowing type as recommended by cast stone manufacturer.
 - 1. **Approved Products:**
 - a. NCP Klearseal as made by National Construction Products, Dallas, Texas
 - b. Klere- Seal 900 as made by Pecora Corp.

2.4 MORTAR MIX

- A. Refer to Section 042000 for mortar requirements.

2.5 FABRICATION

- A. Reinforcement: Reinforce stone with wire and steel reinforcement bars as detailed or as necessary for structural integrity.
- B. **Stone:**
 - 1. Fabricate stone in accordance with referenced standards.
 - 2. **Minimum compressive strength at 28 days of age: 6,500 PSI.**
 - 3. Moisture Absorption: Maximum 8 percent when tested according to ASTM C 97.
 - 4. True to dimensions and profiles with sharp, straight edges and uniform curves.
 - 5. **Do not silicone coat cast stone. Confirm sealer with Architect.**
- C. **Sealer: Apply 2 coats of clear sealer to exposed surfaces of stone at rate of 200 square feet per gallon, per coat.** Apply in accordance with manufacturer's direction. Allow first coat to dry before applying second coat. Do not coat mortar setting or joint surfaces with sealer.
- D. **Anchors:** Provide necessary dowel holes in stone.
- E. **Finish:**

1. **Exposed Surfaces:** Uniformly textured, entirely free of pits, holes, or form marks.
2. **Texture:** Similar in texture to sand finished limestone.
3. **Color:** Provide **white sand, white portland cement, and titanium oxide additive** as required to achieve the most **bright white** color possible.
4. Leave unexposed setting surfaces rough.

2.6 TOLERANCES OF UNITS

- A. **Squareness:** Not more than 1/8 inch in 6 feet out of square.
- B. **Warpage:** Not more than 1/8 inch per 6 feet of length.
- C. **Location of Anchors and Inserts:** Deviation of anchors or inserts from center line or location shown on drawings not greater than plus or minus 3/8 inch.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. **Set stainless steel anchor rods in setting bed.**
- B. Set stone plumb, level and true in full beds of mortar.
- C. Grout dowels into holes in stone and secure anchor with stainless steel tie wire.
- D. Leave securely anchored and bonded.
- E. **Notch cast stone and other projections to allow downspouts to pass by vertically without offsets being required. No exceptions.**

3.2 JOINTS

- A. **Provide 1/4 inch wide joints unless noted otherwise on Drawings.** Fill horizontal and projected unit joints to within 1/2 inch of face of unit with mortar as cast stone is set. **On projections at exterior wall, or non-vertical surfaces, fill exterior 1/2 inch of joints with sealant. Refer 079000.** Leave joints tightly tooled and slightly concave.
- B. Refer to Section 042000 – Unit Masonry for additional requirements.

3.3 TOLERANCES OF INSTALLATION

- A. **Variation from Unit to Adjacent Unit:** 1/32 inch maximum.
- B. **Variation from Plane of Wall:** 1/4 inch in 10 feet, and 1/2 inch in 20 feet or more.
- C. **Variation in Joint Thickness:** 1/8 inch in 3 feet.

3.4 CONTROL/EXPANSION JOINTS

- A. Do not continue horizontal joint reinforcing across control joints.
- B. Install resilient control and expansion joint in continuous lengths in accordance with Section 079000.
- C. **Provide expansion and control joints where indicated on the drawings, or, if none shown, per Brick Institute of America or Cast Stone Institute recommendations. Match control joints and expansion joint locations indicated to be provided in masonry directly adjacent to cast stone units. Maximum distance between control joints shall not exceed 20' o.c.**
- D. **Confirm final location in shop drawings with Architect prior to installation.**

3.5 PATCHING

- A. **Patching of minor defects will be permitted if: 1) performed with proper materials, 2) by skilled craftsmen, 3) as approved by Architect, and 4) patched areas blend-in with surrounding areas so that repair is not noticeable from viewing distance. Unacceptable patches shall be replaced with new cast stone units.**

3.6 CLEANING

- A. After stones are installed, remove foreign matter from surface of stone using a stiff brush, mild cleanser, and clear water.

- B. Contact the manufacturer for advice on how to clean the cast stone. **DO NOT** use any cleaner that could result in yellowing or a change in color of the cast stone over time.
- C. **Use of acid for cleaning of cast stone is strictly prohibited.**

END OF SECTION

SECTION 05 12 00
STRUCTURAL STEEL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Structural steel framing members and connections.
2. Deck support angles.
3. Shop prime painting and touch up painting in the field.
4. Temporary construction bracing.
5. Fabrication and erection inspection and testing.
6. Grouting under base plates and bearing plates.

- B. Related Sections include the following:

1. Division 1 Section "Quality Requirements" for independent testing agency procedures and administrative requirements.
2. Division 1 Section "Submittals" for administrative requirements for the submission of shop drawings and other submittals.
3. Division 5 Section "Architecturally Exposed Structural Steel."
4. Division 5 Section "Steel Deck" for field installation of shear connectors.
5. Division 5 Section "Metal Fabrications" for steel lintels or shelf angles not attached to structural-steel frame, miscellaneous steel fabrications, and other metal items not defined as structural steel.
6. Division 5 Section "Metal Stairs".
7. Division 9 painting Sections for surface preparation and priming requirements.

1.3 DEFINITIONS

- A. Structural Steel: Elements of structural-steel frame, as classified by AISC's "Code of Standard Practice for Steel Buildings and Bridges," that support design loads.

1.4 PERFORMANCE REQUIREMENTS

- A. Connections: Provide details of simple shear connections required by the Contract Documents to be selected or completed by structural-steel fabricator to withstand ASD-service loads indicated and comply with other information and restrictions indicated.

1. Select and complete connections using schematic details indicated and AISC's Steel Construction Manual, edition as referenced in the Building Code.
2. Engineering Responsibility: Fabricator's responsibilities include using a qualified professional engineer to prepare structural analysis data for structural-steel connections.

B. Construction: Type PR, partially restrained.

1.5 SUBMITTALS

A. Submit in accordance with Division 1 Section "Submittals".

B. Submittals for Review

1. Provide complete details and schedules for fabrication and shop assembly of members, erection plans, details, procedures, and diagrams showing sequence of erection of structural steel components.
 - a. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
 - b. Include embedment drawings.
 - c. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld.
 - d. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical high-strength bolted connections.
2. Shop drawings and erection drawings shall not be made by using reproductions of Contract Drawings.
3. Structural steel members for which shop drawings have not been reviewed shall not be fabricated. Engineer's review shall cover general locations, spacings, and details of design. Omission from shop drawings of any materials required by the Contract Documents shall not relieve the Contractor of the responsibility of furnishing and installing such materials, even though such shop drawings may have been reviewed and returned.

C. Submittals for Information:

1. Product Data: For each type of product indicated.
2. For structural-steel connections indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
3. Connection Calculations: Contractor shall design all connections not specifically detailed on the Drawings under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State of Texas. Submit design calculations for the connections designed by the contractor, prior to or with the steel shop drawings. Shop drawings containing connections for which calculations have not been received shall be returned unchecked as an incomplete submittal. Calculations shall be retained for the Engineer's file and will not be approved or returned.
 - a. Connections shall be designed in accordance with the requirements specified in the Structural Drawings and Specifications.

- b. Beam connections: Submit a complete calculation for each different beam connection used and detailed on the shop drawings. Conditions which are similar may be grouped together so as to utilize a single connection design.
 - c. Submit complete connection calculations for wind brace connections, truss connections, moment connections and other connections where specified on the Contract Drawings. Each calculation shall identify the location or locations for which the connection applies, the member mark(s) from the Contract Documents, the piece mark(s) from the shop drawings, the member size, the design loading(s), member size, and the end of the member to which the connection applies.
- 4. Welding certificates.
- 5. Qualification Data: For Installer and fabricator.
- 6. Mill Test Reports: Signed by manufacturers certifying that the following products comply with requirements:
 - a. Structural steel including chemical and physical properties.
 - b. Bolts, nuts, and washers including mechanical properties and chemical analysis.
 - c. Direct-tension indicators.
 - d. Tension-control, high-strength bolt-nut-washer assemblies.
 - e. Shear stud connectors.
 - f. Shop primers.
 - g. Nonshrink grout.
- 7. Source quality-control test reports.

1.6 QUALITY ASSURANCE

- A. Erector Qualifications: A qualified installer who participates in the AISC Certification Program and is designated an AISC-Certified Erector, Category ACSE or CSE.
- B. Installer Qualifications: Company specializing in performing the work of this section with minimum 5 years documented experience.
- C. Fabricator Qualifications: Company specializing in performing the work of this section with minimum 10 years of documented experience.
- D. Welding: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code-Steel."
- E. The latest adopted edition of all standards referenced in this Section shall apply unless noted otherwise. In case of conflict between these Contract Documents and the referenced standard, the Contract Documents shall govern. In case of conflict between these Contract Documents and the Building Code, the more stringent shall govern.
- F. The Contractor shall furnish fabrication and erection inspection and testing of all welds in accordance with AWS D1.1, Chapter 6. Submit records of inspections and tests to the Owner's testing laboratory for their review. The fabrication and erection inspectors shall be AWS certified welding inspectors.
- G. All materials, fabrication procedures and field erection are subject to verification inspection and testing by the Owner's testing laboratory in both the shop and field. Such inspections and tests

will not relieve the Contractor of the responsibility for providing materials and fabrication procedures in compliance with specified requirements.

- H. Qualifications for Welding Work: Contractor shall be responsible for qualifying welding operators in accordance with the AWS "Standard Qualification Procedure." Provide certification to Owner's testing laboratory that welders to be employed in the work have satisfactorily passed AWS qualification tests. Recertification of welders shall be Contractor's responsibility.
- I. Qualification of Welding Procedures: Contractor shall provide the testing laboratory with welding procedures which are to be used. Welding procedures shall be qualified prior to use in accordance with AWS D1.1, Part B.
- J. Comply with applicable provisions of the following specifications and documents:
 - 1. AISC's "Code of Standard Practice for Steel Buildings and Bridges"
 - 2. AISC's "Seismic Provisions for Structural Steel Buildings" and "Supplement No. 2."
 - 3. AISC's "Specification for Structural Steel Buildings"
 - 4. ASTM A6 "Specifications for General Requirements for Delivery of Rolled Steel Plates, Shapes, Sheet Piling, and Bars for Structural Use."
 - 5. RCSC's "Specification for Structural Joints Using High Strength Bolts."
 - 6. AWS D1.1 "Structural Welding Code"
 - 7. SSPC (Society for Protective Coatings), standards as noted.
 - 8. UL "Fire Resistance Directory."

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from erosion and deterioration.
 - 1. Store fasteners in a protected place. Clean and relubricate bolts and nuts that become dry or rusty before use.
 - 2. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

1.8 COORDINATION

- A. Furnish anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

PART 2 - PRODUCTS

2.1 STRUCTURAL-STEEL MATERIALS

- A. Any iron or steel product produced through a manufacturing process shall be produced in the United States.

- B. W-Shapes: ASTM A 992/A 992M.
- C. Channels, Angles: ASTM A 36/A 36M.
- D. Plate and Bar: ASTM A 36/A 36M.
- E. For ASTM A6 groups 4 and 5 rolled shapes, spliced or otherwise, connected by full penetration welds, provide material with Charpy V-Notch testing in accordance with ASTM A6, Supplementary Requirement S5. The impact test shall meet the minimum average value of 20 foot pounds absorbed energy at 70 degrees Fahrenheit and shall be conducted in accordance with ASTM A673 and the AISC Specifications for Structural Steel Buildings.
- F. For plates exceeding 2" thickness used in built up members which are spliced or connected by full penetration welds, provide material with Charpy V-Notch testing in accordance with ASTM A6, Supplementary Requirement S5. The impact test shall be conducted by the producer in accordance with ASTM A673, Frequency P and shall meet a minimum average value of 20 ft pounds absorbed energy at 70 degrees Fahrenheit.
- G. Cold-Formed Hollow Structural Sections: ASTM A 500, Grade B, structural tubing.
- H. Steel Pipe: ASTM A 53/A 53M, Type E, Grade B.
 - 1. Weight Class: As noted.
 - 2. Finish: Galvanized.
- I. Welding Electrodes: Comply with AWS requirements.
- J. Welding electrodes: AWS D1.1, E70. Welding electrodes used in full penetration welds shall have a minimum Charpy V-Notch toughness of 20 ft.-lbs at -20 degrees Fahrenheit when tested in accordance with ASTM A6.

2.2 BOLTS, CONNECTORS, AND ANCHORS

- A. Any iron or steel product produced through a manufacturing process shall be produced in the United States.
- B. High-Strength Bolts, Nuts, and Washers: ASTM A 325 (ASTM A 325M), Type 1, heavy hex steel structural bolts; ASTM A 563 (ASTM A 563M) heavy hex carbon-steel nuts; and ASTM F 436 (ASTM F 436M) hardened carbon-steel washers.
 - 1. Finish: Plain.
- C. Shear Connectors: ASTM A 108, Grades 1015 through 1020, headed-stud type, cold-finished carbon steel; AWS D1.1, Type B.
- D. Unheaded Anchor Rods: ASTM F 1554, Grade 55, weldable.
 - 1. Configuration: Straight.
 - 2. Nuts: ASTM A 563 (ASTM A 563M) heavy hex carbon steel.
 - 3. Plate Washers: ASTM A 36/A 36M carbon steel.
 - 4. Washers: ASTM F 436 (ASTM F 436M) hardened carbon steel.

- 5. Finish: Plain.
- E. Headed Anchor Rods: ASTM F 1554, Grade 55, weldable, straight.
 - 1. Nuts: ASTM A 563 (ASTM A 563M) heavy hex carbon steel.
 - 2. Plate Washers: ASTM A 36/A 36M carbon steel.
 - 3. Washers: ASTM F 436 (ASTM F 436M) hardened carbon steel.
 - 4. Finish: Plain.
- F. Threaded Rods: ASTM A 36/A 36M.
 - 1. Nuts: ASTM A 563 (ASTM A 563M) hex carbon steel.
 - 2. Washers: ASTM F 436 (ASTM F 436M) hardened carbon steel.
 - 3. Finish: Plain.
- G. Drilled expansion bolts shall be one of the following:
 - 1. Kwik Bolt TZ, Hilti, Inc., Tulsa, Oklahoma
 - 2. Strong Bolt 2, Simpson Strong-Tie Company, Inc.
- H. Adhesive Anchors:
 - 1. In concrete:
 - a. HIT RE500-V3 epoxy, Hilti Inc.
 - b. SET-XP epoxy, Simpson Strong-Tie, Inc.
 - c. HIT-HY150 MAX-SD acrylic, Hilti, Inc.
 - 2. In grouted masonry:
 - a. HIT-HY-150 MAX, Hilti, Inc.
 - b. SET epoxy, Simpson Strong-Tie Company, Inc.
 - c. AT acrylic, Simpson Strong-Tie Company, Inc.
 - 3. Adhesive anchor rods: As noted on the drawings.

2.3 PRIMER

- A. Primer: Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer.
- B. Galvanizing Repair Paint: ASTM A 780.
- C. Cold Galvanizing Compound shall be "ZRC" cold galvanizing compound as manufactured by ZRC Worldwide, Marshfield, Massachusetts.

2.4 GROUT

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, Grade B, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time, capable of developing a minimum compressive strength of 5,000 psi at 28 days.

2.5 FABRICATION

- A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Comply with fabrication requirements, including tolerance limits, of AISC's "Code of Standard Practice for Steel Buildings and Bridges", AISC's "Specification for Structural Steel Buildings", and as indicated on accepted shop drawings.
 - 1. Camber structural-steel members where indicated.
 - 2. Mill tolerances shall conform to ASTM A6. Identify high-strength structural steel according to ASTM A 6/ A 6M and maintain markings until structural steel has been erected.
 - 3. Mark and match-mark materials for field assembly.
 - 4. Plates shall be free of gross discontinuities such as ruptures and delaminations. Plates shall comply with ASTM A578, Level 1.
 - 5. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.
- B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.
 - 1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1.
- C. Bolt Holes: Cut, drill, or punch standard bolt holes perpendicular to metal surfaces.
- D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads. Members in compression joints which depend on contact bearing shall have the bearing surfaces milled to a common plane. Members to be milled shall be completely assembled before milling.
- E. Base Plates: Oversize anchor bolt holes in base plates to facilitate erection as specified in Table 14-2 in AISC 360-05.
- F. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 1, "Solvent Cleaning or SSPC-SP 2, "Hand Tool Cleaning."
- G. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1 and manufacturer's written instructions.
- H. Holes: Provide holes required for securing other work to structural steel and for passage of other work through steel framing members.
 - 1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
 - 2. Base-Plate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
 - 3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.6 SHOP CONNECTIONS

- A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened.
 2. Provide washers over all slotted holes in an outer ply.
- B. Weld Connections: Comply with AWS D1.1 for welding procedure specifications, tolerances, appearance, and quality of welds and for methods used in correcting welding work. Welds not specified shall be continuous fillet welds designed to develop the full strength of the member. A combination of welds and bolts shall not be used to transmit stress at the same face of any connections. Clean completed welds prior to inspection. Slag shall be removed from all completed welds.
1. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances of AISC's "Code of Standard Practice for Steel Buildings and Bridges" for mill material.

2.7 SHOP PRIMING

- A. Shop prime steel surfaces except the following:
1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches (50 mm).
 2. Surfaces to be field welded.
 3. Surfaces to be high-strength bolted with slip-critical connections.
 4. Surfaces to receive sprayed fire-resistive materials.
 5. Galvanized surfaces.
 6. Top surfaces of beams which support composite metal floor deck.
 7. Headed shear studs, although overspray is acceptable.
- B. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:
1. SSPC-SP 2, "Hand Tool Cleaning."
 2. SSPC-SP 3, "Power Tool Cleaning."
- C. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a dry film thickness of not less than 1.5 mils (0.038 mm). Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.
1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
 2. Apply two coats of shop paint to inaccessible surfaces after assembly or erection. Change color of second coat to distinguish it from first.

2.8 GALVANIZING

- A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A 123/ A 123M.
1. Fill vent holes and grind smooth after galvanizing.

- B. Galvanizing: The following steel shall be hot-dip galvanized (including any associated fasteners):
 - 1. Lintels and shelf angles attached to structural-steel frame and located in exterior walls.
 - 2. Railing exposed to weather.

2.9 SOURCE QUALITY CONTROL

- A. Owner will engage an independent testing and inspecting agency to perform shop tests and inspections and prepare test reports.
 - 1. Provide testing agency with access to places where structural-steel work is being fabricated or produced to perform tests and inspections.
- B. Correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents.
- C. Bolted Connections: Shop-bolted connections will be inspected according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
- D. Welded Connections: In addition to visual inspection, shop-welded connections will be tested and inspected according to AWS D1.1 and the following inspection procedures, at testing agency's option:
 - 1. Liquid Penetrant Inspection: ASTM E 165.
 - 2. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
 - 3. Ultrasonic Inspection: ASTM E 164.
 - 4. Radiographic Inspection: ASTM E 94.
- E. In addition to visual inspection, shop-welded shear connectors will be tested and inspected according to requirements in AWS D1.1 for stud welding and as follows:
 - 1. Bend tests will be performed if visual inspections reveal either a less-than- continuous 360-degree flash or welding repairs to any shear connector.
 - 2. Tests will be conducted on additional shear connectors if weld fracture occurs on shear connectors already tested, according to requirements in AWS D1.1.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments, with steel erector present, for compliance with requirements.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Design of temporary bracing and supports shall be the responsibility of the Contractor. Remove temporary supports when permanent structural steel, connections, and bracing are in place, unless otherwise indicated.
 - 1. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

3.3 ERECTION

- A. Set structural steel accurately in locations and to elevations indicated and according to AISC's "Code of Standard Practice for Steel Buildings and Bridges" and "Specification for Structural Steel Buildings," unless closer tolerances are required for proper fitting of adjoining or enclosing materials, in which case the more stringent shall apply.
- B. Base Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting base plates. Clean bottom surface of base plates.
 - 1. Set base plates for structural members on wedges, shims, or setting nuts as required.
 - 2. Weld plate washers to top of base plate.
 - 3. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of base plate before packing with grout.
 - 4. Promptly pack grout solidly between bearing surfaces and base plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
 - 5. Grout under baseplates in accordance with Section 03300.
- C. Maintain erection tolerances of structural steel within AISC's "Code of Standard Practice for Steel Buildings and Bridges," Unless adjoining materials dictate a tighter tolerance.
- D. Align and adjust various members forming part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
 - 1. Level and plumb individual members of structure.
 - 2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.
- E. Splice members only where indicated. Any member having a splice not shown and detailed on the accepted shop drawings shall be rejected.
- F. Do not field cut or alter structural members without approval of Architect/Engineer. Do not use thermal cutting during erection.
- G. Gas Cutting: Do not use gas cutting torches in the field to correct fabrication errors in structural framing.

- H. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.
- I. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1 and manufacturer's written instructions.
- J. Slide Bearings: Slide bearing plates shall be permanently affixed to the member and support by welding. Member faces shall be aligned and leveled so as to maintain contact between surfaces before installing bearing plates.

3.4 FIELD CONNECTIONS

- A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.
 - 1. Joint Type: Snug tightened.
 - 2. A307 bolts and high-strength (A325 and A490) bolts noted to be "snug-tight" shall be tightened using a few impacts of an impact wrench or the full effort of a man using an ordinary spud wrench, bringing the plies into contact.
 - 3. High-strength bolts which are not specifically designated to be "snug-tight" shall be tightened to provide at least the minimum tension shown in Table 4 of the "Specification for Structural Joints using ASTM A325 and A490 Bolts." Tightening shall be done by the turn-of-the-nut method, with direct tension indicators, or by properly calibrated wrenches.
 - 4. Bolts tightened with a calibrated wrench or by torque control shall have a hardened washer under the element (nut or bolt head) turned in tightening.
 - 5. Hardened washers shall be placed over slotted holes in an outer ply. Hardened beveled washers shall be used where the outer face of the bolted parts has a slope greater than 1:20 with respect to the bolt axis.
- B. Weld Connections: Comply with AWS D1.1 for welding procedure specifications, tolerances, appearance, and quality of welds and for methods used in correcting welding work. Welds not specified shall be continuous fillet welds designed to develop the full strength of the member. A combination of welds and bolts shall not be used to transmit stress at the same face of any connections. Clean completed welds prior to inspection. Slag shall be removed from all completed welds.
 - 1. Comply with AISC's "Code of Standard Practice for Steel Buildings and Bridges" and "Specification for Structural Steel Buildings" for bearing, adequacy of temporary connections, alignment, and removal of paint on surfaces adjacent to field welds.
 - 2. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances of AISC's "Code of Standard Practice for Steel Buildings and Bridges" for mill material.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to inspect field welds.
- B. Bolted Connections: Shop-bolted connections will be inspected according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
- C. Welded Connections: Field welds will be visually inspected according to AWS D1.1.
 - 1. In addition to visual inspection, field welds will be tested according to AWS D1.1 and the following inspection procedures, at testing agency's option:
 - a. Liquid Penetrant Inspection: ASTM E 165.
 - b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
 - c. Ultrasonic Inspection: ASTM E 164.
 - d. Radiographic Inspection: ASTM E 94.
- D. In addition to visual inspection, test and inspect field-welded shear connectors according to requirements in AWS D1.1 for stud welding and as follows:
 - 1. Perform bend tests if visual inspections reveal either a less-than- continuous 360-degree flash or welding repairs to any shear connector.
 - 2. Conduct tests on additional shear connectors if weld fracture occurs on shear connectors already tested, according to requirements in AWS D1.1.
- E. Correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents.

3.6 REPAIRS AND PROTECTION

- A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.
- B. Touch-up Cold Galvanizing: Touch up areas of hot dip galvanized members where galvanizing has been abraded during shipping and erection and areas where galvanizing has been removed or damaged due to welding. Apply cold galvanizing compound in accordance with the manufacturer's instructions to a minimum dry film thickness of 2.0 mils.
- C. Touchup Painting: After installation, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted joists and accessories, and abutting structural steel.
 - 1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.
 - 2. Apply a compatible primer of same type as shop primer used on adjacent surfaces.

END OF SECTION 05 12 00

SECTION 05 21 00

STEEL JOISTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Furnish all labor and materials required to fabricate, deliver, and erect steel joists and joist girders, including all bridging, ceiling extensions, bearing plates, side wall anchors, and extended ends.
- B. This Section includes the following:
 - 1. Long-span steel joists.
- C. Related Sections include the following:
 - 1. Division 3 Section "Cast-in-Place Concrete" for installing bearing plates in concrete.

1.3 DEFINITIONS

- A. SJI "Specifications": Steel Joist Institute's "Standard Specifications, Load Tables and Weight Tables for Steel Joists and Joist Girders."
- B. Special Joists: Steel joists or joist girders requiring modification by manufacturer to support nonuniform, unequal, or special loading conditions that invalidate load tables in SJI's "Specifications."

1.4 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide special joists and connections capable of withstanding design loads indicated.
- B. Design special joists to withstand design loads with live load deflections no greater than the following:
 - 1. Roof Joists: Vertical deflection of 1/360 of the span.

1.5 SUBMITTALS

- A. Submit in accordance with Division 1 Section "Submittals."
- B. Submittals for Review:

1. Shop Drawings: Show layout, designation, number, type, location, and spacings of joists. Include joining and anchorage details, bracing, bridging, camber, coatings, material properties, configuration, joist accessories; splice and connection locations and details; and attachments to other construction.

C. Submittals for Information:

1. Design calculations for all joists for which the standard load tables are not applicable. Submit prior to, or with the shop drawings. Calculations shall bear the seal of a Registered Professional Engineer, licensed in the State of Texas. Shop drawings submitted without corresponding calculations will be returned unchecked as an incomplete submittal. Calculations will be retained for the Architect's file and will not be approved or returned.
2. Welders Certificates: Submit certificates to Owner's Testing Laboratory, certifying that welders to be employed on the project have passed AWS qualification tests within the previous 12 months. If recertification of welders is required, recertification shall be contractor's responsibility.
3. Product Data: For each type of joist, accessory, and product indicated.
 - a. Indicate locations and details of bearing plates to be embedded in other construction.
4. Manufacturer Certificates: Signed by manufacturers certifying that joists comply with requirements.
5. Mill Certificates: Signed by bolt manufacturers certifying that bolts comply with requirements.
6. Field quality-control test and inspection reports.

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists, including headers and other supplemental framing, complying with applicable standard specifications and load tables of SJI "Specifications." Manufacturer shall have a minimum of five years documented experience in the design and fabrication of open-web joists and joist girders
 1. Manufacturer's responsibilities include providing professional engineering services for designing special joists to comply with performance requirements.
- B. SJI Specifications: Comply with standard specifications in SJI's "Specifications" that are applicable to types of joists indicated.
- C. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle joists as recommended in SJI's "Specifications."
- B. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

1.8 SEQUENCING

- A. Deliver steel bearing plates to be built into cast-in-place concrete and/or masonry construction.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Any iron or steel product produced through a manufacturing process shall be produced in the United States.
- B. Steel: Comply with SJI's "Specifications" for web and steel-angle chord members.
- C. Structural Steel For Supplementary Framing and Joist Leg Extensions: ASTM A36, minimum
- D. Steel Bearing Plates: ASTM A 36/A 36M.
- E. Carbon-Steel Bolts and Threaded Fasteners: ASTM A 307, Grade A, carbon-steel, hex-head bolts and threaded fasteners; carbon-steel nuts; and flat, unhardened steel washers.⁷
 - 1. Finish: Plain, uncoated.
- F. High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy hex steel structural bolts; ASTM A 563 heavy hex carbon-steel nuts; and ASTM F 436 hardened carbon-steel washers.
 - 1. Finish: Plain.
- G. Welding Electrodes: Comply with AWS standards.

2.2 PRIMERS

- A. Primer: SSPC-Paint 15, Type 1 red oxide , or manufacturer's standard shop primer complying with performance requirements in SSPC-Paint 15.

2.3 LONG-SPAN STEEL JOISTS

- A. Manufacture steel joists according to "Standard Specifications for Longspan Steel Joists, LH-Series and Deep Longspan Steel Joists, DLH-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members; of joist type and end and top-chord arrangements as follows:
 - 1. Joist Type: LH-series steel joists and DLH-series steel joists.
 - 2. End Arrangement: Underslung.
 - 3. Top-Chord Arrangement: As indicated.
- B. Comply with AWS requirements and procedures for shop welding, appearance, quality of welds, and methods used in correcting welding work. Refer to Section 2.7 C. for additional welding requirements.

- C. Camber long-span steel joists according to SJI's "Specifications." Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches.

2.4 JOIST ACCESSORIES

- A. Bridging: Provide bridging anchors and number of rows of horizontal or diagonal bridging of material, size, and type required by SJI's "Specifications" for type of joist, chord size, spacing, and span. Furnish additional erection bridging if required for stability.
- B. Fabricate steel bearing plates with integral anchorages of sizes and thicknesses indicated. Shop prime paint.
- C. Steel bearing plates with integral anchorages are specified in Division 5 Section "Metal Fabrications."
- D. Supply ceiling extensions, either extended bottom-chord elements or a separate extension unit of enough strength to support ceiling construction. Extend ends to within 1/2 inch of finished wall surface, unless otherwise indicated.
- E. Supply miscellaneous accessories, including splice plates and bolts required by joist manufacturer to complete joist installation.

2.5 FABRICATION

- A. Splices: Shop splices may occur in chord or web members. Members containing a butt weld splice shall develop an ultimate tensile force of at least 57,000 psi times the full design area of the chord or web.
- B. Holes shall not be made or enlarged by burning with a torch.
- C. Welds shall meet the following criteria for acceptance:
 - 1. Remove slag from welds prior to inspection.
 - 2. Cracked welds are not acceptable and must be repaired.
 - 3. Thorough fusion shall exist between the weld and base metal, as determined by visual inspection.
 - 4. Unfilled weld craters shall not be included in the design length of the weld.
 - 5. Undercut shall not exceed 1/16" provided that it is oriented parallel to the principal stress.
 - 6. The sum of surface (piping) porosity diameters shall not exceed 1/16" in any 1" of design weld length.
 - 7. Weld spatter that does not interfere with paint coverage is acceptable.

2.6 CLEANING AND SHOP PAINTING

- A. Clean and remove loose scale, heavy rust, and other foreign materials from fabricated joists and accessories by hand-tool cleaning, SSPC-SP 2 or power-tool cleaning, SSPC-SP 3.
- B. Apply 1 coat of shop primer to joists and joist accessories to be primed to provide a continuous, dry paint film not less than 1 mil thick.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting substrates, embedded bearing plates, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Do not install joists until supporting construction is in place and secured.
- B. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Specifications," joist manufacturer's written recommendations, and requirements in this Section.
 - 1. Before installation, splice joists delivered to Project site in more than one piece.
 - 2. Space, adjust, and align joists accurately in location before permanently fastening.
 - 3. Minimum bearings and anchorage shall conform to referenced SJI standards and the Drawings.
 - 4. Allow for erection loads. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction. Construction loads shall not be applied until joists are permanently fastened to supports and all bridging has been installed.
- C. Field weld joists to supporting steel bearing plates and framework. Coordinate welding sequence and procedure with placement of joists. Comply with AWS requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
- D. Bolt joists to supporting steel framework using ASTM A 307 carbon-steel bolts.
- E. Bridging shall conform to SJI standards and the shop drawings. Provide and install extra bridging, where indicated or where required due to loading, in addition to the minimum SJI requirements. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to inspect field welds and bolted connections and to perform field tests and inspections and prepare test and inspection reports.
- B. Field welds will be visually inspected according to AWS D1.1/D1.1M.
- C. In addition to visual inspection, field welds will be tested according to AWS D1.1/D1.1M and the following procedures, as applicable:
 - 1. Radiographic Testing: ASTM E 94.
 - 2. Magnetic Particle Inspection: ASTM E 709.
 - 3. Ultrasonic Testing: ASTM E 164.

4. Liquid Penetrant Inspection: ASTM E 165.

- D. Bolted connections will be visually inspected.
- E. High-strength, field-bolted connections will be tested and verified according to procedures in RCSC's "Specification for Structural Joints Using ASTM A 325 or ASTM A 490 Bolts."
- F. Correct deficiencies in Work that test and inspection reports have indicated are not in compliance with specified requirements.
- G. Additional testing will be performed to determine compliance of corrected Work with specified requirements.

3.4 REPAIRS AND PROTECTION

- A. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that joists and accessories are without damage or deterioration at time of Substantial Completion.

END OF SECTION 05 21 00

SECTION 05 31 00

STEEL DECK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

- 1. Roof deck.
- 2. Composite floor deck.

- B. Work Included

- 1. Furnish all labor and materials required to fabricate, deliver and install steel roof deck and accessories including formed steel cant strips, eave strips, valley strips, sump pans, edge closures, pour stops, reinforcing plates and related accessories.
- 2. Furnish all labor and materials required to fabricate, deliver and install steel floor deck and accessories including formed steel end closures, edge forms, flashings, and reinforcing plates, headed shear studs, and related accessories.

- C. Related Sections include the following:

- 1. Division 3 Section "Cast-in-Place Concrete" for structural concrete fill over steel deck.
- 2. Division 5 Section "Structural Steel" for shop- and field-welded shear connectors.
- 3. Division 5 Section "Metal Fabrications" for framing deck openings with miscellaneous steel shapes.
- 4. Division 9 painting Sections for repair painting of primed deck.

1.3 SUBMITTALS

- A. Submittals for Review:

- 1. Shop Drawings: Show layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.
- 2. Product Data: For each type of deck, accessory, and product indicated. Provide deck dimensions, sectional properties, uplift resistance and diaphragm capacity for specified fastener layout and support spacing, and finishes.

- B. Submittals for Information:

- 1. Product Certificates: For each type of steel deck, signed by product manufacturer. Certify that products comply with SDI, UL and ICBO standards as specified.

2. Manufacturer's installation instructions.
3. Welding certificates: For each welder employed on the Work.
4. Field quality-control test and inspection reports.
5. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that each of the following complies with requirements:
 - a. Power-actuated mechanical fasteners.
 - b. Acoustical roof deck.
6. ICBO Research/Evaluation Reports: Deck units shall be approved by the International Conference of Building Officials and shall have a corresponding report from ICBO
7. Deck units shall be classified by Underwriter's Laboratory, Inc. and shall be labeled and marked as required by UL, indicating manufacturer testing and inspection.

1.4 QUALITY ASSURANCE

- A. Installer: Company specializing in performing the work of this Section with minimum 5 years documented experience.
- B. Testing Agency Qualifications: An independent agency qualified according to ASTM E 329 for testing indicated.
- C. Welding: Qualify procedures and personnel according to AWS D1.3, "Structural Welding Code - Sheet Steel."
- D. Fire-Test-Response Characteristics: Where indicated, provide steel deck units identical to those tested for fire resistance per ASTM E 119 by a testing and inspecting agency acceptable to authorities having jurisdiction.
 1. Fire-Resistance Ratings: Indicated by design designations of applicable testing and inspecting agency.
 2. Steel deck units shall be identified with appropriate markings of applicable testing and inspecting agency.
- E. Comply with applicable provisions of the following specifications and documents.
 1. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."
 2. FM Global Listing: Provide steel roof deck evaluated by FM Global and listed in its "Approval Guide, Building Materials" for Class 1 fire rating and Class 1-90 windstorm ratings.
 3. SDI (Steel Deck Institute) - Design Manual for Composite Decks, Form Decks, Roof Decks.
 4. SSPC (Steel Structures Painting Council) - Painting Manual.
 5. UL - Fire Resistance Directory.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.

- B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.
 - 1. Protect and ventilate acoustical cellular roof deck with factory-installed insulation to maintain insulation free of moisture.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Steel Deck:
 - a. ASC Profiles, Inc.
 - b. Canam Steel Corp.;The Canam Manac Group.
 - c. Consolidated Systems, Inc.
 - d. DACS, Inc.
 - e. D-Mac Industries Inc.
 - f. Epic Metals Corporation.
 - g. Marlyn Steel Decks, Inc.
 - h. New Millennium Building Systems, LLC.
 - i. Nucor Corp.; Vulcraft Division.
 - j. Roof Deck, Inc.
 - k. United Steel Deck, Inc.
 - l. Valley Joist; Division of EBSCO Industries, Inc.
 - m. Verco Manufacturing Co.
 - n. Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.

2.2 ROOF DECK

- A. Any iron or steel product produced through a manufacturing process shall be produced in the United States.
- B. Steel Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 30, and with the following:
 - 1. Galvanized Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade 33 or 40, G60 zinc coating.
 - 2. Deck Profile: As indicated
 - 3. Profile Depth: As indicated
 - 4. Design Uncoated-Steel Thickness: As indicated.
 - 5. Design Uncoated-Steel Thicknesses; Deck Unit/Bottom Plate: As indicated.
 - 6. Span Condition: As indicated.
 - 7. Side Laps: Overlapped.

2.3 COMPOSITE FLOOR DECK

- A. Any iron or steel product produced through a manufacturing process shall be produced in the United States.
- B. Composite Steel Floor Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with "SDI Specifications and Commentary for Composite Steel Floor Deck," in SDI Publication No. 30, with the minimum section properties indicated, and with the following:
 - 1. Galvanized Steel Sheet: ASTM A 653/A, Structural Steel (SS), Grade 33, G30 zinc coating.
 - 2. Profile Depth: As indicated.
 - 3. Design Uncoated-Steel Thickness: As indicated.
 - 4. Span Condition: As indicated.

2.4 ACCESSORIES

- A. Any iron or steel product produced through a manufacturing process shall be produced in the United States.
- B. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.
- C. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.
 - 1. Mechanical Fasteners: Galvanized hardened steel, self tapping "Teks" screws, manufactured by Illinois Tool Works, Inc., Buildex Division, or equal. Size shall be #10 minimum, unless noted otherwise.
 - 2. Powder Actuated Fasteners: Zinc coated fastener with .145 inch shank diameter and 1 1/4 inch shank length. X-DNI pin as manufacturer by Hilti, or equal.
- D. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 minimum diameter.
- E. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.
- F. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi, not less than 0.0359-inch design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.
- G. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 33,000 psi, of same material and finish as deck, and of thickness and profile recommended by SDI Publication No. 30 for overhang and slab depth.
- H. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck, unless otherwise indicated.
- I. Recessed Sump Pans: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck, with 3-inch-wide flanges and sloped recessed pans of 1-1/2-inch minimum depth, sealed watertight. For drains, cut holes in the field.

- J. Flat Sump Plate: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck, sealed watertight. For drains, cut holes in the field.
- K. Galvanizing Repair Paint: ASTM A 780.
- L. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance.

3.2 INSTALLATION, GENERAL

- A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 30, manufacturer's written instructions, and requirements in this Section.
- B. Locate deck bundles to prevent overloading of supporting members.
- C. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.
 - 1. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.
- D. Place deck panels flat and square and fasten to supporting frame without warp or deflection.
- E. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.
- F. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.
- G. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.
- H. Mechanical fasteners may be used in lieu of welding to fasten deck. Locate mechanical fasteners and install according to deck manufacturer's written instructions.

3.3 ROOF-DECK INSTALLATION

- A. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 inches long, and as follows:
 - 1. Weld Diameter: As indicated.

2. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of two welds per deck unit at each support. Space welds as indicated.
 3. Weld Washers: Install weld washers at each weld location.
- B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of 1/2 of the span or 18 inches, and as follows:
1. Mechanically fasten with self-drilling, No. 10 diameter or larger, carbon-steel screws.
 2. Fasten with a minimum of 1-1/2-inch-long welds.
- C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches, with end joints as follows:
1. End Joints: Lapped 2 inches minimum.
- D. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and weld or mechanically fasten flanges to top of deck. Space connections not more than 12 inches apart with at least one connection at each corner.
1. Install reinforcing channels or zees in ribs to span between supports and weld or mechanically fasten.
- E. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. Weld or mechanically fasten to substrate to provide a complete deck installation.
1. Weld cover plates at changes in direction of roof-deck panels, unless otherwise indicated.
- F. Flexible Closure Strips: Install flexible closure strips over partitions, walls, and where indicated. Install with adhesive according to manufacturer's written instructions to ensure complete closure.
- G. Architectural finishes and mechanical, electrical, and plumbing equipment shall not be hung directly from the metal deck.

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Field welds will be subject to inspection.
- C. Testing agency will report inspection results promptly and in writing to Contractor and Architect.
- D. Remove and replace work that does not comply with specified requirements.
- E. Additional inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.

3.5 REPAIRS AND PROTECTION

- A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.
- B. Provide final protection and maintain conditions to ensure that steel deck is without damage or deterioration at time of Substantial Completion.

END OF SECTION 05 31 00

SECTION 054000

COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established within General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

A. Section includes:

- 1. **Steel studs, slotted channels, joists, and purlin framing, usually of 16 to 20 gauge, including bracing, fasteners and accessories.**

1.3 SYSTEM REQUIREMENTS

A. Design Requirements:

- 1. **Fabricator is responsible for designing framing system**, including anchorage to structural system and necessary modifications to meet specified requirements and maintain visual design concepts. Design system in accordance with A.I.S.I. Design Manual.
- 2. **Employ registered professional engineer**, licensed to practice structural engineering in jurisdiction where Project is located, to engineer each component of steel stud framing system.
- 3. **Size components to withstand following design loads:**
 - a. Internal: 5 lbf/ft, minimum.
 - b. External: 20 lbf/ft, minimum or as otherwise required to meet building code requirements.
- 4. **Maximum allowable deflection:**
 - a. Supporting masonry veneer: 1/600 of span.
 - b. Unless noted otherwise: 1/360 of span.

B. Performance Requirements:

- 1. Fabricate and assemble system to provide for movement of components without damage, failure of joint seals, undue stress on fasteners, or other detrimental effects when subject to seasonal or cyclic day/night temperature ranges.
- 2. Fabricate and assemble system to accommodate construction tolerances, deflection of building structural members, and clearances of intended openings.

C. Interface With Adjacent Systems:

- 1. Integrate design and connections with adjacent construction.
- 2. Accommodate allowable tolerances and deflections of structural members in installation.

1.4 SUBMITTALS

A. General: Submit in accordance with Section 013300.

B. Product Data:

- 1. Submit product data for framing members, accessories, and connection devices.
- 2. Describe materials, finish and section properties.

C. Sustainable Design Submittals:

- 1. LEED v4 Submittals:
 - a. MR Credit: Building Product Disclosure and Optimization - Environmental Product Declarations: Provide Type III EPDs from manufacturers that have third-party verified environmental impact data.
 - b. MR Credit: Building Product Disclosure and Optimization - Sourcing of Raw Materials: Provide recycled content of products showing the percentage of postconsumer and/or preconsumer recycled content by weight and its associated cost.
 - c. MR Credit: Building Product Disclosure and Optimization - Material Ingredients:

Provide Health Product Declarations (HPDs) from manufacturers with full disclosure of known hazards in compliance with the Health Product Declaration Open Standard.

- d. **MR Credit: Construction and Demolition Waste Management:** Include a statement indicating percentage of materials diverted from disposal in landfills and incinerators, and where recyclable resources are directed back to the manufacturing process.
 - D. **Shop Drawings:** [Provide shop drawings prepared by cold-formed metal framing manufacturer.]
 1. Plans, elevations, sections and details indicating component locations, connections between components, connections of components to structure.
 2. Connection details indicating size, locations, and spacings of fasteners and welds.
 3. Accessory installation details.
 4. **Complete design calculations certified by a licensed professional engineer in the State of Texas** for cold-formed metal framing members and member connections to each other and to the structure. Architect/Engineer will review calculations for information only. Architect will not review calculations for accuracy, nor assume responsibility for adequacy of calculations.
 - E. **Submit following Informational Submittals:**
 1. Qualification Data: Manufacturer's, erector's, and welder's qualification data.
 2. Certifications specified in Quality Assurance article of this Section.
 3. **Evaluation Reports: For cold-formed steel framing.**
 - a. Metal stud manufacturer to have a third party evaluation report for its products that are reviewed to the local building code or its model code (IBC 2009 and AISI S100 or IBC 2012 and AISI S100 or IBC 2015 and AISI S100).
- 1.5 **QUALITY ASSURANCE**
- A. **Engineer Qualifications:** Registered professional engineer licensed to practice structural engineering in jurisdiction where Project is located.
 - B. **Erector Qualifications: Minimum of 10 years documented experience on comparable steel stud framing projects.**
 - C. **Welder Qualifications: AWS certified within past 12 months for each type of weld required.**
 - D. **Certifications:**
 1. Submit certificates verifying AWS qualifications for each welder employed on Project.
 2. Submit fabricator's certification that products furnished for Project meet or exceed specified requirements.
 3. Provide documentation that framing members are certified according to the product-certification program of the Steel Framing Industry Association (SFIA) or similar organization.
 - E. **Manufacturer Qualifications:** Member in good standing of the Steel Framing Industry Association (SFIA) or be a part of a similar organization that provides verifiable code compliance program.
 1. Products to be certified under an independent third party inspection program administered by an agency accredited by IAS to ICC-ES AC98 IAS Accreditation Criteria for Inspection Agencies.
 - F. **Product Tests:** Mill certificates or data from a qualified independent testing agency[, **or in-house testing with calibrated test equipment,**] indicating steel sheet complies with requirements, including base-steel thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.
 - G. **Comply with AISI Specifications and Standards.**
 1. AISI S100 "North American Specification for the Design of Cold-Formed Steel Structural Members".
 2. AISI S200 "North American Standard for Cold-Formed Steel Framing – General Provisions".
- 1.6 **DELIVERY, STORAGE, AND HANDLING**
- A. Comply with requirements of Section 016000.
 - B. Protect and store cold-formed steel framing from corrosion, moisture staining, deformation, and other damage during delivery, storage, and handling as required in AISI's "Code of Standard Practice".

1.7 **PROJECT CONDITIONS**

- A. Field verify measurements. Architect will not review or take responsibility for dimensions.

PART 2 - PRODUCTS

2.1 **ACCEPTABLE MANUFACTURERS**

- A. **Basis of Design:** ClarkDietrich Building Systems
B. **Manufacturers:**
1. ClarkDietrich Building Systems.
2. Consolidated Fabricators Corp.
3. Custom Stud, Inc.
4. MarinoWARE.
5. United Metal Products, Inc.

2.2 **MATERIALS**

- A. **Framing Members, General:** Comply with ASTM C 955 for conditions indicated.
B. **Steel Sheet:** ASTM A 1003, Structural Grade, Type H, metallic coated, of grade and coating designation as follows:
1. Grade: **As required by structural performance.**
2. Coating: **G90.**
C. **Steel Sheet for Vertical Deflection Clips:** ASTM A 1003, ASTM A 653, structural steel, zinc coated, of grade and coating as follows:
1. Grade: **As required by structural performance.**
2. Coating: **G90.**
D. **Studs:**
1. C-shape design, roll formed with punched web, 1-3/8 inch minimum face flange and manufacturer's standard return lip.
a. Product: ClarkDietrich Building Systems; C-shaped steel studs (CWN).
2. **Galvanized studs:**
a. **16 gauge and thicker:** Grade as required by design, but not less than ASTM A653.
E. **Steel Ceiling Joists:** Manufacturer's standard C-shaped steel sections, of web depths indicated, punched with enlarged service holes, with stiffened flanges.
1. Product: ClarkDietrich Building Systems; C-shaped steel sections, or comparable product.
F. **Runners:**
1. Channel shaped; same width as studs, tight fit; solid web.
2. Galvanized: ASTM A653.
3. Sheet Metal Thickness: Minimum thickness to match studs.
G. **Headers and Jambs - Heavy-Duty Stud:** Manufacturer's proprietary shape used to form header beams and jambs, columns or posts, of web depths indicated, unpunched, with stiffened flanges and as follows:
1. Product: ClarkDietrich Building Systems; Heavy Duty Stud (HDS) and Header Bracket (HDSC) or RedHeader PRO.
2. Minimum Base-Steel Thickness: **Matching steel studs.**
H. **Vertical Deflection Clips:** Manufacturer's standard head clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.
1. Product: ClarkDietrich Building Systems; FCSC, FCEC, FTSC, FTC3, FTC5, FS12, FS15, or FS24.
I. **Slotted Deflection Track:** Manufacturer's single, deep-leg, U-shaped steel track; punched with vertical slots in both legs. Studs should be positively attached to deep-leg track using vertical slots while allowing free vertical movement. Legs designed to support horizontal and lateral loads and transfer them to the primary structure, as follows:
1. Product: ClarkDietrich Building Systems; MaxTrak Slotted Deflection Track.
J. **U-Channel Assembly:** Manufacturer's standard length U-Channel for lateral bracing for exterior

Comment [GB1]: *We recommend G90 coating on clips.

Comment [GB2]: NOTE: A446 has been withdrawn and replaced by A653.

Comment [GB3]: *Labor savings product.

- curtain wall framing, loadbearing walls, or high interior partitions constructed of structural studs.
1. Product: ClarkDietrich Building Systems; U-Channel and FastBridge Clip FB68.
- K. **Accessories, Plates, Gussets, Clips:** Formed sheet steel, thickness determined for conditions encountered; same finish as framing members.
1. Bracing, bridging, and solid blocking.
 - a. Product: ClarkDietrich Building Systems; Spazzer 5400 Bridging Bar (SPZS) or Spazzer Bar Guard (SPBG).
 2. Web stiffeners.
 - a. Product: ClarkDietrich Building Systems; QTWS.
 3. Anchor clips.
 - a. Product: ClarkDietrich Building Systems; Moment Clip (MC Series) or Holdown (CD Series).
- L. **Structural Steel Shapes:** Comply with Division 05 structural Sections. Size as required by design for conditions encountered as indicated on Drawings.
- M. **Fasteners:**
1. Self-drilling, self-tapping screws, bolts, nuts and washers: Size, type and spacing determined to suit Project conditions; ASTM A153, hot-dip galvanized, Class C or D as appropriate.
 2. Anchorage Devices: Power driven or powder actuated as appropriate for material connected.
 3. Welding: In conformance with AWS D1.3.
- N. **Galvanizing Touch-Up Paint:** FS TT-P-641, zinc oxide type.
- O. **Slip Track for Head Conditions:**
1. Ceiling runner designed to allow head-of-wall to compress or extend with movement of structure above while maintaining the fire-rating of the wall assembly by a factory applied cured intumescent fire stop material affixed to steel profile. Comply with requirements of ASTM C 645, of thickness indicated for studs and of width to accommodate depth of studs indicated. The fire-rated assembly shall be capable of unencumbered movement as required and indicated on the drawings. The assemblies shall have been tested in accordance with UL 2079, ASTM E 1966, and ASTM E814.
 2. **Basis of Design:** BlazeFrame Industries; BlazeFrame; make and model to fit conditions.
- 2.3 **FABRICATION**
- A. Fit and assemble in largest practical sections for delivery to site, ready for installation.
 - B. Fabricate in accordance with requirements of ASTM C955.
 - C. Cut framing components squarely for attachment to perpendicular members, or as required for angular fit against abutting members. Hold members positively in place until properly fastened.
 - D. Fabricate studs of sizes and sheet metal thicknesses as required by design indicated on Drawings.
- 2.4 **ROOF RAFTER FRAMING**
- A. **Steel Rafters:** Manufacturer's standard C-shaped steel sections, of web depths indicated, unpunched, with stiffened flanges, complying with ASTM C 955, and as follows:
 1. Product: ClarkDietrich Building Systems; C-shaped steel sections, or comparable product.
 2. Minimum Uncoated-Steel Thickness: 0.0538 inch.
 3. Flange Width: 1-5/8 inches.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions and proceed with Work in accordance with Section 014300.

3.2 ERECTION OF STUDDING

- A. Install cold-formed steel framing in accordance with ASTM C 1007 and AISI S200 "North American

Standard for Cold-Formed Steel Framing – General Provisions,” and manufacturer's written instructions unless more stringent requirements are indicated.

- B. Install components in accordance with manufacturer's printed instructions. Provide temporary bracing until erection is complete.
- C. Connect to supports using fastener or welding method.
- D. Locate and align floor and ceiling runners according to layout on approved shop drawings. Anchor in place per engineered Shop Drawings and at maximum 24 inch centers. Locate runner end joints between studs. Splice with length of stud cut to fit stud-to-stud. Anchor splice to each runner at ends and at each end of splice stud. Coordinate installation of required sealants with runner installation.
- E. Install studs plumb, level, and square, free from warp or twist while maintaining dimensional tolerances and alignment with adjacent surfaces.
- F. **Place studs at uniform spacing shown on engineered shop drawings, but not more than 16 inches on center maximum** with full bearing against inside web of runners. Align with all flanges facing same direction.
- G. **Locate studs not more than 2 inches from abutting walls.**
- H. Secure studs to runners on both sides, top and bottom with fasteners or welding of type and at spacing shown on approved shop drawings. Do not attach studs to top runner at slip track locations. Provide deflection allowance in top runners according to cold formed metal manufacturer's requirements for non-load-bearing studs.
- I. **Construct corners using minimum 3 studs. Provide double studs at wall openings, and at door and window jambs.**
- J. Erect studs in one piece full length, brace, and reinforce to develop full strength to meet design requirements. Splicing of studs is not permitted, unless method of splicing is indicated on approved shop drawings.
- K. Place insulation in multiple stud spaces made inaccessible after erection.
- L. Install intermediate jack studs (cripples) above and below openings to match wall stud spacing.
- M. Brace studs that support fixtures, mechanical and electrical items with stud sections or channel bridging as required by design to support applied loads without excess deflection or stress. Install additional framing members as required for attachment of fixtures.
- N. Attach **bridging** as called for by Engineer and in manner to prevent stud rotation. Provide bridging at following locations at a minimum and elsewhere as required by design:
 - 1. **For non-loadbearing exterior walls:**
 - a. Walls less than 10'-0" in height: 1 row mid-height of wall.
 - b. Walls greater than 10'-0" in height: Maximum 5 feet on center.
 - 2. **For load bearing exterior walls:**
 - a. Walls less than 10'-0" in height: 2 rows equally spaced.
 - 3. **Walls greater than 10'-0" in height:** Maximum 4'-0" on center.

3.3 ERECTION OF JOISTS

- A. Install framing components in accordance with manufacturer's instructions.
- B. Make provisions for erection stresses. Provide temporary alignment and bracing.
- C. Place joists at spacing as indicated on drawings, not more than 2 inches from abutting walls.
- D. Connect joists to supports using fastener or welding method.
- E. Set floor joists parallel and level, with lateral bracing and bridging.
- F. **Locate joist end bearing directly over load bearing studs** or provide load distributing member to top of stud track.
- G. Provide joist web stiffeners at reaction points.
- H. Touch-up field welds and damaged galvanized surfaces with primer.
- I. Install bridging at intervals indicated on Shop Drawings. Fasten bridging at each joist intersection as follows:
 - 1. **Bridging:** Combination of flat, taut, steel sheet straps of width and thickness indicated and joist-track solid blocking of width and thickness indicated. Fasten flat straps to bottom flange of joists and secure solid blocking to joist webs.

3.4 **TOLERANCES**

- A. Maximum variation from true position: 1/4 inch.
- B. Maximum variation of any member from plane: 1/8 inch in 4'-0", non-cumulative.

3.5 **FIELD QUALITY CONTROL**

- A. **Testing Agency: Retain a qualified independent testing agency to perform field quality-control testing.**
- B. **Field and shop welds shall be inspected and tested. Request frequency from Architect if not indicated on Drawings.**
- C. Testing agency will report test results promptly and in writing to Contractor, Architect and Structural Engineer.
- D. Remove and replace Work that does not comply with specified requirements.
- E. Additional testing will be performed to determine compliance of corrected Work with specified requirements.

3.6 **ADJUSTING**

- A. Touch-up field welds and damaged galvanized surfaces with appropriate primer.

END OF SECTION

SECTION 055000

METAL FABRICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

A. Section Includes:

1. Steel framing and supports for operable partitions.
2. Steel framing and supports for countertops.
3. Steel framing for partial height walls.
4. Steel framing and supports for mechanical and electrical equipment.
5. Steel framing and supports for applications where framing and supports are not specified in other Sections.
6. Steel shapes for cast stone trim pieces.
7. Elevator machine beams and hoistway beams.
8. Steel shapes for supporting elevator door sills.
9. Shelf angles.
10. Metal ladders.
11. Metal ships' ladders.
12. Metal bollards.
13. Miscellaneous metal shapes.
14. Loose bearing and leveling plates for applications where they are not specified in other Sections.
15. Metal walkway planks and catwalks.
16. Miscellaneous steel applications as required.

B. Products furnished, but not installed, under this Section:

1. **Masonry Support:** Loose steel lintels; steel blocking, steel rods, and inserts.
2. **Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.**

C. Related Sections:

1. Section 055133 - Metal Ladders.

1.3 PERFORMANCE REQUIREMENTS

- A. **Delegated Design:** Design ladders, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

1.4 SUBMITTALS

A. Product Data: For the following:

1. Nonslip aggregates and nonslip-aggregate surface finishes.
2. Metal nosings and treads.
3. Paint products.
4. Grout.

B. Shop Drawings: Show fabrication and installation details for metal fabrications.

1. Include plans, elevations, sections, and details of all metal fabrications and their connections. Show anchorage and accessory items.
2. **Shop Drawings shall be prepared by reputable individuals and firms within the Continental United States.**

1.5 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code - Steel."

1.6 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

1.7 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

PART 2 – PRODUCTS

2.1 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without any seam marks, roller marks, rolled trade names, or blemishes whatsoever.

2.2 FERROUS METALS

- A. Recycled Content of Steel Products: Provide products with average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
- B. Steel Plates, Shapes, and Bars: ASTM A 36.
- C. Steel Pipe: ASTM A 53, standard weight (Schedule 40) unless otherwise indicated.
- D. Slotted Channel Framing: Cold-formed metal box channels (struts) complying with MFMA-4.
 - 1. Size of Channels: 1-5/8 by 1-5/8 inches.
 - 2. Material: Galvanized steel, ASTM A 653, commercial steel, Type B, with G90coating; 0.079-inch nominal thickness.

2.3 FASTENERS

- A. General: Unless otherwise indicated, provide Type 304 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.
 - 1. **Provide stainless-steel fasteners for fastening aluminum.**
- B. **Steel Bolts and Nuts:** Regular hexagon-head bolts, ASTM A 307, Grade A ASTM F 568M, Property Class 4.6; with hex nuts, ASTM A 563; and, where indicated, flat washers.
- C. **Stainless-Steel Bolts and Nuts:** Regular hexagon-head annealed stainless-steel bolts, ASTM F 593; with hex nuts, ASTM F 594; and, where indicated, flat washers; Alloy Group 1.
- D. **Anchor Bolts:** ASTM F 1554, Grade 36, of dimensions indicated; with nuts, ASTM A 563; and, where indicated, flat washers.
 - 1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.
- E. **Eyebolts:** ASTM A 489.
- F. **Machine Screws:** ASME B18.6).
- G. **Lag Screws:** ASME B18.2.
- H. **Wood Screws:** Flat head, ASME B18.6.1.
- I. Plain Washers: Round, ASME B18.22.
- J. Lock Washers: Helical, spring type, ASME B18.21.
- K. Anchors, General: Anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.

- L. Cast-in-Place Anchors in Concrete:** Either threaded type or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A 47 malleable iron or ASTM A 27 cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F 2329.
- M. Post-Installed Anchors: Chemical anchors.**
 - 1. Material for Exterior Locations and Where Stainless Steel is Indicated: Alloy Group 1 stainless steel bolts, ASTM F 593, and nuts, ASTM F 594.

2.4 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes:** Select according to AWS specifications for metal alloy welded.
- B. Universal Shop Primer:** Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
- C. Galvanizing Repair Paint:** High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- D. Bituminous Paint:** Cold-applied asphalt emulsion complying with ASTM D 1187.
- E. Non-shrink, Metallic Grout:** Factory-packaged, ferrous-aggregate grout complying with ASTM C 1107, specifically recommended by manufacturer for heavy-duty loading applications.
- F. Non-shrink, Nonmetallic Grout:** Factory-packaged, non-staining, non-corrosive, non-gaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.5 FABRICATION, GENERAL

- A. Shop Assembly:** Pre-assemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch metals** cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32-inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form bent-metal corners** to smallest radius possible without causing grain separation or otherwise impairing work.
- D. Form exposed work** with accurate angles and surfaces and straight edges.
- E. Weld corners and seams** continuously to comply with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- F. Form exposed connections** with hairline joints, flush and smooth, using concealed fasteners or welds unless noted otherwise on Drawings. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.
- G. Fabricate seams and other connections** that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- H. Cut, reinforce, drill, and tap metal fabrications** as indicated to receive finish hardware, screws, and similar items.
- I. Provide for anchorage** of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.
 - 1. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, 1/8 by 1-1/2 inches, with a minimum 6-inch embedment and 2-inch hook, not less than 8 inches from ends and corners of units and 24 inches o.c., unless otherwise indicated.

2.6 MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.
- B. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.
 - 1. Fabricate units from slotted channel framing where indicated.
- C. **Operable Partitions:** Fabricate supports for operable partitions from continuous steel beams of sizes recommended by partition manufacturer or, if none provided, as required by structural engineer with attached bearing plates, anchors, and braces as recommended by partition manufacturer. Drill or punch bottom flanges of beams to receive partition track hanger rods; locate holes where indicated on operable partition Shop Drawings.

2.7 SHELF ANGLES

- A. **Fabricate shelf angles from steel angles of sizes indicated or, if none shown, as required by specific application,** and for attachment to concrete framing. Provide horizontally slotted holes to receive 3/4-inch-bolts, spaced not more than 6 inches from ends and 24 inches o.c., unless otherwise indicated.
 - 1. Provide mitered and welded units at corners.
 - 2. Provide open joints in shelf angles at expansion and control joints. Make open joint approximately 2 inches larger than expansion or control joint.
 - 3. **Provide continuous shelf angle as required for masonry at floor slab edge below 30' in height of masonry.**
 - 4. Provide continuous shelf angle at each floor slab edge above 30' above first floor slab.
- B. For cavity walls, provide vertical channel brackets to support angles from backup masonry and concrete.
- C. **Galvanize shelf angles located in exterior walls.**
- D. Furnish wedge-type concrete inserts, complete with fasteners, to attach shelf angles to cast-in-place concrete.
- E. **Location: On buildings over 2 stories tall or where brick height exceeds 30 foot from brick ledge height, provide continuous brick shelf angles attached to building structure of size as required to support brick at each floor slab level above 30' AFF.**

2.8 METAL LADDERS

- A. **General:**
 - 1. Comply with ANSI A14.3 unless otherwise indicated.
 - 2. For elevator pit ladders, comply with ASME A17.1.
 - 3. Coordinate location with elevator manufacturer.
- B. **Steel Ladders:**
 - 1. Space siderails 18 inches apart unless otherwise indicated.
 - 2. **Siderails:** Continuous, 1/2-by-2-1/2-inch steel flat bars, with eased edges.
 - 3. **Rungs:** 3/4-inch diameter steel bars. Vertical spacing to be 12 inches o.c. maximum.
 - 4. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
 - 5. Provide nonslip surfaces on top of each rung by coating with abrasive material metallurgically bonded to rung.
 - 6. Provide platforms as indicated or as otherwise required fabricated from welded or pressure-locked steel bar grating, supported by steel angles. Limit openings in gratings to no more than 3/4 inch in least dimension.
 - 7. Support each ladder at top and bottom and not more than 60 inches with welded or bolted steel brackets.
 - 8. Include adjustable stringer extension to serve as extended railing at top of ladder.
 - 9. Galvanize exterior ladders, including brackets and fasteners.
 - 10. Prime ladders, including brackets and fasteners, with zinc rich primer.
- C. **Elevator Pit Ladders:**
 - 1. **Confirm final design requirements with elevator manufacturer prior to fabrication.**

2. Provide one ladder per elevator pit or as otherwise required by manufacturer or state elevator code.
3. Space siderails of elevator pit ladders 16 inches apart.
4. **Siderails:** Continuous, 1/2-by-2-1/2-inch steel flat bars, with eased edges.
5. **Rungs:** 3/4-inch-diameter steel bars. Vertical spacing to be 12 inches o.c. maximum.
6. Extend ladder 48" min above sill of the access door.
7. **Standoff:** 4-1/2" from centerline of rung to wall behind ladder.
8. Provide non-slip surfaces on top of each rung by coating with abrasive material metallicity bonded to rung.
9. The ladder and its attachments shall be capable of sustaining a load of 350 lbs.
10. Support each ladder at top and bottom and not more than 60 inches o.c. with welded or bolted steel brackets
11. Shop prime ladders, including brackets

2.9 METAL SHIPS' LADDER

- A. **Provide metal ships' ladders where indicated on the Drawings.** Fabricate of open-type construction with channel or plate stringers and pipe and tube railings unless otherwise indicated. Provide brackets and fittings for installation. Channels at 68 degrees from horizontal.
 1. Treads shall be not less than 5 inches exclusive of nosing or less than 8-1/2 inches including the nosing, and riser height shall be not more than 9-1/2 inches.
 2. Fabricate ships' ladders, including railings from steel.
 3. Fabricate treads from rolled-steel floor plate.
 4. Include adjustable railing extension pole at top of ships' ladder for use when roof hatch is open.
- B. Prime steel ships' ladders, including treads, railings, brackets, and fasteners.
- C. Basis of Design: FSI Industries; FTHASL24184.

2.10 METAL BOLLARDS

- A. Fabricate metal bollards from Schedule 80 steel pipe.
- B. Fabricate sleeves for bollard anchorage from steel pipe with 1/4-inch- thick steel plate welded to bottom of sleeve. Make sleeves not less than 8 inches deep and 3/4 inch larger than OD of bollard.
- C. Prime bollards with zinc-rich primer.

2.11 METAL WALKWAY PLANKS AND CATWALKS

- A. **Basis of Design:**
 1. McNichols; Plank Grating; 8 diamond, 2" channel; GRIP STRUT; capable of spanning 48" o.c.; plain steel.
 2. MarCo Specialty Steel, Inc.; Grip-Trac Diamond Safety Grating.
- B. **Provide stringers, miscellaneous steel framing as required by 3rd party design engineer.**

2.12 LOOSE BEARING AND LEVELING PLATES

- A. **Provide loose bearing and leveling plates for steel items bearing on masonry or concrete construction as indicated on Drawings or as otherwise required.** Drill plates to receive anchor bolts and for grouting.
- B. Galvanize plates.
- C. Prime plates with zinc-rich primer.

2.13 LOOSE STEEL LINTELS

- A. Fabricate loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.
- B. **Galvanize loose steel lintels located in exterior walls.**

- C. **Provide steel lintels of sizes and shapes as required whether or not called for in the Drawings.**

2.14 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish metal fabrications after assembly.
- C. Finish exposed surfaces to remove all tool and die marks and stretch lines, and to blend into surrounding surface.

2.15 STEEL AND IRON FINISHES

- A. **Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153 for steel and iron hardware and with ASTM A 123 for other steel and iron products.**
 - 1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- B. **Shop prime iron and steel items not indicated to be galvanized unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.**
 - 1. Shop prime with universal shop primer unless zinc-rich primer is indicated.

PART 3 – EXECUTION

3.1 INSTALLATION, GENERAL

- A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.
- B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- C. Field Welding: Comply with the following requirements:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.
- E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- F. **Corrosion Protection: Coat concealed surfaces of aluminum that will come into contact with grout, concrete, masonry, wood, or dissimilar metals with the following:**
 - 1. **Cast Aluminum:** Heavy coat of bituminous paint.
 - 2. **Extruded Aluminum:** Two coats of clear lacquer.

3.2 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.
- B. Anchor supports for operable partitions securely to and rigidly brace from building structure.

3.3 INSTALLING METAL BOLLARDS

- A. Fill bollards solidly with concrete and allow concrete to cure seven days before installing.

- B. Anchor bollards in concrete with pipe sleeves preset and anchored into concrete. Fill annular space around bollard solidly with non-shrink, non-metallic grout; mixed and placed to comply with grout manufacturer's written instructions. Slope grout up approximately 1/8 inch toward bollard.
- C. Fill bollards solidly with concrete, mounding top surface to shed water.

3.4 **INSTALLING BEARING AND LEVELING PLATES**

- A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of plates.
- B. Set bearing and leveling plates on wedges, shims, or leveling nuts. After bearing members have been positioned and plumbed, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout.
 - 1. Use non-shrink grout, either metallic or nonmetallic, in concealed locations where not exposed to moisture; use non-shrink, nonmetallic grout in exposed locations unless otherwise indicated.
 - 2. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.5 **ADJUSTING AND CLEANING**

- A. **Touchup Painting:** Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - 1. **Apply by spray** to provide a minimum 2.0-mil dry film thickness.
- B. **Galvanized Surfaces:** Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

3.6 **SCHEDULE**

- A. **Provide and install items listed in the Schedule below, called for in other portions of this section, and shown on Drawings with anchorage and attachments necessary for installation.**
- B. **The Schedule is a list of principal items only. Refer to Drawing details for additional items not specifically scheduled below.**
- C. **Items of Work Custom Fabricated:**
 - 1. **Lintels, ledges, and channels and plates** not attached to structural framing, for support of metal decking and masonry.
 - a. Provide curved, arched, and straight shapes: **Provide as required whether or not shown on Drawings.**
 - b. **Finish:** Galvanized.
 - 2. **Miscellaneous Steel Shapes:** Channels, angles, plates, tubing, connections, and bolts where shown and detailed on Drawings. **Provide as required whether or not shown on Drawings.**
 - 3. **Structural Bracing:** To support shading canopies, ladders, toilet partitions, TV brackets, projector supports, projections screens, movable partitions, and other equipment. **Provide as required whether or not shown on Drawings.**
 - 4. **Elevator Hoistway Beams and Sill Supports:** Provide as required by elevator manufacturer and as otherwise required **whether or not shown on the Drawings.**
 - 5. **Movable Partition Supporting Structure:** Provide structural beams and supporting structure as required by structural engineer **whether or not shown on the Drawings.**
 - 6. **Bollards at Dumpster Enclosures:** Install two 6 inch diameter concrete filled bollards to 48" above finished paving behind each dumpster. Locate 12" in from perimeter edges of each dumpster.
 - 7. **Steel Channel Framing at Restroom Lavatory Countertops:** Provide steel channel framing at front and rear of lavatory countertops and 2" by 2" tube steel columns vertical supports in walls at all public restrooms and as otherwise indicated on the Drawings or, if none shown, as required by Architect.

8. **Shelf Angles:** Provide continuous shelf angles at second floor slab and at each floor slab above second floor as indicated on the Drawings or, if none shown, as required by Architect and Structural Engineer.
9. **Pony Wall Structure (Dental Hygiene at other locations as required):** Where walls do not extend above ceiling, construct walls with 3-1/2" steel channels at 48" o.c. with top and bottom steel channel rails. Weld all connections solid and expansion bolt to floor or as otherwise approved by structural engineer. When completed, wall shall resist 250 lb. overturning force applied perpendicular to vertical axis of wall. Infill between channels with cold formed, heavy gauge, metal studs at 16" o.c.

END OF SECTION

SECTION 055100

METAL STAIRS

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Provisions established within General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.
- 1.2 **SECTION INCLUDES**
 - A. **Steel stair frame of structural sections, cast-in- place 3-inch thick concrete stair treads with closed risers, and landings at fire and communicating stairs.**
- 1.3 STRUCTURAL REQUIREMENTS
 - A. **Fabricate stair assembly to support live load in order to meet building code requirements. In the event building code has no such requirement, fabricate to support 100 lbs/S.F. uniform live load and 300 lbs/S.F. at most critical point of tread. Maximum deflection L/360.**
- 1.4 QUALITY ASSURANCE
 - A. Design and construct stairs in accordance with AISC Specifications and NAAMM standards.
- 1.5 SUBMITTALS
 - A. **Submit shop drawings** under provisions of Section 013300.
 - B. Indicate profiles, sizes, connection attachments, reinforcing, anchorage, openings, size, and type of fasteners, and accessories.
 - C. Include erection drawings, elevations, and details where applicable.
 - D. Indicate welded connections using standard AWS welding symbols. Indicate net weld lengths.
 - E. **Complete design calculations certified by a registered professional engineer in the State of Texas for stair members and member connections to each other and to the structure. Architect will review calculations for information only. Architect will not review calculations for accuracy, nor assume responsibility for adequacy of calculations.**
- 1.6 DELIVERY, STORAGE AND HANDLING
 - A. Deliver, store, handle, and protect products in accordance with Section 016000.
 - B. Store materials off the ground on blocking or skids.

PART 2 - PRODUCTS

- 2.1 MATERIALS
 - A. Steel Section: ASTM A36.
 - B. Steel Tubing: ASTM A500, Grade B.
 - C. Sheet Steel: ASTM A570, or A366, grades as required for loads imposed.
 - D. Bolts, Nuts, and Washers: ASTM A307.
 - E. Welding Materials: AWS D1.1; type required for materials being welded.
 - F. Primer: FS TT-P-86G type I or II for shop application and field touch-up. Verify compatibility of selected product with intended surface finish prior to application.
 - G. Exposed Mechanical Fastenings: Screws or bolts; unobtrusively located; consistent with design of structure.
 - H. **Treads:**
 - 1. Concrete pan type typical for treads on interior fire stairs.
 - I. **Concrete for Landings:** Portland Cement Type I 2500 PSI, 28 day strength, 2 to 3 inch slump.

- J. **Landing Concrete Reinforcement:** Mesh type, 6 x 6, 10/10, unfinished, unless Fibermesh is approved by Owner.
- K. **Grout:** Refer to Structural Sections, or if none, request requirements from Architect.

2.2 FABRICATION - GENERAL

- A. Verify dimensions on site prior to shop fabrication.
- B. Fabricate items with joints tightly fitted and secured.
- C. Fit and shop assemble sections in largest practical sizes, for handling through building openings.
- D. Grind exposed welds flush and smooth with adjacent finished surface. Ease exposed edges to small uniform radius.
- E. Make exposed joints butt tight, flush, and hairline.
- F. Accurately form components required for anchorage of stairs and landings to each other and to building structure.

2.3 FABRICATION - STAIRS AND PAN LANDINGS

- A. Fabricate stairs with steel pan construction to receive concrete for treads and landings.
- B. Secure treads to stringers with clip angles, welded in place.
- C. Form stringers of rolled steel channels, depth as indicated.
- D. **Prime paint all steel components.**
- E. **Design stair structure, stringers, and landings such that cross beams do not extend below depth of perimeter channels/structure and stringers.**
- F. **Offset stair risers at landings such that center guardrail and handrail at switch back can make a smooth continuous or curved return without requiring a vertical jog in the railings.**

2.4 FINISH

- A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.
- B. **Do not prime surfaces where field welding is required.**
- C. Prime paint items specified with one coat of primer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that field conditions are acceptable and are ready to receive work.
- B. Beginning of installation means erector accepts existing conditions.

3.2 PREPARATION

- A. **Clean and strip primed steel items to bare metal where site welding is required.**
- B. Supply items required to be cast into concrete with setting templates, to appropriate sections.

3.3 INSTALLATION

- A. **Erect stairs level and plumb, free from distortion or defects detrimental to appearance or performance.**
- B. Provide anchors, plates, angles, hangers, and struts required for connecting stairs to structure.
- C. Verify alignment with adjacent construction. Coordinate related work.
- D. Do not field cut or alter members.
- E. Field bolt and weld to match standard of shop bolting and welding. Hide bolts and screws whenever possible.
- F. Mechanically fasten joints butted tight, flush, and hairline. **Grind welds completely smooth and flush (no exceptions).** Do not allow slag, rises, or uneven transitions of any type on stairs or railings.
- G. Obtain Architect/Engineer and Owner approval prior to site cutting or making adjustments not scheduled.
- H. **After erection, prime welds, abrasions, and surfaces not shop primed.**

- I. Verify stairways are in compliance with OSHA prior to stair utilization.
- 3.4 ERECTION TOLERANCES
 - A. Maximum Variation from Plumb: 1/4 inch per story, non-cumulative.
 - B. Maximum Offset From True Alignment: 1/4 inch.
 - C. **Maximum Offset within continuous handrails: None allowed.**
- 3.5 **FINISH**
 - A. Refer Section 099713 - Steel Coatings.
- 3.6 **SCHEDULE**
 - A. Provide at all fire stairs and at other locations indicated on Drawings.

END OF SECTION

SECTION 055213

PIPE AND TUBE RAILINGS

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Provisions established within General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.
- 1.2 SECTION INCLUDES
 - A. **Interior steel tube handrails, balusters, and fittings at fire and communicating stairs (excludes base bid Lobby Stair and Atrium railings).**
 - B. **Exterior steel handrails and guardrails.**
- 1.3 DESIGN REQUIREMENTS
 - A. **Railing assembly, wall rails, and attachments to resist lateral force of 250 lbs at any point and a uniform load of 75 lbs/lf (or meet local code if greater) without damage or permanent set.**
- 1.4 SUBMITTALS
 - A. **Submit shop drawings and product data** under provisions of Section 013300.
 - B. Indicate component details, materials, finishes, connection and joining methods, and the relationship to adjoining work.
 - C. Submit manufacturer's installation instructions under provisions of Section 013300.
 - D. Submit samples under provisions of Section 013300.
 - E. **Submit one sample, 48 inches long, of each railing system with final finish applied for Architect's approval prior to fabrication of final railings.**
- 1.5 FIELD MEASUREMENTS
 - A. Verify that field measurements are as indicated on shop drawings.
- 1.6 DELIVERY, STORAGE AND HANDLING
 - A. Deliver, store, handle and protect products in accordance with section 016000 and 013100.
 - B. Store materials off the ground and in their original protective wrapping.

PART 2 - PRODUCTS

- 2.1 STEEL RAILING SYSTEM
 - A. **Rails and Posts:** ASTM A 53 or A 501 steel tubing; welded jointing; sizes and shapes as indicated.
 - B. **Mounting:** Brackets and flanges, with steel brackets for anchoring to wood framing.
 - C. **Primer:** FS TT-P-86-G, red; one coat.
- 2.2 ACCEPTABLE FABRICATORS
 - A. Fabricator with a **minimum of ten years' experience fabricating similar railing systems** for commercial projects, as approved by Architect. Submit qualifications for approval.
- 2.3 FABRICATION
 - A. Verify dimensions on site prior to shop fabrication.
 - B. Fit and shop assemble sections in largest practical sizes, for delivery to site and installation.
 - C. **Construct railings as indicated on Drawings, or, if none shown, provide standard 6 pipe horizontal railing system with 1-1/2-inch diameter pipe. Construct so that a 4-inch sphere cannot pass through railing system.**

- D. Supply components required for secure anchorage of handrails and railings.
- E. **Grind exposed welds completely smooth and flush with adjacent surfaces with no visible defects, rises, misalignments, slag, or deviations. Fuse without undercutting or overlapping. Thoroughly remove weld splatter.**
- F. **Make exposed joints butt tight, flush, and hairline.**
- G. Accurately form components required for **concealed anchorage** of railings to each other and to building structure.
- H. Form and assemble joints exposed to weather to exclude water.
- I. **Finish:**
 - 1. **Steel Handrails:** Provide hot-dip zinc coating in accordance with ASTM A153 for anchors. Final coating – 2-coat epoxy with clear top coat. Refer to Section 099713 – Special Coatings.
- J. **Non-Shrink Grout:**
 - 1. Premixed and packaged non-ferrous aggregate, non-staining, shrinkage-resistant, non-corrosive, non-gaseous complying with CRD C621, 34.5 MPa (5000 psi) minimum compressive strength.
 - 2. **Acceptable products** and manufacturers:
 - a. Euco-NS, Euclid Chemical Co., Cleveland, OH.
 - b. Supreme, Gifford Hill, Dallas, Texas.
 - c. Crystex, L&M Construction Chemicals, Omaha, NE.
 - d. SonogROUT 10K, Sonneborn Building Products, Minneapolis, MN.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that field conditions are acceptable and are ready to receive work.
- B. Beginning of installation means erector accepts existing conditions.

3.2 PREPARATION

- A. Supply items to be cast into concrete and placed in partitions with erection drawings to appropriate Sections.
- B. Clean and strip primed steel items to bare metal where site welding is required.
- C. Set boots and receivers in concrete.

3.3 INSTALLATION

- A. Install in accordance with shop drawings and manufacturer's instructions.
- B. **Erect work square and level, free from any and all distortion or defects detrimental to appearance or performance.**
- C. Anchor handrailings to structure.
- D. Weld field connections and grind completely smooth to complete assembly. Touch-up welds with primer.
- E. Securely attach handrail brackets to walls and stairs. Solidly anchor to solid wood blocking in walls.
- F. Verify railings are in compliance with OSHA and all other governing codes prior to utilization.

3.4 TOLERANCES

- A. Maximum Variation From Plumb: 1/4 inch per story, non-cumulative.
- B. Maximum Offset From True Alignment: 1/4 inch.

3.5 FINISH

- A. **Refer Section 099713 – Steel Coatings.**

END OF SECTION

SECTION 057300

DECORATIVE RAILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. **Section Includes:**

- 1. **Architectural interior stainless steel railings at Lobby Stair and Atrium.**

1.3 DEFINITIONS

- A. **Railings:** Guards, handrails, and similar devices used for protection of occupants at open-sided floor areas, pedestrian guidance and support, visual separation, or wall protection.

1.4 PERFORMANCE REQUIREMENTS

- A. **Delegated Design:** Design railings, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. **Structural Capacities:** Handrails, guardrails, and their supports must be designed for 50 lbs per linear foot, applied in any direction at the top of the top rail, and a concentrated load of 200 lbs applied in any direction at any location along the top of the top rail
- C. **General:** In engineering railings to withstand structural loads indicated, determine allowable design working stresses of railing materials based on the following:
 - 1. **Steel:** 72 percent of minimum yield strength.
 - 2. **Stainless Steel:** 60 percent of minimum yield strength.
 - 3. **Glass:** 25 percent of mean modulus of rupture (50 percent probability of breakage), as listed in "Mechanical Properties" in AAMA's Aluminum Curtain Wall Series No. 12, "Structural Properties of Glass."
- D. **Thermal Movements:** Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.
 - 1. **Temperature Change:** 120 deg F, ambient; 180 deg F, material surfaces.
- E. **Control of Corrosion:** Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

1.5 SUBMITTALS

- A. **Product Data:** For the following:
 - 1. Manufacturer's product lines of railings assembled from standard components.
- B. **Shop Drawings:** Include plans, elevations, sections, details, and attachments to other work.
- C. **Samples for Verification:** For each type of exposed finish required.
 - 1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters.
 - 2. Each type of glass required.
 - 3. Fittings and brackets.
 - 4. Welded connections.
 - 5. Assembled Samples of railing systems, made from full-size components, including top rail, post, handrail, and infill. Show method of finishing members at intersections. Samples need not be full height.
- D. **Delegated-Design Submittal:** For installed products indicated to comply with performance requirements and design criteria, including analysis data **signed and sealed by the qualified professional engineer licensed in Texas responsible for their preparation with a**

minimum of 10 years' experience designing architectural railing systems of a similar nature.

- E. **Qualification Data:** For qualified professional engineer.

1.6 QUALITY ASSURANCE

- A. **Source Limitations:** Obtain each type of railing from single source from single manufacturer.
- B. **Product Options:** Information on Drawings and in Specifications establishes requirements for system's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including structural analysis, preconstruction testing, field testing, and in-service performance.
1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.
- C. **Welding Qualifications:** Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.6, "Structural Welding Code - Stainless Steel."
- D. **Safety Glazing Labeling:** Permanently mark glass with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
- E. **Mockups:** Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
1. Build mockups as shown on Drawings. If not indicated on drawings follow requirements below.
2. Build mockups for each form and finish of railing consisting of two posts, top rail, infill area, and anchorage system components that are full height and are **not less than 48 inches in length**.

1.7 PROJECT CONDITIONS

- A. **Field Measurements:** Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.

1.8 COORDINATION AND SCHEDULING

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not suit structural performance requirements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Basis of Design:** Refer to Section 008900 - Finish Selection Summary.
- B. **Acceptable Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. **Decorative Interior Railings:**
- a. Viva Railings, Carrollton, Texas.
- b. ETI.

- c. Blum, Julius & Co., Inc.
 - d. Blumcraft of Pittsburgh.
 - e. Livers Bronze Co.
 - f. Wagner, R & B, Inc.; a division of the Wagner Companies.
2. **Basis of Design:**
- a. **Decorative Exterior Painted Architectural Metal Railings System (Not Used):**
Refer to the Drawings for shapes, finishes, and profiles.
 - 1) **Finish:** 3 coat epoxy; refer to Section 099713 - Steel Coatings.
 - b. **Stainless Steel Cable Railing System:**
 - 1) **Basis of Design:** Refer to Section 008900 - Finish Selections Summary.
- 2.2 **METALS, GENERAL**
- A. **Metal Surfaces, General:** Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
 - B. **Brackets, Flanges, and Anchors:** Same metal and finish as supported rails unless otherwise indicated.
 - 1. Provide cast-metal brackets with flange tapped for concealed anchorage to threaded hanger bolt.
 - 2. Provide either formed- or cast-metal brackets with predrilled hole for exposed bolt anchorage.
 - 3. Provide formed-steel brackets with predrilled hole for bolted anchorage and with snap-on cover that matches rail finish and conceals bracket base and bolt head.
 - 4. Provide extruded-aluminum brackets with interlocking pieces that conceal anchorage. Locate set screws on bottom of bracket.
- 2.3 **STAINLESS STEEL**
- A. **Tubing:** ASTM A 554, Grade MT 316 304.
 - B. **Pipe:** ASTM A 312/A 312M, Grade TP 316 304.
 - C. **Castings:** ASTM A 743/A 743M, Grade CF 8 or CF 20.
 - D. **Sheet, Strip, Plate, and Flat Bar:** ASTM A 666, Type 316 304.
 - E. **Bars and Shapes:** ASTM A 276, Type 316 304.
 - F. **Cable:** ASTM A 492, Type 316, 3/16" in diameter.
- 2.4 **STEEL AND IRON**
- A. **Tubing:** ASTM A 500 (cold formed) or ASTM A 513.
 - B. **Bars:** Hot-rolled, carbon steel complying with ASTM A 29, Grade 1010.
 - C. **Plates, Shapes, and Bars:** ASTM A 36.
- 2.5 **GLASS AND GLAZING MATERIALS (NOT USED)**
- A. **Tempered Glass:** ASTM C 1048, Kind FT (fully tempered), Condition A (uncoated), Type 1 (transparent flat glass), Quality-Q3. Provide products that have been tested for surface and edge compression according to ASTM C 1048 and for impact strength according to 16 CFR 1201 for Category II materials.
 - 1. **Glass Color:** Clear.
 - 2. **Thickness for Structural Glass Balusters:** As engineered by manufacturer and required for structural loads, but not less than 1/2 inch (12 mm).
 - B. **Glazing Gaskets for Glass Infill Panels:** Glazing gaskets and related accessories recommended or supplied by railing manufacturer for installing glass infill panels in post-supported railings.
- 2.6 **ILLUMINATED RAILINGS (NOT USED)**
- A. **Illuminated Units:** Provide internal illumination using concealed, internally wired LED-strip fixture system to illuminate walking surfaces adjacent to railings without light leaks. Make provisions for servicing and for concealed connection to electric service. Coordinate electrical characteristics with those of the power supply provided.

1. **LED Lighting:** Provide number of fixtures required by railing length.
2. **Diffusers:** UV-stabilized acrylic diffusers matching profile of railings.
3. **Drivers:** Energy-saving, high power factor; designed for use with high-output LED lighting and with automatic-reset thermal protection.

2.7 FASTENERS

- A. **Fastener Materials:** Unless otherwise indicated, provide the following:
 1. **Stainless-Steel Components:** Type 316 stainless-steel fasteners.
 2. **Dissimilar Metals:** Type 316 stainless-steel fasteners.
- B. **Fasteners for Anchoring to Other Construction:** Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated.
- C. **Provide concealed fasteners** for interconnecting railing components and for attaching railings to other work unless noted otherwise.
- D. **Exposed Fasteners:**
 1. At plate connections of balusters to stringers, provide carriage bolt square shoulder round-head screws in same finish as railing for exposed fasteners unless otherwise indicated.
- E. **Anchors, General:** Anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
- F. **Post-Installed Anchors:** Torque-controlled expansion anchors.
 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941, Class Fe, unless otherwise indicated.
 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 stainless-steel bolts, ASTM F 593, and nuts, ASTM F 594.

2.8 MISCELLANEOUS MATERIALS

- A. **Welding Rods and Bare Electrodes:** Select according to AWS specifications for metal alloy welded.
- B. **Non-shrink, Non-metallic Grout:** Factory-packaged, non-staining, non-corrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.9 FABRICATION

- A. **General:** Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage.
- B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
- C. Make up **wire-rope assemblies** in the shop to field-measured dimensions with fittings machine swaged. Minimize amount of turnbuckle take-up used for dimensional adjustment so maximum amount is available for tensioning wire ropes. Tag wire-rope assemblies and fittings to identify installation locations and orientations for coordinated installation.
- D. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- E. Form work true to line and level with accurate angles and surfaces.
- F. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.
- G. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- H. **Connections:** Fabricate railings with welded connections unless otherwise indicated.
- I. **Welded Connections:** Cope components at connections to provide close fit, or use fittings

designed for this purpose. Weld all around at connections, including at fittings.

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove flux immediately.
4. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 1 welds: no evidence of a welded joint.

J. **Mechanical Connections:** Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.

1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.

K. **Form changes in direction as follows:**

1. By bending.

L. Bend members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

M. Close exposed ends of hollow railing members with prefabricated end fittings.

N. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns, unless clearance between end of rail and wall is 1/4 inch or less.

O. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.

1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers, or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.

P. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.

Q. For railing posts set in concrete, provide stainless-steel sleeves not less than 6 inches long with inside dimensions not less than 1/2 inch greater than outside dimensions of post, with metal plate forming bottom closure.

2.10 **GLAZING PANEL FABRICATION (NOT USED)**

A. **General:** Fabricate to sizes and shapes required; provide for proper edge clearance and bite on glazing panels.

1. Clean-cut or flat-grind edges at butt-glazed sealant joints to produce square edges with slight chamfers at junctions of edges and faces
2. Grind smooth exposed edges, including those at open joints, to produce square edges with slight chamfers at junctions of edges and faces.

B. **Infill Panels:** Provide tempered glass panels for both straight and curved sections.

2.11 **GENERAL FINISH REQUIREMENTS**

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.

C. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.12 **FINISHES**

A. **Interior Stainless Steel Railings:**

1. Stainless Steel Members: Brushed #4 finish. Refer to Section 008900 - Finish Selection Summary.

B. **Exterior Painted Steel Railings:**

1. **Painted Steel Members:** Epoxy as specified in Section 099713 - Steel Coatings.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements have been clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 INSTALLATION, GENERAL

- A. Fit exposed connections together to form tight, hairline joints.
- B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
 - 1. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 - 2. Set posts plumb within a tolerance of 1/16 inch in 3 feet.
 - 3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet.
- C. **Corrosion Protection:** Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- D. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- E. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.3 RAILING CONNECTIONS

- A. **Non-welded Connections:** Use mechanical or adhesive joints for permanently connecting railing components. Use wood blocks and padding to prevent damage to railing members and fittings. Seal recessed holes of exposed locking screws using plastic cement filler colored to match finish of railings.
- B. **Welded Connections:** Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.

3.4 ANCHORING POSTS

- A. **Exterior Locations:** Unless noted otherwise on drawings, install as follows:
 - 1. Use steel pipe sleeves preset and anchored into concrete for installing posts at exterior locations. After posts have been inserted into sleeves, fill annular space between post and sleeve with non-shrink, non-metallic grout, mixed and placed to comply with anchoring material manufacturer's written instructions.
 - 2. Form or core-drill holes not less than 5 inches deep (verify with slab thickness and structural engineer) and 3/4 inch larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with non-shrink, non-metallic grout or anchoring cement, mixed and placed to comply with anchoring material manufacturer's written instructions.
 - 3. Cover anchorage joint with flange of same metal as post, welded to post after placing anchoring material.
 - 4. Leave anchorage joint exposed with anchoring material flush with adjacent surface.
 - 5. Anchor posts to metal surfaces with flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting member.
- B. **Interior Locations:**
 - 1. For stainless-steel railings, weld posts to stainless steel plates and bolt to metal-stair stringer surface with four large carriage (square shoulder) bolts per post.
 - 2. Attach to side of metal stringers.

3.5 ATTACHING RAILINGS

- A. Anchor railing ends to concrete and masonry with brackets on underside of rails connected to

- railing ends and anchored to wall construction with anchors and bolts.
- B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and welded to railing ends.
 - C. Attach handrails to walls with wall brackets except where end flanges are used. **Provide brackets with 1-1/2-inch clearance from inside face of handrail and finished wall surface.** Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
 - 1. Use type of bracket with flange tapped for concealed anchorage to threaded hanger bolt.
 - 2. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
 - D. Secure wall brackets and railing end flanges to building construction as follows:
 - 1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
 - 2. For steel-framed partitions, use hanger or lag bolts set into fire-retardant-treated wood backing between studs. Coordinate with stud installation to locate backing members.
- 3.6 **INSTALLING GLASS PANELS (NOT USED)**
- A. **Post-Supported Glass Railings:** Install assembly to comply with railing manufacturer's written instructions and with requirements in other Part 3 articles. Erect posts and other metal railing components, then set factory-cut glass panels. Do not cut, drill, or alter glass panels in field. Protect edges from damage.
- 3.7 **CLEANING**
- A. Clean aluminum and stainless steel by washing thoroughly with clean water and soap, rinsing with clean water, and wiping dry.
 - B. Clean and polish glass as recommended in writing by manufacturer. Wash both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion.
 - C. Clean by wiping with a damp cloth and then wiping dry.
- 3.8 **PROTECTION**
- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.
 - B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION

SECTION 05 73 53

SMOKE BAFFLE CURTAIN

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes:** Aluminum channel and glass curtain.

1.3 SUBMITTALS

- A. **Product Data:** Manufacturer's data including description of materials, components, finishes, and installation instructions.
- B. **Shop Drawings:** Include plans, elevations, sections, and attachment details.
- C. **Samples for Verification:** For each type of exposed finish required.
 - 1. Sections of linear channel member.
 - 2. Each type of glass required.

1.4 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Basis of Design:** Contract Documents are based on products specified in Section 008900 - Finish Selection Summary to establish a standard of quality. Other available manufacturers with products having equivalent characteristics may be considered, provided deviations are minor and design concept expressed in Contract Documents is not changed, as judged by Architect.
- B. Acceptable Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
 - 1. CRL Architectural Products.
 - 2. Livers Bronze Co.

2.2 MATERIALS

- A. **Aluminum Channel:**
 - 1. General: Provide alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.
 - 2. Extruded Shapes: ASTM B 221, Alloy 6063-T5/T52.
- B. **Tempered Glass:** ASTM C 1048, Kind FT (fully tempered), Condition A (uncoated), Type 1 (transparent flat glass), Quality-Q3. Provide products that have been tested for surface and edge compression according to ASTM C 1048 and for impact strength according to 16 CFR 1201 for Category II materials.
 - 1. Color: Clear.
 - 2. Thickness: 19.0 mm.
 - 3. **Height: 18 inches.**
- C. Sealant: Manufacturers standard silicone sealant.

- D. Fasteners for Anchoring to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated.

2.3 ALUMINUM FINISHES

- A. **Baked-Enamel or Powder-Coat Finish:** AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - 1. Color and Gloss: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install assembly to comply with manufacturer's written instructions.
- B. Install components plumb, level, square, true to line, and rigid.
- C. Fit aluminum connections together to form tight, hairline joints.
- D. Install glass securely in channel using mechanical fasteners and grommets.
- E. Install sealant at joints between glass panels.
- F. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.2 CLEANING

- A. Clean aluminum and stainless steel by washing thoroughly with water and soap, rinsing with clean water, and wiping dry.

END OF SECTION

SECTION 061013

MISCELLANEOUS ROUGH CARPENTRY

PART 1- GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes:**
 - 1. **Oriented-Strand-Board.**
 - 2. **Preservative treatment.**
 - 3. **Fire retardant treatment.**
 - 4. **Fasteners.**
 - 5. **Related accessories.**

1.3 SUBMITTALS

- A. General: Submit in accordance with Section 013300.
- B. **Product Data:** Provide technical data on wood preservative and fire retardant treatment materials and application techniques and instructions.
- C. **Manufacturers Certificates:** Certify that products meet or exceed specified requirements.
 - 1. **Pressure Treated Wood:** **Submit certification** by treating plant stating chemicals and process used, net amount of salts retained, and conformance with referenced standards.
 - 2. **Preservative Treated Wood:** **Submit certification** for water-borne preservative that moisture content was reduced to maximum 19 percent for lumber and 15 percent for plywood after treatment.
 - 3. **Fire Retardant Treated Wood:** **Submit certification** by testing plant stating chemicals and process used, conformance with referenced standards and governing ordinances, and non-bleeding quality of the treatment.
 - 4. **Structural Values:** Where materials are provided to comply with minimum allowable unit stresses, **submit listing of species and grade selected for each use**, in the form of a signed copy of the applicable portion of the producer's grading rules for design values.

1.4 QUALITY ASSURANCE

- A. **Lumber Grading:** Lumber Grading Rules and Wood Species in accordance with Voluntary **Product Standards**. Grading rules of following associations apply to materials furnished.
 - 1. Southern Pine Inspection Bureau (SPIB).
 - 2. West Coast Lumber Inspection Bureau (WCLIBB).
 - 3. Western Wood Products Association (WWPA).
- B. **Grade Marks:** Identify lumber and plywood by official grade mark.
 - 1. Lumber: Include symbol of grading agency, mill name, grade, species, grading rules and condition of seasoning at time of manufacturer.
 - 2. Plywood: Include type, class identification index, and agency mark.
 - 3. Pressure Treatment: Include quality mark of grading agency which maintains continued supervision, testing, inspection, and re-examination service over product quality as described in AWWPA standards.
 - 4. Fire Retardant Treated Wood: Mark attesting FR-S rating.
- C. **Requirements of Regulatory Agencies**
 - 1. Preservative and Pressure Treated Lumber and Plywood: Comply with American Wood Preservers Bureau Standards.

2. Fire Retardant Treated Materials: Comply with Underwriters Laboratories, Inc. and ASTM E 84, for maximum flame spread of 25.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store, handle, and protect products in accordance with Section 016000.
- B. Store products above ground, on platforms or skids, and covered with waterproof coverings. Provide for adequate air circulation.
- C. Do not store seasoned materials in damp or wet locations.
- D. Support products in such a way as to prevent warping and distortion.

PART 2 - PRODUCTS

2.1 WOOD MATERIALS

- A. General: Where stress rating values are given in lieu of grades, select any quality which will meet structural requirements.
- B. **Lumber**
 1. **Grading Rules:** PS 20.
 2. Lumber shall be kiln dried, bearing stamp of Southern Pine Inspection Bureau or equivalent agency.
 3. **Dimensions:** Lumber dimensions are nominal except for posts and timbers; actual dimensions conform to industry standards established by the American Lumber Standards Committee and applicable rules writing agencies. Provide sizes as detailed.
 4. **Moisture Content:** 19 percent maximum moisture content after treatment for fire retardant and preservative treated woods.
 5. **Surfacing:** Surface four sides (S4S), unless noted otherwise.
 6. **Species: Southern Yellow Pine or West Coast Douglas Fir, unless noted otherwise.**
 7. **Finger-Jointed Lumber: Not allowed.**
 8. **Uses, Grades, and Stress Ratings**
 - a. **Non-structural light framing** (2 to 4 inch thick, 2 to 4 inch wide):
 - 1) **General Framing:** Standard and better or Stud grade.
 - 2) **Plates, Blocking, Bracing, Nailers:** Utility grade.

2.2 ORIENTED-STRAND BOARD

- A. **Oriented-Strand-Board:** Exposure 1 sheathing.
 1. **Span Rating:** Not less than 24/0.
 2. **Nominal Thickness:** Not less than 1/2 inch (13 mm).

2.3 ACCESSORIES

- A. **Plastic Cement:** ASTM D 2822, asphalt base.
- B. **Fasteners**
 1. Provide fasteners in sizes, spacings, and locations to suit applications. Hot dip galvanize unless noted otherwise.
 2. **Anchors:**
 - a. Toggle Bolt Type: For anchorage to hollow masonry.
 - b. Expansion Shield and Lag Bolt Type: For anchorage to solid masonry or concrete.
 - c. Bolts or Ballistic Fasteners: For anchorage to steel.
 3. **Bolts:** ASTM A 307 with nuts and washers.
 4. **Anchor Bolts:** ASTM A 307 with nuts and washers.
 5. **Toggle Bolts:** ASTM A 307.
 6. **Lag Screws and Lag Bolts:** ANSI B18.2.1 with washers.
 7. **Wood screws:** ANSI B18.6.1.

8. **Nails, Staples, and Spikes:** FS FF-N-105.
9. **Metal Nailing Discs**
 - a. Flat caps, minimum 1 inch diameter.
 - b. Minimum 30 gage sheet metal.
 - c. Formed to prevent dishing.
 - d. Bell or cup shapes not acceptable.

2.4 WOOD TREATMENTS - SHOP PREPARED

A. **Preservative Treated Wood**

1. **Provide preservative treat fascia blocking at all roof edging, sill plates and grounds in contact with concrete (except on interior of building) roof curbs, cants and nailers for flashing, and elsewhere as noted or shown.**
 - a. Contractor shall provide certification for preservative treated material.
2. Use waterborne salt preservatives as follows:
 - a. AWPB LP-2 above ground.
 - b. AWPB LP 22 ground contact.
3. Redry lumber to maximum 19 percent moisture content, stamp with AWPB "Dry". Redry plywood and particleboard to 15 percent maximum moisture content.
4. **Field treat surface cuts and holes in accordance with AWPB M4.**
 - a. Water repellent containing 2 percent copper naphthenate solution.
 - b. Compatible with preservative pressure treatment.
 - c. Pigment: Colored.
 - d. **Acceptable Products:**
 - 1) Number 10 Green Preservative by Cuprinol Group (Sherwin Williams), Cleveland, OH.
 - 2) Substitutions: Submit in accordance with Section 016000.

B. **Fire Retardant Treated Wood**

1. **Use fire retardant treated wood for wood blocking above ceilings, blocking within return air plenums, blocking within walls, and other areas required by reference building codes.**
 - a. Contractor shall provide UL label for fire retardant material.
2. Comply with AWPB C20 for lumber and AWPB C27 for sheet materials.
3. Not detrimental to structural properties of plywood when exposed to elevated temperatures and high humidity when tested in accordance with ASTM D 5516.
4. **Not capable of bleeding through or adversely affecting type of finish indicated.**
5. Not capable of corroding metals when tested in accordance with MIL-L-199140E.
6. Provide finished products with maximum flame spread rating of 25 when tested in accordance with ASTM E 84.
7. **Acceptable Products and Manufacturers - Interior**
 - a. D-Blaze by Chemical Specialties, Inc., Charlotte, NC.
 - b. Dricon by Hickson Corporation, Atlanta, GA.
 - c. Pyroguard by Hoover Treated Wood Products, Thomson, GA.
 - d. Substitutions: Submit in accordance with Section 016000.
8. **Acceptable Products and Manufacturers - Exterior**
 - a. Exterior Fire-X by Hoover Treated Wood Products, Thomson, GA.
 - b. Substitutions: Submit in accordance with Section 016000.
9. Where treated items are exposed to exterior or to high humidity or are to have a transparent finish applied, provide materials which show no change in fire hazard classification when subjected to standard rain test (UL 790).
10. Use fire retardant treatment which will not bleed through or adversely affect type of finish indicated and which does not require brush treatment of field- made end cuts to maintain fire hazard classification.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that surfaces and conditions are ready to receive work of this section. Notify Owner's Representative of any existing conditions which will adversely affect execution. Beginning of execution will constitute acceptance of existing conditions.

3.2 PREPARATION

- A. **Wood Treatment Applied to Cut Surfaces at Site:** Comply with AWP4 M4.
 - 1. Apply preservative treatment in accordance with manufacturer's instructions to:
 - a. Preservative pressure treated wood site-sawn ends.
 - b. Holes cut through preservative pressure treated wood.
 - 2. Allow preservative to cure prior to erecting members.

3.3 INSTALLATION

- A. **General**
 - 1. Discard units of material with defects which might impair quality of work, and units which are too small to fabricate work with minimum joints or optimum joint arrangement.
 - 2. Set carpentry work accurately to required levels and lines, with members plumb and true and accurately cut and fitted. Scribe and cope as required.
 - 3. Securely attach carpentry work to substrates by anchoring and fastening as required by recognized standards and as required to draw members into place and securely hold same unless otherwise indicated. Use washers under bolt heads.
 - 4. Select fasteners of size that will not penetrate members where opposite side will be exposed to view or will receive finish materials.
 - 5. Make tight connections between members to develop full strength of members.
 - 6. Install fasteners without splitting of wood.
 - 7. Predrill as necessary.
 - 8. Comply with APA E30a requirements for plywood.
 - 9. Install fasteners at spacing recommended by NFPA National Design Specifications for Stress Grade Lumber and Its Fastening - 1973 for lumber and APA Guide E30e for Plywood, unless more restrictive code requirements dictate tighter spacing or heavier fasteners.
 - 10. Locate members as indicated on the drawings. Do not change size, spacing or spans without specific approval of Owner's Representative. Take care to place proper grades and species of members where indicated in accordance with the lumber schedule herein.
 - 11. Temporarily brace framing at the end of each day's work until framing is completed and securely anchored. Leave temporary bracing in place as long as required for safety. As work progresses, securely connect work to compensate for dead load, wind, and erection stresses.
 - 12. Shimming:
 - a. Concrete and masonry bearing: Use steel or slate shims.
 - b. Metal and Wood Bearing: Do not use shims.
 - 13. **Wood Fire Retardant Pressure Treatment:**
 - a. Do not rip cut.
 - b. Do not mill.
 - c. **Only end cuts and bored holes are permitted.**
- B. **Wood Grounds, Nailers, Cants, and Blocking**
 - 1. Provide where required for screeding or attachment of other work.
 - 2. Form to shapes cut as necessary for true line and level of work to be attached.
 - 3. Coordinate location with other work involved.
 - 4. Attach to substrates to support applied loading.
 - 5. Countersink bolts and nuts flush with surfaces and where built into masonry work.

6. Where possible, anchor to formwork before concrete placement.
 7. Provide permanent grounds of dressed, preservative treated, key beveled lumber not less than 1/2 inch wide, and of thickness required to bring face of ground to exact thickness of finish material involved.
 8. Provide continuous blocking.
 9. Remove temporary grounds when no longer required.
 10. Curb roof openings except where prefabricated curbs are provided.
 11. Provide solid lumber preservative cants where roof surfaces meet walls, curbs or other vertical projections.
 12. Install wood blocking behind/above:
 - a. Toilet partitions.
 - b. Toilet accessories.
 - c. Grab bars.
 - d. Mirrors.
 - e. All wall mounted equipment.
 - f. Upper and lower cabinets and shelving.
 - g. Movable partitions.
 - h. Other locations as required and/or called for in individual specification sections.
- C. **Plywood Equipment and Panel Boards:** Install full height painted plywood behind all electrical panels and other equipment whether or not called for on plans.
1. Oversize panel by 12 inches beyond equipment perimeter.
- D. **Wood Nailers:** Provide at roof openings, terminations, and other locations as indicated to match thickness of roof insulation.
- E. **Wood Cants:** Provide where roofing meet walls, curbs, and other vertical projections.
- F. **Wood Curbs:** Provide at roof openings except where prefabricated curbs are provided. Form corners by lapping side members alternately.
- G. **Wood Furring:**
1. Run in longest practical lengths.
 2. Butt ends together.
 3. Rigidly secure to substrate.
- 3.4 TOLERANCES
- A. **Framing members:** 1/4 inch maximum from true position.
 - B. **Surface flatness of floors/roofs:** 1/4 inch in 10 feet maximum.
- 3.5 PROTECTION
- A. Protect products from moisture absorption and subsequent warping or deterioration until subsequent construction can proceed.

END OF SECTION

SECTION 061600

SHEATHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. **Wall sheathing.**
2. **Roof sheathing:** Composite nail based insulated roof sheathing for use under asphalt shingle roofs.
3. **Primed sheathing board for back of parapet walls.**
4. **Exterior grade plywood sheathing.**
5. **Sheathing joint and penetration treatment.**
6. **Wood Structural Insulating Panels (SIPS).**

1.3 ACTION SUBMITTALS

- A. **Product Data:** For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

1.4 QUALITY ASSURANCE

- A. **Testing Agency Qualifications:** For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. **Fire-Test-Response Characteristics:** For assemblies with fire-resistance ratings, provide materials and construction identical to those of assemblies tested for fire resistance per ASTM E 119 by a testing and inspecting agency acceptable to authorities having jurisdiction.
 1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory."

2.2 WOOD PANEL PRODUCTS

- A. **Oriented Strand Board:** DOC PS 2.
- B. Thickness: As needed to comply with requirements specified, but not less than thickness indicated.
- C. Factory mark panels to indicate compliance with applicable standard.

2.3 WALL SHEATHING

- A. **Glass-Mat Gypsum Wall Sheathing:** ASTM C 1177, moisture resistant type; 1/2 and 5/8 inch thick, maximum permissible length; ends square cut, book or tongue and grooved edges.

1. ~~**Acceptable Products:** Subject to compliance with requirements, provide one of the following:~~
 - a. ~~CertainTeed Corporation; GlasRoc.~~
 - b. ~~G-P Gypsum Corporation; Dens-Glass Sheathing.~~
 - c. ~~Temple Inland Inc.; GreenGlass~~
 - d. ~~United States Gypsum Co.; Securock.~~
 2. ~~**Type and Thickness:** Type X, 1/2 and 5/8 inch thick.~~
 3. ~~**Substitutions:** Refer to Section 012500.~~
 - B. **Wall Sheathing Board:** *Coated fiberglass mat gypsum sheathing with integral weather-resistant barrier (WRB) and air barrier (AB) complying with applicable requirements of ICC-ES AS212, ASTM E 2178, and ASTM E 2357; 5/8 inch thick; Type X.*
 1. **Basis of Design:** *DensElement Sheathing by Georgia Pacific.*
 2. **Substitutions:** *Refer to Section 012500.*
 - C. **Primed Sheathing Board for Back of Parapet Walls:** ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, Type X, 1/2 inch thick, factory primed.
 1. **Basis of Design:** Dens Deck Prime by Georgia Pacific.
 2. **Substitutions:** Refer to Section 012500.
- 2.4 **ROOF SHEATHING**
- A. Plywood Sheathing: **DOC PS 1, Exterior, Structural I** sheathing; **fire treated**.
 1. Nominal Thickness: Not less than **3/4 inch**.
 2. **Location:** Provide as substrate under all clay roof tiles.
 3. Provide IT clips as required by manufacturer.
- 2.5 **EXTERIOR GRADE PLYWOOD SHEATHING (NOT USED)**
- A. Plywood Sheathing: **DOC PS 1, Exterior, Exposure 1**, CDX plywood.
- 2.6 **STRUCTURAL INSULATING PANELS**
- A. UL certified EPS core with Perform Guard treatment, minimum of 0.95 pcf complying with ASTM C578 Type I and having ICC ES recognition of termite resistance. Insulation manufacturer shall provide Third Party UL certificate. ICC ES report shall be provided for recognition of termite resistance in compliance with ICC AC239.
 - B. OSB identified with APA or TECO performance mark with Exposure I durability rating and performance in accordance with DOC PS-2 span rating 24/16 or greater.
 - C. Adhesives shall be in conformance with ICC ES AC05 – Acceptance Criteria for Sandwich Panel Adhesives.
 - D. Treatment for mold, mildew, and termite resistance meeting the following requirements:
 1. Registered with EPA.
 2. Mold growth: 0 rating, tested to ASTM D3273 for 8 weeks at 77 degrees F and 100 percent relative humidity.
 3. Termite resistance: Minimum rating of 7.0, tested to AWPA E-1.
 4. Corrosion potential for metals in contact with treated wood: Maximum 2 mils per year, tested to AWPA E12 for minimum of 60 days on aluminum 2024, carbon steel, hot-dip galvanized steel, and G90 galvanized steel.
 5. Equivalent lateral resistance and tooth holding capacity as untreated wood.
- 2.7 **JOINT TREATMENT FOR WALL SHEATHING BOARD**
- A. **Primer:** *Liquid primer recommended by air barrier manufacturer for exposed gypsum core edges.*
 1. **Basis of Design:** *PorousPrep Sealer by PROSOCO, Inc.*
 - B. **Fluid-Applied Air Barrier Flashing:** *Site-applied for application to joints, fasteners, penetrations, openings and material transitions.*
 1. **Basis of Design:** *FastFlash by PROSOCO, Inc.*
 - C. **Flashing and Transition Strip:** *Preformed silicone extrusion, 24 mils thick.*
 1. **Basis of Design:** *SureSpan EX by PROSOCO, Inc.*

2.8 FASTENERS

- A. **General:** Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
 - 1. **For roof and wall sheathing, provide fasteners with hot-dip zinc coating complying with ASTM A 153.**
- B. **Power-Driven Fasteners:** NES NER-272.
- C. **Wood Screws:** ASME B18.6.1.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. **Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.**
- B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.
- C. Securely attach to substrate by fastening as indicated, complying with the following:
 - 1. NES NER-272 for power-driven fasteners.
 - 2. Table 2304.9.1, "Fastening Schedule," in ICC's "International Building Code."
- D. **Coordinate wall sheathing installation with flashing and joint-sealant installation** so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.
- E. **Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.**
- F. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

3.2 WOOD STRUCTURAL PANEL INSTALLATION

- A. General: Comply with applicable recommendations in APA Form No. E30, "Engineered Wood Construction Guide," for types of structural-use panels and applications indicated.
- B. **Fastening Methods:** Fasten panels as indicated below:
 - 1. Wall and Roof Sheathing:
 - a. **Screw to cold-formed metal framing.**
 - b. Space panels 1/8 inch apart at edges and ends.
 - 2. Install over continuous waterproof membrane such as Ice and Water Shield by W.R. Grace, or approved equal.

3.3 ~~GYPSUM SHEATHING INSTALLATION~~

- A. ~~Comply with GA-253 and with manufacturer's written instructions.~~
 - 1. ~~Fasten gypsum sheathing to cold-formed metal framing or studs with screws.~~
 - 2. ~~Install boards with a 3/8-inch gap where non-load-bearing construction abuts structural elements.~~
 - 3. ~~Install boards with a 1/4-inch gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.~~
- B. ~~Apply fasteners so heads bear tightly against face of sheathing, but do not cut into facing.~~
- C. ~~Vertical Installation:~~ Install board vertical edges centered over studs. Abut ends and edges of each board with those of adjacent boards. Attach boards at perimeter and within field of board to each stud.
 - 1. ~~Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of boards.~~
 - 2. ~~For sheathing under stucco cladding, boards may be initially tacked in place with screws if overlying self-furring metal lath is screw attached through sheathing to studs immediately after sheathing is installed.~~

3.4 **WALL SHEATHING BOARD INSTALLATION**

- A. Discard each air- and water-resistive sheathing board with damage that compromises continuity or impairs performance as an air barrier, and is unable to be repaired according to manufacturer's written repair instructions.
 - 1. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
- B. **Comply with ASTM C 1280, GA-253, and manufacturer's written instructions.**
 - 1. Fasten sheathing boards to cold-formed metal framing with specified screws in pattern indicated.
 - 2. Install sheathing boards with a 1/4 inch gap where they abut masonry or similar materials that might retain and transmit moisture to them.
- C. Cut sheathing boards at penetrations, edges, and other obstructions of work to allow for application of air barrier accessory materials. Fit sheathing boards closely against abutting construction.
- D. Install sheathing boards with long dimension perpendicular or parallel to framing. Abut ends and edges of sheathing boards centered over face of framing members. Offset sheathing boards joints by not less than one stud spacing.
 - 1. Apply sheathing boards in pieces sized to provide minimum number of joints and optimum sheathing board arrangement. Arrange joints so that pieces do not span between fewer than three support members.
 - 2. Do not bridge building expansion joints; cut and space edges of sheathing boards to match spacing of structural support elements.
- E. Space fasteners maximum 8 inches o.c. and set back a minimum of 3/8 inch (905 mm) from edges and ends of sheathing boards and as required in indicated fire-resistance-rated designs.
 - 1. Apply fasteners so heads are seated flush to board product air barrier membrane surface without breaking or punching through the surface.
 - a. Treat all countersunk fasteners that penetrate through fiberglass with specified fluid-applied flashing used for sealing joints.
 - 2. Securely attach sheathing boards to substrate by fastening as indicated, complying with the following:
 - a. Table 2304.9.1, "Fastening Schedule," in the IBC.
 - b. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in the ICC's International Residential Code for One- and Two-Family Dwellings.
 - c. ICC-ES evaluation report for fastener.
 - 3. Use common galvanized wire nails. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections. Install fasteners without splitting wood.
 - 4. Use corrosion resistant sheet metal screw fasteners. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections.
- F. Coordinate wall sheathing boards installation with flashing and air barrier accessory material installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.

3.5 **JOINT TREATMENT AT WALL SHEATHING BOARD INSTALLATION**

- A. General: Apply site fluid-applied air barrier flashing at joints, fasteners, penetrations, openings, and material transitions to achieve a continuous air barrier according to air barrier manufacturer's written instructions. Apply within manufacturer's recommended application temperature ranges.
- B. Apply extrusion flashing material in full contact with substrate to produce a continuous seal according to air barrier manufacturers written instructions.
 - 1. Apply extrusion flashing at changes in plane, and inside and outside corners.
- C. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air barrier components.

END OF SECTION

SECTION 062023

INTERIOR FINISH CARPENTRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established within General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SECTION INCLUDES

- A. Interior Finish Carpentry Work
 1. **Stain grade standing and running trim, including wood base, chair rail, crown molding, composite molding assemblies, and other molding trim shapes.**
 2. **Shelving.**
 3. **Acoustical perforated and non-perforated wall paneling.**
 4. **Wood and glass display cases.**
 5. **Paint grade standing and running trim, including composite molding assemblies, wood base, chair rail, and crown molding.**
 6. **Wood window sills.**

1.3 SUBMITTALS

- A. **Product Data:** Manufacturer's technical literature for factory fabricated items and components.
- B. **Samples:** Submit stained or finished samples of each piece of trim, countertop, and paneling. Provided in sizes requested by Architect.
- C. **Shop Drawings:**
 1. Include plans, elevations, sections, and attachment details.
 2. Show large-scale details and shapes.
 3. Show locations and sizes of furring, blocking, and hanging strips, including blocking and reinforcement concealed by construction and specified in other Sections.
 4. Apply **AWI Quality Certification** Program label to Shop Drawings.
- D. Quality Standard Compliance Certificates: **AWI Quality Certification Program.**

1.4 QUALITY ASSURANCE

- A. **Fabricator Qualifications:** Company specializing in fabrication of custom casework of quality and having **minimum of 10 years documented experience.**
 1. **Shop Certification: AWI's Quality Certification Program accredited participant.**
- B. Fabrication Standards: Fabricate items in accordance with AWI standards listed below **using premium grade.**
 1. **Lumber grades: AWI Section 100.**
 2. **Standing and running trim: AWI Section 300.**
 3. **Counter tops: AWI Section 400.**
 4. **Shelving: AWI Section 600.**
 5. **Miscellaneous work: AWI Section 700.**
 6. **Door frames: AWI Section 900.**
- C. Regulatory Requirements: Conform to applicable code for fire retardant requirements.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store, handle, and protect products in accordance with Section 016000.
- B. Protect materials from damage, soiling and deterioration.
- C. Do not deliver finish carpentry materials until job site conditions and operations which could damage, soil or deteriorate work are complete.
- D. Store products and materials in ventilated, interior locations

1.6 ENVIRONMENTAL REQUIREMENTS

- A. Install finish carpentry products only when temperature and humidity conditions have been stabilized and will be maintained.
- B. Maintain temperature and moisture conditions as recommended by woodwork fabricator from date of installation through remainder of construction period.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. General:
 - 1. Comply with quality and grading standards contained herein for each material.
 - 2. Sizes noted on drawings or indicated herein for lumber are nominal unless detailed by specific dimensions of actual size.
 - 3. Plywood and particleboard thicknesses are noted or detailed.
 - 4. Products surfaced four sides, unless noted otherwise.
- B. **Softwood Lumber:**
 - 1. Quality standard: PS 20.
 - 2. **Grading Standard: AWI Custom Grade.**
 - 3. **Maximum moisture content: 6% for interior work; 10% for exterior work.**
 - 4. Species: Idaho white pine, or poplar.
 - 5. Grain: Mixed.
- C. **Hardwood Lumber:**
 - 1. Quality standard: FS MM-L-736C.
 - 2. **Grading standard: AWI Premium Grade**
 - 3. **Maximum moisture content: 6 percent.**
 - 4. **Species: Match Architect's control sample.** Refer to Section 008900 - Finish Selection Summary.
 - 5. **Grain: Match Architect's control sample.** Refer to Section 008900 - Finish Selection Summary.
- D. **Softwood Plywood:**
 - 1. Quality standard: PS 1.
 - 2. **Grading standard: AWI Custom Grade**
 - 3. Core material: C-D Plugged INT-APA.
 - 4. Face quality: A-B INT-APA and Medium density overlay.
 - 5. **Species: Douglas fir.**
 - 6. Ply construction: 3 ply - 3/8 inch; 5 ply-1/2 inch; 7 ply - 3/4 inch.
- E. **Hardwood Plywood:**
 - 1. Quality standard: FS MM-L-736C.
 - 2. **Grading standard: AWI Premium Grade**
 - 3. **Maximum moisture content: 6 percent.**
 - 4. **Species: Match Architect's control sample.** Refer to Section 008900 - Finish Selection Summary.
 - 5. **Grain: Match Architect's control sample.** Refer to Section 008900 - Finish Selection Summary.
- F. **Laminate Materials:**
 - 1. **High pressure laminate surface:**
 - a. Quality standard: NEMA, LD-3.
 - b. **Grade:** AWI Custom Grade.
 - c. Thickness: 0.050 inch for horizontal grade; 0.028 to 0.032 inch for vertical grade.
 - d. Core: Standard.
 - e. **Finish and Sheen:** To be selected by Architect from any and all of the manufacturer's product lines listed in this section for colors selected. Sheen to be selected by Architect from specified product manufacturing full line of sheens available.
 - f. **Acceptable Manufacturers:**

- 1) Wilsonart by Ralph Wilson Plastics, Temple, TX.
 - 2) Nevamar by Exxon Chemical Co., Odenton, MD.
 - 3) Formica by Formica Corp., Wayne, NJ.
 - 4) Lamin-Art, Inc.
 - 5) Pionite.
 - 6) Arborite.
 - 7) Substitutions: Submit in accordance with Section 016000.
2. **Laminate Backing Sheets**
 - a. Composition: High pressure laminate of paper and melamine, without decorative finish, 0.020 inch thick minimum.
 - b. Acceptable manufacturers: Same as for high pressure laminate surfacing.
- G. Medium Density Fiberboard (MDF):**
1. **Product made without formaldehyde** and complying with ANSI A208.2, Product Class MD.
 2. **Acceptable Product:** Medite II as manufactured by Medite Corporation.
- H. Acoustical Perforated and Non-Perforated Wall Paneling Basis of Design:**
1. **Manufacturer, Product, Wood Species, and Finish:** Refer to Document 008900 - Finish Selections Summary.
- 2.2 ACCESSORIES AND TREATMENT
- A. **Contact Adhesive:** FS MMM-A-130B, of type recommended by millwork manufacturer to suit application.
 1. **Adhesive not to be water-based.**
 - B. Bolts, Nuts, Washers, Lags, Pins, Nails, and Screws: Size and type to suit application.
 - C. Nails: Size and type to suit application, plain finish.
- 2.3 SHOP FABRICATION
- A. Shop fabricate laminate assemblies in accordance with approved shop drawings; **AWI Custom Grade standards and mill wood with Premium Grade standards.**
 - B. Sanding/Filling
 1. Perform work in accordance with AWI.
 2. Sand work smooth and set exposed nails and screws.
 - C. Provide cutouts for plumbing fixtures, inserts, appliances, outlet boxes, and other fixtures. Verify locations of cutouts from site dimensions. **Seal edge surfaces of cutouts.**
 - D. Before proceeding with millwork required to be fitted to other construction, obtain measurements and verify dimensions of shop drawings details for accurate fit.
 - E. Fabricate woodwork to dimensions, profiles, and details shown.
 - F. Route and groove back of flat trim members, kerf backs of other wide flat members except plywood or veneered members.
 - G. Assemble in mill in as large of units as practicable to minimize field cutting and fitting.
 - H. Miter joints, where required, by joining, splining, and gluing to comply with requirements for specified grade.
 - I. Cap exposed plywood edges with hardwood trim, 3/8 inch x width of sheet.
 - J. On countertops, perform the following
 1. **Apply laminate finish in full, uninterrupted sheets of maximum practical lengths.**
 2. **Form corners and butt joints with hairline joints.**
 3. **Do not locate joints within 2 feet of sink cut-out.**
 4. **Cap exposed edges with laminate.**
 - K. Mill wood moldings to stock shapes, patterns, and sizes with profiles as indicated on drawings.
- 2.4 **SHOP FINISHING**
- A. General: Finish architectural cabinets at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.
 - B. **Transparent Finish:**
 1. **Grade:** Premium.

2. **Finish:** System - 2, precatalyzed lacquer.
3. Wash coat helps prevent blotchiness with wiping stains.
4. Wash Coat for Closed-Grain Woods: Apply wash-coat sealer to cabinets made from closed-grain wood before staining and finishing.
5. **Staining:** Match Architect's sample.
6. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
7. Filled Finish for Open-Grain Woods: After staining, apply wash-coat sealer and allow to dry. Apply paste wood filler and wipe off excess. Tint filler to match stained wood.
8. **Sheen:** Semigloss, 46-60 gloss units measured on 60-degree gloss meter per ASTM D 523.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that surfaces, openings and conditions are ready to receive work of this section. Notify General Contractor of any existing condition which will adversely affect execution. Beginning of execution will constitute acceptance of existing conditions.
- B. Verify that field measurements are as shown on shop drawings.
- C. Verify that mechanical, electrical, and other items affecting work of this section are in place and ready to receive the work.
- D. Beginning of installation indicates acceptance of existing conditions.

3.2 PREPARATION

- A. Prime paint or seal concealed surfaces and items or assemblies which will be in contact with cementitious materials or surfaces.
- B. Make field cuts with extreme care to avoid splintering.

3.3 INSTALLATION

- A. Install using skilled workmen in accordance with manufacturer's printed instructions and recommendations.
- B. **Install laminate work in accordance with AWI Custom Quality Standards and mill work in accordance with AWI Premium Grade Quality Standards.** Handle materials to avoid dents and other damages.
- C. Set and secure materials and components, rigid, plumb, and square.
- D. Shim as required using concealed shims.
- E. Cut to fit to exact size. Where woodwork abuts other finished work, scribe and cut for accurate fit. Where necessary to fit at site, provide ample allowance for cutting and fitting.
- F. Before making cutouts, drill pilot holes at corners.
- G. Distribute defects allowed in quality grade to best overall advantage when installing job assembled woodwork items.
- H. Install trim and molding in unjointed lengths for openings and for runs less than maximum length of lumber available. For longer runs, use only one piece less than maximum length available in straight run.
- I. Stagger joints in adjacent members.
- J. Cope moldings at returns and miter at corners.
- K. Attach woodwork securely in place with uniform joints providing for thermal and building movements; **blind nail where possible.**
- L. Use finishing nails where exposed.
- M. Set exposed heads for filling, except for exterior wood to receive natural finish.
- N. Secure woodwork to anchors, with built-in blocking.
- O. Preparing for Finish
 1. **Clean woodwork and fill nail holes. Sand to smooth finish.**
 2. **Where woodwork is to receive transparent finish, use matching wood filler.**
- P. Install hardware in accordance with manufacturer's recommendations.

- Q. **Cover exposed edges of sheet goods used for shelving and other items with 3/8 inch thick hardwood edging.** Width of edging to match thickness of shelving.
 - R. **Finish wood paneling shall be installed in continuous series as it comes off the veneer roll. Panels are to be sequentially numbered during fabrication.**
 - S. On field applied laminate plastic work:
 - 1. Apply plastic laminate finishes where indicated.
 - 2. Adhere with adhesive over entire surface. Make joints and corners hairline.
 - 3. Match patterns. Slightly bevel arises.
 - 4. **Cap exposed edges with plastic laminate of same finish and pattern.**
 - 5. **Apply laminate backing sheet on reverse side of plastic laminate finished surfaces.**
 - T. Secure casework to anchors, built-in blocking, or directly attach to substrates where capable of adequately supporting load. Use toggle bolt type fasteners for wall mounted components. Secure countertops to base cabinets.
 - U. Install hardware in accordance with manufacturer's recommendations.
- 3.4 TOLERANCES FOR FIELD ASSEMBLIES/JOINED ITEMS
- A. Maximum Variation from True Position: 1/16 inch.
 - B. Maximum Offset from True Alignment with Abutting Materials: 1/32 inch.
- 3.5 ADJUSTING
- A. Adjust work under provisions of Section 017700.
 - B. Adjust moving or operating parts to function smoothly and correctly.
- 3.6 CLEANING AND PROTECTION
- A. Protect installed millwork from marring defacement or other damage until final completion.
 - B. Clean spaces of debris, vacuum and dust all millwork. Leave in condition ready for use.
- 3.7 **SCHEDULE**
- A. Interior
 - 1. Refer to 008900 for finishes and wood species.
 - 2. **Window Sills, Aprons, Moldings, Casings, Chair Rails, Miscellaneous Trim** and elsewhere where other materials are not indicated: **Stain grade select wood** to match Architect's sample, **AWI Premium Grade**.
 - a. Provide 3/4 inch thick paint grade wood sills with bullnose front edges and 4 inch wood molding at typical window openings **at all windows unless noted otherwise on drawings.**
 - 3. **Chair Rails:**
 - a. 4" stain grade CH038 by TWC.
 - 4. **Crown Molding (Not Used):**
 - a. Refer to drawings for size and profiles.
 - 5. **Wood Base:**
 - a. 6" stain grade wood base. Refer to drawings for size and profiles.

END OF SECTION

SECTION 064100

CUSTOM CASEWORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established within General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section includes:**
 - 1. **Stain grade wood cabinetry.**
 - 2. **Plastic laminate base and wall cabinets.**

1.3 DEFINITIONS

- A. **Exposed:** Where used herein, "exposed" portions of casework includes surfaces visible when doors and drawers are closed. Bottoms of cases more than 4'-0" above finish floor are considered exposed. Visible surfaces in open cases or behind clear doors also are considered as exposed portions.
- B. **Semi-Exposed:** Where used herein, "semi-exposed" portions of cabinet work includes those members behind opaque doors, such as shelves, divisions, interior faces of ends, case backs, drawer sides, backs and bottoms, and back face of doors. Tops of cases 6 feet - 6 inch or more above finish floor shall be considered semi-exposed.

1.4 SUBMITTALS

- A. General: Submit following items in accordance with Section 013300.
- B. **Product Data:** Manufacturer's specifications and installation instructions for hardware and accessory items and for fire retardant treatment.
- C. **Shop Drawings**
 - 1. Indicate profiles, sections, and views of stock items as well as specially fabricated items for the work, at scale large enough to permit checking for design conformity.
 - 2. Indicate sizes, quantities, markings, materials, wood species, finishes and accessories.
 - 3. Include assembly and installation drawings to show methods of blocking, fastening, bracing, jointing, and connecting to work of other trades.
 - 4. Indicate dimensions necessary for fitting casework and adjacent equipment and appliances to fixed planes. Be responsible for details and dimensions not controlled by job conditions.
 - 5. Indicate cut-out locations.
 - 6. Apply **AWI Quality Certification** Program label to Shop Drawings.
- D. **Samples**
 - 1. **Two sample panels, 8" x 10" of each type of high pressure laminates.**
 - 2. **Two 8" x 10" samples of each type and species of plywood and finish lumber with applied finish.**
 - 3. **One of each type of hardware specified.**
- E. Quality Standard Compliance Certificates: **AWI Quality Certification Program.**
- F. **Qualification Data:** Submit **erector qualifications** verifying **ten (10) years minimum of experience**; include list of completed projects having similar scope of work identified by name, location, date, reference name and phone number.

1.5 QUALITY ASSURANCE

- A. **Fabricator Qualifications:** Company specializing in fabrication of custom casework of quality and having **minimum of 10 years documented experience.**
 - 1. Shop Certification: **AWI's Quality Certification Program accredited participant.**

- B. Fabrication Standards: **Fabricate all products and items in accordance with AWI standards listed below using Premium Grade for stain grade millwork and Custom Grade for plastic laminate millwork unless noted otherwise.**
 - 1. Lumber grades: AWI Section 100.
 - 2. Standing and running trim: AWI Section 300.
 - 3. Cabinets and Counter tops: AWI Section 400.
 - 4. Miscellaneous work: AWI Section 700.
- 1.6 DELIVERY, STORAGE AND HANDLING
 - A. Deliver, store, handle, and protect products in accordance with Sections 016000.
 - B. Protect materials from damage, soiling and deterioration.
 - C. Do not deliver finish carpentry materials until job site conditions and operations which could damage, soil or deteriorate work are complete.
 - D. Store products and materials in ventilated, interior locations under constant minimum temperature of 60 degrees F. and relative humidity not to exceed 55 percent.
- 1.7 ENVIRONMENTAL REQUIREMENTS
 - A. Maintain temperature and moisture conditions as recommended by casework fabricator from date of installation through remainder of construction period.
- 1.8 FIELD MEASUREMENTS
 - A. Verify that field measurements are as indicated on shop drawings.
- 1.9 SEQUENCING AND SCHEDULING
 - A. Verify that blocking is in place and backpriming complete before beginning work.

PART 2 - PRODUCTS

- 2.1 CUSTOM CASEWORK, GENERAL
 - A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of architectural cabinets indicated for construction, finishes, installation, and other requirements.
 - 1. Provide inspections of fabrication and installation together with labels and certificates from **AWI certification program** indicating that woodwork complies with requirements of grades specified.
 - 2. The Contract Documents contain requirements that are more stringent than the referenced woodwork quality standard. Comply with requirements of Contract Documents in addition to those of the referenced quality standard.
- 2.2 MATERIALS
 - A. General:
 - 1. Comply with quality and grading standards contained herein for each material.
 - 2. Sizes noted on drawings or indicated herein for lumber are nominal unless detailed by specific dimensions of actual size. Minimum thickness is nominal 1 by material - unless noted or shown otherwise.
 - 3. Plywood: 3/4 inch thickness unless noted or detailed otherwise.
 - 4. Products surfaced four sides, unless noted otherwise.
 - 5. **All of the following products may not be used on this project.**
 - B. **Softwood Lumber:**
 - 1. Quality standard: PS 20.
 - 2. Grading Standard: **AWI Custom Grade**.
 - 3. Maximum moisture content: 6 percent for interior work; 10 percent for exterior work.
 - 4. **Species: Idaho white pine or poplar.**
 - 5. Grain: Mixed.
 - C. **Softwood Plywood:**

1. Quality standard: PS 1.
 2. Grading standard: **AWI Custom Grade.**
 3. Core material: C-D Plugged INT-APA. Provide marine grade plywood at all kitchen cabinet components.
 4. Face quality: A-B INT-APA and Medium density overlay (at counter tops, provide marine grade plywood).
 5. **Species: Douglas fir.**
 6. Ply construction: 3 ply - 3/8 inch; 5 ply-1/2 inch; 7 ply - 3/4 inch.
- D. **Hardwood Lumber:**
1. Quality standard: FS MM-L-736C.
 2. Grading standard: **AWI Premium Grade.**
 3. Maximum moisture content: 6%.
 4. **Species and Grain: Select quality, wood to match Architect's sample.** Refer to Section 008900 - Finish Selections Summary.
- E. **Hardwood Plywood:**
1. Quality standard: PS51.
 2. Grading standard: **AWI Premium Grade.**
 3. Core material: Fir Veneer.
 4. **Species and Grain: Select quality, wood to match Architect's sample.** Refer to Section 008900 - Finish Selections Summary.
 5. Ply construction: 3 ply - 3/8 inch; 5 ply - 1/2 inch; 7 ply - 3/4 inch.
- F. **Hardboard:**
1. Quality standard: PS 58.
 2. Grade: Tempered.
 3. Face: One face sanded.
 4. Thickness: 1/4 inch.
- G. **Laminate Materials:**
1. High Pressure Laminate Surface
 - a. Quality standard: NEMA, LD-3.
 - b. Grade: General Purpose.
 - c. Thickness: 0.050 inch for horizontal grade; 0.028 to 0.032 inch for vertical grade.
 - d. Core: Standard.
 - e. **Finish and Colors:** Architect Reserves the right to select from any of the following manufacturer's full and complete lines of plastic laminates.
 - f. **Acceptable Manufacturers:**
 - 1) Wilsonart.
 - 2) Nevamar.
 - 3) Lamin-Art.
 - 4) Formica.
 - 5) Pionite.
 - 6) Substitutions: In accordance with Section 016000.
 2. Laminate Backing Sheets
 - a. Composition: High pressure laminate of paper and melamine, without decorative finish, 0.020 inch thick minimum.
 - b. Acceptable Manufacturers: Same as for high pressure laminate surfacing.
- H. **Bullet Resistant Panels: (NOT USED)**
1. Description: Panels made by saturating a synthetic fiber mesh made from Kevlar-like material with resin; flat layers of resin soaked mesh are squeezed and baked by an industrial press.
 2. Ballistic Level: 3.
 3. **Location:** Provide at vertical surfaces and secure as required at Council Dais in Council Chambers.

2.3 ACCESSORIES AND TREATMENT

- A. Contact Adhesive: FS MMM-A-I30B of type recommended by millwork manufacturer to suit application.
 - 1. Contact adhesive cannot be water-based.
- B. Wall Adhesive: Solvent release cartridge type, compatible with substrate, capable of achieving durable bond.
- C. Bolts, Nuts, Washers, Lags, Pins, Nails, and Screws: Size and type to suite application.
- D. Fasteners: Size and type to suit application.
- E. **Hardware:**
 - 1. **Overlay Cabinet Hinges:** Fully concealed, self closing, heavy duty type, 135 degree opening, of type and weight to support door, US26 finish.
 - a. Blum Inc., #B71T555, 120 degree.
 - b. Grass America Inc., TEC 860 series.
 - c. Hardware Resources, 22855-3-000.
 - 2. **Cabinet Pulls:** Tubular pulls, brass or stainless steel with brushed chrome finish, length as appropriate. Confirm final lengths for each application during submittals phase with Design Architect.
 - a. **Basis of Design:** Hardware Resources, Naples Collection:
 - 1) **6 inch long:** 156SN; stainless steel tubular pull; 6 inches long; 7/16 inch diameter in satin nickel finish.
 - 2) **8 inch long:** 206SN; stainless steel tubular pull; 8 inches long; 7/16 inch diameter in satin nickel finish.
 - 3) **12 inch long:** 304SN; stainless steel tubular pull; 12 inches long; 7/16 inch diameter in satin nickel finish.
 - 4) **13 inch long:** 336SN stainless steel tubular pull; 13 inches long; 7/16 inch diameter in satin nickel finish.
 - 5) **14-1/2 inch long:** 368SN stainless steel tubular pull; 14-1/2 inches long; 7/16 inch diameter in satin nickel finish
 - 3. **Door Catches:** Aluminum encased, impregnated rubber magnet cabinet catch.
 - a. Stanley Hardware, # CD46.
 - b. Knappe & Vogt, # 916.
 - c. Hager Products, # 1439.
 - 4. **Full extension drawer slide:** Heavy duty model with self-lubrication frictionless, oilite bronze oil cushion bearings, rubber bumpers, tracks, mounting brackets, all zinc plated steel.
 - a. Accuride International, # 3640.
 - b. Knappe & Vogt, # 1483.
 - c. Hardware Resources, # 301FU series.
 - 5. **Shelf Supports Within Cabinets:** 5 mm diameter pin, for use in holes spaced at 1-1/4 inch o.c. vertically .
 - a. Knappe & Vogt, # 346 NP.
 - b. Hardware Resources, # 1707 BN.
 - 6. **Open Shelving:** Knappe & Vogt, 85/185 by width of shelves.
 - 7. **Grommets:** Round plastic wire access grommets, color to be selected by Architect, 2-inches clear opening diameter.
 - a. Doug Mocket Co., XG model.
 - b. Hardware Resources, 68000 series.
 - 8. **Shelf Standards at Display Cabinet:** Size as indicated on the Drawings, and finish as indicated in Document 008900 - Finish Selections Summary.
 - a. Extra Duty Standards: Knappe & Vogt, #85 Series.
 - b. Extra Duty Brackets: Knappe & Vogt, #185 Series.
 - c. Shelf Rests: Knappe & Vogt, #106.
 - d. Cushions: Knappe & Vogt, #129 RUB.

2.4 SHOP FABRICATION

- A. **Fabricate casework to AWI Custom Grade for plastic laminate covered work and Premium Grade for transparent finished work, with reveal overlay construction (or as indicated in AWI Architectural Casework Details if details are not present on Architect's Drawings).**
- B. **Identify components for proper grain matching during fabrication. Cut veneer faced material for drawers over doors from same sheet for vertical grain on each. Grain configuration and orientation shall match on drawers and doors of any one elevation and shall match other elevations within the same room or area.**
- C. Provide cutouts for plumbing fixtures, inserts, appliances, outlet boxes, and other fixtures. Verify locations of cutouts from site dimensions. Seal edge surfaces of cutouts.
- D. Before proceeding with millwork required to be fitted to other construction, obtain measurements and verify dimensions of shop drawings details for accurate fit.
- E. Sanding/Filling
 1. Perform work in accordance with AWI.
 2. Sand work smooth and set exposed nails and screws.
 3. Apply wood filler in exposed nail and screw indentations and leave ready to receive applied finishes.
 4. On items to receive transparent finishes, use wood filler which matches surrounding surfaces and of types recommended for applied finishes.
- F. **Prime seal concealed and semi-concealed surfaces. Brush apply only.**
- G. Fabricate casework to dimensions, profiles, and details shown.
- H. **Band exposed plywood edges with hardwood veneer to match front of surface veneer.**
- I. At curved sections, route and groove back of flat trim members, kerf backs of other wide flat members.
- J. Assemble casework in mill in as large of units as practicable to minimize field cutting and fitting.
- K. Miter trim joints, where required, by joining, splining, and gluing to complying with requirements for specified grade.
- L. On high pressure laminate work:
 1. Apply laminate finish in full, uninterrupted sheets of maximum practical lengths. Apply backing sheets to reverse side of items receiving laminate surfacing. Use white melamine for cabinet interiors.
 2. Form corners and butt joints with hairline joints.
 3. Do not locate joints within 2 feet of sink cut-out.
 4. Cap all exposed edges with laminate for counter tops, shelving, exposed interior parts, drawer and door fronts.
 5. **Apply white laminate Melamine backing sheet to interior of all base cabinets, wall cabinets, and drawers.**
 6. **All shelves in enclosed plastic laminate millwork shall be 3/4-inch plywood finished in white plastic laminate. (not melamine)**
- M. Construction:
 1. **General:**
 - a. Construct casework bodies, bottoms, dividers, sides, tops, shelves, doors, drawer fronts and countertops of 3/4 inch sheet material.
 - b. Use 1/2 inch thick solid lumber material for drawer sides, back and sub-front.
 - c. Use 5/16 inch thick tempered hardboard for drawer bottoms and cabinet backs.
 2. **Overlay Reveals:**
 - a. Unless shown or noted otherwise, allow 1/4 inch horizontal between adjacent drawers and doors and 1/8 inch at vertical edges.
 - b. Flush at top and bottom of wall cabinets and at bottom of base cabinets.
 3. **Methods of Joinery:**
 - a. Provide face plates, paneled ends, and construction, glued under pressure.
 - b. Provide body web frames of stile plowed and stub tenoned construction.
 - c. Join case body members by dado or concealed dowel joints.

- d. Do not use mechanical fasteners or metal clips for attachment of body members to other body members or to web frames.
- 4. **Base Cabinets:**
 - a. Use finished end panels unless condition will be fully concealed.
 - b. **Provide finished toe space fronts, finished to match cabinet front.**
 - c. Construct drawers with rabbited (tongue and groove) construction.
 - d. **Cover all interior components with white Melamine except shelving which shall be white laminate on 3/4-inch plywood.**
- 5. **Wall Cabinets:**
 - a. Use finished end panels unless condition will be fully concealed.
 - b. Provide continuous 1 by 3 inch anchor cleat at top and bottom of cabinet interior full width of unit. Secure cleat in rabbit over back, then glue and spot pin.
 - c. **Cover all interior components with white Melamine except shelving which shall be white laminate on 3/4-inch plywood.**
- 6. **Countertops:**
 - a. Provide with 1-1/2 inch deep face edge, faced with high pressure laminate unless noted or shown otherwise.
 - b. Provide loose 4 inch high pressure laminate covered splashes typically at countertops unless taller splashes shown or noted otherwise.
 - c. **Use marine grade plywood substrate for all countertops where sinks or water lines are present.**
 - d. Seal edge surface of all cut-outs in countertops.
- 7. **Shelving:**
 - a. 3/4 inch thick plywood or solid finish wood up to 36 inch unsupported length.
 - b. **1 inch thick for over 36 inch unsupported lengths (maximum 48").**

2.5 SHOP FINISHING

- A. **General: Finish all architectural cabinets at fabrication shop in a paint booth to furniture grade finish as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.**
- B. **Transparent Finish:**
 - 1. **Grade:** Premium.
 - 2. **Finish:** System - 2, precatalyzed lacquer.
 - 3. Wash coat helps prevent blotchiness with wiping stains.
 - 4. Wash Coat for Closed-Grain Woods: Apply wash-coat sealer to cabinets made from closed-grain wood before staining and finishing.
 - 5. **Staining:** Match Architect's sample.
 - 6. Filled Finish for Open-Grain Woods: After staining, apply wash-coat sealer and allow to dry. Apply paste wood filler and wipe off excess. Tint filler to match stained wood.
 - 7. **Sheen:** Semigloss, 46-60 gloss units measured on 60-degree gloss meter per ASTM D 523.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that surfaces openings and conditions are ready to receive work of this section. Notify Architect of any existing condition which will adversely affect execution. Beginning of execution will constitute acceptance of existing conditions.
- B. Verify that field measurements are as shown on shop drawings.
- C. Verify that mechanical, electrical, and other items affecting work of this section are in place and ready to receive the work.

3.2 PREPARATION

- A. Prime paint or seal concealed surfaces and items or assemblies which will be in contact with cementitious materials or surfaces.

- B. Make field cuts with extreme care to avoid splintering.

3.3 INSTALLATION

- A. **Install work in accordance with AWI Premium Quality Standards for stain grade work and Custom Quality Standards for plastic laminate work. Handle materials to avoid dents and other damages.**
- B. Set and secure materials and components, rigid, plumb, and square. Use joint fasteners to align and secure adjoining cabinets and countertops. Affix base cabinets to floor.
- C. Shim as required using concealed shims.
- D. Field Fitting
 1. Cut to fit and carefully scribe.
 2. Where casework abuts other finished work, scribe and cut for accurate fit.
 3. Where necessary to fit at site, provide ample allowance for cutting and fitting.
 4. Do not use overlay trim pieces to cover joints.
- E. Before making cutouts, drill pilot holes at corners.
- F. Distribute defects allowed in quality grade to best overall advantage when installing job assembled woodwork items.
- G. **Install trim and molding in unjointed lengths** for openings and for runs less than maximum length of lumber available. For longer runs, use only one piece less than maximum length available in straight run. **Allow no joints closer than 12 feet apart.**
- H. **Stagger joints in adjacent members.**
- I. Attach items securely in place with uniform joints providing for thermal and building movements; blind nail where possible.
- J. Use fine finishing nails where exposed.
- K. Set exposed heads for filling.
- L. Secure casework to anchors, built-in blocking, or directly attach to substrates where capable of adequately supporting load. Use toggle bolt type fasteners for wall mounted components. Secure countertops to base cabinets.
- M. Install hardware in accordance with manufacturer's recommendations.
- N. Cover exposed edges of sheet goods used for shelving and other items with veneer to match sheet goods unless otherwise noted.
- O. **On field applied laminate plastic work:**
 1. Apply plastic laminate finishes where indicated.
 2. Adhere with adhesive over entire surface. Make joints and corners hairline.
 3. Match patterns. Slightly bevel arises.
 4. Cap exposed edges with plastic laminate of same finish and pattern.
 5. **Apply laminate backing sheet on reverse side of plastic laminate finished surfaces.**
- P. Cope moldings at returns and miter at corners.
- Q. **Flush out end of countertops and backsplashes with end of base cabinets.**

3.4 ADJUSTING

- A. Adjust work under provisions of Section 017500.
- B. Adjust moving or operating parts to function smoothly and correctly.

3.5 CLEANING/PROTECTION

- A. Protect casework from marring, defacement, or other damage until final completion.
- B. Clean spaces of debris and vacuum and wipe down casework. Leave in condition ready for use.

3.6 TOLERANCES FOR FIELD ASSEMBLIES/JOINED ITEMS

- A. Maximum Variation from True Position: 1/16 inch.
- B. Maximum Offset from True Alignment with Abutting Materials: 1/64 inch for plastic laminate countertops and splashes, 1/32 inch for other components.

END OF SECTION

SECTION 068213

GLASS FIBER REINFORCED PLASTIC PANELING

PART 1 - GENERAL

- 1.1 SUMMARY
 - A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.
 - B. **Section Includes:**
 - 1. **Glass fiber reinforced plastic wall paneling at Janitor Closets and at other locations as indicated on Drawings.**
- 1.2 DELIVERY, STORAGE AND HANDLING
 - A. Deliver, store, handle, and protect products in accordance with Section 016000.
- 1.3 QUALITY ASSURANCE
 - A. **Manufacturer Qualifications:** Firm with **minimum 10 years experience specializing in manufacturer of glass reinforced panels.**
 - B. **Installer: Approved by manufacturer with 10 years experience** and having successfully completed five projects of similar scope and complexity.
- 1.4 SUBMITTALS
 - A. General: Submit in accordance with Section 007013 and Section 013100.
 - B. Submit **product data** describing physical and performance characteristics of each product and accessory proposed for use.
 - C. Submit actual **color samples** of full line of available colors for Architect's selection.

PART 2 - PRODUCTS

- 2.1 **ACCEPTABLE MANUFACTURERS:**
 - A. Crane Co. - Kemlite.
 - B. Marlite.
 - C. NUDO Products.
- 2.2 PRODUCTS
 - A. Fire Resistance Rating (per ASTM E-84):
 - 1. Flame Spread: Class A.
 - 2. Smoke Developed: 200.
 - B. Physical characteristics:
 - 1. Flexural strength: 15,000 psi.
 - 2. Tensile strength: 9,000 psi.
 - C. U.S.D.A. approved.
 - D. Thickness: 1/8", minimum, weighing 1-1/2 lbs/sq.ft.
 - E. **Color: Bright White.**
 - F. Adhesive: As recommended by manufacturer.
 - G. Accessories: Batten strips and related items as required and as recommended by manufacturer.
 - H. **Acceptable Products:**
 - 1. Fire-X Glasbord Plus, by Kemlite.
 - 2. Marlite FRP Panels, by Marlite.
 - 3. Fiber-Lite FRP Liner Panels, by NUDO Products, Inc.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that surfaces and conditions are ready to receive work of this Section.
- B. Notify Architect of any existing conditions which will adversely affect execution.
- C. Beginning of execution will constitute acceptance of existing conditions.

3.2 PREPARATION

- A. Prepare substrate surfaces as recommended by manufacturer.

3.3 INSTALLATION

- A. Install using skilled workmen in accordance with manufacturer's printed instructions and recommendations.

3.4 FIELD QUALITY CONTROL

- A. **Test for adhesion of in-place panels with suction cup used for glass installation.**

3.5 ADJUSTING

- A. Fasten or adhere for tight connections and joints.

3.6 CLEANING

- A. Perform final cleaning in accordance with Section 017700.

3.7 SCHEDULE

- A. Provide on all wall surfaces floor to ceiling in all Janitor and Custodial Closets.
- B. Provide at all other locations called for on drawings.

END OF SECTION

SECTION 071417
FLUID-APPLIED WATERPROOFING SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. **Positive side fluid applied waterproofing system for elevator pits, below grade foundation walls above a finish floor, and other locations where a waterproof membrane is required below grade**
2. **Prefabricated drainage composite, protection board, or mat.**

1.2 SUBMITTALS

- A. **Product Data:** Submit manufacturer's product data, installation instructions, use limitations and recommendations.
- B. **Shop drawings:** showing locations and extent of waterproofing including details for terminations and flashings, projections, penetrations, drains and treatment of substrate joints and cracks.
- C. Written documentation demonstrating installers qualifications under the "Quality Assurance" article including reference projects of a similar scope.
- D. **Samples:** Submit minimum 12-inch by 12-inch representative samples of the following for approval:
 1. Fluid applied membrane.
 2. Prefabricated drainage composite board or mat.
- E. **Warranty:** Submit a sample warranty identifying the terms and conditions stated in Article 1.7.

1.3 QUALITY ASSURANCE

- A. **Manufacturer:** Waterproofing systems shall be manufactured and marketed by a firm with a **minimum of 20 years' experience** in the production and sales of waterproofing. The fluid applied composite sheet membrane waterproofing system must be supplied by single manufacturer. Manufacturers proposed for use, but not named in these specifications shall submit evidence of ability to meet all requirements specified, and include a list of projects of similar design and complexity completed within the past five years.
- B. **Installer:** The installer shall demonstrate qualifications to perform the work of this Section by submitting the following:
 1. Certification or written license from the Waterproofing Manufacturer that the Installer is a trained applicator.
 2. **List of at least ten projects contracted within the past five years of similar scope and complexity to this project.**
 3. **At least 10 years' experience installing specified product** or similar type product
 4. Installer must show evidence of adequate equipment and trained field personnel to successfully complete the project in a timely manner.
 5. Installer's credentials must be approved by both the Architect and the Waterproofing Materials Manufacturer.
- C. **Materials:** Fluid applied composite sheet membrane waterproofing system shall be by single source manufacturer and shall consist of fluid applied waterproofing material, a two part synthetic rubber based system free of isocyanates and bitumen and a composite sheet, a three-layer co-extruded biaxially oriented HDPE integrally bonded to a non-woven geotextile. For each type of material required for the work of this section, provide primary materials that are the products of one manufacturer.
- D. **Pre-Installation Conference:** A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work. Agenda for meeting shall

include review of surface preparation, minimum curing period, installation procedures, special details and flashings, inspection, testing, protection and repair procedures.

- E. **Inspection and Testing:** All areas shall be water tested following application and be inspected by an independent testing firm or individual trained and approved by the waterproofing systems manufacturer.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials and products in the original, unopened containers with seals unbroken, labeled with the manufacturer's name, product brand name and type, date of manufacture and directions for storage and use.
- B. Store and handle materials in strict compliance with manufacturer's instructions, recommendations and material safety data sheets. Protect from damage from sunlight, weather, excessive temperatures and construction operations. Remove damaged material from the site and dispose of in accordance with applicable regulations.
 - 1. Do not double-stack pallets of waterproofing on the job site. Provide cover on top and all sides, allowing for adequate ventilation.
 - 2. Store drainage composite or protection board flat and off the ground. Provide cover on top and all sides.
 - 3. Protect waterproofing materials from freezing.
 - 4. Store composite membrane. The composite membrane should be stored off the ground and not stacked more than 12 rolls high. Provide cover for material to protect top and sides
- C. Sequence deliveries to avoid delays, but minimize on-site storage.

1.5 PROJECT CONDITIONS

- A. **Perform work only when existing and forecasted weather conditions are within the limits established by the manufacturer of the materials and products used.**
- B. **Proceed with installation only when substrate construction and preparation work is complete and in condition to receive membrane waterproofing.**
- C. **Do not allow waste products (i.e. petroleum, grease, oil, solvents, vegetable or mineral oil, animal fat, acids, etc.) to come into contact with the waterproofing membrane. Any exposure to foreign materials or chemical discharges must be presented to the Membrane Manufacturer to determine the impact on the waterproofing assembly performance.**
- D. **Horizontal Application - Concrete Deck Surface condition:**
 - 1. A minimum slope to drain of 11 mm/m (1/8 in./ft) shall be used on all concrete decks. This is best achieved with a monolithic structural slab and not with a separate concrete fill layer.
 - 2. Ensure no excessive deflection or movement of the deck or other structural problems.
 - 3. The deck shall provide for support of the maximum anticipated dead and environmental loads and for expansion and contraction suitable for the roof system structure.
 - 4. All projections, penetrations and openings in the deck should be completed before the waterproofing application begins.
 - 5. Joints in pre-cast/pre-stressed concrete decks are to be grouted so that the top surface is level and smooth before membrane application.
- E. **Deck/Wall Preparation: refer to Section 3.2 Substrate Preparation**
- F. **General contractor shall assure adequate protection and ventilation during the application of the Waterproofing assembly.**

1.6 WARRANTY

- A. Upon Project completion the contractor must submit a written warranty for the waterproofing materials signed by the Waterproofing Manufacturer.
- B. **Warranties** available from the manufacturer. Please see manufacturer specific written warranty documents for specifics (Choose one):
 - 1. **Watertightness Warranty:**

- a. **Manufacturer's standard 15-year watertightness warranty.**

PART 2 - PRODUCTS

2.1 GENERAL

A. Manufacturers and Products:

1. Carlisle; CCW-525.
2. W. R. Meadows; Hydralastic 836.
3. Tremco; TREMproof 250GC.

2.2 MATERIALS

- A. Fluid Applied Waterproofing Membranes:** One part, moisture-curing, rapid curing, high-solids, VOC-compliant modified polyurethane.
- B. Prefabricated Drainage Composite:** For all vertical surfaces. Drainage composite shall be designed to promote positive drainage while serving as a protection course.
- C. Miscellaneous Materials:** Tape and other accessories specified or acceptable to manufacturer of fluid applied waterproofing membrane.

PART 3 - EXECUTION

3.1 EXAMINATION

- A.** The installer shall examine conditions of substrates and other conditions under which this work is to be performed and notify the contractor, in writing, of circumstances detrimental to the proper completion of the work. Do not proceed with work until unsatisfactory conditions are corrected.

3.2 PREPARATION OF SUBSTRATES

- A. Vertical and Horizontal Surfaces:** Refer to manufacturer's literature for requirements for preparation of substrates. Surfaces shall be structurally sound and free of voids, spalled areas, loose aggregate and sharp protrusions. Remove contaminants such as grease, oil and wax from exposed surfaces. Remove dust, dirt, loose stone and debris. Use repair materials and methods that are acceptable to manufacturer of the fluid applied waterproofing.
- B. Tie-holes and "bugholes" larger than 13 mm (1/2") in diameter or deeper than 3 mm (1/8"), or both,** should be repaired with a lean concrete mix or with a lean concrete mix or grout. See ASTM D 5295, Preparation of Concrete Surfaces for Adhered Membrane Waterproofing Systems, for further details on substrate preparation.
- C. Cracked, pitted, honeycombed or heavily bugholed surfaces** can be filled by spraying from close in (10" to 12") but high material usage will result. Under these circumstances it may be more efficient to fill the surface with a parge coat of lean mortar mix before application of the material. It is also acceptable to fill in gaps with a compatible sealant or caulk.
- D. Cast-In-Place Concrete Substrates:**
1. **For horizontal applications,** poured in-place concrete must be cast with a minimum slope to drain of 11 mm/m (1/8 in./ft.) and must be monolithic, smooth, and free of unapproved curing compounds, form release agents and other surface contaminants.
 2. Fill form tie rod holes with concrete and finish flush with surrounding surface.
 3. Repair bugholes over 13 mm (0.5 in.) in length and 6 mm (0.25 in.) deep and finish flush with surrounding surface.
 4. Remove scaling to sound, unaffected concrete and repair exposed area.
 5. Grind irregular construction joints to suitable flush surface.
- E. Pre-cast Concrete Decks:** All pre-cast units shall be mechanically fixed to minimize the potential for differential movement and all joints shall be grouted.
- F. Substrate Cleaning:**
1. Thoroughly sweep the substrate that is to receive the waterproofing membrane.
 2. Substrate must also be blown using oil free air to remove any remaining loose debris.

3. A final check to determine if the substrate is sufficiently clean is to apply a test patch of membrane and check its adhesion.

3.3 INSTALLATION

A. Refer to manufacturer's literature for recommendations on installation, including but not limited to, the following:

1. **Vertical Application Fluid Applied Membrane (Watertightness Warranty):**
 - a. **Detailing: Apply a minimum thickness of 1.5 mm (60 mils) over all detail areas** (including inside corners, outside corners, pipe penetrations, cracks, construction joints, etc) prior to application of the field of the membrane.
 - b. **Apply a minimum thickness of 2.3 mm (90 mils) over all vertical areas** to be waterproofed and lapping a minimum of 100 mm (4 in.) onto pre-treated detail areas. Perform wet film thickness tests as work progresses to confirm thickness.
2. **Horizontal Application Fluid Applied Membrane (15 year Watertightness Warranty):**
 - a. **Detailing:** Apply a minimum thickness of 1.5 mm (60 mils), or as per manufacturer's drawings and written application instructions, over all detail areas (including inside corners, outside corners, pipe penetrations, cracks, construction joints, etc) prior to application of the field of the membrane
 - b. Apply a minimum thickness of 1.5 mm (60 mils) over all horizontal areas to be waterproofed and lapping a minimum of 100 mm (4 in.) onto detail areas. Perform wet film thickness tests as work progresses to confirm thickness.
 - c. Apply a second coat at a minimum thickness of 1.5 mm (60 mils) over first coat and completely covering all detail areas to give a minimum total thickness of 3.0 mm (120 mils) in the field and 4.5 mm (180 mils) at detail areas. Perform wet film thickness tests as work progresses to confirm thickness.

B. Coat back of stone panels provided under Section 044300 - Exterior Stone Cladding that will be within 12 inches of grade.

3.4 WATER TEST

- A. Horizontal Applications:** All areas of horizontal decks must be water tested by means of electronic testing or ponding to a minimum depth of 50mm (2 in.) for a period of 24 hours to confirm the integrity of the membrane.
1. Allow the membrane to cure for a minimum period of 48 hours before starting water tests.
 2. Before flood testing, be sure the structure will withstand the dead load of the water.
 3. For well-sloped decks, segment the flood test to avoid deep water near drains.
- B. Mark any leaks and repair according to manufacturers repair procedures when the membrane is dry.**

3.5 CLEANING AND PROTECTION

- A. Remove any masking materials after installation. Clean any stains on materials that would be exposed in the completed work.
- B. A protection course should always be installed as soon as possible after completion of the waterproofing installation and flood testing to protect the membrane from mechanical damage and UV.
- C. Install any protection, drainage and insulation courses according to the manufacturer's instructions.

3.6 SCHEDULE

- A. Provide on exterior of all concrete foundation and walls below grade.
- B. Provide on exterior of elevator pits.

END OF SECTION

SECTION 071616

CRYSTALLINE WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section includes crystalline negative side waterproofing for elevator pits.**

1.3 SUBMITTALS

- A. **Product Data:** For each type of product.
 - 1. Include construction details, material descriptions, and installation instructions.

1.4 QUALITY ASSURANCE

- A. **Applicator Qualifications:** A firm experienced in applying crystalline waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service **performance with the specified product for a minimum of 10 years**, and that employs workers trained and approved by manufacturer.

1.5 FIELD CONDITIONS

- A. **Weather Limitations:** Proceed with application only when existing and forecasted weather conditions permit crystalline waterproofing to be performed according to manufacturer's written instructions.
- B. Proceed with waterproofing work only after pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate to be waterproofed have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have been repaired to provide a sound substrate free of forming materials, including reveal inserts.
- C. **Ambient Conditions:** Proceed with waterproofing work only if temperature is maintained at 40 deg F (4.4 deg C) or above during work and cure period, and space is well ventilated and kept free of water.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Basis of Design:** Xypex; Xypex Concentrate.

2.2 WATERPROOFING MATERIALS

- A. **Crystalline Waterproofing:** Prepackaged, gray-colored proprietary blend of portland cement, specially treated sand, and active chemicals that, when mixed with water and applied, penetrates into concrete and concrete unit masonry and reacts chemically with the byproducts of cement hydration in the presence of water to develop crystalline growth within substrate capillaries to produce an impervious, dense, waterproof substrate; with properties complying with or exceeding the criteria specified below.
 - 1. **Water Permeability:** Maximum zero for water at 30 feet (9 m) when tested according to COE CRD-C 48.
 - 2. **Compressive Strength:** Minimum 4000 psi (27.6 MPa) at 28 days when tested according to ASTM C 109/C 109M.

2.3 ACCESSORY MATERIALS

- A. **Patching Compound:** Factory-premixed cementitious repair mortar, crack filler, or sealant recommended by waterproofing manufacturer for filling and patching tie holes, honeycombs, reveals, and other imperfections; and compatible with substrate and other materials indicated.
- B. **Plugging Compound:** Factory-premixed cementitious compound with hydrophobic properties and recommended by waterproofing manufacturer; resistant to water and moisture but vapor permeable for all standard applications (vertical, overhead, and horizontal surfaces not exposed to vehicular traffic); and compatible with substrate and other materials indicated.
- C. **Water:** Potable.

2.4 MIXES

- A. **Crystalline Waterproofing:** Add prepackaged dry ingredients to water according to manufacturer's written instructions. Mix together with mechanical mixer or by hand to required consistency.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for suitable conditions where waterproofing is to be applied.
- B. Proceed with application only after unsatisfactory conditions have been corrected.
- C. Notify Architect in writing of active leaks or defects that would affect system performance.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions.
- B. Protect other work from damage caused by cleaning, preparation, and application of waterproofing. Provide temporary enclosure to confine spraying operation and to ensure adequate ambient temperatures and ventilation conditions for application.
- C. Do not allow waterproofing, patching, and plugging materials to enter reveals or annular spaces intended for resilient sealants or gaskets, such as joint spaces between pipes and pipe sleeves.
- D. Stop active water leaks with plugging compound.
- E. Repair damaged or unsatisfactory substrate with patching compound.
 - 1. At holes and cracks 1/16 inch (1.6 mm) wide or larger in substrate, remove loosened chips and cut reveal with sides perpendicular to surface, not tapered, and minimum 1 inch (25 mm) deep. Fill reveal with patching compound flush with surface.
- F. **Surface Preparation:** Remove efflorescence, chalk, dust, dirt, mortar spatter, grease, oils, paint, curing compounds, and form-release agents to ensure that waterproofing bonds to surfaces.
 - 1. Clean concrete surfaces according to ASTM D 4258.
 - a. Scratch- and Float-Finished Concrete: Etch with 10 percent muriatic acid solution according to ASTM D 4260.
 - b. Smooth-Formed and Trowel-Finished Concrete: Prepare by mechanical abrading or abrasive-blast cleaning according to ASTM D 4259.
 - 2. Clean concrete unit masonry surfaces according to ASTM D 4261.
 - a. Lightweight Concrete Unit Masonry: Etch with 10 percent muriatic acid solution or abrade surface by wire brushing. Remove acid residue until pH readings of water after rinse are not more than 1.0 pH lower or 2.0 pH higher than pH of water before rinse.
 - b. Medium- and Normal-Weight Concrete Unit Masonry: Sandblast or bushhammer to a depth of 1/16 inch (1.6 mm).
 - 3. Concrete Joints: Clean reveals.

3.3 APPLICATION

- A. General: Comply with waterproofing manufacturer's written instructions for application and curing.

1. Saturate surface with water for several hours and maintain damp condition until applying waterproofing. Remove standing water.
 2. Apply waterproofing to surfaces.
 3. **Number of Coats: Two.**
 4. **Application Method:** Apply to ensure that each coat fills voids and is in full contact with substrate or previous coat.
 5. Dampen surface between coats.
- B. **Final Coat Finish:** Smooth.
- C. **Curing:** Moist-cure waterproofing for three days immediately after final coat has set, followed by air drying, unless otherwise recommended in writing by manufacturer.
- 3.4 FIELD QUALITY CONTROL
- A. **Manufacturer's Field Service: Engage a factory-authorized service representative to test** and inspect completed application of waterproofing.
- B. Prepare test and inspection reports.
- 3.5 **SCHEDULE**
- A. Provide on interior side of elevator pit walls.

END OF SECTION

SECTION 071823

FLOOR WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes:** Waterproofing coatings for equipment-room and penthouse floors.

1.3 SUBMITTALS

- A. **Product Data:** For each type of product.
 - 1. Include installation instructions and details, material descriptions, dry or wet film thickness requirements, and finish.
- B. **Samples for Verification:** For each type of exposed finish, prepared on rigid backing.
 - 1. Provide stepped Samples on backing to illustrate buildup of coatings.
- C. **Maintenance Data:** For coatings to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. **Installer Qualifications:** An entity that employs installers and supervisors who are trained and approved by manufacturer with a **minimum of 10 years verifiable successful experience** with the approved product.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Basis of Design:**
 - 1. **Manufacturer:** Tremco Commercial Sealants and Waterproofing.
 - 2. **Product:** Vulkem 350/950NF/950N.
 - 3. **Color:** As selected from full range of manufacturer's colors available.

2.2 COATING

- A. **Coating:** Manufacturer's standard, seamless, high-solids-content, cold liquid-applied, elastomeric, water-resistant membrane system with integral wearing surface for equipment-room floor; according to ASTM C 957.
- B. **Base Coat:** Single-components urethane membrane.
- C. **Intermediate Coat:** Two-component urethane membrane.
- D. **Topcoat:** Two-component urethane membrane.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, surface smoothness, and other conditions affecting performance of coating work.
- B. Verify that substrates are visibly dry and free of moisture.
 - 1. Test for moisture content by measuring with an electronic moisture meter.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.
 - 1. Begin coating application only after substrate construction and penetrating work have been completed.

2. Begin coating application only after minimum concrete-curing and -drying period recommended in writing by coating manufacturer has passed and after substrates are dry.
3. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Clean and prepare substrates according to ASTM C 1127 and manufacturer's written instructions to produce clean, dust-free, dry substrate for coating application. Remove projections, fill voids, and seal joints if any, as recommended in writing by coating manufacturer.
- B. Schedule preparation work so dust and other contaminants from process do not fall on wet, newly coated surfaces.
- C. Concrete Substrates:
 1. Remove grease, oil, paints, and other penetrating contaminants from concrete.
 2. Remove concrete fins, ridges, and other projections.
 3. Remove laitance, glaze, efflorescence, curing compounds, concrete hardeners, form-release agents, and other incompatible materials that might affect coating adhesion.
 4. Remove remaining loose material to provide a sound surface, and clean surfaces according to ASTM D 4258.

3.3 COATING APPLICATION

- A. Apply coating according to ASTM C 1127 and manufacturer's written instructions.
- B. Apply coats of specified compositions for each type of coating, at locations as indicated on Drawings, to wet film thickness recommended by manufacturer; turn up walls.
- C. Verify that wet-film thickness of each coat complies with requirements every 100 sq. ft.
- D. Apply coatings to prepared wall terminations and vertical surfaces to height indicated; omit aggregate on vertical surfaces.
- E. Cure coatings. Prevent contamination and damage during coating application and curing.

3.4 PROTECTING AND CLEANING

- A. Protect coatings from damage and wear during remainder of construction period.
- B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.5 SCHEDULE

- A. Provide on floors and 8" up perimeter walls of penthouse and first floor mechanical rooms at northeast corner of building including the following:
 1. Oxygen Storage 142.
 2. Dental Compressor and Vacuum 1 COMP.
 3. Fire Pump Room 1FIRE1.
 4. Equipment Room 1MECH1.
 5. Mechanical Penthouse 5MECH1.
 6. Elevator Controller Closet 5MECH2.

END OF SECTION

SECTION 072100

THERMAL BUILDING INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SECTION INCLUDES

- A. **Batt insulation in walls.**
- B. **Unfaced acoustical batt insulation.**
- C. **Blown-in acoustical insulation.**
- D. **Polyisocyanurate rigid insulation boards at exterior walls.**
- E. **Spray-applied cellulosic insulation.**
- F. **Installation accessories**

1.3 PERFORMANCE REQUIREMENTS

- A. Provide continuity of thermal barrier at building enclosure elements.
- B. Provide continuity of vapor and air barrier at building enclosure elements.

1.4 SUBMITTALS

- A. **Product Data:** Including performance specifications, composition, and applicable standards.
- B. **Manufacturer's Instructions:** Written installation instructions including attachment recommendations.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store, handle, and protect products under provisions of Section 016000.
- B. Protect insulation materials from physical damage and from deterioration by moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.
- C. Protect plastic insulation as follows:
 - 1. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
 - 2. Protect against ignition at all times. Do not deliver plastic insulating materials to Project site before installation time.
 - 3. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.6 ENVIRONMENTAL REQUIREMENTS

- A. Do not install insulation during inclement weather or when surfaces are moist.

1.7 SEQUENCING AND SCHEDULING

- A. Coordinate work in accordance with Section 013100.
- B. Do not begin work until substrate work is complete and work of other trades which will be concealed by work of this Section has been approved.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Acceptable Manufacturers:** (See Articles below for specific products.)
 - 1. **Batt Insulation:**
 - a. Johns Manville.

- b. Owens Corning Fiberglas Corp.
- c. CertainTeed Corp.

2.2 THERMAL BATT INSULATION

A. Unfaced glass fiber composition minimum 1 pound per cubic foot density, meeting following standards:

1. ASTM E 84: Flame spread 25 maximum; smoke developed 50 maximum.
2. ASTM E 136: Non-combustible.
3. ASTM C 518: R value of 3.2 per inch of thickness.
4. ASTM C 665: Type I.
5. **Total Thickness:** As required to obtain R-value indicated, but **not less than R-19**.
6. **Acceptable Products:**
 - a. Unfaced Thermal Batt Insulation by Owens Corning Fiberglas Corp.
 - b. Unfaced Thermal Batt Insulation by CertainTeed Corp.
 - c. Unfaced Thermal-SHIELD by Johns Manville.

2.3 BATT (ACOUSTICAL) INSULATION

A. Unfaced, Glass-Fiber Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics:

1. **Thickness:** Refer to schedule at end of this Section.
2. Density: 1 pcf minimum.
3. **Acceptable Products:**
 - a. Sound Attenuation Batts by Owens Corning.
 - b. Sound Control Batts by CertainTeed.
 - c. Sound Control Batts by Johns Manville.

B. Unfaced, Mineral Wool Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing); unfaced mineral-fiber blanket insulation produced by combining mineral fibers of rock or slag with thermosetting resins; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics:

1. **Thickness:** Refer to schedule at end of this Section.
2. Density: 2.5 pcf minimum.
3. **Acceptable Manufacturers:**
 - a. Fibrex Insulations, Inc.
 - b. Rock Wool Manufacturing Co.
 - c. Roxul.
 - d. Thermafiber LLC.

2.4 RIGID BOARD INSULATION

A. Polyisocyanurate Board, Glass-Fiber-Mat Faced: ASTM C 1289, glass-fiber-mat faced, Type II, Class 2.

1. **Basis of Design:** Hunter Panels.
2. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.
3. **Thickness:** 1 inch., or as required to provide R-5.
4. **Acceptable Manufacturers:**
 - a. Atlas Roofing Corp.
 - b. Firestone Building Products.
 - c. Rmax, Inc.

B. Z Clips:

1. **Basis of Design:** Advanced Architectural Products; Smart ci Simple Z.
2. Sizes: As required to secure and bridge continuous insulation and to make attachment to Terra Cotta to flush out with brick.

2.5 ACCESSORIES

- A. **Joint Tape:** Pressure sensitive type, recommended by insulation manufacturer.
- B. **Insulation Adhesive:** Type recommended by board insulation manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that substrates and conditions are ready to receive work of this Section. Notify Architect and Owner of any existing conditions which will adversely affect execution. Beginning of execution will constitute acceptance of existing conditions.
- B. Verify that work of other trades which will be covered by insulation is complete and approved.

3.2 INSTALLATION

- A. Install batt insulation with mechanical fasteners at roof deck in accordance with manufacturer's recommendations after mechanical and electrical services have been installed.
- B. Fit batt insulation tight within stud spaces, above ceilings and tight to and behind mechanical and electric services within plane of insulation, leaving no gaps or voids. Butt insulation tightly. Cut and fit tightly around items penetrating insulation.
- C. Within stud or joist systems install full height and width in such manner that voids or openings do not occur. Insulation is required for full width between studs, including cavity of each stud. Do not allow insulation to obstruct vents.
- D. Cut and trim insulation neatly, to fit spaces. Cut insulation oversize to ensure tight butt joints when installed. Cut insulation to fit around protrusions and irregularly shaped projections. Use batts free of ripped backs or edges.
- E. Install sound blankets in stud cavities of walls and ceilings and elsewhere as detailed or scheduled. Butt tightly.
- F. **Do not tape joints of rigid insulation.**

3.3 PROTECTION

- A. **Protect insulation from moisture until building is made watertight.**

3.4 SCHEDULE

- A. Provide R values and thicknesses as follow unless specifically noted otherwise on the Drawings.
 - 1. **Continuous Insulation at Exterior Walls:** 3/4 inch thick, polyisocyanurate board.
 - 2. **Exterior Walls:** R-13, unfaced batts between studs, and 3/4 inch thick untapped rigid polyisocyanurate board applied outside of air barrier.
 - 3. **Penthouse Roof:** R-25 polyisocyanurate rigid insulation.
 - 4. **Roof:** Refer to following:
 - a. Section 075216 - Modified Bituminous Roofing.
 - 5. **Sound Batts at all Interior Stud Walls:** Full depth of stud cavity in all interior demising walls between rooms and in demising walls between rooms and corridors.
 - 6. **Sound Batts at all Interior Ceilings:** 4 inch sound batts above all ceilings where walls do not extend to deck above. Provide batts to nearest full-height walls which extend to deck.

END OF SECTION

SECTION 072423
DIRECT APPLIED FINISH SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. Section Includes: Direct-applied finish system (DAFS) and accessories indicated, specified, or required to complete application to soffits.

1.3 SUBMITTALS

- A. **Product Data:** Manufacturer's technical literature for each type of product indicated, specified, or required; include following:
1. Manufacturer's catalog number and general classification for each product.
 2. Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material.
- B. **Samples for Verification:** 12 inch square sample prepared on rigid backing for each type of coating required.

1.4 QUALITY ASSURANCE

- A. **Applicator Qualifications:**
1. Experience: Company experienced with not less than 5 years' experience in performing specified work similar in design, products, and extent to scope of this Project; with:
 - a. A record of successful in-service performance.
 - b. Sufficient production capability, facilities, and trained and skilled personnel.
 2. Supervision: Maintain a competent supervisor who is at Project during times specified work is in progress, and, who is experienced in installing work similar in design, products, and extent to scope of this Project.
- B. **Field Samples:** Construct one field sample panel for each color and texture, illustrating surface finish, color and texture. Samples shall be of materials specified and of suitable size as required to accurately represent each color and texture used on the project. Prepare each sample using same tools and techniques for actual project application. Locate sample panel where directed and maintain and make available approved samples at the job site.

1.5 DELIVERY AND STORAGE

- A. **Delivery:** Deliver materials to Project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label.
- B. **Storage:** Store materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature recommended by manufacturer. Maintain storage containers in a clean condition, free of foreign materials and residue.

1.6 PROJECT CONDITIONS

- A. **Installation Ambient Air Temperature:** Minimum of 50°F and rising, and remain so for 24 hours prior to, during and after operations, until building heating system can maintain the above minimum temperature.
- B. **Substrate Temperature:** Do not apply materials to substrates whose temperature are below 50°F or contain frost or ice.
- C. **Inclement Weather:** Do not apply materials during inclement weather unless appropriate protection is employed.
- D. **Sunlight Exposure:** Avoid, when possible, installation of the materials in direct sunlight. Application of acrylic finishes in direct sunlight in hot weather may adversely affect aesthetics.

- E. Materials shall not be applied if ambient temperature exceeds 80°F or falls below 50°F within 24 hours of application. Protect materials from uneven and excessive evaporation during hot, dry weather.
- F. Prior to installation, the substrate shall be inspected for surface contamination, levelness or other defects that may adversely affect the performance of the materials and shall be free of residual moisture.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Basis of Design:** Contract Documents are based on products specified below to establish a standard of quality. Other available manufacturers with products having equivalent characteristics may be considered, provided deviations are minor and design concept expressed in Contract Documents is not changed, as judged by Architect.
 - 1. **Manufacturer:** Parex USA, Inc./Variance Specialty Finishes.
 - 2. **Components:**
 - a. **Primer:** VariPrime.
 - b. **Surface Leveler, Basecoat and Decorative Acrylic Finish:** Alto.

2.2 TRIM ACCESSORIES

- A. **J-Beads:**
 - 1. Product Description: Square edge trim for encasing edge of gypsum board.
 - 2. Material Quality Standard: ASTM A 653, G60, hot-dip galvanized zinc coating.
 - 3. Basis of Design: USG Corp.; J-Trim, 200-A.
- B. **Control Joints:**
 - 1. Product Description: One-piece trim formed with V-shaped slot, with removable strip covering slot opening.
 - 2. Material Quality Standard: ASTM B A 653, G60, hot-dip galvanized zinc coating.
 - 3. Basis of Design: USG Corp.; Control Joint, 093.
- C. **Screw Fasteners:**
 - 1. Product Quality Standard: ASTM C 1063.
 - 2. Description: Self-drilling and self-tapping screws with pan or wafer type head; fabricated from corrosive resistant or nonferrous metal; in lengths required to achieve minimum penetration of 3/8 inch beyond stud.

2.3 COMPONENTS

- A. **Gypsum Sheathing:** Glass-mat gypsum board specified in Division 06 Section "Gypsum Sheathing."
- B. **Primer:** 100% acrylic-based, vapor permeable, tintable primer designed to reduce variations in surface absorption, improve finish coverage, and improve consistency of finished aesthetics
- C. **Surface Leveler, Basecoat and Decorative Acrylic Finish:** Integrally colored, acrylic polymer based, trowel applied, multi-purpose basecoat and finish material designed for use with acrylic plaster finishing systems

2.4 MIXING

- A. General: Mix according to manufacturer's written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions:
 - 1. Examine substrates to which direct-applied finish system (DAFS) will be applied for compliance with requirements and other conditions affecting performance.

2. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents.
3. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 PREPARATION

- A. **Treating Gypsum Sheathing Joints:** Apply three coats of drywall joint compound in conjunction with drywall tape. Fill and finish smooth. Wet sand/trowel filled joints, edges, corners, openings, and trim to produce surface ready to receive finish.

3.3 APPLICATION

- A. **Install according to ASTM C843 and manufacturer's instructions.**
- B. **Installing Accessories:**
 1. Attach accessories through sheathing with screw fasteners to hold in place and alignment; secure at ends and not more than 12 inches on centers.
 2. Maintain 1/4 inch between accessory and abutment to form a sealant joint.
 3. Install longest lengths possible, avoid butt joints.
 4. Install so that finish will be true to line, level, plumb, square, curved or as otherwise required, without excessive thickness of materials.
 5. Miter or cope at corners; install with tight joints seated with sealant and in alignment.
- C. **Applying Primer:**
 1. Apply primer over sheathing in a continuous coat to uniform thickness indicated by manufacturer instructions.
 2. Allow to dry before applying next coat.
- D. **Applying Basecoat:**
 1. Apply over primer to uniform thickness indicated by manufacturer instructions.
 2. Allow to dry before applying next coat.
- E. **Applying Decorative Acrylic Finish Coat:**
 1. Apply to basecoat when dry to uniform thickness indicated by manufacturer instructions.
 2. Apply by troweling with a stainless steel trowel.
 3. Apply finish coat in a continuous application, always working to a wet edge, and work to finish that matches approved submittals.
 4. Apply in a continuous application, and work a wet edge towards the unfinished wall area. Work to an architectural break in the soffit before stopping to avoid cold joints.

3.4 ADJUSTING

- A. **Imperfections:** Repair or replace work to eliminate cracks, dents, blisters, buckles, crazing, check cracking, dry outs, efflorescence, sweat outs, excessive pinholes, and similar imperfections and where bond to substrate has failed.

END OF SECTION

SECTION 072616
BELOW-GRADE VAPOR RETARDERS

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
- 1.2 **SUMMARY**
 - A. Section includes:
 - 1. **Sheet materials for controlling vapor diffusion through concrete slabs.**
- 1.3 SUBMITTALS
 - A. General: Submit the following in accordance with provisions of Section 013300.
 - B. **Product Data:** Manufacturer's descriptive data and installation instructions for sheet vapor retarder and seaming tape.
 - C. **Samples for Verification:** Of sheet membrane, vapor barrier, 8 inches x 10 inches.
 - D. Test Reports: From independent laboratory indicating compliance with specified requirements by testing a single production roll according to ASTM E 1745, Section 8.
- 1.4 QUALITY ASSURANCE
 - A. **Installer Qualifications:** An experienced installer who is acceptable to manufacturer, who has completed applications similar in material and extent to that required for this Project, and whose work has resulted in construction with a record of successful in-service performance for a **minimum of 10 years.**
- 1.5 DELIVERY, STORAGE, AND HANDLING
 - A. Deliver materials in original packages, bearing manufacturer's labels indicating brand name and directions for storage.
 - B. Store materials to comply with manufacturer's written instructions to prevent deterioration from moisture or other detrimental effects.
- 1.6 PROJECT CONDITIONS
 - A. Environmental Limitations: Comply with manufacturer's written recommendations for substrate temperature and moisture content, ambient temperature and humidity, ventilation, and other conditions affecting materials performance.
 - B. Close areas to traffic during installation and for time period after application recommended in writing by manufacturer.
- 1.7 COORDINATION
 - A. Coordinate placement of sheet vapor retarder with applicable Division 2 and 3 Sections.
 - B. Job Conditions: Do not install vapor retarder until all below-slab fill and utility work has been completed, tested, and backfilled.
 - C. Coordinate installation with scheduled concrete pours to avoid delays. Make provisions for installation of work by other trades.

PART 2 - PRODUCTS

- 2.1 **MANUFACTURER**
 - A. **Basis of Design:**
 - 1. Manufacturer: Stego Industries LLC.
 - 2. Sheet Vapor Retarder: Stego Wrap Vapor Barrier - 15 mil.

3. Accessories:
 - a. Seams: Stego Tape.
 - b. Penetrations of Vapor Retarder: Stego Mastic and Stego Tape.
 - c. Perimeter Edge Seal: Stego Crete Claw (one-sided seam tape not permitted).
 - d. Penetration Prevention: Stego Beast Foot.
 - e. Vapor Retarder-Safe Screed System: Stego Beast Screed.

2.2 MATERIALS

- A. Sheet Vapor Retarder:
 1. **Type: 15 mil** polyolefin film meeting requirements of ASTM E 1745, Class A.
 2. **Water Vapor Transmittance:** Maintain permeance of less than 0.01 perms [grains/(ft² x hr x inHg)] as tested according to ASTM E154, Sections 8, 11, 12, and 13 (ASTM E1745 Section 7.1 (7.1.1 – 7.1.5)).
 3. **Tensile Strength:** ASTM E 154; minimum 35.2 lbs/in, for new material.
 4. **Puncture Resistance:** ASTM D 1709, minimum 2400 grams.
 5. **Tear Resistance:** 7.40 pounds per foot MD per ASTM D 1004.
 6. **Other Acceptable Products:** Subject to compliance with requirements, provide one of the following:
 - a. **Type VP-1:**
 - 1) Stego Wrap Vapor Barrier 15 mil by Stego Industries, LLC.
 - 2) ~~Perminator 15 Mil~~, PMPC by W.R. Meadows.
 - 3) ~~Moistop Ultra 15 by Fortifiber Building Systems.~~
 - 4) Vaporguard by Reef Industries.
 - 5) Substitutions: None permitted.
 - b. **Type VP-2:**
 - 1) Stego Wrap Vapor Barrier 15 mil by Stego Industries, LLC. with Stego Crete Claw Tape at perimeters.
 - 2) Substitutions: None permitted.
- B. Accessories:
 1. **Seaming Tape:** Manufacturers standard multi-layer pressure-sensitive tape for sealing membrane joints and for sealing membrane to underside of concrete slab; 6 inches wide; water permeance property shall not exceed 0.03 perm according to ASTM F 1249 or ASTM E 96; provided by vapor retarder manufacturer.
 2. **Pipe Boot:** Use manufacturer's standard prefabricated pipe boots.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Do not proceed until under-slab plumbing and electrical rough-in work is complete, and specified fill or subgrade material has been placed, compacted, and tested; and is level and without voids.

3.2 INSTALLATION

- A. Place, protect, and repair vapor retarder sheets according to ASTM E 1643 and manufacturer's written instructions.
- B. For interior forming applications, avoid the use of non-permanent stakes driven through the vapor barrier. Use female-threaded screed pad posts with nail holes and insert them into Beast Foot. Ensure Beast Foot's peel-and-stick adhesive base is fully adhered to the vapor barrier.
- C. Use reinforcing bar supports with base sections that eliminate or minimize the potential for puncture of the vapor barrier.
- D. Unroll vapor barrier with the longest dimension parallel with the direction of the concrete placement and face laps away from the expected direction of the placement whenever possible.
- E. Install under all concrete slabs on grade under structural slabs on carton forms and around all grade beams whether or not called for on Drawings.

- F. Install vapor retarder without tears, voids, and holes. Lap ends and edges as recommended by manufacturer, but not less than 6 inches over adjacent sheets. Seal laps with seaming tape.
 - G. Extend vapor barrier to the perimeter of the slab. If practicable, terminate it at the top of the slab, otherwise (a) at a point acceptable to the structural engineer or (b) where obstructed by impediments, such as dowels, waterstops, or any other site condition requiring early termination of the vapor barrier. At the point of termination, seal vapor barrier to the slab itself using Stego Crete Claw, per manufacturer's instructions.
 - H. Turn sheet material down at grade beams.
 - I. Use manufacturer's prefabricated accessories around piping and other penetrations and fasten per manufacturer's instructions.
 - J. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
 - K. Install sheets continuously under grade beams.
 - L. Seal joints, tears, holes, perimeter, and penetrations through vapor with tape.
- 3.3 PROTECTION
- A. Do not permit unnecessary foot or vehicular traffic on unprotected horizontal membrane.
 - B. Protect completed membrane from damage. Prior to pouring concrete, inspect membrane for punctures or damage and repair as required to maintain vapor retarder integrity.
- 3.4 SCHEDULE
- A. **VP-1:** Provide under all slabs-on-grade conditions.
 - B. **VP-2:** Provide under all slab-on-carton forms at conditions between carton forms and slabs. Install according to manufacturer's recommendations.

END OF SECTION

SECTION 073213

CLAY ROOF TILE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SECTION INCLUDES

- A. Clay Roof Tile.
- B. Fasteners.
- C. Underlayment.
- D. Flashings and Counterflashings.

1.3 DEFINITIONS

- A. Roofing Terminology: See ASTM D 1079, glossaries in TRI/WSRCA's "Concrete and Clay Roof Tile Design Criteria Installation Manual for Moderate Climate Regions," and NRCA's "NRCA Roofing and Waterproofing Manual" for definitions of terms related to roofing work in this Section.

1.4 SUBMITTALS

- A. **Product Data:** For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of clay roof tile and accessory.
 - 2. Manufacturer's printed installation instructions for each product, including product storage requirements.
- B. **Shop Drawings:**
 - 1. Clay Roof Tile:
 - a. Exposure Pattern.
 - b. Locations and configurations of special shapes.
 - c. Locations and configuration of each type of flashing.
 - 2. Fabricated Sheet Metal Items:
 - a. Dimensioned profiles.
 - b. Locations and extent of each item; include joint locations.
 - c. Jointing methods and materials.
 - d. Provisions for prevention or electrolytic action between dissimilar materials.
 - e. Interface with adjacent construction.
- C. **Samples for Verification:** Full-size field tile of each color and finish specified, representing the actual color and finish of products to be installed
- D. **Warranty:** Sample copy of standard manufacturer's warranty stating obligations, remedies, limitations, and exclusions of warranty.
- E. **Maintenance Data:** Maintenance letter issued by the clay roof tile manufacturer.

1.5 QUALITY ASSURANCE

- A. **Installer Qualifications:** Company specializing in installing roofing of the type specified in this section, with no fewer than three years of documented experience.
- B. **Manufacturer Qualifications:** Current ISO 9000 certification.
- C. **Source Limitations:** Products specified in this section will be supplied by a single manufacturer, experienced in designing and manufacturing clay roof tile.
- D. **Mockups:**
 - 1. Construct mockup using materials specified in this section.
 - 2. Construct mockup as directed, at location indicated.

3. Obtain Architect/Owner's acceptance of mockup before beginning construction activities of this section; accepted mockup will be standard by which completed work of this section is judged.
 4. Accepted mockup may remain as part of Work.
- E. **Pre-Installation Meeting:**
1. Convene at job site prior to scheduled beginning of construction activities of this section to review requirements of this section.
 2. Require attendance by representatives of the following:
 - a. Roofing contractor of this section.
 - b. Other entities directly affecting, or affected by, construction activities or this section.
 3. Notify Architect and Owner four calendar days in advance of scheduled meeting date.
- 1.6 DELIVERY, STORAGE, AND HANDLING
- A. Store products of this in manufacturer's unopened packaging until installation.
 - B. Maintain storage area conditions for products of this section in accordance with the manufacturer's instructions until installation.
- 1.7 **WARRANTY**
- A. **Manufacturers Product Warranty:** Provide a 75-year warranty guaranteeing material integrity and color fastness for the clay roof tile.
 - B. **Roof Contractor Warranty:** The contractor warrants products of this section, as installed, to be in accordance with the Contract Documents and free from faults and defects in materials and workmanship for a period of 3 years.
- 1.8 **EXTRA MATERIALS**
- A. Provide an additional quantity of clay roof tile matching clay roof tile installed, in the amount of **3 percent of the total installed**, but not less than one full carton, for Owner's use in roof maintenance.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturing facility shall be located in the United States of America:
- B. Manufacturer shall have been in continuous operation for over 100 years.
- C. Manufacturer shall be ISO 9000 certified and meet Cradle to Cradle specifications.
- D. Acceptable Clay Roof Tile Manufacturer: Ludowici Roof Tile; P.O. Box 69 4757 Tile Plant Road, New Lexington, OH 43764. Tel. (800) 945-8453. Email: info@ludowici.com. Website: www.ludowici.com.
- E. Requests for substitution will be considered in accordance with provisions of Section 016000.
- F. Unless otherwise specified for an individual product or material, supply all products specified in this section from the same manufacturer.

2.2 CLAY ROOF TILE

- A. **Clay Roof Tile, General:** Incombustible, vitrified tile manufactured from shale and fire clays, having less than 2.0 percent moisture absorption when tested in accordance with ASTM C 67, and meeting Grade 1 freeze/thaw resistance requirements when tested in accordance with ASTM C 1167.
 1. **Color Blend:** As indicated in Section 008900 - Finish Selection Summary.
- B. **Basis of Design Clay Roof Tile:** 13.25" Full Corner Spanish.
 1. **Profile:** A high profile tile with a simple one piece barrel design which provides a pattern of distinctive ripples across the roof.
 2. **Nominal Size:** 9.75 inches (247.6 mm) wide by 13.25 inches (336.6 mm) long.
 3. **Average Exposure:** 8.25 inches (209.6 mm) center to center by 10.25 inches (260.4 mm) long.

4. **Accessory Tile Pieces:** Provide any of the following pieces required for the work:
- a. 10.25" Full Corner Spanish Eave tile
 - b. 7.25" Full Corner Spanish Eave tile
 - c. Eave Closure tile
 - d. Top Fixture tile
 - e. End Band (Half) tile
 - f. Left Detached Gable Rake tile
 - g. Right Detached Gable Rake tile
 - h. Circular Cover Hip tile
 - i. Circular Cover Hip Starter tile
 - j. Circular Cover Ridge tile
 - k. Circular Cover Closed Ridge End tile
 - l. Circular Cover Hip/Ridge Terminal tile

2.3 ACCESSORY MATERIALS

- A. **Underlayment:** Ludowici Pro 70 over waterproofing membrane.
- B. **Waterproofing Membrane:** 40 mil minimum thickness ASTM D1970.
- C. **Flashing:** 16 oz / sq ft (0.56 mm) thick ASTM B 370 cold rolled copper.
- D. **Copper Wire:** 10 gauge (2.6 mm) minimum, with or without insulation.
- E. **Mortar for Finishing Valley Edges:**
 - 1. Mix the following materials in equal parts:
 - a. Factory-mixed mortar meeting requirements of ASTM C 387, Type M.
 - b. Factory-mixed surface bonding mortar meeting requirements of ASTM C 887.
 - 2. Add mineral oxide pigment to match color of roof tile.
 - 3. Add water and acrylic additive in accordance with mortar materials manufacturer's instructions to obtain correct mix for workability.
- F. **Roof Cement:** Asphalt roof cement conforming to ASTM D 4586, Type I or II
- G. **Sealant Used in Lieu of Flashing Cement:** ASTM C 920 silicone, provide one compatible with 3M 2-Component Roof Tile Adhesive AH-160 and underlayment.
- H. **Screws:** No. 8 or 9 brass or stainless steel, flathead phillips or square drive, of sufficient length to provide minimum 0.75 inch (19 mm) penetration into roof deck.
- I. **Nails for Solid Wood Deck:** Corrosion resistance copper or stainless steel; minimum 0.375 inch (9.5 mm) head diameter; shank minimum 11 gauge (3 mm), of sufficient length to provide minimum 0.75 inch (19 mm) penetration into roof deck but not through the underside.
- J. **Nails for Plywood Deck:** Slater's copper ring shank nail, 11 gauge (3 mm), of sufficient length to provide minimum 0.75 inch (19 mm) penetration into roof deck.
- K. **Wood Nailers and Cant Strips:** Preservative-treated wood, as specified in Section 061013.

2.4 FLASHING FABRICATION

- A. Flashing and Trim: Form to profiles indicated on drawings and as required to protect roofing materials from physical damage and shed water in accordance with manufacturer's instructions for indicated project conditions.
- B. Form sections square and accurate in profile, in maximum possible lengths, free from distortion or defects detrimental to appearance or performance.
- C. Fabrication of other indicated sheet metal items is specified in Section 076200.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that roofing penetrations and plumbing stacks are in place and properly flashed to deck surface.
- B. Verify that roof openings are correctly famed and of sufficient height to install required flashings.
- C. Verify that deck surfaces are dry and free of ridges, warps and voids.

3.2 PREPARATION

- A. Comply with clay roof tile manufacturer's recommendations on preparation of acceptable roof deck.
- B. Broom clean deck surfaces prior to installation of underlayment and prepare deck per the underlayment manufacturer's instructions.

3.3 UNDERLAYMENT AND ACCESSORY INSTALLATION

A. Underlayment:

- 1. Install per manufacturer's instructions.
- 2. Beginning at eave edge, install perpendicular to roof slope; extend minimum of 4 inches (100 mm) over gutters and valley flashing, and minimum 6 inches (150 mm) up abutting vertical surfaces.
- 3. Overlap side joints minimum 2-1/2 inches (64 mm); overlap end joints minimum 6 inches (150 mm).
- 4. Install second layer parallel to first layer, maintaining specified overlap at gutters, valley flashings, and at side and end joints; locate side joints minimum 18 inches (457 mm) from first layer side joints, and locate end joints minimum 12 inches (300 mm) from first layer end joints.
- 5. Fasten sides and ends to deck with fasteners spaced at maximum 6 inches (150 mm) on centers.
- 6. Install additional layer on rough surfaces; install additional layer of full-width high temp waterproof underlayment parallel to, and centered on, hips, ridges and valleys.

B. Flashings: Install at all locations where roof intersects side wall and head wall conditions.

C. Valley Flashings:

- 1. Install minimum 24 inch (610 mm) wide copper flashing over full-width high temp waterproofing membrane material; fasten metal to deck with cleats.
- 2. Overlap end joints minimum 12 inches (304.8 mm), do not solder joints.
- 3. Lap self-adhering waterproofing membrane material over edges of flashing 4 inches (101.6 mm).

D. Intersections of Roof Surfaces and Abutting Vertical Surfaces:

- 1. Install continuous 18 inch (457.2 mm) wide strips of high temp waterproof membrane material to extend 12 inches (304.8 mm) across roof deck and 6 inches (152.4 mm) up vertical surface.
- 2. Install continuous copper flashing to extend 4 inches (101.6 mm) up vertical surface.
- 3. Form saddle flashings for protrusions through roof in accordance with manufacturer's instructions.

E. Fabricate Sheet Metal Items: Install in accordance with shop drawings and SMACNA ASMM.

3.4 CLAY ROOF TILE INSTALLATION

- A. Install tile roofing in strict accordance with manufacturer's instructions.
- B. Install the Eave Closure tile flush with eave.
- C. Install the first course of field tile over Eave Closure tile overhand of first course of field tile at eave should not be less than 0.75 inches (19 mm) and not more than 2 inches (51 mm). This dimension should be related to the size of the gutters and should either be shown on the drawings or specified here.
 - 1. Do not drive fasteners tightly against tiles, to reduce risk of breakage and to allow for natural deck movement.
 - 2. Allow tile to "hang" on its fasteners.
- D. Alternate installation of the tile at the eave beginning with 13.25" Full Corner Spanish tile, 10.25" Full Corner Spanish tile, 7.25" Full Corner Spanish tile. Repeat sequence along the entire eave.
- E. All subsequent courses above the eave will utilize 12.25" Full Corner Spanish tile.
- F. Install each subsequent course with a maximum exposure in each course of 10.25 inches (260.4 mm). Wet cut tile at hips and valleys, using masonry saw with diamond blade.
- G. At hip and ridge install bead of adhesive at butt edge of each tile of sufficient thickness to ensure adhesion between tiles and located so it is completely concealed. Install sealant as

required at hip and ridge accessories to achieve watertight installation. Install type M mortar between cut field tile and nailer for hip tile.

3.5 PROTECTION

- A. Do not permit traffic over finished roof surface unless absolutely necessary.
- B. Minimize traffic over installed clay roof tile. If necessary, wear soft-soles shoes and walk on the "butt" edge of the tile in order to avoid breakage.
- C. Replace tile broken due to improper protection or traffic control.

END OF SECTION

SECTION 074213

METAL WALL PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes:**

- 1. **Exposed-fastener, lap-seam metal wall panels.**

1.3 SUBMITTALS

- A. **Product Data:** For each type of product.

- 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.

- B. **Shop Drawings:**

- 1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
 - 2. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than 1-1/2 inches per 12 inches.

- C. **Samples for Initial Selection:** For each type of metal panel indicated with factory-applied finishes.

- 1. Include Samples of trim and accessories involving color selection.

- D. **Samples for Verification:** For each type of exposed finish, prepared on Samples of size indicated below:

- 1. **Metal Panels:** 36 inches long by actual panel width. Include fasteners, closures, and other metal panel accessories.

- E. **Sample Warranties:** For special warranties.

1.4 QUALITY ASSURANCE

- A. **Installer Qualifications:** An entity that employs installers and supervisors who are trained and approved by manufacturer with a **successful track record of installing specified product for over 10 years.**

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
- B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Retain strippable protective covering on metal panels during installation.

1.6 FIELD CONDITIONS

- A. **Weather Limitations:** Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.7 WARRANTY

- A. **Special Warranty:** Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including rupturing, cracking, or puncturing.
 - b. Deterioration of metals and other materials beyond normal weathering.
 - 2. **Warranty Period: Two years** from date of Substantial Completion.
- B. **Special Warranty on Panel Finishes:** Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. **Finish Warranty Period: 20 years** from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. **Basis of Design:** As indicated in Section 008900 - Finish Selections Summary.

2.2 PERFORMANCE REQUIREMENTS

- A. **Structural Performance:** Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 1592:
 - 1. **Wind Loads:** As indicated on Drawings.
 - 2. **Deflection Limits:** For wind loads, no greater than 1/240 of the span.
- B. **Thermal Movements:** Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. **Temperature Change (Range):** 120 deg F, ambient; 180 deg F, material surfaces.

2.3 EXPOSED-FASTENER, LAP-SEAM METAL WALL PANELS

- A. General: Provide factory-formed metal panels designed to be field assembled by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps. Include accessories required for weathertight installation.
- B. **Perforated, Corrugated-Profile, Exposed-Fastener Metal Wall Panels:** Formed with alternating curved ribs spaced at 2.67 inches o.c. across width of panel.
 - 1. **Metallic-Coated Steel Sheet:** Zinc-coated (galvanized) steel sheet complying with ASTM A 653, G90 coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792, Class AZ50 coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755.
 - a. Nominal Thickness: 0.022 inch.
 - b. Exterior Finish: Two-coat fluoropolymer.
 - c. Color: White.

2.4 MISCELLANEOUS MATERIALS

- A. Miscellaneous Metal Subframing and Furring: ASTM C 645, cold-formed, metallic-coated steel sheet, ASTM A 653, G90 (hot-dip galvanized) coating designation or ASTM A 792, Class AZ50 aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.
- B. Panel Accessories: Provide components required for a complete, weathertight panel system. Match material and finish of metal panels unless otherwise indicated.

- C. **Flashing and Trim:** Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Finish flashing and trim with same finish system as adjacent metal panels.
 - D. **Panel Fasteners:** Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.
 - E. **Panel Sealants:** Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.
 - 1. **Butyl-Rubber-Based, Solvent-Release Sealant:** ASTM C 1311.
- 2.5 **FABRICATION**
- A. **General:** Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
 - B. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
 - C. **Sheet Metal Flashing and Trim:** Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
- 2.6 **FINISHES**
- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 - B. **Steel Panels and Accessories:**
 - 1. **Two-Coat Fluoropolymer:** AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 2. **Color:** Refer to Section 008900 - Finish Selections Summary.

PART 3 - EXECUTION

- 3.1 **EXAMINATION**
- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
 - 1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
 - 2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.
 - a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
 - B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.
 - C. Proceed with installation only after unsatisfactory conditions have been corrected.
- 3.2 **PREPARATION**
- A. **Miscellaneous Supports:** Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal panel manufacturer's written recommendations.

3.3 METAL PANEL INSTALLATION

- A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 - 1. Shim or otherwise plumb substrates receiving metal panels.
 - 2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
 - 3. Install screw fasteners in predrilled holes.
 - 4. Locate and space fastenings in uniform vertical and horizontal alignment.
 - 5. Install flashing and trim as metal panel work proceeds.
 - 6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 - 7. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
- B. **Fasteners: Use stainless-steel fasteners** for surfaces exposed to the exterior; use galvanized-steel fasteners for surfaces exposed to the interior.
- C. **Metal Protection:** Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.
- D. **Lap-Seam Metal Panels:** Fasten metal panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.
 - 1. Lap ribbed or fluted sheets one full rib. Apply panels and associated items true to line for neat and weathertight enclosure.
 - 2. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of metal panels.
 - 3. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
 - 4. Install screw fasteners with power tools having controlled torque adjusted to compress washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.
 - 5. Flash and seal panels with weather closures at perimeter of all openings.
- E. **Accessory Installation:** Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
 - 1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal wall panel manufacturer; or, if not indicated, provide types recommended by metal panel manufacturer.
- F. **Flashing and Trim:** Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that are permanently watertight.
 - 1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof performance.
- G. **Watertight Installation:**
 - 1. Apply a continuous ribbon of sealant to seal lapped joints of metal panels, using sealant as recommend by manufacturer on side laps of nesting-type panels; and elsewhere as needed to make panels watertight.
 - 2. Provide sealant between panels and protruding equipment, vents, and accessories.
 - 3. At panel splices, nest panels with minimum 6-inch end lap, sealed with sealant and fastened together by interlocking clamping plates.

3.4 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.
- B. After metal panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
- C. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 074244

COMPOSITE ALUMINUM WALL PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

A. Section Includes:

1. Prefinished, composite aluminum panels, in compliance with the fire hazard classifications as required by IBC 2006 and NFPA 285.
2. Extruded aluminum mounting system.
 - a. System summary: drained/back-ventilated, rout-and-return, aluminum composite panel rainscreen system, modeled in compliance with the insulation requirements of IECC, fabricated by a Premium MCM Fabricator, or equivalently qualified, as defined by the Metal Construction Association.

1.3 SYSTEM DESCRIPTION

A. System Requirements:

1. **Exterior - Rainscreen System:** Panel system utilizing aluminum extrusion with integral concealed support system. No field sealant, gasketing, exposed flashing or trim required (coping required at parapet conditions). **System requires a geographically-suitable air barrier over sheathing back-up.** Trades responsible for penetrations through air barrier will seal penetrations according to membrane manufacturer's recommendations.
2. **Interior - Standard Mounting:** Fabricator's standard aluminum extrusion mounting system.

B. Delegated Design Requirements:

1. **Fabricator:** Responsible for designing system, including anchorage to structural system and necessary modifications to meet specified requirements and maintain visual design concepts.
 - a. **Employ registered professional engineer,** licensed to practice structural engineering in Texas, to certify compliance with system performance requirements.
 - b. **Drawings:** Diagrammatic and are intended to establish basic dimension of units, sight lines, and profiles of units.
 - c. **Provide concealed fastening.**
 - d. **Attachment Considerations:** Account for site peculiarities and expansion and contraction movements so there is no possibility of loosening, weakening and fracturing connections.

C. Performance Requirements: Certify compliance with requirements listed below, based on manufacturer's test data for testing conducted by independent laboratory. Laboratory results older than eight (8) years from date of submittal shall not be acceptable. If current test results are unavailable or unacceptable, conduct testing to certify compliance, without impact to the construction schedule.

1. **Maximum Perimeter Framing Deflection:** Normal to plane of wall between supports, deflection of secured perimeter framing members shall not exceed L/175 or 3/4 inch, whichever is less.
2. **Maximum Panel Deflection:** Not exceed L/60 of full span normal to plane of wall.
3. **Maximum Anchor Deflection:** Not exceed 1/16 inch.
4. **Maximum Permanent Deflection of Framing Members:** Not exceed L/100 of span length at 1-1/2 times design pressure and components shall not experience failure or gross permanent distortion. At connection points of framing members to anchors, permanent set shall not exceed 1/16 inch.

5. **Air infiltration: not to exceed 0.04cfm per square foot** of wall specimen area, when tested to 6.24psf in accordance with ASTM E283.
6. **Static water infiltration: no uncontrolled water shall pass into the room-side of the wall assembly when tested at a differential static pressure of 15psf** in accordance with ASTM E331.
7. **Bond Integrity:** When tested for bond integrity, ASTM D1781 (simulating resistance to panel delamination), there shall be no adhesive failure of bond between core and skin nor cohesive failure within core, based on following values.
 - a. **Bond Strength:** 214 PSI (Vertical Pull)
 - b. **Peel Strength:**
 - 1) 22.5 inch pound/inch dry.
 - 2) 22.5 inch pound/inch after 8 hours in water at 200° F.
 - 3) 22.5 inch pound/inch after 21 days soaking in water at 70° F.
- D. **Structural Performance:** Provide metal-faced composite wall panel assemblies capable of withstanding the effects of the following loads and stresses within limits and under conditions indicated, based on testing according to ASTM E 330:
 1. **Design Wind Loads:** As indicated on structural drawings.
 2. **Deflection Limits:** Metal-faced composite wall panel assemblies shall withstand wind loads with deflections in compliance with paragraph 1.2C.
- E. **Thermal Movements:** Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 1. **Temperature Change (Range):** Minus 29 to plus 82 deg C ambient; 180 deg F 100 deg C material surfaces.
- F. **Interface With Adjacent Systems:**
 1. Accommodate allowable tolerances and deflections for structural members in installation.
 2. Attachments of panel support system are to be to minimum 16 gauge metal stud system.

1.4 SUBMITTALS

- A. **Product Data:** Submit following:
 1. Product data for entire system, including panels, concealed flashings, and finishes.
 2. Color charts for finish indicating manufacturer's colors available for selection.
 3. Samples of warranties customized for this project.
- B. **Shop Drawings:** Submit for installation of system, including panel fabrication, jointing, corners, concealed flashings, gutters, weeps, copings, fascia, soffits, and accessories.
 1. Stamp with seal and signature of professional engineer responsible for design.
 2. Submit detail drawings of panel connections, draining, ventilating and weep details.
 3. Indicate details for sheathing and metal stud system support for the panel system.
 4. Detail connections, fastener penetrations through air barrier, method and materials used to seal penetrations.
 5. Include transitions and interfacing with all surrounding fenestration products or adjacent construction.
 6. Indicate how trim members are spliced, sealed, terminate and provide water tight conditions with fenestration products and surrounding conditions.
 7. Indicate the sheathing and air barrier terminate, interface and seal to fenestration products and surrounding conditions to make water tight installation.
 8. Submit R-value averaging of proposed wall assembly, in compliance with the insulation requirements for steel-framed walls as determined by IECC 2009 table 502.1.2. Model design criteria should match ASTM E283 test specimen in size and detailing.
- C. **Samples: Submit minimum 12 by 12 inch in size** illustrating composition and color. Draw-down lines are only acceptable for new custom formulations.
- D. **Informational Submittals:** Submit following packaged separately from other submittals:
 1. Design data for system indicating compliance with delegated design requirements.
 2. Test Reports: Certified test reports showing compliance with performance requirements.

3. Certifications specified in Quality Assurance article.
 4. Qualification Data: All required qualification data.
 5. Fabricator instructions.
 6. Manufacturer's field reports.
- E. **Closeout Submittals:** Submit warranty in accordance with Section 017700.

1.5 QUALITY ASSURANCE

- A. **Engineer Qualifications:** **Registered professional engineer** licensed to practice structural engineering in Texas, with minimum of five years' experience in design of metal wall systems and structural stud design.
- B. **Manufacturer Qualifications:** Company specializing in manufacturing Products specified in this Section with **minimum 20 years' experience**.
- C. **Fabricator Qualifications:** Company specializing in fabricating work specified in this Section with **minimum 10 years' experience**. Fabricator shall be a certified as a Premium MCM Fabricator, or equivalently qualified, by Metal Construction Association Fabricator's Council, and shall be preauthorized by aluminum-faced composite panel manufacturer. Fabricator shall document 10 projects of similar nature in past five years. Fabricator shall demonstrate ability to comply with section 3.1B below. All material measurements to be verified in field.
- D. **Installer Qualifications:** Certified acceptable to fabricator, with experience on at least **10 projects of similar nature in past five years**.
- E. **Certifications:**
1. Fabricator's certification that Installer is approved to perform work.
 2. Fabricator's certification that products furnished for Project meet or exceed specified requirements.
 3. Engineer's Certifications.
- F. **Pre-installation Conference:** Conduct conference at project site to review methods and procedures related to metal wall panel assemblies including, but not limited to, the following:
1. Panel fabricator/installer shall meet with Owner, Architect, Composite Material Manufacturer's Representative, and other trade Contractors whose work interfaces with or affects metal wall panels including installers of doors, windows, and louvers. A direct employee of the fabricator must be present at the conference.
 2. Review and finalize construction schedule and verify availability of materials, fabricator/installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 3. Review methods and procedures related to metal wall panel installation, including manufacturer's written instructions.
 4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
 5. Review flashings, special details, wall penetrations, openings, and condition of other construction that will affect metal wall panels.
 6. Review governing regulation and requirements for insurance, certificates, and testing and inspecting if applicable.
 7. Review temporary protection requirements for metal wall panel assembly during and after installation.
 8. Review wall panel observation and repair procedures after metal wall panel installation.
 9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.6 FIELD MOCK-UPS

- A. Sample Exterior Installation:
1. Construct on-site mock-up **10 feet long by 10 feet tall** as directed.
 2. Show jointing, corners, weeps, and typical construction techniques.
 3. **Accepted Field Sample: May remain part of completed Work.**

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Packing, Shipping, Handling, and Unloading: Protect finish panel faces, including plastic sheet protection wrap.
- B. Acceptance at Site: Inspect each panel and accessory as delivered and confirm that finish is undamaged. Do not install damaged panels.
- C. Storage and Protection: Comply with fabricator's printed requirements.

1.8 PROJECT CONDITIONS

- A. Environmental Requirements: Comply with manufacturer's written requirements under which products can be installed.

1.9 WARRANTY

- A. **Special Warranties:** Prepare and submit in accordance with Section 017800.
 - 1. **Factory Finish: 30-year Warranty** Stating Finish will be:
 - a. Free of fading or color change in excess of 5 Delta E units, ASTM D2244;
 - b. Will not chalk in excess of numeral rating of 8 for colors and 6 for whites, ASTM D4214;
 - 2. **Fabricator/Installer Warranty:** Standard form in which Fabricator agrees to repair or replace metal panels that fail due to improper fabrication or installation techniques:
 - a. **Warranty Period: One year** from Date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Acceptable Manufacturers:**
 - 1. Alpolic, Mitsubishi Plastics Composites America, Inc., Chesapeake, VA 23320
 - 2. Alucobond, manufactured by 3A Composites USA, Inc., Benton, KY 42025.
 - 3. Reynobond, Alcoa Architectural Products, Eastman GA 31023.
 - 4. Substitutions: Manufacturer shall document 1 million square feet of successful product installation on domestic projects, compliant with quality assurance, testing, and performance requirements specified herein. Document full compliance with IBC 2006 and ICC-ES Acceptance Criteria 25.

2.2 ACCEPTABLE FABRICATORS

- A. **Basis of Design:**
 - 1. Acceptable Fabricators:
 - a. EWS.
 - b. NOW Specialties Inc., Carrollton, TX 75006.
 - 2. Exterior and Interior System: 4100 System.

2.3 MATERIALS

- A. **Composite Panels:**
 - 1. Aluminum-faced panel with thermoplastic core.
 - a. Overall Panel thickness: 0.157 inches.
 - b. **Aluminum Face:** 0.0197 inches, with strippable protective film. Protective film: heavy and opaque if required to indicate finish grain direction.
 - c. **Aluminum Backer Sheet thickness:** 0.0197 inches.
 - d. **Aluminum Alloy:** ASTM B209 3003 at coated finish.
- B. **Composition: Two sheets of aluminum sandwiching core of extruded thermoplastic material formed in continuous process** with no glues or adhesives between dissimilar materials. Products laminated sheet by sheet or in batch process using glues or adhesives between materials shall not be acceptable.
 - 1. **Standard Polyethylene Core** (where permitted by IBC 2006 or applicable codes), with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing agency acceptable to authorities having jurisdiction:

- a. Flame-Spread Index: 25 or less
 - b. Smoke-Developed Index: 450 or less
- 2. **Fire-Retardant Core (where required by IBC 2006 or other applicable code):** Complies with NFPA 285, with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - a. Flame-Spread Index: 15 or less.
 - b. Smoke-Developed Index: 105 or less.

2.4 MISCELLANEOUS METAL FRAMING

- A. **Miscellaneous Metal Framing, General:** ASTM C 645, cold-formed metallic-coated steel sheet, ASTM A 653/A 653M, G40 Z120 hot-dip galvanized or coating with equivalent corrosion resistance unless otherwise indicated.
- B. **Subgirts:** As required by structural calculations. Minimum requirement is manufacturer's standard C- or Z-shaped sections 0.079-inch nominal thickness.
- C. **Zee Clips:** As required by structural calculations. Minimum requirement is 0.079-inch nominal thickness.
- D. **Base or Sill Angles:** As required by structural calculations. Minimum requirement is 0.079-inch nominal thickness.
- E. **Hat-Shaped, Rigid Furring Channels:**
 - 1. Nominal Thickness: As required by structural calculations. Minimum requirement is as required to meet performance requirements.
 - 2. Depth: 7/8 inch.
- F. **Cold-Rolled Furring Channels:** As required by structural calculations. Minimum requirement is minimum 1/2-inch wide flange.
 - 1. Nominal Thickness: As required by structural calculations. Minimum requirement is as required to meet performance requirements.
 - 2. Depth: 3/4 inch.
 - 3. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with nominal thickness of 0.079-inch.
 - 4. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch diameter wire, or double strand of 0.048-inch diameter wire.
- G. **Fasteners for Miscellaneous Metal Framing:** As required by structural calculations. Minimum requirement is of type, material, size, corrosion resistance, holding power, and other properties required to fasten miscellaneous metal framing members to substrates.

2.5 ACCESSORIES

- A. **Panel Extrusions:** Extruded aluminum, ASTM B 221.
- B. **Concealed Flashings:** Formed aluminum sheet, minimum 0.030 inch, ASTM B 209, post-finished to match panels.
- C. **Stiffeners:** formed of extruded aluminum, adhered to interior side of metal wall panel with structural silicone and VHB tape, and designed to tie-in to extrusions. Spacing: single, full-width span per every 19.99 square feet of panel area. Demonstrate compliance with structural review and IBC 2006: in event of a contradiction, more stringent requirement will govern. No alternate type stiffeners shall be permitted, such as galvanized steel angles, plates, subgirt or aluminum composite material.
- D. **Escutcheon plates:** 2" thick, or as directed by architect. Plates: fabricated from the same sheet stock and batch as the face material. Hem outside edge to conceal material core. Maintain 1/16-inch joint between inside edge and adjacent material.

2.6 FABRICATION

- A. **General:** Fabricate and finish metal-faced composite wall panels and accessories at the factory to greatest extent possible, by fabricator's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

- B. Fabricate metal-faced composite wall panels in a manner that allows proper ventilation on interior side of panel.
- C. **Metal-Faced Composite Wall Panels:** Factory form panels in a continuous process with no glues or adhesives between dissimilar materials. Trim and square edges of sheets with no displacement of face sheets or protrusion of core material.
 - 1. Form panel lines, breaks, and angles to be sharp and true, with surfaces free from warp and buckle. Exposed gaps or pinholes will not be acceptable.
 - 2. Fabricate panels with panel stiffeners, as required to comply with deflection limits, attached to back of panels with structural silicone sealant or VHB tape.
 - 3. Fabricate material as necessary to install all panels with finish grain direction arrows oriented as shown on approved shop drawings.
 - 4. **Dimensional Tolerances:**
 - a. **Length:** Plus or minus 1/16 inch.
 - b. **Width:** Plus or minus 1/16 inch.
 - c. **Thickness:** Plus or minus 0.008 inch.
 - d. **Panel Bow:** 0.8 percent maximum of panel length or width.
 - e. **Squareness:** 1/16 inch maximum.
- D. **Sheet Metal Accessories:** Fabricate concealed flashings to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
 - 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 - 2. **Sealed Joints:** Form non-expansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA standards.
 - 3. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
 - 4. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended by metal-faced composite wall panel manufacturer.
 - a. **Size:** As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal-faced composite wall panel manufacturer for application, but not less than thickness of metal being secured.
- E. **Exterior System Characteristics:**
 - 1. **Concealed fastener, drained/back-ventilated rainscreen principle.**
 - 2. **Weight:** 1.62 pounds per square foot.
 - 3. **Pan depth:** 1 inch, formed out of 1" route-and-return perimeter panel legs.
 - 4. **System depth (dimension from exterior face of panel to air barrier):** 2 1/4 inch.
 - 5. **Horizontal joint:** open to inner leaf. Continuous, extruded horizontal track, with extruded clip attachment. Exposed fasteners within the joint will not be acceptable.
 - 6. **Vertical joint:** open to inner leaf. Clip profile: anchored to vertical I-beam stiffener. Exposed fasteners within the joint will not be acceptable.
 - 7. **Base detail:** open to inner leaf. Continuous, extruded horizontal track, with extruded clip attachment. Concealed base flashing: controls bulk water and condensation by shedding moisture to the outside of the building. Allow 8 inches of vertical clearance between base of panel and landscaping. Grade must allow proper drainage of ground water. Submersion of panel system or any other components of the wall assembly shall not be permitted. Exposed fasteners within the joint will not be acceptable.
 - 8. **Top detail:** coping material shall be offset 1/4-inch from face of material to allow for proper ventilation. Exposed fasteners within the joint will not be acceptable.

2.7 FINISH

- A. Coil-coated, 30% maximum gloss **70% Kynar 500 or Hylar 5000-based polyvinylidene fluoride (PVDF) resin** in conformance with AAMA 605-05. Finishes formulated from Lumaflon resins such as Megaflon and Coraflon shall not be acceptable.

1. **Acceptable Color:** Color to be selected from manufacturer's full and complete line of architectural finishes. Refer to Section 008900 - Finish Selection Summary

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Fabricator present, for compliance with requirements for installation tolerances, metal-faced composite wall panel supports, and other conditions as shown on reviewed and accepted shop drawings for conditions affecting performance of the Work.
 1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal-faced composite wall panel manufacturer.
 2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal-faced composite wall panel manufacturer.
 3. Verify that weather-resistant membrane has been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
- B. Fabricator shall field-verify all material measurements prior to fabrication. Measurements shall have no impact to the construction schedule. Communicate to the Architect if material measurements will impact the design intent.
- C. Examine roughing-in for components and systems penetrating metal-faced composite wall panels to verify actual locations of penetrations relative to panel joint locations of panels before panel installation.
- D. Prepare written report, endorsed by Fabricator, listing conditions detrimental to performance of the Work, and issue to Architect as formal submittal.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. **Miscellaneous Framing:** Install subgirts, base angles, sills, furring, and other miscellaneous wall panel support members and anchorage according to ASTM C 754 and structural engineer's written instructions. Confirm that all penetrations through the air barrier have been sealed.

3.3 METAL-FACED COMPOSITE WALL PANEL INSTALLATION

- A. General: Install metal-faced composite wall panels according to Fabricator's written instructions in orientation, sizes, and locations indicated on Drawings. Install panel's perpendicular to girts and subgirts unless otherwise indicated. Anchor panels and other components of the Work securely in place to the structural studs, with provisions for thermal and structural movement.
 1. Commence metal-faced composite wall panel installation and install minimum of 300 sq. ft. in presence of Fabricator's general superintendent or authorized representative.
 2. Install all panels with finish grain direction arrows oriented as shown on approved shop drawings.
 3. Flash metal-faced composite wall panels at perimeter of all openings. Do not begin installation until air barrier and flashings that will be concealed by panels are installed, properly sealed and tested for water tightness and conditions inspected and accepted by independent inspector before being concealed by the panel system.
 4. Install flashing and trim as metal-faced composite wall panel work proceeds.
 5. Provide aesthetic escutcheons for pipe and conduit penetrating the air barrier and exterior walls.
- B. **Fasteners:**
 1. **Aluminum Wall Panels:** Use **stainless-steel fasteners** for attachment of the girts and subgirts.
- C. **Metal Protection:** Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action as recommended by metal-faced composite wall panel manufacturer.

- D. **Attachment System Installation, General:** Install attachment system required to support metal-faced composite wall panels and to provide a complete system per contract documents, including subgirts, extrusions, tracks, panel clips, and anchor channels.
 - 1. Include attachment to supports, panel-to-panel joinery, panel-to-dissimilar-material joinery.
 - 2. Do not begin installation until weather barrier and flashings that will be concealed by composite panels are installed.
- E. **Drained/Back-Ventilated Installation:** Provide fabricator's standard track, clips, and stiffeners for a complete outer leaf, draining to the exterior at base. Install support system at locations and, spacing, required by structural engineer. Attach wall panels by interlocking extruded clips attached to stiffeners within routed-and-turned flanges of wall panels.
 - 1. Install wall panels to allow individual panels to "free float" and be installed and removed without disturbing adjacent panels.
 - 2. Do not apply sealants to joints unless otherwise indicated on Drawings.

3.4 ACCESSORY INSTALLATION

- A. General: Install accessories with positive anchorage to building and provide for thermal expansion. Coordinate installation with flashings and other components.
 - 1. Install components required for a complete metal-faced composite wall panel assembly including corners, concealed flashings, baffles, gussets, closure strips, and similar items.
- B. Flashing: Comply with performance requirements, Fabricator's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
 - 1. Install concealed flashing free of visible oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems.
 - 2. Expansion Provisions: Provide for thermal expansion of concealed flashing. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep.

3.5 ERECTION TOLERANCES

- A. Installation Tolerances: Shim and align metal-faced composite wall panel units within installed tolerance of 1/4 inch in 20 feet, non-cumulative, on level, plumb, location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.6 FIELD QUALITY CONTROL

- A. **Manufacturer's Field Service: Engage authorized service representative to inspect,** observe testing, and adjust completed metal-faced composite wall panel installation, including accessories **at pre-installation, mid-point of installation, and finished installation.**
- B. Additional tests and inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- C. **Prepare test and inspection reports and submitted to Architect within 7 days.**

3.7 CLEANING

- A. Remove temporary protective coverings and strippable films as metal-faced composite wall panels are installed unless otherwise indicated in manufacturers written installation instructions. Maintain in original condition after installation and document damage by other trades.
- B. After metal-faced composite wall panel installation, clear weep holes of obstructions and dirt.
- C. Replace metal-faced composite wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 075400
THERMOPLASTIC MEMBRANE ROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. Section Includes:
1. Adhered thermoplastic polyolefin (TPO) membrane roofing systems.
 2. Roof insulation.

1.3 PERFORMANCE REQUIREMENTS

- A. **General Performance:**
1. Installed membrane roofing shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without water penetration or failure due to defective manufacture, fabrication, installation, or other defects in construction.
 2. Membrane roofing and base flashings shall remain watertight.
- B. **Roofing System Design:** Membrane roofing identical to systems successfully tested by a qualified testing and inspecting agency to resist uplift pressure.
- C. **FM Approvals Listing:**
1. System Quality Standards: Membrane roofing, base flashings, and accessories complying with following requirements:
 - a. FM Approvals 4450.
 - b. FM Approvals 4470.
 2. Fire/Windstorm Classification: Class 1-75.
 3. Hail Resistance: SH.

1.4 SUBMITTALS

- A. **Product Data:** Manufacturer's technical literature for each product indicated, specified, or required.
1. Include manufacturer's written installation application instructions.
 2. Include material descriptions, individual components, profiles, accessories, and finishes.
 3. Include manufacturer's written instructions for evaluating, preparing, and treating substrate onto which work will be applied.
 4. Include manufacturer's standard drawing details recommended for each condition encountered in work.
- B. **Shop Drawings:** Detailed plans, sections, and large-scale details of products.
1. Base flashings and membrane terminations.
 2. Tapered insulation, including slopes.
 3. Orientation of steel roof deck and orientation of membrane roofing and fastening spacings and patterns for mechanically fastened membrane roofing.
 4. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
- C. **Samples for Verification:**
1. Sheet roofing, of color specified, including T-shaped side and end lap seam.
 2. Substrate board.
- D. **Maintenance Data:** For inclusion maintenance manual required by appropriate Division 01 Section.
1. Include manufacturer's instructions for maintenance of installed work
 2. Include methods and frequency recommended for maintaining optimum condition under anticipated use.
 3. Include precautions against cleaning products and methods which may be detrimental to finishes and performance.

4. Include name, address, and telephone number of manufacturer's nearest authorized service representative.

1.5 QUALITY ASSURANCE

A. Installer Qualifications:

1. Experience: Company with **not less than 5 years' experience** in performing specified work similar in design, products, and extent to scope of this Project; with a record of successful in-service performance; and with sufficient production capability, facilities, and trained and skilled personnel.
2. Supervision: Maintain a competent supervisor who is at Project during times specified work is in progress, and, who is experienced in installing work similar in design, products, and extent to scope of this Project.
3. Manufacturer Qualification: Certified, licensed, approved, or acceptable to manufacturer to install specified work.

B. Pre-Installation Conference: Before beginning work of this Section, conduct conference at site to comply with requirements of appropriate Division 01 Sections.

1. Required Attendees:
 - a. Owner.
 - b. Architect.
 - c. Contractor, including supervisor.
 - d. Roof decking installer, including supervisor.
 - e. Installers of adjacent work, including supervisors.
 - f. Testing agency personnel, including supervisors.
 - g. Manufacturer's technical representative.
2. Minimum Agenda:
 - a. Review Contract Document requirements.
 - b. Review approved submittals.
 - c. Review installation procedures, including, but not limited to, following:
 - 1) Manufacturer's methods and procedures.
 - 2) Structural loading limitations of roof deck during and after roofing
 - 3) Preparation of substrates to receive membrane roofing.
 - 4) Substrate conditions and finishes for compliance with requirements, including flatness and fastening.
 - 5) Placement and attachment of roof membrane.
 - 6) Base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect roofing system.
 - 7) Roof accessories and roof-mounted equipment.
 - 8) Repair procedures after roofing installation.
 - d. Review forecasted weather conditions and procedures for coping with unfavorable conditions.
 - e. Tour representative areas of required Work, discuss and evaluate for compliance with Contract Documents, including substrate conditions, surface preparations, sequence of installation and other preparatory Work performed by other installers.
3. Reports: Record discussions, including decisions and agreements reached, and prepare report.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
- B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
- C. Handle and store roofing materials and place equipment in a manner to avoid permanent

deflection of deck.

1.7 PROJECT CONDITIONS

- A. **Weather Limitations:** Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.8 WARRANTY

- A. **Manufacturer's Extended Warranty:** Furnish executed copy of roofing manufacturer's "No Dollar Limit" warranty agreement signed by authorized representative of thermoplastic polyolefin single-ply membrane roofing manufacturer against defective material and faulty workmanship for **20 years from date of substantial completion.**
- B. **Installer's Extended Warranty:** Furnish executed copy of roofing installer's "edge-to-edge" warranty agreement signed by authorized representative of roofing installer against faulty workmanship for **two years from date of substantial completion.**

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Basis of Design:** Contract Documents are based on products specified below to establish a standard of quality. Other acceptable manufacturers with products having equivalent characteristics may be considered, provided deviations are minor and design concept expressed in Contract Documents is not changed, as judged by Architect.
 - 1. **Manufacturer:** GAF.
 - 2. **Specification:** TFANI60.
 - 3. **Polyisocyanurate Board Insulation:** EnergyGuard Polyiso Insulation.
 - 4. **Insulation Adhesive:** OlyBond 500.
 - 5. **Membrane:** EverGuard TPO.
 - 6. **Membrane Adhesive:** 1121 Bonding Adhesive.
- B. **Other Acceptable Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. Carlisle SynTec Incorporated.
 - 2. Firestone Building Products Company.
 - 3. GAF Materials Corporation.
 - 4. Johns Manville International, Inc.

2.2 MATERIALS, GENERAL

- A. **Source Limitations:** Obtain components from same manufacturer as membrane roofing or from source approved by membrane roofing manufacturer.
- B. **Material Compatibility:** Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.

2.3 THERMOPLASTIC POLYOLEFIN ROOFING MEMBRANE

- A. **Fabric-Reinforced Thermoplastic Polyolefin Sheet:** ASTM D 6878, uniform, flexible sheet formed from a thermoplastic polyolefin, internally fabric or scrim reinforced, and as follows:
 - 1. Thickness: 60 mils, nominal.
 - 2. Exposed Face Color: White.
 - 3. Physical Properties:
 - a. Breaking Strength: 225 lbf; ASTM D 751, grab method.
 - b. Elongation at Break: 15 percent; ASTM D 751.
 - c. Tearing Strength: 55 lbf minimum; ASTM D 751, Procedure B.
 - d. Brittleness Point: Minus 22 deg F.

- e. **Ozone Resistance:** No cracks after sample, wrapped around a 3-inch- diameter mandrel, is exposed for 166 hours to a temperature of 104 deg F and an ozone level of 100 pphm; ASTM D 1149.
- f. **Resistance to Heat Aging:** 90 percent minimum retention of breaking strength, elongation at break, and tearing strength after 166 hours at 240 deg F; ASTM D 573.
- g. **Water Absorption:** Less than 4 percent mass change after 166 hours' immersion at 158 deg F; ASTM D 471.
- h. **Linear Dimension Change:** Plus or minus 2 percent; ASTM D 1204.

2.4 AUXILIARY MATERIALS

- A. **General:** Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with membrane roofing.
- B. **Sheet Flashing:** Manufacturer's standard unreinforced thermoplastic polyolefin sheet flashing, 55 mils thick, minimum, of same color as sheet membrane.
- C. **Bonding Adhesive:** Manufacturer's standard solvent-based bonding adhesive for membrane, and solvent-based bonding adhesive for base flashings.
- D. **Metal Termination Bars:** Manufacturer's standard predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch thick; with anchors.
- E. **Fasteners:** Factory-coated steel fasteners and metal or plastic plates meeting corrosion-resistance provisions in FMG 4470, designed for fastening substrate board to roof deck, membrane to substrate, and acceptable to membrane roofing system manufacturer.
- F. **Miscellaneous Accessories:** Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, termination reglets, cover strips, slip sheet, and other accessories.

2.5 INSULATION

- A. **Polyisocyanurate Board Insulation:** ASTM C 1289, Type II, Class 1, Grade 2, felt or glass-fiber mat facer on both major surfaces, maximum 2 inch thickness.
- B. **Cover Board:** ASTM C 1289, high density polyisocyanurate board with felt or glass-fiber mat facer on both major surfaces, 1/2 inch thick.
- C. **Tapered Insulation:** Factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches unless otherwise indicated.

2.6 INSULATION ACCESSORIES

- A. **Fasteners:** Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation to steel deck, and acceptable to roofing system manufacturer.
- B. **Insulation Adhesive:** Insulation manufacturer's recommended cold-applied adhesive formulated to attach roof insulation to concrete deck or to another insulation layer.

2.7 WALKWAYS

- A. **Additional layer of 60 mil roof membrane material.**
 - 1. Color: Gray or contrasting color to primary roofing material.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. **Acceptance of Surfaces and Conditions:**
 - 1. Examine substrates to receive thermoplastic polyolefin roofing and associated work will be applied for compliance with requirements and other conditions affecting performance.
 - 2. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents.
 - 3. Starting work within a particular area will be construed as acceptance of surface conditions.
- B. **Verifications:** Verify following for compliance with requirements and other conditions affecting performance of roofing system:

1. Roof openings and penetrations are in place and curbs are set and braced and that roof drain bodies are securely clamped in place.
2. Wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.

3.2 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
- B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- C. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.

3.3 INSULATION INSTALLATION

- A. Coordinate installing membrane roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.
- B. Comply with membrane roofing system and insulation manufacturer's written instructions for installing roof insulation.
- C. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches in each direction.
- D. **Adhered Insulation at Concrete Deck:** Adhere each layer of insulation and cover board using insulation adhesive.
- E. **Mechanically Fastened at Steel Deck:** Loose lay each layer of insulation and cover board and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.

3.4 ADHERED ROOFING MEMBRANE INSTALLATION

- A. Install roofing membrane over area to receive roofing according to membrane roofing system manufacturer's written instructions. Unroll roofing membrane and allow to relax before installing.
 1. Install sheet according to ASTM D 5036.
 2. Provide additional layer of "sacrificial" membrane at all attachment points for lightning protection or other necessary rooftop systems. Coordinate location and attachment with system provider and include final installation under required warranty.
- B. Start installation of membrane roofing in presence of membrane roofing system manufacturer's technical personnel.
- C. Accurately align membrane roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- D. Bonding Adhesive: Apply water-based bonding adhesive to substrate at rate required by manufacturer and immediately install roofing membrane. Do not apply bonding adhesive to splice area of roofing membrane.
- E. Seams: Clean seam areas, overlap roofing membrane, and hot-air weld side and end laps of roofing membrane according to manufacturer's written instructions to ensure a watertight seam installation.
 1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet membrane.
 2. Verify field strength of seams a minimum of twice daily and repair seam sample areas.
 3. Repair tears, voids, and lapped seams in roofing membrane that does not meet requirements.
- F. Quality: Install roof so there is no ponding of water in any area and roof membrane is smooth with no bubbles or creases.

3.5 BASE FLASHING INSTALLATION

- A. Install sheet flashings and preformed flashing accessories and adhere to substrates according to membrane roofing system manufacturer's written instructions.
- B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate and allow to partially dry. Do not apply bonding adhesive to seam area of flashing.
- C. Flash penetrations and field-formed inside and outside corners with sheet flashing.
- D. Clean seam areas and overlap and firmly roll sheet flashings into the adhesive. Weld side and end laps to ensure a watertight seam installation.

3.6 WALKWAY INSTALLATION

- A. Walkways: Install additional layer of roofing membrane in locations indicated. Adhere walkway according to roofing system manufacturer's written instructions. Coordinate final location of walkways with actual installation of equipment. Verify location with Architect prior to installation.

3.7 FIELD QUALITY CONTROL

- A. **Final Roof Inspection:** Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion and submit report to Architect.
- B. Repair or remove and replace components of membrane roofing system where test results or inspections indicate that they do not comply with specified requirements.

3.8 PROTECTION

- A. Protect membrane roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.

END OF SECTION

SECTION 076200

SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established within General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SECTION INCLUDES:

- A. **Counter flashing.**

1.3 PERFORMANCE REQUIREMENTS

- A. General: Manufacture and install manufactured roof specialties to resist thermally induced movement and exposure to weather without failing, rattling, leaking, and fastener disengagement.
- B. **Thermal Movements:** Provide manufactured roof specialties that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of thermal movements. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. **Temperature Change (Range):** 120 deg F(67 deg C), ambient; 180 deg F(100 deg C), material surfaces.
- C. **Water Infiltration:** Provide manufactured roof specialties that **do not allow water infiltration** to building interior.

1.4 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work. Agenda for meeting shall include review of fabrication, expansion, waterproofing, and dissimilar metals interface.

1.5 SUBMITTALS

- A. **Product Data:** Indicating performance and physical characteristics of products proposed for use.
- B. **Color Charts:** Manufacturer's pre-finished metal color charts. Include all colors and product lines, showing actual physical coating.
- C. **Manufacturer's Instructions:** Printed manufacturer's installation instructions.
- D. **Warranty:** Two copies of water-tightness warranty, and finish coating warranty on pre-finished products for pre-finished products.

1.6 QUALITY ASSURANCE

- A. **Installer Qualifications:** Company specializing in sheet metal flashing work with **10 years minimum experience in similar sized installations.**
- B. **Quality Standard:** Comply with SMACNA Architectural Sheet Metal Manual.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store, handle, and protect products under provisions of Sections 016000.

- B. Stack pre-formed material to prevent twisting, bending, and abrasions, and to provide ventilation.
- C. Prevent contact with materials which may cause discoloration or staining.
- D. Ship pre-coated products with strippable covering.

1.8 WARRANTY

- A. Provide warranties under provisions of Section 017800.
- B. **Provide installer and general contractor 10 year water tightness guarantee** beginning at substantial completion including repair or replacement of defective materials and workmanship.

PART 2 - PRODUCTS

2.1 SHEET MATERIALS

- A. **Aluminum (all exposed and unexposed flashings except at concealed gutter):** ASTM B209, 5005 alloy, temper as required for intended application (15 KSI minimum), **thickness as recommended in Specifications for Aluminum Sheet Metal Work in Building Construction** for intended purposes. Manufacturer at Contractor's option.
 - 1. **Exposed Coil-Coated Finish:**
 - a. **Two-Coat Fluoropolymer:** AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - b. **Color:** As indicated in Section 008900 - Finish Selection Summary.
- B. **Copper Sheet (at concealed gutters):** ASTM B 370, cold-rolled copper sheet, H00 or H01 temper.
 - 2. **Exposed Finish:** Mill.
 - 3. **Thickness:** 32 oz./sq. ft.
- C. **Sealant:** One part, non-sag polyurethane.

2.2 ACCESSORIES

- A. **Fasteners for Aluminum:**
 - 1. Nails: AISI Series 300 for stainless and galvanized steel; aluminum for aluminum sheets. Use annular ring shank type, No. 12 gage or larger to suit application, of sufficient length to penetrate backing material at least 7/8 inch.
 - 2. Screws and Bolts: AISI Series 300 for stainless and galvanized steel; and aluminum for aluminum sheets; of sufficient size and length to sustain imposed stresses.
- B. **Fasteners for Copper:** Copper, hardware bronze or passivated Series 300 stainless steel.
- C. **Protective Back Paint:** Zinc chromate alkyd.
- D. **Sealants:** One component polyurethane, non-sagging, sealant as specified in Section 079200.

2.3 FABRICATION

- A. Form sections true to shape, accurate in size, square, free from distortion and defects, to profiles indicated **in accordance with current edition of SMACNA Architectural Sheet Metal Manual.**
- B. Form pieces in longest practical lengths.
- C. Hem exposed flashings on underside 1/2 inch; miter and seam corners.
- D. Form materials which are typically concealed from view by the public with lap seams.
- E. **Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer.**
- F. Fabricate corners from one place with minimum 18 inch long legs; solder for rigidity or seal with sealant if approved by Architect.

- G. Fabricate vertical faces with bottom edge formed outward 1/8 inch and hemmed to form drip.
- H. Fabricate flashings to allow toe to extend per Drawings or a minimum of 2 inches over wall surfaces.
- I. Fabricate as much as possible in shop with machinery to eliminate as much hand tooling on the job as possible. Shop fabricate to allow for adjustments in the field for proper anchoring and joining.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that surfaces and conditions are ready to receive work of this section. Notify General Contractor of any existing conditions which will adversely affect execution. Beginning of execution will constitute acceptance of existing conditions.
- B. Verify roof openings, pipes, sleeves, and vents through roof are solidly set, and nailing strips located.
- C. Verify membrane termination and base flashings are in place, sealed, and secure.

3.2 PREPARATION

- A. Field measure site conditions prior to fabricating work.

3.3 INSTALLATION

- A. Install using skilled workmen in accordance with manufacturer's printed instruction and recommendations.
- B. Conform to drawing details included in manuals published by SMACNA, AA, and NRCA.
- C. **Secure flashings in place using concealed fasteners.** Use exposed fasteners only in locations approved by Architect and never in plain view.
- D. Fit flashings tight in place. Make corners square, surfaces true and straight in planes, and lines accurate to profiles.
- E. Seal metal joints watertight at gutters, scuppers, and downspouts, leaders and conductor heads.
- F. **Provide electrolytic separation between dissimilar metals with protective back paint.**
- G. **Seal joints** as shown and as required for watertight construction.
 - 1. **Solder all joints at copper installations.**
 - 2. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1 inch (25 mm) into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is moderate, between 40 and 70 deg F (4 and 21 deg C), set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F (4 deg C).
- H. **Install expansion joints at frequency as recommended in SMACNA Architectural Sheet Metal Manual. Do not fasten seams such that movement is restricted.** Coordinate expansion joint locations with joints in adjacent materials. Install building expansion joints where indicated.

3.4 QUALITY CONTROL

- A. Install surfaces flat such that from normal viewing distances, no waviness or oil canning is visible.

3.5 CLEANING

- A. Perform final cleaning under provisions of Section 017800.

3.6 PROTECTION

- A. Protect finished installation under provisions of Section 015000.

END OF SECTION

SECTION 077100

MANUFACTURED ROOF SPECIALTIES

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.
- 1.2 SUMMARY
 - A. **Section Includes:**
 - 1. **Roof edge drainage systems.**
 - 2. **Prefinished metal Copings.**
 - 3. **Collection boxes.**
- 1.3 **PERFORMANCE REQUIREMENTS**
 - A. General: Manufacture and install manufactured roof specialties to resist thermally induced movement and exposure to weather without failing, rattling, leaking, and fastener disengagement.
 - B. **SPRI Wind Design Standard:** Manufacture and install copings and roof-edge flashings tested according to SPRI ES-1 and capable of resisting the following design pressures:
 - 1. Design Pressure: As indicated - refer structural.
 - C. **Thermal Movements:** Provide manufactured roof specialties that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of thermal movements. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
 - D. **Water Infiltration:** Provide manufactured roof specialties that **do not allow water infiltration** to building interior.
- 1.4 SUBMITTALS
 - A. General: Submit in accordance with Section 013300.
 - B. **Product Data:** For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - C. **Shop Drawings:** Show layouts of manufactured roof specialties, including plans and elevations. Identify factory- vs. field-assembled work. Include the following:
 - 1. Details for fastening, joining, supporting, and anchoring manufactured roof specialties including fasteners, clips, cleats, and attachments to adjoining work.
 - 2. Details for expansion and contraction.
 - D. **Fabrication Samples:** For copings made from 12 inch lengths of full-size components including fasteners, cover joints, accessories, and attachments.
 - E. **Product Test Reports:** Based on evaluation of comprehensive tests performed by a qualified testing agency, verifying compliance of copings with performance requirements.
- 1.5 COORDINATION
 - A. Coordinate installation of manufactured roof specialties with interfacing and adjoining construction to provide a leakproof, secure, and noncorrosive installation.

PART 2 - PRODUCTS

- 2.1 **EXPOSED METALS**
 - A. **Aluminum Sheet:** ASTM B 209, alloy as standard with manufacturer for finish required, with

temper to suit forming operations and performance required.

1. **Surface:** Smooth, flat finish.
2. **Exposed Coil-Coated Finishes:** Prepainted by the coil-coating process to comply with ASTM A 755. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. **Two-Coat Fluoropolymer:** AAMA 621. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.
 - 1) **Color:** Refer to Section 008900 – Finish Selection Summary.

2.2 CONCEALED METALS

- A. **Aluminum Sheet:** ASTM B 209, alloy and temper recommended by manufacturer for type of use and structural performance indicated, mill finished.

2.3 MISCELLANEOUS MATERIALS

- A. General: Provide materials and types of fasteners, protective coatings, separators, sealants, and other miscellaneous items required by manufacturer for a complete installation.
- B. **Fasteners:** Manufacturer's recommended fasteners, suitable for application and designed to withstand design loads.
 1. Exposed Penetrating Fasteners: Gasketed screws with hex washer heads matching color of sheet metal.
- C. **Sealing Tape:** Pressure-sensitive, 100 percent solids, polyisobutylene compound sealing tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape.
- D. **Elastomeric Sealant:** ASTM C 920, elastomeric polyurethane polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
- E. **Bituminous Coating:** Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.4 ROOF-EDGE DRAINAGE SYSTEMS

- A. **Gutters:** Manufactured in uniform section lengths not exceeding 12 feet, with matching corner units, ends, outlet tubes, and other accessories. Elevate back edge at least 1 inch above front edge. Furnish flat-stock gutter straps, gutter brackets, expansion joints, and expansion-joint covers fabricated from same metal as gutters.
 1. Material: 22 ga. copper.
 2. **Gutter Profile:** Style as indicated on Drawings, and according to SMACNA's "Architectural Sheet Metal Manual."
 3. **Corners:** Welded.
 4. **Gutter Supports:** Manufacturer's standard supports as selected by Architect with finish matching the gutters.
 5. **Gutter Accessories:** Continuous hinged leaf guard of solid metal designed to shed leaves.
- B. **Downspouts:** 6" X 6" 24 ga. copper rectangular, or larger as required, prefinished complete with mitered elbows, manufactured from the exposed coil-coated metal. Furnish with metal hangers, from same material as downspouts and anchors.
 1. Provide all parts necessary to provide sealed connections to underground storm drainage system.
- C. **Collection Boxes:** Manufactured collection boxes, each with flanged back and stiffened top edge and of dimensions and shape indicated, complete with outlet tube that nests into upper end of downspout, exterior flange trim, and built-in overflow; 24 ga copper.
- D. **Concrete Splash Pans:** Precast concrete with groove to direct water flow.

2.5 COPINGS

- A. **Copings:** Manufactured standard system consisting of formed-metal coping cap in section

lengths not exceeding 12 feet, concealed anchorage, concealed splice plates with same finish as coping caps, mitered corner units, and end cap units.

1. **Available Products:**

a. **Pac-Tite Tapered Coping** by Pac-Clad/Peterson Aluminum **with 20 year warranty; FM 1-90 certification.** Meeting ANSI/SPRI ES-1 standard test.

2. **Material:** Formed aluminum, thickness as required to meet performance requirements.

a. **Finish:** 2-coat fluoropolymer, refer to Section 008900 for final color selection.

3. **Corners: Continuously welded.**

4. **Snap-on Coping Anchor Plates:** Concealed, galvanized steel sheet, 12 inches wide, 0.028 inch thick, with integral cleats and stainless steel fasteners.

B. **Self-Adhering, High-Temperature Sheet:** Minimum 30 to 40 mils thick, consisting of slip-resisting polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.

1. Thermal Stability: ASTM D 1970; stable after testing at 240 deg F.

2. Low-Temperature Flexibility: ASTM D 1970; passes after testing at minus 20 deg F.

3. **Basis of Design:** Henry Company; Blueskin PE200 HT.

2.6 ROOF EDGES AND GRAVEL STOPS

A. Roof Edges and Gravel Stops: Manufactured standard system consisting of formed-metal profiles indicated in section lengths not exceeding 12 feet, concealed anchorage, concealed splice plates with same finish as roof edges and gravel stops, and mitered corner units.

1. **Material:** Formed aluminum, thickness as required to meet performance requirements.

a. **Finish:** 2-coat fluoropolymer, refer to Section 008900 for final color selection.

2. **At Clay Tile Roofing:** 22 ga. copper.

3. At dissimilar materials, provide bituminous paint.

2.7 FINISHES

A. Refer to Drawings and Section 008900 - Finish Selection Summary.

B. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

C. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

D. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. **Examine substrates, areas, and conditions**, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of work.

1. Examine walls, roof edges, and parapets for suitable conditions for manufactured roof specialties.

2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.

3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install manufactured roof specialties according to manufacturer's written instructions. Anchor manufactured roof specialties securely in place and capable of resisting forces specified in performance requirements. Use fasteners, separators, sealants, and other miscellaneous items as required to complete manufactured roof specialty systems.

1. Install manufactured roof specialties with provisions for thermal and structural movement.
 2. Torch cutting of manufactured roof specialties is not permitted.
- B. **Metal Protection:** Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
1. **Underlayment:** Where installing exposed-to-view components of manufactured roof specialties, install a layer of thru-wall flashing underlayment and adhere to substrate.
- C. Install manufactured roof specialties level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil-canning, buckling, or tool marks.
- D. Install manufactured roof specialties to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before manufacture.
- E. **Expansion Provisions:** Provide for thermal expansion of exposed manufactured roof specialties. Space movement joints at a **maximum of 12 feet o.c.** with no unplanned joints within 18 inches of corners or intersections.
- F. **Fasteners:** Use fasteners of type and size recommended by manufacturer but of sizes that will penetrate substrate not less than 1-1/4 inches for nails and not less than 3/4 inch for wood screws.
- G. Seal joints with elastomeric sealant as required by manufacturer of roofing specialties.
- 3.3 **ROOF-EDGE DRAINAGE-SYSTEM INSTALLATION**
- A. General: Install components to produce a complete roof-edge drainage system according to manufacturer's written instructions. Coordinate installation of roof perimeter flashing with installation of roof-edge drainage system.
- B. **Gutters:** Join and seal gutter lengths. Allow for thermal expansion. Attach gutters to firmly anchored gutter supports spaced not more than 24 inches apart. Attach ends with rivets and seal with sealant to make watertight. Slope to downspouts.
1. Install gutter with expansion joints at locations indicated but not exceeding 50 feet apart. Install expansion joint caps.
 2. Install continuous leaf guards on gutters with non-corrosive fasteners, removable for cleaning gutters.
- C. **Downspouts:** Join sections with manufacturer's standard telescoping joints. Provide hangers with fasteners designed to hold downspouts securely to walls and 1 inch away from walls; locate fasteners at top and bottom and at approximately 60 inches o.c.
1. Provide elbows at base of downspout to direct water away from building.
 2. **Hold downspouts tight against building envelope. Cut cast stone trim and other appurtenances to allow gutter to remain vertical without offsets.**
- D. **Collection Boxes:** Anchor securely to wall with elevation of conductor top edge 1 inch below scupper discharge.
- E. **Splash Pans:** Install where downspouts discharge at grade.
- 3.4 **COPING INSTALLATION**
- A. Install cleats, anchor plates, and other anchoring and attachment accessories and devices with concealed fasteners.
- B. **Anchor copings to resist uplift and outward forces according to performance requirements.**
1. Interlock front and back leg drip edges of snap-on coping cap into cleated anchor plates anchored to substrate at manufacturer's recommended spacing.
- 3.5 **CLEANING AND PROTECTION**
- A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
- B. Remove temporary protective coverings and strippable films as manufactured roof specialties are installed. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain in a clean condition during construction.

- C. Replace manufactured roof specialties that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 077200
ROOF ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. **Section Includes:**
 - 1. **Equipment supports (roof curbs).**
 - 2. **Roof hatches.**
 - 3. **Pipe supports.**

1.3 PERFORMANCE REQUIREMENTS

- A. **General Performance:** Roof accessories shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
- B. **Design Wind Loads:** As indicated on structural drawings or as otherwise determined using design wind loads applicable to Project from basic wind speed indicated in miles per hour, according to ASCE 7, Section 6.5, "Method 2-Analytical Procedure."

1.4 SUBMITTALS

- A. **Product Data:** For each type of roof accessory indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. **Shop Drawings:** For roof accessories. Include plans, elevations, keyed details, and attachments to other work. Indicate dimensions, loadings, and special conditions. Distinguish between plant- and field-assembled work.
- C. **Samples:** For each exposed product and for each color and texture specified, prepared on Samples of size to adequately show color.
- D. **Operation and Maintenance Data:** For roof accessories to include in operation and maintenance manuals. Provide at project close-out.
- E. **Warranty:** Sample of special warranty.

1.5 COORDINATION

- A. Coordinate layout and installation of roof accessories with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and non-corrosive installation.
- B. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.

1.6 WARRANTY

- A. **Special Warranty on Painted Finishes:** Manufacturer's standard form in which manufacturer agrees to repair finishes or replace roof accessories that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. **Fluoropolymer Finish:** Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. **Finish Warranty Period:** **20 years** from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 METAL MATERIALS

- A. **Aluminum-Zinc Alloy-Coated Steel Sheet:** ASTM A 792/A 792M, AZ50 coated.
 - 1. **Exposed Coil-Coated Finish:** Prepainted by the coil-coating process to comply with ASTM A 755/A 755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. **Two-Coat Fluoropolymer Finish:** AAMA 621. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.
 - 2. **Concealed Finish:** Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil.
- B. **Aluminum Extrusions and Tubes:** ASTM B 221, manufacturer's standard alloy and temper for type of use, finished to match assembly where used, otherwise mill finished.
- C. **Stainless-Steel Sheet and Shapes:** ASTM A 240/A 240M or ASTM A 666, Type 304.
- D. **Steel Shapes:** ASTM A 36/A 36M, hot-dip galvanized according to ASTM A 123/A 123M unless otherwise indicated.
- E. **Galvanized-Steel Tube:** ASTM A 500, round tube, hot-dip galvanized according to ASTM A 123/A 123M.
- F. **Steel Pipe:** ASTM A 53/A 53M, galvanized.

2.2 MISCELLANEOUS MATERIALS

- A. General: Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.
- B. **Glass-Fiber Board Insulation:** ASTM C 726, thickness as indicated.
- C. **Wood Nailers:** Softwood lumber, pressure treated with waterborne preservatives for aboveground use, acceptable to authorities having jurisdiction, containing no arsenic or chromium, and complying with AWPA C2; not less than 1-1/2 inches thick. Provide fire retardant treated where required by code.
- D. **Underlayment:**
 - 1. **Basis of Design:** Henry Bluskin PE200HT for warranty reasons with air barrier.
- E. **Fasteners:** Roof accessory manufacturer's recommended fasteners suitable for application and metals being fastened. Match finish of exposed fasteners with finish of material being fastened. Provide non-removable fastener heads to exterior exposed fasteners. Furnish the following unless otherwise indicated:
 - 1. Fasteners for Zinc-Coated or Aluminum-Zinc Alloy-Coated Steel: Series 300 stainless steel or hot-dip zinc-coated steel according to ASTM A 153/A 153M or ASTM F 2329.
 - 2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
 - 3. Fasteners for Copper Sheet: Copper, hardware bronze, or passivated Series 300 stainless steel.
 - 4. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.
- F. **Elastomeric Sealant:** ASTM C 920, elastomeric silicone polymer sealant as recommended by roof accessory manufacturer for installation indicated; low modulus; of type, grade, class, and use classifications required to seal joints and remain watertight.

2.3 EQUIPMENT SUPPORTS (ROOF CURBS)

- A. **Equipment Supports:** Internally reinforced metal equipment supports capable of supporting superimposed live and dead loads, including equipment loads and other construction indicated on Drawings; with welded or mechanically fastened and sealed corner joints, integral metal cant, and integrally formed deck-mounting flange at perimeter bottom.
 - 1. **Acceptable Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Curbs Plus, Inc.

- b. Custom Solution Roof and Metal Products.
 - c. Pate Company (The).
 - d. Thybar Corporation.
 - B. **Size:** Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported.
 - C. **Material:** 0.050 inch thick aluminum.
 - 1. **Finish:** Two-coat fluoropolymer.
 - 2. **Color:** As selected by Architect from manufacturer's full range.
 - D. **Construction:**
 - 1. **Insulation:** Factory insulated with 1-1/2-inch- thick glass-fiber board insulation.
 - 2. **Liner:** Same material as equipment support, of manufacturer's standard thickness and finish.
 - 3. **Factory-installed continuous wood nailers** 3-1/2 inches wide at tops of equipment supports.
 - 4. **Metal Counterflashing:** Manufacturer's standard, removable, fabricated of same metal and finish as equipment support.
 - 5. Fabricate equipment supports to minimum height of 12 inches unless otherwise indicated.
 - 6. **Security Grille:** Provide where indicated.
- 2.4 **ROOF HATCH (NOT USED)**
- A. **Roof Hatches:** Aluminum roof-hatch units with lids and insulated double-walled curbs, welded or mechanically fastened and sealed corner joints, continuous lid-to-curb counterflashing and weathertight perimeter gasketing, stepped integral metal cant raised the thickness of roof insulation, and integrally formed deck-mounting flange at perimeter bottom.
 - 1. **Acceptable Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Babcock-Davis.
 - b. Bilco Company (The).
 - c. J. L. Industries, Inc.
 - d. Milcor Inc.; Commercial Products Group of Hart & Cooley, Inc.
 - e. Nystrom.
 - f. O'Keeffe's Inc.
 - B. **Type and Size:** Single-leaf, 36" X 72"; one total count; verify size with Drawings and Architect prior to ordering.
 - C. **Loads:** Minimum 40-lbf/sq. ft. external live load and 20-lbf/sq. ft. internal uplift load.
 - D. **Hatch Material:** 0.090 inch thick aluminum.
 - 1. **Finish:** Mill finish.
 - E. **Construction:**
 - 1. **Insulation:** Glass-fiber board.
 - 2. **Curb Liner:** Manufacturer's standard, of same material and finish as metal curb.
 - 3. On ribbed or fluted metal roofs, form flange at perimeter bottom to conform to roof profile.
 - 4. Fabricate curbs to **minimum height of 12 inches above roof surface** unless otherwise indicated.
 - F. **Hardware:** Stainless steel spring latch with turn handles, butt- or pintle-type hinge system, and padlock hasps inside and outside.
 - 1. Provide two-point latch on lids larger than 84 inches.
 - G. **Guardrail System:** Roof hatch manufacturer's standard guardrail device for attachment to hatch. Required for all roof hatches located within 10 feet of roof edge.
 - 1. Height: 42 inches above finished roof deck
 - H. **Ladder-Assist Post:** Roof-hatch manufacturer's standard device for attachment to roof-access ladder.
 - 1. **Operation:** Post locks in place on full extension; release mechanism returns post to closed position.

2. **Height:** 42 inches above finished roof deck.
3. **Material:** Aluminum.
4. **Post:** 1-5/8-inch- diameter pipe.
5. **Finish:** Mill.

2.5 **PIPE SUPPORTS**

A. **Pipe Supports:**

1. **Acceptable Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Portable Pipe Hangers Inc.
2. **Pipe Support Height:** As indicated on Drawings.
3. **Roller Assembly:** With stainless-steel roller and high density polypropylene base plate, sized for supported pipes.

2.6 **GENERAL FINISH REQUIREMENTS**

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 **EXAMINATION**

- A. **Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.**
- B. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
- C. Verify dimensions of roof openings for roof accessories.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 **INSTALLATION**

- A. General: Install roof accessories according to manufacturer's written instructions.
 1. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.
 2. Anchor roof accessories securely in place so they are capable of resisting indicated loads.
 3. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.
 4. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.
- B. **Metal Protection:** Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
 1. Underlayment: Where installing roof accessories directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slipsheet, or install a course of polyethylene sheet.
- C. **Equipment Support (Roof Curb) Installation:** Install equipment supports so top surfaces are level with each other.
- D. **Roof-Hatch Installation:**
 1. Install roof hatch so top surface of hatch curb is level.
 2. Verify that roof hatch operates properly. Clean, lubricate, and adjust operating mechanism and hardware.
 3. Attach ladder-assist post according to manufacturer's written instructions.
- E. **Pipe Support Installation:** Install pipe supports so top surfaces are in contact with and provide

- equally distributed support along length of supported item.
- F. Seal joints with elastomeric sealant as required by roof accessory manufacturer.

3.3 REPAIR AND CLEANING

- A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing according to ASTM A 780.
- B. Touch up factory-primed surfaces with compatible primer ready for field painting according to Division 09 painting Sections.
- C. Clean exposed surfaces according to manufacturer's written instructions.
- D. Clean off excess sealants.
- E. Replace roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

3.4 SCHEDULE

- A. **Roof Hatch (Not Used):** Provide at locations indicated on the Drawings, but not less than at location to be determined by Architect.
- B. **Pipe Supports:** Provide at 3'-0" o.c. under all exposed roof piping and as otherwise indicated on the Drawings or indicated on MEP Drawings.
- C. **Equipment Supports (Roof Curbs):** Provide at all mechanical equipment penetrations on roof, as otherwise indicated on the Drawings, and as indicated on the MEP Drawings.

END OF SECTION

SECTION 078100

APPLIED FIREPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. **Section Includes:** Spray Applied Fire Resistive Materials (SFRMs) applied to surfaces that are concealed from view behind other construction when the Work is completed.

1.3 SUBMITTALS

- A. **Product Data:** For each type of product indicated.
- B. **Shop Drawings:** Show extent of sprayed fire-resistive material for each construction and fire-resistance rating, applicable fire-resistive design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction, and minimum thicknesses.
- C. **Field quality-control** test and special inspection reports.

1.4 QUALITY ASSURANCE

- A. **Installer Qualifications:** A qualified installer approved by SFRM manufacturer to install manufacturer's products. A manufacturer's willingness to sell its SFRM to Contractor or to an installer engaged by Contractor does not in itself confer qualification on the buyer.
- B. **SFRM Testing:** By a qualified testing and inspecting agency engaged by Contractor or manufacturer to test for compliance with specified requirements for performance and test methods.
 - 1. SFRMs are randomly selected for testing from bags bearing the applicable classification marking of UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
 - 2. Testing is performed on specimens of SFRMs that comply with laboratory testing requirements specified in Part 2 and are otherwise identical to installed fire-resistive materials, including application of accelerant, sealers, topcoats, tamping, troweling, rolling, and water overspray, if any of these are used in final application.
 - 3. Testing is performed on specimens whose application the independent testing and inspecting agency witnessed during preparation and conditioning. Include in test reports a full description of preparation and conditioning of laboratory test specimens.
- C. **Compatibility and Adhesion Testing:** Engage a qualified testing and inspecting agency to test for compliance with requirements for specified performance and test methods.
 - 1. Test for bond per ASTM E 736 and requirements in UL's "Fire Resistance Directory" for coating materials. Provide bond strength indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
 - 2. Verify that manufacturer, through its own laboratory testing or field experience, has not found primers or coatings to be incompatible with SFRM.
- D. **Fire-Test-Response Characteristics:** Where indicated, provide products identical to those tested for fire resistance per ASTM E 119 by a testing agency acceptable to authorities having jurisdiction.
 - 1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another testing and inspecting agency.
 - 2. Identify products with appropriate markings of applicable testing and inspecting agency.
- E. **Provide products containing no detectable asbestos as determined according to the method specified in 40 CFR 763, Subpart E, Appendix E, Section 1, "Polarized Light Microscopy."**

1.5 PROJECT CONDITIONS

- A. **Environmental Limitations:** Do not apply SFRM when ambient or substrate temperature is 40 deg F or lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.
- B. **Ventilation:** Ventilate building spaces during and after application of SFRM. Use natural means or, if they are inadequate, forced-air circulation until fire-resistive material dries thoroughly.
- C. Sequence and coordinate application of SFRM with other related work specified in other Sections to comply with the following requirements:
 - 1. Provide temporary enclosure as required to confine spraying operations and protect the environment.
 - 2. Provide temporary enclosures for applications to prevent deterioration of fire-resistive material due to exposure to weather and to unfavorable ambient conditions for humidity, temperature, and ventilation.
 - 3. Avoid unnecessary exposure of fire-resistive material to abrasion and other damage likely to occur during construction operations subsequent to its application.
 - 4. Do not apply fire-resistive material to metal roof deck substrates until concrete topping, if any, has been completed. For metal roof decks without concrete topping, do not apply fire-resistive material to metal roof deck substrates until roofing has been completed; prohibit roof traffic during application and drying of fire-resistive material.
 - 5. Do not apply fire-resistive material to metal floor deck substrates until concrete topping has been completed.
 - 6. Do not begin applying fire-resistive material until clips, hangers, supports, sleeves, and other items penetrating fire protection are in place.
 - 7. Defer installing ducts, piping, and other items that would interfere with applying fire-resistive material until application of fire protection is completed.
 - 8. Do not install enclosing or concealing construction until after fire-resistive material has been applied, inspected, and tested and corrections have been made to defective applications.

1.6 WARRANTY

- A. **Special Warranty:** Manufacturer's standard form, signed by Contractor and by Installer, in which manufacturer agrees to repair or replace SFRMs that fail in materials or workmanship within specified warranty period.
 - 1. **Failures** include, but are not limited to, the following:
 - a. Cracking, flaking, spalling, or eroding in excess of specified requirements; peeling; or delaminating of SFRM from substrates.
 - b. Not covered under the warranty are failures due to damage by occupants and Owner's maintenance personnel, exposure to environmental conditions other than those investigated and approved during fire-response testing, and other causes not reasonably foreseeable under conditions of normal use.
 - 2. **Warranty Period:** **Five years** from date of substantial completion.

PART 2 - PRODUCTS

2.1 CONCEALED SFRM

- A. **Acceptable Products:**
 - 1. GCP Applied Technologies; Monokote MK-6 Series.
 - 2. Carbolite Company; RPM International; AD Southwest Fireproofing Type 5GP.
 - 3. Isolatek International, Inc; Cafco 300.
- B. **Material Composition:** Manufacturer's standard product, as follows:
 - 1. **Concealed Sprayed-Fiber Fire-Resistive Material:** Factory-mixed, dry formulation of inorganic binders, mineral fibers, fillers, and additives conveyed in a dry state by pneumatic equipment and mixed with water at spray nozzle to form a damp, as-applied product.

- C. **Physical Properties:** Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:
1. **Dry Density: 15 lb/cu. ft. for average and individual densities**, or greater if required to attain fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method."
 2. **Thickness:** Minimum average thickness required for fire-resistance design indicated according to the following criteria, but not less than 0.375 inch, per ASTM E 605:
 - a. Where the referenced fire-resistance design lists a thickness of 1 inch or more, the minimum allowable individual thickness of SFRM is the design thickness minus 0.25 inch.
 - b. Where the referenced fire-resistance design lists a thickness of less than 1 inch but more than 0.375 inch, the minimum allowable individual thickness of SFRM is the greater of 0.375 inch or 75 percent of the design thickness.
 - c. No reduction in average thickness is permitted for those fire-resistance designs whose fire-resistance ratings were established at densities of less than 15 lb/cu. ft.
 3. **Bond Strength:** 150 lbf/sq. ft. minimum per ASTM E 736 based on laboratory testing of 0.75-inch minimum thickness of SFRM.
 4. **Compressive Strength:** 5.21 lbf/sq. in. minimum per ASTM E 761. Minimum thickness of SFRM tested shall be 0.75 inch and minimum dry density shall be as specified but not less than 15 lb/cu. ft.
 5. **Corrosion Resistance:** No evidence of corrosion per ASTM E 937.
 6. **Deflection:** No cracking, spalling, or delamination per ASTM E 759.
 7. **Effect of Impact on Bonding:** No cracking, spalling, or delamination per ASTM E 760.
 8. **Air Erosion:** Maximum weight loss of 0.025 g/sq. ft. in 24 hours per ASTM E 859. For laboratory tests, minimum thickness of SFRM is 0.75 inch, maximum dry density is 15 lb/cu. ft., test specimens are not prepurged by mechanically induced air velocities, and tests are terminated after 24 hours.
 9. **Fire-Test-Response Characteristics:** Provide SFRM with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - a. Flame-Spread Index: 0.
 - b. Smoke-Developed Index: 0.
 10. **Fungal Resistance:** No observed growth on specimens per ASTM G 21.

2.2 AUXILIARY FIRE-RESISTIVE MATERIALS

- A. General: Provide auxiliary fire-resistive materials that are compatible with SFRM and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.
- B. **Substrate Primers:** For use on each substrate and with each sprayed fire-resistive product, provide primer that complies with one or more of the following requirements:
1. Primer's bond strength complies with requirements specified in UL's "Fire Resistance Directory" for coating materials based on a series of bond tests per ASTM E 736.
 2. Primer is identical to those used in assemblies tested for fire-test-response characteristics of SFRM per ASTM E 119 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of work. A substrate is in satisfactory condition if it complies with the following:
1. Substrates comply with requirements in the Section where the substrate and related materials and construction are specified.

2. Substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, incompatible paints, incompatible encapsulants, or other foreign substances capable of impairing bond of fire-resistive materials with substrates under conditions of normal use or fire exposure.
3. Objects penetrating fire-resistive material, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
4. Substrates are not obstructed by ducts, piping, equipment, and other suspended construction that will interfere with applying fire-resistive material.
5. Proceed with installation only after unsatisfactory conditions have been corrected.
- B. Verify that concrete work on steel deck has been completed.
- C. Verify that roof construction, installation of roof-top HVAC equipment, and other related work are completed.
- D. **Conduct tests according to fire-resistive material manufacturer's written recommendations to verify that substrates are free of substances capable of interfering with bond.**
- E. Cover other work subject to damage from fallout or overspray of fire-resistive materials during application.
- F. Clean substrates of substances that could impair bond of fire-resistive material, including dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, and incompatible primers, paints, and encapsulants.
- G. **Prime substrates where recommended in writing by SFRM manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive SFRM.**
- H. Coat substrates with bonding adhesive before applying fire-resistive material where required to achieve fire-resistance rating or as recommended in writing by SFRM manufacturer for material and application indicated.
- I. **Extend fire-resistive material in full thickness over entire area of each substrate to be protected.** Unless otherwise recommended in writing by SFRM manufacturer, install body of fire-resistive covering in a single course.
- J. Spray apply fire-resistive materials to maximum extent possible. Following the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by SFRM manufacturer.
- K. Where sealers are used, apply products that are tinted to differentiate them from SFRM over which they are applied.
- L. Apply concealed SFRM in thicknesses and densities not less than those required to achieve fire-resistance ratings designated for each condition, but apply in greater thicknesses and densities if specified in Part 2 "Concealed SFRM" Article.
- M. Cure concealed SFRM according to product manufacturer's written recommendations.
- N. Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.
- O. Repair or replace work that has not successfully protected steel.

3.2 FIELD QUALITY CONTROL

- A. **Special Inspections:** Engage a qualified special inspector to perform the following special inspections and prepare reports:
 1. SFRM.
 2. Intumescent Coating
- B. **Testing Agency:** Engage a qualified testing agency to perform tests and inspections and prepare test reports.
 1. Testing and inspecting agency will interpret tests and state in each report whether tested work complies with or deviates from requirements.
- C. **Tests and Inspections:** Testing and inspecting of completed applications of SFRM shall take place in successive stages, in areas of extent and using methods as follows. **Do not proceed with application of SFRM for the next area until test results for previously completed**

applications of SFRM show compliance with requirements. Tested values must equal or exceed values indicated and required for approved fire-resistance design.

1. **Thickness for Floor, Roof, and Wall Assemblies:** For each 1000-sq. ft. area, or partial area, on each floor, from the average of 4 measurements from a 144-sq. in. sample area, with sample width of not less than 6 inches per ASTM E 605.
 2. **Thickness for Structural Frame Members:** From a sample of 25 percent of structural members per floor, taking 9 measurements at a single cross section for structural frame beams or girders, 7 measurements of a single cross section for joists and trusses, and 12 measurements of a single cross section for columns per ASTM E 605.
 3. **Density for Floors, Roofs, Walls, and Structural Frame Members:** At frequency and from sample size indicated for determining thickness of each type of construction and structural framing member, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method."
 4. **Bond Strength for Floors, Roofs, Walls, and Structural Framing Members:** For each 10,000-sq. ft. area, or partial area, on each floor, cohesion and adhesion from one sample of size indicated for determining thickness of each type of construction and structural framing member, per ASTM E 736.
 - a. Field test SFRM that is applied to flanges of wide-flange, structural-steel members on surfaces matching those that will exist for remainder of steel receiving fire-resistive material.
 - b. If surfaces of structural steel receiving SFRM are primed or otherwise painted for coating materials, perform series of bond tests specified in UL's "Fire Resistance Directory." Provide bond strength indicated in referenced UL fire-resistance criteria, but not less than 150 lbf/sq. ft. minimum per ASTM E 736.
 5. If testing finds applications of SFRM are not in compliance with requirements, testing and inspecting agency will perform additional random testing to determine extent of noncompliance.
- D. Remove and replace applications of SFRM that do not pass tests and inspections for cohesion and adhesion, for density, or for both and retest as specified above.
- E. Apply additional SFRM, per manufacturer's written instructions, where test results indicate that thickness does not comply with specified requirements, and retest as specified above.

3.3 SCHEDULE

- A. Provide thickness as required to achieve 1 hour fire rating on all steel structure not exposed to view. Confirm final locations with Architect.

END OF SECTION

SECTION 078400

FIRESTOPPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established within General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SECTION INCLUDES

- A. **Installation of firestopping materials at openings, penetrations, and voids in, and at periphery of fire-rated construction**

1.3 DEFINITIONS

- A. **Firestopping:** A material, or combination of materials, to retain the integrity of time-rated construction by maintaining an effective barrier against the spread of flame, smoke, and gasses **used in specific locations as follows:**
 - 1. Ducts, cables, conduits, and piping penetrations through fire rated floor construction and through fire rated partitions.
 - 2. Openings between and at edges of floor slabs (i.e., expansion joints)
 - 3. Penetrations of vertical shafts
 - 4. Other locations where specifically shown on the drawings, where specified or required by codes.

1.4 QUALITY ASSURANCE

- A. Submit the following in accordance with Section 013300.
 - 1. **Product data, letter of certification, or certified laboratory test report** that the material or combination of materials meet the requirements specified in ASTM E814 and UL 1479 and are so classified in UL's Building Materials Directory.
- B. Materials shall meet and be acceptable for applicable building code.
- C. Materials shall meet the requirements of NFPA 101 - LIFE Safety Code and NFPA 70 - National Electrical Code.

1.5 SUBMITTALS

- A. Submit shop drawings, product data, samples, certificates, and manufacturer's installation instructions under provisions of Section 013300.
- B. **Submit manufacturer's product data** for all materials and prefabricated devices, providing descriptions sufficient for identification at the job site. Include manufacturer's instructions for installation.
- C. **Submit shop drawings** showing proposed material, reinforcement, anchorage, fastenings, and method of installation. Construction details shall accurately reflect actual job conditions.
- D. **Submit actual samples** of each product proposed for use, in its installed state.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products to site under provisions of Section 016000.
- B. Deliver in original unopened containers or packages bearing manufacturers' name, brand designation, and product description.
- C. Store materials under cover and protected from damage under provisions of Section 016000.
- D. Do not use damaged materials.

1.7 SEQUENCING/SCHEDULING

- A. Coordinate the work of this Section with work performed under other Sections of the Project Manual.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. To the extent products of the following manufacturers meet or exceed specified requirements, the following are acceptable.
 - 1. The Rectorseal Corp., Houston, TX
 - 2. 3M Fire Protection Products, St. Paul, MN
 - 3. Specified Technologies Inc., Sommerville, NJ
 - 4. Hilti.
 - 5. Accepted Substitute in accordance with Section 016000.

2.2 FIRESTOPPING MATERIALS

- A. **Through Penetration Firestopping System.** Comply with UL classification XHEZ.
 - 1. **Acceptable Manufacturers:**
 - a. FireMaster, Thermal Ceramics, Augusta, GA
 - b. The Rectorseal Corp., Houston, TX
 - c. 3M Fire Protection Products, St. Paul, MN
 - d. Tremco, Beachwood, OH
 - e. United States Gypsum Company, Chicago, IL
 - f. Accepted Substitute in accordance with Section 016000.
- B. **Fire Retardant Sealants:** Single component, asbestos free, neutral cure.
 - 1. **Acceptable Manufacturers and Products:**
 - a. Specified Technologies Inc: LC1 Firestop Sealant
 - b. Rectorseal:
 - 1) Biotherm 100 (non-sag); 200 (self-leveling)
 - 2) Metacaulk 835, 880, 910, 950
 - c. 3M Products: Fire Barrier CP-25WB; CP-25N/S (no-sag); CP-25S/L (self-leveling), Fire Dam 150.
 - d. Tremco: Fyre-Shield.
 - e. United States Gypsum Company: Thermafiber Smoke Seal.
- C. **Fire-Resistive Elastomeric Joint Sealants:** Single component, asbestos free, neutral cure.
 - 1. **Movement Capability: 40 percent, ASTM C719.**
 - 2. **Acceptable Manufacturers and Products:**
 - a. Specified Technologies Inc: LC1 Firestop Joint Sealant
 - b. 3M Products: Fire Barrier 2000/2003 Silicone Sealant.
 - c. Tremco: Fyre-Sil, Fyre-Sil S/L
 - d. Rectorseal: Metacalk 880
- D. **Fire Retardant Putty:** Single component, asbestos free, dielectric, non-hardening, intumescent putty
 - 1. **Acceptable Manufacturers and Products:**
 - a. Specified Technologies Inc: SpecSeal Firestop Putty
 - b. Tremco: Tremstop FP
 - c. 3M: Fire Barrier Moldable Putty
- E. **Fire Retardant Job-Mixed Vinyl Compound:** Dry gypsum/vinyl compound, non-asbestos, site mixed with water
 - 1. **Acceptable Manufacturers and Products:**
 - a. United States Gypsum Company: Firecode Compound.
 - b. National Gypsum Company: Sta-smooth FS 90 Fire-Shield Compound
- F. **Fire Retardant Intumescent Wrap Strips:** Foil backed, intumescent wrap strips
 - 1. **Acceptable Manufacturers and Products:**
 - a. Specified Technologies Inc: SpecSeal WrapStrip
 - b. 3M: FS 195 Fire Barrier Wrap Strip
 - c. Tremco: Tremstop
 - d. Rectorseal: Metawrap 60

- G. **Firestop Forming Materials Complying with UL XHKU**
 - 1. **Acceptable manufacturers:**
 - a. Manville Building Insulation, Schuller International, Inc.
 - b. USG Interiors Inc.
 - 2. Temporary Forms: Type X gypsum board
- H. **Accessories:** Provide accessories required by manufacturer, UL or other testing agency, and classification for specific application.
 - 1. Retaining Collars: Manufacturer's standard
 - 2. Steel wire, wire mesh, clips, sleeves, anchoring devices, primers, and other materials
 - 3. Metal Sheets and Shapes: Size and thickness as required by fire resistant system
- I. Firestopping material shall be asbestos-free and capable of maintaining an effective barrier against flame, smoke and gasses in compliance with the requirements of ASTM E814, and UL1479.
- J. Materials shall be suitable for the firestopping of penetrations made by steel, copper, plastic, and insulated pipe.
- K. On insulated pipe, the fire-rating classification must not require removal of the insulation.
- L. The rating of the firestops shall be not less than the rating of the time-rated floor or wall assembly.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean surfaces to be in contact with firestopping materials of dirt, grease, oil, loose materials, rust, or other substances that may affect proper fitting or the required fire resistance.

3.2 INSTALLATION

- A. Install firestopping materials as indicated, in accordance with manufacturer's instructions.
- B. Prime surfaces as recommended by manufacturer.
- C. Seal all holes or voids made by penetrations to ensure an effective smoke barrier.
- D. Unless protected from possible loading, install firestopping materials in floors having void openings of (4) four inches or more to support the same floor load requirements.
- E. Tool material after application but before skin forms, to a smooth surface.
- F. Protect seals from disturbance for 48 hours.

3.3 FIELD QUALITY CONTROL

- A. Examine firestopped areas to ensure proper installation prior to concealing or enclosing firestopped areas.
- B. Areas of work shall remain accessible until inspection and approval by the applicable code authorities.

END OF SECTION

SECTION 078443

JOINT FIRESTOPPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Joints in or between fire-resistance-rated constructions.
2. Joints in smoke barriers.

1.3 SUBMITTALS

A. Product Data: For each type of product.

B. Product Schedule: For each joint firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing agency.

1. Engineering Judgments: Where Project conditions require modification to a qualified testing agency's illustration for a particular joint firestopping system condition, submit illustration, with modifications marked, approved by joint firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

1.4 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install joint firestopping systems when ambient or substrate temperatures are outside limits permitted by joint firestopping system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
- B. Install and cure joint firestopping systems per manufacturer's written instructions using natural means of ventilation or, where this is inadequate, forced-air circulation.

1.5 COORDINATION

- A. Coordinate construction of joints to ensure that joint firestopping systems can be installed according to specified firestopping system design.
- B. Coordinate sizing of joints to accommodate joint firestopping systems.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics:

1. Perform joint firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
2. Test per testing standards referenced in "Joint Firestopping Systems" Article. Provide rated systems complying with the following requirements:
 - a. Joint firestopping systems shall bear classification marking of a qualified testing agency.
 - 1) UL in its "Fire Resistance Directory."
 - 2) Intertek Group in its "Directory of Listed Building Products."

2.2 JOINT FIRESTOPPING SYSTEMS

- A. Joint Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of assemblies in or between which joint firestopping systems are installed. Joint firestopping systems shall accommodate building movements without impairing their ability to resist the passage of fire and hot gases.

- B. **Joints in or between Fire-Resistance-Rated Construction:** Provide joint firestopping systems with ratings determined per ASTM E 1966 or UL 2079.
 - 1. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of the wall, floor, or roof in or between which it is installed.
- C. **Joints in Smoke Barriers:** Provide fire-resistive joint systems with ratings determined per UL 2079 based on testing at a positive pressure differential of 0.30-inch wg.
 - 1. L-Rating: Not exceeding 5.0 cfm/ft. of joint at both ambient and elevated temperatures.
- D. **Exposed Joint Firestopping Systems:** Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.
- E. **Accessories:** Provide components of fire-resistive joint systems, including primers and forming materials, that are needed to install elastomeric fill materials and to maintain ratings required. Use only components specified by joint firestopping system manufacturer and approved by the qualified testing agency for conditions indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. **Surface Cleaning:** Before installing fire-resistive joint systems, clean joints immediately to comply with fire-resistive joint system manufacturer's written instructions and the following requirements:
 - 1. Remove from surfaces of joint substrates foreign materials that could interfere with adhesion of elastomeric fill materials or compromise fire-resistive rating.
 - 2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with elastomeric fill materials. Remove loose particles remaining from cleaning operation.
 - 3. Remove laitance and form-release agents from concrete.
- B. **Prime substrates where recommended in writing by joint firestopping system manufacturer using that manufacturer's recommended products and methods.** Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

3.3 INSTALLATION

- A. General: Install fire-resistive joint systems to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.
- B. Install forming materials and other accessories of types required to support elastomeric fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
 - 1. After installing elastomeric fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of fire-resistive joint system.
- C. Install elastomeric fill materials for fire-resistive joint systems by proven techniques to produce the following results:
 - 1. Elastomeric fill voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
 - 2. Apply elastomeric fill materials so they contact and adhere to substrates formed by joints.
 - 3. For elastomeric fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 CLEANING AND PROTECTION

- A. Clean off excess elastomeric fill materials adjacent to joints as the Work progresses by methods and with cleaning materials that are approved in writing by joint firestopping system manufacturers and that do not damage materials in which joints occur.
- B. Provide final protection and maintain conditions during and after installation that ensure joint firestopping systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated fire-resistive joint systems immediately and install new materials to produce fire-resistive joint systems complying with specified requirements.

END OF SECTION

SECTION 079200
JOINT SEALANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established within General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

A. **Section Includes:**

1. **Silicone joint sealants.**
2. **Urethane joint sealants.**
3. **Latex joint sealants.**
4. **Preformed joint sealants.**
5. **Acoustical joint sealants.**

1.3 PRECONSTRUCTION TESTING

- A. Preconstruction Compatibility and Adhesion Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.
1. Use ASTM C 1087 to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
 2. Submit not fewer than eight pieces of each kind of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
 3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 4. For materials failing tests, obtain joint-sealant manufacturer's written instructions for corrective measures including use of specially formulated primers.
 5. Testing will not be required if joint-sealant manufacturers submit joint preparation data that are based on previous testing, not older than 24 months, of sealant products for adhesion to, and compatibility with, joint substrates and other materials matching those submitted.

1.4 SUBMITTALS

- A. **Product Data:** For each joint-sealant product indicated.
- B. **Sustainable Submittal:**
1. Product data for sealants and sealant primers, including printed statement of VOC content.
- A. **Samples for Initial Selection:** Two samples, 1/4 inch diameter x 4 inches in size illustrating color selections available.
- C. **Joint-Sealant Schedule:** Include the following information:
1. Joint-sealant application, joint location, and designation.
 2. Joint-sealant manufacturer and product name.
 3. Joint-sealant formulation.
 4. Joint-sealant color.
- D. **Product Certifications:** Submit manufacturers certification that joint sealants that are in contact with air barrier specified by Section 072726 - Fluid-Applied Membrane Air Barriers are compatible and will not void warranties.
- E. **Product Test Reports:** Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that sealants comply with requirements.
- F. **Field-Adhesion Test Reports:** For each sealant application tested.

1.5 **QUALITY ASSURANCE**

- B. **Manufacturer:** Company specializing in manufacturing the products specified in this Section with **minimum 10 years documented experience**.
- A. **Installer Qualifications:** Manufacturer's authorized representative who is trained and **approved for installation of units required for this Project, with minimum 10 years documented experience**.
- B. **Source Limitations:** Obtain each kind of joint sealant from single source from single manufacturer.
- C. **Mockups:** Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section.

1.6 **PROJECT CONDITIONS**

- A. Do not proceed with installation of joint sealants under the following conditions:
 - 1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F.
 - 2. When joint substrates are wet.
 - 3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
 - 4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.7 **WARRANTY**

- A. **Special Installer's Warranty:** Manufacturer's standard form in which Installer agrees to repair or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
 - 1. **Warranty Period: Three years** from date of Substantial Completion.
- B. **Special Manufacturer's Warranty:** Manufacturer's standard form in which joint-sealant manufacturer agrees to furnish joint sealants to repair or replace those that do not comply with performance and other requirements specified in this Section within specified warranty period.
 - 1. **Warranty Period: 20 years** from date of Substantial Completion for silicone sealants.
- C. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:
 - 1. Movement of the structure caused by structural settlement or errors attributable to design or construction resulting in stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
 - 2. Disintegration of joint substrates from natural causes exceeding design specifications.
 - 3. Mechanical damage caused by individuals, tools, or other outside agents.
 - 4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 - PRODUCTS

2.1 **MATERIALS, GENERAL**

- A. **Compatibility:**
 - 1. Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.
 - 2. Provide compatible joint sealants that are in contact with air barrier specified by Section 072726 - Fluid-Applied Membrane Air Barriers that are approved by air barrier manufacturer and does not void warranty.
- B. **VOC Content of Interior Sealants:** Provide sealants and sealant primers for use inside the weatherproofing system that comply with the following limits for VOC content when calculated according to 40 CFR 59, Part 59, Subpart D (EPA Method 24):

1. Architectural Sealants: 250 g/L.
 2. Sealant Primers for Nonporous Substrates: 250 g/L.
 3. Sealant Primers for Porous Substrates: 775 g/L.
- C. **Liquid-Applied Joint Sealants:** Comply with ASTM C 920 and other requirements indicated for each liquid-applied joint sealant specified, including those referencing ASTM C 920 classifications for type, grade, class, and uses related to exposure and joint substrates.
1. **Suitability for Immersion in Liquids:** Where sealants are indicated for Use I for joints that will be continuously immersed in liquids, provide products that have undergone testing according to ASTM C 1247. Liquid used for testing sealants is deionized water, unless otherwise indicated.
- D. **Stain-Test-Response Characteristics:** Where sealants are specified to be non-staining to porous substrates, provide products that have undergone testing according to ASTM C 1248 and have not stained porous joint substrates indicated for Project.
- E. **Suitability for Contact with Food:** Where sealants are indicated for joints that will come in repeated contact with food, provide products that comply with 21 CFR 177.2600.
- F. **Colors of Exposed Joint Sealants:** As selected by Architect from manufacturer's full range.
- 2.2 **SILICONE JOINT SEALANTS**
- A. **Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant (S-GP) :** ASTM C 920, Type S, Grade NS, Class 50, for Use NT.
1. **Acceptable Products:** Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Omniseal 50.
 - b. Dow Corning Corporation; 795.
 - c. GE Advanced Materials - Silicones; SilGlaze II SCS2800.
 - d. Pecora Corporation; 864.
- B. **Mildew-Resistant, Single-Component, Acid-Curing Silicone Joint Sealant (S-S):** ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
1. **Acceptable Products:** Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Omnipus.
 - b. Dow Corning Corporation; 786 Mildew Resistant.
 - c. GE Advanced Materials - Silicones; Sanitary SCS1700.
 - d. Tremco Incorporated; Tremsil 200 Sanitary.
- 2.3 **URETHANE JOINT SEALANTS**
- A. **Multi-component, Non-sag, Urethane Joint Sealant (U-MC):** ASTM C 920, Type M, Grade NS, Class 50, for Use NT.
1. **Acceptable Products:** Subject to compliance with requirements, provide one of the following:
 - a. Pecora Corporation; Dynatrol II.
 - b. Polymeric Systems, Inc.; PSI-270.
- B. **Multi-component, Self-Leveling, Traffic-Grade, Urethane Joint Sealant (U-TB):** ASTM C 920, Type M, Grade SL, Class 50, for Use T.
1. **Acceptable Products:** Subject to compliance with requirements, provide one of the following:
 - a. Polymeric Systems, Inc.; PSI-270.
 - b. Tremco Incorporated; Dymeric 240 FC.
 - c. Pecora; Dynatread.
- 2.4 **LATEX JOINT SEALANTS**
- A. **Latex Joint Sealant (AL):** Acrylic latex or siliconized acrylic latex, ASTM C 834, Type OP, Grade NF.
1. **Acceptable Products:** Subject to compliance with requirements, provide one of the following:

- a. BASF Building Systems; Sonolac.
- b. Bostik, Inc.; Chem-Calk 600.
- c. May National Associates, Inc.
- d. Pecora Corporation; AC-20+.
- e. Tremco Incorporated; Tremflex 834.

2.5 PREFORMED JOINT SEALANTS

- A. **Preformed Foam Joint Sealant (PF):** Manufacturer's standard preformed, pre-compressed, open-cell foam sealant manufactured from urethane foam with minimum density of 10 lb/cu. ft. and impregnated with a nondrying, water-repellent agent. Factory produce in pre-compressed sizes in roll or stick form to fit joint widths indicated; coated on one side with a pressure-sensitive adhesive and covered with protective wrapping.

- 1. **Acceptable Products:** Subject to compliance with requirements, provide one of the following:
 - a. EMSEAL Joint Systems, Ltd.; Emseal 25V.
 - b. Sandell Manufacturing Co., Inc.; Polyseal.
 - c. Willseal USA, LLC; Willseal 150.
 - d. MM Systems, Color Joint Silicone
 - e. BASF, WABO Weather Seal II

2.6 ACOUSTICAL JOINT SEALANTS

- A. **Acoustical Joint Sealant (AC):** Manufacturer's standard non-sag, paintable, non-staining latex sealant complying with ASTM C 834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.

- 1. **Acceptable Products:** Subject to compliance with requirements, provide one of the following:
 - a. Pecora Corporation; AC-20 FTR.
 - b. USG Corporation; SHEETROCK Acoustical Sealant.

2.7 MISCELLANEOUS MATERIALS

- A. **Primer:** Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.
- B. **Cleaners for Nonporous Surfaces:** Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
- C. **Masking Tape:** Non-staining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.
- D. **Backer Rod:**
 - 1. General: Provide sealant backings of material and type that are non-staining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing
 - 2. **Elastomeric Tubing Sealant Backings:** Neoprene, butyl, EPDM, or silicone tubing complying with ASTM D 1056, nonabsorbent to water and gas, and capable of remaining resilient at temperatures down to minus 26 deg F. Provide products with low compression set and of size and shape to provide a secondary seal, to control sealant depth, and otherwise contribute to optimum sealant performance
 - 3. **Bond-Breaker Tape:** Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint where such adhesion would result in sealant failure. Provide self-adhesive tape where applicable

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. **Surface Cleaning of Joints:** Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:
 - 1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
 - 2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air.
Porous joint substrates include the following:
 - a. Concrete.
 - b. Masonry.
 - c. Unglazed surfaces of ceramic tile.
 - d. Exterior insulation and finish systems.
 - 3. Remove laitance and form-release agents from concrete.
 - 4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. **Nonporous joint substrates include the following:**
 - a. Metal.
 - b. Glass.
 - c. Porcelain enamel.
 - d. Glazed surfaces of ceramic tile.
- B. **Joint Priming:** Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
- C. **Masking Tape:** Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF JOINT SEALANTS

- A. **General:** Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.
- B. **Sealant Installation Standard:** Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.
- C. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
 - 1. Do not leave gaps between ends of sealant backings.
 - 2. Do not stretch, twist, puncture, or tear sealant backings.
 - 3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.
- D. Install sealants using proven techniques that comply with the following and at the same time backings are installed:

1. Place sealants so they directly contact and fully wet joint substrates.
 2. Completely fill recesses in each joint configuration.
 3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
 4. **Measure joint dimensions and size materials to achieve required width/depth ratios.**
 5. **Install joint backing (if required) to achieve a neck dimension no greater than 1/3 the joint width.**
- C. **Test sealant application to substrate before installation. Ensure proper adhesion is achieved prior to proceeding with the Work.**
- D. **If substrate has a rough texture and an appropriate seal cannot be achieved, clean rough surface and force float sealant into voids providing a smooth surface first. Allow initial application to cure, and then install final application of sealant. Water test final installation of a test location for proper seal prior to proceeding with remainder of the sealant work.**
- E. Tooling of Non-sag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
1. Remove excess sealant from surfaces adjacent to joints.
 2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
 3. Provide concave joint profile per Figure 8A in ASTM C 1193, unless otherwise indicated.
 4. Provide flush joint profile where indicated per Figure 8B in ASTM C 1193.
 5. Provide recessed joint configuration of recess depth and at locations indicated per Figure 8C in ASTM C 1193.
 - a. Use masking tape to protect surfaces adjacent to recessed tooled joints.
- F. Installation of Preformed Silicone-Sealant System: Comply with the following requirements:
1. Apply masking tape to each side of joint, outside of area to be covered by sealant system.
 2. Apply silicone sealant to each side of joint to produce a bead of size complying with preformed silicone-sealant system manufacturer's written instructions and covering a bonding area of not less than 3/8 inch. Hold edge of sealant bead 1/4 inch inside masking tape.
 3. Within 10 minutes of sealant application, press silicone extrusion into sealant to wet extrusion and substrate. Use a roller to apply consistent pressure and ensure uniform contact between sealant and both extrusion and substrate.
 4. Complete installation of sealant system in horizontal joints before installing in vertical joints. Lap vertical joints over horizontal joints. At ends of joints, cut silicone extrusion with a razor knife.
- G. Installation of Preformed Foam Sealants: Install each length of sealant immediately after removing protective wrapping. Do not pull or stretch material. Produce seal continuity at ends, turns, and intersections of joints. For applications at low ambient temperatures, apply heat to sealant in compliance with sealant manufacturer's written instructions.
- H. Acoustical Sealant Installation: At sound-rated assemblies and elsewhere as indicated, seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919 and with manufacturer's written recommendations.

3.4 **FIELD QUALITY CONTROL**

- A. **Field-Adhesion Testing:** Field test joint-sealant adhesion to joint substrates as follows:
1. **Extent of Testing:** Test completed and cured sealant joints as follows:
 - a. Perform 10 tests for the first 1000 feet of joint length for each kind of sealant and

- joint substrate.
 - b. Perform 1 test for each 1000 feet of joint length thereafter or 1 test per each floor per elevation.
 - 2. **Test Method:** Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.
 - a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
 - 3. Inspect tested joints and report on the following:
 - a. Whether sealants filled joint cavities and are free of voids.
 - b. Whether sealant dimensions and configurations comply with specified requirements.
 - c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion passes sealant manufacturer's field-adhesion hand-pull test criteria.
 - 4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant fill, sealant configuration, and sealant dimensions.
 - 5. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.
- B. **Evaluation of Field-Adhesion Test Results:** Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.
- 3.5 **CLEANING**
- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.
- 3.6 **PROTECTION**
- A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.
- 3.7 **JOINT-SEALANT SCHEDULE**
- A. **Sealant Schedule:**
- 1. **Exterior locations:**
 - a. **Wall joints:**
 - 1) **Bordered on both sides by porous building material** (concrete, stone, masonry, exterior insulation and finish systems): Designation S-GP; PF
 - 2) **Bordered on both sides by non-porous building material** (coated and uncoated metals, anodized aluminum, porcelain tile, and glass): Designation S-GP; PF
 - 3) **Bordered on one side by porous building material** (concrete, stone, masonry) and other side by non-porous building material (coated and uncoated metals, anodized aluminum, porcelain tile, and glass): Designation

S-GP; PF

- b. **Perimeter of penetrations through walls:** Designation S-GP
 - c. **Control joints (filling of V-grooves) and perimeter of penetrations in Portland cement plaster walls:** Designation S-GP.
 - d. **Expansion joints in ceilings, soffits, and overhead surfaces:** Designation S-GP
 - e. **Control joints and perimeter of penetrations in ceilings, soffits, and overhead surfaces:** Designation S-GP
 - f. **Wall and ceiling joints between frames and their rough opening:** Designation S-GP.
 - g. **Wall and ceiling joints between frames and adjoining surfaces:** Designation S-GP.
 - h. **Joints and perimeter of penetrations in horizontal pedestrian and vehicle traffic surfaces:** Designation U-TB.
 - i. **Joints in Division 07 Section 07 "Sheet Metal Flashing and Trim:"** Designation S-GP.
2. **Interior Joints:**
- a. **Wall and ceiling joints subject to movement:** Designation U-MC.
 - b. **Wall and ceiling joints not subject to movement:** Designation AL.
 - c. **Interior side of exterior openings:** U-MC.
 - d. **Floor joints:** Designation U-TB.
 - e. **Wall and ceiling joints between frames and their rough opening:** Designation AL.
 - f. **Wall and ceiling joints between frames and adjoining surfaces:** Designation AL.
 - g. **Interior Sanitary Joints; Joints Between Plumbing Fixtures and Adjoining Floor, Wall, and Ceiling Surfaces; Joints Between Shower Door Enclosure Components and Adjacent Finish Surfaces; Joints in Dietary and Food Preparation Areas, Kitchens, Food Storage Areas, and Areas Subject to Frequent Wet Cleaning, including joints between walls and floors, Joints Between Back Splashes and Wall Substrates:** Designation S-S.

END OF SECTION

SECTION 081113

HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Provisions established within General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.
- 1.2 **SECTION INCLUDES**
 - A. **Fire rated and non-rated rolled steel flush doors, frames with square corners and edges and associated glazing.**
- 1.3 QUALITY ASSURANCE
 - A. Conform to requirements of SDI-100.
 - B. **Manufacturer:** Company specializing in manufacturing the Products specified in this section with **minimum ten years experience**.
 - C. Installed frame and door assembly to conform to UL 10C for fire rated class indicated or scheduled.
- 1.4 SUBMITTALS
 - A. **Submit shop drawings**, and manufacturer's installation instructions, under provisions of Section 013300.
 - B. Indicate frame configuration, anchor types and spacings, location of cutouts for hardware, reinforcement, and finish.
 - C. Indicate door elevations, internal reinforcement, closure method, and cut outs for glazing.
 - D. Manufacturer's Installation Instructions: Indicate special installation instructions.
 - E. **Submit manufacturer's product literature.**
- 1.5 DELIVERY, STORAGE AND PROTECTION
 - A. Protect products under provisions of Section 016000.
 - B. Accept doors on site in manufacturer's packaging. Inspect for damage.
 - C. Break seal on-site to permit ventilation.
- 1.6 FIELD MEASUREMENTS
 - A. Verify that field measurements are as indicated on shop drawings.
- 1.7 COORDINATION
 - A. Coordinate work under provisions of Section 013200.
 - B. Coordinate the work with door opening construction, door frame and door hardware installation.

PART 2 - PRODUCTS

- 2.1 **ACCEPTABLE MANUFACTURERS - DOORS AND WELDED UNIT FRAMES**
 - A. **Curries.**
 - B. **Ceco Corporation.**
 - C. **Trussbilt.**
 - D. Substitutions: Under provisions of Section 016000.

2.2 DOORS AND FRAMES

- A. **Exterior Doors:** SDI-100 **Grade III – Heavy Duty**, Model 2 - Seamless, **flush panel insulated, 16 gage**, galvanized with rain cap
- B. **Interior Doors:** SDI-100 **Grade II – Heavy Duty** Model 2 - Seamless, **18 gage, flush panel doors**.
- C. **Door Frames - Exterior:** **14 gage, welded**, galvanized
- D. **Door Frames - Interior (fire rated):** **16 gage welded**.
- E. **Basis of Design:** Ceco Door SQ Series frames with square edges and corners.
- F. **Profile Dimensions:**
 - 1. **Backbends:** ¼" backbends exposed beyond specified wall finish.
 - 2. **Rabbets:** Equal 15/16" rabbets each side of soffit.
 - 3. **Stops:** ½" deep.
 - 4. **Face Frame Dimension:** 2" wide.

2.3 DOOR CORE

- A. **Core Types**
 - 1. **Fire Rated Doors:** Mineral fiberboard.
 - 2. **Non-Rated Doors:** Manufacturer's standard kraft-paper honeycomb, polystyrene, polyurethane, mineral-board, or vertical steel-stiffener core that produces doors complying with ANSI A250.8.
- B. **Provide fire-rated cores as scheduled and as required to meet all applicable codes, whether or not called for on Drawings.**

2.4 ACCESSORIES

- A. **Rubber Silencers:** Resilient rubber.
- B. **Glazing Stops:** Rolled steel channel shape, mitered corners; prepared for countersink style tamperproof screws.
- C. **Anchors:** Three per jamb, typically, of type to suit supportive construction.

2.5 FABRICATION

- A. Fabricate frames as welded unit. **Grind welds smooth prior to delivery.**
- B. Fabricate frames and doors with hardware reinforcement plates (for locks, closers, and other items attached to doors and frames) welded in place. Provide mortar guard boxes.
- C. **Reinforce frames wider than 48 inches with roll formed steel channels fitted tightly into frame head, flush with top.**
- D. Prepare frame for silencers. Provide three single rubber silencers for single doors on strike side, and two single silencers on frame head at double doors without mullions.
- E. Attach fire rated label to each fire-rated frame and door unit.
- F. Close top edge of exterior door flush with inverted steel channel closure. Seal joints watertight.
- G. **Provide fire rated doors and frames as required to meet all applicable codes, whether or not called for on Drawings.**

2.6 FINISH

- A. **Manufacturer's standard baked-on primer.**
- B. Refer to 099100 for final finish.
- C. **Note: All hollow metal doors and frames shall be spray painted, not brushed. No exceptions.**

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify substrate conditions under provisions of Section 013200.
- B. Verify that opening sizes and tolerances are acceptable.

- C. Verify surfaces and conditions are ready to receive work of this section. Notify Architect of any existing conditions which will adversely affect execution. Beginning of execution will constitute acceptance of existing conditions.

3.2 INSTALLATION

- A. Install frames in accordance with SDI-105 and reference U.L. publication.
- B. Install doors in accordance with DHI and reference U.L. publication.
- C. Coordinate with adjacent construction for anchor placement.
- D. Coordinate and provide for installation of glass and glazing as indicated on Drawings and required by code.
- E. Install roll formed steel reinforcement channels between two abutting frames. Anchor to structure and floor.
- F. Set frames plumb, level, and true alignment, securely fastened to the floor and adjoining walls.
- G. Install doors accurately in frames, maintaining specified clearances.

3.3 TOLERANCES

- A. Maximum Diagonal Distortion: 1/8 inch measured with straight edge, corner to corner.

3.4 ADJUSTING AND CLEANING

- A. Adjust hardware and door movement for smooth, quiet and balanced door movement.

END OF SECTION

SECTION 081216

INTERIOR ALUMINUM FRAMES

PART 1 - GENERAL

1.1 SUMMARY

A. **Section Includes:**

1. Fire rated and unrated pre-finished aluminum door and side light frames for interior use (Not for use at exterior vestibules).

1.2 SUBMITTALS

- A. **Product Data:** Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each product specified.
- B. **Shop Drawings:** Show fabrication and installation details. Include plans, elevations, sections, and details of components including hardware, glazing, and glazing stops. Show attachments to other Work.
- C. **Samples:** For each type of exposed finish required, prepared on Samples of manufacturer's standard sizes and of same thickness and material indicated for the Work. If finishes involve normal color and texture variations, include sample sets showing the full range of variations expected.

1.3 QUALITY ASSURANCE

- A. **Installer Qualifications:** An experienced installer who has a **minimum of 10 years experience** installing interior aluminum framing systems similar in material, design, and extent to those indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
- B. **Manufacturer Qualifications:** A firm with a **minimum of 10 years experience** in manufacturing interior aluminum framing systems similar to those indicated for this Project and with a record of successful in-service performance.
- C. **Source Limitations:** Obtain aluminum frames through one source from a single manufacturer with the capacity and resources to provide products of consistent quality in appearance and physical properties.
- D. **Fire-Rated Door Frames:** Frames complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated below, based on testing according to NFPA 252.
 1. **Provide at locations scheduled on Drawings and as otherwise required by code, and local authorities having jurisdiction, whether or not shown on Drawings.**

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver frames palletted, wrapped, or crated to provide protection during transit and job storage.
- B. Inspect frames on delivery for damage. Minor damages may be repaired provided refinished items match new work and are approved by Architect; otherwise, remove and replace damaged items as directed.
- C. Store frames at building site under cover and as near as possible to final installation location. Do not use covering material that will cause discoloration of aluminum finish.

1.5 PROJECT CONDITIONS

- A. **Environmental Limitations:** Do not install interior aluminum frames until spaces are enclosed and weatherproof; wet work in spaces is complete and dry; flooring, walls, ceilings, and work above ceilings is complete; and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

- B. **Field Measurements:** Verify interior aluminum frame dimensions by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

PART 2 - PRODUCTS

2.1 PRODUCTS AND MANUFACTURERS

- A. **Products:** Subject to compliance with requirements, provide one of the products specified for each designation in the Door Schedule and Hardware Schedule in the Documents.
- B. **Acceptable Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. Raco.
 - 2. Advanced Architectural Frames.
 - 3. Frameworks Manufacturing by ASSA ABLOY.
 - 4. Modulex, Inc; Division of Pacific National Group.
 - 5. Versatrac.
 - 6. Wilson Partitions.
- C. **Basis of Design:** Raco; Solutions II with fixed throat to accommodate partition frame system with 2" trim and face.
- D. Provide 20 minute fire rated frames at locations in Atrium as required by codes.
- E. **Substitutions:** Under provisions of Section 016000.

2.2 MATERIALS

- A. **Extruded Aluminum:** ASTM B 221 (ASTM B 221M) alloy 6063-T5 or alloy and temper required to suit structural and finish requirements.

2.3 COMPONENTS

- A. **General:** Provide interior aluminum frame components that comply with dimensions and profiles indicated on drawings and this Section.
 - 1. **Rabbets:** Equal 1-15/16" rabbets on each side of soffit.
 - 2. **Stops:** 1/2" deep.
 - 3. **Face:** 2" wide.
- B. **Door Frames:** Extruded aluminum, not less than 0.062 inch (1.6 mm) thick, reinforced for hinges and strikes.
- C. **Glass Frames:** Extruded aluminum, not less than 0.062 inch (1.6 mm) thick, designed for glass thickness indicated.
- D. **Trim:** 2" face extruded aluminum, not less than 0.062 inch (1.6 mm) thick, removable snap-in glass stops and door stops without exposed fasteners.

2.4 ACCESSORIES

- A. **Fasteners:** Aluminum, nonmagnetic stainless-steel or other non-corrosive metal fasteners compatible with frames, stops, panels, reinforcement plates, hardware, anchors, and other items being fastened.
- B. **Door Silencers:** Manufacturer's standard mohair or vinyl.
- C. **Glazing Gaskets:** Manufacturer's standard extruded or molded plastic, to accommodate 6-mm thick glass.
- D. **Glazing:** As specified in Division 8 Section "Glazing."
- E. **Hardware:** As specified in Division 8 Section "Door Hardware."

2.5 FABRICATION

- A. Machine jambs and prepare for hardware, with concealed reinforcement plates, drilled and tapped as required, and fastened within frame with concealed screws.
- B. Provide concealed corner reinforcements and alignment clips for precise butt or mitered connections.

- C. Fabricate frames for glass to allow glass replacement without dismantling frame.
- D. Fabricate components to allow secure installation without exposed fasteners.
- E. **At fire rated frames, provide steel reinforcement as required by manufacturer to achieve the fire ratings called for on the partitions in which the rated frames occur.**

2.6 ALUMINUM FINISHES

- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- C. **Final Finish:** To be selected by Architect from the following:
 - 1. **Clear Anodic Finish:** AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
 - 2. **Color Anodic Finish:** AAMA 611, AA-M12C22A32/A34, Class II, 0.010 mm or thicker.
 - 3. **High-Performance Organic Finish:** Two-coat fluoropolymer finish complying with AAMA 2604 and containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 4. **Color and Finish:** Refer to Section 008900.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls, floors, and ceilings for suitable conditions where interior aluminum frames are to be installed.
- B. **Verify that wall thickness does not exceed standard tolerances allowed by throat size of frame based upon partition type frame is shown to be inserted on to plans. Provide frame throat size as required to accommodate the partition type called for on plans.**
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with frame manufacturer's written installation instructions and approved Shop Drawings.
- B. Install frames plumb and square, securely anchored to substrates with fasteners recommended by frame manufacturer.
- C. Install partition components in the longest possible lengths; **components up to 12 feet long must be one piece.** Fasten to adjacent construction on maximum 36-inch(914-mm) centers, using sheet metal screws or other fasteners approved by frame manufacturer.
 - 1. Use concealed installation clips to ensure that splices and connections are tightly butted and properly aligned.
 - 2. Secure clips to main structural extrusion components and not to snap-in or trim members.
 - 3. **Do not leave screws or other fasteners exposed to view when installation is complete.**

3.3 CLEANING AND ADJUSTING

- A. Clean exposed frames promptly after installation, using cleaning methods recommended by frame manufacturer.
 - 1. Clean and maintain anodized aluminum according to AAMA 609.
- B. Touch up marred areas so touchup is not visible from a distance of 12 inches. Remove and replace frames with damaged finish that cannot be satisfactorily repaired.

3.4 PROTECTION

- A. Provide protection required to ensure that framing will be without damage or deterioration on Substantial Completion.

END OF SECTION

SECTION 081416

FLUSH WOOD DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes:**
 - 1. **Solid-core doors with wood-veneer faces.**
 - 2. **Factory finished flush wood doors.**
 - 3. **Factory fitting flush wood doors to frames and factory machining for hardware.**

1.3 SUBMITTALS

- A. General: Submit in accordance with Section 013300.
- B. **Product Data:** For each type of door. Include details of core and edge construction and trim for openings. Include factory-finishing specifications.
- C. **Shop Drawings:** Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; location and extent of hardware blocking; and other pertinent data.
 - 1. Indicate dimensions and locations of mortises and holes for hardware.
 - 2. Indicate dimensions and locations of cutouts.
 - 3. Indicate requirements for veneer matching.
 - 4. Indicate doors to be factory finished and finish requirements.
 - 5. Indicate fire ratings for fire doors.
- D. **Samples for Verification:**
 - 1. **Factory finishes applied to actual door face materials, approximately 8 by 10 inches, for each material and finish.** For each wood species and transparent finish, **provide set of three samples** showing typical range of color and grain to be expected in the finished work.
 - 2. **Corner sections of doors, approximately 8 by 10 inches,** with door faces and edgings representing typical range of color and grain for each species of veneer and solid lumber required. Finish sample with same materials proposed for factory-finished doors.
 - 3. **Frames for light openings,** 6 inches long, for each material, type, and finish required.

1.4 QUALITY ASSURANCE

- A. **Source Limitations:** Obtain flush wood doors through one source from a single manufacturer.
- B. **Quality Standard:** **Comply with AWI's "Architectural Woodwork Quality Standards Illustrated," Premium Grade.**
 - 1. **Provide AWI Quality Certification Labels or an AWI letter of licensing for Project indicating that doors comply with requirements of Premium Grade.**
- C. **Fire-Rated Wood Doors:** Doors complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 252.
 - 1. **Test Pressure:** After 5 minutes into the test, the neutral pressure level in furnace shall be established at 40 inches or less above the sill.
 - 2. **Oversize, Fire-Rated Wood Doors:** For door assemblies exceeding sizes of tested assemblies, provide oversize fire door label or certificate of inspection, from a testing and inspecting agency acceptable to authorities having jurisdiction, stating that doors comply with requirements of design, materials, and construction.
 - 3. **Temperature-Rise Rating:** At exit enclosures, provide doors that have a temperature-rise rating of 450 deg F maximum in 30 minutes of fire exposure.

4. **Positive Pressure Testing:** Comply with UL#10C.
- D. **Pre-installation Conference:** Conduct conference at Project site to comply with requirements in Division 01 Section 013100 "Project Management and Coordination."

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Comply with requirements of referenced standard and manufacturer's written instructions.
- B. Package doors individually in cardboard cartons and wrap bundles of doors in plastic sheeting.
- C. Mark each door on top and bottom rail with opening number used on Shop Drawings.

1.6 PROJECT CONDITIONS

- A. **Environmental Limitations:** Do not deliver or install doors until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period.

1.7 WARRANTY

- A. **Special Warranty:** Manufacturer's standard form, signed by manufacturer, Installer, and Contractor, in which manufacturer agrees to repair or replace doors that are defective in materials, veneer quality or workmanship, have warped (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section, or show telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch span.
1. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.
 2. **Warranty** shall be in effect during the following period of time from date of Substantial Completion:
 - a. **Solid-Core Interior Doors: Life of installation.**

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Acceptable Manufacturers:**
1. **Algoma Hardwoods Inc.**
 2. **Eggers Industries; Architectural Door Division.**
 3. **GRAHAM Manufacturing Corp.**
 4. **VT Industries Inc.**

2.2 DOOR CONSTRUCTION, GENERAL

- A. Doors for Transparent Finish:
1. **Grade: Premium Grade, AWI certified,** with Grade A faces.
 2. **Species and Cut:** Match Architect's control Sample. Refer Section 008900 – Finish Selection Summary.
 3. **Assembly of Veneer Leaves on Door Faces:** Balance match.
 4. **Pair and Set Match:** Provide for doors hung in same opening or separated only by mullions.
 5. **Room Match:** Match door faces within each separate room or area of building. Corridor door faces shall match.
 6. **Stiles:** Applied wood-veneer edges of same species as faces and covering edges of faces.
 7. **Finish:** Match Architect's control sample.

2.3 SOLID-CORE DOORS

- A. **Particleboard Cores:** Comply with the following requirements:
1. Particleboard: ANSI A208.1, Grade LD-2.
 2. Provide doors with glued-block cores instead of particleboard cores at locations where exit devices are indicated.

- B. **Interior Veneer-Faced Doors:**
 - 1. **Core: Particleboard.**
 - 2. **Construction: Seven plies** with stiles and rails bonded to core, then entire unit abrasive planed before veneering.
- C. **Fire-Rated Doors:**
 - 1. **Construction:** Construction and core specified above for type of face indicated or manufacturer's standard mineral-core construction as needed to provide fire rating indicated.
 - 2. **Blocking:** For mineral-core doors, provide composite blocking with improved screw-holding capability approved for use in doors of fire ratings indicated as follows:
 - a. 5-inch top-rail blocking.
 - b. 5-inch bottom-rail blocking, in doors indicated to have protection plates.
 - c. 5-inch midrail blocking, in doors indicated to have armor plates.
 - d. 5-inch midrail blocking, in doors indicated to have exit devices.
 - 3. **Edge Construction:** Provide edge construction with intumescent seals concealed by outer stile matching face veneer, and laminated backing at hinge stiles for improved screw-holding capability and split resistance.
 - 4. **Pairs:** Provide fire-rated pairs with fire-retardant stiles matching face veneer that are labeled and listed for kinds of applications indicated without formed-steel edges and astragals. **Provide stiles with concealed intumescent seals.**
- D. **Fire Astragals: Provide as required at all pairs of fire-rated doors.** Confirm profiles with Architect prior to fabrication.

2.4 LOUVERS AND LIGHT FRAMES

- A. **Wood Beads for Light Openings in Wood Doors:**
 - 1. **Wood Species:** Same species as door faces.
 - 2. **Profile:** Manufacturer's standard shape.
 - 3. **At 20-minute, fire-rated, wood-core doors,** provide wood beads and metal glazing clips approved for such use.

2.5 FABRICATION

- A. **Factory fit doors to suit frame-opening sizes indicated,** with the following uniform clearances and bevels, unless otherwise indicated:
 - 1. Comply with clearance requirements of referenced quality standard for fitting. Comply with requirements in NFPA 80 for fire-rated doors.
- B. **Factory machine doors for hardware that is not surface applied.** Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, DHI A115-W series standards, and hardware templates.
 - 1. Coordinate measurements of hardware mortises in metal frames to verify dimensions and alignment before factory machining.
 - 2. **Metal Astragals:** Pre-machine astragals and formed-steel edges for hardware for pairs of fire-rated doors.
- C. **Openings:** Cut and trim openings through doors to comply with applicable requirements of referenced standards for kind(s) of door(s) required.
 - 1. **Light Openings:** Trim openings with moldings of material and profile indicated, or if none indicated, confirm with Architect.

2.6 FACTORY FINISHING

- A. **General:** Comply with AWI's "Architectural Woodwork Quality Standards Illustrated" for factory finishing.
- B. **Finish doors at factory to match Architect's Control Sample.**
- C. **Transparent Finish:**
 - 1. **Grade: AWI Certified Premium Grade.**
 - 2. **Finish:** AWI System TR-3 Water-based acrylic lacquer.
 - 3. **Staining and Sheen:** Stain as selected by Architect.

4. **Match Architect's control sample.**

PART 3 - EXECUTION

3.1 EXAMINATION

- A. **Examine doors and installed door frames before hanging doors.**
 - 1. Verify that frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
 - 2. **Reject doors with defects and/or unattractive grain patterns. Architect shall be sole judge of aesthetic qualities and shall determine final acceptance.**
 - 3. **Verify AWI Premium Grade certification has been received.**
- B. **Proceed with installation only after unsatisfactory conditions have been corrected.**

3.2 INSTALLATION

- A. **Hardware:** For installation, see Division 08 Section "Door Hardware."
- B. **Manufacturer's Written Instructions:** Install doors to comply with manufacturer's written instructions, referenced quality standard, and as indicated.
 - 1. Install fire-rated doors in corresponding fire-rated frames according to NFPA 80.
- C. **Factory-Fitted Doors:** Align in frames for uniform clearance at each edge.
- D. **Factory-Finished Doors:** Restore finish before installation if fitting or machining is required at Project site.

3.3 ADJUSTING

- A. **Operation:** Re-hang or replace doors that do not swing or operate freely.
- B. **Finished Doors:** **Replace doors that are damaged, do not match Architect's Control Sample, or do not comply with AWI Premium Grade requirements.** Architect shall be sole judge of whether doors meet aesthetic requirements and Control Sample called for in this Section. Doors may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION

SECTION 081700

INTEGRATED DOOR OPENING ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

1.2 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.3 SUMMARY

- A. Section Includes: Integrated door openings assemblies including metal frame, integrated door system with operating hardware, and associated door hardware as specified in this section.

1.4 SUBMITTALS

- A. **Product Data:** Manufacturer's product data sheets including integrated opening assemblies construction and installation details, material descriptions, core descriptions, hardware reinforcements, profiles, anchorage, fire resistance rating, operational descriptions and finishes.
- B. **Shop Drawings:** Include the following:
 - 1. Elevations of each door design.
 - 2. Details of door and frames types including dimensioned profiles and metal thicknesses.
 - 3. Locations of reinforcement and preparations for hardware.
 - 4. Details of anchorages, joints, field splices, and connections.
 - 5. Details of accessories.
 - 6. Details of moldings, removable stops, and glazing.
 - 7. Details of conduit and preparations for power, signal, and control systems.
 - 8. Provide all dimensions necessary required to complete recessed pockets.
- C. **Operating and Maintenance Manuals:** Provide manufacturers operating and maintenance manuals for each item comprising the complete integrated assembly installation in quantity as required in Division 01, Closeout Submittals. The manual to include the name, address, and contact information of the manufacturers providing the installed assemblies and their nearest service representatives. The final copies delivered after completion of the installation test to include "as built" modifications made during installation, checkout, and acceptance.
- D. **Warranties and Maintenance:** Special warranties and maintenance agreements specified in this Section.

1.5 QUALITY ASSURANCE

- A. Quality Standard: In addition to requirements specified, comply with ANSI A156.32, latest edition, "Integrated Door Opening Assemblies".
- B. Standards: All hardware specified herein to comply with ANSI/BHMA Certified Product Standards, A156 Series.
- C. Supplier Qualifications: Factory authorized distributor of manufacturer(s) systems and products. Submit written documentation upon request.
- D. Installer Qualifications: Installers acceptable by the primary assembly manufacturer, with a minimum three years documented experience installing both standard and electrified integrated door opening assemblies similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
- E. Regulatory Requirements: Comply with NFPA 70, NFPA 80, NFPA 101 and ANSI A117.1 requirements and guidelines as directed in the model building code including, but not limited to, the following:

1. Where indicated to comply with accessibility requirements, comply with Americans with Disabilities Act (ADA), "Accessibility Guidelines for Buildings and Facilities (ADAAG)," ANSI A117.1 as follows:
 - 1). Handles, Pulls, Latches, Locks, and other Operating Devices: Shape that is easy to grasp with one hand and does not require tight grasping, tight pinching, or twisting of the wrist.
 - 2). Door Closers: Comply with the following maximum opening-force requirements indicated:
 - 1) Interior Hinged Doors: 5 lbf applied perpendicular to door.
 - 2) Fire Doors: Minimum opening force allowable by authorities having jurisdiction.
 2. NFPA 101: Comply with the following for means of egress doors:
 - 1). Latches, Locks, and Exit Devices: Not more than 15 lbf to release the latch. Locks shall not require the use of a key, tool, or special knowledge for operation.
 - 2). Thresholds: Not more than 1/2 inch high.
 3. Fire-Rated Door Assemblies: Provide door hardware for assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 252 (neutral pressure at 40" above sill) or UL-10C.
 - 1). Test Pressure: Positive pressure labeling.
- 1.6 DELIVERY, STORAGE, AND HANDLING
- A. Deliver products to the project site under provisions Division 01 Section "Product Storage and Handling Requirements". Inspect doors, frames, and hardware with representatives of the supplier to verify shipment is complete and to rectify discrepancies promptly.
 1. Integrated door assembly systems to be delivered to the job site complete with necessary screws, miscellaneous parts, instructions, and installation templates. Each package legibly and properly labeled to correspond to the approved Door Schedule.
 - B. Furnish integrated door opening assemblies with operating hardware flush to door skin, using protective wrappings and spacers between projecting hardware. Maintain and protect door assemblies using cardboard spacers and protective edge guards along the door edges, to reduce exposure to marring or damage during storage.
 - C. Store integrated door opening assemblies in dry and secure area. Do not store electronic access control software, credentials, or accessories at Project site without prior authorization.
- 1.7 PROJECT CONDITIONS
- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.
- 1.8 WARRANTY
- A. **Special Warranty Periods:** Manufacturer's standard written form, with the exceptions noted below, warranting integrated door opening assemblies to be free of defect in material or workmanship under normal use for a period of five (5) years.
 1. **Continuous Hinges:** Ten (10) years.
 2. **Door Closers:** Ten (10) years.
 - B. Warranty includes the manufacturer, at their sole option, agreeing to repair or replace products or parts found to be defective in material or workmanship according to details contained in the warranty certificate.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Basis of Design:** Adams Rite Manufacturing (AR) - The RITE Door.

2.2 MATERIAL REQUIREMENTS

A. Doors and Frames:

1. **Doors:** 1-3/4" thickness, with no visible seams or spot welds on door face, conforming to manufacturer's standard integrated assembly system construction. Door face skins minimum 18 gauge, cold rolled steel, with either a Honeycomb or Polystyrene type core. Doors to be constructed with a U-shaped, 16 gauge steel reinforcement channel, top and bottom, for the installation of door hardware accessories and supplied with a 18 gauge top cap.
2. **Frames:** Minimum 16 gauge, ASTM A366 cold rolled steel, complying with ANSI/SDI A250.8. Furnish frames with mitered corners, continuously welded and ground smooth on frame face. Prepare frames with 14 gauge reinforcements for applied hardware and provide suitable adjustable type anchors for wall condition, minimum 4 each per jamb.
3. **Fire Rated Doors and Frames:** Fabricate in accordance with NFPA 80, listed and labeled by a qualified testing agency, for the fire protection ratings indicated.

B. Door Hardware:

1. Provide a complete integrated door opening assembly, including the installation and adjustment of the latching mechanism within the door construction.
2. Integrated exit device hardware to be clean and unobtrusive in design with a minimal bar height of 2-7/16-inches. Push rails not exceed a projection of 1-1/8-inches when in the latched position and be made of heavy duty aluminum extrusion, available in anodized and architectural finishes using metal cladding. Exit device end caps to be of metal construction.
3. Push and pull hardware to be clean and unobtrusive in design with a maximum projection of 1/4-inches on pull side and 5/8-inches on the push side.
4. Lever handles to be clean and unobtrusive in design with a maximum projection of 3-1/2-inches and match design of similar lever locking hardware furnished on project.
5. Door hardware to include the following minimum products for each integrated door opening assembly.
 - a. Hanging Device: Continuous Hinges (geared or pinned).
 - b. Integrated Locking/Latching Hardware: Exit Devices, Lever Handle Trim, or Flush Push/Pulls.
6. Door hardware may include the following optional products for each integrated door opening assembly as specified in the Door Hardware Sets under Part 3:
 - a. Door Closers: Surface Closer or Pocket Closer.
 - b. Accessory Items: Magnetic Holders, Protection Plates, Edge Guards, Astragals, Smoke Seals.

2.3 FINISH REQUIREMENTS

- A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.
- B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware.
- C. Finishes:
 1. Door Faces: Factory Pre-Finished.
 2. Frames: Factory Pre-Finished.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

- B. Proceed with installation only after unsatisfactory conditions have been corrected. Beginning of installation indicates acceptance of the existing conditions.

3.2 INSTALLATION

- A. General: Install integrated door opening assemblies plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.
- B. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.
 - 1. Installers are to be trained and by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; integrated locking/latching devices; closing devices; and seals.
- C. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:
 - 1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
 - 2. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
 - 3. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.
- D. Coordinate installation and interface wiring with fire alarm and smoke detection systems.
- E. Remove or protect furnished hardware accessories, prior to painting or finishing completed after the installation of the hardware accessories.

3.3 ADJUSTMENT AND CLEANING

- A. Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Remove and replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.4 CLEANING AND PROTECTION

- A. Protect all door opening assemblies and hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install hardware at the latest possible time frame.
- B. Clean operating items as necessary to restore proper finish and provide final protection and maintain conditions that ensure integrated door and operating hardware is without damage or deterioration at time of owner occupancy.
- C. Painted Finish Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat, or painted finishes, and apply touchup of compatible air drying finish paint.

END OF SECTION

SECTION 083113

ACCESS DOORS AND FRAMES

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.
- 1.2 **SECTION INCLUDES**
 - A. **Access door and frame units.**
 - B. **Floor, wall and ceiling locations.**
- 1.3 SUBMITTALS
 - A. Submit under provisions of Section 013300.
 - B. **Product Data:** Provide sizes, types, finishes, scheduled locations, and details of adjoining work.
- 1.4 REGULATORY REQUIREMENTS
 - A. Conform to applicable code for fire rated access units.
- 1.5 COORDINATION
 - A. Coordinate work under provisions of Section 013100.
 - B. Coordinate the work with mechanical and electrical work requiring access units.

PART 2 - PRODUCTS

- 2.1 **MANUFACTURERS - WALL AND CEILING UNITS**
 - A. Milcor, Inc.
 - B. J. L. Industries.
 - C. KARP, Associates.
 - D. Substitutions: Under provisions of Section 016000.
 - E. **Products listed herein are those of Milcor, Inc., as standard of quality.**
 - F. **Note: All of the following types may not be used on this project.**
- 2.2 **ACCESS UNITS - WALLS**
 - A. **Non-Fire Rated Door and Frame Unit:** Formed steel finish; Stainless steel at restroom walls.
 - 1. In Gypsum Board on Metal Studs: Model DW 3203 manufactured by Milcor.
 - B. **Fire Rated Door and Frame Unit:** Formed steel finish; Stainless steel at restroom walls. 1-1/2 hour UL B label fire rating
 - 1. In Gypsum Board on Metal Studs: Model 3218 manufactured by Milcor.
- 2.3 **ACCESS UNITS - CEILINGS**
 - A. **Non-Fire Rated Door and Frame Unit:** Formed steel; Stainless steel at restroom walls.
 - 1. In Gypsum Board on Metal Furring: Model DW 3203 manufactured by Milcor.
 - B. **Fire Rated Door and Frame Unit:** Formed steel, 1-1/2 hour B label fire rating
 - 1. In Gypsum Board on Metal Furring: Model 3218 manufactured by Milcor.
- 2.4 **ACCESS UNITS - EXTERIOR**
 - A. **Non-Fire Rated Door and Frame Unit:** Formed of stainless steel.
 - 1. Model NIFR manufactured by Milcor.

- 2.5 FABRICATION - WALL AND CEILING UNITS
 - A. Fabricate frames and flanges of 22 gage steel.
 - B. Fabricate door panels of 22 gage steel single thickness steel sheet.
 - C. Weld, fill, and grind joints to assure flush and square unit.
 - D. **Hardware**
 - 1. **Hinge:** 175 degree steel hinges with removable pin.
 - 2. **Lock:** Screw driver slot for quarter turn cam lock.
- 2.6 **FINISHES**
 - A. **Base Metal Protection:** Prime coat units with baked on primer. Final finish refer to 099100 and 008900.
 - B. **Stainless steel units at restroom and exterior wall locations.**

PART 3 - EXECUTION

- 3.1 EXAMINATION
 - A. Verify substrate conditions under provisions of Section 014300.
 - B. Verify that rough openings for door and frame are correctly sized and located.
- 3.2 INSTALLATION
 - A. Install units in accordance with manufacturer's instructions.
 - B. Install frames plumb and level in opening. Secure rigidly in place.
 - C. Position unit to provide convenient access to concealed work requiring access.
- 3.3 **SCHEDULE**
 - A. **Provide fire rated and non-fire rated access doors as required at all locations where required by code or the Owner including, but not limited to, HVAC units, plumbing valves, electrical junction boxes and other items requiring access.**
 - B. **Additionally, provide at all locations indicated on the Drawings.**

END OF SECTION

SECTION 083516

SIDE FOLDING GRILLES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. **Side-folding aluminum grilles.**
 - 2. Operating hardware and supports.

1.3 PERFORMANCE REQUIREMENTS

- A. All locking posts shall allow for horizontal sway without pressure to side walls of track from trollies while opening and closing the curtain.
- B. All post's standard locking hardware and handles shall be flush within post with exceptions for exit hardware.

1.4 SUBMITTALS

- A. **Product Data:** Provide information on grille construction, components, materials, and finishes.
- B. **Shop Drawings:** Indicate track layout and dimensions including pocket, required curves, types and locations of posts, required locking and hardware, options, finish and installation details.
- C. **Operation and Maintenance Data:** To include in emergency, operation, and maintenance manuals

1.5 WARRANTY

- A. Provide manufacturer's 2 year warranty against defects in materials and workmanship.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Basis of Design:**
 - 1. **Manufacturer:** Dynamic Closures Corporation.
 - 2. **Product:** SL 12 CS Curtain.
- B. Other Acceptable Manufacturers: Subject to compliance with requirements herein, provide products from one of the following:
 - 1. CHI Overhead Doors.
 - 2. Overhead Door Corp.
 - 3. Wayne-Dalton Corp.

2.2 MATERIALS

- A. **Aluminum Extrusions:** ASTM B221, 6063-T5 or T6 alloy and temper.

2.3 COMPONENTS

- A. **Description:** 4.25 inches (108mm) wide with 2 inch (51mm) high bottom and top plates, truss-like aluminum, with alternating 12 inch (305mm) polycarbonate panels and 2 inch (51mm) solid aluminum panels in a checkerboard design. Panels connected with single-piece vertical 0.6125 x 0.5 inch (16mm) x (13mm) aluminum hinges
- B. **Operation:** Manual push/pull. Provide pull straps on openings over 9 feet (2743mm) in height and countertop applications.
- C. **Curtain Carriers:** Dual bearing trollies with 1.125 inch (29mm) diameter tires.

- D. **Overhead Track:** Extruded aluminum, 1.375 inches (35mm) wide x 1.675 inches (43mm) high, continuous profile seamed with alignment bars and track pins at splices.
- E. **Curves:** Detailed type and location on drawing if required.
- F. **Locking Post:** Extruded aluminum, all post's standard locking hardware and handles shall be flush within post with exceptions for exit hardware. Locks may be on the public side, secure side or both except for intermediate posts. All stainless steel lock rods engage stainless steel floor or counter sockets. All locking posts shall allow for horizontal sway without pressure to side walls of track from trollies while opening and closing the curtain. Refer to detailed drawing for location and type of posts. Post type and location detailed on drawing.
 - 1. **Wall Channel:** A floor to track extruded aluminum channel that the hookbolt fits and locks into. This channel is secured permanently to the wall.
 - 2. **HookBolt Lead:** This post has a hookbolt that secures it to the Wall Channel. Additional top locking or double hookbolt locking available.
 - 3. **Bi-Part:** A pair of posts that lock together with a hookbolt with an added lock rod to keep the curtain in place. It is used to separate larger doors into manageable sections, or to split the door to stack in two different directions. The concealed stainless steel lock rod engages into a floor or counter socket. Doors should have at least one Bi-Part for every 30 feet (9144mm) of width. Top stainless steel rod locking available.
 Top & Bottom: Lead or Trailing End option. This post contains spring loaded stainless steel lock rods that engage a floor or counter socket with the bottom rod and the top rod engages into the track and header. They are unlocked with a keyed cylinder, thumb turn or paddle, both disengaging in one motion. A rubber bumper is the standard leading edge but may also have a 4 inch (102mm) flange.
 - 4. **Intermediate:** A middle post in a door located between door sections, containing a spring-loaded stainless steel lock rod that engages a floor or counter socket to keep the door in place and unlocked by a keyed cylinder or a thumb turn. Maximum straight line spacing of all posts is 10 feet (3048mm). Curves and counter top applications will require closer spacing.
 Traveling End: The Traveling End post terminates a door inside of a pocket (storage area). It is free to travel back and forth inside of the pocket. The post self-locks into permanent header and floor stops that prevent the door from fully leaving the pocket. A rear flange attached to the back of the post prevents reaching around.
 Fixed End: Simply attaches the end of a door permanently to a wall of structure.
- G. **Emergency Egress Door:** Detailed latch type and location on drawing if required. Swing out 35.5 in. x 79.5 in. (902mm x 2019mm) emergency egress door within the curtain. Egress doors for open air Grilles are constructed with perforated panels. Egress doors for Closures are constructed of corresponding curtain material. Add 8 inches (203mm) to stack.

2.4 FINISHES

Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install assembly in accordance with manufacturer's instructions.
- B. Anchor to adjacent construction without distortion or stress, level and plumb, to provide smooth operation.

3.2 ADJUSTING

- A. Adjust grilles for smooth operation throughout full operating range.

END OF SECTION

SECTION 084113

ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Related Documents: General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and Drawings are applicable to this Section.
- B. Section Includes:
 - 1. Aluminum storefront for use at weather protected recessed exterior openings, entrances, and interior uses only
 - 2. Anchors, brackets, and attachments.
 - 3. Aluminum door hardware.

1.2 SYSTEM DESCRIPTION AND PERFORMANCE

- A. Architectural Requirements
 - 1. Drawings are diagrammatic and do not purport to identify or solve problems of thermal or structural movement, glazing or anchorage.
 - 2. Requirements shown by details are intended to establish basic dimensions of units, sightlines and profiles of members.
 - 3. Provide concealed fastening only. No exceptions.
- B. Structural Requirements
 - 1. System to provide for expansion and contraction within system components caused by a cycling temperature range of 170 F degrees without causing detrimental effects to system or components.
 - 2. Design and size members to withstand dead loads and live loads caused by pressure and suction of wind as calculated in accordance with building code, and measured in accordance with ANSI/ASTM E 330.
 - 3. Limit mullion deflection to L/200, or flexure limit of glass with full recovery of glazing materials, whichever is less.
 - 4. System to accommodate, without damage to system or components, or deterioration of perimeter seal: Movement within system; movement between system and perimeter framing components; dynamic loading and release of loads; and deflection of structural support framing.
 - 5. Storefront manufacturer shall be responsible for design and engineering of storefront systems, including water drainage system and necessary modifications to meet specified requirements and maintaining visual design concepts.
 - 6. Attachment methods of frame at rough opening to be designed and engineered by storefront manufacturer's licensed engineer registered in the state in which the project is located. Consideration shall take into account site peculiarities, deflection of structure above storefront, and expansion and contraction movements so there is no possibility of loosening, weakening or fracturing connection between units and building structure or between units themselves.
 - 7. Design anchors, fasteners and braces to be structurally stressed not more than 50% of allowable stress when maximum loads are applied.
 - 8. Engineer storefront and entrances to be free from rattles, wind whistles and noise due to thermal and structural movement and wind pressure.
- C. Environmental Requirements
 - 1. Drain water entering joints, condensation occurring in glazing channels, or migrating moisture occurring within system, to exterior. No water leakage shall occur in wall when tested in accordance with ASTM E 331 at test pressure of 6.24 pounds per square foot.
 - 2. Limit air infiltration through assembly to 0.06 cu ft/min/sq ft of assembly surface area, measured at a reference differential pressure across assembly of 6.24 lbs/sq ft. as measured in accordance with ANSI/ASTM E 283.

3. Maintain continuous air and vapor barrier throughout assembly, primarily in line with inside pane of glass and heel bead of glazing compound.

1.3 SUBMITTALS

- A. **Submit shop drawings and product data** under provisions of Section 013300.
- B. Include system and component dimensions; literature on components; framed opening requirements and tolerances; anchorage and fasteners; glass and infills; door hardware requirements; and affected related work.
- C. Submit manufacturer's installation instructions under provisions of Section 013300.
- D. Submit samples under provisions of Section 013300.
- E. Submit samples illustrating:
 1. (4) Pre-finished aluminum surface samples (4 by 4 inches).
 2. (1) Storefront section with specified glass (12 by 12 inches).
 3. (1) 8 x 8 inch door corner section with specified glass.

1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with AAMA SFM-1 and AAMA - Metal Curtain Wall, Window, Store Front and Entrance - Guide Specifications Manual.
- B. Conform to requirements of ANSI A117.1, TAS, ADA and local accessibility amendments.
- C. Testing: Vacuum Chamber Water Pressure Testing shall be performed by the Owner's certified testing company on two door units and 10 percent of exterior window units or as otherwise determined by the Architect. Hose stream tests may be performed by the Architect with the assistance of the Contractor at additional locations as requested by the Architect. Testing for water infiltration will be conducted on the storefront system, storefront windows and doors, and entrance doors after installation of window/door, exterior veneer, and sealant have been completed. Leave interior side of drywall finishes off for a distance of 4 inches around frames for observation until testing has been satisfactorily completed.
- D. In addition, Architect and Contractor shall conduct a water dam test at storefront window sills. The purpose shall be to observe for water loss through joints between windows and adjacent finishes. Leave interior side finishes open for a distance of 6 inches around the entire water dam and sill for observation until testing has been satisfactorily completed.

1.5 QUALIFICATIONS

- A. **Manufacturer and Installer:** Company specializing in manufacturing aluminum glazing systems with **minimum 10 years documented experience.**

1.6 PRE-INSTALLATION CONFERENCE

- A. **Convene for a Pre-installation conference** one week prior to commencing work of this Section, under provisions of Section 013100.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and handle system components under provisions of Section 016000.
- B. Store and protect system components under provisions of Section 016000.
- C. Provide wrapping to protect prefinished aluminum surfaces.

1.8 COORDINATION

- A. Manufacturer shall be responsible for details and dimensions not controlled by job conditions and shall show on his shop drawings required field measurements beyond his control.
- B. Coordinate with responsible trades to establish, verify and maintain field dimensions and job conditions.

1.9 ENVIRONMENTAL CONDITIONS

- A. Do not install sealants when ambient temperature is less than 40 degrees F during and 48 hours after installation.

- 1.10 WARRANTY
- A. Provide 5 year warranty jointly signed by manufacturer and installer under provisions of Section 017839.
 - B. Warranty: Cover complete system for failure to meet specified requirements and finish.
- 1.11 FIELD MEASUREMENTS
- A. Verify that field measurements are as indicated on shop drawings and as instructed by the manufacturer.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers: Subject to compliance with requirements herein, provide products from one of the following: Basis of Design for Aluminum Fixed Windows: EFCO Corporation
 - 1. EFCO Corporation.
 - 2. Kawneer North America; an Alcoa company.
 - 3. Oldcastle BuildingEnvelope.

2.2 MATERIALS

- A. Extruded Aluminum: ANSI/ASTM B 221; 6060-T5 alloy, temper.
- B. Sheet Aluminum: ASTM B 209; 5005-H16 alloy, temper.
- C. Sheet Steel: ANSI/ASTM A 446; hot-dipped galvanized.
- D. Steel Sections: ANSI/ASTM A 36; shapes to suit mullion sections.
- E. Primer and Touch-Up Primer for Galvanized Surfaces: FS TT-P-645.
- F. Fasteners: Stainless steel.

2.3 FABRICATED COMPONENTS

- A. General: Form section true to details with clean, straight, sharply defined profiles, free from defects impairing strength or durability.
- B. **SF-1 Exterior Storefront System:** 2-1/4-inch by 4-1/2-inch profile as indicated on Drawings, 1 inch glazing, thermally broken, exterior pressure glazed (EPDM gasket), steel reinforced for entrances.
 - 1. **Basis of Design:** EFCO Corp; Series 403-I TS with aluminum back plate and top closure caps.
- C. **SF-2 Interior Storefront System:** 2 inch by 4-1/2 inch profile as indicated on Drawings. 1 inch glazing non-thermal broken with sound sealed gasket;
 - 1. **Basis of Design:** EFCO Carpi Series 402 NT with aluminum back plate.
- D. **Medium Stile Heavy Duty Reinforced Entrance Doors:** 3/16-inch thick walls with 1-3/4" thick x 3-1/2-inch wide vertical rails, 5-inch wide top rail, 10-inch wide bottom rail; welded corners; square glazing stops for insulated glass units; beveled glazing stops for single glazed units.
 - 1. **Basis of Design:** EFCO Corp; D300 Medium Stile Doors.
 - 2. Horizontal rails to be wide enough to contain panic hardware.
 - 3. Vertical stiles to be wide enough to contain vertical panic hardware release rods in double doors.
- E. **Flashings:** Form from sheet aluminum with same finish as extruded sections. Apply finish after fabrication. Material thickness as required to suit condition without deflection or "oil canning".
- F. High Performance Pan Sill Flashing: Install manufacturer's high performance sill flashing at all storefront window locations whether or not called for on the Drawings.

2.4 GLASS AND GLAZING MATERIALS

- A. Glass and Glazing Materials: As specified in Section 088000.

2.5 SEALANT MATERIALS

- A. Sealant and Backing Materials: As specified in Section 079200 of types described below

2.6 HARDWARE

- A. Refer Section 087100.
- B. Provide continuous geared hinges and recessed closers at all doors. Coordinate panic hardware with door locations.

2.7 FABRICATION

- A. Fabricate doors and frames allowing for minimum clearances and shim spacing around perimeter of assembly, yet enabling installation.
- B. Rigidly fit and secure joints and corners with internal reinforcement, except that **door corners will be welded**. Make joints and connections flush, hairline, and weatherproof.
- C. Provide only products with internal drainage systems directing all moisture to the exterior of the system and wall. System provided shall allow no water to deposit in the wall system or cavity wall adjacent to the installation.
- D. Prepare components to receive anchor devices. Fabricate anchorage items.
- E. Arrange fasteners, attachments, and jointing to ensure concealment from view.
- F. Prepare components with internal reinforcement for door hardware.
- G. Reinforce framing members for imposed loads and as required for wind loads.
- H. Fabricate window units with "end dams" at the sill and other locations as required to collect and direct water to the exterior of the system.
- I. Use of double vertical mullions at splayed windows is not permitted.

2.8 FINISHES

- A. **Refer to 008900 for finish as selected from the following:**
 - 1. **Clear Anodic Finish:** AAMA 611, AA-M12C22A21, Class I, 0.018 mm or thicker.
 - 2. **Color Anodic Finish:** AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. ~~Color: Refer to 008900.~~
 - 3. **High-Performance Organic Finish:** ~~2-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.~~
 - a. ~~Color: Refer to 008900.~~
- B. **Concealed Steel Items:** Galvanized in accordance with ANSI/ASTM A386 to 2.0 oz/sq ft.
- C. Apply one coat of bituminous paint to concealed aluminum and steel surfaces in contact with cementitious or dissimilar materials.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify wall openings and adjoining air and vapor seal materials are ready to receive work of this Section.
- B. Verify dimensions, tolerances, and method of attachment with other work.
- C. Beginning of installation means acceptance of existing conditions.

3.2 INSTALLATION

- A. Install wall system, doors, and glazing in accordance with manufacturer's instructions and AAMA Procedural Guide for Certification of Window and Door Assemblies.
- B. Use anchorage devices to attach securely frame assembly to structure.
- C. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.
- D. Install manufacturer's high performance pan sill flashing at all locations. Provide end dams and ensure water is directed to the exterior of the system.
- E. Coordinate attachment and seal of air and vapor barrier materials.

- F. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.
 - G. Install hardware using templates provided. Refer to Section 087100 for installation requirements.
 - H. Install glass in accordance with Section 088000, using exterior dry method of glazing.
 - I. Install perimeter polyurethane type sealant (Designation U-SC), backing materials, and installation requirements in accordance with Section 079200.
 - 1. Where installing aluminum window systems adjacent to rough surface clean and force float sealant into rough surface. Allow sealant to set per manufacturer's recommendations, then install aluminum window system and seal between aluminum window systems and smooth sealant surface.
 - J. Adjust operating hardware for smooth operation.
 - K. Use only concealed fasteners. No exposed screws or other types of fasteners will be allowed under any circumstances. Any storefront installed with exposed fasteners shall be removed and replaced at the Contractor's expense.
- 3.3 TOLERANCES
- A. Maximum Variation from Plumb: 0.06 inches every 3 feet non-cumulative or 1/16 inches per 10 feet, whichever is less.
 - B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch.
- 3.4 ADJUSTING
- A. Adjust work under provisions of Section 017700.
 - B. Adjust operating hardware for smooth operation.
- 3.5 CLEANING/REPAIRING/REPLACEMENT
- A. Remove protective material from pre-finished aluminum surfaces.
 - B. Wash down exposed surfaces using a solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.
 - C. Remove excess sealant by moderate use of mineral spirits or other solvent acceptable to sealant manufacturer.
 - D. Replace scratched, cracked, chipped or otherwise damaged glass and framing.
- 3.6 PROTECTION OF FINISHED WORK
- A. Protect finished work under provisions of Section 015000.
 - B. Protect finished work from damage.
- 3.7 SCHEDULE
- A. **SF-1 Exterior Storefront System:** Provide at exterior building entrances doors and door frames with 1" insulated glass units to match those used in curtainwall.
 - B. **SF-2 Interior Storefront System:** Provide at east 4 story Atrium at interior glazed walls with 1" insulated acoustical glazed units.

END OF SECTION

SECTION 084229

AUTOMATIC SLIDING DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. Section Includes: Automatic aluminum sliding glass door assemblies for use at West Lobby Entrances.

1.3 SUBMITTALS

- A. **Product Data:** Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for entrance doors.
- B. **Shop Drawings:** Include plans, elevations, sections, details, hardware mounting heights, and attachments to other Work.
- C. **Samples for Verification:** For each type of exposed finish required, prepared on Samples of size indicated below and of same thickness and material indicated for the Work. If finishes involve normal color and texture variations, include sample sets showing the full range of variations expected.
 - 1. Size: 12 inch long sections of extrusions or formed shapes.

1.4 QUALITY ASSURANCE

- A. **Installer Qualifications:** An experienced installer who is an authorized representative of the entrance door manufacturer for both installation and maintenance of units required for this Project with a minimum of **10 years' experience** installing specified products.
- B. **Air Infiltration:** According to ASTM E283-91:
 - 1. Standard Test Pressure @ 1.57 psf, measured 0.462 cfm/ft² (ASTM Allowable 1.20 cfm/ft²).
 - 2. Additional Test Pressure @ 6.24 psf, measured 1.052 cfm/ft².
- C. **Product Options:** Information on Drawings and in Specifications establishes requirements for system's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, or in-service performance.
 - 1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.
- D. **Welding Standards:** Comply with AWS D1.2, "Structural Welding Code--Aluminum."

1.5 PROJECT CONDITIONS

- A. **Field Measurements:** Verify entrance door openings by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.6 WARRANTY

- A. **Special Warranty:** Written warranty, executed by manufacturer agreeing to repair or replace components of the entrance door system that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, the following:
 - 1. Lateral deflection of glass lite edges in excess of 1/175 of their length or 3/4 inch (75

- mm), whichever is less.
- 2. Faulty operation of hardware.
- 3. Deterioration of metals, metal finishes, and other materials beyond normal use.
- B. **Warranty Period:** Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis of Design:
 - 1. Manufacturer: Horton Automatics, a division of Overhead Door Corporation.
 - 2. Product: Automatic Commercial Sliding Doors, Type 310.
- B. **Other Acceptable Manufacturers:** Subject to compliance with requirements, provide product by one of the manufacturers listed below:
 - 1. Besam Entrance Solutions.
 - 2. Dorma USA, Inc.
 - 3. Stanley Access Technologies; Div. of The Stanley Works.

2.2 SLIDING AUTOMATIC DOORS

- A. General: Manufactured door units shall include operator, header with roller track, carrier assemblies, framing jambs, sliding door panel(s), sidelite(s), activation, safety devices and accessories required for complete installation.
 - 1. **Configuration:** SO-SX-SX-SO.
 - 2. **Mounting Type:** Between jambs.
 - 3. **Floor Track Configuration:** No track across sliding-door opening and at sidelites (trackless).
 - 4. **Stile Design:** Medium stile; 3-1/2 inch nominal width.
 - 5. **Rail Design:** 5 inch nominal height.
 - 6. Glazing Stops and Gaskets: Beveled.
 - 7. **Glazing:** Clear tempered.
 - 8. **Finish:** Finish framing, door, sidelite, and header with Class II, clear anodic finish.
- B. **Operator:** The operator shall be mounted and concealed within the header.
 - 1. **Operating force** shall be accomplished through a 1/8 HP DC permanent magnet motor with worm gear transmission and 1800 RPM working with drive belt, attached door hangers, and idler pulley. Drive belt to be steel reinforced nylon, 1/2" (13 mm) wide. Idler pulley to be reinforced, metallic material.
 - 2. **Master Control** shall be 16 bit microprocessor controller with dual on-board seven-segment alphanumeric diagnostic display and position encoder. The encoder shall monitor revolutions of the operator shaft and send signals to microprocessor controller to define door position and speed. The control shall have minimum of 28 programmable parameters including the following functions as required by ANSI A156.10:
 - a. Adjustable opening and closing speeds.
 - b. Adjustable back-check and latching.
 - c. Adjustable braking.
 - d. Adjustable hold-open time between 1 to 30 seconds.
 - e. Adjustable Reversing Circuit will reopen door unit if closing path is obstructed.
 - f. Separate day and night modes of operation with security over-ride.
 - 3. **Finger Safety:** When unit slides open, strike rail of sliding panel will stop short of adjacent sidelite; resulting opening is net slide.
 - 4. **On/Off Switch** shall be supplied. When switched OFF, unit reverts to free manual operation (likewise during electrical power failure).
- C. Security and Safety Power Fail Options:
 - 1. **Automatic lock:** Automatically locks slide function of door when in closed position. Additional power supply for autolock not acceptable.
 - a. **Autolock Fail Safe:** If power fails the lock disengages.

2. Monitored Power Fail (battery back-up):

- a. **Software Selectable Power Fail Open:** If power fails the door slides open.
- D. **Header:** Shall be slim 4" (102mm) deep by 6" (152mm) high aluminum construction with extruded z-profile reinforcement for dead load and lateral strength. Header shall have removable face plate for service and adjustment of operator and controls. Header mounts flush to 4" framing jambs.
- E. **Carrier Assemblies and Header Roller Track:** Carrier assemblies shall support door panels with minimum four rollers per panel. Rollers will be steel, high quality ball bearing wheels 1-1/4" (32 mm) diameter. Anti-Derailing shall be accomplished by means of a continuous aluminum extrusion full length of slide panel travel. Overhead header roller track shall be continuous aluminum, nylon covered, and replaceable.
- F. **Hardware:** ANSI A156.5, Grade 1, 2-Point Locking provided and installed in strike rail shall include:
 - 1. Hookbolt Latch, 5/8" laminated stainless steel, latching into jamb or adjacent strike rail.
 - 2. 3/8" hex-bolt into breakout carrier frame.
 - 3. Keyed 1 5/32" (29 mm) Cylinder mounted on exterior side with 31/32" (25 mm) backset.
 - 4. Thumbturn mounted on interior side.
 - 5. Hardware Options:
 - a. Lock Position Indicator.
 - b. Cylinder Guard.
 - c. Cylinder Escutcheon.
- G. **Activation Sensors:** Microwave or active infrared sensor shall be header-mounted each side of door unit for detection of traffic from each direction.
- H. **Presence Sensors:**
 - 1. Header mounted sensors shall provide active infrared presence detection on each side of the door unit and shall remain active throughout the entire door opening and closing cycle.
 - 2. Hold-open beams: Two pulsed infrared photoelectric beams to be mounted in vertical rails of sidelite or in jambs. Sender/receiver arrangement parallels door opening.

2.3 RELATED WORK REQUIREMENTS

- A. **Electrical:** 120 VAC, 50/60 cycle, single phase, dedicated 20 amp circuit per operator. Non-North American voltages can be 240 VAC 50/60 cycle (operator must have 240 volt power supply).
- B. **Operator Construction:** Electromechanical, modular type construction.

2.4 MATERIALS

- A. **Aluminum:** Alloy and temper recommended by manufacturer for type of use and finish indicated, complying with standards indicated below:
 - 1. Extruded: ASTM B 221 (ASTM B 221M).
 - 2. Sheet and Plate: ASTM B 209 (ASTM B 209M).
 - 3. Welding Rods and Bare Electrodes: AWS A5.10.
- B. **Glazing:** As specified in Division 8 Section "Glazing."
- C. **Sealants and Joint Fillers:** Refer to Division 7 Section "Joint Sealants" for joints at perimeter of entrance system.
- D. **Nonmetallic, Shrinkage-Resistant Grout:** Premixed, nonmetallic, non-corrosive, non-staining grout; complying with ASTM C 1107; of consistency suitable for application.
- E. **Bituminous Paint:** Cold-applied, asphalt-mastic paint complying with SSPC-Paint 12 requirements, except containing no asbestos; formulated for 30-mil (0.76-mm) thickness per coat.

2.5 DOOR ASSEMBLIES

- A. **General:** Provide manufacturer's standard door assembly, complete with doors, sidelite framing, and accessories as indicated. Comply with the following:
 - 1. **Number of Doors:** As indicated.

2. **Emergency Breakaway Capability:** Door only.
 3. **Floor Track Configuration:** Trackless across door opening and recessed, pin-guide track system at sidelites.
- B. **Opening Force:** Provide entrance doors that require no more than 5 lbf (22.2 N) to stop door movement.

2.6 COMPONENTS

- A. **Doors:** Provide manufacturer's standard 1-3/4-inch- (44.5-mm-) thick glazed doors with minimum 0.125-inch- (3.2-mm-) thick, extruded tubular stile and rail members. Fabricate corners with mechanically fastened reinforcing brackets or by welding. Incorporate concealed tie-rods that span full length of top and bottom rails.
1. **Glazing Stops and Gaskets:** Provide manufacturer's standard snap-on, extruded-aluminum, square glazing stops and preformed resilient glazing gaskets.
 2. **Stile and Rail Design:** Match profile sizes and locations for the storefront entrances. Include 10 inch high bottom rail required for accessibility requirements.
- B. **Framing Members:** Fabricated from extruded-aluminum or formed-aluminum sheet or plate.
1. **Main Extrusions:** Minimum wall thickness of 0.125 inch (3.2 mm).
 2. **Extruded Glazing Stops and Applied Trim:** Minimum wall thickness of 0.062 inch (1.6 mm).
- C. **Headers:** Fabricated from minimum 0.125-inch- (3.2-mm-) thick, extruded aluminum or formed-aluminum sheet or plate. Conceal roller track in header, providing access by means of hinged or removable access panel to permit service and adjustment. Secure panel to prevent unauthorized access.
1. **Concealed:** Fabricate header to match depth of framing and to extend full width of door opening.
 2. **Capacity:** Capable of supporting doors up to 100 lb (45 kg) per leaf.
- D. **Carrier Assembly and Overhead Roller Track:** Manufacturer's standard carrier assembly that allows vertical adjustment; consisting of nylon- or delrin-covered ball-bearing-center steel wheels operating on a continuous roller track, or ball-bearing-center steel wheels operating on a nylon- or delrin-covered continuous roller track. Support doors from carrier assembly by cantilever and pivot assembly.
1. **Rollers:** Minimum of two ball-bearing roller wheels and two anti-rise rollers for each active leaf.
- E. **Brackets and Reinforcements:** Manufacturer's standard; compatible with adjacent materials. Provide non-staining, nonferrous shims for aligning system components.
- F. **Fasteners and Accessories:** Manufacturer's standard corrosion-resistant, non-staining, non-bleeding; compatible with adjacent materials.
1. **Reinforcement:** Reinforce members as required to retain fastener threads.
 2. **Exposed Fasteners:** Do not use exposed fasteners, except for hardware application. For hardware application, use countersunk Phillips flat-head machine screws finished to match framing members or hardware being fastened, unless otherwise indicated.

2.7 HARDWARE

- A. **General:** Refer to Division 8 Section "Door Hardware" for requirements for hardware items other than those indicated to be provided by entrance door manufacturer.
- B. **Heavy-Duty Hardware:** Provide units as indicated in sizes, number, and type recommended by manufacturer for entrances required. Finish exposed parts to match door finish, unless otherwise indicated.
- C. **Emergency Breakaway Hardware:** Provide release hardware that allows panel to swing out in the direction of egress to a full 90 degrees from sliding mode as indicated. Maximum force to open panel shall be 50 lbf (222 N).
1. **Release Position:** Doors in any position.
- D. **Surface Pulls:** 1-1/2 inch diameter by 60 inch vertical stainless steel pulls on 2 inch standoffs; #4 brushed stainless steel. Confirm with manufacturer.
- E. **Compression Weather Stripping:** Manufacturer's standard replaceable, compressible

gaskets of molded neoprene complying with ASTM D 2000 or molded PVC complying with ASTM D 2287. Include bumper-type gaskets at door stops and laps.

- F. **Sweep Weather Stripping:** Manufacturer's standard replaceable weather stripping of wool, polypropylene, or nylon woven pile, with nylon-fabric or aluminum-strip backing, complying with AAMA 701. Sweep weather stripping includes stripping at jamb, head, and meeting rails where there is no stop or lap to receive compression weather stripping.

2.8 FABRICATION

- A. General: Fabricate entrance door assembly components to designs, sizes, and thicknesses specified and to comply with indicated standards.
- B. Prefabrication: Provide entrance doors as prefabricated assemblies. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to Project site.
 - 1. Do not drill and tap for surface-mounted hardware items until time of installation at Project site.
 - 2. Perform fabrication operations, including cutting, fitting, forming, drilling, and grinding of metalwork in manner that prevents damage to exposed finish surfaces. For hardware, perform these operations before applying finishes.
 - 3. Form shapes with sharp profiles, straight and free of defects or deformations, before finishing.
 - 4. Prepare components to receive concealed fasteners and anchor and connection devices.
 - 5. Fabricate components with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion.
- C. Welding: Weld components to comply with referenced AWS standard. Weld before finishing components to greatest extent possible. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- D. Glazing Channels: Provide minimum clearances for thickness and type of glass indicated according to GANA's "Glazing Manual."
- E. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.
- F. Hardware: Install hardware, except surface-mounted hardware, at fabrication plant. Remove only as required for final finishing operation and for delivery to and installation at Project site.
- G. Doors: Fabricate doors in profiles indicated. Reinforce as required to support imposed loads and for installing hardware. Factory assemble door and frame units.
- H. Framing: Fabricate tubular and channel frame assemblies in configuration indicated, with welded or mechanical joints according to manufacturer's standards. Provide sub-frames and reinforcement of types indicated or, if not indicated, as required for a complete system to support required loads.
- I. Electrical Grounding: Fabricate entrance doors to be internally grounded, complying with requirements of authorities having jurisdiction.

2.9 ALUMINUM FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- C. **Clear Anodic Finish:** AAMA 611, AA-M12C22A21, Class I, 0.018 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, header support, and other conditions affecting performance of entrance doors.

1. Proceed with installation only after unsatisfactory conditions have been corrected.
- 3.2 PREPARATION
 - A. Templates and Diagrams: Furnish templates, diagrams, and other data to fabricators and installers of related work, as necessary for coordinating entrance door installation.
 - 3.3 INSTALLATION
 - A. General: Comply with entrance door manufacturer's written installation instructions, unless more stringent requirements are indicated. Do not install damaged components. Fit frame joints to produce hairline joints free of burrs and distortion. Rigidly secure non-movement joints. Seal joints watertight.
 - B. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
 - C. Entrances: Install entrances plumb and true in alignment with established lines and grades without warp or rack of framing members and doors. Anchor securely in place. Lubricate operating hardware and other moving parts.
 1. Install surface-mounted hardware using concealed fasteners to greatest extent possible.
 2. Set tracks, header assemblies, operating brackets, and guides level and true to location with anchorage for permanent support.
 - D. Glazing: Comply with installation requirements in Division 8 Section "Glazing," unless otherwise indicated.
 - E. Sealants: Comply with requirements in Division 7 Section "Joint Sealants" for installing sealants, fillers, and gaskets.
 1. Set continuous floor tracks and flashing in a full sealant bed, unless otherwise indicated.
 2. Seal frame perimeter with sealant, unless otherwise indicated.
 - 3.4 ADJUSTING
 - A. Adjust door hardware for smooth and safe operation.
 - B. Readjust doors after repeated operation of completed installation equivalent to three days' use by normal traffic (100 to 300 cycles). Lubricate hardware and other moving parts.
 - C. Test grounding system for compliance with requirements of authorities having jurisdiction.
 - 3.5 CLEANING AND PROTECTION
 - A. Clean glass and aluminum surfaces promptly after installation. Remove excess glazing and sealant compounds, dirt, and other substances. Repair damaged finish to match original finish.
 1. Comply with requirements in Division 8 Section "Glazing" for cleaning and maintaining glass.
 - B. Provide final protection and maintain conditions, including limiting construction traffic, that ensure entrance doors are without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 084243

ICU ENTRANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. Section includes manually operated intensive care unit/critical care unit ICU entrances for individual special-care rooms and in Simulation labs.

1.3 SUBMITTALS

- A. **Product Data:** For each configuration of ICU entrance indicated.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. **Shop Drawings:** For each ICU entrance installation.
 - 1. Include plans, elevations, sections, hardware mounting heights, and attachment details.
- C. **Samples for Verification:** For each type of exposed finish required, in manufacturer's standard sizes.
- D. **Sample Warranties:** For manufacturer's warranties.

1.4 QUALITY ASSURANCE

- A. **Installer Qualifications:** An entity that employs installers and supervisors who are trained and approved by manufacturer with a minimum of **10 years' experience** installing specified products.

1.5 FIELD CONDITIONS

- A. **Field Measurements:** Verify actual dimensions of openings to receive ICU entrances by field measurements before fabrication.

1.6 WARRANTY

- A. **Special Warranty:** Manufacturer agrees to repair or replace components of ICU entrances that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Faulty operation of hardware.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal use.
 - 2. **Warranty Period: Two years** from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. **Basis of Design:**
 - 1. Manufacturer: Horton Automatics, a division of Overhead Door Corporation.
 - 2. Product: Profiler-ICU; Type 310T.
- B. **Other Acceptable Manufacturers:** Subject to compliance with requirements, provide product by one of the manufacturers listed below:
 - 1. Besam Entrance Solutions.
 - 2. Dorma USA, Inc.

3. Stanley Access Technologies; Div. of The Stanley Works.

2.2 PERFORMANCE REQUIREMENTS

- A. **Opening Force:** Not more than 5 lbf to fully open door.

2.3 SLIDING ICU ENTRANCE ASSEMBLIES

- A. General: Provide manufacturer's standard factory-glazed ICU entrances including door leaves, sidelites, framing, headers, carrier assemblies, roller tracks, and accessories required for a complete installation as indicated.
- B. Breakaway Hardware: Release hardware that allows indicated panels to swing out in direction of egress to full 90 degrees from closed door position.
 1. Maximum Force to Open Panel: 50 lbf.
 2. Release Position: Sliding door fully open.
- C. **Sliding ICU Entrance:**
 1. **Configuration: Telescoping SO-SX-SX.**
 2. **Mounting:** Between jambs.
 3. **Floor Track Configuration:** No track across sliding-door opening and at sidelites (trackless).
 4. **Stile Design:** Medium stile; 3-1/2 inch nominal width.
 5. **Rail Design:** 5 inch nominal height.
 6. **Glazing Stops and Gaskets:** Beveled.
 7. **Glazing:** Clear tempered.

2.4 COMPONENTS

- A. **Framing Members:** Extruded aluminum, minimum 0.125 inch thick and reinforced as required to support imposed loads.
 1. Nominal Size: 1-3/4 by 4-1/2 inches.
 2. Extruded Glazing Stops and Applied Trim: Minimum 0.062 inch wall thickness.
- B. **Stile and Rail Doors:** 1-3/4 inch thick glazed doors with minimum 0.125 inch thick, extruded-aluminum tubular stile and rail members. Mechanically fasten corners with reinforcing brackets that are welded, or incorporate concealed tie rods that span full length of top and bottom rails.
 1. Glazing Stops and Gaskets: Snap-on, extruded-aluminum stops and preformed gaskets for glazing indicated.
- C. **Sidelites:** 1-3/4 inch deep sidelites with minimum 0.125 inch thick, extruded-aluminum tubular stile and rail members matching door design and finish.
 1. Glazing Stops and Gaskets: Same materials and design as for stile and rail door.
- D. **Glazing:** As specified in Section 088000 Glazing from full range of manufacturer's products.
- E. **Headers:** Fabricated from minimum 0.125 inch thick extruded aluminum, and extending full width of ICU entrance units to conceal carrier assemblies and roller tracks. Provide hinged or removable access panels for service and adjustment. Secure panels to prevent unauthorized access.
- F. **Carrier Assemblies and Overhead Roller Tracks:** Assembly that allows vertical adjustment; consisting of nylon- or delrin-covered, ball-bearing-center steel wheels operating on a continuous roller track or of ball-bearing-center steel wheels operating on a nylon- or delrin-covered, continuous roller track. Support doors from carrier assembly by cantilever and pivot assembly. Provide minimum of two ball-bearing roller wheels and two antirise rollers for each active leaf.
- G. **Brackets and Reinforcements:** High-strength aluminum with nonstaining, nonferrous shims for aligning system components.
- H. **Fasteners and Accessories:** Corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

2.5 HARDWARE

- A. General: Provide units in sizes and types recommended by ICU entrance and hardware manufacturers for entrances and uses indicated. Finish exposed parts to match door finish unless otherwise indicated.
- B. **Pulls:** Recessed units on both sides of each operable door.

2.6 FABRICATION

- A. General: Factory fabricate ICU entrance components to designs, sizes, and thicknesses indicated and to comply with indicated standards.
 - 1. Fabricate aluminum components before finishing.
 - 2. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
 - 3. **Use concealed fasteners to greatest extent possible.** Where exposed fasteners are required, use countersunk Phillips flat-head machine screws, finished to match framing.
 - a. Where fasteners are subject to loosening or turning out from structural movements or vibration, use self-locking devices.
 - b. Reinforce members as required to receive fastener threads.
 - 4. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.
- B. Framing: Provide ICU entrances as prefabricated assemblies. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to Project site.
 - 1. Fabricate tubular and channel frame assemblies with welded or mechanical joints. Provide subframes and reinforcement as required for a complete system to support required loads.
 - 2. Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
 - 3. Form profiles that are straight and free of defects or deformations.
 - 4. Provide components with concealed fasteners and anchor and connection devices.
 - 5. Fabricate components with accurately fitted joints, with ends coped or mitered to produce hairline joints free of burrs and distortion.
 - 6. Provide anchorage and alignment brackets for concealed support of assembly from the building structure.
- C. Doors: Factory fabricated and assembled in profiles indicated. Reinforce as required to support imposed loads and for installing hardware.
- D. Glazing: Fabricate framing with minimum glazing edge clearances for thickness and type of glazing indicated, according to GANA's "Glazing Manual."
- E. Hardware: Factory install hardware to the greatest extent possible; remove only as required for final finishing operation and for delivery to and installation at Project site. Cut, drill, and tap for factory-installed hardware before applying finishes.

2.7 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 - 1. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
 - 2. Sheet and Plate: ASTM B 209.
- B. Heat-Treated Float Glass: ASTM C 1048; Type I; Quality-Q3; Class I (clear) unless otherwise indicated; of kind and condition indicated.
 - 1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
- C. Sealants and Joint Fillers: As specified in Section 079200 "Joint Sealants."

2.8 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

- B. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. **Clear Anodic Finish:** AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, header support, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install automatic entrances according to manufacturer's written instructions.
 - 1. Do not install damaged components. Fit frame joints to produce hairline joints free of burrs and distortion. Rigidly secure nonmovement joints. Seal joints watertight.
- B. Install ICU entrances plumb, true in alignment with established lines and grades, and without warp or rack of framing members and doors. Anchor securely in place.
 - 1. Install surface-mounted hardware using concealed fasteners to greatest extent possible.
 - 2. Set headers, carrier assemblies, tracks, operating brackets, and guides level and true to location with anchorage for permanent support.
- C. Sealants: Comply with requirements in Section 079200 "Joint Sealants" for installing sealants, fillers, and gaskets.
 - 1. Set framing members, floor tracks, and flashings in full sealant bed.
 - 2. Seal perimeter of framing members with sealant.

3.3 ADJUSTING

- A. Adjust operating hardware and moving parts to function smoothly; lubricate as recommended by manufacturer.
- B. Adjust force to open door panels.

3.4 CLEANING AND PROTECTION

- A. Clean glass and metal surfaces promptly after installation. Remove excess glazing and sealant compounds, dirt, and other substances. Repair damaged finish to match original finish.

END OF SECTION

SECTION 084413

GLAZED ALUMINUM CURTAIN WALLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established within General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

A. Section includes:

1. **Conventionally glazed drainable aluminum curtain walls installed as stick systems.**
2. **Reference Section 012100 Allowances for Window Testing.**

1.3 PERFORMANCE REQUIREMENTS

- A. **General:** Provide glazed aluminum curtain-wall systems, including anchorage, capable of withstanding, without failure, the effects of the following:

1. **Structural loads.**
2. **Movements of supporting structure** indicated on Drawings including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
3. **Dimensional tolerances of building frame and other adjacent construction.**
4. **Failure includes the following:**
 - a. Deflection exceeding specified limits.
 - b. Thermal stresses transferred to building structure.
 - c. Framing members transferring stresses, including those caused by thermal and structural movements, to glazing.
 - d. Glass breakage.
 - e. Noise or vibration created by wind and thermal and structural movements.
 - f. Loosening or weakening of fasteners, attachments, and other components.
 - g. Sealant failure.
 - h. **Drainage within the system allowed to deposit moisture within the exterior wall system.**
5. Ballistic resistant system and glazing.

- B. **Structural Loads:**

1. **Wind Loads: As indicated on Structural Drawings, but not less than 90 mph.**
2. Periodic Maintenance-Equipment Loads: As indicated on Drawings.

- C. **Structural-Test Performance:** Provide glazed aluminum curtain-wall systems, including anchorage, capable of withstanding test pressure indicated without material and deflection failures and permanent deformation of structural members exceeding 0.2 percent of span when tested according to ASTM E 330.

1. **Submit reports of tests** performed on manufacturer's standard assemblies.
2. **Test Pressure:** 150 percent of positive and negative wind-load design pressures.
3. **Test Duration:** As required by design wind velocity but not less than 10 seconds.

- D. **Deflection of Framing Members:**

1. **Deflection under design load shall not exceed $L/175$ for spans less than 13'-6".**
2. **Deflection under design load shall not exceed $L/240 + 1/4"$ for spans greater than 13'-6".**
3. **Cantilever Deflection:** Where framing members overhang an anchor point, limited to **2 times the length of cantilevered member, divided by 175.**

- E. **Thermal Movements:** Provide glazed aluminum curtain-wall systems that allow for thermal movements resulting from the following maximum change (range) in ambient and surface

temperatures. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. **Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.**

2. **Test Performance:** No buckling, stress on glass, glazing-edge seal failure, sealant failure, excess stress on curtain-wall framing, anchors and fasteners, or reduction of performance when tested according to AAMA 501.5.

a. Test Ambient Temperature Range: 0 to 180 deg F.

F. **Air Infiltration:** Provide glazed aluminum curtain-wall systems with **maximum air leakage of 0.06 cfm/sq. ft. of fixed wall area** when tested according to ASTM E 283 **at a minimum static-air-pressure differential of 6.24 lbf/sq. ft.**

G. **Water Penetration Under Static Pressure:** Provide aluminum glazed curtain-wall systems that do not evidence water penetration when tested according to ASTM E 331 at a **minimum differential static pressure of 20 percent of positive design wind load, but not less than 15 lbf/sq. ft.**

H. **Water Penetration Under Dynamic Pressure:** Provide glazed aluminum curtain-wall systems that do not evidence water leakage when tested according to AAMA 501.1 under dynamic pressure equal to 20 percent of positive design wind load, but not less than **15 lbf/sq. ft.**

1. **Maximum Water Leakage:** According to AAMA 501.1 No uncontrolled water penetrating systems or appearing on systems' normally exposed interior surfaces from sources other than condensation. Water controlled by flashing and gutters that is drained to exterior and cannot damage adjacent materials or finishes is not considered water leakage.

I. **Condensation Resistance:** Provide glazed aluminum curtain-wall systems with condensation-resistance factor (**CRF**) of **not less than 55** when tested according to AAMA 1503.

J. **Average Thermal Conductance:** Provide glazed aluminum curtain-wall systems with average U-factor of not more than **0.66 Btu/sq. ft. x h x deg F** when tested according to AAMA 1503.

K. **Sound Transmission:** Provide glazed aluminum curtain-wall systems with **minimum STC 32** according to ASTM E 413 **and an OITC 26** according to ASTM E 1332, as determined by testing according to ASTM E 90.

L. **Structural-Sealant Joints:**

1. Designed to carry gravity loads of glazing.

2. Designed to produce tensile or shear stress of less than 20 psi.

M. **Structural Sealant:** Capable of withstanding tensile and shear stresses imposed by structural-sealant-glazed curtain walls without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.

1.4 SUBMITTALS

A. **Product Data:** Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of product indicated.

B. **Shop Drawings:** Prepared by or under the supervision of a qualified professional engineer detailing fabrication and assembly of glazed aluminum curtain-wall systems.

1. Include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

C. **Samples for Initial Selection:** Provide one set of manufacturer's full array of standard and special finishes on actual aluminum sample panels for initial selection. Provide two 8 inch by 8 inch aluminum panels in final finish selected by Architect.

D. **Maintenance Data for Structural Sealant:** For structural-sealant-glazed curtain walls to include in maintenance manuals. Include ASTM C 1401 recommendations for post-installation-phase quality-control program.

E. **Qualification Data:** For Installer.

F. **Field quality-control test reports.**

G. **Warranties:** Special warranties specified in this Section.

1.5 QUALITY ASSURANCE

- A. **Installer Qualifications:** Capable of assuming engineering responsibility and performing Work of this Section and who is acceptable to manufacturer with a **minimum of 10 years successful experience installing specified systems.**
 - 1. **Engineering Responsibility:** Preparation of data for glazed aluminum curtain-wall systems including the following:
 - a. Shop Drawings based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.
 - B. **Testing Agency Qualifications:** An independent agency qualified according to ASTM E 699 for testing indicated. **Also, refer to testing requirements in this section and in Section 012100, Allowances for Window Testing.**
 - C. **Product Options:** Information on Drawings and in Specifications establishes requirements for systems' aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, and in-service performance.
 - 1. Do not modify intended **aesthetic effects, as judged solely by Architect**, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.
 - D. **Welding:** Qualify procedures and personnel according to AWS D1.2, "Structural Welding Code-Aluminum."
 - E. **Pre-installation Conference:** Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination." Review methods and procedures related to glazed aluminum curtain-wall systems including, but not limited to, the following:
 - 1. Review structural load limitations.
 - 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 3. Review required testing, inspecting, and certifying procedures.
 - F. **Testing: Refer to Allowances Section 012100 for testing allowance. Vacuum Chamber Testing shall be performed at 20% of exterior glazed units. Hose stream and other types of tests may be performed by the Owner's certified Testing Agent or the Architect with assistance by the Contractor. Testing for water infiltration will be conducted around the curtain wall system after installation of window, exterior veneer, and exterior sealant have been completed. Leave interior drywall and final finishes 4 inches clear from window rough opening until water test has been performed and results are approved by the Architect.**
 - G. **Prepare water dam test at 20% of window sills on the project. Observe for water loss through joints between windows and adjacent finishes. Leave interior side openings around entire water dam for a space of 4 inches clear for observation during testing.**
 - H. **Structural-Sealant Glazing:** Comply with ASTM C 1401 for design and installation of curtain wall assemblies.
- 1.6 PROJECT CONDITIONS
- A. **Field Measurements:** Verify actual locations of structural supports for glazed aluminum curtain-wall systems by field measurements before fabrication and indicate measurements on Shop Drawings.
 - 1. **Established Dimensions:** Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating glazed aluminum curtain-wall systems without field measurements. Coordinate construction to ensure that actual dimensions correspond to established dimensions.
- 1.7 WARRANTY
- A. **Special Assembly Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of glazed aluminum curtain-wall systems that do**

not comply with requirements herein or that deteriorate as defined in this Section within specified warranty period.

1. **Failures include, but are not limited to, the following:**
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Noise or vibration caused by thermal movements.
 - c. Deterioration of metals and other materials beyond normal weathering.
 - d. Water leakage.
 - e. Air leakage.
2. **Warranty Period: Five years from date of Substantial Completion.**

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Acceptable Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. **EFCO Corporation.**
 2. **Arcadia Group**
 3. **Kawneer North America; an Alcoa company.**
 4. **Oldcastle Building Envelope.**

2.2 ACCEPTABLE PRODUCTS

- A. **Curtain Wall Systems:**
 1. **Typical Curtain Wall Basis of Design: EFCO 5600 Series, thermally broken as required by wind loads.** If sizes are not shown on the drawings provide 2-1/2-inch wide x 7-1/2-inch depth or as required for wind loading and structural requirements. Confirm final sizes with Architect.
 - a. **CW-1:** 2-1/2" W x 6" D.
 - b. **CW-2:** 2-1/2" W x 7-1/4" D.
 - c. **CW-3:** 2-1/2" W x 10-1/4" D.
 - d. **SGCW-1:** 2-1/2" W x 6" D.
 - e. **SGCW-2:** 2-1/2" W x 7-1/4" D.
 - f. **SGCW-3:** 2-1/2" W x 10-1/4" D.
 2. **Ribbon Wall Basis of Design: EFCO 600 RLT.**
 - a. **CWR-1:** 2-1/4" W x 6" D.
 - b. Provide hinged windows at roof access glazed panels.
 3. When designated as ballistic resistant applications, include 1/4 inch thick steel bar in the mullions.
 4. Substitutions: As approved by Architect from listed manufacturers.

2.3 FRAMING SYSTEMS

- A. **Aluminum:** Alloy and temper recommended by manufacturer for type of use and finish indicated.
 1. Sheet and Plate: ASTM B 209.
 2. Extruded Bars, Rods, Shapes, and Tubes: ASTM B 221.
 3. Extruded Structural Pipe and Tubes: ASTM B 429.
 4. Welding Rods and Bare Electrodes: AWS A5.10.
- B. **Frame:**
 1. Frame components shall be mechanically fastened by means of extruded aluminum shear blocks attached to vertical mullions.
 2. Curtain wall system is able to accommodate separate interior and exterior finishes and colors.
 3. Exterior color includes scroll profile as indicated on the Drawings.
 4. Face width and system depths as indicated on the Drawings.
- C. **Steel Reinforcement:** With manufacturer's standard corrosion-resistant primer complying with SSPC-PS Guide No. 12.00 applied immediately after surface preparation and pretreatment.

Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.

1. Structural Shapes, Plates, and Bars: ASTM A 36.
 2. Cold-Rolled Sheet and Strip: ASTM A 611.
 3. Hot-Rolled Sheet and Strip: ASTM A 570.
- D. **Brackets and Reinforcements:** Manufacturer's standard high-strength aluminum with non-staining, nonferrous shims for aligning system components.
- E. **Fasteners and Accessories:** **Manufacturer's concealed**, standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.
1. **Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system.**
 2. Where fasteners are subject to loosening or turn out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
 3. Reinforce members as required to receive fastener threads.
 4. At movement joints, use slip-joint linings, spacers, and sleeves of material and type recommended by manufacturer.
- F. **Anchors:** Three-way adjustable anchors that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
- G. **Concealed Flashing:** Dead-soft, 0.018 inch thick stainless steel, ASTM A 240 of type recommended by manufacturer.
- H. **Framing Gaskets:** As recommended by manufacturer for joint type.
- I. **Framing Sealants:** As recommended by manufacturer for joint type.

2.4 GLAZING SYSTEMS

- A. Glazing: As specified in Division 8 Section "Glazing."
- B. **Glazing Gaskets:** Manufacturer's standard sealed-corner pressure-glazing system of **black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers.**
- C. **Glazing Sealants for use in typical curtain wall applications:** As recommended by manufacturer for joint type.
- D. **Structural Glazing Sealants:** ASTM C 1184, chemically curing silicone formulation that is compatible with system components with which it comes in contact, specifically formulated and tested for use as structural sealant and approved by structural-sealant manufacturer for use in curtain-wall assembly indicated.
1. **Color:** As selected by Architect from manufacturer's full range of colors.
- E. **Weatherseal Sealants:** ASTM C 920 for Type S; Grade NS; Class 25; Uses NT, G, A, and O; chemically curing silicone formulation that is compatible with structural sealant and other system components with which it comes in contact; recommended by structural-sealant, weatherseal-sealant, and structural-sealant-glazed curtain-wall manufacturers for this use.
1. **Color:** Match structural sealant.

2.5 ACCESSORY MATERIALS

- A. **Shading Fins:** (Not Used).
- B. **Insulating Materials:** Specified in Division 7 Section "Building Insulation."
- C. **Flashings:** Form from sheet aluminum with same finish as extruded sections. Apply finish after fabrication. Material thickness as required to suit condition without deflection or "oil canning".
- D. **High Performance Pan Sill Flashing:** **Install manufacturer's high performance sill flashing at all windows whether or not called for on drawings.**
- E. **Wind Braces:** Manufacturer's standard wind bracing to be installed where needed to conform to performance requirements.
- F. **Bituminous Paint:** Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

2.6 FABRICATION

- A. Form aluminum shapes before finishing.
- B. **Construction: Thermally broken.**
- C. **Fabricate components that, when assembled, have the following characteristics:**
 - 1. Sharp profiles, straight and free of defects or deformations.
 - 2. Accurately fitted joints with ends coped or mitered.
 - 3. **Internal guttering systems or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within the system to exterior.**
 - 4. Physical and thermal isolation of glazing from framing members.
 - 5. Accommodations for thermal and mechanical movements of glazing and framing to prevent glazing-to-glazing contact and to maintain required glazing edge clearances.
 - 6. **Provisions for re-glazing from exterior.**
- D. **Fabricate with drainage system directing all moisture to the exterior of the system and wall. Allow for no water to deposit in the wall system or cavity.**
- E. **Weld in concealed locations to greatest extent possible** to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- F. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.
- G. **Fabricate Members with welded "end dams" at the sill and other locations as required to collect and direct water to the exterior of the system.**
- H. **Double vertical mullions are not permitted. Splayed mullions only allowed with Architect's specific permission. Splayed mullions, if approved, shall have flat exterior trim cap unless otherwise specifically approved by the Architect.**
- I. **At curved or segmented glazed areas (if any), provide splayed millions (with Architect's approval) as required to accommodate radius required without double mullions.**

2.7 ALUMINUM FINISHES

- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- C. ~~**Mica-Metallic High-Performance Organic Finish:** Two-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.~~
 - 1. ~~**Color:** Refer to Document 008900 - Finish Selection Summary.~~
- D. **Clear Anodic Finish:** AAMA 611, AA-M12C22A21, Class I, 0.018 mm or thicker.
- E. Apply one coat of bituminous paint to concealed aluminum surfaces in contact with cementitious or dissimilar materials.

2.8 SOURCE QUALITY CONTROL

- A. **Structural Sealant:** Perform quality-control procedures complying with ASTM C 1401 recommendations including, but not limited to, assembly material qualification procedures, sealant testing, and assembly fabrication reviews and checks.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare surfaces that will contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

3.3 INSTALLATION

A. General:

- 1. Comply with manufacturer's written instructions.
- 2. Do not install damaged components.
- 3. Fit joints to produce hairline joints free of burrs and distortion.
- 4. Rigidly secure non-movement joints.
- 5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
- 6. Seal joints watertight, unless otherwise indicated.
- 7. **Use only concealed fasteners. Any curtainwall installed with exposed fasteners shall be removed and replaced at the contractor's expense.**

B. Metal Protection:

- 1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape or installing nonconductive spacers as recommended by manufacturer for this purpose.
- 2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

C. **Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within the system to the exterior.**

D. Install components plumb and true in alignment with established lines and grades.

E. **Install manufacturer's high performance pan sill flashing at all locations. Provide welded end dams and ensure water is directed to the exterior of the system.**

F. Coordinate attachment and seal of air and vapor barrier materials.

G. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

H. Install glazing as specified Division 8 Section "Glazing."

- 1. **Prepare surfaces that will contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.**

I. Install sealants as specified in Division 7 Section "Joint Sealants."

- 1. **Where installing aluminum window systems adjacent to rough surfaces clean and force float sealant into rough surface. Allow sealant to set per manufacturer's recommendations, then install aluminum window system and seal between aluminum window systems and smooth sealant surface.**

J. Install insulation materials as specified in Division 7 Section "Building Insulation."

K. **Erection Tolerances:** Install glazed aluminum curtain-wall systems to comply with the following maximum tolerances:

- 1. **Plumb:** 1/8 inch in 10 feet; 1/4 inch in 40 feet.
- 2. **Level:** 1/8 inch in 20 feet; 1/4 inch in 40 feet.
- 3. **Alignment:**
 - a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
 - b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
 - c. Where surfaces are separated by reveal or protruding element of 1 inch wide or greater, limit offset from true alignment to 1/4 inch.
- 4. **Location:** Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.4 FIELD QUALITY CONTROL

- A. **Testing Agency:** Notify and coordinate with Owner's independent testing agency or Architect to water test in-place system. **Refer to Section 012100 Allowances for Window Testing.**

1. **Test a minimum of 20 percent of the windows on the project utilizing vacuum chamber testing method by a certified window testing consultant. Additional hose stream testing may be performed by the Architect with the assistance of the Contractor.**
2. **Test 20 percent of the end dam installations on the project.**
- B. Repair or remove work where test results and inspections indicate that it does not comply with specified requirements.
- C. Additional testing and inspection, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- D. **Structural-Sealant Adhesion:** Test structural sealant according to recommendations in ASTM C 1401, Destructive Test Method A, "Hand Pull Tab (Destructive)," Appendix X2.
 1. Test a minimum of four areas on each building facade.
 2. Repair installation areas damaged by testing.
- E. **Require manufacturer to inspect the project three times during the installation of system to include:**
 1. Review of substrate prior to installation to ensure acceptance.
 2. During course of system installation.
 3. At final completion of system installation.
 4. **Provide written report of inspection to Architect within three days of inspections as a prerequisite for Contractor's Application for Payment that month.**

END OF SECTION

SECTION 084511

TRANSLUCENT LINEAR CHANNEL GLAZING SYSTEM

PART 1 - GENERAL

- 1.1 SUMMARY
 - A. Sections includes: Translucent linear glass units, framing, glazing accessories.
- 1.2 SUBMITTALS
 - A. **Product Data:** Submit manufacturer's technical literature. Include manufacturer's product data providing product descriptions, technical data, and installation instructions
 - B. **Shop Drawings:** Include plans, elevations, and details of product showing component dimensions.
 - C. **Samples for Verification:** Standard sample length by full panel width in size.
 - D. **Warranties:** Submit manufacturer's warranty.
- 1.3 DELIVERY, STORAGE, AND HANDLING
 - A. Deliver materials to specified destination in manufacturer or distributor packaging, undamaged, complete with installation instructions.
 - B. Store off ground, on a level surface, under cover, and protected from weather and construction activities in accordance with manufacturer's recommendations.
- 1.4 WARRANTY
 - A. **Material Warranty:** Provide manufacturer's limited **10-year warranty**.

PART 2 - PRODUCTS

- 2.1 MANUFACTURERS AND PRODUCTS
 - A. **Basis of Design:**
 - 1. **Manufacturer:** Pilkington Profilit™ channel glass system, supplied by Technical Glass Products.
 - 2. **Product:** As indicated in Section 008900 - Finish Selection Summary.
- 2.2 PERFORMANCE
 - A. **System Description:** Thermally Broken aluminum frame with double glazed, translucent, linear glass with 2-3/8 inch deep channel flange.
 - B. **Air Infiltration Requirements:** ASTM E 283 at 6.24 PSF. Total amount of air infiltration shall not exceed 0.06 cubic foot/minute square foot of wall area tested.
 - C. **Water Penetration Under Static Pressure:** In accordance with ASTM E 331-00; air pressure 20 percent design wind load; 6.24 PSF minimum, 20 PSF maximum, applied against face. No uncontrolled water penetration allowed
 - D. **Structural Requirements:** AAMA/NWWDA/CSA 101/1.S.21 A440-08 and ASTM F 588.
 - E. **Glazing Requirements:** 16 CFR 1201, Category I and Category II.
- 2.3 MATERIALS
 - A. **Glass:** ASTM C1036, Type 1, Class 1, Quality q3, rolled glass, channel shape, cast.
 - 1. Nominal thickness of 0.120 inch for framing members and rails, 0.090 inch for sheets, and 0.050 inch for glazing stops and similar components
 - B. **Stainless Steel Wire:** ASTM A492, Type 316.
 - C. **Aluminum:** ASTM B221, alloy 6063-T5 for extrusions; ASTM B209, alloy 5005-H16 for sheets; or other alloys and temper recommended by manufacturer appropriate for specified finish.
 - D. **Vinyl:** AAMA 303 external grade unplasticized PVC.

2.4 ACCESSORIES

- A. Anchorage Devices: Manufacturer's standard formed or fabricated steel or aluminum assemblies or shapes, plates, bars or tubes.
- B. Fasteners: Aluminum, non-magnetic stainless steel or other non-corrosive materials compatible with items being fastened.
 - 1. Provide concealed fasteners wherever possible.
 - 2. Exposed Locations: Phillips flathead screws with finish matching item fastened.
 - 3. Concealed Locations: Manufacturer's recommended standard fasteners.
- C. Expansion Anchor Devices: Lead-shield or toothed-steel, drilled-in, expansion bolt anchors.
- D. Perimeter Joint Sealant and Backer Rod: Silicone-Glazing.
 - 1. Colors: Standard colors as selected by Architect from manufacturer's full range of colors.
 - 2. Primer: If required by sealant manufacturer for applications show.
 - 3. Sealant Backing, Bond Breaker Rod and Tape: Closed cell unless required by sealant manufacturer.

2.5 FABRICATION

- A. Coordination of Fabrication: Check actual frame or door openings required in construction work by accurate field measurements before fabrication.
 - 1. Fabricate units to withstand design loads that will be applied when system is in place.
- B. General: Provide each unit of framework continuous.
 - 1. Disassemble only to extent necessary for shipment and installation.
 - 2. Conceal fasteners wherever possible.
 - 3. Form gutter and weep system to prevent water infiltration.
 - 4. Separate dissimilar metals and aluminum in contact with concrete utilizing protective coating or preformed separators, which will prevent contact and corrosion.
- C. Aluminum Framing: Provide members of size, shape and profile indicated, designed to provide for glazing from exterior or interior.
 - 1. Provide manufacturer's standard thermal isolation between exterior and interior aluminum extrusions.
 - 2. Fabricate frame assemblies with mitered or coped joints.
 - 3. Maintain accurate relation of planes and angles, with hairline fit or contacting members.
 - 4. Seal horizontals and direct moisture accumulation to exterior.
 - 5. Provide spacers and other materials used internally or externally that are corrosive resistant, non-staining, non-bleeding and compatible with adjoining materials.
 - 6. Fabricate framing for expansion and contraction due to temperature changes without detriment to appearance or performance.
 - 7. Make provisions in framing for minimum edge clearance, nominal edge cover and nominal pocket width for thickness and type of glazing or infill used in accordance with recommendations of manufacturer and Technical Manual.
- D. Welding: Comply with recommendations of American Welding Society (AWS).
 - 1. Use recommended electrodes and methods to avoid distortion and discoloration.
 - 2. Grind exposed welds smooth and flush with adjacent surfaces; restore mechanical finish.

2.6 ALUMINUM FINISH

- A. **Fluorocarbon Coating:** AAMA 2605. Match color on curtain wall.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting framing, with installer present, for compliance with the following:
 - 1. Manufacturing and installation tolerances, including those for size, squareness, offsets at corners.
 - 2. Minimum required face or edge clearances.
 - 3. Observable edge damage or face imperfections.
- B. Do not proceed with glazing until unsatisfactory conditions have been corrected.

3.2 **INSTALLATION**

- A. Install units in accordance with manufacturer's written instructions, plumb, level, square, and free from warp or twist while maintaining dimensional tolerances and alignment with surrounding construction.
- B. Erect framing, vinyl spacer, and glass in accordance with manufacturer's printed installation instructions. Seal glass units continuously on both sides of glass between frame and glass and between linear glass units.
- C. Joint Sealant: Install perimeter joint sealant and backing materials between assemblies and adjacent construction.
- D. **Erection Tolerances:**
 - 1. Limit Variations from Plumb and Level:
 - a. 1/8 inch in 10 feet vertically.
 - b. 1/8 inch in 20 feet horizontally.
 - 2. Limit Variations from Theoretical Locations: 1/4 inch for any member at any location.
 - 3. Limit Offsets in Theoretical End-To-End and Edge-To-Edge Alignment: 1/16 inch from flush surfaces not more than 2 inches apart or out-of-flush by more than 1/4 inch.

END OF SECTION

SECTION 087100

DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes commercial door hardware for the following:
 - 1. Swinging doors.
 - 2. Other doors to the extent indicated.
- B. Door hardware includes, but is not necessarily limited to, the following:
 - 1. Mechanical door hardware.
 - 2. Electromechanical door hardware.
 - 3. Cylinders specified for doors in other sections.
- C. Related Sections:
 - 1. Division 08 Section "Door Hardware Schedule".
 - 2. Division 08 Section "Hollow Metal Doors and Frames".
 - 3. Division 08 Section "Flush Wood Doors".
 - 4. Division 08 Section "Access Control Hardware".
- D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.
 - 1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
 - 2. ICC/IBC - International Building Code.
 - 3. NFPA 70 - National Electrical Code.
 - 4. NFPA 80 - Fire Doors and Windows.
 - 5. NFPA 101 - Life Safety Code.
 - 6. NFPA 105 - Installation of Smoke Door Assemblies.
 - 7. State Building Codes, Local Amendments.
- E. Standards: All hardware specified herein shall comply with the following industry standards:
 - 1. ANSI/BHMA Certified Product Standards - A156 Series
 - 2. UL10C – Positive Pressure Fire Tests of Door Assemblies

1.3 SUBMITTALS

- A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.
- B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
 - 1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
 - 2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.
 - 3. Content: Include the following information:
 - a. Type, style, function, size, label, hand, and finish of each door hardware item.
 - b. Manufacturer of each item.
 - c. Fastenings and other pertinent information.
 - d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
 - e. Explanation of abbreviations, symbols, and codes contained in schedule.
 - f. Mounting locations for door hardware.
 - g. Door and frame sizes and materials.
 - h. Warranty information for each product.
 - 4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.
- C. Shop Drawings: Details of electrified access control hardware indicating the following:
 - 1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:
 - a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
 - b. Complete (risers, point-to-point) access control system block wiring diagrams.
 - c. Wiring instructions for each electronic component scheduled herein.

2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.
- D. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.
- E. Informational Submittals:
 1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.
- F. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Submittals.

1.4 QUALITY ASSURANCE

- A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.
- B. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
- C. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.
- D. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.
 1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.
 2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.
- E. Each unit to bear third party permanent label demonstrating compliance with the referenced standards.

- F. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:
1. Function of building, purpose of each area and degree of security required.
 2. Plans for existing and future key system expansion.
 3. Requirements for key control storage and software.
 4. Installation of permanent keys, cylinder cores and software.
 5. Address and requirements for delivery of keys.
- G. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.
1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
 2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
 3. Review sequence of operation narratives for each unique access controlled opening.
 4. Review and finalize construction schedule and verify availability of materials.
 5. Review the required inspecting, testing, commissioning, and demonstration procedures
- H. At completion of installation, provide written documentation that components were applied to manufacturer's instructions and recommendations and according to approved schedule.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.
- B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.
- C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.6 COORDINATION

- A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

- B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.
- C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.7 WARRANTY

- A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.
- B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:
 - 1. Structural failures including excessive deflection, cracking, or breakage.
 - 2. Faulty operation of the hardware.
 - 3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - 4. Electrical component defects and failures within the systems operation.
- C. Standard Warranty Period: One year from date of Substantial Completion, unless otherwise indicated.
- D. Special Warranty Periods:
 - 1. Ten years for mortise locks and latches.
 - 2. Twenty five years for manual surface door closer bodies.
 - 3. Ten years for heavy duty floor closers.
 - 4. Two years for shallow depth floor closers.
 - 5. Five years for motorized electric latch retraction exit devices.
 - 6. Two years for electromechanical door hardware.

1.8 MAINTENANCE SERVICE

- A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

PART 2 - PRODUCTS

2.1 SCHEDULED DOOR HARDWARE

- A. General: Provide door hardware for each door to comply with requirements in Door Hardware Sets and each referenced section that products are to be supplied under.
- B. Designations: Requirements for quantity, item, size, finish or color, grade, function, and other distinctive qualities of each type of door hardware are indicated in the Door Hardware Sets at the end of Part 3. Products are identified by using door hardware designations, as follows:
- C. Named Manufacturer's Products: Product designation and manufacturer are listed for each door hardware type required for the purpose of establishing requirements. Manufacturers' names are abbreviated in the Door Hardware Schedule.
- D. Substitutions: Requests for substitution and product approval for inclusive mechanical and electromechanical door hardware in compliance with the specifications must be submitted in writing and in accordance with the procedures and time frames outlined in Division 01, Substitution Procedures. Approval of requests is at the discretion of the architect, owner, and their designated consultants.

2.2 HANGING DEVICES

- A. Hinges: ANSI/BHMA A156.1 certified butt hinges with number of hinge knuckles as specified in the Door Hardware Sets.
 - 1. Quantity: Provide the following hinge quantity, unless otherwise indicated:
 - a. Two Hinges: For doors with heights up to 60 inches.
 - b. Three Hinges: For doors with heights 61 to 90 inches.
 - c. Four Hinges: For doors with heights 91 to 120 inches.
 - d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.
 - 2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:
 - a. Widths up to 3'0": 4-1/2" standard or heavy weight as specified.
 - b. Sizes from 3'1" to 4'0": 5" standard or heavy weight as specified.
 - 3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:
 - a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
 - b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.
 - 4. Hinge Options: Comply with the following where indicated in the Hardware Sets or on Drawings:

- a. Non-removable Pins: Provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for the all out-swinging lockable doors.

5. Acceptable Manufacturers:

- a. Hager Companies (HA).
- b. McKinney Products (MK).

- B. Continuous Geared Hinges: ANSI/BHMA A156.26 Grade 1-600 certified continuous geared hinge. with minimum 0.120-inch thick extruded 6060 T6 aluminum alloy hinge leaves and a minimum overall width of 4 inches. Hinges are non-handed, reversible and fabricated to template screw locations. Factory trim hinges to suit door height and prepare for electrical cut-outs.

1. Acceptable Manufacturers:

- a. Hager Companies (HA).
- b. Pemko Manufacturing (PE).

- C. Floor Closers: ANSI/BHMA A156.4 certified floor closers. Provide independent and adjustable valves for closing speed, latch speed, and backcheck with built-in dead stop and hold open features as specified. Provide finished cover plates or thresholds as indicated in door Hardware Sets.

1. Acceptable Manufacturers:

- a. Rixson Door Controls (RF).

2.3 POWER TRANSFER DEVICES

- A. Electrified Quick Connect Transfer Hinges: Provide electrified transfer hinges with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.

1. Acceptable Manufacturers:

- a. McKinney Products (MK) - QC (# wires) Option.

- B. Electrified Quick Connect Continuous Geared Transfer Hinges: Provide electrified transfer continuous geared hinges with a 12" removable service panel cutout accessible without de-mounting door from the frame. Furnish with Molex™ standardized plug connectors with sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.

1. Acceptable Manufacturers:

- a. McKinney Products (MK) - SER-QC (# wires) Option.
 - b. Pemko Manufacturing (PE) - SER-QC (# wires) Option.
- C. Electric Door Wire Harnesses: Provide electric/data transfer wiring harnesses with standardized plug connectors to accommodate up to twelve (12) wires. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Provide sufficient number and type of concealed wires to accommodate electric function of specified hardware. Provide a connector for through-door electronic locking devices and from hinge to junction box above the opening. Wire nut connections are not acceptable. Determine the length required for each electrified hardware component for the door type, size and construction, minimum of two per electrified opening.
 - 1. Provide one each of the following tools as part of the base bid contract:
 - a. McKinney Products (MK) - Electrical Connecting Kit: QC-R001.
 - b. McKinney Products (MK) - Connector Hand Tool: QC-R003.
 - 2. Acceptable Manufacturers:
 - a. McKinney Products (MK) – QC-C Series.

2.4 DOOR OPERATING TRIM

- A. Flush Bolts and Surface Bolts: ANSI/BHMA A156.3 and A156.16, Grade 1, certified.
 - 1. Flush bolts to be furnished with top rod of sufficient length to allow bolt retraction device location approximately six feet from the floor.
 - 2. Furnish dust proof strikes for bottom bolts.
 - 3. Surface bolts to be minimum 8" in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable.
 - 4. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.
 - 5. Acceptable Manufacturers:
 - a. Rockwood Manufacturing (RO).
 - b. Trimco (TC).
- B. Door Push Plates and Pulls: ANSI/BHMA A156.6 certified door pushes and pulls of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.
 - 1. Push/Pull Plates: Minimum .050 inch thick, size as indicated in hardware sets, with beveled edges, secured with exposed screws unless otherwise indicated.
 - 2. Door Pull and Push Bar Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door unless otherwise indicated.
 - 3. Offset Pull Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door and offset of 90 degrees unless otherwise indicated.
 - 4. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets.
 - 5. Acceptable Manufacturers:

- a. Rockwood Manufacturing (RO).
- b. Trimco (TC).

2.5 CYLINDERS AND KEYING

- A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.
- B. Source Limitations: Obtain each type of keyed cylinder and keys from the same source manufacturer as locksets and exit devices, unless otherwise indicated.
- C. Cylinders: Original manufacturer cylinders complying with the following:
 - 1. Mortise Type: Threaded cylinders with rings and cams to suit hardware application.
 - 2. Rim Type: Cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
 - 3. Bored-Lock Type: Cylinders with tailpieces to suit locks.
 - 4. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
 - 5. Keyway: Match Facility Restricted Keyway.
- D. Permanent Cores: Manufacturer's standard; finish face to match lockset; complying with the following:
 - 1. Interchangeable Cores: Core insert, removable by use of a special key; usable with other manufacturers' cylinders.
 - 2. Removable Cores: Core insert, removable by use of a special key, and for use with only the core manufacturer's cylinder and door hardware. Provide removable core (small or large format) as specified in Hardware Sets.
- E. Keying System: Each type of lock and cylinders to be factory keyed.
 - 1. Conduct specified "Keying Conference" to define and document keying system instructions and requirements.
 - 2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
 - 3. Existing System: Key locks to Owner's existing system.
- F. Key Quantity: Provide the following minimum number of keys:
 - 1. Change Keys per Cylinder: Two (2)
 - 2. Master Keys (per Master Key Level/Group): Five (5).
 - 3. Construction Keys (where required): Ten (10).
- G. Construction Keying: Provide temporary keyed construction cores.
- H. Key Control Cabinet: Provide a key control system including envelopes, labels, and tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet. Key control cabinet shall have expansion capacity of 150% of the number of locks required for the project.
 - 1. Acceptable Manufacturers:

- a. Lund Equipment (LU).
- b. MMF Industries (MM).
- c. Telkee (TK).

2.6 MECHANICAL LOCKS AND LATCHING DEVICES

- A. Mortise Locksets, Grade 1 (Heavy Duty): ANSI/BHMA A156.13, Series 1000, Operational Grade 1 certified. Locksets are to be manufactured with a corrosion resistant steel case and be field-reversible for handing without disassembly of the lock body.

- 1. Acceptable Manufacturers:

- a. Corbin Russwin Hardware (RU) – ML2000 Series.
 - b. No Substitution.

- B. Narrow Stile Interconnected Locksets:

- 1. Interconnected locksets designed with a mortise case which contains both a latchbolt and deadbolt and allows simultaneous retraction of both the latchbolt and deadbolt with a single motion turning of the lever handle.
- 2. Locksets to be non-handed and available with a 1 1/8" or 1 1/2" standard backset.
- 3. Latchbolt and deadbolt shall be fabricated of wrought brass and bronze with a minimum 3/4" latchbolt throw and 1" deadbolt throw.
- 4. Acceptable Manufacturers:
 - a. Adams Rite (AD) – 2190/2290 Series.

2.7 ELECTROMECHANICAL LOCKING DEVICES

- A. Electromechanical Mortise Locksets, Grade 1 (Heavy Duty): Subject to same compliance standards and requirements as mechanical mortise locksets, electrified locksets to be of type and design as specified below.

- 1. Electrified Lock Options: Where indicated in the Hardware Sets, provide electrified options including: outside door lock/unlock trim control, latchbolt and lock/unlock status monitoring, deadbolt monitoring, and request-to-exit signaling. Support end-of-line resistors contained within the lock case. Unless otherwise indicated, provide electrified locksets standard as fail secure.
- 2. Energy Efficient Design: Provide lock bodies which have a holding current draw of 15mA maximum, and can operate on either 12 or 24 volts. Locks are to be field configurable for fail safe or fail secure operation.
- 3. Acceptable Manufacturers:
 - a. Corbin Russwin Hardware (RU) - ML20900 Series.
 - b. No Substitution.

2.8 AUXILIARY LOCKS

- A. Push-Pull Latches, Paddle Type, Mortise: ANSI/BHMA A156.13, Series 1000, Operational and Security Grade 1 mortise type push-pull locks and latches with ligature-resistant paddle trim capable of being mounted in vertical (up or down) and horizontal (sideways) positions. Locksets to be manufactured with a corrosion resistant, formed steel case and be non-handed, field-reversible for re-handing without disassembly of the lock body. Paddles and covers are manufactured from cast stainless steel or brass material. Provide optional lead-lining (lock body) and Torx® fasteners as specified in Hardware Sets.
 - 1. Acceptable Manufacturers:
 - a. Corbin Russwin Hardware (RU) – ML2000 HPSK Series.

2.9 LOCK AND LATCH STRIKES

- A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:
 - 1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
 - 2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
 - 3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
 - 4. Double-lipped strikes: For locks at double acting doors. Furnish with retractable stop for rescue hardware applications.
- B. Standards: Comply with the following:
 - 1. Strikes for Mortise Locks and Latches: BHMA A156.13.
 - 2. Strikes for Bored Locks and Latches: BHMA A156.2.
 - 3. Strikes for Auxiliary Deadlocks: BHMA A156.36.
 - 4. Dustproof Strikes: BHMA A156.16.

2.10 CONVENTIONAL EXIT DEVICES

- A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:
 - 1. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.
 - 2. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer's catalog and template book for specific requirements.

3. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.
 4. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.
 5. Electromechanical Options: Subject to same compliance standards and requirements as mechanical exit devices, electrified devices to be of type and design as specified in hardware sets. Include any specific controllers when conventional power supplies are not sufficient to provide the proper inrush current.
 6. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.
 - a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
 - b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.
 7. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.
 8. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2" wide stiles.
 9. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.
 10. Rail Sizing: Provide exit device rails factory sized for proper door width application.
 11. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.
- B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 certified panic and fire exit hardware devices furnished in the functions specified in the Hardware Sets. Exit device latch to be stainless steel, pullman type, with deadlock feature.
1. Acceptable Manufacturers:
 - a. Von Duprin (VD) - 35A/98 XP Series.

2.11 DOOR CLOSERS

- A. All door closers specified herein shall meet or exceed the following criteria:
1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers including installation and adjusting information on inside of cover.

2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.
 3. Cycle Testing: Provide closers which have surpassed 15 million cycles in a test witnessed and verified by UL.
 4. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the physically handicapped, provide units complying with ANSI ICC/A117.1.
 5. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.
 6. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.
 7. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.
- B. Door Closers, Surface Mounted (Large Body Cast Iron): ANSI/BHMA A156.4, Grade 1 surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control.
1. Acceptable Manufacturers:
 - a. Corbin Russwin Hardware (RU) - DC8000 Series.
 - b. No Substitution.
- C. Door Closers, Surface Mounted (Commercial Duty): ANSI/BHMA 156.4, Grade 1 certified surface mounted, institutional grade door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck, closing sweep, and latch speed control valves. Provide non-handed units standard.
1. Acceptable Manufacturers:
 - a. Corbin Russwin Hardware (RU) - DC6000 Series.
 - b. No Substitution.

2.12 ARCHITECTURAL TRIM

A. Door Protective Trim

1. General: Door protective trim units to be of type and design as specified below or in the Hardware Sets.

Size: Fabricate protection plates (kick, armor, or mop) not more than 2" less than door width (LDW) on stop side of single doors and 1" LDW on stop side of pairs of doors, and not more than 1" less than door width on pull side. Coordinate and provide proper width and height as required where conflicting hardware dictates. Height to be as specified in the Hardware Sets.

2. Where plates are applied to fire rated doors with the top of the plate more than 16" above the bottom of the door, provide plates complying with NFPA 80. Consult manufacturer's catalog and template book for specific requirements for size and applications.
3. Protection Plates: ANSI/BHMA A156.6 certified protection plates (kick, armor, or mop), fabricated from the following:
 - a. Stainless Steel: 300 grade, 050-inch thick.
4. Options and fasteners: Provide manufacturer's designated fastener type as specified in the Hardware Sets. Provide countersunk screw holes.
5. Acceptable Manufacturers:
 - a. Rockwood Manufacturing (RO).

2.13 DOOR STOPS AND HOLDERS

- A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.
- B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 certified door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.
 1. Acceptable Manufacturers:
 - a. Rockwood Manufacturing (RO).
 - b. Trimco (TC).
- C. Overhead Door Stops and Holders: ANSI/BHMA A156.6, Grade 1 certified overhead stops and holders to be surface or concealed types as indicated in Hardware Sets. Track, slide, arm and jamb bracket to be constructed of extruded bronze and shock absorber spring of heavy tempered steel. Provide non-handed design with mounting brackets as required for proper operation and function.
 1. Acceptable Manufacturers:
 - a. Rixson Door Controls (RF).
 - b. Rockwood Manufacturing (RO).
 - c. Sargent Manufacturing (SA).

2.14 ARCHITECTURAL SEALS

- A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.
- B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.
 - 1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.
- C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.
 - 1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NPFA 252, Standard Methods of Fire Tests of Door Assemblies.
- D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.
- E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.
- F. Acceptable Manufacturers:
 - 1. National Guard Products (NG).
 - 2. Pemko Manufacturing (PE).
 - 3. Reese Enterprises, Inc. (RE).

2.15 FABRICATION

- A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.16 FINISHES

- A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.
- B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware
- C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.
- B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

- A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.
- B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

- A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.
 - 1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.
- B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:
 - 1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
 - 2. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."
 - 3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
 - 4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.
- C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.
- D. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

- E. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

- A. Field Inspection: Supplier will perform a final inspection of installed door hardware and state in report whether work complies with or deviates from requirements, including whether door hardware is properly installed, operating and adjusted.

3.5 ADJUSTING

- A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

- A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.
- B. Clean adjacent surfaces soiled by door hardware installation.
- C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

- A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

1. MK - McKinney
2. PE - Pemko
3. RF - Rixson
4. RO - Rockwood
5. RU - Corbin Russwin
6. AD - Adams Rite
7. VD - Von Duprin
8. HS - HES
9. NO - Norton
10. OT - OTHER
11. RI - RITE Door

END OF SECTION

SECTION 087113
AUTOMATIC DOOR OPERATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. **Section Includes:**

- 1. **Low-energy door operators for accessibility and interconnected to the fire alarm and smoke evacuation systems.**
- 2. **Steel bollards, wiring and push button controls for remote control.**
- 3. **Power as required to serve door operators.**
- 4. **Control wiring connected to fire alarm and smoke evacuation systems (if any) as required.**

1.3 DEFINITIONS

- A. **Double Egress Doors:** A pair of doors that simultaneously swing with the two doors moving in opposite directions with no mullion between them.
- B. **Double Swing Doors:** A pair of doors that swing with the two doors moving in opposite directions with a mullion between them; each door functioning as a single swing door.

1.4 SUBMITTALS

- A. **Product Data:** For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for automatic door operators, including activation and safety devices. Include operating characteristics, electrical characteristics, and furnished accessories.
- B. **Shop Drawings:** For automatic door operators. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Indicate required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Include locations and elevations of entrances showing activation and safety devices.
 - 3. Wiring Diagrams: For power, signal, and activation- and safety-device wiring.
- C. **Warranty:** Sample of special warranty.

1.5 QUALITY ASSURANCE

- A. **Installer Qualifications:** Manufacturer's authorized representative who is trained and approved for installation and maintenance of units required for this Project, and with a **minimum of ten years' experience.**
 - 1. Maintenance Proximity: Not more than two hours' normal travel time from Installer's place of business to Project site.
- B. **Certified Inspector Qualifications:** Certified by the AAADM.
- C. **Source Limitations:** Obtain automatic door operators, including activation and safety devices, from single source from single manufacturer.
- D. **Electrical Components, Devices, and Accessories:** Listed and labeled as defined in NFPA 70, by a testing agency, and marked for intended location and application.
- E. **Exit-Door Requirements:** Comply with requirements of authorities having jurisdiction for doors with automatic door operators serving as a component of a required means of egress.

1.6 PROJECT CONDITIONS

- A. **Field Measurements:** Verify actual dimensions of door frames by field measurements before

fabrication of exposed covers for automatic door operators.

1.7 **COORDINATION**

- A. Templates: Obtain and distribute, to the parties involved, templates for doors, frames, operators, and other work specified to be factory prepared and reinforced for installing automatic door operators. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing automatic door operators to comply with indicated requirements.
- B. **Electrical and Smoke Evacuation Systems Roughing-in:** Coordinate layout and installation of automatic door operators, including activation and safety devices, with connections to power supplies, access-control system, fire alarm and smoke evacuation systems. **General Contractor to provide required circuiting power and low voltage requirements to all locations as required for a fully operational system whether or not indicated on drawings.**

1.8 **WARRANTY**

- A. **Special Warranty:** Manufacturer's standard form in which manufacturer agrees to repair or replace components of automatic door operators that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Faulty or sporadic operation of automatic door operator, including activation and safety devices.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal weathering or use.
 - 2. **Warranty Period: Two years** from date of Substantial Completion.

1.9 **MAINTENANCE SERVICE**

- A. **Initial Maintenance Service:** Beginning at Substantial Completion, **provide 12 months' full maintenance** by skilled employees of automatic door operator Installer. Include quarterly planned and preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door operation. Provide parts and supplies the same as those used in the manufacture and installation of original equipment.
 - 1. Engage a certified inspector to perform safety inspection after each adjustment or repair, and at end of maintenance period. Furnish completed inspection reports to Owner.
 - 2. Perform maintenance, including emergency callback service, during normal working hours.
 - 3. Include 24-hour-per-day, seven-day-per-week emergency callback service.

PART 2 - PRODUCTS

2.1 **MANUFACTURERS**

- A. **Basis-of-Design Product:** Provide concealed type units unless indicated or otherwise required. Subject to compliance with requirements, provide the following:
 - 1. **Concealed Units:** LCN Closers; 2800 Series; model as applicable to specific installation. Verify functionality with depth of frame.
 - 2. **Surface Mounted Units:** LCN Closers; 4600 Series, Auto Operator/Auto Equalizer. Model 4640 (push) and 4630 (pull) as applicable. Verify functionality with depth of frame.
 - 3. Accessories:
 - a. 3620 special template.
 - b. Provide delay contacts for emergency power circuits.
 - c. Flushbolts: Provide Von Duprin auto flushbolts at locations where flushbolts apply.
 - 4. Substitutions: None allowed.

2.2 **MATERIALS**

- A. **Aluminum:** Alloy and temper recommended by manufacturer for type of use and finish

indicated, complying with standards indicated below:

1. Sheet: ASTM B 209.
 2. Extrusions: ASTM B 221.
- B. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.

2.3 AUTOMATIC DOOR OPERATORS, GENERAL

- A. General: Provide operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; for long-term, maintenance-free operation under normal traffic load for type of occupancy indicated; and complying with UL 325. Coordinate operator mechanisms with door operation, hinges, and activation and safety devices.
1. **Emergency Breakaway:** Where indicated for center-pivoted doors, provide emergency breakaway feature for reverse swing of doors. Equip system to discontinue power to automatic door operator when door is in emergency breakaway position, and to return to closed position after breakaway and automatically reset.
 2. **Fire-Rated Doors:** Provide door operators for fire-rated door assemblies that comply with NFPA 80 for fire-rated door components and are listed and labeled by a qualified testing agency.
 3. **Wind Load:** Provide door operators on exterior doors that will open and close doors and maintain them in fully closed position when subjected to wind load of 10 psf.
- B. **Electromechanical Operating System:** Self-contained unit powered by permanent-magnet dc motor; with closing speed controlled mechanically by gear train and dynamically by braking action of electric motor, connections for power and activation- and safety-device wiring, and manual operation including spring closing when power is off.
- C. **Hinges:** See Division 08 Section "Door Hardware" for type of hinge for each door that door operator shall accommodate.
- D. **Cover for Surface-Mounted Operators:** Fabricated from 0.125-inch- thick extruded or formed aluminum; manufacturer's standard width; with enclosed end caps, provision for maintenance access, and fasteners concealed when door is in closed position.
1. **Finish: Match door finish** – Refer to Document 008900.
- E. **Brackets and Reinforcements:** Manufacturer's standard, fabricated from aluminum with non-staining, nonferrous shims for aligning system components.

2.4 LOW-ENERGY DOOR OPERATORS

- A. Standard: BHMA A156.19.
- B. **Performance Requirements:**
1. **Opening Force if Power Fails:** Not more than 15 lbf required to release a latch if provided, not more than 30 lbf required to manually set door in motion, and not more than 15 lbf required to fully open door.
 2. **Entrapment Protection:** Not more than 15 lbf required to prevent stopped door from closing or opening.
- C. **Configuration:** Operator to control single swinging door.
1. Traffic Pattern: Two way.
 2. Operator Mounting: Surface.
- D. **Operation:** Power opening and spring closing. Provide time delay for door to remain open before initiating closing cycle as required by BHMA A156.19. When not in automatic mode, door operator shall function as manual door closer, with or without electrical power.
- E. **Operating System:** Electro-mechanical.
- F. Microprocessor Control Unit: Solid-state controls.
- G. Features:
1. Adjustable opening and closing speed.
 2. Adjustable opening force.
 3. Adjustable back-check.
 4. Adjustable hold-open time from zero to 30 seconds.
 5. Adjustable time delay.

6. Obstruction recycle.
 - H. **Exposed Finish:** Finish exposed components with finish matching door and frame.
- 2.5 **ACTIVATION AND SAFETY DEVICES**
- A. General: Provide activation and safety devices in accordance with BHMA standards, for condition of exposure and for long-term, maintenance-free operation under normal traffic load for type of occupancy indicated. Coordinate activation and safety devices with door operation and door operator mechanisms.
 - B. **Push-Plate Switch (Exterior Locations):** Momentary-contact door control switch with flat push-plate actuator with contrasting-colored, engraved message.
 1. **Configuration:** Rectangular push plate with 2-by-4-inch junction box.
 - a. **Mounting:** As indicated on Drawings. If none indicated, provide and mount to epoxy painted 4 inch by 4 inch by 36 inch (above finish grade) steel bollard with steel top (welded), at location to be determined by the Architect.
 2. **Push-Plate Material:** Plastic for Interior application, and Stainless Steel for Exterior application, as selected by Architect from manufacturer's full range.
 3. **Message:** "Push to Open."
 - C. **Infrared Sensor (Interior Locations):** Provide above door head on interior side of doors. Manufacturer's standard.
 - D. **Handheld Remote Control Push Button Device:** Provide manufacturer's standard. **Provide four (4) devices with each unit.**
- 2.6 **FABRICATION**
- A. Factory fabricate automatic door operators to comply with indicated standards.
 - B. Fabricate exterior components to drain water passing joints and condensation and moisture occurring or migrating within operator enclosure to the exterior.
 - C. Form aluminum shapes before finishing.
 - D. **Use concealed fasteners to greatest extent possible.** Where exposed fasteners are required, use countersunk Phillips flat-head machine screws, finished to match operator.
 - E. Provide metal cladding, completely cladding visible surfaces before shipment to Project site. Fabricate cladding with concealed fasteners and connection devices, with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion, and with allowance for thermal expansion at exterior doors.
- 2.7 **ACCESSORIES**
- A. **Signage:** As required by cited BHMA standard for the type of operator.
 1. Application Process: Decals.
 2. Provide sign materials with instructions for field application when operators are installed.
 - B. Guide Rails: See Division 05 Section ".
- 2.8 **GENERAL FINISH REQUIREMENTS**
- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 - C. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.
 - D. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- 2.9 **FINISHES**
- A. Refer to 008900 for finish and color as selected from the following:
 1. **Clear Anodic Finish:** AAMA 611, AA-M12C22A21, Class I, 0.018 mm or thicker.
 2. **Color Anodic Finish:** AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.

3. **High-Performance Organic Finish:** 2-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
4. Match finish on exterior aluminum doors and windows on the project.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, door and frame preparation and reinforcements, and other conditions affecting performance of automatic door operators.
- B. Examine roughing-in for electrical systems to verify actual locations of power connections before automatic door operator installation.
- C. Verify that full-height finger guards are installed at each door with pivot hinges where door has a clearance at hinge side greater than 1/4 inch and less than 3/4 inch with door in any position.
- D. **Proceed with installation only after unsatisfactory conditions have been corrected.**

3.2 INSTALLATION

- A. General: Install complete automatic door operators according to manufacturer's written instructions, including activation and safety devices, control wiring, and remote power units if any; connection to the building's power supply; and signage.
 1. Do not install damaged components. Fit joints to produce hairline joints free of burrs and distortion.
 2. Install operators true in alignment with established lines and door geometry without warp or rack. Anchor securely in place.
 3. Low-Energy Door Operator Installation Standard: BHMA A156.19.
- B. **Power Connection:** See Division 26 Sections for connection to electrical power distribution system. **Provide power, low voltage wiring to smoke evacuation and circuiting as required for a fully-operational system, whether or not shown on Drawings.** Include circuiting and power to remote push button controls and bollards as required.
- C. **Activation and Safety Devices:** Install devices and wiring according to manufacturer's written instructions and cited BHMA standard for type of operator and direction of pedestrian travel. Connect activation- and safety-device wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- D. **Signage:** Apply on both sides of each door as required by cited BHMA standard for type of door operator and direction of pedestrian travel.

3.3 ADJUSTING

- A. Adjust automatic door operators to function smoothly, and lubricate as recommended by manufacturer; comply with requirements of applicable BHMA standards.
 1. Adjust operators on exterior doors for weathertight closure.
- B. After completing installation of exposed, factory-finished automatic door operators, inspect exposed finishes on doors and operators. Repair damaged finish to match original finish.
- C. Readjust automatic door operators after repeated operation of completed installation equivalent to three days' use by normal traffic (100 to 300 cycles).
- D. Occupancy Adjustment: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.4 DEMONSTRATION

- A. Engage a certified inspector to train Owner's maintenance personnel to adjust, operate, and maintain automatic door operators.

3.5 SCHEDULE

A. Locations:

1. 11 Automatic door leafs at the Southeast and Northwest vestibules leading into the east Atrium 100. If activated by push button only one leaf in each bank of doors of each Vestibule shall operate. Preferably on a delay between banks to minimize air infiltration. ~~In a smoke event, all door leafs shall open at the same time. Connect to Smoke Evacuation System to open vestibule doors upon alarm condition.~~
2. At West Atrium provide one leaf at north door.

END OF SECTION

SECTION 088000

GLAZING

PART 1 - GENERAL

1.1 SUMMARY

- A. Related Documents: Provisions established within General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.
- B. **Section Includes** (Note: Not all of the following products may apply to this project):
 - 1. Glass for hollow metal doors and frames which are not pre-glazed.
 - 2. Fire rated glazing for doors and sidelites where required.
 - 3. Glass for interior fire rated and non-fire rated windows.
 - 4. Glass and spandrel panels for aluminum storefront, curtain wall, fixed windows, doors, and other types of window systems.
 - 5. Mirrors.
 - 6. Associated glazing sealants and accessories.
 - 7. Ceramic frit on exterior surface of glass.

1.2 SYSTEM REQUIREMENTS

- A. Design Requirements: Provide continuity of building enclosure to maintain continuous air and vapor barrier throughout glazed assembly from glass pane to heel bead of sealant.

1.3 PRECONSTRUCTION TESTING

- A. **Distortion Tolerance Testing:**
 - 1. Measure each pane of monolithic uncoated and coated heat treated glass or coated glass of 6 mm thickness or more used in the project, including glass used in the visual mockup.
 - 2. **Measurement Device:** LiteSentry measurement system or approved equal.
 - 3. **Roll Wave Criteria (horizontal):** Average 0.003 Center / 0.008 edges (peak to valley).
 - 4. **Millidipter Criteria (90% surface):** Maximum +/- 102 A overall, or the highest overall measurement from the approved visual mock-up that is less than +/- 120A overall, whichever is less, for the typical size. Non-typical size maximum remains at +/- 120.
 - 5. **Documentation:**
 - a. **Document and record the results of each pane and forward to the Architect for review.**
 - b. **Tag each pane of glass that fails outside of the maximum distortion limits and certify that these non-conforming glass panels will not be fabricated and supplied to the project.**
 - c. Provide written documentation of the Roll Wave and Millidipter measurements of the glass used in the visual mock-up before the mock-up is reviewed by the Owner and Architect for approval.
 - d. Provide additional written documentation upon request of Owner or Architect.
- B. **Bow/Warp Tolerance:**
 - 1. Maximum 1/2 of ASTM C1048.
 - 2. Measure every hour on a vertical plane with an aluminum straight edge
 - 3. Provide recorded written documentation upon request.
- C. **Bow/Warp and Air Space Measurement, Concave/Convex:**
 - 1. Measure box warp every hour on a vertical plane with an aluminum straight edge or other type of device.
 - 2. Measure center air space on all units equal to or more than 25 s.f.
 - 3. Scips and voids in the primary or secondary seals are prohibited and maximum gap at primary/secondary seal interface is 1 inch in length and 3/32 inch width.
 - 4. **Documentation:**

- a. **Document and record results and forward to the Architect for review.**
- b. **Tag each pane/unit of glass that falls outside of the maximum color variation limits and certify that non-conforming glass will not be fabrications and /or supplied to the project.**
- c. Provide additional written documentation upon request of the Owner or Architect.

1.4 SUBMITTALS

- A. General: Submit in accordance with Section 013300.
- B. **Product Data:** Manufacturer's descriptive data and recommended installation instructions for each type of glass and glazing material specified, including glazing accessories and glazing sealants.
- C. **Sustainable Submittals:** (Not Used)
 - 1. Product data for glazing sealants used inside of the weatherproofing system, including printed statement of VOC content.
- D. **Shop Drawings:** Sections and details of glass and glazing materials installation at framing members including head, mullions, transoms, jambs and sills.
- E. **Test Reports:** For each of the following types of glazing products:
 - 1. Tinted float glass.
 - 2. Low-E glass
 - 3. Insulating glass
 - 4. Safety glass
 - 5. Wire glass
 - 6. Glazing sealants
 - 7. Glazing gaskets
- F. **Warranty:** Signed and dated by manufacturer.

1.5 QUALITY ASSURANCE

- A. Single Source Responsibility: Glass of each type to be produced by same manufacturer.
- B. Installer Qualifications: Minimum of **10 years successful experience** on comparable projects and approved in writing by manufacturer.
- C. Regulatory Requirements:
 - 1. Fabricate glass to comply with ASTM C1036, ASTM C1048, and ANSI Z97.1.
 - 2. Perform work in accordance with FGMA Glazing Manual for glazing installation methods.
- D. Certifications:
 - 1. Manufacturer's letter certifying glass and glazing materials compatibility
 - 2. Manufacturer's letter certifying that sealed insulating glass units meet or exceed specification.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle products in accordance with Section 016000.

1.7 PROJECT CONDITIONS

- A. Environmental Requirements:
 - 1. **Perform glazing when ambient temperature is above 40°F.**
 - 2. Perform glazing on dry surfaces only.

1.8 WARRANTY

- A. Manufacturer's standard **10 year warranty** on hermetically sealed insulating glass units and for mirrors

PART 2 - PRODUCTS

2.1 GLASS MATERIALS

- A. **Single Pane, Clear and Tinted, Laminated Tempered and Un-Tempered Units.**

1. **Quality:** Glazing select, float, complying with ASTM C1036, Type I, Class 1, Quality q3.
2. **Type:** Tempered, complying with ASTM C1048, Kind FT fully tempered and untempered.
3. **Thickness:** 1/4 inch.
4. **Acceptable Manufacturers:**
 - a. PPG Industries Inc., Pittsburgh, PA
 - b. Guardian Industries Corp., Corsicana, TX
 - c. Oldcastle Glass
 - d. Pilkington
 - e. Viracon
5. **Color and Tint:** To be selected by Architect. Refer to Section 008900 - Finish Selections Summary. **Retain subparagraph below only with clear float glass and only after verifying availability.**
- B. **Exterior Insulated Glazing Units:** Refer to Section 008900 - Finish Selections Summary.
 1. **Acceptable Manufacturers:**
 - a. PPG Industries Inc., Pittsburgh, PA
 - b. Guardian Industries Corp., Corsicana, TX
 - c. Oldcastle Glass
 - d. Pilkington
 - e. Viracon
- C. **Glass for Shelves at Display Cabinets:** 3/8 inch thick, fully tempered, clear glass.
- D. **Framed Mirrors:**
 1. **ASTM C1036, mirror select quality, 1/4" clear plate. Backs shall have 2 coats of silver hermetically sealed, complying with GS-27, with an impervious protective coating of copper deposited over silver by electrolysis, and finished with a special composition hard, mirror-backing paint.** Mirrors shall bear manufacturer's labels. Mirrors shall have ground and polished edges.
 2. **Mirror Setting Mastic:** As recommended by mirror manufacturer.
 3. **Frame:** Provide continuous 1/4" by 3/8" brushed stainless steel channel trim around all mirrors.
- E. **Fire-Protection-Rated Glazing: (Not Used)** Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on positive-pressure testing according to NFPA 257 or UL 9, including the hose-stream test, and shall comply with NFPA 80.
 1. **Acceptable Manufacturers:**
 - a. SafiFirst.
 - b. Firelite by Technical Glass Products.
 2. Fire-protection-rated glazing required to have a fire-protection rating of 20 minutes shall be exempt from the hose-stream test.
 3. **Provide tempered rated glass at rated openings, where required by code whether or not indicated as such on drawings.**
 4. **Fire-Protection-Rated Glazing Labeling:** Permanently mark fire-protection-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name; test standard; whether glazing is permitted to be used in doors or openings; if permitted in openings, whether or not glazing has passed the hose-stream test; whether or not glazing meets 450 deg F (250 deg C) temperature-rise limitation; and the fire-resistance rating in minutes.
 5. **Fire-Rated Monolithic Ceramic Glazing:** Clear, ceramic flat glass; 5/16-inch nominal thickness or as called for by manufacturer.
 - a. **Basis-of-Design Products:** Nippon Electric Glass Co., Ltd. (distributed by Technical Glass Products).
 - b. **Required Fire Ratings:** Refer to Drawings, and as required by code.
 - 1) **20-minute:** Premium Firelite Plus fire rated glass at locations called for on the Drawings and per code.

- 2) **45-minute:** Pilkington Pyrostop fire rated glass at locations as called for on Drawings and per code.
- 3) **60-minute:** Pilkington Pyrostop fire rated glass at locations indicated called for on the Drawings.
- c. **Applications:** Doors, windows, and interior glazing.
- d. **Framing:** Refer to Drawings.

2.2 GLAZING ACCESSORIES

- A. **Setting Blocks:**
 - 1. Material: Preformed neoprene, compatible with sealant.
 - 2. Hardness: 80-90 Shore A durometer
 - 3. Size: 0.10 inch for each square foot of glazing, not less than 4 inch length x width of channel minus 1/16 inch x 1/4 inch high.
 - 4. Location: Sill quarter points, centered minimum 4 inches from each edge.
 - 5. Requirement: Resistant to sunlight, weathering oxidation and permanent deformation under load.
- B. **Spacer Shims:**
 - 1. Material: Preformed neoprene, compatible with sealant.
 - 2. Hardness: 50-60 Shore A durometer.
 - 3. Size: Minimum 3 inch length x 1/2 height of glazing stop x thickness to suit application.
- C. **Edge Blocks:**
 - 1. Material: Preformed neoprene, compatible with sealant.
 - 2. Hardness: 60-70 Shore A durometer.
 - 3. Size: Minimum 4 inch length x width to support thickness of glass, allow nominal 1/8 inch clearance between edge of glass and edge bumper.
 - 4. Location: Place in vertical channel.
 - 5. Requirement: Resistant to sunlight, weathering, oxidation and permanent deformation under load.
- D. **Dense Compression Gaskets:** Molded or extruded gaskets of profile and hardness required to maintain watertight seal, made from one of the following:
 - 1. EPDM complying with ASTM C 864.
 - 2. Silicone complying with ASTM C 1115.
- E. **Glazing Tapes:**
 - 1. Material: Preformed butyl or closed cell PVC foam with integral spacing device and containing paper release.
 - 2. Hardness: 10-15 Shore A durometer.
 - 3. Size: Continuous corner to corner.
 - 4. **Acceptable Products:**
 - a. Pre-Shimmed 440 Tape, Tremco, Cleveland, OH.
 - b. 330 Glazing Tape, PTI, Dayton, OH
 - 5. Glazing Tape: as required to maintain fire rating of tested assembly.
 - 6. Setting Blocks: as required to maintain fire rating of tested assembly.
- F. **1/4-inch x 3/8-inch high polished stainless steel channel trim.** Provide continuous channel trim around all mirrors.
- G. **Glazing Film:**
 - 1. Provide vinyl glazing film at locations indicated on the Drawings. Final artwork to be provided by Architect. Film shall be applied on the outside surface of the glass.
 - 2. Submit 12" x 12" color samples on required substrates for Architect approval.
 - 3. **Acceptable Product:** To be selected by Architect from full and complete line of manufacturers products.

2.3 GLAZING SEALANTS

- A. **Polyurethane (Type Sealant):**

1. Single component, complying with FS TT-S-00230C, Type II, Class A, and ASTM C920, Type S, Grade NS, Class 25
2. Moisture curing
3. Hardness: 20-35 Shore A durometer
4. Non-sagging, non-bleeding, non-staining
5. Color as selected by the Architect.
6. **Acceptable products:**
 - a. Sonolastic NP-1, Sonneborn Building Products, Minneapolis, MN
 - b. Dymonic, Tremco, Cleveland, OH
 - c. Dynatrol I, Pecora Corporation, Harleysville, PA

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions and proceed with Work in accordance with Section 014000.
- B. Verify that openings for glazing are correctly sized and within tolerances.
- C. Verify that glazing channel surfaces or recesses are clear, free of burrs, obstructions, irregularities, and glass is free of edge damage or imperfections.

3.2 PREPARATION

- A. Clean contact surfaces with solvent and wipe dry.
- B. Seal porous glazing channels or recesses with substrate compatible primer or sealer.
- C. Prime surfaces scheduled to receive sealant, if required by sealant manufacturer.
- D. Verify that materials used for cleaning edges of sealed insulating units are compatible with sealants and components and will not damage or cause deterioration of the integrity of the sealed insulating unit.

3.3 INSTALLATION

- A. Install glass units in accordance with manufacturer's printed instructions. **Ensure weep and drainage holes are not blocked by sealants or setting blocks.**
- B. **Preformed Glazing Gaskets (Dry Method):**
 1. Cut gasket to proper length.
 2. Weld joints by butting gasket and sealing junctions with sealant.
 3. Place setting blocks at quarter points, with edge blocks no more than 6 inches from corner.
 4. Rest glass on setting blocks and push against stop with sufficient pressure to ensure full contact and adhesion at perimeter.
 5. Install removable stops, avoiding displacement of gasket and exert pressure for full continuous contact.
 6. Install fixed aluminum window glass in gaskets.
- C. **Interior Dry Method (Tape and Tape):**
 1. Cut glazing tape to length and install against permanent stop, projecting 1/16 inch above sight line.
 2. Place setting blocks at 1/4 points with edge blocks no more than 6 inches from corners.
 3. Rest glass on setting blocks and push against stop for full contact and adhesion at perimeter.
 4. Place glazing tape on free perimeter of glass in same manner described above.
 5. Install removable stop, avoid displacement of tape, exert pressure on tape for full continuous contact.
 6. Knife trim excess or protruding tape.
- D. **Tempered and Fire Rated Glass:**
 1. Do not cut, seam, nip or abrade tempered or fire rated glass.
 2. Set fire rated glass lites with proper orientation so that coatings face fire side or protected side as specified.

3. **Provide and install tempered and fire rated glass in all doors, windows and sidelights where required by code whether or not called for on Drawings.**

3.4 GLASS MIRRORS

- A. Apply one additional coat of moisture-resistant paint, type recommended by manufacturer, to back of mirror.
- B. Allow to dry.
- C. Apply mirror mastic to cover not more than 25% of back mirror, 1/8" to 1/2" thickness of setting bed.
- D. Set mirror on concealed shelf angle.
- E. Press mirror against substrate to bond.
- F. Leave open ventilation space, 1/8" minimum between mirror and substrate.
- G. Do not seal off ventilation space at edge of mirror.

3.5 PROTECTION

- A. Protect finished Work under provisions of Section 015000.
- B. After installation, mark glass pane with an "X" by using removable plastic tape or paste.

3.6 CLEANING

- A. Clean work under provision of Section 017400.
- B. Remove excess glazing materials from finished surfaces.
- C. Remove labels after work is completed.
- D. Wash and polish both faces not more than 7 days prior to Owner's acceptance of work.
- E. Comply with glass manufacturer's recommendations for final cleaning.

3.7 SCHEDULE

- A. **Exterior 1" Insulating Units (Fritted and Unfritted Units):** Provide at all exterior curtainwall, fixed windows, storefront and entrance locations. Refer to Drawings for frit locations.
- B. **Interior 1" Acoustical Units:** Provide at interior atrium storefront.
- C. **Channel Glass Insulating Units (blue):** Provide at 3rd floor Nursing Skills Lab north and east elevations.
- D. **1/4" Thick Clear Glass:** Provide at interior locations as indicated on plans.
- E. **Vinyl Film:** Provide at east Atrium north wall, 1" thick acoustical units at 4th floor from finish floor to 48" above finish floor.
- F. **Decorative Tempered Glass:** Provide at first floor elevators east opening to 8'-0" AFF.
- G. **Interior 1" Thick Spandrel Glass Units with Ceramic Frit on Second Surface:** Provide at storefront spandrel locations at each floor of the atrium.

END OF SECTION

SECTION 089100

LOUVERS

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.
- 1.2 SECTION INCLUDES
 - A. **Architectural grade metal wall louvers.**
 - B. **Refer to mechanical specifications for additional information on required free area.**
- 1.3 SUBMITTALS
 - A. General: Submit in accordance with Section 013300.
 - B. **Product Data:**
 - 1. Descriptive data of louvers including standard drawings, louver free area, maximum recommended air velocity, materials and finishes.
 - C. **Shop Drawings:**
 - 1. Include details of fabrication and erection, anchorage and accessories.
 - 2. Indicate elevations, dimensions and tolerances, blade configuration and screening.
 - D. Certificates: Submit manufacturer's certification that materials meet specification standards.
 - E. Manufacturer's Instructions: Submit manufacturer's installation instructions.
- 1.4 FIELD MEASUREMENTS
 - A. Verify that field measurements are as indicated on shop drawings.
- 1.5 DELIVERY, STORAGE AND HANDLING
 - A. Deliver, store, and handle products in accordance with Section 016000.
- 1.6 COORDINATION
 - A. Coordinate work under provisions of Section 013100.
 - B. Coordinate work with installation of exterior insulation and finish system.

PART 2 - PRODUCTS

- 2.1 **ACCEPTABLE MANUFACTURERS AND PRODUCTS**
 - A. Airolite Company, LLC (The).
 - B. Construction Specialties, Inc.
 - C. Greenheck Fan Corporation.
 - D. Ruskin Company; Tomkins PLC.
 - E. Substitutions: Submit in accordance with Section 016000.
- 2.2 **METAL WALL LOUVERS**
 - A. Wall louvers of sizes indicated on Drawings or otherwise required.
 - B. **Basis of Design:**
 - 1. **Manufacturer:** Construction Specialties.
 - 2. **Product:** Model A4097 Drainable 4" louver.
 - 3. **Free Area:** 50.4 percent minimum.

2.3 MATERIALS

- A. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), Alloy 6063-T5, T-52, or T6.
- B. Aluminum Sheet: ASTM B 209 (ASTM B 209M), Alloy 3003 or 5005 with temper as required for forming, or as otherwise recommended by metal producer for required finish.
- C. Galvanized-Steel Sheet: ASTM A 653/A 653M, G90 (Z275) zinc coating, mill phosphatized.

2.4 ACCESSORIES

- A. **Insect Screen:** 18 by 16 size aluminum mesh, set in frame of same material as screen.
- B. Sealants: Type as specified in Section 079000.
- C. Fasteners: Manufacturer's standard, compatible with fabricated items.

2.5 FABRICATION

- A. Fabricate units as indicated on Drawings.
- B. Screens: Permanently install screen mesh in shaped frame with reinforced corner construction; screw to louver frame.
- C. Fabricate units rigid, neat in appearance, and free from defects, warp or buckle.
- D. Dress exposed welds for smooth flush appearance.

2.6 FINISHES

- A. Refer to 008900 for finish and color as selected from the following:
 - 1. **Clear Anodic Finish:** AAMA 611, AA-M12C22A21, Class I, 0.018 mm or thicker.
 - 2. **Color Anodic Finish:** AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - 3. **High-Performance Organic Finish:** **2-coat fluoropolymer finish** complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions and proceed with Work in accordance with Section 014300.
- B. Verify that prepared openings are ready to receive work and opening dimensions are as indicated on the shop drawings.
- C. Beginning of installation means acceptance of existing conditions.

3.2 INSTALLATION

- A. Install using skilled workmen in accordance with manufacturer's printed instructions.
- B. Install louvers level and plumb.
- C. Secure louvers in opening framing with concealed fasteners wherever possible.
- D. Apply bituminous protective coating to aluminum surfaces in contact with dissimilar metals.
- E. Align louver assembly to ensure moisture shed from flashings and diversion of moisture to exterior.
- F. Form tight joints with exposed connections accurately fitted together.
- G. Install insect screening to interior of louver.
- H. Install perimeter sealant and backing rod in accordance with Section 07 90 00.

3.3 CLEANING

- A. Repair damage to louvers and screens as a result of cutting, grinding, or welding to match original condition.
- B. Clean surfaces and components to remove foreign substances.

3.4 SCHEDULE

- A. Provide at the following locations and as otherwise called for on architectural and mechanical drawings:

1. Intake and exhaust air grilles at Penthouse.
2. Exhaust grille for smoke evacuation at Classroom 102.

END OF SECTION

SECTION 092900

GYPSUM BOARD ASSEMBLIES

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.
- 1.2 **SECTION INCLUDES**
 - A. **Fire rated and abuse resistant gypsum board.**
 - B. **Mold resistant gypsum board.**
 - C. **Glass mat tile backing board.**
 - D. **Resilient furring.**
 - E. **Taped and sanded joint treatment.**
 - F. **Texturing gypsum board finish.**
 - G. **Drywall framing systems.**
- 1.3 SUBMITTALS
 - A. Submit under provisions of Section 013300.
 - B. **Product Data:** Provide data on all products proposed for use.
 - C. **Texture Samples:** Submit two samples gypsum board texture, 16 by 16 inch in size, illustrating finish texture.
- 1.4 QUALITY ASSURANCE
 - A. Perform Work in accordance with ASTM C840, GA-201, GA-216 and GA-600.
 - B. Maintain environmental conditions as recommended by manufacturer prior to beginning joint treatment work.
- 1.5 DELIVERY, STORAGE, HANDLING
 - A. Deliver, store, handle, and protect products in conformance with manufacturer's instructions and in accordance with Section 016000.
 - B. Store inside building, on sleepers, and out of water.
- 1.6 QUALIFICATIONS
 - A. Applicator: Company specializing in performing the work of this section with **minimum 10 years documented experience.**
- 1.7 REGULATORY REQUIREMENTS
 - A. Conform to applicable code for fire rated assemblies.

PART 2 - PRODUCTS

- 2.1 **ACCEPTABLE MANUFACTURERS - GYPSUM BOARD SYSTEM**
 - A. National Gypsum.
 - B. Georgia Pacific.
 - C. USG Corp.
- 2.2 **GYPSUM BOARD MATERIALS**
 - A. **Fire Rated Gypsum Board:** ASTM C 1396; 48 inch wide, maximum permissible length; ends square cut, tapered and beveled edges.

1. **Core: 5/8 inch thick, Type X.**
 2. **Basis-of-Design:** USG Corp.; Sheetrock Firecode Core.
- B. **Moisture-Resistant Gypsum Board:** With moisture- and mold-resistant core and surfaces; ASTM C 1396; 48 inch wide, maximum permissible length; ends square cut, tapered and beveled edges.
1. **Core: 5/8 inch thick, Type X.**
 2. **Mold Resistance:** ASTM D 3273, score of 10.
 3. **Basis-of-Design:** Sheetrock Mold Tough Firecode Gypsum Board.
- C. **Abuse-Resistant Gypsum Board:** Manufactured to produce greater resistance to surface indentation, through-penetration (impact resistance), and abrasion than standard, regular-type and Type X gypsum board; 48 inch wide, maximum permissible length; ends square cut, tapered and beveled edges.
1. **Core: 5/8 inch thick, Type X.**
 2. **Basis-of-Design:** USG; Sheetrock AR Firecode Core.
- D. **Acoustically Enhanced Gypsum Board:** ASTM C 1396; multilayer products constructed of two layers of gypsum boards sandwiching a viscoelastic sound-absorbing polymer core; 48 inch wide, maximum permissible length; ends square cut, tapered and beveled edges.
1. **Core: 5/8 inch thick, Type X.**
 2. **Basis-of-Design:** National Gypsum; SoundBreak
 3. **Additional Acceptable Manufacturers:**
 - a. Quiet Solution.
- 2.3 **TILE BACKING PANELS**
- A. **Glass-Mat, Water-Resistant Backing Board:** ASTM C 1178, with manufacturer's standard edges.
1. **Core: 5/8 inch thick, Type X.**
 2. **Mold Resistance:** ASTM D 3273, score of 10.
 3. **Basis of Design:** Georgia Pacific; DensShield Tile Backer.
- B. **Cementitious Backer Units:**
1. ANSI A118.9 or ASTM C 1325; cementitious panels composed of portland cement, aggregates, glass mesh on both faces, and manufacturer's proprietary ingredients; capable of remaining unaffected by prolonged exposure to water; 1/4, 1/2, and 5/8 inch thick.
 2. **Acceptable Manufacturers:**
 - a. Custom Building Products.
 - b. FinPan, Inc.
 - c. National Gypsum Co.
 - d. USG Corp.
- 2.4 **FRAMING MATERIALS**
- A. **Studs and Tracks:** ASTM C 645; galvanized sheet steel, gage per manufacturer's span charts, 'ST' series shape, depths as indicated on Drawings. Provide with floor and ceiling runners, 'C' shaped galvanized, 1-1/4 inch leg.
1. **Thicknesses:** 20 gage, 25 gage, and others as required. Coordinate with Architect.
- B. **Firestop Slip Tracks:** Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
1. **Basis of Design:** BlazeFrame Fire Stop Deflection Track.
- C. **Flexible Track for Studs:** Galvanized steel flexible track and strap system designed to receive studs for framing curves; component sizes as indicated on Drawings.
1. **Galvanized Steel:** ASTM A 653, gage and grade as required for application.
 2. **Basis of Design:** Flex-Ability Concepts; Flex-C Trac.

- D. **Grid Suspension System for Gypsum Board Ceilings:** ASTM C 645, direct-hung system composed of main beams and cross-furring members that interlock.
 - 1. **Acceptable Products:** Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Armstrong World Industries, Inc.; Drywall Grid Systems.
 - b. Chicago Metallic Corporation; Drywall Grid System.
 - c. USG Corporation; Drywall Suspension System.
- E. **Furring, Framing and Accessories:** Provide in conformance with ASTM C 645, GA-216, and GA-600 and as follows:
 - 1. **Cold Rolled Channels:** 3/4 inch, 1-1/2 inch and 2 inches, 16 gage, prime painted.
 - 2. **Furring Channels:** 7/8 inch deep x 1-1/4 inch face, 25 gage, galvanized.
 - 3. **Resilient Furring:** 7/8 x 7/8 inch cold-rolled channels.
- F. **Fasteners:** ASTM C 1002 for screws as follows:
 - 1. Inserts, clips, bolts, nails or other screws as recommended by wallboard manufacturer, of type and size to suit application and to rigidly secure materials in place.
 - 2. Self-drilling, self-tapping bugle head screws for use with power drive tool.
 - 3. **Metal Framing to Structure:** Power driven screw fasteners to withstand 190 pound single shear resistance and 200 pound bearing force when drive through structural head or base and without exceeding allowable design stress in runner, fastener, or structural support.
 - 4. **Metal to Metal:** 3/8 inch, Type S or S-12, pan head screws.
 - 5. **Gypsum Board to Sheet Metal Application:** Type S screws.
 - 6. **Gypsum Board to Gypsum Board Application:** Type G screws.
- G. **Adhesive:** Utilize adhesive meeting requirements of GA-216 over metal framing.

2.5 ACCESSORIES

- A. U. S. Gypsum Company products specified below as a standard of quality, unless noted otherwise.
 - 1. **Acoustical Sealant:** Non-hardening, non- skinning, for use in conjunction with gypsum board; manufactured by Tremco, or USG.
 - 2. **Corner Beads:** Metal, Durabead No. 103, galvanized.
 - 3. **Casing Beads:** No. 200-A, galvanized, except vinyl J-mold at unit windows
 - 4. **Control Joint:** No. 093, galvanized.
 - 5. **Reveal:** Continuous architectural reveals where noted on drawings. (Note: Some or all of these products may not be used on this project, refer to Drawings.)
 - a. **Acceptable Products:**
 - 1) Fry Reglet; 5/8 x 5/8 inches, GWB Reveal, DRM-625-625.
 - 2) Fry Reglet; 5/8 x 3/4 inches, GWB Reveal, DRM-625-75.
 - 3) Fry Reglet:
 - a) Column Ring at Gypsum Board: GWB Reveal DRWT-75-75.
 - b) ACT Ceiling: Reveal WRM-75-75-625.
 - 6. **Joint Tape:**
 - a. **ASTM C475 or FS SS-J-570, Type II, perforated tape**
 - 7. **Joint Compound:**
 - a. **ASTM C475 or FS SS-J-570, Type I**
 - b. **Acceptable product:**
 - 1) Taping compound: USG Durabond Joint Compound Taping.
 - 2) Topping: USG Joint Compound-All Purpose
 - c. **Use special joint compound as recommended by manufacturer for exterior gypsum ceiling board.**
- B. **Steel Drill Screws:** ASTM C 1002, unless otherwise indicated.
 - 1. Use screws complying with ASTM C 954 for fastening panels to steel members from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick.

2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.
- C. **Resilient Channels:** Formed steel; minimum 25 gage thick; size and length as required, serrated face, Z-shaped profile; equal to U.S.G. model RC-1, 2-1/2 inch wide x 1/2 inch deep, spaced at 24 inches O.C.
- D. **Cover for Wall at Exterior Windows:**
 1. **Basis of Design:**
 - a. **Manufacturer:** Mull-It-Over Products.
 - b. **Product:** Mull-It-Over.
 - c. **STC:** Not less than 55.
 - d. ~~**Finish:** Painted color to match wall color.~~
 - e. **At Mullion:** 55 Classic.
 - f. **At Glazing:** 60 Classic (At No Window Mullion).

PART 3 - EXECUTION

3.1 INSPECTION

- A. Verify that site conditions are ready to receive work and opening dimensions are as indicated or instructed by the manufacturer. Report in writing to project superintendent, any defects which would prevent proper execution of the work of this section in accordance with tolerances indicated. Surfaces are to be true and flat, without warps, waves, distortions, or other irregularities.
- B. Beginning of installation means acceptance of existing substrate.

3.2 ACOUSTICAL ACCESSORIES INSTALLATION

- A. Install acoustical sealant at wall perimeter of drywall partitions as follows:
 1. **Metal Stud Framing:** One bead at contact area of all intersecting walls, floors, and ceilings. Refer to Section 079200 for sealant material to be utilized.
 2. **Base Layer Gypsum Board:** One bead.
 3. **Seal all penetrations of partitions** by conduit, pipe, ductwork, rough-in boxes, and access door frames.

3.3 INSTALLING GYPSUM CEILING SUSPENSION SYSTEMS

- A. Install suspension system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
- B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.
- C. Suspend hangers from building structure as follows:
 1. **Install hangers vertically, plumb and free from contact with insulation or other objects** within ceiling plenum that are not part of supporting structural or suspension system.
 - a. **Splay hangers only in rare instances (where no other options are available) to miss obstructions. Offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.**
 2. **Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.**
 3. **Flat Hangers:** Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
 4. **Do not attach hangers to steel roof deck.**

5. **Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.**
 6. **Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.**
 7. **Do not connect or suspend steel framing from ducts, pipes, or conduit.**
 - D. **Fire-Resistance-Rated Assemblies:** Wire tie furring channels to supports.
 - E. **Grid Suspension Systems:** Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.
- 3.4 METAL STUD INSTALLATION
- A. Follow recommendations of U.S. Gypsum Co., "Gypsum Construction Handbook".
 - B. Install studding in accordance with ASTM C 754, GA-201, GA- 216, and GA-600.
 - C. **Metal Stud Spacing: 16 inches on center, unless otherwise noted in schedule or on Drawings.** Locate studs maximum of 2 inches from door frames, abutting partitions, corners, and other construction features.
 - D. **Stud to Ceiling or Structure:** Refer to Drawings for indication of partitions extending to finished ceiling only and for partitions extending through the ceiling to the structure above. **Maintain clearance under structural building members to avoid deflection transfer to studs. Provide extended leg "slip track" ceiling runners and connect after structure is fully loaded. Install additional supports as necessary.**
 - E. **Door Opening Framing:** Install double studs at door frame jambs. Install stud tracks on each side of opening, at frame head height, and between studs and adjacent studs.
 - F. **Blocking:** Screw wood blocking to studs. Bolt or screw steel channels to studs. Install blocking for support of plumbing fixtures, toilet partitions, wall cabinets, shelving, toilet accessories, and hardware.
 - G. Coordinate installation of bucks, anchors, blocking, electrical and mechanical work placed in or behind partition framing.
 - H. **Stud Connections:** Secure studs to runners with screws at door and window frames, partition intersections and corners. Use longest available steel lengths. **Where required for additional height, splice studs** by nesting a minimum lap of 18 inches and attach flanges together with 2 screws in each flange. Prevent structural loading of stud systems.
 - I. **Restroom Chase Wall Studs:** Position double row of studs vertically in runners so that studs are opposite each other in pairs with flanges pointed in same direction. Space at 16 inches on center unless otherwise noted. Anchor each stud to runner flanges with screws. **Cross brace between rows of studs with wallboard, 12 inches by chase width, screw attached to stud webs at quarter points in partition height, with 1 inch screws spaced 8" off center in each stud web.**
- 3.5 FURRING CHANNEL INSTALLATION
- A. Space resilient channels at maximum 16 inches on center for suspended gypsum board applications where indicated. Place joints over framing members. .
- 3.6 GYPSUM BOARD INSTALLATION
- A. Install gypsum board in accordance with GA 201, GA 216, GA-600, and U.S.G. "Gypsum Construction Handbook".
 - B. Pre-install gypsum board prior to furr down installation and tub/shower installations.
 - C. **Erect board horizontally** with ends and edges occurring over firm bearing. Stagger end joints to occur at different locations on opposite sides of wall. Apply board to resilient clips at ceilings with long dimension at right angles to framing.
 - D. Abutt boards without forcing. Neatly fit ends and edges of boards and make cuts and penetrations so that paper facing and gypsum core are not damaged.
 - E. **Use screws when fastening gypsum board to metal furring or framing.** Stagger fasteners opposite each other on adjacent ends and edges. Space fasteners as recommended in U.S.G., "Gypsum Construction Handbook".

- F. **Double Layer Applications:** Place first layer perpendicular to framing or furring members. Place second layer parallel to first layer. Offset joints of second layer from joints of first layer.
 - G. Install tile backing board over stud framing in accordance with manufacturer's instructions.
 - H. Install mold-resistant gypsum board and tile backer board over stud framing (or over base layer of gypsum board) in accordance with manufacturer's instructions. Install factory edges adjacent to fixtures.
 - I. **Place corner beads at all external corners.** Use longest practical length. Place edge trim where gypsum board abutts dissimilar materials.
 - J. On fire rated assemblies, seal all penetrations and make air-tight. Refer to Section 078400 for firestopping requirements and materials.
 - K. Thicken partitions to eliminate wall surface jogs for the full length of the wall within a room to conceal structural members, pipes, panels, specialty items, and accessories. Verify with Architect before beginning installation.
 - L. Coordinate door and other frame thicknesses with wall thicknesses as required.
 - M. **At curved barrel vaulted ceiling and walls, use flexible track for studs and joists. Do not construct curved framing from a segmented stud track.**
- 3.7 APPLYING TILE BACKING PANELS
- A. **Glass-Mat, Water-Resistant Backing Panels:** Comply with manufacturer's written installation instructions and install at showers, tubs, and where indicated. Install with 1/4-inch 6.4-mm gap where panels abut other construction or penetrations.
 - B. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.
- 3.8 JOINT TREATMENT
- A. Tape, fill, and sand exposed joints, edges, and corners to produce surface ready to receive finishes. **The intent of this paragraph is to provide the highest quality of joint treatment work consistent with commercial construction.** Unless noted otherwise, texturing work will be applied prior to painting. Prior to texturing, leave surfaces smooth, uniform, and free of fins, depressions, ridges, cracks, and other imperfections.
 - B. Feather coats onto adjoining surfaces so that camber is maximum 1/32 inch.
 - C. Taping, filling, and sanding at attachment locations are not required at surfaces behind adhesive applied ceramic tile.
 - D. Tape all joints in fire rated partitions and wrapping where concealed from view.
 - E. **Texture:** Unless noted otherwise:
 - 1. Wall texture to be light sprayed on texture and knocked down with a metal blade. Confirm final texture with Architect.
 - 2. Painted gypsum ceilings shall be smooth with no texture.
- 3.9 TOLERANCES
- A. Maximum Variation from True Flatness: 1/8 inch in 10 feet in any direction.
- 3.10 SCHEDULE
- A. **Abuse-Resistant Gypsum Board (Type X):** Provide to 8'-0" AFF at painted wall surfaces or behind wall covering at all interior public Corridors, Elevator Lobbies, Vestibules, Stairwells, Atrium, Classrooms, Labs and other high traffic areas of the building.
 - B. **Moisture Resistant Gypsum Board (Type X):**
 - 1. Provide at interior surface of all exterior walls.
 - 2. Provide at all walls and ceilings of Restrooms, all walls of Mechanical Rooms, Janitor Closets, Kitchen and rooms with finish floors below grade.
 - C. **Cementitious Backer Board or Glass-Mat, Water-Resistant Backing Board:**
 - 1. Provide behind all ceramic wall tile.
 - D. **Lead Lined Gypsum Board:**

1. Provide at walls of the 5 energized X-ray rooms on second floor.
- E. **Fire Rated Gypsum Board (Type X):**
1. Provide at all other locations in the building not listed above.

END OF SECTION

SECTION 093000

TILING

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.
- 1.2 SECTION INCLUDES
 - A. **Ceramic tile floor, base, and wall surfacing, installed using the thinset method with cementitious grouted joints.**
 - B. **Ceramic tile floors installed using thickset method with cementitious grouted joints. (Not Used)**
 - C. **Marble thresholds at flooring transitions.**
- 1.3 QUALITY ASSURANCE
 - A. Conform to ANSI- Recommended Standard Specifications for Ceramic Tile - A137.1.
 - B. **Conform to TCA Ceramic Tile: The Installation Handbook.**
 - C. Single source for setting products: Provide mortar, grout, waterproofing, and anti-fracture membrane from a single source/manufacturer unless otherwise approved by Architect and Owner.
 - D. **Provide final lighting or a minimum of 80 foot candles of temporary lighting in areas where tile is being installed.**
 - E. **Uncover finished tile work immediately after completing for Architect's inspection, prior to covering tile for protection from other trades.**
- 1.4 SUBMITTALS
 - A. **Submit product data** under provisions of Section 013300.
 - B. Submit product data, specifications, and instruction for using mortars, adhesives and grouts.
 - C. **Submit representative color samples** of each type tile and grout proposed for use under provisions of Section 013300.
- 1.5 ENVIRONMENTAL REQUIREMENTS
 - A. Do not install adhesives in a closed, unventilated environment.
 - B. **Maintain 50 degrees F during installation of mortar materials.**

PART 2 - PRODUCTS

- 2.1 **ACCEPTABLE TILE MANUFACTURERS**
 - A. **Refer Section 008900.**
 - B. Substitutions: Under provisions of Section 016000.
- 2.2 **TILE MATERIALS**
 - A. **Ceramic Wall Tile:**
 - 1. Grade: ANSI/A137.1; 5.0 to 10.0 percent water absorption.
 - 2. **Edge:** Cushioned.
 - 3. **Base:** Matching base units, 4 inches high unless noted otherwise on Drawings or Finish Schedule.
 - 4. **Size, Color, Finish, and Acceptable Product:** Refer Section 008900 and Finish Plans.
 - 5. **All tile shall be rectified and certified.**
 - B. **Ceramic Floor Tile:**
 - 1. Grade: ANSI/A137.1; 5.0 to 10.0 percent water absorption.
 - 2. **Edge:** Cushioned.

3. **Size, Color, Finish, and Acceptable Product:** Refer Section 008900 and Finish Plans.
 4. **All tile shall be rectified and certified.**
 - C. **Trimmers**
 1. Provide necessary matching caps, cove base, indicated outside corners, stops, returns, trimmers and other shapes to complete installation.
 2. Color and finish to match adjacent tile.
 - D. **Thresholds:** Provide white marble thresholds at transitions and doorways whether or not shown on drawings.
- 2.3 **ACCEPTABLE MORTAR, GROUT, AND ADHESIVE MANUFACTURERS**
- A. **Laticrete.**
 - B. **Mapei.**
 - C. **Custom Building Products.**
 - D. **Bostik.**
- 2.4 **FLOOR MORTAR MATERIALS - THICKSET BEDS**
- A. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.
- 2.5 **FLOOR MORTAR MATERIALS - THIN SET BEDS**
- A. Mortar Bed: ANSI A118.4 thinset bond coat, dry-set cementitious mortar.
- 2.6 **WALL MORTAR MATERIALS**
- A. Mortar: ANSI A118.4 non-sag dry-set cementitious mortar. Adhesives not permitted.
- 2.7 **GROUT TYPE**
- A. **Wall Applications:**
 1. Grade: ANSI A118.6, cementitious dry cure type, un-sanded for walls.
 2. Additives: Latex for strength and acid resistance.
 - B. **Floor Applications:**
 1. **Water-Cleanable Epoxy Grout:** ANSI A118.3.
 2. **Basis of Design:** Laticrete SpectraLOCK PRO (Part AB Liquid) with Laticrete SpectraLOCK Powder (Part C).
 - C. **Colors:** Refer to Section 008900.
- 2.8 **MORTAR MIX AND GROUT**
- A. Mix and proportion pre-mix setting bed mortar, adhesives, and grout materials in accordance with manufacturer's instructions.
- 2.9 **MEMBRANES**
- A. **Anti-Fracture and Waterproofing Membrane:**
 1. Description: Manufacturer's proprietary elastomeric compound formulated for use as heavy duty crack isolation and waterproof membrane under tile floors.
 2. **Basis of Design: #9235 by Laticrete International, Inc.**
 3. **Acceptable Products:**
 - a. Planicrete W by Mapei
 - b. NobleSeal TS by The Noble Company, Grand Haven, MI
 4. **Install anti-fracture membrane over cracks in concrete slabs on grade and at cracks in elevated floor slabs beneath ceramic tile installations.**
 5. **Install continuous waterproofing membrane throughout all elevated restroom, shower, and kitchen floors scheduled to receive ceramic tile. Continue membrane 8" up all walls in these areas.**
 - B. **Uncoupling Sheet:**
 1. ~~**Chlorinated Polyethylene Sheet:** Non-plasticized, chlorinated polyethylene faced on the bottom side with non-woven polyester fabric; 1/8 inch nominal thickness.~~
 2. **Acceptable Products:**

- a. ~~Schluter Systems L.P.; DITRA.~~
3. ~~**Install uncoupling sheet product under all tiled areas of the building including, but not limited to lobbies, restrooms, elevators, corridors, public restrooms, and public corridors. Recess slab in these areas as required to provide a level floor surfaces between tiled areas and adjacent floor finishes.**~~

2.10 TILE BACKING PANELS

- A. Refer Section 092900.

2.11 ACCESSORIES

- A. **Wall Tile Reveal** (1/2" high by 3/8" deep): Schluter Model # Deco SG125AE12; satin aluminum continuous reveals.
- B. **TEC-1 Edge Closure**: Schluter Schiene, thickness as required; stainless steel finish. Provide sample to Architect attached to specified tile for approval.
- C. **TEC-2 Edge Closure**: Schluter Rondee; #4 brushed finish. Confirm locations during submittal process with Design Architect.
- D. **Stair Nosing**: Schluter Trep-E in stainless steel finish.
- E. **Stainless Steel Starter Course Trim (Not Used)**: 1/8" thick custom fabricated stainless steel starter course trim for use in ceramic tile wall; #4 brushed finish.
- F. **Stainless Steel Tile Edge Trim (Not Used)**: 1/8" thick custom fabricated stainless steel edge trim; #4 brushed finish.
- G. **Control Joint A**: Schluter Dilex MPV15 or MPV 25 as required. Provide at typical tile control joints and/or above saw cut joints in the concrete slab below. Confirm color and final location with Architect.
- H. **Marble Thresholds**: ASTM C 503, with a minimum abrasion resistance of 12 according to ASTM C 1353 or ASTM C 241 and with honed finish.
1. **Basis of Design**: Uniform, fine- to medium-grained white marble with white or gray veining.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that areas to receive tile installed by thin bed method have wood float finish, are true within 1/4 inch in 10'-0", and are pitched to drains where required.
- B. Condition of Surfaces to Receive Tile:
1. Surface to be firm, dry, clean, and free of oily or waxy films, mortar, slag or soil.
 2. Install grounds, anchors, plugs, hangers, bucks, electrical and mechanical work in or behind tile prior to proceeding with tile work.
 3. Wet down or wash dry, dusty masonry or concrete surfaces and remove excess water immediately prior to application of tiles.
- C. Beginning of work constitutes acceptance of substrate surfaces.
- D. Apply additional adhesive or floor filler as required to level adjoining tiles of varying thicknesses.

3.2 INSTALLATION

- A. **Anti-Fracture Membrane**
1. **Install anti-fracture membrane over all cracks of 1/16 inch or greater in substrates.**
Apply a 12 inch wide strip centered on crack. Install in accordance with manufacturer's recommendations.
- B. **Waterproofing Membrane**
1. Install waterproofing membrane in strict compliance with manufacturer's instructions.
 2. **Install waterproofing membrane on entire floor area under tile at elevated floor slabs and continue waterproofing up adjacent walls a minimum of 8 inches. Flash in around floor drains.**
- C. **Uncoupling Sheet**:

1. Install uncoupling sheet per manufacturer's instructions at all tiled floor areas of the building. Recess slab to provide level finish floor with other finishes in the building.
- D. **Tile Installation, General:**
1. **Install ceramic tile, thresholds, and base in accordance with ANSI/TCA A108.5, TCA Installation Specifications for substrate encountered, and in compliance with instructions of manufacturer of setting and grouting materials.**
 2. Cut and fit tile tight to protrusions and vertical interruptions. Form corners and bases neatly.
 3. Work tile joints uniform in width, subject to variance in tolerance allowed in tile size. Make joint watertight, without voids, cracks, excess mortar, or grout.
 4. Prepare surface, fit, set, bond, grout, and clean in accordance with applicable requirements of ANSI standards and **Tile Council of North America**.
 - a. **Floors:**
 - 1) Thinset: TCA F114.
 - 2) Thickset: TCA F112
 - 3) Thickset on Waterproofing: TCA F121.
 - b. **Walls:**
 - 1) Thinset on gypsum board or cementitious backer boards: TCA W243
 - 2) Thinset on coated glass-mat gypsum backer board: TCA B419
- E. **Layout**
1. **Lay out work per drawings** or, if none provided, so that full tile or joint is centered on each wall and no tile of less than half width need be used. Do not interrupt pattern through openings.
 2. For heights stated in feet and inches, use courses of full tile to produce nearest attainable heights without cutting tile.
 3. No staggered joints will be permitted unless indicated on drawings.
 4. Align joints in tile both directions.
 5. **Align joints between floor and base tile.**
 6. Make joints between sheets of tile exactly same width as joints within sheet.
 7. File edges of cut tile smooth and even.
 8. **Provide final lighting or a minimum of 80 foot candles of temporary lighting in areas to receive tile prior to installation.**
- F. **Thin Set Method**
1. **Install uncoupling sheet** product, anti-fracture membrane, and/or waterproofing membrane according to manufacturer's instructions.
 2. Apply mortar or adhesive with notched trowel using scraping motion to work material into good contact with surface to be covered. Maintain 90 percent coverage on back of tile and fully bed corners.
 3. Apply only as much mortar or adhesive as can be covered within allowable windows as recommended by mortar or adhesive manufacturer or while surface is still tacky.
 4. When installing large tiles, ceramics or mosaics, trowel small quantity of mortar or adhesive onto back of each tile or sheet of tiles.
 5. Set tiles in place and rub or beat with small beating block.
 6. Beat or rap tile to ensure proper bond and also to level surface of tile.
 7. Align tile to show uniform joints and allow to set until firm.
 8. Clean excess mortar or adhesive from surface of tile with wet cheese cloth (not a sponge) while mortar is fresh.
 9. Sound tile after setting. Replace hollow sounding tiles.
- G. **Thick Set Method:**
1. **Install uncoupling sheet, anti-fracture membrane, and waterproofing membrane** in accordance with manufacturer's instructions.
 2. Apply mortar bed to a minimum thickness of 1 inch.

3. Apply mortar bond coat.
4. Apply mortar with notched trowel using scraping motion to work material into good contact with surface to be covered. Maintain 90 percent coverage on back of tile and fully bed corners.
5. Apply only as much mortar as can be covered within allowable windows as recommended by mortar manufacturer or while surface is still tacky.
6. Set tiles in place and rub or beat with small beating block.
7. Beat or rap tile to ensure proper bond and also to level surface of tile.
8. Align tile to show uniform joints and allow to set until firm.
9. Clean excess mortar or adhesive from surface of tile with wet cheese cloth (not a sponge) while mortar is fresh.
10. Sound tile after setting. Replace hollow sounding tiles.

H. **Grouting**

1. Allow tiles to set amount of time recommended by mortar manufacturer before grouting.
2. Install in accordance with grout manufacturer's recommendations and ANSI A108.10.
3. Pack joints full and free before mortar takes initial set.
4. Clean excess mortar from surface with wet cheesecloth as work progresses. Do not use hydro-sponges.

3.3 **CLEANING**

- A. Clean excess mortar from surface with water as work progresses. Perform cleaning while mortar is fresh and before it hardens on surfaces.
- B. Sponge and wash tile diagonally across joints. Polish with clean dry cloth.
- C. Remove grout haze following recommendation of mortar additive manufacturer. Do not use acids for cleaning.

3.4 **PROTECTION**

- A. **Uncover tile work for Architect's inspection immediately upon completion and prior to covering up for protection from other trades for remainder of construction.**
- B. **Prohibit traffic from floor finish for 72 hours after installation.**
- C. Protect tile floors with heavy-duty, non-staining construction paper until Owner occupancy.

END OF SECTION

SECTION 095113

ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Provisions established within General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.
- 1.2 SECTION INCLUDES
 - A. **Suspended metal grid ceiling system with Tech Zone (or equal products) and perimeter trim.**
 - B. **Suspended metal grid ceiling system and perimeter trim.**
 - C. **Acoustical panels.**
- 1.3 SYSTEM DESCRIPTION
 - A. Suspension system to rigidly secure acoustical ceiling system including integral mechanical and electrical components with **maximum deflection of 1/360**.
- 1.4 QUALITY ASSURANCE
 - A. **Manufacturer:** Company specializing in manufacture of ceiling suspension system and ceiling tile with **10 years minimum experience**.
 - B. **Installer:** Company with **10 years minimum experience**.
 - C. Certificates
 - 1. Submit manufacturer's certification that suspension system is capable of supporting light fixtures, grilles, and other ceiling components.
- 1.5 SUBMITTALS
 - A. **Submit product data** under provisions of Section 013300.
 - B. Indicate on shop drawings, grid layout and related dimensioning, junctions with other work or ceiling finishes, interrelation of mechanical and electrical items related to system.
 - C. **Provide product data on metal grid system** components, acoustic units.
 - D. Submit samples under provisions of section 013300.
 - E. **Submit 2 samples, 6 by 6 inches in size, illustrating material and finish of each acoustic unit specified on this project.**
 - F. **Submit 1 sample, 12 inches long, of each type of suspension system main runner, cross runner, and edge trim specified in this project.**
 - G. Submit manufacturer's installation instructions under provisions of Section 013300.
- 1.6 ENVIRONMENTAL REQUIREMENTS
 - A. **Maintain uniform temperature of minimum 60 degrees F, and maximum humidity of 40 percent prior to, during, and after installation.**
- 1.7 DELIVERY, STORAGE AND HANDLING
 - A. Store tile and panel cartons open at each end to stabilize moisture content.
- 1.8 PROJECT CONDITIONS
 - A. **Do not install acoustical ceilings until building is enclosed, sufficient heat, air conditioning and relative humidity control equipment are operating, dust generating activities have terminated, and overhead work is completed, tested, and approved.**
 - B. Schedule installation of acoustic units after interior wet work is dry.
 - C. **Humidity: 20-40 percent** prior to, during, and after installation.
 - D. **Temperature: 61 degrees F minimum**, prior to, during, and after installation.

- 1.9 EXTRA STOCK
- A. **Provide 250 SF of primary acoustical panels and 100 SF of all other panels and an equivalent amount of ceiling grid material in extra stock under provisions of Section 017700.**
 - B. Store in designated location as directed by Owner.
- 1.10 COORDINATION
- A. Coordinate installation with other trades and make provisions for their work to prevent cutting and patching.
- 1.11 GUARANTEE
- A. The installation of the acoustical material shall be guaranteed to be tight and remain in place for **two years after final acceptance of the building**. Any loose or falling materials shall be replaced by Contractor at his own expense.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS - SUSPENSION SYSTEM

- A. **Manufacturers:** Subject to compliance with requirements indicated, provide products of one of the following:
 - 1. Chicago Metallic.
 - 2. Donn /USG Metal Products.
 - 3. Armstrong World Industries.

2.2 SUSPENSION SYSTEM MATERIALS

- A. **Standard Exposed Tee Grid:**
 - 1. Intermediate duty system, complying with ASTM C 635, non-fire rated.
 - 2. Commercial quality cold-rolled steel with galvanized coating.
 - 3. All components die cut and interlocking.
 - 4. Exposed grid surface width: 9/16 inch and 15/16 inch systems. Refer to ceiling plans, finish plans and Section 008900 - Finish Selections Summary.
 - 5. Cope cross runners to lay flush with main runners, except at edge moldings.
 - 6. **Finish on exposed surfaces:** Baked-on white enamel, satin finish.
- E. **Grid Accessories:** Stabilizer bars, furring clips, splices, edge moldings, hold down clips and closure strips as necessary to complete and complement suspended ceiling grid system.
- F. All components die-cut and interlocking.
- G. **Support Channels and Hangers:** Galvanized steel; size and type to suit application, to rigidly secure acoustic ceiling system including integral mechanical and electrical components **with maximum deflection of 1/360**.

2.3 ACCEPTABLE MANUFACTURERS - ACOUSTIC UNITS

- A. Armstrong World Industries.
- B. Certainteed.
- C. U. S. Gypsum Company.

2.4 ACOUSTIC UNIT MATERIALS

- A. **Acceptable Products:**
 - 1. Refer to Section 008900.
 - 2. NRC rating of 0.9 minimum.

2.5 ACCESSORIES

- A. Hanger Wire: Minimum 12 gage, galvanized, self-annealed, mild steel wire.
- B. Touch-up Paint: Type and color to match acoustical and grid units.
- C. Hold Down Clips: Manufacturer's standard.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that existing conditions are ready to receive work.
- B. Verify that layout of hangers will not interfere with other work.
- C. Beginning of installation means acceptance of existing conditions.

3.2 INSTALLATION - LAY-IN GRID SUSPENSION SYSTEM

- A. Install system in accordance with ASTM C636, manufacturer's instructions and as supplemented in this Section, to produce a ceiling true to lines and levels, free from warp and soiled or damaged grid or panels.
- B. Install system capable of supporting imposed loads to a deflection of 1/360 maximum.
- C. Install after major above ceiling work is complete. Coordinate the location of hangers with other work.
- D. Hang system independent of walls, columns, ducts, pipes and conduit. **Hang wires vertically and plumb directly from structure (not from fireproofing, fireproofing suspension members, bridging or roof decks). Locate first hanger 6 inches from wall and space 4'-0" along carrying channel.** Where carrying members are spliced, avoid visible displacement of face plane of adjacent members. **Do not splice main tees when width is less than 10'-0".**
- E. Where ducts or other equipment prevent the regular spacing of hangers, reinforce the nearest affected hangers and related carrying channels to span the extra distance. Construct trapeze hangers when necessary.
- F. Center system on room axis leaving equal border units, unless shown otherwise on the drawings. **Do not leave tiles less than 1/2 length or width in a given room.**
- G. Do not support fixtures or other components on main runners or cross runners if weight causes total dead load to exceed deflection capability. **Support fixture loads by supplementary hangers located within 6 inches of each corner; or support components independently.**
- H. Do not eccentrically load system, or produce rotation of runners.
- I. Install edge molding at intersection of ceiling and vertical surfaces, using longest practical lengths. Miter corners. Provide edge moldings at junctions with other interruptions. Field rabbet panel edges. Where round obstructions occur, provide preformed closers to match edge molding. **Provide prefabricated radiused edge moldings around radiused wall corners and columns.** Use maximum lengths, straight, true to line, and level.
- J. Form expansion joints as detailed. Form to accommodate plus or minus one inch movement. Maintain visual closure.
- K. **Level grid with laser leveling device.**

3.3 INSTALLATION - ACOUSTICAL UNITS

- A. Install acoustical units in accordance with manufacturer's instructions.
- B. Fit acoustic units in place, free from damaged edges or other defects detrimental to appearance and function.
- C. Lay directional patterned units one way with pattern parallel to shortest room axis. Fit border neatly against abutting surfaces.
- D. **Install units after above ceiling work is complete.**
- E. Install acoustic units level, in uniform plane, and free from twist, warp and dents.
- F. Cut panels to fit irregular grid and perimeter edge trim.
- G. **Lay acoustic insulation batts for a distance of 48 inches both sides of wall partitions unless entire ceiling is scheduled to receive acoustical batts.**
- H. **Install hold-down clips to retain panels tight to grid system within 10 feet of an exterior door.**

3.4 TOLERANCES

- A. Variation from Flat and Level Surface: 1/8 inch in 10 feet.
- B. Variation from Plumb of Grid Members Caused by Eccentric Loads: Two degrees maximum.

3.5 ADJUSTING AND PATCHING

- A. Replace damaged members of exposed suspension system. Replace ceiling board and tile that is damaged, installed improperly, or shows visible signs of sagging.

3.6 CLEANING

- A. Clean soiled areas of ceiling material with mild soap and water. Replace ceiling board and tile damaged by improper cleaning.

END OF SECTION

SECTION 095133

ACOUSTICAL METAL CEILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes:** Acoustical metal panels and associated suspension system for interior soffit under Grand Staircase and landings.

1.3 SUBMITTALS

- A. **Product Data:** For each type of product.
- B. **Shop Drawings:** Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Panel pattern.
 - 2. Ceiling suspension members.
 - 3. Ceiling-mounted items including light fixtures, diffusers, grilles, speakers, sprinklers, and access panels.
 - 4. Ceiling perimeter and penetrations through ceiling; trim and moldings.
- C. **Samples for Verification:** For each component indicated and for each exposed finish required, prepared on Samples of size indicated below:
 - 1. **Metal Panels:** Set of full-size Samples of each type, finish, color, pattern, and texture. Show panel edge profile.
 - 2. **Exposed Suspension-System Members, Moldings, and Trim:** Set of 6 inch long Samples of each type, finish, and color.

1.4 SYSTEM DESCRIPTION

- A. Suspension system to rigidly secure acoustical metal ceilings including integral mechanical and electrical components with **maximum deflection of 1/360**.

1.5 QUALITY ASSURANCE

- A. **Manufacturer:** Company specializing in manufacture of ceiling suspension system and ceilings with **10 years minimum experience**.
- B. **Installer:** Company with **3 years minimum successful experience**.
- C. Certificates
 - 1. Submit manufacturer's certification that suspension system is capable of supporting light fixtures, grilles, and other ceiling components.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical metal panels, suspension-system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they are protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Handle acoustical metal panels, suspension-system components, and accessories carefully to avoid damaging units and finishes in any way.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **ACT-4 Basis of Design:** Refer to Section 008900 - Finish Selections Summary.

2.2 ACOUSTICAL METAL PANELS

- A. **Acoustical Panel Standard:** Provide manufacturer's standard pans of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectances unless otherwise indicated.
 - 1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches away from test surface according to ASTM E 795.
- B. **Sheet Metal Characteristics:** For metal components exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, roughness, stains, or discolorations.
 - 1. Aluminum Sheet: Rolled aluminum sheet, complying with ASTM B 209; alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
 - a. **Painted Finishes:** Electrolytic zinc-coated steel complying with ASTM A 879, 13Z coating, surface treatment as recommended by finish manufacturer for type of use and finish indicated.
- C. **Sound-Absorbent Fabric Layer:** Provide fabric layer, sized to fit concealed surface of pan, and consisting of black, nonwoven, nonflammable, sound-absorbent material with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing according to ASTM E 84.
 - 1. Bond fabric layer to panels in the factory with manufacturer's standard nonflammable adhesive.

2.3 ALUMINUM PANELS FOR ACOUSTICAL METAL PANEL CEILING

- A. **Classification:** Units complying with ASTM E 1264 for Type XX, other types described as perforated aluminum facing (pan) units with sound-absorbent fabric backing.
- B. **Panel Fabrication:** Manufacturer's standard units of size, profile, and edge treatment indicated, formed from metal indicated and finished to comply with requirements indicated.
 - 1. **Torsion-Spring Pans:** Designed to be securely retained in preslotted, exposed suspension grid by torsion springs provided by manufacturer.
- C. **Panel Thickness:** Not less than 0.032 inch.
- D. **Panel Edge Detail:** Square with upturned edges.
- E. **Panel Joint Detail:** 1/8" W x 1/4" H, continuous reveals in same finish as panels.
- F. **Panel Size:** As indicated on Drawings.
- G. **Pan Face Finish:** Painted in custom color to match Architect's sample.

2.4 METAL SUSPENSION SYSTEMS, GENERAL

- A. **Metal Suspension System Standard:** Provide manufacturer's standard metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable ASTM C 635 requirements.
- B. **Suspension Systems:** Provide systems complete with carriers, runners, splice sections, connector clips, alignment clips, leveling clips, torsion springs, hangers, molding, trim, retention clips, load-resisting struts, and other suspension components required to support ceiling units and other ceiling-supported construction.
- C. **Attachment Devices:** Size for 5 times the design load indicated in ASTM C 635, Table 1, Direct Hung, unless otherwise indicated. Comply with seismic design requirements.
 - 1. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing according to ASTM E 1190, conducted by a qualified testing and inspecting agency.
- D. **Wire Hangers, Braces, and Ties:** Provide wires complying with the following requirements:
 - 1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641, Class 1 zinc coating, soft temper.
 - 2. Size: Select wire diameter so its stress at 3 times the hanger design load indicated in ASTM C 635, Table 1, Direct Hung, is less than yield stress of wire, but provide not less than 0.135 inch diameter wire.

- E. **Exposed Metal Edge Moldings and Trim:** Provide exposed members as indicated or as required to comply with seismic requirements of authorities having jurisdiction, to conceal edges of and penetrations through ceiling, to conceal edges of pans and runners, for fixture trim and adapters, for fasciae at changes in ceiling height, and for other conditions; of metal and finish matching acoustical metal pan ceiling units unless otherwise indicated.

- 1. For Circular Penetrations of Ceiling: Fabricate edge moldings to diameter required to fit penetration exactly.

2.5 **DIRECT-HUNG, STANDARD-GRID, METAL SUSPENSION SYSTEM FOR ACOUSTICAL METAL PAN CEILING**

- A. **Suspension System:** For torsion-spring-hinged pans.
- B. **Narrow-Face, Uncapped, Double-Web, Steel Suspension System:** Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytic zinc-coated or hot-dip galvanized, to produce structural members with 9/16 inch wide faces.
 - 1. **Structural Classification:** Intermediate-duty system.
 - 2. **Face Design:** With 1/4 inch wide reveals at all joints including perimeter edge joints.
 - 3. **Face Finish:** Painted to match color of metal pan.

2.6 **GENERAL FINISH REQUIREMENTS**

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 **ALUMINUM FINISHES**

- A. **Color-Coated Finish:** Manufacturer's standard of 2 coat fluorocarbon (Kynar) paint complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.

PART 3 - EXECUTION

3.1 **EXAMINATION**

- A. Examine substrates, areas, and conditions, including structural framing to which acoustical metal pan ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical metal pan ceilings.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 **PREPARATION**

- A. Measure each ceiling area and establish layout of acoustical metal pans to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width pans at borders, and comply with layout shown on reflected ceiling plans and coordination drawings.

3.3 **INSTALLATION**

- A. General: Install acoustical metal pan ceilings to comply with ASTM C 636/C 636M and seismic design requirements indicated, according to manufacturer's written instructions and Cisca's "Ceiling Systems Handbook."
- B. Suspend ceiling hangers from building's structural members and as follows:
 - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 - 2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.

3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
 4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that do not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
 5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and hanger type involved. Install hangers in a manner that does not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
 6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
 7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
 8. Do not attach hangers to steel deck tabs.
 9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 10. Space hangers not more than 48 inches o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
 11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
- C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.
- D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical metal pans.
1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
 2. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3.2 mm in 3.6 m). Miter corners accurately and connect securely.
 3. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- E. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- F. Cut acoustical metal panel units for accurate fit at borders and at interruptions and penetrations by other work through ceilings. Stiffen edges of cut units as required to eliminate evidence of buckling or variations in flatness exceeding referenced standards for stretcher-leveled metal sheet.
- G. Install acoustical metal pans in coordination with suspension system and exposed moldings and trim. Comply with installation tolerances according to CISCA's "Metal Ceilings Technical Guidelines."
1. For lay-in, square-edge pans, install pans with edges fully hidden from view by flanges of suspension-system runners and moldings.
 2. For lay-in, reveal-edge pans on suspension-system runners, install pans with bottom of reveal in firm contact with top surface of runner flanges.
 3. For lay-in, reveal-edge pans on suspension-system members with box-shaped flanges, install pans with reveal surfaces in firm contact with suspension-system surfaces and panel faces flush with bottom face of runners.

4. **For torsion-spring-hinged pans**, position pans according to manufacturer's written instructions.
 5. For snap-in pans, fit adjoining units to form flush, tight joints.
 6. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions unless otherwise indicated.
 7. Fit adjoining units to form flush, tight joints.
 8. Install directionally patterned or textured metal pans in directions indicated.
 9. Install sound-absorbent fabric layers in, and bond to, perforated metal pans.
 10. Install sound-absorbent pads in perforated metal pans[over metal spacer grids].
 - H. Install sound attenuation panels in areas indicated by reflected ceiling plans or room finish schedules. Lay panels directly on ceiling system and close major openings to form complete coverage in required areas. Lay second sound-absorbent pads on sound attenuation panels.
 - I. Install hold-down clips where indicated.
- 3.4 CLEANING
- A. Clean exposed surfaces of acoustical metal pan ceilings, including trim and edge moldings, after removing strippable, temporary protective covering, if any. Comply with manufacturer's written instructions for stripping of temporary protective covering, cleaning, and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and bent units.
- 3.5 SCHEDULE
- A. Install torsion spring mounted panels and supporting grid at underside of all flights and landings of Grand Staircase in the east Atrium and floors 2, 3, and 4. Make provisions for recessed can lighting and sprinkler heads to occur in center bays of ceiling only. Refer to Drawings and Section 008900 - Finish Selection Summary.

END OF SECTION

SECTION 096513

RESILIENT BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes:**
 - 1. **Resilient base.**
 - 2. **Reducer and transition strips.**

1.3 REGULATORY REQUIREMENTS

- A. Conform to applicable building code for flame/ fuel/smoke rating requirements in accordance with ASTM E 84.

1.4 SUBMITTALS

- A. **Provide manufacturer's product literature.**
- B. **Samples: Illustrate style, color, and size.**
 - 1. **Verification of Selection:**
 - a. **Quantity:** Two.
 - b. **Wall Base:** Submit 12 inch lengths.
 - c. **Trim Components:** Submit 12 inch lengths.
- C. Informational Submittals: Submit following upon request of the Architect:
 - 1. Certifications specified in Quality Assurance article.
 - a. Qualification Data: Manufacturer's and installer's qualification data.
 - b. Manufacturer's Instructions. Include applicable temperature range and special procedures.
- D. Submit cleaning and maintenance data under provisions of Section 017800.

1.5 QUALITY ASSURANCE

- A. **Single Source Responsibility:** Obtain each type and color of resilient products from a single source with resources to provide products of consistent quality in appearance and physical properties without delaying progress of the Work.
- B. **Installer Qualifications:** Acceptable to manufacturer with successful documented experience for **at least 10 years on a similar project size.**
- C. Regulatory Requirements: Comply with local regulations controlling use of volatile organic compounds for installation products.
- D. Certifications: Submit following upon request of the Architect:
 - 1. Manufacturer's certification that products furnished for project meet or exceed specified requirements.
 - 2. Manufacturer's certification attesting that Installer is trained and approved for application of materials.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Comply with Section 016000.
 - 1. Deliver materials to job site in manufacturer's unopened containers clearly marked with manufacturer's name, brand, size, thickness, grade, and color.
 - 2. Store materials in accordance with manufacturer's requirements.

1.7 **PROJECT CONDITIONS**

- A. Environmental Requirements: **Maintain minimum air and surface temperature required by adhesive manufacturer in spaces to receive products for at least 72 hours prior to installation, during installation, and for not less than 48 hours after installation.**
1. **Store products in spaces where they will be installed for at least 72 hours before beginning installation to achieve temperature stability.**
 2. Do not install products until they are at same air and surface temperature as space where they are to be installed.
 3. **After installation, maintain minimum air and surface temperature of 55 F in areas where work is completed.**

1.8 **MAINTENANCE**

- A. **Extra Materials:** Furnish in accordance with Section 017700.
1. Furnish resilient base for each color in quantity equal to **5 percent of total material furnished but not less than:**
 - a. **50 lineal feet of each type and color base installed.**
 - b. **6 outside molded corners matching base.**
 - c. **Provide in roll form of each different composition and color installed.**
 2. Store at job site where directed. Ensure boxes are identified by manufacturer, pattern, style, and color.

PART 2 - PRODUCTS

2.1 **MANUFACTURERS**

- A. **Acceptable Manufacturers:**
1. Burke Flooring.
 2. Roppe, Fostoria, OH.
 3. Johnsonite, Chagrin Falls, OH.
 4. Flexco, Tuscumbia, AL.
- B. Substitutions: Submit in accordance with Section.

2.2 **MATERIALS**

- A. **Resilient Base:**
1. ASTM F 1861.
 2. **Type: Rubber.**
 3. **Style: Straight with cove or angled toe bottom at all floors, per campus Design Guidelines.**
 4. Group: Solid/ homogenous.
 5. Thickness: 0.125 inch nominal.
 6. **Height: 4 inches nominal.**
 7. **Provide in roll form to accommodate installation with minimum seaming.**
 8. **Corner Units: Provide only factory manufactured inside and outside corners, matching base style and color. No exceptions. Color to match specified base color.**
 9. **Color/Manufacturer:** Final color and manufacturer to be selected by Architect from any of the listed manufacturers' full and complete lines. Refer Section 008900 and Finish Selection Summary.
- B. **Basis of Design:** As specified in Section 008900 - Design Selection Summary.

2.3 **RESILIENT FLOORING ACCESSORIES**

- A. **Carpet Reducer Strip:** Homogeneous vinyl or rubber composition.
1. **Profile:** Fabricate to accommodate 5/16-inch glue-down carpet and other adjacent applications as required. Submit for Architect's approval.
 2. **Width:** 2 inch, minimum.
 3. Align flush with top of carpet on side of strip.
 4. Tapered or bullnose edge on side opposite of carpet.

5. **Colors:** Selected by Architect from any of the following manufacturer's full range of colors.
 6. **Basis of Design:**
 - a. Super Imperial Reducer No. 705, Burke.
 - b. Deluxe Reducer Strip No. 78, by Flexco.
 - c. EG-XX-G Series, Johnsonite.
 - d. Carpet Reducer Strip No. 174, Roppe.
 - e. Johnsonite # CTA XX K
- B. **Carpet to carpet transition strip:**
1. **Basis of Design:**
 - a. Johnsonite # VT-XX-M6 or approved equal
- 2.4 **ACCESSORIES**
- A. Primers and Adhesives: Waterproof.
1. Materials required by resilient product manufacturer for particular product and substrate moisture content and condition.
 2. Removable adhesive with antimicrobial additive; approved by resilient product manufacturer.
 3. Volatile Organic Compound: 3 g/L, maximum.

PART 3 - EXECUTION

- 3.1 **EXAMINATION**
- A. Examine conditions and proceed with work in accordance with Section 014300.
1. Site Verification of Conditions: Verify that surfaces are free of substances which may adversely affect adhesive and resilient materials.
- 3.2 **PREPARATION**
- A. Prepare Substrate:
1. Remove ridges, bumps, trowel marks and protrusions from substrate.
 2. **Fill depressions, low spots, cracks, joints, holes, indentations, and other defects with self-leveling and patching compounds as required at no additional cost to Owner.**
 3. Clean substrate to remove paint, dirt, oil, grease, sealers, release agents, hardening compounds, curing compounds, residual adhesives, and harmful substances which could impair performance of adhesive materials used with resilient products.
 4. Vacuum clean substrate.
 5. Prime substrate in accordance with manufacturer's requirements.
 6. **Unroll rolled products minimum 24 hours before installation.**
- 3.3 **INSTALLATION**
- A. General: Comply with Section 016000.
1. Adhesive: Apply with notched trowel at rate and in pattern required by manufacturer.
 - a. Gun application is not permitted.
 - b. Apply to provide continuous bond between resilient material and substrate. Do not allow adhesive to bleed through joints.
 - c. Spread only enough adhesive to permit installation of materials before adhesive's initial set.
 - d. Allow solvent to flash off and adhesive to become tacky in accordance with manufacturer's requirements before applying resilient product.
 2. Scribing: Produce tight hairline joints.
 - a. Scribe to walls, columns, cabinets, floor outlets, floor penetrations, and other appurtenances.
 - b. Scribe, cut and fit exposed edges at adjoining construction and neatly abut.

- B. **Resilient Base:** Use longest lengths possible; **pieces less than 10 feet long are not permitted.** Seams are not permitted between wall corners spaced less than 10 feet apart.
 - 1. Fit joints straight, tight, and vertical.
 - 2. Install on solid substrate backing.
 - 3. Bond tight to wall and floor surfaces.
 - 4. Scribe to door frames and other interruptions.
 - 5. **Outside Corners: Use prefabricated outside corner units only.**
 - 6. **Inside Corners: Butt and cope, or mitered.**
 - a. **Do not wrap base around inside corners.**
 - 7. Align tops of adjacent sections.
- C. **Carpet Reducer Strips: Provide reducer strips at unprotected edges, exposed edges, and where carpet terminates.**
 - 1. Center strip under door where flooring terminates at door openings.
 - 2. Install in longest lengths practicable with minimal joints.
 - 3. Fit joints tightly.
 - 4. Secure resilient strips to subfloor by using adhesive.

3.4 CLEANING

- A. **Cleaning:** Clean in accordance with Section 017400.
 - 1. Immediately remove excess adhesive from surfaces without damage.
 - 2. Replace scuffed, scratched, broken, and discolored products.
 - 3. Re-install loose products.
 - 4. Clean surfaces in accordance with manufacturer's requirements. Do not use materials and methods which may damage finish and surrounding construction.

3.5 PROTECTION

- A. **Protect** in accordance with Section 015000.
 - 1. Protect work from damage from subsequent construction operations so there will be no indication of use and damage at time of acceptance.

END OF SECTION

SECTION 096516

RESILIENT SHEET FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

- 1. **Linoleum sheet floor covering** with heat welded seams.

1.3 SUBMITTALS

- A. **Product Data:** For each type of product indicated.
- B. **Shop Drawings:** For each type of floor covering. Include floor covering layouts, locations of seams, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
 - 1. Show details of special patterns.
- C. **Samples for Selection:** For each type of floor covering indicated.
- D. **Product Schedule:** For floor coverings. Use same designations indicated on Drawings.
- E. **Qualification Data:** For qualified Installer.
- F. **Maintenance Data:** For each type of floor covering to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. **Installer Qualifications:** A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for floor covering installation and seaming method indicated, and with ten years documented experience of successful similar installations.
 - 1. Engage an installer who employs workers for this Project who are trained or certified by floor covering manufacturer for installation techniques required.
- B. **Mockups:** Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockups for floor coverings including resilient base and accessories.
 - a. Size: Minimum 100 sq. ft. for each type, color and pattern in locations directed by Architect.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store floor coverings and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F. Store rolls upright.

1.6 PROJECT CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 85 deg F, in spaces to receive floor coverings during the following time periods:
 - 1. 48 hours before installation.
 - 2. During installation.
 - 3. 48 hours after installation.
- B. Until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.
- C. Close spaces to traffic during floor covering installation.
- D. Close spaces to traffic for 48 hours after floor covering installation.
- E. Install floor coverings after other finishing operations, including painting, have been completed.

1.7 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Floor Covering: Furnish quantity not less than 3% in roll form and in full roll width for each color, pattern, and type of floor covering installed.

PART 2 - PRODUCTS

2.1 VINYL SHEET FLOOR COVERING

- A. **Unbacked Vinyl Sheet Floor Covering:** ASTM F 1913, 0.080 inch thick.
- B. **Wearing Surface:** Smooth.
- C. **Sheet Width:** As standard with manufacturer .
- D. **Seaming Method:** Heat welded .
- E. **Colors and Patterns:** Refer to 00 89 00.

2.2 INSTALLATION MATERIALS

- A. **Trowelable Leveling and Patching Compounds:** Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.
- B. **Adhesives:** Water-resistant type recommended by manufacturer to suit floor covering and substrate conditions indicated.
- C. **Seamless-Installation Accessories:**
 - 1. Heat-Welding Bead: Manufacturer's solid-strand product for heat welding seams.
 - a. Color: Match floor covering.
- D. **Integral-Flash-Cove-Base Accessories:** Refer to 00 89 00.
 - 1. Cove Strip: 1-inch radius provided or approved by manufacturer.
 - 2. Cap Strip: Square metal, vinyl, or rubber cap provided or approved by manufacturer.
 - 3. Corners: Metal inside and outside corners and end stops provided or approved by manufacturer.
- E. **Floor Polish:** Provide protective liquid floor polish products as recommended by manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. **Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.**
- B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor coverings.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. **Prepare substrates according to manufacturer's written instructions to ensure adhesion of floor coverings.**
- B. **Concrete Substrates:** Prepare according to ASTM F 710.
 - 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 - 2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
- C. **Testing for Moisture in Floor Slabs:** Perform preinstallation testing specified by Section 090561 - Moisture Vapor Emission Control and provide MVE-control systems products for those floor surfaces that do not comply with requirements.
- D. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.
- E. Do not install floor coverings until they are same temperature as space where they are to be

installed.

1. Move floor coverings and installation materials into spaces where they will be installed at least 48 hours in advance of installation.
- F. Sweep and vacuum clean substrates to be covered by floor coverings immediately before installation.

3.3 FLOOR COVERING INSTALLATION

- A. **Comply with manufacturer's written instructions for installing floor coverings.**
- B. Unroll floor coverings and allow them to stabilize before cutting and fitting.
- C. Lay out floor coverings as follows:
1. Maintain uniformity of floor covering direction.
 2. Minimize number of seams; place seams in inconspicuous and low-traffic areas, at least 6 inches away from parallel joints in floor covering substrates.
 3. Match edges of floor coverings for color shading at seams.
 4. Avoid cross seams.
- D. Scribe and cut floor coverings to butt neatly and tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, and door frames.
- E. Extend floor coverings into toe spaces, door reveals, closets, and similar openings.
- F. Maintain reference markers, holes, or openings that are in place or marked for future cutting by repeating on floor coverings as marked on substrates. Use chalk or other nonpermanent marking device.
- G. Install floor coverings on covers for telephone and electrical ducts and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of floor coverings installed on covers and adjoining floor covering. Tightly adhere floor covering edges to substrates that abut covers and to cover perimeters.
- H. Adhere floor coverings to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- I. Seamless Installation:
1. Heat-Welded Seams: Comply with ASTM F 1516. Rout joints and use welding bead to permanently fuse sections into a seamless floor covering. Prepare, weld, and finish seams to produce surfaces flush with adjoining floor covering surfaces.
- J. Integral-Flash-Cove Base: Cove floor coverings up vertical surfaces a dimension as indicated. Support floor coverings at horizontal and vertical junction by cove strip. Butt at top against cap strip.
1. Install metal corners at inside and outside corners.

3.4 CLEANING AND PROTECTION

- A. **Comply with manufacturer's written instructions for cleaning and protection of floor coverings.**
- B. Perform the following operations immediately after completing floor covering installation:
1. Remove adhesive and other blemishes from floor covering surfaces.
 2. Sweep and vacuum floor coverings thoroughly.
 3. Damp-mop floor coverings to remove marks and soil.
- C. Protect floor coverings from marks, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Floor Polish: Remove soil, visible adhesive, and surface blemishes from floor covering before applying liquid floor polish.
1. Apply two coat(s).
- E. Cover floor coverings until Substantial Completion.

END OF SECTION

SECTION 096519

RESILIENT TILE FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SECTION INCLUDES

- A. **Luxury Vinyl Tile and Planks (LVT).**

1.3 REGULATORY REQUIREMENTS

- A. Conform to applicable building code for flame/fuel/smoke rating requirements in accordance with ASTM E 84.

1.4 SUBMITTALS

- A. General: Submit in accordance with Section 007013 and Section 013100.
- B. **Product data:** For specified products, describing physical and performance characteristics, sizes, patterns and colors available.
- C. **Samples** under provisions of Section 013300.
 - 1. **Submit (2) samples** in full panel sizes for LVT, illustrating color and pattern for each floor material specified.

1.5 ENVIRONMENTAL REQUIREMENTS

- A. **Store materials for 3 days prior to installation in area of installation to achieve temperature stability.**
- B. **Maintain ambient temperature required by adhesive manufacturer three days prior to, during, and 48 hours after installation of materials.**

1.6 QUALITY ASSURANCE

- A. **Single Source Responsibility:** Obtain each type and color of resilient products from a single source with resources to provide products of consistent quality in appearance and physical properties without delaying progress of the Work.
- B. **Installer Qualifications:** Acceptable to manufacturer with successful documented experience for **at least 10 years with a similar product.**
- C. **Regulatory Requirements:** Comply with local regulations controlling use of volatile organic compounds for installation products.
- D. **Certifications:** Submit following upon request of the Architect:
 - 1. Manufacturer's certification that products furnished for project meet or exceed specified requirements.
 - 2. Manufacturer's certification attesting that Installer is trained and approved for application of materials.
- E. **Mockups:** Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. **Build mockups for each floor tile pattern specified, including resilient base and accessories.**
 - a. **Size: 6 ft. x 6 ft. for each design and color scheme.**

1.7 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store and handle materials in accordance with the requirements of Sections 016000.
- B. Store flooring materials in original containers in enclosed space at minimum of 70 degrees F for three days prior to installation.

1.8 **EXTRA MATERIALS**

- A. **Provide 50 square feet of extra stock flooring of each material and color specified under provisions of Section 017700.**

PART 2 - PRODUCTS

2.1 **MANUFACTURERS - RESILIENT TILE FLOORING**

- A. **Vinyl Planks: Refer to Section 008900 - Finish Selections Summary.**
B. Substitutions: Under provisions of Section 016000.

2.2 **TILE FLOORING MATERIALS**

- A. **Luxury Vinyl Tile and Plank Flooring (LVT):**
1. ASTM F 1700.
2. **Class:** As indicated by product designations.
3. **Type:** Type B, embossed surface.
4. **Thickness:** Refer to Finish Selection Summary Spreadsheet.
5. **Size:** Varies; Refer to Finishes Drawings and Finish Summary Spreadsheet.
6. **Acceptable Product: Refer to Section 008900 - Finish Selections Summary.**

2.3 **ACCESSORIES**

- A. **Subfloor Filler:** White premix latex; type recommended by flooring material manufacturer.
B. **Adhesives:** Waterproof; types recommended by flooring manufacturer.
C. **Vinyl Reducer:** Standard 1 inch wide tapered edging, 1/8 inch thick, color to match base.
D. **Subfloor Leveling Basis of Design:** Roppe; Subfloor Leveling Product.

PART 3 - EXECUTION

3.1 **EXAMINATION**

- A. Verify that surfaces are smooth and flat with maximum variation of 1/4 inch in 10 ft, and are ready to receive Work.
B. **Verify concrete floors are dry to a maximum moisture content of 7 percent (unless more stringent requirements are listed by the manufacturer, and exhibit negative alkalinity, carbonization, or dusting. Provide a copy of test results indicating this has been achieved to Architect prior to proceeding with the work.**
C. Examine concrete for sealers, hardeners or curing compounds not compatible with adhesive.
D. Beginning of installation means acceptance of existing substrate and site conditions.

3.2 **PREPARATION**

- A. **Remove sub-floor ridges and bumps. Fill low spots, cracks, joints, holes, and other defects with subfloor filler as required at no additional cost to the Owner.**
B. Apply, trowel, and float filler to leave a smooth, flat, hard surface.
C. Prohibit traffic from area until filler is cured.

3.3 **INSTALLATION - LVT MATERIAL**

- A. Install in accordance with manufacturers' instructions.
B. Mix LVT from container to ensure shade variations are consistent.
C. Spread only enough adhesive to permit installation of materials before initial set.
D. Install LVT with all joints as called for in Finish Selection Summary Spreadsheet or as noted on drawings. Joints shall be tight butt joints, true to line.
E. **Do not lay LVT with less than 1/2 plank width adjacent to walls unless indicated on drawings. Confirm final position with Architect prior to installation.**
F. Terminate flooring at centerline of door openings where adjacent floor finish is dissimilar.
G. Install edge strips at unprotected or exposed edges, and where flooring terminates.
H. Scribe flooring to walls, columns, cabinets, floor outlets, and other appurtenances to produce tight joints.

- I. Install edge strips where indicated. Fit joints tightly.
- 3.4 CLEANING AND PROTECTION
 - A. **Comply with manufacturer's written instructions for cleaning and protection of floor tile.**
 - B. Prohibit traffic on floor finish for 24 hours after installation.
 - C. **Allow Architect to inspect tile flooring before covering up for protection from subsequent trades for the remainder of construction.**
 - D. Repair or replace damaged surfaces that are soiled or scarred prior to wax installation in a manner acceptable to Owner.
 - E. Perform the following operations immediately after completing floor tile installation:
 - 1. Remove adhesive and other blemishes from exposed surfaces.
 - 2. Sweep and vacuum surfaces thoroughly.
 - 3. Damp-mop surfaces to remove marks and soil.
 - F. Protect floor tile products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
 - G. Cover flooring until Substantial Completion.

END OF SECTION

**SECTION 096566
RUBBER FLOORING**

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established within General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section

1.2 SUMMARY

- A. **Section Includes:** Adhered rubber tile flooring and accessories indicated, specified, or required for installation.

1.3 SUBMITTALS

- A. **Product Data:** Manufacturer's technical literature for each product indicated, specified, or required.
- B. **Maintenance Data:** For inclusion in maintenance manual required by Division 01.

1.4 QUALITY ASSURANCE

- A. **Installer Qualifications:** An experienced installer who has completed rubber flooring installations similar in material, design, and extent to that indicated for this Project, who is acceptable to manufacturer, and whose work has resulted in installations with a record of successful in-service performance.

1.5 PROJECT CONDITIONS

- A. Install products after other finishing operations, including painting, are completed.
- B. Maintain a temperature of not less than 70 deg F or more than 95 deg F in installation spaces for at least 48 hours before installation, during installation, and for at least 48 hours after installation, unless manufacturer's written recommendations specify longer time periods. After postinstallation period, maintain a temperature of not less than 55 deg F or more than 95 deg F.
- C. Close spaces to traffic during flooring installation and for time period after installation recommended in writing by manufacturer.

1.6 MAINTENANCE

- A. **Extra Materials:** Furnish not less than 5 percent of amount installed of each type, color, pattern, and size of tile flooring installed packaged with protective covering for storage and identified with labels describing contents.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. **Basis of Design:** Refer to Section 008900 - Finish Selection Summary.

2.2 MATERIALS

- A. **Rubber Tile for Stair Treads:** A plain colored, rubber tile with a surface of classically round pastille raised studs at the tread and smooth rubber tile at the riser.

2.3 ACCESSORIES

- A. **Trowelable Leveling and Patching Compound:** Latex-modified, hydraulic-cement-based formulation approved by flooring manufacturer.
- B. **Adhesives:** Water-resistant type recommended by manufacturer to suit floor covering and substrate conditions indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Acceptance of Surfaces and Conditions:

1. Examine substrates to receive rubber flooring and associated work for compliance with requirements and other conditions affecting performance.
2. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents.
3. Starting Work within a particular area will be construed as acceptance of surface conditions.

3.2 PREPARATION

A. Prepare substrates according to following:

1. Manufacturer's written instructions.
2. ASTM F 710.

B. Remove coatings, including curing compounds, sealers, hardeners, and other substances that are incompatible with flooring adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer; do not use solvents.

C. **Testing for Moisture in Floor Slabs:** Perform preinstallation testing specified by Section 090561 - Moisture Vapor Emission Control and provide MVE-control systems products for those floor surfaces that do not comply with requirements.

D. Prepare substrates to comply with flatness tolerance of 1/4 in in 10 foot as follows:

1. Fill cracks, holes and depressions with trowelable leveling and patching compounds.
2. Remove concrete protrusions, bumps, and ridges by sanding or grinding.

E. Move floor coverings and installation materials into spaces where they will be installed at least 48 hours in advance of installation.

F. Sweep and vacuum substrates to be covered by floor coverings immediately before installation.

3.3 INSTALLATION

A. Adhere products to substrates using a full spread of adhesive applied to substrate to comply with adhesive and flooring manufacturers' written instructions, including those for trowel notching, adhesive mixing, and adhesive open and working times.

B. Provide completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

C. Restrict foot traffic at least 12 hours after installation. Restrict rolling traffic for 24 hours after installation. Do not clean floor for 5 days.

3.4 CLEANING

A. Perform the following operations immediately after installing flooring products:

1. Remove adhesive and other surface blemishes using cleaner recommended in writing by flooring manufacturer.
2. Sweep and vacuum floor thoroughly.
3. Do not wash floor until after waiting period recommended in writing by flooring manufacturer.
4. Damp mop floor to remove marks and soil using method and cleaner recommended in writing by flooring manufacturer.

3.5 PROTECTION

A. Protect flooring against mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period. Use protection methods indicated or recommended in writing by flooring manufacturer.

B. Do not move heavy or sharp objects directly over floor surfaces. Place plywood or hardboard panels over flooring and under objects while they are being moved. Slide or roll objects over panels without moving panels.

END OF SECTION

SECTION 096623

RESINOUS MATRIX TERRAZZO FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SECTION INCLUDES

- A. **Thin-set, epoxy-resin terrazzo flooring and base.**
- B. **Precast epoxy-resin terrazzo units.**
- C. **Zinc divider strips.**

1.3 PREINSTALLATION MEETINGS

- A. **Preinstallation Conference:** Conduct conference at Project site.
 - 1. Review methods and procedures related to terrazzo including, but not limited to, the following:
 - a. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
 - b. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - c. Review special terrazzo designs and patterns.

1.4 SUBMITTALS

- A. **Product Data:** For each type of product.
 - 1. Include terrazzo installation requirements.
- B. **Shop Drawings:** Provide electronic files of colored, computer generated plans showing the following:
 - 1. Terrazzo patterns in various colors.
 - 2. Divider strips.
 - 3. Control-joint strips.
 - 4. Accessory strips.
 - 5. Abrasive strips.
 - 6. Stair treads, risers, and landings.
 - 7. Precast terrazzo jointing and edge configurations.
- C. **Samples for Verification:** For each type, material, color, and pattern of terrazzo and accessory required showing the full range of color, texture, and pattern variations expected. Label each terrazzo sample to identify manufacturer's matrix color and aggregate types, sizes, and proportions. Prepare Samples of same thickness and from same material to be used for the Work, in size indicated below:
 - 1. **Terrazzo:** 12 inch square Samples.
 - 2. **Precast Terrazzo:** 12 inch square Samples.
 - 3. **Accessories:** 6 inch long Samples of each exposed strip item required.

1.5 CLOSEOUT SUBMITTALS

- A. **Maintenance Data:** For inclusion in maintenance manual required by Division 01.
 - 1. Include manufacturer's instructions for maintenance of installed Work, including methods and frequency recommended for maintaining optimum condition under anticipated use.
 - 2. Include precautions against cleaning products and methods which may be detrimental to finishes and performance.

1.6 QUALITY ASSURANCE

A. **Installer Qualifications:**

1. Engage an installer who is a contractor member of NTMA with a **minimum of 10 years' successful experience** installing specified products.
2. Engage an installer who is certified in writing by terrazzo manufacturer as qualified to install manufacturer's products.

B. **NTMA Standards:** Comply with NTMA's "Terrazzo Specifications and Design Guide" and with written recommendations for terrazzo type indicated unless more stringent requirements are specified.

C. **Mockups:** Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups for terrazzo including accessories.
 - a. **Size: Minimum 2 steps.**
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to Project site in supplier's original wrappings and containers, labeled with source's or manufacturer's name, material or product brand name, and lot number if any.

B. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

1.8 FIELD CONDITIONS

A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting terrazzo installation.

B. Field Measurements: Verify actual dimensions of construction contiguous with precast terrazzo by field measurements before fabrication.

C. **Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.**

D. Close spaces to traffic during terrazzo application and for not less than 24 hours after application unless manufacturer recommends a longer period.

E. Control and collect water and dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.

PART 2 - PRODUCTS

2.1 EPOXY-RESIN TERRAZZO

A. **Epoxy-Resin Terrazzo:** Comply with NTMA's "Terrazzo Specifications and Design Guide" and manufacturer's written instructions for matrix and aggregate proportions and mixing.

1. **Thickness:** 3/8 inch nominal.
2. **Formulated Mix Color and Pattern:** Match Architect's samples. Refer to Section 008900 - Finish Selection Summary and Finish Plans.

B. **Materials:**

1. **Flexible Reinforcing Membrane:** Manufacturer's resinous membrane for substrate-crack preparation and reflective-crack reduction.
 - a. Reinforcement: Fiberglass scrim.
2. **Primer:** Manufacturer's product recommended for substrate and use indicated.
3. **Epoxy-Resin Matrix:** Manufacturer's standard recommended for use indicated and in color required for mix indicated.
 - a. **Physical Properties without Aggregates:**
 - 1) **Hardness:** 60 to 85 per ASTM D 2240, Shore D.
 - 2) **Minimum Tensile Strength:** 3000 psi per ASTM D 638 for a 2 inch specimen made using a "C" die per ASTM D 412.

- 3) **Minimum Compressive Strength:** 10,000 psi per ASTM D 695, Specimen B cylinder.
- 4) **Chemical Resistance:** No deleterious effects by contaminants listed below after seven-day immersion at room temperature per ASTM D 1308.
 - a) Distilled water.
 - b) Mineral water.
 - c) Isopropanol.
 - d) Ethanol.
 - e) 0.025 percent detergent solution.
 - f) 1.0 percent soap solution.
 - g) 10 percent sodium hydroxide.
 - h) 10 percent hydrochloric acid.
 - i) 30 percent sulfuric acid.
 - j) 5 percent acetic acid.
- b. **Physical Properties with Aggregates:** For resin blended with Georgia white marble, ground, grouted, and cured per requirements in NTMA's "Terrazzo Specifications and Design Guide"; comply with the following:
 - 1) **Flammability:** Self-extinguishing, maximum extent of burning 1/4 inch per ASTM D 635.
 - 2) **Thermal Coefficient of Linear Expansion:** 0.0025 inch/inch per deg F for temperature range of minus 12 to plus 140 deg F per ASTM D 696.
4. **Aggregates:** Comply with NTMA gradation standards for mix indicated and contain no deleterious or foreign matter.
 - a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C 131.
 - b. 24-Hour Absorption Rate: Less than 0.75 percent.
 - c. Dust Content: Less than 1.0 percent by weight.
5. **Finishing Grout:** Resin based.

2.2 PRECAST EPOXY-RESIN TERRAZZO BASE

- A. **Precast Terrazzo Base:** Minimum 3/4 inch thick, reinforced portland cement terrazzo units cast in maximum lengths possible, but not less than 10' sections. Comply with NTMA's written recommendations for fabricating precast terrazzo base units in sizes and profiles indicated.
 1. **Type:** Straight.
 2. **Top Edge:** Straight, with polished top surface.
 3. **Metal Toe Strip:** Zinc.
 4. **Outside Corner Units:** With finished returned edges at outside corner.
 5. **Color, Pattern, and Finish:** Match Architect's sample. Refer to Section 008900 - Finish Selection Summary.
- B. **Precast Terrazzo Units:** Comply with NTMA's written recommendations for fabricating precast terrazzo units in sizes and profiles indicated. Reinforce units as required by unit sizes, profiles, and thicknesses and as recommended by manufacturer. Finish exposed-to-view edges and reveals to match face finish. Ease exposed edges to 1/8 inch radius.
 1. Stair treads and landings.
 2. Color, Pattern, and Finish: Match Architect's control sample. Refer to Section 008900 - Finish Selection Summary.

2.3 STRIP MATERIALS

- A. **Thin-Set Divider Strips:** L-type angle by depth of terrazzo.
 1. **Material:** White-zinc alloy.
 2. **Top Width:** 1/32, 1/16, and 1/8 inch. Confirm final locations with Architect.
- B. **Control-Joint Strips:** Separate, double 1/32 inch L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.
- C. **Accessory Strips:** Match divider-strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:
 1. Base-bead strips for exposed top edge of terrazzo base.

2. Edge-bead strips for exposed edges of terrazzo.
3. Nosings for terrazzo stair treads and landings.
- D. **Abrasive Strips:** Three-line abrasive inserts at each nosing. Silicon carbide, aluminum oxide, or combination of both, in epoxy-resin binder set in channel.
 1. **Width:** 1/8 inch.
 2. **Depth:** As required by terrazzo thickness.
 3. **Length:** 4 inches less than stair width.
 4. **Color:** As selected by Architect from full range of industry colors.

2.4 MISCELLANEOUS ACCESSORIES

- A. **Strip Adhesive:** Epoxy-resin adhesive recommended by adhesive manufacturer for this use.
- B. **Anchoring Devices:**
 1. **Strips:** Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and required for secure attachment to substrate.
 2. **Precast Terrazzo:** Provide mechanical anchoring devices as recommended by fabricator for proper anchorage and support of units for conditions of installation and support.
- C. **Patching and Fill Material:** Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
- D. **Joint Compound:** Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
- E. **Resinous Matrix Terrazzo Cleaner:** Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated.
- F. **Sealer:** Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; is recommended by sealer manufacturer; and complies with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated.
 1. **Surface Friction:** Not less than 0.6 according to ASTM D 2047.
 2. **Acid-Base Properties:** With pH factor between 7 and 10.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions:
 1. Examine substrates, areas, and conditions for compliance with requirements for installation tolerances, and other conditions affecting performance of the work.
 2. Proceed with installation only after unsatisfactory conditions have been corrected.
 3. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 PREPARATION

- A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.
- B. **Testing for Moisture in Floor Slabs:** Perform preinstallation testing specified by Section 090561 - Moisture Vapor Emission Control and provide MVE-control systems products for those floor surfaces that do not comply with requirements.
- C. **Preparing Concrete Slabs:**
 1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with terrazzo.
 - a. **Shot-blast surfaces with an apparatus that abrades the concrete surface,** contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
 - b. Repair damaged and deteriorated concrete according to terrazzo manufacturer's written recommendations.
 - c. Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.

- D. Protect other work from water and dust generated by grinding operations. Control water and dust to comply with environmental protection regulations.
 - 1. Erect and maintain temporary enclosures and other suitable methods to limit water damage and dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

3.3 EPOXY-RESIN TERRAZZO INSTALLATION

- A. Comply with NTMA's written recommendations for terrazzo and accessory installation.
- B. Place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions and NTMA's "Terrazzo Specifications and Design Guide."
- C. **Installation Tolerance:** Limit variation in terrazzo surface from level to 1/8 inch in 10 feet; noncumulative.
- D. Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.
- E. Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted.
- F. **Flexible Reinforcing Membrane:**
 - 1. Prepare and prefill substrate cracks with membrane material.
 - 2. Install membrane at substrate cracks in areas to receive terrazzo.
 - 3. Reinforce membrane with fiberglass scrim.
 - 4. Prepare membrane according to manufacturer's written instructions before applying substrate primer.
- G. **Primer:** Apply to terrazzo substrates according to manufacturer's written instructions.
- H. **Strip Materials:**
 - 1. **Divider and Control-Joint Strips:**
 - a. Locate divider strips in locations indicated.
 - b. Install control-joint strips back to back directly above concrete-slab control joints] [in locations indicated.
 - c. Install control-joint strips with 1/4 inch gap between strips, and install sealant in gap.
 - d. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.
 - 2. **Accessory Strips:** Install as required to provide a complete installation.
 - 3. **Abrasive Strips:** Install with surface of abrasive strip positioned 1/16 inch higher than terrazzo surface.

3.4 PRECAST TERRAZZO INSTALLATION

- A. Install precast terrazzo units using method recommended by NTMA and manufacturer unless otherwise indicated.
- B. Do not install units that are chipped, cracked, discolored, or not properly finished.
- C. Seal joints between units with joint compound matching precast terrazzo matrix.

3.5 REPAIR

- A. Cut out and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by Architect.

3.6 CLEANING AND PROTECTION

- A. **Cleaning:**
 - 1. Remove grinding dust from installation and adjacent areas.
 - 2. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow them to dry thoroughly.
- B. **Sealing:**
 - 1. Seal surfaces according to NTMA's written recommendations.

2. Apply sealer according to sealer manufacturer's written instructions.
- C. Protection: Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure that terrazzo is without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 096813

TILE CARPETING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Direct glue-down carpet tiles.
2. Adhesive disc system for adhering carpet to substrate.
3. Carpet base with continuously bound top edge.

1.3 SUBMITTALS

- A. **Product Data:** For each type of product indicated. Include manufacturer's written data on physical characteristics, durability, and fade resistance. Include installation methods.
- B. **Sustainable Submittals:**
 1. Product data for adhesives, including printed statement of VOC content.
 2. Product data for carpet to comply with CRI Green Label program
 3. Product data for products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content
 4. Product certificates for products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
- C. **Shop Drawings:** Show the following:
 1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles.
 2. Carpet tile type, color, and dye lot.
 3. Pattern type, location, and direction.
 4. Transition details to other flooring materials.
- D. **Samples:** For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
 1. **Carpet Tile:** Two (2) full-sized Samples or as required to indicate full range of variations in the pattern.
 2. **Adhesive Disks:** 2 each.
 3. **Pattern Mockups:** Provide 3 carpet tile mockups in the field consisting of 16 tiles each in 3 different patterns as requested by Architect. Tiles can be reused in final construction.
- E. **Maintenance Data:** For carpet tile to include in maintenance manuals specified in Division 1. Include the following:
 1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
 2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.

1.4 QUALITY ASSURANCE

- A. **Product Options:** Products and manufacturers named in Part 2 establish requirements for product quality in terms of appearance, construction, and performance. Other manufacturers'

products comparable in quality to named products and complying with requirements may be considered. Refer to Division 1 Section "Substitutions."

1.5 DELIVERY, STORAGE, AND HANDLING

- A. General: Comply with CRI 104, Section 5, "Storage and Handling."

1.6 PROJECT CONDITIONS

- A. General: Comply with CRI 104, Section 6.1, "Site Conditions; Temperature and Humidity."
B. **Environmental Limitations:** Do not install carpet tile until wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
C. Do not install carpet tile over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.
D. Where demountable partitions or other items are indicated for installation on top of carpet tile, install carpet tile before installing these items.

1.7 WARRANTY

- A. General Warranty: Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.
B. **Special Carpet Tile Warranty:** Written warranty, signed by carpet tile manufacturer agreeing to replace carpet tile that does not comply with requirements or that fails within specified warranty period. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse. Failures include, but are not limited to, more than 10 percent loss of face fiber, edge raveling, snags, runs, and delamination.
1. **Warranty Period: 10 years from date of Substantial Completion.**

1.8 EXTRA MATERIALS

- A. Furnish extra materials described below, before installation begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. **Carpet Tile: Full-size units equal to 5 percent of amount installed** for each type indicated, but not less than 100 sq. yd.(8.3 sq. m).

PART 2 - PRODUCTS

2.1 CARPET TILE

- A. **Acceptable Products:**
1. **Refer Section 008900.**
B. **Standard Carpet Tile:** Comply with ASTM D 6859-05 and ASTM D 1335-05.

2.2 INSTALLATION ACCESSORIES

- A. **Trowelable Leveling and Patching Compounds:** Latex-modified, hydraulic-cement-based formulation provided by or recommended by carpet tile manufacturer.
B. **Adhesive Discs:** Pre-sized adhesive discs of type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet tile and that is recommended by carpet tile manufacturer.
a. **Basis of Design:** Interface Tac Tiles; 3" x 3" adhesive squares or manufacturers' standard.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet tile performance. Verify that substrates and conditions are satisfactory for carpet tile installation and comply with requirements specified.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. General: Comply with CRI 104, Section 6.2, "Site Conditions; Floor Preparation," and carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile installation.
- B. **Use trowelable, self-leveling and patching compounds**, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.
- C. **Testing for Moisture in Floor Slabs:** Perform preinstallation testing specified by Section 090561 - Moisture Vapor Emission Control and provide MVE-control systems products for those floor surfaces that do not comply with requirements.
- D. **Concrete Subfloors:** Verify that concrete slabs comply with ASTM F 710 and the following:
 - 1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. **Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by carpet tile manufacturer. Provide results of tests and manufacturers requirements prior to carpet tile installation.**
 - 2. Subfloor finishes comply with requirements specified in Division 3 Section "Cast-in-Place Concrete" for slabs receiving carpet tile.
 - 3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.
- E. Remove coatings, including curing compounds, and other substances that are incompatible with adhesive discs and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet tile manufacturer.
- F. **Broom and vacuum clean substrates** to be covered immediately before installing carpet tile. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. General: Comply with CRI 104, Section 14, "Carpet Modules" and with carpet manufacturer's written installation instructions.
- B. Installation Method: As recommended in writing by carpet tile manufacturer.
 - 1. Install tile carpeting with adhesive discs in accordance with manufacturer's written instructions.
- C. **Cut and fit carpet tile to butt tightly to each other**, to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.
- D. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.
- E. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.
- F. **Install pattern parallel to walls and borders with all tiles oriented as indicated in Document 008900 - Finish Selection Summary and as indicated on Drawings. If pattern is not specified or shown on the Drawings, request clarification from Architect. No additional charges will be allowed based upon pattern selected by Architect.**

3.4 CLEANING AND PROTECTION

- A. Perform the following operations immediately after installing carpet tile:
 - 1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet tile manufacturer.
 - 2. Remove yarns that protrude from carpet tile surface.
 - 3. Vacuum carpet tile using commercial machine with face-beater element.
- B. Protect installed carpet tile to comply with CRI 104, Section 15, "Protection of Indoor Installations."
- C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION

SECTION 097200

WALL COVERINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes:
 - 1. Surface preparation, including floating gypsum board walls at concrete columns smooth, sizing of all surfaces, and prime painting.
 - 2. Vinyl wall coverings with printed graphics, including application materials and incidental services, on gypsum board wall surfaces in Atrium on North wall.

1.3 SUBMITTALS

- A. **Product Data** for each type of product specified. Include data on physical characteristics, durability, fade resistance, and flame-resistance characteristics.
- B. **Samples** for verification in sets for each color, texture, and pattern specified, showing the full range of variations expected in these characteristics.
 - 1. **Wall Covering Material: Full-width sample, not less than 36 inches (914 mm) long**, from dye lot used for the Work.
 - a. Submit sample with specified treatments applied.
 - b. **Mark top and face of material.**
 - c. **Show complete pattern repeat.**
- C. Maintenance data for wall covering to include in the operation and maintenance manual specified in Division 1.

1.4 QUALITY ASSURANCE

- A. **Installer Qualifications:** Engage an installer who has a **minimum of 10 years' experience** on projects similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.
- B. **Fire-Test-Response Characteristics:** Provide wall coverings with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. **If specified products do not meet these specifications, bring to the attention of the Architect prior to purchasing specified materials.**
 - 1. **Flame Spread: 25 or less.**
 - 2. **Smoke Developed: 450 or less.**

1.5 PROJECT CONDITIONS

- A. **Space Enclosure and Environmental Limitations:** Do not install wall covering until space is enclosed and weatherproof, wet-work in space is completed and nominally dry, work above ceilings is complete, and ambient temperature and humidity conditions are and will be continuously maintained at values near those indicated until final occupancy.
- B. **Lighting:** Do not install wall covering until a lighting level of not less than **50 foot-candles** is provided on the surfaces to receive wall covering.
- C. **Ventilation:** Provide continuous ventilation during installation and for not less than the time recommended by the wall covering manufacturer for full drying or curing.

1.6 EXTRA MATERIALS

- A. Furnish extra materials described below, before installation begins, that match products installed, are packaged with protective covering for storage, and are identified with labels describing contents.
 - 1. **Rolls of Wall Covering Material:** Full-size rolls equal to 5 percent of amount of each type of wall covering installed.

PART 2 - PRODUCTS

2.1 VINYL WALLCOVERING

- A. **Vinyl:** Type I and II; in rolls from same production run.
- B. **Acceptable Products:**
 - 1. Refer to Section 008900 - Finish Selections Summary.
 - 2. Material Only Allowance: \$50.00 SF.
 - 3. Graphic design and electronic files will be provided by the Architect.

2.2 ACCESSORIES

- A. **Accessory Materials:**
 - 1. **Adhesive:** Mildew-resistant, non-staining adhesive, for use with specific wall covering and substrate application, as recommended by wall covering manufacturer.
 - 2. **Substrate Filler:** As recommended by adhesive and wall covering manufacturers; compatible with substrate.
 - 3. **Substrate Primer and Sealer:** Type as recommended by wall covering manufacturer.
 - 4. **Termination Trim:** Fry Reglet continuous reveal with friction fit grip.
- B. **Termination Trim:**
 - 1. **Corner Fabric / Vinyl Trim:** Gordon Interior Specialties; Model 966-FT-12.
 - 2. **Typical Center of Wall Fabric / Vinyl Tuck Reveal with Welt Insert:** Gordon Interior Specialties; Model 927-FR-12.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates for compliance with requirements for moisture content and other conditions affecting performance of Work of this Section. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrates of substances that could impair wall covering's bond, including mold, mildew, oil, grease, incompatible primers, and dirt.
- C. Prepare substrates to achieve a smooth, dry, clean surface free of flaking, unsound coatings, cracks, and defects.
 - 1. **Painted Surfaces:** Treat areas susceptible to pigment bleeding.
 - 2. **Metals:** If not factory primed, clean and apply rust-inhibitive zinc primer.
 - 3. **Moisture Content:** Maximum of 5 percent on new plaster, drywall, concrete, and concrete masonry units when tested with an electronic moisture meter. Present findings to Architect prior to beginning installation.
 - 4. **Prime and size all new gypsum board** substrates with primer and sizing recommended by wall covering manufacturer.
- D. Check painted surfaces for pigment bleeding. Sand gloss, semigloss, and eggshell finishes with fine sandpaper.
- E. Acclimatize wall covering materials by removing them from packaging in the installation areas not less than 24 hours before installation.

3.3 INSTALLATION, GENERAL

- A. General: Comply with wall coverings manufacturers' written installation instructions applicable to products and applications indicated, except where more stringent requirements apply.
- B. Cut wall covering panels in roll number sequence. Change run numbers at partition breaks and corners only.
- C. Install wall covering with no gaps or overlaps.
- D. Match pattern **72 inches(1830 mm)** above finish floor.
- E. Install seams vertical and plumb at least **6 inches(150 mm)** from outside corners and **3 inches(75 mm)** from inside corners. No horizontal seams.
- F. Remove air bubbles, wrinkles, blisters, and other defects.
- G. Trim edges for color uniformity, pattern match, and tight closure at seams and edges. Butt seams.
- H. Razor trim edges on flat work table. Do not razor cut directly on gypsum board substrate.
- I. Install wall covering termination trim at all locations where wall covering does not stop at an inside corner (whether or not indicated on Drawings).

3.4 CLEANING

- A. Remove excess adhesive at finished seams, perimeter edges, and adjacent surfaces.
- B. Use cleaning methods recommended by wall covering manufacturer.
- C. Replace strips that cannot be cleaned.

END OF SECTION

SECTION 097713

STRETCHED-FABRIC WALL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. **Section Includes:** Factory stretched-fabric wall panels

1.3 DEFINITIONS

- A. NRC: Noise Reduction Coefficient.
- B. SAA: Sound Absorption Average.

1.4 SUBMITTALS

- A. **Product Data:** For each type of fabric facing, panel edge, core material, and mounting indicated.
- B. **Shop Drawings:** Include mounting devices and details; details at panel head, base, joints, and corners; and details at ceiling, floor base, and wall intersections. Indicate panel edge and core materials.
 - 1. **Include elevations showing panel sizes and direction of fabric weave and pattern matching.**
- C. **Samples:** For each type of fabric facing, including seams and corner conditions.
- D. **Coordination Drawings:** Elevations and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Electrical outlets, switches, and thermostats.
 - 2. Items penetrating or covered by stretched-fabric wall panels including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Alarms.
 - e. Sprinklers.
 - f. Access panels.
- E. **Maintenance Data:** For stretched-fabric wall panels to include in maintenance manuals. Include fabric manufacturers' written cleaning and stain-removal recommendations.

1.5 QUALITY ASSURANCE

- A. **Source Limitations:** Obtain stretched-fabric wall panels from single source from single manufacturer.
- B. **Fire-Test-Response Characteristics:** Provide stretched-fabric wall panels meeting the following as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - 1. **Surface-Burning Characteristics:** As determined by testing per ASTM E 84.
 - a. **Flame-Spread Index:** 25 or less.
 - b. **Smoke-Developed Index:** 450 or less.
 - 2. **Fire Growth Contribution:** Meeting acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Comply with fabric and stretched-fabric wall panels manufacturers' written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.
- B. Deliver materials and units in unopened bundles and store in a temperature-controlled dry place with adequate air circulation.

1.7 PROJECT CONDITIONS

- A. **Environmental Limitations:** Do not install stretched-fabric wall panels until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. **Lighting:** Do not install stretched-fabric wall panels until a permanent level of lighting is provided on surfaces to receive the units.
- C. **Air-Quality Limitations:** Protect stretched-fabric wall panels from exposure to airborne odors, such as tobacco smoke, and install units under conditions free from odor contamination of ambient air.
- D. **Field Measurements:** Verify locations of stretched-fabric wall panels and actual dimensions of openings and penetrations by field measurements before fabrication.

1.8 WARRANTY

- A. **Special Warranty:** Manufacturer's standard form in which manufacturer agrees to repair or replace components of stretched-fabric wall panels that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to the following:
 - a. Acoustical performance.
 - b. Fabric sagging, distorting, or releasing from panel edge.
 - c. Warping of core.
 - 2. **Warranty Period: Two years** from date of Substantial Completion.

1.9 EXTRA MATERIALS

- A. Furnish extra materials from same production run that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. **Fabric: For each fabric, color, and pattern** installed, provide length equal to 10 percent of amount installed, but **no fewer than 10 yards**.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Basis of Design:**
 - 1. Manufacturer: Novawall Systems, Inc.
 - 2. Product: Novawall Factory Stretched Fabric Panel Systems.
- B. **Acceptable Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Armstrong.
 - 2. Barrisol USA.
 - 3. Conwed Designsapes.
 - 4. Fabric Wall.
 - 5. FabriTrack Systems, Inc.
 - 6. Novawall Systems, Inc.

2.2 STRETCHED-FABRIC WALL PANELS

- A. **Wall Panels:** Manufacturer's standard system consisting of facing material factory stretched tightly over a frame and core material and secured in the frame.

1. **Mounting:** Back mounted with manufacturer's standard, secured to substrate.
2. **Core:** Glass-fiber board.
3. **Edge Construction:** Manufacturer's standard chemically hardened core with no frame.
4. **Edge Profile:** **2 inch weltless with 1/4 inch reveal.** Confirm with Architect during submittal process.
5. **Corner Detail in Elevation:** Lapped square with continuous edge profile.
6. **Acoustical Performance:** Sound absorption NRC of not less than 0.95 according to ASTM C 423 for Type A mounting according to ASTM E 795.
7. **Nominal Overall Panel Thickness:** **2 inches.**
8. **Panel Width:** As indicated on Drawings.
9. **Panel Height:** As indicated on Drawings.
10. **Reveal:** Aluminum, 3/4 inch by 3/4 inch Fry Reglet, DRM-75-75, where indicated. Butt joints elsewhere.

2.3 MATERIALS

A. Core Materials:

1. **Glass-Fiber Board:** ASTM C 612, Type standard with manufacturer; nominal density of 6 to 7 lb/cu. ft.96, unfaced, (unless otherwise indicated on Master Schedule) and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
2. **Fiberglass Face Layer:** 1/8-inch- thick layer of smooth sheet laminated to face of core.

B. Facing Material:

Fabric from same dye lot; color and pattern.

1. Refer Document 008900 - Finish Selections Summary.
2. Manufacturer, Product Line/Pattern, Style Number, Color: Refer to 008900.
 - a. **Provide COM material only allowance of \$40 per sq. yd.** Color and fabric to be selected by the Architect.

C. Frame Construction:

Manufacturer's standard, continuous, extruded plastic frame (track).

D. Mounting Devices:

Concealed on back of unit, recommended by manufacturer to support weight of unit, and as follows:

1. **Splines:** Manufacturer's standard concealed metal or plastic splines that engage the kerfed edges of the unit, with other moldings and trim for interior corners, exterior corners, and exposed edges, with factory-applied finish on exposed items.

2.4 FABRICATION

A. General:

Use manufacturer's standard construction except as otherwise indicated; with facing material applied to face, edges, and back border of dimensionally stable core; and with rigid edges to reinforce panel perimeter against warpage and damage.

1. **Glass-Fiber Board Cores:** Chemically harden core edges and areas of core where mounting devices are attached.

B. Core-Face Layer:

Evenly stretched over core face and edges and securely attached to core; free from puckers, ripples, wrinkles, or sags.

C. Facing Material:

Apply fabric facing fully covering visible surfaces of unit; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.

1. **Corners:** Square, 2 inch weltless type.
2. **Radius and Other Non-Square Corners:** Attach facing material so there are no seams or gathering of material.
3. **Fabrics with Directional or Repeating Patterns or Directional Weave:** Mark fabric top and attach fabric in same direction so pattern or weave matches in adjacent units.

D. Dimensional Tolerances of Finished Units:

Plus or minus 1/16 inch for the following:

1. Thickness.
2. Edge straightness.
3. Overall length and width.
4. Squareness from corner to corner.
5. Chords, radii, and diameters.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine fabric, fabricated units, substrates, areas, and conditions, for compliance with requirements, installation tolerances, and other conditions affecting performance of stretched-fabric wall panels.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Measure each area and establish layout of panels and joints of sizes indicated on Drawings within a given area.
- B. Before installation, allow fabric to adjust and become stable in spaces where it will be installed according to stretched-fabric system manufacturer's written instructions. **Acclimatize fabric for minimum of 24 hours** at ambient temperature and humidity conditions indicated for spaces when occupied for their intended use.

3.3 INSTALLATION

- A. Install panels in locations indicated. Unless otherwise indicated, install panels with vertical surfaces and edges plumb, top edges level and in alignment with other panels, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.
- B. Comply with manufacturer's written instructions for installation of panels using type of mounting devices indicated. Mount panels securely to supporting substrate.
- C. Align fabric pattern and grain with adjacent panels.

3.4 INSTALLATION TOLERANCES

- A. **Variation from Plumb and Level:** Plus or minus 1/16 inch.
- B. **Variation of Panel Joints from Hairline:** Not more than 1/16 inch wide.

3.5 CLEANING

- A. Clip loose threads; remove pills and extraneous materials.
- B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

3.6 SCHEDULE

- A. Provide continuously around all interior walls of Dean's Conference Room from top of chairrail to bottom ceiling. Recess panels above chairrail so that finished face of panels are flush with adjacent drywall.

END OF SECTION

SECTION 097763

DIGITAL GRAPHICS WALL PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

- 1. Custom wall coverings with digital graphics attached to wall with standoffs.

1.3 DESIGN INTENT

- A. Owner will provide digital image.

1.4 SUBMITTALS

- A. **Product Data** for each type of product specified.
- B. Maintenance data for wall covering to include in the operation and maintenance manual specified in Division 1.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design:

1. Wall Panels:

- a. Manufacturer: Koroseal Interior Products.
- b. Series: Digital Print Media.
- c. Panel Product: Acrylic.

2. Mounting Method:

- a. Manufacturer: Lumaline.
- b. Product: Flex-Display.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates for compliance with requirements for moisture content and other conditions affecting performance of Work of this Section. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions for surface preparation.

3.3 INSTALLATION

- A. General: Comply with manufacturers' written installation instructions applicable to products and applications indicated, except where more stringent requirements apply.

3.4 CLEANING

- A. Use cleaning methods recommended by manufacturer.

3.5 SCHEDULE

- A. South wall of Lobby 100A, south of monumental stair, size approximately 27'-9" x 19'-0".

END OF SECTION

SECTION 098316
ACOUSTIC PLASTER

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.1 SUMMARY

- A. **Section Includes:** Spayed-applied acoustic plaster.

1.2 SUBMITTALS

- A. **Product Data:** For each type of product indicated.
- B. **Samples for Verification:** Furnish materials to be used with labels indicating colors, finish characteristics, and locations of the Work. Samples will be reviewed for color and appearance only. Furnish the following.
 - 1. 12" x 12" sample in color selected.
- C. **Acoustical Test Reports:** Provide acoustical test reports from an independent testing facility to verify test conditions and NRC rating.

1.3 QUALITY ASSURANCE

- A. **Installer Qualifications:** A firm or individual certified, licensed, or otherwise qualified by manufacturer with a **minimum of 10 years successful experience** installing specified product.

1.4 DELIVER, STORAGE, AND HANDLING

- A. Deliver products to Project site in original, unopened packages with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, and shelf life if applicable.
- B. Store materials inside, under cover, and aboveground; keep dry until ready for use. Remove from Project site and discard wet or deteriorated materials. Do not open packaging nor remove labels until time of installation.
- C. Protect materials from physical damage and from deterioration by moisture, soiling, and other sources. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. **Basis of Design:** International Cellulose Corp., SonaKrete Acoustical Finish System.

2.2 MATERIALS

- A. **Acoustic Plaster:** Cellulosic fiber.
 - 1. **Minimum NRC:** 0.75.
 - 2. **Color:** White.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements of Sections in which substrates and related work are specified and for other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. **Protection: Cover other work subject to damage from fallout or overspray of materials during application.**
- B. Clean substrates of substances that could impair bond of materials.

3.3 INSTALLATION

- A. General: Install system in accordance with manufacturer's printed installation instructions, submittals, applicable industry standards, and governing regulatory requirements for the Work.
- B. Spray and trowel in thin layers to achieve a total thickness of 3/4 inch.
- C. Cure material with continuous natural or mechanical ventilation.

3.4 CLEANING AND PROTECTION

- A. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.
- B. Coordinate application of material with other construction to minimize need to cut or remove completed applications. As installation of other construction proceeds, inspect material and patch any damaged or removed areas.
- C. Protect the Work so it will not deteriorate or be damaged.

END OF SECTION

SECTION 099100

PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SECTION INCLUDES

- A. **Complete interior and exterior surface preparation and finishing for field application of latex and oil based coatings.**
- B. **Requirements for field finishing mechanical and electrical equipment.**
- C. Examine specifications for various other trades and their provisions regarding their painting. **Paint or finish surfaces that are left unfinished by other sections of specifications as a part of this Section.**
- D. **Sizing of all interior walls prior to applying painted finish.**

1.3 SURFACES NOT TO RECEIVE FIELD FINISHING

- A. Do not paint copper, bronze, chrome plated items, nickel, stainless steel, Monel metal, lead, face brick, prefinished wall and floor coverings, items with factory applied final finish (except where exposed on roofs and in finished spaces), chases, and plenums unless otherwise specified or scheduled.

1.4 QUALITY ASSURANCE

- A. **Applicator:** Company specializing in commercial painting and finishing with **minimum 10 years experience.**
- B. **Product Labels:** Include manufacturer's name, type of paint, stock number, color, and label analysis on label of containers.
- C. **Pre-Installation Conference:** Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination." Review methods and procedures related to painting including, but not limited to, the following:
 - 1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 2. Review required certifying procedures.

1.5 REGULATORY REQUIREMENTS

- A. Conform to applicable building code for flame spread/fuel contribution/smoke development rating requirements for finishes.
- B. Comply with applicable city, county, state, and federal requirements and ordinances regarding maximum Volatile Organic Compound (VOC) content of coatings.
 - 1. **Provide paints and coatings for interior applications with zero-VOC content, unless otherwise approved by Architect.**

1.6 SUBMITTALS

- A. **Submit product data and samples** under provisions of Section 013300.
- B. Provide product data describing physical performance criteria and composition on finishing products.
- C. **Submit color selection samples** under provisions of Section 013300.
- D. **Submit two (2) samples, 16 by 16 inches in size,** illustrating range of colors, paint types, and textures selected for each surface finishing product scheduled.

- 1.7 FIELD SAMPLES
- A. Provide field samples under provisions of Section 014000.
 - B. **Provide field sample panel, 8 ft long by 8 ft wide, illustrating each coating color, paint type, texture, and finish intended for use. Obtain Architect's approval prior to purchasing remainder of materials.**
 - C. Locate as directed by Architect.
 - D. Accepted sample may remain as part of the Work.
- 1.8 DELIVERY, STORAGE, AND HANDLING
- A. Deliver products to site under provisions of Section 016000.
 - B. Store and protect products under provisions of Section 016000.
 - C. Deliver products to site in sealed and labeled containers; inspect to verify acceptance.
 - D. Container labeling to include manufacturer's name, type of paint, brand name, brand code, coverage, surface preparation, drying time, cleanup, color designation, and instructions for mixing and reducing.
 - E. Store paint materials at minimum ambient temperature of 45 degrees F and a maximum of 90 degrees F, in well ventilated area, unless required otherwise by manufacturer's instructions.
 - F. Take precautionary measures to prevent fire hazards and spontaneous combustion.
- 1.9 ENVIRONMENTAL REQUIREMENTS
- A. Do not apply materials when surface and ambient temperatures are outside the ranges required by paint manufacturer.
 - B. **Provide continuous ventilation and heating facilities to maintain surface and ambient temperatures above 45 degrees F for 24 hours before, during, and 48 hours after application of finishes, unless required otherwise by manufacturer's instructions.**
 - C. **Do not apply exterior coatings during rain or snow, or when relative humidity is above 75 percent,** unless allowed otherwise by manufacturer's instructions.
 - D. **Minimum Application Temperatures for Latex Paints: 45 degrees F for interiors; 50 degrees F for exterior;** unless allowed otherwise by manufacturer's instructions.
 - E. **Minimum Application Temperature for Varnish and Finishes: 65 degrees F for interior or exterior,** unless required otherwise by manufacturer's instructions.
 - F. **Do not apply paints when relative humidity exceeds 85 percent; at temperatures less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.**
- 1.10 EXTRA STOCK
- A. **Provide (2) unopened gallon containers of each color to Owner as extra stock.**
 - B. Label each container with color, color number, texture, and room locations, in addition to the manufacturer's label.
 - C. Furnish under provisions of Section 017700.
- 1.11 SCAFFOLDS AND PROTECTION
- A. Provide adequate safe ladders, scaffolds, and stages necessary to complete work.
 - B. Protect completed finish and paint work, and protect adjacent finish surfaces from paint splatter, spills and stains. Use adequate drop cloths and masking procedures during progress of work.
- 1.12 PRECAUTIONS
- A. Do not store paints, oils, thinners, and other flammable items inside building. Store in approved containers when not in actual use during painting job. Keep fire hazard at a minimum.
 - B. Take precaution to protect public and construction workers during progress of work.
 - C. Furnish temporary fire extinguisher of suitable chemicals and capacity. Locate near flammable materials.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Sherwin-Williams (listed as standard of quality in schedule).
- B. Glidden Professional.
- C. Kelly Moore
- D. P.P.G. Industries.
- E. **Provide materials selected for coating systems for each type surface from a single manufacturer** unless otherwise specified. Secondary products such as linseed oil, turpentine, and shellacs shall be first quality products of a reputable manufacturer.

2.2 MATERIALS

- A. Coatings: Ready mixed. Process pigments to a soft paste consistency, capable of being readily and uniformly dispersed to a homogeneous coating with good flow and brushing properties; capable of drying or curing free of streaks or sags.
- B. Accessory Materials: Linseed oil, shellac, turpentine, paint thinners, and other materials not specifically indicated but required to achieve the finishes specified, of commercial quality.
- C. Patching Materials: Latex filler.

2.3 FINISHES

- A. Refer to schedule at end of section.
- B. **Colors and Sheens:** Refer to Document 008900 - Finish Selection Summary and Finish Selection Spreadsheet.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that surfaces and substrate conditions are ready to receive work as instructed by the product manufacturer.
- B. Examine surfaces scheduled to be finished prior to commencement of work. Report to General Contractor any condition that may potentially affect proper application.
- C. Test shop applied primers for compatibility with subsequent cover materials.
- D. Beginning of installation means acceptance of existing surfaces and substrate.

3.2 PREPARATION

- A. Remove electrical plates, hardware, light fixture trim, and fittings prior to preparing surfaces or finishing.
- B. Correct minor defects and clean surfaces which affect work of this Section. Remove existing coatings which exhibit loose surface defects.
- C. Shellac and seal marks which may bleed through surface finishes.
- D. **Impervious Surfaces:** Remove mildew by scrubbing with solution of tri-sodium phosphate (TRS) and bleach. Rinse with clean water and allow surface to dry.
- E. **Gypsum Board Surfaces:** Latex fill minor defects. Spot prime defects after repair. **Size all gypsum board walls (similar to wall covering sizing) prior to priming wall surface.**
- F. **Galvanized Surfaces:** Remove surface contamination and oils and wash with solvent. **Apply coat of etching primer.**
- G. **Uncoated Steel and Iron Surfaces:** Remove grease, scale, dirt, and rust. Where heavy coatings of scale are evident, remove by wire brushing or sandblasting; clean by washing with solvent.
- H. **Shop Primed Steel Surfaces:** Sand and scrape to remove loose primer and rust. Feather edges to make touch-up patches inconspicuous. Clean surfaces with solvent. Prime bare steel surfaces.
- I. **Aluminum Substrates:** Remove loose surface oxidation.

- J. **Interior Wood Items Scheduled to Receive Clear Finish:** Wipe off dust and grit prior to sealing. Fill nail holes and cracks prior to sealing; sand between coats.
 - K. **Interior Wood Items Scheduled to Receive Paint Finish:** Wipe off dust and grit prior to priming. Seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes and cracks after primer has dried; sand between coats.
 - L. **Exterior Wood or Cementitious Board Scheduled to receive Paint Finish:** Remove dust, grit, and foreign matter. Seal knots, pitch streaks, and sappy sections.
 - M. **Shop Finished Items:** Finish in accordance with AWI standards and guide lines.
 - N. **Interior Metal Doors and Frames Scheduled for Painting:** Seal top and bottom edges with primer.
- 3.3 PROTECTION
- A. Protect elements surrounding work of this Section from damage or disfiguration.
 - B. Repair damage to other surfaces caused by work of this Section.
 - C. Furnish drop cloths, shields, and protective methods to prevent spray or droppings from disfiguring other surfaces.
 - D. Remove empty paint containers from site.
- 3.4 APPLICATION
- A. **The intent of these Specifications is to produce the highest quality appearance of paint and finish surfaces. Finish walls to Level 4 finish at a minimum and Level 5 finish where scheduled. Employ skilled mechanics and painters only. The proper preparation of surfaces will be strictly enforced and wherever finished surfaces show any defects due to improper preparation, workmanship, etc., remove defects and refinish work at Contractor's expense. Long corridors to receive Level 4 finish with light orange peel texture. Ceiling to receive Level 4 finish with no texture. Office spaces to receive Level 3 finish with light orange peel texture.**
 - B. Apply products in accordance with manufacturer's instructions. Final finish coats shall have visual evidence of solid hiding and uniform appearance, and shall **be free and smooth of brush marks, streaks, sags, runs, laps, or skipped areas.**
 - C. **All metal doors and frames shall be spray painted, not brushed. No exceptions!**
 - D. Do not apply finishes to surfaces that are not dry.
 - E. Apply each coat to uniform finish and thickness.
 - F. Sand lightly between coats on wood and metal items to achieve required finish.
 - G. Allow applied coat to dry before next coat is applied.
 - H. **Prime back surfaces of interior and exterior woodwork** (including roof fascia) where applicable scheduled to be painted with primer paint.
 - I. **Prime back surfaces of interior woodwork scheduled to receive stain or varnish** finish with gloss varnish reduced 25 percent with mineral spirits.
 - J. Edges of paint adjoining other materials or colors shall be sharp and clean with no overlapping.
- 3.5 FINISHING MECHANICAL AND ELECTRICAL EQUIPMENT
- A. **Paint shop primed equipment. Paint shop prefinished items where exposed to view in finished spaces.** In mechanical rooms, repair shop pre-finished coatings which have been scratched or otherwise damaged with identical touch-up paint. Sand prior to touching up as required.
 - B. Remove unfinished louvers, grilles, covers, and access panels on mechanical and electrical components and spray paint separately.
 - C. Paint grilles, registers, and diffusers to match adjacent wall and ceiling surfaces, except that factory pre-finished items need not be painted.
 - D. **In finished spaces exposed to view, prime and paint all exposed structure. pipes, conduit, boxes, ducts, hangers, brackets, collars, and supports, whether or not indicated on Drawings. Verify colors with Architect.**
 - E. Repair or replace identification markings on mechanical or electrical equipment when painted accidentally.

- F. **Paint surfaces of plywood backboards for electrical and telephone equipment** before installing equipment whether or not called for on Drawings.
 - G. Replace electrical plates, hardware, light fixture trim, and fittings removed prior to finishing.
 - H. **Paint exposed air handlers, roof ventilators, goose necks, exhaust fans, and other items on roof with 2 coats (or as otherwise required to cover) exterior oil-based enamel. Prepare surfaces in accordance with base metal or primer as specified herein.**
- 3.6 CLEANING/TOUCH-UP
- A. As Work proceeds, promptly remove paint where spilled, splashed, or spattered.
 - B. During progress of Work maintain premises free of unnecessary accumulation of tools, equipment, surplus materials, and debris.
 - C. Collect cotton waste, cloths, and material which may constitute a fire hazard, place in closed metal containers and remove daily from site.
 - D. **Spot painting will be allowed** to correct soiled or damaged paint surfaces **only when touch-up spot** will blend into surrounding finish and **is invisible to normal viewing** (as determined by the Architect). **Otherwise, re-coat entire section to corners, wall break, or visible stopping point.**
- 3.7 VOLATILE ORGANIC COMPOUND (VOC) COMPLIANCE
- A. Products listed in following schedule or substitutes proposed for use must be formulated to meet applicable ordinances and regulations regarding maximum VOC content. Utilize products which have been specially formulated to meet such requirements.
- 3.8 **SCHEDULE (Note: All of the following conditions may not exist on this project). Sherwin-Williams products are listed as "Basis of Design".)**
- A. **Interior Gypsum Wallboard:**
 - 1. **Taping and Bedding** - All gypsum wallboard joints and corner angles are to be taped, pre-bedded, and finished with at least 2 floats. All screws and/or nails will be filled at least 3 times. All rough edges are to be sanded smooth. Any blisters or imperfections in tape will be cut out and repaired.
 - 2. **Texture:**
 - a. **Walls: Light sprayed on orange peel texture.**
 - b. **Ceilings: No texture.**
 - 3. **Level of Finish:** ~~Finish all gypsum wallboard wall to a minimum Level 4 finish and gypsum drywall ceilings to Level 5 finish typical, unless noted otherwise. Long corridors to receive Level 4 finish with light orange peel texture. Ceiling to receive Level 4 finish with no texture. Office spaces to receive Level 3 finish with light orange peel texture.~~
 - 4. **Priming** - All gypsum wallboard shall be sized with a wall covering sizing product and then primed with Sherwin-Williams ProMar 200 Zero VOC Interior Latex Primer, B28W2600.
 - 5. **Topcoats** – 2 coats Sherwin-Williams ProMar 200 Zero VOC Interior Latex Eg-shel, B20-2600 Series.
 - 6. Use flat for all ceilings, Sherwin-Williams ProMar 200 Zero VOC Interior Latex Flat, B30-2600 Series.
 - 7. Finish colors as selected by Architect from manufacturer's full line of colors, including primary custom colors.
 - 8. **Dry Erase Finish:** Sherwin-Williams Dry Erase, Clear Gloss Coating, KB65C2000 Kit. *Surfaces to receive dry erase paint to receive minimum Level 4 finish.*
 - 9. **Epoxy:** Sherwin-Williams Pre-Catalyzed Waterbased Epoxy, K45-150 Series, Eg-Shel.
 - B. **Interior Painted Metal Trim:**
 - 1. **Preparation - Previously painted metal:** Surface will be sanded to ensure adhesion. Loose or peeling paint will be scaled and sanded smooth. **New metal:** All dust, dirt, and grease will be cleaned from surface.
 - 2. **Priming** - All unprimed metal will be primed with Sherwin-Williams Pro-Cryl Universal Water Based Metal Primer, B66-310 Series.

3. **Topcoats** - 2 coats Sherwin-Williams ProMar 200 Zero VOC Interior Latex Semi-Gloss, B31-2600 Series.
 4. Finish colors as selected by Architect from manufacturer's full line of colors, including custom colors.
- C. **Interior Concrete Masonry Units: (Not Used)**
1. **Preparation** - Remove efflorescence and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions..
 2. **Block Filler** - Sherwin-Williams PrepRite Block Filler, B25W25.
 3. **Topcoats** - 2 coats Sherwin-Williams ProMar 200 Zero VOC Interior Latex Semi-Gloss, B31-2600 Series.
Wet Areas Topcoats – 2 coats Sherwin-Williams Pro Industrial Water Based Catalyzed Epoxy Gloss, B73-300 Series.
 4. Finish colors as selected by Architect from manufacturer's full line of colors, including primary and custom colors.
- D. **Exterior Metal Surfaces:**
1. **Preparation - On new metal surfaces:** Clean surface to remove any foreign matter such as dirt or grease. Etching may be required on some metal surfaces.
 2. **Priming** - On new metal surfaces: Apply Sherwin-Williams Pro-Cryl Universal Water Based Metal Primer, B66-310 Series, (depending on type and condition of metal). Lightly sand any rash or roughness.
 3. **Topcoats-** On new primed metal surfaces: 2 topcoats of Sherwin-Williams Pro Industrial Acrylic Eg-Shel, B66-660 Series. Finish colors will be selected by Architect. Refer to Document 008900 - Finish Selections Summary.
 4. Finish colors as selected by Architect from manufacturer's full line of colors, including primary and custom colors.
- E. **Exterior Painted Wood Surfaces:**
1. **Priming** - On new wood surfaces: Apply Sherwin-Williams Exterior Latex Wood Primer, B42W8041.
 2. **Topcoats-** On new primed wood surfaces: 2 topcoats of Sherwin-Williams A-100 Exterior Latex Flat, A6-100 Series. Finish colors will be selected by Architect.
 3. Finish colors as selected by Architect from manufacturer's full line of colors, including primary and custom colors.
- F. **Exterior Painted Concrete Surfaces:**
1. **Priming** - On new concrete surfaces: Apply Sherwin-Williams Loxon Interior/Exterior Acrylic Masonry Primer, A24W8300.
 2. **Topcoats-** On new primed concrete surfaces: 2 topcoats of Sherwin-Williams A-100 Exterior Latex Flat, A6-100 Series. Finish colors will be selected by Architect.
 3. Finish colors as selected by Architect from manufacturer's full line of colors, including primary and custom colors.
- G. **Exterior Stained/Clear Wood Surfaces:**
1. Two coats Sherwin-Williams SD3T15, SuperDeck Exterior Semi-Transparent Stain.
OR
 2. Two coats Sherwin-Williams SD1T100, SuperDeck Exterior Waterborne Clear Sealer.
OR
 3. Two coats Sherwin-Williams SD7-Series, SuperDeck Exterior Waterborne Solid Color Stain.

END OF SECTION

SECTION 099713

STEEL COATINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

A. Section Includes:

- 1. Surface preparation and high build glazed coatings with polyurethane topcoats for selected interior ferrous metal surfaces.
- 2. Surface preparation and epoxy coatings for exterior metal surfaces, such as architectural metals and railings and other metal surfaces as called for in the Documents.

1.3 QUALITY ASSURANCE

- A. **Manufacturer:** Company specializing in manufacturing quality epoxy and polyurethane coatings **with 10 years minimum experience** manufacturing specified products.
- B. **Applicator:** Company specializing in commercial painting and finishing **with minimum 10 years documented experience** applying specified products.
- C. **Product Labels:** Include manufacturer's name, type of paint, stock number, color and label analysis on label of containers.
- D. **Single Source Responsibility:** Materials selected for coating systems for each type surface shall be product of a single manufacturer unless otherwise specified.

1.4 REGULATORY REQUIREMENTS

- A. Conform to applicable building code for flame/fuel/smoke rating requirements for finishes.

1.5 TESTS

- A. Provide periodic testing with Wet Film Thickness gage to verify that proper thickness of finish coatings are being applied.

1.6 SUBMITTALS

- A. Submit product data under provisions of Section 013300.
- B. **Provide product data** on all finishing products.
- C. **Submit color selection samples** under provisions of Section 013300.
- D. Submit 2 samples, 16 by 16 inches in size illustrating scheduled colors and textures for each surface finishing product scheduled.
- E. Submit manufacturer's application instructions under provisions of Section 013300.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products to site under provisions of Section 016000.
- B. Store and protect products under provisions of Section 016000.
- C. Deliver products to site in sealed and labeled containers; inspect to verify acceptance.
- D. Container labeling to include manufacturer's name, type of paint, brand name, brand code, coverage, surface preparation, drying time, cleanup, color designation, and instructions for mixing and reducing.
- E. Store paint materials at minimum ambient temperature of 50 degrees F and a maximum of 90 degrees F, in well ventilated area, unless required otherwise by manufacturer's instructions.

- F. Take precautionary measures to prevent fire hazards and spontaneous combustion.
- 1.8 ENVIRONMENTAL REQUIREMENTS
- A. **Provide continuous ventilation and heating facilities to maintain surface and ambient temperatures above 50 degrees F for 24 hours before, during, and 48 hours after application of finishes**, unless required otherwise by manufacturer's instructions.
 - B. **Minimum Application Temperatures:** 50 degrees F; unless required otherwise by manufacturer's instructions.
 - C. Provide lighting level of 80 foot candles measured mid- height at substrate surface.
 - D. Restrict traffic from area where coating is being applied or is curing.
- 1.9 EXTRA STOCK
- A. Provide in accordance with Section 017700.
 - B. **Provide a (1) unopened gallon container of each color to Owner's Representative as extra stock.**
 - C. Label each container with color, color number, texture, and room locations, in addition to the manufacturer's label.
- 1.10 PRECAUTIONS
- A. Fire Extinguishers: Provide temporary fire extinguisher of suitable chemicals and capacity, located near the flammable materials as described.
- 1.11 WARRANTY
- A. **Provide 3 year warranty** under provisions of Section 017800.
 - B. Warranty: Include coverage for bond to substrate and degradation of chemical resistance.

PART 2- PRODUCTS

- 2.1 MANUFACTURERS
- A. **Acceptable Manufacturers:** Subject to compliance with requirements herein, provide products from one of the following:
 - 1. **Basis of Design:** Tnemec Company, Inc.
 - 2. Carboline.
 - 3. Sherwin Williams.
 - B. Substitutions: Under provisions of Section 016000.
 - C. Products specified in Schedule are those of Tnemec Company, Inc. as a standard of quality.
- 2.2 MATERIALS
- A. Coatings:
 - 1. Process pigments to a soft paste consistency, capable of being readily and uniformly dispersed to a homogeneous coating.
 - 2. Good flow and brushing properties; capable of drying or curing free of streaks or sags.
 - B. Accessory Materials: Linseed oil, shellac, turpentine, paint thinners and other materials not specifically indicated but required to achieve the finishes specified, of commercial quality.
- 2.3 PRIMERS
- A. **Type P1 – Metal Primer for all interior and exterior applications**
 - B. **Acceptable Manufacturers and Products**
 - a. **Basis of Design:** Series 161 Tnemec-Fascure.
 - b. Carboline 893 Epoxy Primer by Carboline.
 - c. 7500 Magna-Prime by International.
 - 2. **Physical Requirements:**
 - a. **Solids Content:** 58 percent minimum.

- b. **VOC:** 3.5 pounds per gallon maximum.
- 3. **Performance Requirements:**
 - a. General: Tests are based on one coat at manufacturer's recommended DFT.
 - b. **Adhesion:** ASTM D 4541, not less than 900 psi pull, average of five trials.
 - c. **Salt Spray (Fog):** ASTM B 117, no blistering, cracking, softening, or delamination of film. No more than 1/32 inch rust creepage at scribe after 1500 hours exposure.

2.4 EPOXY COATINGS

A. **Type E1 – Epoxy Coatings for interior applications only – Second Coat**

- 1. **Acceptable Manufacturers and Products:**
 - a. **Basis of Design:** Series 66 Hi Build Epoxoline by Tnemec.
 - b. 190 HB by Carboline.
 - c. Magna Coat 7510 by International.
- 2. **Physical Requirements:**
 - a. Solids content by volume: 54 percent minimum.
 - b. Sheen: Semi-gloss.
 - c. V.O.C.: 3.08 pounds per gallon.
- 3. **Performance Requirements:**
 - a. General: Tests are based on 2 coats at manufacturer's recommended DFT.
 - b. Abrasion: ASTM D 4060, CS17 wheel with 1000 g load, maximum 130 mg loss after 1000 cycles.
 - c. Adhesion: ASTM D 4541, not less than 900 psi pull, average of 3 trials.
 - d. Humidity: ASTM D 4585, no blistering, cracking, softening, and delamination of film. No more than 1/32 inch rust creepage at scribe and no more than one percent rusting at edges after 1000 hours exposure.
 - e. Salt spray (Fog): ASTM B 177, No blistering, cracking, softening, and delamination of film. No more than 1/32 inch rust creepage at scribe and no more than one percent rusting at edges after 1000 hours exposure.

2.5 POLYURETHANE COATINGS

A. **Type U1 - High Build Acrylic Polyurethane Coatings for exterior applications only – Second and Third Coat:**

- 1. **Acceptable Manufacturers and Products:**
 - a. **Basis of Design:** Series 73 Endura-Shield, semi-gloss, by Tnemec.
 - b. 134 HS, gloss, by Carboline.
 - c. Hythane Ultra 8731, gloss, by International.
- 2. **Physical Requirements:**
 - a. Solids content by volume: 57 percent minimum.
 - b. Sheen: Semi-gloss.
 - c. VOC: 3.5 pounds per gallon.
- 3. **Performance Requirements:**
 - a. General: Tests are based on one coat of primer and one finish coat at manufacturer's recommended DFT.
 - b. Abrasion: ASTM D 4060, CS17 wheel with 1000 g load, maximum 90 mg loss after 1000 cycles.
 - c. Adhesion: ASTM D 4541, not less than 800 psi pull, average of 3 trials.
 - d. Humidity: ASTM D 4585, no blistering, cracking, and delamination of film after 1000 hours exposure.
 - e. Salt spray (Fog): ASTM B 117, No blistering, cracking, softening, and delamination of film. No more than 1/8 inch rust creepage at scribe and no more than one percent rusting at edges after 1000 hours exposure.

B. **Type U2 – Aliphatic Polyester Polyurethane Coatings – Third and final coat for interior applications only**

1. **Acceptable Manufacturers and Products:**
 - a. **Basis of Design:** Series 290 CRU semi-gloss, by Tnemec.
 - b. 450HS, by PPG Protective & Marine Coatings, Amercoat.
 - c. Carbothane 133 Series, by Carboline.
2. **Physical Requirements:**
 - a. Solids content by volume: 67 percent minimum.
 - b. Sheen: Semi-gloss.
 - c. VOC: 2.41 pounds per gallon.

2.6 COATING SYSTEMS

- A. Refer to schedule at end of Section.

PART 3- EXECUTION

3.1 INSPECTION

- A. Verify that surfaces and substrate conditions are ready to receive work as instructed by the product manufacturer.
- B. Examine surfaces scheduled to be finished prior to commencement of work. Report to Owner's Representative any condition that may potentially affect proper application.
- C. Beginning of installation means acceptance of existing surfaces and substrate.

3.2 SURFACE PREPARATION - GENERAL

- A. Protect surrounding and adjacent surfaces in manner recommended by coating manufacturer.
- B. Remove oil, wax and grease by scraping off heavy deposits and cleaning with mineral spirits or hot trisodium phosphate solution followed by water rinse.

3.3 SURFACE PREPARATION - SPECIFIC

A. Steel

1. Exterior/Interior Exposed Steel items Scheduled to Receive SC-1:

- a. Surface prepared in accordance with SSPC-SP3 Power Tool Clean cleaning procedures.
- b. Shop primed steel scheduled to receive SP-1: Field touched-up prior to painting.
- c. Unprimed steel: Minimum surface preparation in accordance with SSPC-SP3 Power Tool Clean.

B. Non-ferrous Surfaces

1. Exterior/Interior Non-ferrous Metal Surfaces Scheduled to Receive SC-1 and SC-3:

- a. Minimum surface preparation in accordance with SSPC-SP1 Solvent Clean procedures.
- b. Remove white rust from galvanized.
- c. Utilize SSPC-SP10 on high temperature surfaces.

3.4 SURFACE PREPARATION FOR NEW WORK

A. General:

1. Correct minor defects.
2. Remove temporary labels, wrappings, and protective coverings from surfaces to be coated.
3. Seal stains, marks, and other imperfections which may bleed through surface finishes.

B. Steel - Unprimed:

1. Remove weld spatter by chipping or grinding.
2. Clean interior and weather protected steel in accordance with SSPC SP7, "Brush-Off Blast Cleaning".

3. Apply primer, or metal conditioner to bare surfaces in accordance with manufacturer's recommendations, paying particular attention to abrasions, welds, bolts, and nuts. Allow to set as recommended by manufacturer.
 - C. **Steel - Prime Coated:**
 1. Remove loose primer and rust; sand to feather-edge at adjacent sound primer by cleaning in accordance with SSPC SP2 "Hand Tool Cleaning" and SP3 "Power Tool Cleaning".
 2. Apply primer or metal conditioner to abrasions, welds, bolts, and nuts in accordance with manufacturer's recommendations. Allow to set as instructed by manufacturer. Rinse with clean water with rust inhibitor mixed-in or applied primer or metal conditioner immediately following rinse. Allow to dry.
 3. Prime coat bare areas immediately.
 4. Apply specified primer to bare steel and previously primed steel surfaces scheduled to receive special coatings.
 - D. **Steel - Galvanized:**
 1. Remove white rust by cleaning in accordance with SSPC SP2 "Hand Tool Cleaning" and SP3 "Power Tool Cleaning".
 2. Exercise care not to remove galvanizing.
- 3.5 PROTECTION
- A. Protect elements surrounding the work of this Section from damage or disfiguration.
 - B. Repair damage to other surfaces caused by work of this Section.
 - C. Furnish drop cloths, shields, and protective methods to prevent spray or droppings from disfiguring other surfaces.
 - D. Remove empty paint containers from site.
- 3.6 APPLICATION
- A. Apply products in accordance with manufacturer's instructions.
 - B. Final Finish Coats: Visual evidence of solid hiding and uniform appearance, free and smooth of brush marks, streaks, sags, runs, laps, or skipped areas.
 - C. Apply each coat to uniform finish and thickness.
 - D. Allow applied coat to dry before next coat is applied.
- 3.7 CLEANING/TOUCH-UP
- A. As Work proceeds, promptly remove paint where spilled, splashed, or spattered.
 - B. During progress of Work maintain premises free of unnecessary accumulation of tools, equipment, surplus materials, and debris.
 - C. Collect cotton waste, cloths, and material which may constitute a fire hazard, place in closed metal containers and remove daily from site.
 - D. Spot painting will be allowed to correct soiled or damaged paint surfaces only when touch-up spot will blend into surrounding finish and is invisible to normal viewing. Otherwise, re-coat entire section to corners or visible stopping point.
- 3.8 FIELD QUALITY CONTROL
- A. **Request acceptance of each coat from Architect before applying succeeding coats.**
 - B. Initiate and maintain for duration of Project field quality control program using certified calibration and testing devices and to ensure conformance with application requirements.
- 3.9 SPECIAL COATING SCHEDULE
- A. **Coating System No. 1 - Exterior Metals.**
 1. **Surface:** Handrails, guardrails, pipe bollards, exposed steel lintels.
 2. **Color and Sheen:** As selected by Architect.
 3. **Application Method:** Spray.
 4. **Prime Coat:** Type P1, DFT 2.0 to 4.0 mils.
 5. **Intermediate (Second) Coat:** Type U1, DFT 3.0 to 4.0 mils.

6. **Top (Third) Coat:** Type U1, DFT 3.0 to 4.0 mils.
- B. **Coating System No. 2 - Interior Metals.**
1. **Surface:** Ferrous metal handrails and guardrails.
 2. **Color and Sheen:** To match Architect's color sample or as schedule by Architect from full and complete line of RAL colors.
 3. **Application Method:** Spray.
 4. **Prime Coat:** Type P1, DFT 2.0 to 4.0 mils.
 5. **Intermediate (Second) Coat:** Type E1, DFT 3.0 to 5.0 mils.
 6. **Top (Third) Coat:** Type U2, DFT 2.0 to 3.0 mils.

END OF SECTION

SECTION 101103

VISUAL DISPLAY BOARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

A. Section includes:

1. Tackboards.
2. Porcelain markerboards.
3. Glass markerboards.
4. Visual display wall coverings.
5. Glass display case.
6. Cabinet Whiteboards.
7. Glass dry erase markerboards.

1.3 SUBMITTALS

- A. **Product Data:** For each type of product.
 1. Include construction details, material descriptions, dimensions of individual components and profiles, finishes, and accessories for visual display units.
- B. **Samples for Verification:** For each type of visual display unit indicated.
- C. **Sample Warranties:** For special warranties.
- D. **Maintenance Data:** For visual display units to include in maintenance manuals.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver factory-built visual display boards, including factory-applied trim where indicated, completely assembled in one piece without joints, where possible. If dimensions exceed maximum manufactured panel size, provide two or more pieces of equal length as acceptable to Architect. When overall dimensions require delivery in separate units, prefabricate components at the factory, disassemble for delivery, and make final joints at the site.

1.5 WARRANTY

- A. **Special Warranty for Porcelain-Enamel Face Sheets:** Manufacturer's standard form in which manufacturer agrees to repair or replace porcelain-enamel face sheets that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Surfaces lose original writing and erasing qualities.
 - b. Surfaces become slick or shiny.
 - c. Surfaces exhibit crazing, cracking, or flaking.
 2. **Warranty Period: 20 years from date of Substantial Completion.**

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
 1. **Available Manufacturers:** Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.

2.2 MATERIALS, GENERAL

- A. **Porcelain-Enamel Face Sheet:** Manufacturer's standard steel sheet with porcelain-enamel coating fused to steel; uncoated thickness indicated.
 - 1. **Gloss Finish:** Gloss as indicated; dry-erase markers wipe clean with dry cloth or standard eraser.
- B. **Natural Cork Sheet:** Seamless, single-layer, compressed fine-grain cork sheet; bulletin board quality; face sanded for natural finish with surface-burning characteristics indicated.
- C. **Vinyl Fabric:** Mildew resistant, washable, complying with FS CCC-W-408D, Type II, burlap weave; weighing not less than 13 oz./sq. yd.; with surface-burning characteristics indicated.
- D. **Hardboard:** AHA A135.4, tempered.
- E. **Particleboard:** ANSI A208.1, Grade 1-M-1.
- F. **Fiberboard:** ANSI A208.2, Grade MD.
- G. **Extruded Aluminum:** ASTM B 221, Alloy 6063.
- H. **Laminating Adhesive:** Manufacturer's standard moisture-resistant thermoplastic type.

2.3 TACKBOARD ASSEMBLIES

- A. **Vinyl-Fabric-Faced Tackboard:** 1/8-inch- (3-mm-) thick, vinyl-fabric-faced cork sheet factory laminated to 3/8-inch- (9.5-mm-) thick fiberboard backing.
 - 1. **Acceptable Manufacturers:**
 - a. Claridge Products & Equipment, Inc.
 - b. Best-Rite Manufacturing.
 - c. Egan Visual, Inc.
 - d. PolyVision Corporation, a Steelcase Company.
 - 2. **Basis of Design:** Claridge; Series 3 Type A with concealed fasteners, top map rail and bottom chalk rail.
 - a. **Tackboard Color:** As selected by Architect from manufacturer's full line of products.
 - b. **Trim Color:** Clear anodized.

2.4 PORCELAIN MARKERBOARD ASSEMBLIES

- A. **Porcelain-Enamel Markerboards:** Balanced, high-pressure, factory-laminated markerboard assembly of three-ply construction consisting of backing sheet, core material, and 0.021-inch-thick, porcelain-enamel face sheet with high-gloss finish.
 - 1. **Acceptable Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Best-Rite Manufacturing.
 - b. Claridge Products and Equipment, Inc.
 - c. PolyVision Corporation; a Steelcase company.
 - d. Egan Visual Inc.
 - 2. **Manufacturer's Standard Core:** Minimum 1/4 inch 6 mm thick, with manufacturer's standard moisture-barrier backing.
 - 3. **Laminating Adhesive:** Manufacturer's standard, moisture-resistant thermoplastic type.
 - 4. **Basis of Design:** Claridge; Series 3 Type A with concealed fasteners, top map rail and bottom chalk rail.

2.5 GLASS MARKERBOARD ASSEMBLIES

- A. **Basis of Design:**
 - 1. **Acceptable Manufacturer:** Clarus.
 - 2. **Product:** Clarus Float.
 - 3. **Glass:** 1/4 inch thick tempered safety glass.
 - 4. **Color:** As selected by Architect.
 - 5. **Accessories:**
 - a. One box marker holder for each board.
 - b. Four hoop magnets for each boards.

2.6 VISUAL DISPLAY WALL COVERINGS

- A. **Visual Display Wall Covering:** Intended for use with dry-erase markers and as a projection surface and consisting of low-gloss, plastic film bonded to fabric backing; not less than 0.020-mil (0.0005-mm) total thickness.
 - 1. **Basis-of-Design:** Walltalkers; a division of RJF International Corporation; Just Rite, JR48-00 with scrim backing or approved equal. **Note: Submit samples of manufacturer's options of Visual Display Wall Coverings for Architect's review and selection.**
- B. **Adhesive:** Mildew-resistant, nonstaining, **strippable** adhesive, for use with specific wall covering and substrate application, as recommended in writing by wall covering manufacturer.
- C. **Primer/Sealer:** Mildew-resistant primer/sealer complying with requirements in Section 099000 and recommended in writing by wall covering manufacturer for intended substrate.
- D. Install and adhere 20 gauge sheet metal to wall behind Visual Display Wall Covering and ensure flatness prior to installing Visual Display Wall Covering.

2.7 GLASS FRONT LOCKABLE DISPLAY CASE

- A. **Acceptable Manufacturers:** Subject to compliance with requirements, manufacturers offering products to be incorporated into the Work include, but are not limited to the following:
 - 1. Claridge
- B. **Size:** 36 inches wide by 30 inches tall
- C. **Mounting:** Recessed.
- D. **Finish:** Clear anodized aluminum.
- E. **Basis-of-Design:** Claridge; Contemporary Series.

2.8 CABINET WHITE BOARDS

- A. **Acceptable Manufacturers:**
 - 1. Egan Visual
 - 2. Nucraft
- B. **Basis of Design:**
 - 1. Egan Visual Wood Presentation Cabinet # CABW48 with bullnose edge and hardwood veneer. Veneer, stain and finish to be selected by Architect.
 - a. Tackable interior on both side panels
 - b. Full low glare whiteboard porcelain center section with marker tray below.
 - c. Finishes to be selected by Architect from manufacturer's full and complete line of finishes.

2.9 VISUAL DISPLAY BOARD ACCESSORIES

- A. **Aluminum Frames and Trim:** Fabricated from not less than 0.062-inch-(1.57-mm-) thick, extruded aluminum; of size and shape indicated.
 - 1. **Factory-Applied Trim:** Manufacturer's standard.
- B. **Chalktray:** Manufacturer's standard, continuous, extruded aluminum, solid type with ribbed section and smoothly curved exposed ends.
- C. **Visual Display Rails:** Manufacturer's standard, aluminum-framed, tackable fabric visual display surface fabricated into narrow rail shape and designed for displaying material.
 - 1. Provide continuous display rail along entire length of top of markerboards.

2.10 FABRICATION

- A. Fabricate visual display surfaces to sizes indicated on Drawings.
- B. **Porcelain-Enamel Visual Display Assemblies:** Laminate porcelain-enamel face sheet and backing sheet to core material under heat and pressure with manufacturer's standard flexible, waterproof adhesive. Color to be selected by Architect.
- C. **Visual Display Boards:** Factory assemble visual display boards, unless otherwise indicated.

1. Where factory-applied trim is indicated, trim shall be assembled and attached to visual display boards at manufacturer's factory before shipment.
- D. **Factory-Assembled Visual Display Units:** Coordinate factory-assembled units with trim and accessories indicated. Join parts with a neat, precision fit.
 1. Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, balanced around center of board, as acceptable to Architect.
 2. Provide manufacturer's standard vertical-joint spline or H-trim system between abutting sections of markerboards.
 3. Provide manufacturer's standard mullion trim at joints between markerboards and tackboards of combination units.
- E. **Aluminum Frames and Trim:** Fabricate units straight and of single lengths, keeping joints to a minimum. Miter corners to neat, hairline closure.
 1. Where factory-applied trim is indicated, trim shall be assembled and attached to visual display units at manufacturer's factory before shipment.
- F. **Aluminum Anodic Finish:** Class II, anodic coating complying with AAMA 611. Refer to Document 008900 and Finish Selection Summary Spreadsheet for colors.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Prepare surfaces to achieve a smooth, dry, clean surface free of flaking, unsound coatings, cracks, defects, and substances that will impair bond between visual display boards and surfaces.
- B. Install visual display surfaces in locations and at mounting heights indicated on Drawings. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.
- C. **Visual Display Boards:** Attach concealed clips, hangers, and grounds to wall surfaces and to visual display boards with fasteners at not more than 16 inches(400 mm) o.c. Secure both top and bottom of boards to walls.
 - a. Attach chalktrays to boards with fasteners at not more than 12 inches(300 mm) o.c.
- D. **Visual Display Wall Coverings:** Comply with visual display wall covering manufacturers' written installation instructions.
 1. After installation, clean visual display wall covering according to manufacturer's written instructions. Remove excess adhesive at finished seams, perimeter edges, and adjacent surfaces.
- E. Attach one cleaning label to visual display surface in each room. Cover and protect visual display surfaces after installation and cleaning.

3.2 SCHEDULE

- A. Deans Office: One Clarus Glassboard, 6' x 4'.
- B. Porcelain Markerboards:
 1. Classroom 101: Two 8' x 4'.
 2. Classroom 103A: Two 8' x 4'.
 3. Classroom 103B: Two 8' x 4'.
 4. Nursing Debriefing: One 8' x 4'.
 5. Classroom 204: One 8' x 4'.
 6. Classroom 302: Two 8' x 4'.
 7. Classroom 304: One 8' x 4'.
 8. Classroom 340: Two 8' x 4'.
 9. Classroom 446: One 8' x 4'.
- C. Conference Room 411: One 4' x 4' cabinet.

END OF SECTION

SECTION 101400

SIGNAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes (Note: Not all of the products listed may be use on this Project):**

1. Interior room signs.
2. Public Toilet room signs.
3. Bronze Building plaques.
4. Exterior building dimensional letters. (Not Used)
5. Monument sign.

1.3 SUBMITTALS

- A. General: Submit in accordance with Section 013300.
- B. **Samples:** At the same time shop drawings are submitted, submit full-sized sample of each type of sign conforming to specification requirements as to letter size, spacing and style.
- C. **Shop Drawings and Manufacturers' Brochures:** Submit in accordance with Section 013300.
- D. Template: Submit full-size template drawing for approval of letter size, stock, spacing, setting screws.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Acceptable Manufacturers:** Subject to compliance with requirements indicated, provide products of one of the following:
 1. APCO.
 2. Lassiter Industries.
 3. ASI Sign Systems, Grand Prairie, Texas
 4. Nelson-Harkins, Chicago, Illinois
- B. Substitutions: Under provisions of the General Conditions.

2.2 INTERIOR ROOM SIGNS

- A. General: Provide room identification signs and room numbers as scheduled on Drawings and below.
- B. Mechanically or adhesively attach as recommended by sign manufacturer.
- C. **Interior Signage Plaques:**
 1. **Typical Interior Room Sign:** Plastic nameplate with acetate insert, acrylic accent bar, brushed aluminum plate with raised Braille, and ADA number. Provide one per interior room. Attach to wall adjacent to room per ADA/TAS requirements. Refer to drawings for layout.
 2. **Elevator Fire Exit Sign:** Plastic plaque meeting Life Safety and Building Codes with floor plan and fire egress shown and raised Braille. Provide one per elevator landing. Attach to wall adjacent to elevator door as required by code.
 3. **Public Toilet Rooms:** Identification signs with handicap accessible symbol, "MEN" or "WOMEN" indicated as appropriate and raised Braille. Provide one per toilet room. Attach per ADA/TAS requirements. Refer to drawings for layout.
 4. **Directional Signage as indicated on Drawings.**

5. **Fire Exiting Signage for fire stairs.** Provide one plaque per landing on public side and stair side of door as required by code. Refer to drawings for additional information.
- D. **Graphic Process:**
1. Raised tactile characters 1/32 inch from sign face.
 2. Provide Grade 2 braille for each text immediately below text.
 3. Meet requirements of most current edition of ADA and TAS.
- E. **Font: Optima.**
- F. **Copy:** To be provided by Owner during submittal stage.
- G. Place signs in locations indicated on Drawings and per ADA/TAS requirements.
- H. Properly finish edges of signs and with letters and numbers evenly and accurately cut.
- I. Spacing of Letters and Numbers: Optically correct.
- J. **Basis of Design Product:** APCO "Elevate" with "Scroll" decorative shaped header. Shape and sign design to match Architect's signage drawing sheets in documents.
- K. **Similar Product:** Lassiter Industries; similar to Changeable Message Series CM009, with overall dimensions to be increased to 6-1/4 inches high by 7-1/2 inches wide.
- L. **Where sign is mounted on glass, provide matching blank plate on back side of glass.**
- 2.3 **BUILDING PLAQUE**
- A. **Acceptable Manufacturers:**
1. Advance Corporation; Braille-Tac Division.
 2. A. R. K. Ramos.
 3. Gemini Incorporated.
 4. Matthews International Corporation; Bronze Division.
 5. Metal Arts; Div. of L&H Mfg. Co.
 6. Mills Manufacturing Company.
 7. Nelson-Harkins Industries.
 8. Southwell Company (The).
- B. **Cast Plaques:** Building Plaque. Provide castings free of pits, scale, sand holes, and other defects, as follows:
1. **Plaque Material:** Bronze.
 2. **Border Style:** Satin/brushed bronze.
 3. **Font and Texture:** Seneca, satin/brushed bronze.
 4. **Background Texture:** Manufacturer's standard leatherette texture in oxidized dark bronze.
 5. **Mounting:** Concealed studs for substrates encountered.
 6. **Size:** 24" wide x 30" high, unless otherwise indicated on plans or Owner's standard.
 7. **Design:** Refer to Drawings.
 8. **Copy:** To be provided by Owner during submittal stage.
 9. **Location:** Locate one each plaque in West Building Lobby and Southeast Vestibule. Coordinate final location with Architect during submittal stage or prior to completion of rough framing (for blocking location).
- 2.4 **DIMENSIONAL CHARACTERS**
- A. **Acceptable Manufacturers:**
1. Advance Corporation; Braille-Tac Division.
 2. A. R. K. Ramos.
 3. Gemini Incorporated.
 4. Metal Arts; Div. of L&H Mfg. Co.
 5. Mills Manufacturing Company.
 6. Nelson-Harkins Industries.
 7. Southwell Company (The).
- B. **Cast Characters:** Produce characters with smooth flat faces, sharp corners, and precisely formed lines and profiles, free of pits, scale, sand holes, and other defects. Cast lugs into back of characters and tap to receive threaded mounting studs. Alloy and temper recommended by

sign manufacturer for casting process used and for use and finish indicated. Comply with the following requirements.

1. **Character Material:** Aluminum.
2. **Dimensions:** 10 inch tall.
3. **Thickness:** 2 inches thick.
4. **Font:** As selected by Architect.
5. **Finish:** Clear or Bronze anodized, or painted white. Confirm final finish and color with Architect.
6. **Type and Copy:**
 - a. Final copy to be determined with Owner during submittal process. For bid purposes include "Health Science & Human Services Center" on the building exterior.
7. **Mounting:** As indicated on drawings, or if none indicated, projected on 2 inch standoffs.
8. **Final location:** To be determined by Architect.
9. Contractor shall provide all required circuiting and conduit from electrical panels provide fully operational backlighted signage.

2.5 **RESERVED HANDICAPPED PARKING SIGNS**

- A. Screen-printed, 18 gage bonderized steel with blue baked enamel finish and white screen printed copy.
- B. **Size:** Refer to Drawings.
- C. **Copy:**
 1. "Reserved Parking".
 2. "Van Accessible".
- D. **Post:** Refer to Drawings. Provide 2-inch square aluminum tube frame with **powder coat "MSU burgundy" painted finish**. Top portion of frame shall have metal mesh background for sign attachment. Mesh paint color to be **"MSU burgundy."** Obtain RAL or Pantone color specification from MSU facilities.
- E. Provide one per handicap parking space.

2.6 **MONUMENT SIGN**

- A. Relocate existing masonry monument sign from MaGaha Building to Health Science site. Provide two new ground mounted floor light (one per side). Revise dimensional characters to name of new building.

PART 3 - EXECUTION

3.1 **DELIVERY AND STORAGE**

- A. Deliver and store identifying devices in protective wrappings until ready for installation.

3.2 **INTERIOR INSTALLATION - ROOM SIGNS**

- A. **Install signs plumb, level and square and in proper planes with other work, at heights as required by ADA/TAS.**
- B. Anchor each plastic sign with sufficient amount adhesive for proper installation as recommended by manufacturer for substrate.

3.3 **EXTERIOR INSTALLATION - PARKING SIGNS**

- A. Refer to Drawings. Set posts in concrete piers vertical and plumb. Coat aluminum posts with bituminous coating prior to setting in concrete.

3.4 **EXTERIOR INSTALLATION - BUILDING SIGNS (NOT USED)**

- A. General: Install plaques and exterior building signage using mounting methods indicated and according to manufacturer's written instructions.
 1. **Provide wood blocking or plywood backing where building address dimensional letters are to be located.**

2. **Verify location of building address dimensional lettering in field with Architect, Owner and Fire Marshal prior to installing building sheathing.**
 3. Install letters, signs and plaques level, plumb, true to line, and at locations and heights indicated, with plaque surfaces free of distortion and other defects in appearance.
 4. Install letters, signs and plaques so they do not protrude beyond or obstruct space per accessibility standards.
 5. Before installation, verify that surfaces are clean and free of materials or debris that would impair installation.
 6. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- 3.5 CLEANING
- A. Remove protective materials and clean all signs. Clean surfaces with plain water or water with soap or household detergent.
- 3.6 SCHEDULE
- A. Refer to signage schedule on the Drawings and as follows:
 1. One room name and number sign for each room in the building.
 2. Two wayfinding signs, with department names and suite numbers on each floor.
 3. Elevator/Exit signage at each elevator lobby.
 4. One building plaque at the West Atrium and one at Southeast Vestibule to Atrium.
 5. Relocate one exterior monument sign at west side of building. Confirm final location with Design Architect. Obtain existing sign from Owner. Construct campus standard base and support as required. Provide ground mounted flood lights and power/circuiting as required for fully operational lighting on North and South sides of signage.

END OF SECTION

SECTION 102113

STAINLESS STEEL TOILET COMPARTMENTS

PART 1 GENERAL

1.1 SUMMARY

- A. Related Documents: Provisions established in General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.
- B. **Section Includes:**
 - 1. **Floor mounted, overhead braced stainless steel toilet compartments with no sight lines.**
 - 2. **Wall mounted stainless steel urinal screens.**
 - 3. **Mounting and operating hardware.**

1.2 SUBMITTALS

- A. General: Submit in accordance with Section 007013 and Section 013100.
- B. **Product Data:** Submit manufacturer's product data and catalog cut sheets.
- C. **Shop Drawings**
- D. Indicate partition layouts, swing of doors, elevations, anchorage and mounting details, components, hardware, finishes, and relevant dimensions.
 - 1. Furnish location template drawings for anchorage locations in supporting members for attachment of partitions.
- E. **Samples:** Submit full range of color samples of **actual finish** (2 by 3 inch minimum size), **not color photo representations.**
- F. Manufacturer's Instructions: Submit manufacturer's printed installation instructions.

1.3 QUALITY ASSURANCE

- A. **Regulatory Requirements:** Conform to Americans with Disabilities Act Accessibility Guidelines (**ADAAG**), ANSI A 117.1, or local or state code for provisions for the physically handicapped, whichever is more stringent.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store and handle materials in accordance with the requirements of Sections 01 60 00.
- B. Store materials in weather tight location.
- C. Keep materials in original wrappers until installation is complete.

1.5 SEQUENCING AND SCHEDULING

- A. Coordinate Work with placement of anchorage devices. Supply rough-in data in sufficient time for concealed preparatory work to be conducted.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. **Acceptable Manufacturers:** Subject to compliance with requirements herein, provide products from one of the following:
 - 1. Hadrian Inc., Menotr, OH.
 - 2. Accurate Partitions Corporation, Lyons, IL.
 - 3. All American Metal Corporation, Freeport, NY.
 - 4. American Sanitary Partition Corporation, Ocoee, FL.
 - 5. Ampco Products, Inc., Miami, FL.
 - 6. General Partitions Manufacturing Corporation, Erie, PA.

7. Global Partitions, Eastonollee, GA.
 8. Knickerbocker Partition Corporation, Freeport, NY.
 9. Metpar Steel Products Corp., Westbury, NY.
 10. Sanymetal Products Company, Somerset, KY.
 11. Weis/Robart Partitions, Inc., Wayne, MI.
- B. Substitutions: In accordance with the requirements of Section 01 60 00

2.2 ACCEPTABLE PRODUCTS

1. **Basis of Design:**
 - a. Hadrian, Inc., No Sight Line, Standard Series, floor mounted overhead braced partitions.
 - b. Or approved equal.
2. **Finish:** #4 brushed stainless steel.

2.3 MATERIALS

- A. **Stainless Steel**
 1. ASTM A 167, Type 302/304, satin lustre finish.
 2. **Panels and Doors:** 22 gage minimum (20 gage when recommended by manufacturer) face sheets.
 3. **Pilasters:** 20 gage minimum (18 gage when recommended by manufacturer) face sheets.
- B. **Chrome Plating:** ASTM B 456.
- C. **Pilaster Shoes:** 3 inch high; ASTM A 167, Type 302/304, No. 4 polished finish stainless steel.
- D. **Core:** Manufacturer's standard sound deadening material.
- E. **Mounting Brackets:** Manufacturer's standard heavy duty satin lustre stainless steel or anodized polished aluminum.
- F. **Hardware:**
 1. **Hinge:** Stainless steel or chrome plated brass, continuous hinges, adjustable to hold open at angle up to 90 degrees.
 2. **Latch:** Manufacturer's standard stainless steel or chrome plated brass thumb turn or slide bolt with emergency operation.
 - a. Provide slide bolt in accessible stall.
 3. **Door Strike and Keeper:** Manufacturer's standard stainless steel or chrome plated combination type with rubber face.
 4. **Coat Hook:** Manufacturer's standard stainless steel or chrome plated brass combination hook and rubber tipped pin.
 5. **Door Pull:** Manufacturer's standard stainless steel or chrome plated brass, for out swinging doors.
- G. **Anchorage and Fasteners**
 1. Exposed Fasteners: Manufacturer's standard stainless steel or chrome plated brass with theft-resistant type screw head and nuts.
 2. Concealed Fasteners: Hot-dip galvanized or cadmium plated.

2.4 FABRICATION

- A. Provide compartments of floor anchored and overhead braced style.
- B. Provide urinal screens with combination floor anchored style and wall-supported style.
- C. Take field measurements to ensure proper fitting of Work. Shop assemble to greatest extent possible.
- D. **Partitions, Pilasters, Screens, and Doors**
 1. Assemble to greatest extent possible. Make cutouts for toilet accessories at factory.
 2. Provide formed and closed edges for doors, panels, and pilasters. Miter and weld corners and grind smooth. Provide closed edges in color matching panels.

3. Provide internal reinforcement in areas of attached hardware and fittings. Mark locations of reinforcement for partition mounted washroom accessories.
 - E. **Dimensions**
 1. **Doors:** 1 inch thick minimum units; 24 inch wide inward swing doors and 32 inch wide outward swing doors for handicapped stalls.
 2. **Pilasters:** Manufacturer's standard, 1-1/4 inch minimum thickness.
 3. **Panels:** Manufacturer's standard 1 inch minimum unit.
 4. **Urinal Screens:** 1 inch thick minimum, **18 inches wide by 48 inches tall.**
 - F. **Supports and Hangers:** Equip pilasters with leveling devices, anchor studs, and locking nuts.
 - G. **Pilaster Shoes:** Plinths, one piece, hemmed top and bottom, formed to fit pilaster, equipped with concealed clips, 3 inch height, 20 gage stainless steel.
 - H. **Wall Brackets:** Panel brackets, two ear, "T" style.
 - I. **Pilaster to Pilaster Brackets:** Stirrup style brackets.
- 2.5 FACTORY FINISHING
- A. Clean, degrease, and neutralize panels.
 - B. **Stainless Steel: No. 4 brushed finish.**

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine conditions and proceed with Work in accordance with Section 01 43 00.
- B. Check areas scheduled to receive partitions for correct dimensions, plumbness of walls, soundness of wall surfaces, location of built-in framing/anchorages/bracing, and other conditions that would affect proper installation of holding brackets and anchorage or suspension devices.
- C. **Provide 2 X 4 wood or 3-inch X 3-inch X 1/4-inch steel angle/channel blocking in walls to support partitions at locations of attachments whether or not shown on Drawings.**
- D. Verify spacing of plumbing fixtures to assure compatibility with installation of partitions.
- E. Beginning of installation means acceptance of existing surfaces.

3.2 INSTALLATION

- A. General:
 1. Install partitions and screens rigid, straight, plumb, and level.
 2. **Maintain zero sight lines between pilasters and panels.**
 3. **Maintain zero sight lines between panels and walls.**
 4. Secure panels to walls with not less than 2 stirrups brackets, attached near top and bottom of panel.
 5. Locate wall brackets so that holes for wall anchorages occur in tile joints.
 6. Conceal evidence of drilling, cutting, and fitting to room finish.
- B. **Floor Mounted Overhead Braced Partitions:**
 1. Attach pilasters to supporting floor with pilaster supports anchored with minimum 2 inch penetration into floor system.
 2. Provide adjustment for floor variations with screw jack through steel saddles integral with pilaster. Conceal floor fastenings with pilaster shoes.
 3. Level, plumb, and tighten installation with leveling device.
 4. Secure pilaster shoes in position.
 5. Secure headrail to pilaster face with not less than two fasteners preface. Secure headrail to walls.
 6. Set tops of doors parallel with overhead brace when doors are in closed position.
- C. **Combination Floor-Mounted and Wall-Supported Panels and Screens:**
 1. Floor mounted.
 2. Attach to wall with anchoring devices and wall brackets.
 3. Position, level, and tighten units.

3.3 ADJUSTING

- A. Adjust and lubricate hardware for proper operation after installation.
- B. Set hinges on inward swing doors to hold doors open approximately 30 degrees from closed position when unlatched.
- C. Set hinges on outward swing doors to return to fully closed position.
- D. Perform final adjustments to leveling devices and hardware.
- E. Adjust and align hardware for uniform clearance at vertical edges of doors **with no sight lines**.

3.4 CLEANING

- A. Clean surfaces free of oil, dirt, and imperfections.

END OF SECTION

SECTION 102123

CUBICLE CURTAINS AND TRACKS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUBMITTALS

- A. **Product Data:** Submit manufacturer's specifications to evidence compliance with these specifications.
- B. **Shop Drawings:**
 - 1. Show details of the system, related construction and reflected layout of ceiling areas showing location of tracks in relation to other ceiling mounted items.
 - 2. Indicate materials, finishes, dimensions, thicknesses and/or gages of parts, reinforcement, where applicable, and anchorage including items of hardware and accessories necessary for complete installation.
- C. **Samples for Verification:**
 - 1. Curtain: Full size sample.
 - 2. Track: 12 inch long track with end caps and curtain carriers.
- D. **Cubicle Schedule:** Use same room designations as indicated on Drawings.
- E. **Maintenance Data:** For inclusion in maintenance manual required by Division 01.
 - 1. Include manufacturer's instructions for maintenance of installed Work, including methods and frequency recommended for maintaining optimum condition under anticipated use.
 - 2. Include precautions against cleaning products and methods which may be detrimental to finishes and performance.

1.3 MAINTENANCE

- A. **Extra Materials:** Furnish as described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Curtain Carriers: Full-size units equal to 3 percent of amount installed for each size indicated.
 - 2. Curtains: Two.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis of Design: Refer to **Section 008900 - Finish Selections Summary**.
- B. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents, provide product by one of manufacturers named alphabetically below. If not named, submit as substitution according to Conditions of the Contract and appropriate Division 01 Sections.
 - 1. AR Nelson Co.
 - 2. Construction Specialties, Inc.
 - 3. Imperial Fastener Co.
 - 4. In Pro Corp.
 - 5. Salisbury Industries.

2.2 CUBICLE CURTAINS

- A. **Curtain Fabric:** Product that is equivalent to color, texture, pattern, finish, appearance, and material quality characteristics indicated by basis of design selection.
- B. **Curtain Construction:**

1. Flame Resistance: Comply with NFPA 701.
2. **Curtain Top:** Not less than 20 inch wide nylon mesh with 1/2 inch holes; overlap seams and double-lock stitch to body of curtain.
3. **Width:** Equal to track length plus 10 percent.
4. **Length:** Equal to floor-to-ceiling height minus 20 inches from finished ceiling at top and 12 to 15 inches above finished floor.
5. **Top Hem:** Not less than 1 inch and not more than 1-1/2 inch wide, triple thickness, reinforced with integral web and double stitched; 2 piece, rolled edge, corrosion resistant, nickel-plated brass grommets spaced not more than 6 inches on centers.
6. **Bottom and Side Hems:** Not less than 1 inch wide, reinforced, triple thickness and single stitched.
7. **Seams:** Not less than 1/2 inch wide, double turned and double stitched.

2.3 CURTAIN TRACKS

- A. **Extruded-Aluminum Track:** Not less than 1-1/4 inches wide by 3/4 inch high, with minimum wall thickness of 0.058 inch.
 1. Curved Track: Factory fabricated 12 inch radius bends.
 2. Finish: Clear anodized.
- B. **Track Accessories:** Fabricate splices, end caps, connectors, end stops, coupling and joining sleeves, wall flanges, brackets, ceiling clips, and other accessories from same material and with same finish as track.
- C. **Curtain Carriers:** Two nylon rollers and nylon axle with chrome-plated steel, stainless steel, or aluminum hook with nickel plated steel beaded chain curtain drop.
- D. **Exposed Fasteners:** Stainless steel.
- E. **Concealed Fasteners:** Hot-dip galvanized.

2.4 IV SUPPORT SYSTEMS

- A. **Extruded-Aluminum IV Track:** Not less than 1-1/4 inches wide by 3/4 inch high; with minimum wall thickness of 0.058 inch.
 1. Curved Track: Factory fabricated 12 inch radius bends.
 2. Finish: Clear anodized.
- B. **IV Carriers:** Four nylon rollers and steel or stainless-steel axles, with hanger loop fabricated from 1/4-inch- diameter stainless steel.
- C. **Telescoping IV Hangers:** 3/4 inch stainless-steel main shaft and a 3/8 inch stainless-steel inner shaft, vertically adjustable 16 inches; with 4 non folding 1/4 inch stainless-steel arms with loops and a stainless-steel top loop to attach to carrier.

PART 3 - EXECUTION

- A. Acceptance of Surfaces and Conditions:
 1. Examine substrates to which cubicle specialties will be applied for compliance with requirements and other conditions affecting performance.
 2. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents.
 3. Starting Work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform work according to following, unless otherwise specified:
 1. Respective manufacturer's installation instructions.
 2. Approved submittals.
 3. Contract Documents.

- B. General: Install tracks level and plumb, according to manufacturer's written instructions. Provide track fabricated from one continuous length up to 16 feet.
 - 1. Curtain Track Mounting: Surface.
 - 2. IV Track Mounting: Surface.
- C. Surface Track Mounting: Fasten surface-mounted tracks at intervals of not less than 24 inches. Fasten support at each splice and tangent point of each corner. Center fasteners in track to ensure unencumbered carrier operation. Mechanically fasten to suspended ceiling grid with screws.
- D. Track Accessories: Install splices, end caps, connectors, end stops, coupling and joining sleeves, and other accessories as required for a secure and operational installation.
- E. IV Hangers: Unless otherwise indicated, install one IV hook on each IV track and hang one IV hanger.
- F. Curtain Carriers: Provide curtain carriers adequate for 6 inch spacing along the full length of the curtain plus an additional carrier.

END OF SECTION

SECTION 102226
OPERABLE PARTITIONS

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- 1.2 **SUMMARY**
 - A. **Section Includes:**
 - 1. **Manually-operated, acoustical panel partition and enclosure.**
- 1.3 DEFINITIONS
 - A. ADA-ABA Accessibility Guidelines: U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA) and Architectural Barriers Act (ABA) Accessibility Guidelines for Buildings and Facilities."
 - B. STC: Sound Transmission Class.
- 1.4 **PERFORMANCE REQUIREMENTS**
 - A. **Delegated Design:** Design operable panel partitions, including comprehensive engineering analysis by a qualified professional engineer, registered in the state the Project is located, using performance requirements and design criteria indicated.
 - B. **Acoustical Performance:** Provide operable panel partitions tested by a qualified testing agency for the following acoustical properties according to test methods indicated:
 - 1. Sound-Transmission Requirements: Operable panel partition assembly tested for laboratory sound-transmission loss performance according to ASTM E 90, determined by ASTM E 413, and rated for not less than the STC indicated.
- 1.5 **SUBMITTALS**
 - A. **Product Data:** For each type of product indicated.
 - B. **Sustainable Submittals:**
 - 1. Product data for each composite wood product used in operable panel partitions, documentation indicating that product contains no urea formaldehyde.
 - C. **Shop Drawings:** Include plans, elevations, sections, details, and attachments to other work.
 - 1. For installed products indicated to comply with design loads, include structural analysis data for attachments, signed and sealed by the qualified professional engineer responsible for their preparation.
 - 2. Indicate storage and operating clearances. Indicate location and installation requirements for hardware and track, blocking, and direction of travel.
 - D. **Samples for Initial Selection:** For each type of exposed material, finish, covering, or facing indicated.
 - 1. Include similar Samples of accessories involving color selection.
 - E. **Delegated-Design Submittal:** For operable panel partitions indicated to comply with performance requirements, including analysis data and calculations signed and **sealed by the qualified professional engineer**, registered in the state the Project is located, responsible for their preparation.
 - 1. Design Calculations: Calculate requirements for seismic restraints.
 - F. **Setting Drawings:** For embedded items and cutouts required in other work, including support-beam, mounting-hole template.
 - G. **Qualification Data:** For qualified Installer.
 - H. **Product Certificates:** For each type of operable panel partition, from manufacturer.
 - I. **Operation and Maintenance Data:** For operable panel partitions to include in maintenance

manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Panel finish facings and finishes for exposed trim and accessories. Include precautions for cleaning materials and methods that could be detrimental to finishes and performance.
2. Seals, hardware, track, carriers, and other operating components.

J. **Warranty:** Sample of special warranty.

1.6 **QUALITY ASSURANCE**

- A. **Installer Qualifications:** An employer of workers trained and approved by manufacturer with at least **ten years' experience** of documented successful installations.
- B. **Fire-Test-Response Characteristics:** Provide panels with finishes meeting one of the following as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 1. **Surface-Burning Characteristics:** As determined by testing per ASTM E 84.
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.
 2. **Fire Growth Contribution:** Meeting acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265.

1.7 **PROJECT CONDITIONS**

- A. **Field Measurements:** Verify actual dimensions of operable panel partition openings by field measurements before fabrication.

1.8 **WARRANTY**

- A. **Special Warranty:** Manufacturer's standard form in which manufacturer agrees to repair or replace components of operable panel partitions that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Faulty operation of operable panel partitions.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal wear.
 2. **Warranty Period: Two years** from date of Substantial Completion.

1.9 **EXTRA MATERIALS**

- A. Furnish extra materials from the same production run that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. **Panel Finish-Facing Material: Furnish full width in quantity to cover both sides of two panels when installed.**

PART 2 - PRODUCTS

2.1 **MATERIALS**

- A. **Steel Frame:** Steel sheet, manufacturer's standard nominal minimum thickness for uncoated steel.
- B. **Steel Face/Liner Sheets:** Tension-leveled steel sheet, manufacturer's standard nominal minimum thickness for uncoated steel.
- C. **Gypsum Board:** ASTM C 36.
- D. **Medium-Density Fiberboard:** ANSI A208.2, made with binder **containing no urea formaldehyde.**

2.2 OPERABLE ACOUSTICAL PANELS

- A. **Operable Acoustical Panels:** Operable acoustical panel partition system, including panels, seals, finish facing, suspension system, operators, and accessories.
 - 1. **Acceptable Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Advanced Equipment Corporation.
 - b. Hufcor.
 - c. Curtition; KWI-K-WALL Company.
 - d. Modernfold, Inc.; a DORMA Group Company.
 - e. Panelfold Inc.
 - 2. **Basis-of-Design:** Refer to Section 008900 - Finish Selection Summary.
- B. **Panel Operation: Manually operated, single panels.**
- C. **Panel Construction:** Provide top reinforcement as required to support panel from suspension components and provide reinforcement for hardware attachment. Fabricate panels with tight hairline joints and concealed fasteners. Fabricate panels so finished in-place partition is rigid; level; plumb; aligned, with tight joints and uniform appearance; and free of bow, warp, twist, deformation, and surface and finish irregularities.
- D. **Dimensions:** Fabricate operable acoustical panel partitions to form an assembled system of dimensions indicated and verified by field measurements.
 - 1. **Panel Width:** Standard widths, refer to Drawings.
- E. **STC: Not less than 52.**
- F. **Panel Weight:** 8 lb/sq. ft. maximum.
- G. **Panel Thickness:** Not more than 4 inches nominal.
- H. **Panel Closure:** Manufacturer's standard.
 - 1. **Initial Closure:** Flexible, resilient PVC, bulb-shaped acoustical seal.
 - 2. **Final Closure:** Constant-force, lever-operated mechanical closure expanding from panel edge to create a constant-pressure acoustical seal.
- I. **Hardware:** Manufacturer's standard as required to operate operable panel partition and accessories; with decorative, protective finish.
 - 1. **Hinges:** SOSS invisible laminated hinge with antifriction segments.
- J. **Locations:** Refer to schedule at end of this Section.

2.3 SEALS

- A. **General:** Provide types of seals indicated that produce operable panel partitions complying with acoustical performance requirements and the following:
 - 1. Manufacturer's standard seals.
 - 2. Seals made from materials and in profiles that minimize sound leakage.
 - 3. Seals fitting tight at contact surfaces and sealing continuously between adjacent panels and between operable panel partition perimeter and adjacent surfaces, when operable panel partition is extended and closed.
- B. **Horizontal Top Seals:** One of the following:
 - 1. Continuous-contact, extruded-PVC seal exerting uniform constant pressure on track.
 - 2. PVC-faced, mechanical, retractable, constant-force-contact seal exerting uniform constant pressure on track when extended.
 - 3. Continuous-contact, extruded-PVC seal exerting uniform constant pressure on track or PVC-faced, mechanical, retractable, constant-force-contact seal exerting uniform constant pressure on track when extended.
- C. **Horizontal Bottom Seals:** PVC-faced, mechanical, retractable, constant-force-contact seal exerting uniform constant pressure on floor when extended, ensuring horizontal and vertical sealing and resisting panel movement.
 - 1. **Automatically Operated for Acoustical Panels:** Extension and retraction of bottom seal automatically operated by movement of partition, with operating range **not less than 2 inches** between retracted seal and floor finish.

2.4 FINISH FACING

- A. **General:** Provide finish facings for panels that comply with indicated fire-test-response characteristics and that are factory applied to operable panel partitions with appropriate backing, using mildew-resistant non-staining adhesive as recommended by facing manufacturer's written instructions.
 - 1. Apply one-piece, seamless facings free of air bubbles, wrinkles, blisters, and other defects, with edges tightly butted, and with no gaps or overlaps. Horizontal seams are not permitted. Tightly secure and conceal raw and selvage edges of facing for finished appearance.
 - 2. Where facings with directional or repeating patterns or directional weave are indicated, mark facing top and attach facing in same direction.
 - 3. **Color/Pattern:** \$45/SY Material only; C.O.M. fabric and stain grade wood veneer; refer to Document 008900 - Finish Selections Summary.
- B. **Cap-Trimmed Edges:** Protective perimeter-edge trim with tight hairline joints concealing edges of panel and finish facing, finished as follows:
 - 1. **Aluminum:** Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than the strength and durability properties of alloy and temper required to comply with performance requirements; and with manufacturer's standard clear anodic finish.

2.5 SUSPENSION SYSTEMS

- A. **Suspension Tracks:** Steel or aluminum with adjustable steel hanger rods for overhead support, designed for type of operation, size, and weight of operable panel partition indicated. Size track to support partition operation and storage without damage to suspension system, operable panel partitions, or adjacent construction. Limit track deflection to no more than 0.10 inch between bracket supports. Provide a continuous system of track sections and accessories to accommodate configuration and layout indicated for partition operation and storage.
 - 1. **Panel Guide:** Aluminum; finished with factory-applied, decorative, protective finish.
 - 2. **Head Closure Trim:** As required for acoustical performance; with factory-applied, decorative, protective finish.
- B. **Carriers:** Trolley system as required for configuration type, size, and weight of partition and for easy operation; with ball-bearing wheels.
- C. **Aluminum Finish:** Mill finish or manufacturer's standard, factory-applied, decorative finish unless otherwise indicated.
- D. **Steel Finish:** Manufacturer's standard, factory-applied, corrosion-resistant, protective coating unless otherwise indicated.
- E. **Structural Steel Bracing and Support:** Provide miscellaneous steel structure as indicated on the Drawings, or, if none shown, as required to support track and panels from building structure. Refer to Section 055000, Metal Fabrications.

2.6 ACCESSORIES

- A. **Storage Pocket Door:** Full height at end of partition run to conceal stacked partition; of same materials, finish, construction, thickness, and acoustical qualities as panels; complete with operating hardware and acoustical seals at soffit, floor, and jambs. Use concealed Soss hinges.
 - 1. Manufacturer's standard method to secure storage pocket door in closed position.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine flooring, structural support, and opening, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of operable panel partitions.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Comply with ASTM E 557 except as otherwise required by operable panel partition manufacturer's written installation instructions.
- B. Install operable panel partitions and accessories after other finishing operations, including painting, have been completed.
- C. **Broken, cracked, chipped, deformed, or unmatched panels are not acceptable.**
- D. Broken, cracked, deformed, or unmatched gasketing or gasketing with gaps at butted ends is not acceptable.

3.3 ADJUSTING

- A. **Adjust operable panel partitions to operate smoothly, without warping or binding.** Lubricate hardware and other moving parts.
- B. Adjust pass doors storage pocket doors to operate smoothly and easily, without binding or warping. Check and readjust operating hardware. Confirm that latches and locks engage accurately and securely without forcing or binding.

3.4 FIELD QUALITY CONTROL

- A. **Light-Leakage Test:** Illuminate one side of partition installation and observe vertical joints and top and bottom seals for voids; adjust partitions for acceptable fit.
- B. **Testing Methodology: Perform testing of installed operable panel partition for noise isolation** according to ASTM E 336, determined by ASTM E 413, and rated for not less than NIC indicated. Adjust and fit partitions to comply with NIC test method requirements.
- C. Testing Extent: Testing agency shall randomly select one operable panel partition installation(s) for testing.
- D. Repair or replace operable panel partitions that do not comply with requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of repaired, replaced, or additional work with specified requirements.
- F. Prepare test and inspection reports.

3.5 CLEANING

- A. Clean soiled surfaces of operable panel partitions to remove dust, loose fibers, fingerprints, adhesives, and other foreign materials according to manufacturer's written instructions.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain operable panel partitions.

3.7 SCHEDULE

- A. **Demising wall between Dental Hygiene Lab / Classrooms 103A and 103B.**

END OF SECTION

SECTION 102233

HORIZONTAL SLIDING ACCORDION-TYPE FIRE DOORS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. **Section Includes: Horizontal sliding, accordion-type fire doors.**

1.2 SUBMITTALS

- A. **Shop Drawings:** Indicate required stacking depth, storage pocket width and height of header above finished floor. Show installation details, layout, and electrical requirements.

1.3 QUALITY ASSURANCE

- A. **Installation shall be performed by factory trained and certified installers with a minimum of three years experience installing accordion-type fire doors.**
- B. Fire doors shall be listed by Underwriters Laboratories for ratings as indicated, when tested in accordance with the requirements of UL 10B and NFPA252.
- C. Automatic closing system shall be listed by Underwriters Laboratories in accordance with the requirements of UL 864 and be intended for use with assembly in compliance with NFPA 80, Chapter 9, Section 9.4.2.1.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver to the job site in manufacturer's original, unopened package.

1.5 COORDINATION

- A. Coordinate the efforts of the various trades affected by the work of this section. Assure accurate installation of header, jamb, and trim. Provide field dimensions for fabrication. Supervise unloading and handling of materials.
- B. After testing the fire alarm system, automatic-closing fire doors shall be re-set to the original positions.
- C. Store boxes flat (not more than three high) in a dry area and protect from elements that may damage materials. Replace damaged materials at no cost to the owner.

PART 2 – PRODUCTS

2.1 MANUFACTURER

- A. **Basis of Design: Horizontal sliding accordion-type fire doors shall be Won-Door FireGuard 60 as manufactured by Won-Door Corporation.**
- B. Products of other manufacturers demonstrating complete compliance with each of the fire rating and performance criteria of the product specified will be considered for approval. Minimum proof of compliance shall include UL test report and independent testing agency report documenting compliance with IBC Section 1008.1.3.3 and NFPA 80, Chapter 9.

2.2 FIRE RATING

- A. Fire Doors shall be listed by Underwriters Laboratory as special purpose fire doors having a 60 minute fire-resistive rating in accordance with the requirements of UL 10B and NFPA 252.

2.3 REMOTE MONITORING AND CONTROL

- A. Fire doors shall be capable of being remotely monitored and controlled by a personal computer (PC). Information displayed on the computer shall indicate the voltage of the battery, AC line voltage and error conditions. Status information shall indicate whether the door(s) is closed, open, closing, opening, stopped, blocked or locked. Access using the Fire Exit Hardware shall be indicated as well as when the door(s) has received a fire signal.

2.4 MATERIALS

- A. **Construction** shall consist of two parallel, accordion-type walls of panels independently suspended with no floor tracks, pantographs, or interconnections except at the lead-post.
- B. **Panels** shall be formed of 24-gauge enamel coated steel V-grooved for strength and resilience. Panels shall be connected by full height 24-gauge enamel coated steel hinges. Panels shall be modular in design and capable of in-place repair-ability.
- C. **Suspension System** shall consist of two 14-gauge cold rolled steel (or .125 aluminum) tracks on 8" centers attached to the overhead structural support. Each lead post shall be suspended by an 8-wheel ball bearing trolley. Each panel shall be suspended by a steel hanger pin and a ball bearing roller.
- D. **Lead-posts** shall be of 24-gauge cold rolled steel and shall be connected by specially formed steel panels. An internally mounted stabilizer bar shall keep lead-posts plumb and in proper alignment during operation and insure a tight fitting closure. On model FG CC the leadpost shall also function as an integrated storage pocket cover door.
- E. **Perimeter Seals** shall consist of continuous extruded vinyl sweeps attached to the top and bottom of the fire door to form a smoke and draft seal.
- F. **Hanging weight** shall be 5.5 pounds per square foot.
- G. **Automatic Closing System** shall consist of the following:
 - 1. Microprocessor based Electronic Control box with these features:
 - a. Ability to monitor dual power sources continually for peak performance including:
 - 1) Detect a missing battery, bad battery, or low battery condition.
 - 2) Detect if the charging circuit is bad.
 - 3) Detect fuse failures.
 - 4) Detect high or low AC conditions.
 - b. Ability to monitor the health of the drive train including:
 - 1) Direction errors, obstruction errors, hindrance errors, and position errors.
 - 2) Active daily path checks, by actually closing and opening to assure a clear path and proper operation.
 - 3) Ability to monitor a passive input such as an infrared light beam to assure the closing path is clear.
 - c. Ability to monitor inputs including:
 - 1) Sticky door block, exit hardware, patron hardware, and key switches.
 - 2) Key switch miswires where key open and key close are both on simultaneously.
 - d. Ability to self-monitor the health of:
 - 1) Internal volatile and non-volatile memory.
 - 2) Proper operation of firmware.
 - e. Ability to run a "watch dog" monitoring circuit which will force a software restart in the event the software hangs, including the ability to track the number of resets that occur for diagnostic purposes.
 - f. Ability to record the number of times the door has closed, opened, lost communication with external microprocessors, and the number of times the controller has been reset manually.
 - g. Ability to monitor ambient temperature and lockout the operating devices once the environment at the door becomes untenable.
 - h. Ability to enter a security mode to help control access through the door including:
 - 1) The ability to automatically re-close and secure itself after a legitimate patron access has occurred.

- 2) The ability to unlock and revert to a fire door in a fire alarm condition, including the ability to re-lock automatically after the fire alarm condition has cleared.
- i. Ability to withstand voltages up to 120 volts AC on the fire alarm input circuit without damage including the ability to indicate that the alarm circuit has not been wired as a dry contact, "no voltage" circuit when errant voltages are applied to the circuit.
- j. Ability to communicate with other microprocessors on the system via an internal bus system, including but not limited to microprocessors on the motor drive, in the leading edge of the door, and on a wall mounted display panel adjacent to the door.
- k. Ability to indicate trouble or supervised information both locally and at a remote location.
2. Motor Operator Assembly including:
 - a. A DC gear-motor, drive sprocket, clutch, and position sensors. The motor shall drive the fire door by means of a chain attached to a stabilizer bar trolley each time the door operates including the initial closing cycle.
3. A door control momentary rocker switch shall be mounted on one side of the door near the lead post and shall have the following functions: Pressing the upper portion of the switch shall close the door and/or clear fault conditions. Pressing the lower portion of the switch shall open the door and/or temporarily mute the local horn. For doors using wall mounted key switches, **Error! Reference source not found.Option Error! Reference source not found.**, a color coordinated cover plate shall be provided to fill the hole left when the rocker switch is removed.
4. The control box shall be equipped with a service switch that performs the following functions:
 - a. When the switch is off with AC power present, the controller shall emit an audible coded sound indicating the system is out of service. In this mode all normal functions shall cease including motor and communications.
 - b. When the switch is off and AC power is not present, the controller shall enter a sleep mode during which the system shall use the battery to monitor the AC line for power but do nothing else.
 - c. When the switch is moved from the off position to the on position, the controller shall enter a calibrate mode where it emits a coded audible alert indicating that the door needs to be closed to complete the calibration sequence. As soon as the door is closed, the controller shall automatically stop the audible alert, and resume all normal functions and monitoring.
5. Leading Edge Obstruction Detector:
 - a. Shall be pressure sensitive such that each contact with an obstruction shall cause the door to stop, reverse enough to remove pressure on the leading edge, pause, and then re-close when in an alarm condition. The leading edge obstruction detector shall be fully functional at all times, including during the initial closing cycle.
 - b. Constant pressure to the leading edge in the direction of opening shall, while the door is opening under motor power, continue to open under motor power until the leading edge is released. This is termed motor assisted opening.
 - c. Constant pressure to the leading edge while not under motor power shall prevent motor operation and allow the door to be opened manually.
6. Exit Hardware shall be located on both sides of each fire door.
 - a. In emergency mode, a slight pressure on the hardware will cause the door to open a minimum of 32 inches, pause for 3 seconds, and then automatically close.
 - b. The open distance shall be field programmable, up to the entire opening width, if the local authority requires an opening larger than 32 inches.
 - c. The pause before re-close shall be field programmable, up to 30 seconds, if the local authority requires a longer pause time.
 - d. The exit hardware shall have the ability when not in the emergency (fire) mode or the security (lock) mode to be used to open the door and move it back into the storage pocket.

- e. The exit hardware shall be field programmable to provide access control. When programmed, the exit hardware shall not respond when pressed until activated by signal from smoke detector or fire alarm.
- 7. Suffix "E" doors shall include the following extras; track seals, anti-sway brackets every five feet or less across the opening, modified lead post trolleys and foil tape between the panels and the smoke liner.
- 8. On model FG CC the header assembly shall be provided as integrated part of the door assembly.

PART 3 – EXECUTION

3.1 PREPARATION

- A. Openings shall be to the dimensions specified, plumb and level.
- B. Headers shall be parallel with the finished floor within $\pm 1/8$ " tolerance over the entire length of the opening.
- C. Manufacturer shall make available to the general contractor a DVD showing door opening preparation.

3.2 INSTALLATION

- A. Install fire doors in accordance with manufacturer's instructions for clearance and fastenings.
- B. Adjust for smooth, quiet operation. Verify that all operations are functional and meet the requirements of applicable codes and regulations.
- C. Upon completion of the installation, general contractor shall protect fire doors from damage and shall replace or repair subsequent damage so that doors are acceptable to the architect at no additional cost to the owner.
- D. Installation shall be performed by factory trained and certified installers with a minimum of three years experience installing accordion-type fire doors.

3.3 DEMONSTRATION

- A. Manufacturer's onsite field technician shall demonstrate the operation of the doors to the General Contractor. A DVD outlining the operation, scheduled maintenance, basic troubleshooting and care of the door system shall be provided to the owner by the door manufacturer.

END OF SECTION

SECTION 102613
WALL AND CORNER GUARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established within the General and Supplementary General Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section Includes:**
 - 1. Corner Guards on outside corners of interior walls and other locations as indicated on the drawings.
 - 2. Wall Protection Rails.

1.3 PERFORMANCE REQUIREMENTS

- A. **Performance Requirements**
 - 1. All products to meet ASTM E84 characteristics as follows
 - a) **Flame Spread: 25 Maximum.**
 - b) **Smoke Developed: 450 Maximum.**
 - 2. When used as part of a fire rated assembly, devices must be capable of maintaining the specified or indicated hourly rating when tested in accordance with ASTM E119.
- B. Installed component assembly to support vertical live load of 100 lb/lineal ft with deflection not to exceed 1/50 of span between supports.
- C. **Corner guards to resist lateral impact force of 100 lbs at any point without permanent damage.**

1.4 SUBMITTALS

- A. General: Submit in accordance with Section 013300.
- B. **Samples:** Submit (2) 12 inches long, samples of each type of corner guard specified. Provide actual samples of vinyl colors from manufacturer's stock variety for Architect's selection, if vinyl corner guards are specified.
- C. **Product Literature:** Specific information for products intended to be provided.
- D. Certificates: Submit certificates indicating product's compliance with referenced standards and tests.
- E. Manufacturer's Instructions: Submit manufacturer's recommended installation instructions and suggested fastener types/patterns for each substrate encountered.

1.5 QUALITY ASSURANCE

- A. **Manufacturer Qualifications:** Company specializing in manufacture and fabrication of wall protection devices with **ten years' experience.**
- B. Conform to ANSI A117.1 (or local code if more stringent) requirements for the physically handicapped.

1.6 COORDINATION

- A. Coordinate work under provisions of Section 013100.
- B. Coordinate the work with wall or partition Sections for installation of concealed blocking or anchor devices.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store and handle products in accordance with Section 016000.

1.8 SEQUENCING AND SCHEDULING

- A. Begin work only after substrate work is complete and attachment devices in hollow walls is verified as being accurately placed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Approved Manufacturers:** Subject to compliance with requirements indicated, provide products of one of the following:
 - 1. Inpor, Muskego, WI.
 - 2. IPC.
 - 3. Koroguard Wall Protection Systems, Fairlawn, OH.
 - 4. Construction Specialties Inc., Muncy, PA
 - 5. Pawling Corp., Pawling, NY

2.2 CORNER GUARDS (Refer to Schedule. Note: All of the following products may not be used on this project.)

- A. **Type WP-1: Surface Metal Stainless Steel Corner Guard:**
 - 1. **Design:** Surface applied with adhesive.
 - 2. **Material:** Type 304 Stainless Steel with 1-1/2 inch wide flanges each leg. No. 4 brushed finish.
 - 3. **Height:** 48 inches, or to bottom of chairrail where chairrail is indicated.
 - 4. **Thickness:** 16 gage.
 - 5. **Finish:** No. 4 Satin.
 - 6. **Method of Attachment:** Adhesive.
 - 7. **Basis of Design:** IPC; Model 181124C-304.
- B. **WP-2: Stainless Steel Surface Mounted End Wall Protection Channels:**
 - 1. **Type:** 304 SS.
 - 2. **Size:** As required with 3" return leg on each side of wall.
 - 3. **Height:** Full height of wall.
 - 4. **Basis of Design:** IPC; 427 end wall protection.

2.3 WALL GUARDS

- A. **WP-3: Acrylic Wall Guard:**
 - 1. **Size:** 5" tall with radiused profile.
 - 2. **Material:** 0.080 inch acrylic.
 - 3. **Basis of Design:** Construction Specialties; SCN50 with matching end caps.
 - 4. **Color:** To be selected by Architect from manufacturer's full and complete color lines including metal tones and standard solid colors

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions and proceed with Work in accordance with Section 014300.
- B. Verify that substrate finishes are complete and attachment devices in hollow walls are accurately located.

3.2 INSTALLATION

- A. Install using skilled workmen in accordance with manufacturer's printed instructions.
- B. Located devices as shown on the Drawings or as determined in the field by the Architect.
- C. Stop corner guards at heights indicated. If no heights are indicated, carry device full height of wall. Terminate 48 inch tall units at underside of chairrail where chairrail is present.
- D. Provide wood blocking at locations with screw attachment.
- E. **Attach as recommended by manufacturer.**

1. Provide wood blocking in wall as required.
- 3.3 ADJUSTING
- A. On flush mounted devices, verify that device is flush with adjacent wall surface. Adjust as required for proper fit and appearance.
- 3.4 CLEANING
- A. Remove protective coverings on devices only at final cleaning stage.
- 3.5 SCHEDULE
- A. **Corner Guards:**
 1. **Type WP-1 (Surface Mounted Stainless Steel):**
 - a. Provide on all outside corners of walls in public and high traffic areas as indicated on Drawings, or if none shown, provide 300 units. Confirm final locations with Design Architect.
 - b. Verify height with Architect. At chairrail locations, terminate at bottom of chairrail unless instructed otherwise by Architect.
 2. **Type WP-2 (Surface Mounted End of Wall Protection):**
 - c. Provide end of wall protection at all locations indicated on Drawings, or, if none shown, provide 150 units. Confirm height and final locations with Architect.
 - B. **Wall Guards:**
 1. **Type WP-3 (Vinyl Wall Guard):**
 - a. Provide continuous bumper rail at all Corridor, Laboratory and Health professions department walls in Building. Verify final locations on Drawings and with Architect.
 - b. Verify mounting height with Architect.

END OF SECTION

SECTION 102813

TOILET ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SECTION INCLUDES

- A. **Toilet accessories**
- B. **Attachment hardware and related trim**

1.3 SUBMITTALS

- A. **Product Data:** Submit manufacturer's catalog cut sheets, data sheets, installation instructions, maintenance data, and operating instructions.

1.4 QUALITY ASSURANCE

- A. Regulatory Requirements
 - 1. **Conform to ANSI A117.1, Texas Accessibility Standards, and Americans With Disabilities Act** (or local code if more stringent requirement is applicable) for installing work for accessibility to the disabled.

1.5 SEQUENCING AND SCHEDULING

- A. Coordinate work with placement of wall reinforcement and reinforcement/fabrication of toilet partitions to receive anchor attachments. Supply rough-in data in sufficient time to be built into other work.
- B. Do not install accessories until room finishes are completed.
- C. **Provide all necessary wood blocking and/or steel structure to support toilet accessories as part of this scope of work.**

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Sheet Steel: ASTM A 366, commercial quality.
- B. Zinc Coating: ASTM A 123.
- C. Chrome Plating: ASTM B 456, Type SC2.
- D. Stainless Steel Sheet: ASTM A 167.
- E. Stainless Steel Tubing: ASTM A 269, stainless steel.
- F. Fasteners, Screws, and Bolts: Hot dip galvanized ASTM A386 where concealed; finish to match device where exposed.
- G. Expansion Shields: Type as recommended by accessory manufacturer for component and substrate.

2.2 BASIS OF DESIGN

- A. Multi-roll Toilet Paper Dispenser: Wausau Paper; 772169.
- B. Paper Towel Dispenser: Wausau Paper; Opti-Serv Hybrid, 77510.
- C. Soap Dispenser: Gojo; LTX12, black, and integral mounted Gojo drip tray.

2.3 PUBLIC-USE WASHROOM ACCESSORIES

- A. **Acceptable Manufacturers:** Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Bobrick Washroom Equipment, Inc.
- B. **Toilet Tissue (Roll) Dispenser (TA-1)** at Multi-Fixture Restrooms: (OFCI)
1. **Basis of Design:** Bobrick B-27460, surface mounted.
 2. Description: Double roll dispenser without controlled delivery; lockable spindles.
 3. Accessible: Yes.
 4. Operation: Non-controlled delivery with theft resistant spindles.
 5. Capacity: Two rolls of up to 6 inch diameter.
 6. Material and Finish: Stainless steel, #4 finish (satin).
- C. **Toilet Tissue Dispenser (TA-2)** at Gypsum Board Walls of Individual Restrooms and Stalls:
1. **Basis of Design:** Bobrick B-6977.
 2. **Mounting:** Recessed.
 3. Description: Double roll dispenser.
 4. Accessible: Yes.
 5. Operation: Non-controlled delivery.
 6. Capacity: Two rolls of up to 5 inch diameter.
 7. Material and Finish: Stainless steel, #4 finish (satin).
- D. **Touchless Soap Dispenser (TA-3):** (OFCI)
1. **Basis of Design:** Bobrick B-826.18 with 826.20 power adapter and one case of 4 bottles.
 2. Power: 120v.
 3. Provide all electrical circuiting back to electrical panel for these units whether or not shown on Drawings.
- E. **Grab Bar, One-Piece (TA-4):**
1. **Basis-of-Design:** Bobrick; B-6897 42" x 54" x 1-1/2".
 2. Mounting: Flanges with concealed fasteners.
 3. Material: Type 304 Stainless steel, 0.05 inch thick.
 - a. Finish: Smooth, No. 4, satin finish.
 4. Outside Diameter: 1-1/2 inches.
 5. Configuration and Length: 42 x 54 inches, one-piece construction.
- F. **Sanitary-Napkin Disposal Unit (TA-5):**
1. **Basis-of-Design:** Bobrick; B-353 (recessed type at tiled wall conditions); B-254 (surface mounted type at toilet partition conditions)
 2. **Mounting:**
 - a. **Recessed type:** At tiled wall locations.
 - b. **Partition mounted:** At toilet partition locations.
 3. Door or Cover: Self-closing disposal-opening cover and hinged face panel with tumbler lockset.
 4. Receptacle: Removable.
 5. Material and Finish: Stainless steel, No. 4 finish (satin).
- G. **Waste Receptacle (TA-6):** (DELETED FROM PROJECT - REPLACE WITH Opti-Serve Hybrid paper towel dispenser (OFCI))
1. **Basis-of-Design:** Bobrick; B-369 with optional 369-130 Towelmate (recessed type) for single user toilets.
 2. Mounting: Recessed 4 inches into cavity.
 3. Capacity: 2 gallons.
 4. Receptacle: Removable.
 5. Material and Finish: Stainless steel, No. 4 finish (satin).
 6. 350 C-Fold Towels or 475 Multi-Fold Towels.

- H. **Combination Paper Towel Dispenser and Waste Receptacle (TA-7) for Public Toilets:** (DELETED FROM PROJECT - REPLACE WITH Opti-Serve Hybrid paper towel dispenser (OFCI))
1. **Basis of Design:** Bobrick B-3947 with optional 369-130 Towelmate.
 2. **Mounting: Recessed type.** Note unit requires 4 inch into cavity.
 3. Capacity:
 - a. Waste: 18 gal.
 - b. Towels: 600 C-fold or 800 multi-fold.
 4. Stainless steel No.4 finish 9 (satin).
- I. **Air Dryers (TA08): (Not Used)**
1. **Basis-of-Design:** Dyson; Airblade dB AB14.
 2. Case: Polycarbonate ABS plastic with antimicrobial coating.
 3. Touch-free operation.
 4. Electrical Characteristics: 120-127V 50 & 60 Hz.
 5. Motor Speed: 92,000 RPM.
 6. **Color:** As selected by Architect.

2.4 OTHER BATHROOM ACCESSORIES

- A. **Acceptable Manufacturers:** Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Ameror.
 2. Bobrick Washroom Equipment, Inc.
 3. American Specialties, Inc.
 4. Basco.
 5. Bradley Corporation.
 6. Harneu Hardware.
 7. Taymor.
 8. Freedom Showers
 9. Danze
 10. KR Specialities
 11. Accessible Environments
- B. **Toilet Tissue (Roll) Dispenser (TA-9): (Not Used)**
1. **Basis of Design:** Taymor 01.2608 Satin Stainless Steel.
- C. **Shower Curtain Rod (TA-10): (Not Used)**
1. **Basis-of-Design:** Bobrick; B-207.
 2. Outside Diameter: 1-1/4 inch(32 mm).
 3. Mounting: Flanges with concealed fasteners.
 4. Rod Material and Finish: Stainless steel, No. 4 finish (satin).
 5. Flange Material and Finish: Stainless steel, No. 4 finish (satin).
 6. Accessories: Integral chrome-plated brass glide hooks.
- D. **Double 18" Towel Bar (TA-11): (Not Used)**
1. **Basis-of-Design:** Danze Sirius 18" (3 1/2" x 22") Satin Stainless Steel.
- E. **Robe Hook (TA-12): (Not Used)**
1. **Basis-of-Design:** Bobrick; B-6727.
 2. Description: Double-prong unit.
 3. Material and Finish: Stainless steel, No. 4 finish (satin).
- F. **Single 24" Towel Bar (TA-13): (Not Used)**
1. **Basis of Design:** Taymor 01.2624.
 2. Description: 3/4-inch-(19-mm-) square tube with rectangular end brackets.
 3. Mounting: Flanges with concealed fasteners.
 4. Length: 24 inches.
 5. Material and Finish: Stainless steel, No. 4 finish (satin).
- G. **Folding Shower Seat (TA-14): (Not Used)**

1. **Basis-of-Design** Product: Freedom Showers/Accessible Professionals Folding Shower Seat APCSSB-30015PWS White (30" x 15").
 2. Configuration: L-shaped seat, designed for wheelchair access.
 3. Seat: Phenolic or polymeric composite of slat-type or one-piece construction in color as selected by Architect.
 4. Mounting Mechanism: Stainless steel, No. 4 finish (satin).
 5. Dimensions: 30 inches wide by 15 inches deep.
- H. **Shower Curtain and Hooks (TA-15): (Not Used)**
1. Shower Curtain Material: Opaque, matte white vinyl 008" (0.2mm) thick.
 - a. **Basis-of-Design:** Bobrick; B-204-2.
 2. Shower Curtain Hooks Material: Stainless steel.
 - a. **Basis-of-Design:** Bobrick; B-204-1.
 - 1) Substitutions: In accordance with the requirements of Section 012500.
- I. **Baby Changing Station (TA-16): (Not Used)**
1. **Basis-of-Design:** Koala Kare; KB110-SSRE.
 2. Mounting: Recessed type.
 3. Orientation: Horizontal.
 4. Material and Finish: Stainless steel, No. 4 finish (satin).
- J. **Double 24" Towel Bar (TA-17): (Not Used)**
1. **Basis-of-Design:** Danze Sirius 24" (7" x 24") Satin Stainless Steel.
 2. Mounting: Concealed fastener under surface flange.
 3. Length: 24 inches.
 4. Configuration: Double bar.
 5. Material and Finish: Stainless steel, No. 4 finish (satin).
- K. **12" Grab Bar (TA-18): (Not Used)**
1. **Basis of Design:** Taymor 01.C220012 Satin Stainless Steel.
- L. **24" Grab Bar (TA-19): (Not Used)**
1. **Basis of Design:** Taymor 01.C220024 Satin Stainless Steel.
- M. **36" Grab Bar (TA-20): (Not Used)**
1. **Basis of Design:** Taymor 01.C220036 Satin Stainless Steel.
- N. **42" Grab Bar (TA-21): (Not Used)**
1. **Basis of Design:** Taymor 01.C220042 Satin Stainless Steel.
- O. **Fold Up Tub Seat (TA-22): (Not Used)**
1. **Basis of Design:** CD Sparling FTB-28; 28"; white.
- P. **Weighted Shower Curtain for Accessible Showers (TA-23):** Accessible Environments # CURT0005-66W x 74H x 72" for 60" shower. Provide with collapsible water dam by KR Specialties model # New Generation 66" with end caps.

2.5 UNDERLAVATORY GUARDS

- A. **Acceptable Manufacturers:** Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Plumberex Specialty Products, Inc.
 2. Truebro, Inc.
- B. **Underlavatory Guard (TA-24): Provide at all exposed hot water piping and drains whether or not indicated on Drawings.**
1. **Basis-of-Design:** Plumberex; Handy-Shield Maxx.
 2. Description: Insulating pipe covering for supply and drain piping assemblies, that prevent direct contact with and burns from piping, and allow service access without removing coverings.
 3. Material and Finish: Antimicrobial, molded-plastic, white.

2.6 CUSTODIAL ACCESSORIES

- A. **Acceptable Manufacturers:** Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Bobrick Washroom Equipment, Inc.
 - 2. Bradley Corporation.
- B. **Mop Holder with Shelf (TA-25):**
 - 1. **Basis-of-Design:** Bobrick; B-224x 36
 - 2. Description: Unit with shelf, hooks, holders, and rod suspended beneath shelf.
 - 3. Length: 36 inches(914 mm).
 - 4. **Hooks:** Three.
 - 5. **Mop/Broom Holders:** Four, spring-loaded, rubber hat, cam type.
 - 6. Material and Finish: Stainless steel, No. 4 finish (satin).
 - a. **Shelf:** Not less than nominal 0.05-inch-(1.3-mm-) thick stainless steel.
 - b. **Rod:** Approximately 1/4-inch-(6-mm-) diameter stainless steel.

2.7 MIRRORS

- A. **Acceptable Manufacturers:** Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Bobrick Washroom Equipment, Inc.
 - 2. Bradley Corporation.
- B. **24 inch wide by 36 inch high (TA-26):**
 - 1. **Basis of Design:** Bobrick B165 2436.
 - 2. Description: Stainless steel channel frame with 1/4 inch thick glass.
 - 3. Set at height meeting ADA requirements.

2.8 FABRICATION

- A. Weld and grind smooth joints of fabricated components.
- B. Form exposed surfaces from single sheet of stock, free of joints.
- C. Form surfaces flat without distortion. Maintain flat surfaces without scratches or dents.
- D. Back paint components where contact is made with building finishes to prevent electrolysis.
- E. Shop assemble components and package complete with anchors and fittings.
- F. Provide steel anchor plates, adapters, and anchor components for installation.
- G. Manufacturer's identification tags or marks are not acceptable on surfaces that will remain exposed to view after installation.
 - 1. Evidence of "patching" after removal of tags or marks is not acceptable.

2.9 FACTORY FINISHING

- A. Galvanizing: ASTM A 123 to 1.25 ounces per square foot.
- B. Chrome/Nickel Plating: ASTM B 456, Type SC 2 polished finish.
- C. **Stainless Steel:** No. 4 satin luster finish.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. **Examine site conditions to ensure that required blocking, wall thicknesses, and supports are provided prior to ordering units. If wall thicknesses are not sufficient, notify Architect for instruction prior to ordering units. Proceed with Work in accordance with Section 014300.**
- B. Verify that site conditions are ready to receive work and dimensions are as indicated on shop drawings and instructed by the manufacturer.
- C. Check openings for plumbness of blocking and frames.
- D. Beginning of installation means acceptance of existing conditions.

3.2 PREPARATION

- A. Deliver inserts and rough-in frames to site at appropriate time for building-in.
- B. Provide templates and rough-in measurements as required.
- C. Verify exact location of accessories for installation.
- D. Protect adjacent or adjoining finished surfaces and work from damage during installation.

3.3 INSTALLATION

- A. Install using skilled workmen in accordance with manufacturers' printed instructions.
- B. Install plumb and level, securely and rigidly anchored to substrate.
- C. Locate accessories in order that they do not interfere with door swings or use of fixtures. Install recessed accessories after wall finishes have been completed.
- D. Anchor accessories with bolts, plates, and approved type fasteners. Take down any loose items and repair damaged wall surfaces.
- E. Mount surface mounted accessories to backup material with toggle bolts, plumb and align.
- F. Anchor grab bars to drywall with concealed 16 gage steel anchor plates.

3.4 SCHEDULE (refer to Drawings for additional requirements and locations of toilet accessories)

- A. **Public Restrooms:** Provide the following at each Public Restroom:
 - 1. One TA-1 double toilet tissue dispenser at each toilet.
 - 2. One TA-3 touchless soap dispenser at each lavatory.
 - 3. One TA-4 grab bar at each handicapped toilet.
 - 4. One TA-5 sanitary napkin disposal unit for each female toilet.
 - 5. One TA-7 combination paper towel and waste receptacle.
 - 6. One TA-24 undercounter lavatory guard at each lavatory.
 - 7. One trash receptacle adjacent to entry door. Material only allowance of \$80.00 each.
- B. **Individual and Private Restrooms:** Provide the following at each Individual or Private Restroom:
 - 1. One TA-4 grab bar.
 - 2. One TA-3 touchless soap dispenser.
 - 3. One TA-2 toilet tissue dispenser.
 - 4. One TA-7 combination paper towel and waste receptacle.
 - 5. One TA-24 undercounter lavatory guard.
 - 6. One TA-26 24 by 36 inch framed mirror set at an accessible height unless a lighted mirror is called for on RCP's.
 - 7. One trash receptacle adjacent to entry door. Material only allowance of \$80.00 each.
- C. **Janitor Rooms:** Provide two TA-25 mop holders at each Janitor Closet. Place one over mop sink. Refer to drawings for other locations.
- D. **Underlavatory Guards:** Provide TA-24 underlavatory guards at all exposed water pipes and drains below accessible lavatories and sinks.

END OF SECTION

SECTION 104400
FIRE PROTECTION SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SECTION INCLUDES

- A. **Fire extinguishers.**
- B. **Recessed fire extinguisher cabinets.**
- C. **Mounting hardware and accessories.**
- D. **Fire Control Key Box.**

1.3 SUBMITTALS

- A. General: Submit in accordance with Section 013300.
- B. **Product Data:** Include physical dimensions, operational features, color and finish, anchorage details, material descriptions and type of hardware.
- C. **Shop Drawings:** Include rough-in measurements, locations, and details for cabinets.

1.4 OPERATION AND MAINTENANCE DATA

- A. Submit under provisions of Section 017800.
- B. Maintenance Data: Include test, refill or recharge schedules and re-certification requirements.

1.5 QUALITY ASSURANCE

- A. Single Source Responsibility: Obtain products in this Section from one manufacturer.
- B. Certifications
 - 1. Provide extinguishers which are U.L. listed and bear the U.L. "Listing Work" for type, rating, and classification.
 - 2. Conform to NFPA-10 requirements for extinguishers.
 - 3. Provide units conforming with ANSI/UL 711.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle products in accordance with Section 016000.
- B. Store extinguishers in protected location until after final cleaning is completed.

1.7 PROJECT/SITE CONDITIONS

- A. Environmental Requirements: Do not store products subject to freeze damage in environments where damage could occur.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Acceptable Manufacturers**
 - 1. Larsens Manufacturing Co.
 - 2. J. L. Industries.
 - 3. Walter Kidde & Co.
 - 4. Note: Larsen's used as a standard of quality in products below where model numbers or styles are indicated.

2.2 FIRE EXTINGUISHERS

- A. **Multi-purpose dry chemical type** U.L. 299, (ammonium phosphate), with pressure gauge. Provide one of the following:
 - 1. **Type A:** MP-10, unless otherwise required by AHJ.
 - 2. **Type B:** If the local fire official determines a larger capacity is required, then provide as required by local AHJ.

2.3 CABINETS

- A. **Cabinet: Basis of Design:** Larsen's model "Occult" series with clear acrylic glazing. Formed sheet stainless steel, 20 gage, **recessed**, size to accommodate accessories.
 - 1. **Type A:** 02409 (6-1/4 inch deep). (Not Used)
 - 2. **Type B:** 03216 (8-1/4 inch deep).
- B. **Trim:** 3/4-inch wide face, stainless steel fully recessed.
- C. **Door: Stainless steel, #4 finish 20 gage thick**, reinforced for flatness and rigidity; latch access.
 - 1. **Glazing:** Clear acrylic.
 - 2. **Style: Vertical Duo Door** with vision panel.
- D. **Mounting Hardware:** Appropriate to cabinet.

2.4 ACCESSORIES

- A. **Fire Extinguisher Surface Mounting Brackets:** Where called for on the Drawings or as otherwise required, provide "B" series full length wall brackets, size as required for cylinder used.

2.5 FIRE CONTROL KEY BOX

- A. Provide one recessed fire department key control box, equal to model 3264 by Knox.
 - 1. Include recessed mounting trim accessories.
 - 2. Determine final location with Fire Marshal.
 - 3. Finish: Clear anodized aluminum.

2.6 FINISHES

- A. **Extinguisher:** Red enamel.
- B. **Cabinet trim and door: Type 304 stainless steel # 4 finish.**

2.7 SCHEDULE

- A. **Provide at all locations as indicated on Drawings and as required by code. Provide and locate such that an FEC is always within 75 ft. of all occupiable space within the building whether or not shown on Drawings.**

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions and proceed with Work in accordance with Section 014300.
- B. Beginning of installation indicates acceptance of existing conditions.

3.2 INSTALLATION

- A. Install using skilled workmen in accordance with manufacturer's printed instructions.
- B. Securely attach cabinets and mounting brackets in place to framed rough opening.
- C. Verify acceptable location, type & size of extinguisher with local fire officials before beginning work.

3.3 IDENTIFICATION

- A. Identify fire extinguisher locations with the following methods
 - 1. **Horizontal silk-screened text turned 90 degrees on stainless steel doors, spelling "FIRE EXTINGUISHER" in red color applied to cabinet door.**

END OF SECTION

SECTION 105123

PLASTIC-LAMINATE-CLAD LOCKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established within General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. Section includes plastic-laminate-clad wood lockers.

1.3 SUBMITTALS

- A. **Product Data:** For each type of plastic-laminate-clad wood locker.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of locker.
- B. **Shop Drawings:** For plastic-laminate-clad wood lockers.
 - 1. Include plans, elevations, sections, details, and attachments to other work.
 - 2. Show details full size.
 - 3. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 - 4. Show locations and sizes of cutouts and holes for items installed in lockers.
 - 5. Show locker fillers, trim, base, sloping tops, and accessories.
 - 6. Show locker numbering sequence.
- C. **Samples for Initial Selection:** For the following:
 - 1. High-pressure decorative laminates.
 - 2. Thermoset decorative overlay panels.
- D. **Samples for Verification:** For the following products:
 - 1. Plastic-laminate-clad panels, not less than 8 by 10 inches, for each type, color, pattern, and surface finish, with separate samples of unfaced panel product used for core.
 - 2. Thermoset decorative-overlay-surfaced panels, not less than 8 by 10 inches, for each type, color, pattern, and surface finish.
 - 3. Exposed cabinet hardware and accessories, one unit for each type and finish.
- E. **Maintenance Data:** For adjusting, repairing, and replacing locker doors and latching mechanisms to include in maintenance manuals.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver lockers until painting and similar operations that could damage lockers have been completed in installation areas. If lockers must be stored in other-than-installation areas, store only in areas where environmental conditions are the same as those in final installation location, and comply with requirements specified in "Field Conditions" Article.

1.5 FIELD CONDITIONS

- A. **Environmental Limitations:** Do not deliver or install lockers until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between 43 and 70 percent during the remainder of the construction period.
- B. **Field Measurements:** Where lockers are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Locate concealed framing, blocking, and reinforcements that support lockers by field measurements before being enclosed, and indicate measurements on Shop Drawings.
- C. **Established Dimensions:** Where lockers are indicated to fit to other construction, establish dimensions for areas where lockers are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.6 WARRANTY

- A. **Special Warranty:** Manufacturer agrees to repair or replace components of lockers that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures.
 - b. Faulty operation of locks or hardware.
 - c. Deterioration of wood and other materials beyond normal use.
 2. Warranty Period: **Three years** from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Accessibility Requirements: For lockers indicated to be accessible, comply with applicable regulations indicated on the Drawings.

2.2 PLASTIC-LAMINATE-CLAD WOOD LOCKERS

- A. **Construction Style:** Flush overlay.
 1. Reveal Dimension: 1/2 inch.
- B. **Locker Body:** Fabricated from particleboard-core panels covered on both sides with thermoset decorative overlay.
 1. Side Panels: Manufacturer's standard 3/4 or 5/8 inch thick.
 2. Back Panel: Manufacturer's standard 1/2 or 3/8 inch thick.
 3. Top Panel: [Manufacturer's standard 3/4 or 5/8 inch thick.
 4. Bottom Panel: [Manufacturer's standard 3/4 or 5/8 inch thick.
 5. Exposed Panel Edges: 3-mm-thick PVC.
- C. **Plastic-Laminate-Clad Wood Doors:** High-pressure decorative laminate, Grade VGS, over both sides of particleboard core.
 1. Thickness: Manufacturer's standard 3/4 or 5/8 inch thick.
 2. Panel Edges: 3-mm-thick PVC.
- D. **End Panels:** Match style, material, construction, and finish of plastic-laminate-clad wood doors.
- E. **Shelves:** Fabricated from particleboard-core panels covered on both sides with thermoset decorative overlay; fixed.
 1. Thickness: 5/8 inch.
 2. Exposed Edges: 3-mm-thick PVC.
- F. **Drawer Faces:** Match style, material, construction, and finish of plastic-laminate-clad wood doors. Attach drawer faces to subfronts with mounting screws from drawer interior.
- G. **Drawer Subfronts, Sides, and Backs:** Fabricated from particleboard-core panels covered on both sides with thermoset decorative overlay.
 1. Thickness: 3/8 inch.
 2. Exposed Edges: 3 mm thick PVC.
- H. **Drawer Bottoms:** 1/4 inch thick, thermoset decorative overlay over particleboard core.
- I. **Corners and Filler Panels:** 3/4 inch) thick panels. Match style, material, construction, and finish of plastic-laminate-clad wood doors.
- J. **Continuous Finish Base:** Plastic-laminate-clad, 3/4 inch thick panel that matches door faces; fabricated in lengths as long as practical to enclose base and base ends of lockers.
- K. **Plastic-Laminate Colors, Patterns, and Finishes:** As selected by Architect from plastic-laminate manufacturer's full range of colors and patterns.

2.3 MATERIALS

- A. **Composite Wood:** Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.
 - 1. Particleboard: ANSI A208.1, Grade M-2-Exterior Glue.
 - 2. Thermoset Decorative Panels: Particleboard or medium-density fiberboard finished with thermally fused, melamine-impregnated decorative paper and complying with requirements of NEMA LD 3, Grade VGL, for Test Methods 3.3, 3.4, 3.6, 3.8, and 3.10.
- B. **High-Pressure Decorative Laminate:** NEMA LD 3, grades as follows:
 - 1. Horizontal Surfaces: Grade HGL.
 - 2. Vertical Surfaces: Grade HGS.
- C. **Furring, Blocking, Shims, and Hanging Strips:** Softwood or hardwood lumber, kiln dried to less than 15 percent moisture content.
- D. **Anchors:** Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.
- E. **Wood Support Base:** 2 by 4 inch nominal-size lumber.

2.4 HARDWARE

- A. General: Provide manufacturer's standard locker hardware complying with the requirements in this Section.
- B. **Padlock Hasp:** Surface mounted, steel; finished to match other locker hardware.
- C. **Frameless Hinges (European Type):** Fully concealed, nickel-plated steel, with not less than 125 degrees of opening.
 - 1. Provide three hinges.
- D. **Wire Pulls:** Back mounted; 5 inches long, 2-1/2 inches deep, and 5/16 inch in diameter.
- E. **Accessible Handle:** Metal, fixed, graspable lever handle and rose trim; surface mounted.
- F. **Hooks:** Manufacturer's standard, ball-pointed aluminum or steel; chrome finished. Attach hooks with at least two fasteners.
 - 1. Provide hooks as indicated on Drawings.
 - 2. Provide one double-prong ceiling hook and two single-prong wall hooks for eRetain one of two "Exposed Hardware Finishes" paragraphs below. First paragraph is manufacturers' standard. See Evaluations.
- G. **Exposed Hardware Finishes:** Polished chrome unless otherwise indicated.

2.5 ACCESSORIES

- A. **Number Plates:** 1-1/2 inch diameter, etched, embossed, or stamped, aluminum plates with black numbers and letters at least 1/2 inch high. Identify lockers in sequence indicated on Drawings. Finish plates to match other locker hardware.

2.6 FABRICATION

- A. **Configuration: Two tier.**
- B. Fabricate each locker with shelves, an individual door and frame, an individual top, a bottom, and a back, and with common intermediate uprights separating compartments.
 - 1. Fabricate lockers to dimensions, profiles, and details indicated.
 - 2. Ease edges of corners of solid-wood members to 1/16 inch radius.
- C. Fabricate components square, rigid, without warp, and with finished faces flat and free of scratches and chips. Accurately factory machine components for attachments. Make joints tight and true.
 - 1. Fabricate lockers using manufacturer's standard construction, with joints made with dowels, dados, or rabbets. Dado side panels to receive shelving except where indicated to be adjustable.
- D. Accessible Lockers: Fabricate as follows:
 - 1. Locate bottom shelf no lower than 15 inches above the floor.

2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches above the floor.
- E. Venting: Fabricate lockers with space between doors and locker assembly of not less than 1/4 inch.
- F. Number Plates: Inlay number plates flush in each locker door, near top, centered.
- G. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 1. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended, and check measurements of assemblies against field measurements indicated on Shop Drawings before disassembling for shipment.
- H. Shop cut openings, to maximum extent possible, to receive hardware, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
- I. Attach PVC edging to panels by thermally fusing edging to panels after panel fabrication.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls, floors, and support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Verify that furring is attached to concrete and masonry walls that are to receive lockers.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Condition lockers to average prevailing humidity conditions in installation areas before installation.
- B. Before installing lockers, examine factory-fabricated work for completeness and complete work as required, including removal of packing.

3.3 INSTALLATION

- A. Assemble knocked-down lockers with manufacturer's standard fasteners, with no exposed fasteners on face frames.
- B. Install lockers level, plumb, and true; use concealed shims.
- C. Connect groups of lockers together with manufacturer's standard fasteners, through predrilled holes, with no exposed fasteners on face frames. Fit lockers accurately together to form flush, tight, hairline joints.
- D. Install lockers without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings, providing unencumbered operation. Complete installation of hardware and accessory items as indicated.
 1. Installation Tolerance: No more than 1/8 inch in 96 inch sag, bow, or other variation from a straight line. Shim as required with concealed shims.
- E. Locker Anchorage: Fasten wood lockers through back, near top and bottom, at ends with No. 8 flush-head wood screws sized for 1 inch penetration into wood framing, blocking, or furring and spaced not more than 16 inches o.c.
- F. Scribe and cut corner and filler panels to fit adjoining work using fasteners concealed where practical. Repair damaged finish at cuts.
- G. Install number plates after lockers are in place.
 1. Attach number plate on each locker door, near top, centered, with at least two screws with finish matching number plate.

3.4 ADJUSTING, CLEANING, AND PROTECTION

- A. Clean, lubricate, and adjust hardware. Adjust doors to operate easily without binding.
- B. Protect lockers from damage, abuse, dust, dirt, stain, or paint. Do not permit use during construction.
- C. Touch up marred finishes, or replace lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by locker manufacturer.

END OF SECTION

SECTION 108113
BIRD CONTROL DEVICES

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- 1.2 **SUMMARY**
 - A. **Section Includes:**
 - 1. **Stainless steel bird spikes.**
- 1.3 **SUBMITTALS**
 - A. **Product Data:** Manufacturer's data of product indicated.
- 1.4 PRODUCT DELIVERY
 - A. Deliver materials in factory packages with factory labels attached.
 - B. Cover and protect material in transit and at job site. Damaged or defaced material will be rejected and replaced at no cost to the Owner.

PART 2 - PRODUCTS

- 2.1 **MANUFACTURER**
 - A. **Basis of Design:** Bird-B-Gone; Stainless Steel Pigeon Spikes; width to fit conditions.
- 2.2 **MATERIALS**
 - A. **Plastic Bird Spikes:**
 - 1. Material: Stainless steel.
 - 2. Mounting Method: Non-silicone based construction adhesive.

PART 3 - EXECUTION

- 3.1 EXAMINATION
 - A. Examine substrates, areas, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of work.
 - B. Do not proceed until unsatisfactory conditions have been corrected.
- 3.2 INSTALLATION
 - A. Comply with manufacturer's written installation instructions, and specifications unless more stringent requirements are indicated.
 - B. Install to cover entire depth of mounting surface; follow contours and angles closely; cut or break away to fit properly.
- 3.3 **SCHEDULE**
 - A. Provide a minimum of 500 L. F. at locations to be determined with Architect.

END OF SECTION

SECTION 113100

RESIDENTIAL APPLIANCES

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Provisions established in General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.
- 1.2 **SECTION INCLUDES**
 - A. **Residential appliances.**
 - B. **All required electrical cords, anchors, and accessories for Residential Appliances**
 - C. **Accessible and Energy Star products.**
- 1.3 SUBMITTALS
 - A. **Product Data:** List model numbers and pertinent performance and size data.
- 1.4 DELIVERY, STORAGE AND HANDLING
 - A. Deliver, store, and handle material in accordance with Section 016000.
 - B. Keep materials in original packing until final installation and hook up.
 - C. Do not deliver to site until immediately prior to installation, or as otherwise approved by Owner.

PART 2 - PRODUCTS

- 2.1 **MANUFACTURERS**
 - A. **Basis-of-Design:** General Electric unless otherwise noted below.
 - B. **Note: All products shall be Energy Star and ADA compliant.**
- 2.2 ELECTRICAL REQUIREMENTS
 - A. Fabricate and assemble products in strict conformity with the requirements of the Underwriter's Laboratories, Inc.
 - B. Provide under and over voltage protection.
 - C. Each item shall bear the appropriate label of the Underwriter's Laboratories, Inc.
- 2.3 **APPLIANCES**
 - A. **Refrigerator / Freezer (Top Freezer) with Ice Maker (ADA Compliant):**
 - 1. **Basis of Design:** GE; Model No. GIE21GSHSS.
 - 2. Capacity: 21.2 cu. ft.
 - 3. Finish: Stainless steel
 - B. **Electric Range with cooktop: (Not Used)**
 - 1. **Basis of Design:** GE; Model No. JS630SFSS.
 - 2. Burner Type: Smooth radiant.
 - C. **Dishwasher (ADA Compliant):**
 - 1. **Basis of Design:** Asko; D5426XL.
 - 2. Tub: Stainless steel.
 - 3. Seven spray wash system, convection dry, 50 dBA.
 - 4. Finish: Stainless steel.
 - 5. Size: approximately 32" x 23" x 22"
 - D. **Countertop Microwave Oven (Loose equipment):**
 - 1. **Basis of Design:** GE; Model No. PEB7226SFSS.
 - 2. Capacity: 2.2 cu. ft.
 - 3. Size: approximately 24" x 14" x 20"

- E. **Undercounter Microwave Oven: (Not Used)**
 - 1. **Basis of Design:** GE; Model No. PVM9179SFSS.
 - 2. **Capacity:** 1 cu. ft.
- F. **Undercounter Refrigerator: (Not Used)**
 - 1. **Basis of Design:** N/A
- G. **Washing Machine (Front Loading Model, ADA Compliant):**
 - 1. **Basis of Design:** GE; Model No. GFW480SSKWW (ADA Compliant).
 - 2. **Capacity:** 4.9 cu. Ft
 - 3. **Color:** White
 - 4. **Size:** approximately 28" x 39" x 34"
- H. **Dryer (Front Loading Model, ADA Compliant):**
 - 1. **Basis of Design:** GE; Model No. GFD48ESSKWW.
 - 2. **Capacity:** 8.3 cu. ft.
 - 3. **Color:** White
 - 4. **Size:** approximately 28" x 39" x 34"

PART 3 - EXECUTION

- 3.1 **PREPARATION**
 - A. Verify that built-in and finish work is complete and ready for appliance installation.
 - B. Verify electrical and plumbing requirements are correct.
 - C. Verify openings for built-in items are correct.
 - D. Beginning of installation indicates acceptance of existing conditions.
 - E. Provide anti-tip devices on ranges.
- 3.2 **INSTALLATION**
 - A. Install all items in locations indicated and/or as directed.
 - B. Provide competent foreman as supervisor for the installation, and to coordinate with other trades in regard to connections and installations.
 - C. Kitchen equipment shall be installed, tested and adjusted by skilled mechanics.
 - D. Complete all required connections to units in accordance with applicable codes.
- 3.3 **CLEAN UP/START-UP**
 - A. Remove all debris and wipe down all appliances.
 - B. Start-up and run all units through one complete cycle to ensure proper operation. Adjust as required. Replace any malfunctioning equipment prior to substantial completion.
- 3.4 **SCHEDULE**
 - A. Contractor shall provide and install each of the following pieces of Residential Appliances on the Project.
 - 1. **Student Lounge 140**
 - a. (1) Full Size Refrigerator with Top Freezer with Ice Maker (ADA)
 - b. (1) Dishwasher (ADA)
 - c. (1) Countertop Microwave
 - 2. **Laundry 141**
 - a. (1) Washing Machine (ADA)
 - b. (1) Dryer (ADA)
 - 3. **Break Room 211**
 - a. (1) Full Size Refrigerator with Top Freezer with Ice Maker (ADA)
 - b. (1) Dishwasher (ADA)
 - c. (1) Countertop Microwave
 - 4. **Break Room 307**
 - d. (1) Full Size Refrigerator with Top Freezer with Ice Maker (ADA)
 - e. (1) Dishwasher (ADA)

- f. (1) Countertop Microwave
- 5. **Kitchenette 413**
 - g. (1) Full Size Refrigerator with Top Freezer with Ice Maker (ADA)
 - h. (1) Countertop Microwave
- 6. **Break Room 424**
 - i. (1) Full Size Refrigerator with Top Freezer with Ice Maker (ADA)
 - j. (1) Dishwasher (ADA)
 - k. (1) Countertop Microwave
- 7. **Break Room 433**
 - l. (1) Full Size Refrigerator with Top Freezer with Ice Maker (ADA)
 - m. (1) Dishwasher (ADA)
 - n. (1) Countertop Microwave
- 8. **Break Room 443**
 - o. (1) Full Size Refrigerator with Top Freezer with Ice Maker (ADA)
 - p. (1) Dishwasher (ADA)
 - q. (1) Countertop Microwave

END OF SECTION

SECTION 117300
PATIENT CARE EQUIPMENT

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- 1.2 **SUMMARY**
 - A. **Section Includes:** Patient care equipment.
- 1.3 **PREINSTALLATION MEETINGS**
 - A. Preinstallation Conference: Conduct conference at Project site.
- 1.4 **SUBMITTALS**
 - A. **Product Data:** Manufacturer's data of product indicated.
 - B. Shop Drawings:
 - 1. Include plans, elevations, sections, and details.
 - 2. Include details of components. Indicate location and size of each field connection.
 - 3. Include diagrams for service connections and power, signal, and control wiring.
 - C. **Operation and Maintenance Data:** For products to include in operation and maintenance manuals.
- 1.5 **PRODUCT DELIVERY**
 - A. Deliver materials in factory packages with factory labels attached.
 - B. Cover and protect material in transit and at job site. Damaged or defaced material will be rejected and replaced at no cost to the Owner.

PART 2 - PRODUCTS

- 2.1 **MANUFACTURER**
 - A. Basis of Design:
 - 1. **Horizontal Headwall:** Modular Services Co.; Single Tier Silhouette III, Model 8510.
 - 2. **Vertical Headwall:** Modular Services Co.; Dual Single Sided Extended Profile Unit, Model 7112.
 - 3. **Twin Articulating Arm Headwall:** Dual Stratus Series 5830; Model 5832-D.
 - 4. **Single Articulating Arm Headwall:** Stratus Series 5830, Model 5832.
 - 5. **Bed Docker:** Modular Services Co.; BD601.
- 2.2 **PATIENT-BED LOCATORS**
 - A. Bed Docker: Surface-mounted docking station with conduit raceway provisions for eight power-service connections, four on each side, that is UL listed and labeled and complying with NFPA 70, and that ensures proper positioning of patient beds and protects wall surfaces from impact and abrasion damage caused by contact with patient bed.
- 2.3 **PATIENT-BED HEADWALLS**
 - A. Patient-Bed HeadWall: Headwall system; UL listed and labeled; complying with NFPA 70 and NFPA 99; with integrated raceways that provide single-area connection for power services and communication wiring and single connection for hard-piped and brazed medical gas piping.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Do not proceed until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with manufacturer's written installation instructions, and specifications unless more stringent requirements are indicated.
- B. Patient-Bed Dockers:
 - 1. Install bed dockers level and plumb, according to manufacturer's written instructions.
 - 2. Accurately fit, align, securely fasten, and install bed dockers free from distortion or defects.
- C. Patient-Bed Headwalls:
 - 1. Install service walls level and plumb, according to manufacturer's written instructions.
 - 2. Accurately fit, align, securely fasten, and install service walls free from distortion or defects.

3.3 PROTECTION

- A. Protect installed products from damage for the remainder of the construction period.
- B. Repair damaged products according to manufacturer's written instructions. If damaged products cannot be successfully repaired, as determined by Architect, remove and replace damaged products.

3.4 SCHEDULE

A. Base Bid:

- 1. 201A - Nursing Sim #1: Stratus Series 5830.
- 2. 201B - Nursing Sim #2: Stratus Series 5830.
- 3. 201C - Nursing Sim #3: Stratus Series 5830.
- 4. 201D - Nursing Sim #4: Dual Single Sided Extended Profile Unit, Model 7112 with Bed Docker BD601.
- 5. 260 - IPE Sim: Stratus Series 5830.
- 6. 255A - R. C. Sim #1: Dual Single Sided Extended Profile Unit, Model 7112.
- 7. 255B - R. C. Sim #1: Dual Single Sided Extended Profile Unit, Model 7112.
- 8. 360A - Skills Bed #9: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.
- 9. 360B - Skills Bed #10: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.
- 10. 360C - Skills Bed #11: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.
- 11. 360D - Skills Bed #12: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.
- 12. 360E - Skills Bed #13: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.

B. Alternate #4:

- 1. 201E - Nursing Sim #5: Dual Single Sided Extended Profile Unit, Model 7112 with Bed Docker BD601.
- 2. 201F - Nursing Sim #6: Dual Single Sided Extended Profile Unit, Model 7112 with Bed Docker BD601.
- 3. 201G - Nursing Sim #7: Dual Single Sided Extended Profile Unit, Model 7112 with Bed Docker BD601.
- 4. 201H - Nursing Sim #8: Dual Single Sided Extended Profile Unit, Model 7112 with Bed Docker BD601.
- 5. 250A - R. C. Sim #1: Single Tier Silhouette III, Model 8510.
- 6. 250B - R. C. Sim #1: Single Tier Silhouette III, Model 8510.
- 7. 250C - R. C. Sim #1: Single Tier Silhouette III, Model 8510.
- 8. 250D - R. C. Sim #1: Single Tier Silhouette III, Model 8510.
- 9. 255C - R. C. Sim #1: Dual Single Sided Extended Profile Unit, Model 7112.
- 10. 255D - R. C. Sim #1: Dual Single Sided Extended Profile Unit, Model 7112.

11. 305 - Clinic: Single Tier Silhouette III, Model 8510.
12. 306 - Clinic: Single Tier Silhouette III, Model 8510.
13. 350A - Skills Bed #1: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.
14. 350B - Skills Bed #2: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.
15. 350C - Skills Bed #3: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.
16. 350D - Skills Bed #4: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.
17. 350E - Skills Bed #5: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.
18. 350F - Skills Bed #6: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.
19. 350G - Skills Bed #7: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.
20. 350H - Skills Bed #8: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.
21. 360F - Skills Bed #14: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.
22. 360G - Skills Bed #15: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.
23. 360H - Skills Bed #16: Single Tier Silhouette III, Model 8510 with Bed Docker BD601.

END OF SECTION

SECTION 122413

ROLLER WINDOW SHADES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. **Section Includes:**
 - 1. **Manual roller shades**
 - 2. **Motorized shade operators.**
 - 3. **Blackout Roller Shades (Not used).**

1.3 SUBMITTALS

- A. General: Submit in accordance with Section 007013 and Section 013100.
- B. **Product Data:** For each type of product indicated. Include styles, material descriptions, construction details, dimensions of individual components and profiles, features, finishes, and operating instructions.
 - 1. **Manual Shade Operators.**
 - 2. **Motorized Shade Operators:** Include operating instructions.
 - 3. **Motors:** Show nameplate data, ratings, characteristics, and mounting arrangements.
- C. **Shop Drawings:** Show location and extent of roller shades. Include elevations, sections, details, and dimensions not shown in Product Data. Show installation details, mountings, attachments to other work, operational clearances, and relationship to adjoining work.
 - 1. **Manual Shade Operators:** Elevate and schedule each window shade size, shape and location within the building using same room number designations used on drawings.
 - 2. **Motorized Shade Operators:** Show locations and details for installing operator components, switches, and controls. Indicate motor size, electrical characteristics, drive arrangement, mounting, and grounding provisions.
 - 3. **Wiring Diagrams:** Power, system, and control wiring.
- D. **Coordination Drawings:** Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 - 1. Ceiling suspension system members and attachment to building structure.
 - 2. Ceiling-mounted or penetrating items including light fixtures, air outlets and inlets, speakers, sprinklers, recessed shades, and special moldings at walls, column penetrations, and other junctures of acoustical ceilings with adjoining construction.
 - 3. Shade mounting assembly and attachment.
 - 4. Size and location of access to shade operator, motor, and adjustable components.
 - 5. Minimum Drawing Scale: 1/4 inch = 1 foot (1:48).
- E. **Samples for Initial Selection:** For each colored component of each type of shade indicated.
 - 1. Include similar Samples of accessories involving color selection.
- F. **Samples for Verification:**
 - 1. **Complete, full-size operating unit** not less than 16 inches wide for each type of roller shade indicated.
 - 2. **For the following products:**
 - a. **Shade Material For Initial Selection:** Not less than 3 inches square, with specified treatments applied for all manufacturer's complete line of products, for Architect's initial selection. Mark face of material.
 - b. **Shade Material:** Not less than three 12-inch-square sections of fabric selected by the Architect for the project, from dye lot used for the Work, with specified treatments applied. Show complete pattern repeat. Mark top and face of material.

- G. **Maintenance Data:** For roller shades to include in maintenance manuals. Include the following:
1. Methods for maintaining roller shades and finishes.
 2. Precautions about cleaning materials and methods that could be detrimental to fabrics, finishes, and performance.
 3. Operating hardware.
 4. Motorized shade operator.

1.4 **QUALITY ASSURANCE**

- A. **Installer Qualifications:** Approved by Fabricator of products, with **10 years experience installing specified products.**
- B. **Source Limitations:** Obtain roller shades through one source from a single manufacturer.
- C. **Fire-Test-Response Characteristics:** Provide roller shade band materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
1. Flame-Resistance Ratings: Passes NFPA 701.
- D. **Product Standard:** Provide roller shades complying with WCMA A 100.1.
- E. **Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.**
1. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
 2. Do not purchase remainder of shade fabric until approval of mock-up has been received.

1.5 **DELIVERY, STORAGE, AND HANDLING**

- A. Deliver shades in factory packages, marked with manufacturer and product name, and location of installation using same designations indicated on Drawings and in a window treatment schedule.

1.6 **PROJECT CONDITIONS**

- A. **Environmental Limitations:** Do not install roller shades until construction and wet and dirty finish work in spaces, including painting, is complete and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. **Field Measurements:** Where roller shades are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operable glazed units' operation hardware throughout the entire operating range. Notify Architect of discrepancies. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.7 **EXTRA MATERIALS**

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. **Rollers Shades:** Provide extra fabric shade replacements for each size, color, texture, and pattern indicated in full-size units equal to a minimum of 2 percent of the amount installed.

PART 2 - PRODUCTS

2.1 **ROLLER SHADES**

- A. **Basis of Design:**
1. **Manufacturer:** MechoShade Systems, Inc.
 2. **Manual Operation:** Mecho/5, single shade.
 3. **Motorized Operation:** Electro/3, single shade.
- B. **Acceptable Manufacturers:** Subject to compliance with Basis of Design requirements above, other manufacturers products that may be incorporated into the Work include, but are not

limited to, the following:

1. Draper Inc.
 2. Hunter Douglas Contract.
 3. Lutron Electronics Co., Inc.
 4. MechoShade Systems, Inc.
 5. Nysan Solar Control Inc.; Hunter Douglas Company.
 6. Silent Gliss USA, Inc.
- C. **Shade Band Material:** PVC-coated fiberglass.
1. **Pattern, Style, Color, Screening Percentage:** To be selected by Architect from manufacturer's full and complete line of products.
 2. **Bottom Hem:** Straight.
- D. **Rollers:** Electro-galvanized or epoxy primed steel or extruded-aluminum tube of diameter and wall thickness required to support and fit internal components of operating system and the weight and width of shade band material without sagging; designed to be easily removable from support brackets; with manufacturer's standard method for attaching shade material. Provide capacity for two roller shade band(s) per roller, unless otherwise indicated on Drawings.
- E. **Direction of Roll:** Regular, from back of roller.
- F. **Mounting Brackets:** Fascia end caps, fabricated from steel finished to match fascia or headbox.
- G. **Fascia:** L-shaped, formed-steel sheet or extruded aluminum; long edges returned or rolled; continuous panel concealing front and bottom of shade roller, brackets, and operating hardware and operators; length as indicated; removable design for access.
- H. **Top/Back Cover:** L-shaped; material and finish to match fascia; combining with fascia and end caps to form a six-sided headbox enclosure sized to fit shade roller and operating hardware inside.
- I. **Bottom Bar:** Steel or extruded aluminum, with plastic or metal capped ends. Provide-type bottom bar with concealed weight bar as required for smooth, properly balanced shade operation.
- J. **Audiovisual Light-Blocking (Blackout) Shades (Not Used):** Designed for eliminating all visible light gaps when shades are fully closed; fabricated from blackout shade band material with fascia headbox pocket and bottom bar extended and formed for light-tight joints among shade components and between shade components and adjacent construction.
1. **Side Channels, Sill Channel or Angle, and Perimeter Seals:** Manufacturer's standard design, including sill light seal attached to bottom bar, for eliminating light gaps when shades are closed.
 2. **Shade Band Retention System:** Manufacturer's standard design for guiding shade band material through range of travel and holding shade band flat with edges of material within side channels.
- K. **Mounting:** Recessed in ceiling above windows (confirm final mounting type in the field on mock-up with Architect).
- L. **Hold-Down Brackets and Hooks or Pins:** Manufacturer's standard for fixing shade in place, keeping shade band material taut, and reducing light gaps when shades are closed.
- M. **Shade Operation: Manual;** with continuous-loop bead-chain, clutch, and cord tensioner and bracket lift operator.
1. **Pull:** Manufacturer's standard hand-grip engaged pull.
 2. **Clutch:** Capacity to lift size and weight of shade; sized to fit roller or provide adaptor.
 3. **Lift-Assist Mechanism:** Manufacturer's standard spring assist for balancing roller shade weight and lifting heavy roller shades.
 4. **Loop Length:** Length required to make operation convenient from floor level.
 5. **Bead Chain:** Nickel-plated metal or stainless steel.

2.2 ROLLER SHADE FABRICATION

- A. **Product Description:** Roller shade consisting of a roller, a means of supporting the roller, a flexible sheet or band of material carried by the roller, a means of attaching the material to the roller, a bottom bar, and an operating mechanism that lifts and lowers the shade.

- B. **Concealed Components:** Non-corrodible or corrosion-resistant-coated materials.
 - 1. Lifting Mechanism: With permanently lubricated moving parts.
- C. **Unit Sizes:** Obtain units fabricated in sizes to fill window and other openings as follows, measured at 74 deg F:
 - 1. **Shade Units Installed between (Inside) Jambs or Mullions:** Edge of shade not more than 1/8 inch from face of jamb or mullion. Length equal to head to sill dimension of opening in which each shade is installed.
 - 2. **Shade Units Installed Outside Jambs:** Width and length as indicated, with terminations between shades of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.
- D. **Installation Brackets:** Designed for easy removal and reinstallation of shade, for supporting fascia, headbox, roller, and operating hardware and for hardware position and shade mounting method indicated.
- E. **Installation Fasteners:** No fewer than two fasteners per bracket, fabricated from metal non-corrosive to shade hardware and adjoining construction; type designed for securing to supporting substrate; and supporting shades and accessories under conditions of normal use.
- F. **Color-Coated Finish:** For metal components exposed to view, apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.
- G. **Colors of Metal and Plastic Components Exposed to View:** As selected by Architect from manufacturer's full and complete line of products. Refer to Document 008900, Finish Selection Summary.

2.3 **MOTORIZED ROLLER SHADE OPERATORS**

- A. **Acceptable Manufacturers:** Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Manufacturer of manual operation roller shade.
 - 2. Elero USA Inc.
 - 3. SIMU US, Inc.
 - 4. SOMFY Systems.
- B. **General:** Provide factory-assembled motorized shade operation systems designed for lifting shades of type, size, weight, construction, use, and operation frequency indicated. Provide operation systems of size and capacity and with features, characteristics, and accessories suitable for Project conditions and recommended by shade manufacturer, complete with electric motors and factory-prewired motor controls, remote-control stations, remote-control devices, power disconnect switches, enclosures protecting controls and all operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with the building electrical system.
- C. Comply with NFPA 70.
- D. **Control Equipment:** Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6[with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc].
- E. **Electric Motors:** UL-approved or -recognized, totally enclosed, insulated motor, complying with NEMA MG 1, with thermal-overload protection, brake, permanently lubricated bearings, and limit switches; sized by shade manufacturer to start and operate size and weight of shade considering service factor or considering Project's service conditions without exceeding nameplate ratings.
 - 1. **Service Factor:** According to NEMA MG 1, unless otherwise indicated.
 - 2. **Motor Characteristics:** Single phase, 110 V, 60 Hz.
 - 3. **Motor Mounting:** Within manufacturer's standard roller enclosure.
- F. **Position of Motor and Electrical Connection:** Left side of roller, as determined by hand of user facing shade from inside, unless otherwise indicated on Drawings.
- G. **Remote Controls:** Electric controls with NEMA ICS 6, Type 1 enclosure for recessed or flush mounting. Provide the following devices for remote-control activation of shades:
 - 1. **Control Stations:** Keyed, -contact, three-position, switch-operated control station with

- open, close, and off functions. Provide two keys per station.
2. **Individual/Group Control Stations:** Momentary-contact, three-position, rocker-style, wall switch-operated control station with open, close, and center off functions for individual and group control.
 - a. **Color:** Bright White.
 - b. **Product:** Subject to compliance with requirements, provide "**Decora Plus**" by **Leviton Manufacturing Co. Inc.** or equal.
 - H. **Limit Switches:** Adjustable switches, interlocked with motor controls and set to automatically stop shade at fully raised and fully lowered positions.
 - I. **Operating Function:** Stop and hold shade at any position.
 - J. **Operating Features:** Include the following:
 1. Group switching with integrated switch control; single face plate for multiple switch cut-outs.
 - K. **Power / Circuiting:** Provide electrical power/circuitry from a panel approved by the electrical engineer, to provide a complete and total system whether or not power/circuitry is shown on the Drawings.
 - L. Program and provide relay required to connect to hand-held touch screen control device used in Council Chambers and Executive Council Room.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, accurate locations of connections to building electrical system, and other conditions affecting performance.
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 ROLLER SHADE INSTALLATION

- A. Install roller shades between window mullions, level, plumb, and aligned with adjacent units according to manufacturer's written instructions. Locate so shade band is not closer than 2 inches to interior face of glass. Allow clearances for window operation hardware.

3.3 ADJUSTING

- A. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

3.4 CLEANING AND PROTECTION

- A. Clean roller shade surfaces after installation, according to manufacturer's written instructions.
- B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that roller shades are without damage or deterioration at time of Substantial Completion.
- C. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain roller shades. Refer to Division 01 Section Demonstration and Training."

3.6 SCHEDULE

- A. **Manual Roller Shades with Solar Shade Fabric:** Refer to locations called for in Section 008900 - Finish Selections Summary.
- B. **Motorized Roller Shades with Solar Shade Fabric:** Refer to locations called for in Section 008900 - Finish Selections Summary.
- C. **Roller Shades with Blackout Fabric (Not Used)**

END OF SECTION

SECTION 123640

QUARTZ AGGLOMERATE COUNTERTOPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established within General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section includes quartz agglomerate countertops.**

1.3 SUBMITTALS

- A. **Product Data:** For each accessory and manufactured product.
- B. **Shop Drawings:**
 - 1. Include plans, sections, details, and attachments to other work.
 - 2. Show locations and details of joints.
 - 3. Show direction of veining, grain, or other directional pattern.
- C. **Samples for Verification:** For each quartz agglomerate type indicated, in sets of Samples not less than 12 inches square.
 - 1. Include three or more Samples in each set and show the full range of variations in appearance characteristics expected in the completed Work.
- D. **Maintenance Data:** For quartz countertops to include in maintenance manuals. Include product data for care products used or recommended by Installer, and names, addresses, and telephone numbers of local sources for products.

1.4 QUALITY ASSURANCE

- A. **Fabricator Qualifications:** Shop that employs skilled workers who custom-fabricate quartz countertops similar to that required for this Project, and whose products have a record of a **minimum of 10 years successful in-service performance with specified product.**
- B. **Installer Qualifications:** Fabricator of quartz countertops with a **minimum 10 years successful experience fabricating and installing specified products.**
- C. **Mockups:** Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and execution.
 - 1. Build mockup of typical countertop as shown on Drawings.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store and handle quartz and related materials to prevent deterioration or damage due to moisture, temperature changes, contaminants, corrosion, breaking, chipping, and other causes.
 - 1. Lift quartz with wide-belt slings; do not use wire rope or ropes that might cause staining. Move quartz agglomerate, if required, using dollies with cushioned wood supports.
 - 2. Store quartz on wood A-frames or pallets with nonstaining, waterproof covers. Arrange to distribute weight evenly and to prevent damage to quartz agglomerate. Ventilate under covers to prevent condensation.

1.6 FIELD CONDITIONS

- A. **Field Measurements:** Verify dimensions of construction to receive quartz countertops by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. **Source Limitations:** Obtain quartz from a single source with resources to provide materials of consistent quality in appearance and physical properties.

2.2 QUARTZ AGGLOMERATE COUNTERTOP MATERIALS

- A. **Quartz Agglomerate:** Solid sheets consisting of quartz aggregates bound together with a matrix of filled plastic resin and complying with ICPA SS-1, except for composition.
 - 1. **Colors and Patterns:** As indicated in Document 008900 - Finish Selection Summary.

2.3 COUNTERTOP FABRICATION

- A. Fabricate countertops according to quartz agglomerate manufacturer's written instructions and the AWI/AWMAC/WI's "Architectural Woodwork Standards."
 - 1. **Grade:** Premium.
- B. **Configuration:**
 - 1. **Front:** 1-1/2 inch laminated bullnose.
 - 2. **Backsplash:** Straight.
 - 3. **End Splash:** Match backsplash.
- C. **Countertops:** 3 cm thick, quartz agglomerate laminated to 3/4 inch thick plywood substrate (marine grade at wet locations).
- D. **Backsplashes:** 2 cm thick, quartz agglomerate.
- E. Fabricate tops with shop-applied edges and backsplashes unless otherwise indicated. Comply with quartz agglomerate manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
 - 1. Fabricate with loose backsplashes for field assembly.
- F. **Joints:** Fabricate countertops without joints.
- G. **Cutouts and Holes:**
 - 1. **Undercounter Plumbing Fixtures:** Make cutouts for fixtures in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.
 - a. Provide vertical edges, slightly eased at juncture of cutout edges with top and bottom surfaces of countertop and projecting 3/16 inch (5 mm) into fixture opening.
 - b. Provide vertical edges, rounded to 3/8-inch (10-mm) radius at juncture of cutout edges with top surface of countertop, slightly eased at bottom, and projecting 3/16 inch (5 mm) into fixture opening.
 - c. Provide 3/4-inch (20-mm) full bullnose edges projecting 3/8 inch (10 mm) into fixture opening.
 - 2. **Counter-Mounted Plumbing Fixtures:** Prepare countertops in shop for field cutting openings for counter-mounted fixtures. Mark tops for cutouts and drill holes at corners of cutout locations. Make corner holes of largest radius practical.
 - 3. **Fittings:** Drill countertops in shop for plumbing fittings, undercounter soap dispensers, and similar items.
 - 4. **Counter-Mounted Cooktops (Not Used):** Prepare countertops in shop for field cutting openings for cooktops. Mark tops for cutouts and drill holes at corners of cutout locations. Make corner holes of largest radius practical.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates to receive quartz agglomerate countertops and conditions under which quartz agglomerate countertops will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of quartz agglomerate countertops.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of quartz agglomerate countertops.

- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Advise installers of other work about specific requirements for placement of inserts and similar items to be used by quartz agglomerate countertop Installer for anchoring quartz agglomerate countertops. Furnish installers of other work with Drawings or templates showing locations of these items.
- B. Before installing quartz agglomerate countertops, clean dirty or stained quartz agglomerate surfaces by removing soil, stains, and foreign materials. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives and rinse with clear water. Allow quartz agglomerate to dry before installing.

3.3 CONSTRUCTION TOLERANCES

- A. **Variation from Level:** Do not exceed 1/8 inch in 96 inches, 1/4 inch maximum.
- B. **Variation in Joint Width:** Do not vary joint thickness more than one-fourth of nominal joint width.
- C. **Variation in Plane at Joints (Lipping):** Do not exceed 1/64 inch difference between planes of adjacent units.
- D. **Variation in Line of Edge at Joints (Lipping):** Do not exceed 1/64 inch difference between edges of adjacent units, where edge line continues across joint.

3.4 INSTALLATION OF COUNTERTOPS

- A. Fasten subtops to cabinets by screwing through subtops into cornerblocks of base cabinets. Shim as needed to align subtops in a level plane.
- B. Install countertops over subtops with full spread of water-cleanable epoxy adhesive.
- C. Install countertops by adhering to supports with water-cleanable epoxy adhesive.
- D. Do not cut quartz agglomerate in field unless otherwise indicated. If quartz agglomerate countertops or splashes require additional fabrication not specified to be performed at Project site, return to fabrication shop for adjustment.
- E. Do necessary field cutting as quartz agglomerate is set. Use power saws with diamond blades to cut quartz agglomerate. Cut lines straight, true, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.
- F. Set quartz agglomerate to comply with requirements indicated. Shim and adjust quartz agglomerate to locations indicated, with uniform joints of widths indicated and with edges and faces aligned according to established relationships and indicated tolerances. Install anchors and other attachments indicated or necessary to secure quartz agglomerate countertops in place.
- G. Bond joints with quartz agglomerate adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.
 - 1. Install metal splines in kerfs in quartz agglomerate edges at joints. Fill kerfs with quartz agglomerate adhesive before inserting splines and remove excess immediately after adjoining units are drawn into position.
 - 2. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.
- H. Space joints with 1/16 inch gap for filling with sealant. Use temporary shims to ensure uniform spacing.
 - 1. Install metal splines in kerfs in quartz agglomerate edges at joints. Fill kerfs with setting adhesive before inserting splines and remove excess immediately after adjoining units are drawn into position.
 - 2. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.
- I. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Use power saws with diamond blades to cut quartz agglomerate. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.
- J. Install backsplashes and end splashes by adhering to countertops with quartz agglomerate adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears.

Leave 1/16 inch gap between splashes and wall for filling with sealant. Use temporary shims to ensure uniform spacing.

- K. Install backsplashes and end splashes by adhering to wall with water-cleanable epoxy adhesive. Leave 1/16 inch gap between countertop and splashes for filling with sealant. Use temporary shims to ensure uniform spacing.
- L. Grout joints to comply with ANSI A108.10. Remove temporary shims before grouting. Tool grout uniformly and smoothly with plastic tool.
- M. Apply sealant to joints and gaps specified for filling with sealant; comply with Section 079200 "Joint Sealants." Remove temporary shims before applying sealant.

3.5 ADJUSTING AND CLEANING

- A. In-Progress Cleaning: Clean countertops as work progresses. Remove adhesive, grout, mortar, and sealant smears immediately.
- B. Remove and replace quartz agglomerate countertops of the following description:
 - 1. Broken, chipped, stained, or otherwise damaged quartz agglomerate. Quartz agglomerate may be repaired if methods and results are approved by Architect.
 - 2. Defective countertops.
 - 3. Defective joints, including misaligned joints.
 - 4. Interior quartz agglomerate countertops and joints not matching approved Samples and mockups.
 - 5. Interior quartz agglomerate countertops not complying with other requirements indicated.
- C. Replace in a manner that results in quartz agglomerate countertops matching approved Samples and mockups, complying with other requirements, and showing no evidence of replacement.
- D. Clean quartz agglomerate countertops no fewer than six days after completion of sealant installation, using clean water and soft rags. Do not use wire brushes, acid-type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that may damage quartz agglomerate.
- E. Sealer Application: Apply quartz agglomerate sealer to comply with quartz agglomerate producer's and sealer manufacturer's written instructions.

3.6 SCHEDULE

- A. Provide quartz countertops, vertical trim and backsplashes at the following locations:
 - 1. Reception desks at Nursing Department offices at 4th floor and Dental Hygiene at 1st floor.
 - 2. Dental Operatories in Dental Hygiene.
 - 3. Countertops at all Breakrooms and Nursing Stations in Labs.
 - 4. Dental Hygiene Locker Room countertops.
 - 5. Window sills throughout (2 cm).
 - 6. Refer to Drawings and finish plans for additional locations.

END OF SECTION

SECTION 123646

SOLID SURFACING COUNTERTOPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Provisions established within General and Supplementary Conditions of the Contract, Division 01 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. **Section includes solid surfacing countertops.**

1.3 SUBMITTALS

- A. **Product Data:** For each accessory and manufactured product.
- B. **Shop Drawings:**
 - 1. Include plans, sections, details, and attachments to other work.
 - 2. Show locations and details of joints.
 - 3. Show direction of veining, grain, or other directional pattern.
- C. **Samples for Verification:** For each solid surfacing type indicated, in sets of Samples not less than 12 inches square.
 - 1. Include three or more Samples in each set and show the full range of variations in appearance characteristics expected in the completed Work.
- D. **Maintenance Data:** For solid surfacing countertops to include in maintenance manuals. Include product data for care products used or recommended by Installer, and names, addresses, and telephone numbers of local sources for products.

1.4 QUALITY ASSURANCE

- A. **Fabricator Qualifications:** Shop that employs skilled workers who custom-fabricate solid surfacing similar to that required for this Project, and whose products have a record of a **minimum of 10 years successful in-service performance with specified product.**
- B. **Installer Qualifications:** Fabricator of solid surfacing countertops with a **minimum 10 years successful experience fabricating and installing specified products.**
- C. **Mockups:** Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and execution.
 - 1. Build mockup of typical countertop as shown on Drawings.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store and handle solid surfacing and related materials to prevent deterioration or damage due to moisture, temperature changes, contaminants, corrosion, breaking, chipping, and other causes.
 - 1. Lift solid surfacing with wide-belt slings; do not use wire rope or ropes that might cause staining. Move solid surfacing, if required, using dollies with cushioned wood supports.
 - 2. Store solid surfacing on wood A-frames or pallets with nonstaining, waterproof covers. Arrange to distribute weight evenly and to prevent damage to solid surfacing. Ventilate under covers to prevent condensation.

1.6 FIELD CONDITIONS

- A. **Field Measurements:** Verify dimensions of construction to receive solid surfacing countertops by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 SOLID SURFACE COUNTERTOP MATERIALS

- A. **Solid Surface Material:** Homogeneous-filled plastic resin complying with ICPA SS-1.
 - 1. Type: Provide veneer type.
 - 2. Integral Sink Bowls: Comply with CSA B45.5/IAPMO Z124.
 - 3. **Colors and Patterns:** As indicated in Document 008900 - Finish Selection Summary.

2.2 COUNTERTOP FABRICATION

- A. Fabricate countertops according to solid surfacing manufacturer's written instructions and the AWI/AWMA/WI's "Architectural Woodwork Standards."
 - 1. **Grade:** Premium.
- B. **Configuration:**
 - 1. **Front:** 1-1/2 inch laminated bullnose.
 - 2. **Backsplash:** Straight.
 - 3. **End Splash:** Match backsplash.
- C. **Countertops:** 3 cm thick, solid surfacing laminated to 3/4 inch thick plywood substrate (marine grade at wet locations).
- D. **Backsplashes:** 2 cm thick, solid surfacing.
- E. Fabricate tops with shop-applied edges and backsplashes unless otherwise indicated. Comply with solid surfacing manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
 - 1. Fabricate with loose backsplashes for field assembly.
- F. **Joints:** Fabricate countertops without joints.
- G. **Cutouts and Holes:**
 - 1. **Undercounter Plumbing Fixtures:** Make cutouts for fixtures in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.
 - a. Provide vertical edges, slightly eased at juncture of cutout edges with top and bottom surfaces of countertop and projecting 3/16 inch (5 mm) into fixture opening.
 - b. Provide vertical edges, rounded to 3/8-inch (10-mm) radius at juncture of cutout edges with top surface of countertop, slightly eased at bottom, and projecting 3/16 inch (5 mm) into fixture opening.
 - c. Provide 3/4-inch (20-mm) full bullnose edges projecting 3/8 inch (10 mm) into fixture opening.
 - 2. **Counter-Mounted Plumbing Fixtures:** Prepare countertops in shop for field cutting openings for counter-mounted fixtures. Mark tops for cutouts and drill holes at corners of cutout locations. Make corner holes of largest radius practical.
 - 3. **Fittings:** Drill countertops in shop for plumbing fittings, undercounter soap dispensers, and similar items.
 - 4. **Counter-Mounted Cooktops (Not Used):** Prepare countertops in shop for field cutting openings for cooktops. Mark tops for cutouts and drill holes at corners of cutout locations. Make corner holes of largest radius practical.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates to receive solid surfacing countertops and conditions under which solid surfacing countertops will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of solid surfacing countertops.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of solid surfacing countertops.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Advise installers of other work about specific requirements for placement of inserts and similar items to be used by solid surfacing countertop Installer for anchoring solid surfacing countertops. Furnish installers of other work with Drawings or templates showing locations of these items.
- B. Before installing solid surfacing countertops, clean dirty or stained solid surfacing surfaces by removing soil, stains, and foreign materials. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives and rinse with clear water. Allow solid surfacing to dry before installing.

3.3 CONSTRUCTION TOLERANCES

- A. **Variation from Level:** Do not exceed 1/8 inch in 96 inches, 1/4 inch maximum.
- B. **Variation in Joint Width:** Do not vary joint thickness more than one-fourth of nominal joint width.
- C. **Variation in Plane at Joints (Lipping):** Do not exceed 1/64 inch difference between planes of adjacent units.
- D. **Variation in Line of Edge at Joints (Lipping):** Do not exceed 1/64 inch difference between edges of adjacent units, where edge line continues across joint.

3.4 INSTALLATION OF COUNTERTOPS

- A. Fasten subtops to cabinets by screwing through subtops into cornerblocks of base cabinets. Shim as needed to align subtops in a level plane.
- B. Install countertops over subtops with full spread of water-cleanable epoxy adhesive.
- C. Install countertops by adhering to supports with water-cleanable epoxy adhesive.
- D. Do not cut solid surfacing in field unless otherwise indicated. If solid surfacing countertops or splashes require additional fabrication not specified to be performed at Project site, return to fabrication shop for adjustment.
- E. Do necessary field cutting as solid surfacing is set. Use power saws with diamond blades to cut solid surfacing. Cut lines straight, true, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.
- F. Set solid surfacing to comply with requirements indicated. Shim and adjust solid surfacing to locations indicated, with uniform joints of widths indicated and with edges and faces aligned according to established relationships and indicated tolerances. Install anchors and other attachments indicated or necessary to secure solid surfacing countertops in place.
- G. Bond joints with solid surfacing adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.
 - 1. Install metal splines in kerfs in solid surfacing edges at joints. Fill kerfs with solid surfacing adhesive before inserting splines and remove excess immediately after adjoining units are drawn into position.
 - 2. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.
- H. Space joints with 1/16 inch gap for filling with sealant. Use temporary shims to ensure uniform spacing.
 - 1. Install metal splines in kerfs in solid surfacing edges at joints. Fill kerfs with setting adhesive before inserting splines and remove excess immediately after adjoining units are drawn into position.
 - 2. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.
- I. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Use power saws with diamond blades to cut solid surfacing. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.
- J. Install backsplashes and end splashes by adhering to countertops with solid surfacing adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears. Leave 1/16 inch gap between splashes and wall for filling with sealant. Use temporary shims to ensure uniform spacing.

- K. Install backsplashes and end splashes by adhering to wall with water-cleanable epoxy adhesive. Leave 1/16 inch gap between countertop and splashes for filling with sealant. Use temporary shims to ensure uniform spacing.
- L. Grout joints to comply with ANSI A108.10. Remove temporary shims before grouting. Tool grout uniformly and smoothly with plastic tool.
- M. Apply sealant to joints and gaps specified for filling with sealant; comply with Section 079200 "Joint Sealants." Remove temporary shims before applying sealant.

3.5 ADJUSTING AND CLEANING

- A. In-Progress Cleaning: Clean countertops as work progresses. Remove adhesive, grout, mortar, and sealant smears immediately.
- B. Remove and replace solid surfacing countertops of the following description:
 - 1. Broken, chipped, stained, or otherwise damaged solid surfacing. Solid surfacing may be repaired if methods and results are approved by Architect.
 - 2. Defective countertops.
 - 3. Defective joints, including misaligned joints.
 - 4. Interior solid surfacing countertops and joints not matching approved Samples and mockups.
 - 5. Interior solid surfacing countertops not complying with other requirements indicated.
- C. Replace in a manner that results in solid surfacing countertops matching approved Samples and mockups, complying with other requirements, and showing no evidence of replacement.
- D. Clean solid surfacing countertops no fewer than six days after completion of sealant installation, using clean water and soft rags. Do not use wire brushes, acid-type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that may damage solid surfacing.
- E. Sealer Application: Apply solid surfacing sealer to comply with solid surfacing producer's and sealer manufacturer's written instructions.

END OF SECTION

SECTION 102123

CUBICLE CURTAINS AND TRACKS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUBMITTALS

- A. **Product Data:** Submit manufacturer's specifications to evidence compliance with these specifications.
- B. **Shop Drawings:**
 - 1. Show details of the system, related construction and reflected layout of ceiling areas showing location of tracks in relation to other ceiling mounted items.
 - 2. Indicate materials, finishes, dimensions, thicknesses and/or gages of parts, reinforcement, where applicable, and anchorage including items of hardware and accessories necessary for complete installation.
- C. **Samples for Verification:**
 - 1. Curtain: Full size sample.
 - 2. Track: 12 inch long track with end caps and curtain carriers.
- D. **Cubicle Schedule:** Use same room designations as indicated on Drawings.
- E. **Maintenance Data:** For inclusion in maintenance manual required by Division 01.
 - 1. Include manufacturer's instructions for maintenance of installed Work, including methods and frequency recommended for maintaining optimum condition under anticipated use.
 - 2. Include precautions against cleaning products and methods which may be detrimental to finishes and performance.

1.3 MAINTENANCE

- A. **Extra Materials:** Furnish as described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Curtain Carriers: Full-size units equal to 3 percent of amount installed for each size indicated.
 - 2. Curtains: Two.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis of Design: Refer to **Section 008900 - Finish Selections Summary**.
- B. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents, provide product by one of manufacturers named alphabetically below. If not named, submit as substitution according to Conditions of the Contract and appropriate Division 01 Sections.
 - 1. AR Nelson Co.
 - 2. Construction Specialties, Inc.
 - 3. Imperial Fastener Co.
 - 4. In Pro Corp.
 - 5. Salsbury Industries.

2.2 CUBICLE CURTAINS

- A. **Curtain Fabric:** Product that is equivalent to color, texture, pattern, finish, appearance, and material quality characteristics indicated by basis of design selection.
- B. **Curtain Construction:**

1. Flame Resistance: Comply with NFPA 701.
2. **Curtain Top:** Not less than 20 inch wide nylon mesh with 1/2 inch holes; overlap seams and double-lock stitch to body of curtain.
3. **Width:** Equal to track length plus 10 percent.
4. **Length:** Equal to floor-to-ceiling height minus 20 inches from finished ceiling at top and 12 to 15 inches above finished floor.
5. **Top Hem:** Not less than 1 inch and not more than 1-1/2 inch wide, triple thickness, reinforced with integral web and double stitched; 2 piece, rolled edge, corrosion resistant, nickel-plated brass grommets spaced not more than 6 inches on centers.
6. **Bottom and Side Hems:** Not less than 1 inch wide, reinforced, triple thickness and single stitched.
7. **Seams:** Not less than 1/2 inch wide, double turned and double stitched.

2.3 CURTAIN TRACKS

- A. **Extruded-Aluminum Track:** Not less than 1-1/4 inches wide by 3/4 inch high, with minimum wall thickness of 0.058 inch.
 1. Curved Track: Factory fabricated 12 inch radius bends.
 2. Finish: Clear anodized.
- B. **Track Accessories:** Fabricate splices, end caps, connectors, end stops, coupling and joining sleeves, wall flanges, brackets, ceiling clips, and other accessories from same material and with same finish as track.
- C. **Curtain Carriers:** Two nylon rollers and nylon axle with chrome-plated steel, stainless steel, or aluminum hook with nickel plated steel beaded chain curtain drop.
- D. **Exposed Fasteners:** Stainless steel.
- E. **Concealed Fasteners:** Hot-dip galvanized.

2.4 IV SUPPORT SYSTEMS

- A. **Extruded-Aluminum IV Track:** Not less than 1-1/4 inches wide by 3/4 inch high; with minimum wall thickness of 0.058 inch.
 1. Curved Track: Factory fabricated 12 inch radius bends.
 2. Finish: Clear anodized.
- B. **IV Carriers:** Four nylon rollers and steel or stainless-steel axles, with hanger loop fabricated from 1/4-inch- diameter stainless steel.
- C. **Telescoping IV Hangers:** 3/4 inch stainless-steel main shaft and a 3/8 inch stainless-steel inner shaft, vertically adjustable 16 inches; with 4 non folding 1/4 inch stainless-steel arms with loops and a stainless-steel top loop to attach to carrier.

PART 3 - EXECUTION

- A. Acceptance of Surfaces and Conditions:
 1. Examine substrates to which cubicle specialties will be applied for compliance with requirements and other conditions affecting performance.
 2. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents.
 3. Starting Work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform work according to following, unless otherwise specified:
 1. Respective manufacturer's installation instructions.
 2. Approved submittals.
 3. Contract Documents.

- B. General: Install tracks level and plumb, according to manufacturer's written instructions. Provide track fabricated from one continuous length up to 16 feet.
 - 1. Curtain Track Mounting: Surface.
 - 2. IV Track Mounting: Surface.
- C. Surface Track Mounting: Fasten surface-mounted tracks at intervals of not less than 24 inches. Fasten support at each splice and tangent point of each corner. Center fasteners in track to ensure unencumbered carrier operation. Mechanically fasten to suspended ceiling grid with screws.
- D. Track Accessories: Install splices, end caps, connectors, end stops, coupling and joining sleeves, and other accessories as required for a secure and operational installation.
- E. IV Hangers: Unless otherwise indicated, install one IV hook on each IV track and hang one IV hanger.
- F. Curtain Carriers: Provide curtain carriers adequate for 6 inch spacing along the full length of the curtain plus an additional carrier.

END OF SECTION

SECTION 134900

RADIATION PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Lead sheet, strip, and plate.
2. Lead-lined building materials and products including the following:
 - a. Gypsum board.
 - b. Steel hollow-metal door frames.
 - c. Wood doors.
 - d. Leaded glass.
3. Informational signs.

1.3 DEFINITIONS

- A. **Lead Equivalence:** The thickness of lead that provides the same attenuation (reduction of radiation passing through) as the material in question under the specified conditions.
 1. Lead equivalence specified for materials used in diagnostic x-ray rooms is as measured at 100 kV unless otherwise indicated.

1.4 SUBMITTALS

- A. **Product Data:** For each type of product indicated. Include detailed technical product information and installation instructions.
- B. **Shop Drawings:** Show layout of radiation-protected areas. Indicate lead thickness or lead equivalence of components. Show components and installation conditions not fully dimensioned or detailed in product data.
 1. Show ducts, pipes, conduit, and other objects that penetrate radiation protection; include details of penetrations.

1.5 QUALITY ASSURANCE

- A. **Installer Qualifications:** Engage an experienced installer who has completed work similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance **for over 10 years**.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Provide materials and workmanship, including joints and fasteners, which maintain continuity of radiation protection at all points and in all directions equivalent to materials specified in thicknesses and locations indicated.
 1. Materials, thicknesses, and configurations indicated are based on radiation protection design prepared by Owner's radiation health physicist. This design is available to Contractor on request.

- B. **Lead-Lined Assemblies:** Unless otherwise indicated, provide lead thickness in doors, door frames, window frames, penetration shielding, joint strips, film transfer cabinets, and other items located in lead-lined assemblies not less than that indicated for assemblies in which they are installed.

2.2 MATERIALS

- A. **Lead Sheet, Strip, and Plate:** ASTM B 749, alloy UNS No. L51121 (chemical-copper lead).
 - 1. **Thickness:** 1/16 inch.
- B. **Lead-Lined Gypsum Board:** 5/8 in thick Type X gypsum board complying with Division 09 Section "Gypsum Board Assemblies," of width and length required for support spacing and to prevent cracking during handling, and with a single sheet of lead laminated to the back of the board.
 - 1. Provide lead sheet lining the full width and to 7'-0" high on board.
 - 2. Provide 3 in wide lead strips for wrapping metal stud flanges.
 - 3. Provide 2 in wide lead strips for backing joints.
 - 4. Provide 5/16 in lead disks for covering screw heads.
- C. **Lead Glass:** Lead-barium, polished glass containing not less than 60 percent heavy metal oxides, including not less than 48 percent lead oxide by weight.
 - 1. **Safety Glass:** **Tempered lead glass.**
- D. **Accessories and Fasteners:** Provide manufacturer's standard fasteners and accessories as required for installation, maintaining same lead equivalence as rest of system.

2.3 LEAD-LINED, OBSERVATION-WINDOW FRAMES

- A. **General:** Fabricate from 0.043 inch thick, formed-steel sheet or 0.064 inch thick aluminum extrusions with mitered corners, welded or bolted with concealed fasteners.
 - 1. Line with lead sheet formed to match frame contour, continuous in each jamb and across head and sill, lapping the stops, and fabricated wide enough to maintain an effective lap with lead of adjoining assemblies.
 - 2. Construct so lead lining overlaps glazing material perimeter by at least 3/8 inch and furnish removable stops.
 - 3. Form sill with an opening for sound transmission. Offset sound passage to make opening lightproof and to maintain required lead equivalence at all points and in all directions.

2.4 LEAD-LINED WOOD DOORS

- A. **Lead-Lined Wood Doors:** Flush wood doors complying with Division 08 Section "Flush Wood Doors" with lead lining of thickness not less than that required for walls in which they are located.

2.5 INFORMATIONAL SIGNS

- A. **Informational Signs, General:** Fabricate signs by engraving lettering in high-pressure-laminate engraving stock with contrasting face and core. Machine engrave copy using high-speed cutters mechanically positioned by master templates for accurately formed letters, numbers, and symbols.
 - 1. **Color:** As selected by Architect from manufacturer's full range of colors.
 - 2. Provide copy indicated or as directed. Provide signs of sufficient size to contain required information.
 - 3. Indicate lead equivalence in millimeters and heights of radiation protection in inches (millimeters).
- B. **Rooms Where the Level of Protection Is Uniform Throughout:** Provide one sign for each room indicating lead equivalence of partitions, ceilings, floors, doors, and other portions of radiation protection enclosure. Indicate height of radiation protection above floor or indicate that partitions are radiation protected to full height.
- C. **Rooms Where the Level of Protection Is Not Uniform Throughout:** Provide one sign for each room with different lead equivalences in different locations. Indicate, in tabular form, lead equivalence of each wall, partition, ceiling, floor, door, and window. Indicate height of radiation

protection above floor or indicate that partitions are radiation protected to full height. Indicate where lead equivalence changes or is not continuous.

- D. **Rooms Where Some Partitions Are without Radiation Protection:** Provide one sign for each partition that contains radiation protection and indicate its lead equivalence. Indicate height of radiation protection above floor or indicate that partitions are radiation protected to full height.
- E. **Rooms Where Only the Door Has Radiation Protection:** Provide one sign for each door indicating its lead equivalence.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates in areas to receive radiation protection, with Installer present, for compliance with requirements, installation tolerances, and other conditions affecting performance of radiation protection.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF LEAD-LINED GYPSUM BOARD

- A. Install with long edge parallel to supports and lead lining facing supports. Provide blocking at end joints.
- B. Fastening to Metal Supports: Use steel drill screws spaced as recommended in writing by gypsum board manufacturer. Install lead strips covering face of framing and wrap around flange to cover points of screws.
 - 1. Where possible, install lead-lined gypsum board before installing gypsum board on other side of partition, and do not fold lead strips back over inside of flange until after lead-lined gypsum board is applied.
 - 2. Apply lead disks recessed flush with surface of board over heads of screws securing trim.
- C. Openings: Extend lead-lined gypsum board into frames of openings, lapping lead lining with lead frames or frame linings at least 1 in. Arrange board around openings so neither horizontal nor vertical joints occur at corners of openings.
- D. Install control and expansion joints where indicated, with appropriate trim accessories. Install lead strip on face of framing, extending across joint, and lap with lead lining of gypsum board.

3.3 INSTALLATION OF LEAD-LINED DOORS AND DOOR FRAMES

- A. Install lead-lined steel door frames according to Division 08 Section "Hollow Metal Doors and Frames."
- B. Install lead-lined wood doors according to Division 08 Section "Flush Wood Doors."
- C. Lap lead lining of frames over lining in walls at least 1 in.
- D. Hardware: Line covers, escutcheons, and plates to provide effective shielding at cutouts and penetrations of frames and doors. See Division 08 Section "Door Hardware" for other installation requirements.
- E. Touch up damaged finishes with compatible coating after sanding smooth.
- F. Operation: Rehang or replace doors that do not swing or operate freely. Check and readjust operating hardware items, leaving doors and frames undamaged and in proper operating condition.

3.4 INSTALLATION OF PENETRATING ITEMS

- A. At penetrations of lead linings, provide lead shields to maintain continuity of protection.
- B. Provide lead linings, sleeves, shields, and other protection in thickness not less than that required in assembly being penetrated.
- C. Secure shields at penetrations using adhesive or wire ties but not penetrating fasteners unless indicated on Drawings.
- D. Film Transfer Cabinets: Where film transfer cabinets occur in lead-lined partitions, line wall flange with lead sheet of same thickness as required for partition where it is located.

- E. Outlet Boxes and Conduit: Cover or line with lead sheet lapped over adjacent lead lining at least 1 in. Wrap conduit with lead sheet for a distance of not less than 10 in from box.
- F. Duct Openings: Unless otherwise indicated, line or wrap ducts with lead sheet for distance from partition/ceiling equal to three times the largest opening dimension. Lap lead sheet with adjacent lead lining at least 1 in.
- G. Piping: Unless otherwise indicated, wrap piping with lead sheet for a distance of not less than 10 in from point of penetration.

3.5 FIELD QUALITY CONTROL

- A. Correct deficiencies in or remove and replace radiation protection that inspection reports indicate does not comply with specified requirements.
- B. Additional inspections, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.
- C. Testing: After radiology equipment has been installed and placed in operating condition, Owner will engage a radiation health physicist to test radiation protection.
- D. Make corrections required by radiation health physicist.
- E. Uncover and repair or replace defective work, including finishes and other work covering defective work. Arrange and pay for additional testing by radiation health physicist until no more corrections are required.

3.6 PROTECTION

- A. Lock radiation-protected rooms once doors and locks are installed and limit access to only those persons performing work in the rooms.

END OF SECTION

SECTION 142400
HYDRAULIC ELEVATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes hydraulic passenger elevators.

B. Related Requirements:

1. Section 011000 "Summary" for purchase contract for elevators negotiated by Owner and assigned to Contractor.
2. Section 015000 "Temporary Facilities and Controls" for temporary use of elevators for construction purposes.
3. Section 033000 "Cast-in-Place Concrete" for setting sleeves, inserts, and anchoring devices in concrete.
4. Section 051200 "Structural Steel Framing" for the following:
 - a. Attachment plates, angle brackets, and other structural-steel preparations for fastening guide-rail brackets.
 - b. Divider beams.
 - c. Hoist beams.
 - d. Structural-steel shapes for subsills that are part of steel frame.
5. Section 055000 "Metal Fabrications" for the following:
 - a. Attachment plates and angle brackets for supporting guide-rail brackets.
 - b. Divider beams.
 - c. Hoist beams.
 - d. Structural-steel shapes for subsills.
 - e. Pit ladders.
 - f. Cants made from steel sheet in hoistways.
6. Section 055213 "Pipe and Tube Railings" for railings between adjacent elevator pits.
7. Section 008900, Finish Selection Summary for finish flooring in elevator cars.
8. Section 221429 "Sump Pumps" for sump pumps, sumps, and sump covers in elevator pits.
9. Section 312000 "Earth Moving" for excavating well hole to accommodate cylinder assembly and for the disposition of excavated material from the cylinder well hole.

1.3 DEFINITIONS

- A. Definitions in ASME A17.1/CSA B44 apply to work of this Section.

- B. Service Elevator: A passenger elevator that is also used to carry freight.

1.4 ACTION SUBMITTALS

- A. Product Data: Include capacities, sizes, performances, operations, safety features, finishes, and similar information. Include product data for car enclosures; hoistway entrances; and operation, control, and signal systems.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, and large-scale details indicating service at each landing; machine room layout; coordination with building structure; relationships with other construction; and locations of equipment.
 - 2. Include large-scale layout of car-control station.
 - 3. Indicate maximum dynamic and static loads imposed on building structure at points of support as well as maximum and average power demands.
- C. Samples for Initial Selection: For finishes involving color selection.
- D. Samples for Verification: For exposed car, hoistway door and frame, and signal equipment finishes, **3-inch- (75-mm-)** square Samples of sheet materials and **4-inch (100-mm)** lengths of running trim members.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Seismic Qualification Certificates: For elevator equipment, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Manufacturer Certificates: Signed by elevator manufacturer, certifying that hoistway, pit, and machine room layout and dimensions, as shown on Drawings, and electrical service, as shown and specified, are adequate for elevator system being provided.
- D. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For elevators to include in emergency, operation, and maintenance manuals.
 - 1. Submit manufacturer's/installer's standard operation and maintenance manual, in accordance with ASME A17.1/CSA B44 **including diagnostic and repair information available to manufacturer's and installer's maintenance personnel.**

- B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted elevator use.
- C. Continuing Maintenance Proposal: Submit a continuing maintenance proposal from Installer to Owner, in the form of a standard one year maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.
- D. Continuing Maintenance Proposal: Submit a continuing maintenance proposal from Installer to Owner with terms, conditions, and obligations as set forth in, and in same form as, "Draft of Elevator Maintenance Agreement" at end of this Section, starting on date initial maintenance service is concluded.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Elevator manufacturer **or an authorized representative who is trained and approved by manufacturer and who has at least ten (10) years experience.**

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle materials, components and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.9 COORDINATION

- A. Coordinate installation of sleeves, block outs, elevator equipment with integral anchors, and other items that are embedded in concrete or masonry for elevator equipment. Furnish templates, sleeves, elevator equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.
- B. Furnish well casing and coordinate delivery with related excavation work.
- C. Coordinate locations and dimensions of other work specified in other Sections that relates to hydraulic elevators, including pit ladders; sumps and floor drains in pits; entrance subsills; electrical service; and electrical outlets, lights, and switches in hoistways, pits, and machine rooms.

1.10 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair, restore, or replace elevator work that fails in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.
 - 2. Warranty Period: One (1) year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 HYDRAULIC ELEVATOR MANUFACTURERS

- A. Thyssen Krupp, ENDURA B 5000H
- B. Source Limitations: Obtain elevators from single manufacturer.
 - 1. Major elevator components, including pump-and-tank units, plunger-cylinder assemblies, controllers, signal fixtures, door operators, car frames, cars, and entrances, shall be manufactured by single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.
- B. Accessibility Requirements: Comply with Section 407 in the United States Access Board's ADA-ABA Accessibility Guidelines and with ICC A117.1.

2.3 ELEVATORS

- A. Elevator System, General: Manufacturer's standard elevator systems. Unless otherwise indicated, manufacturers' standard components shall be used, as included in standard elevator systems and as required for complete system.
- B. Elevator Description:
 - 1. Elevator Number(s): 1 and 2.
 - 2. Type: Under-the-car single cylinder.
 - 3. Rated Load: **5000 lb (2270 kg)**.
 - 4. Rated Speed: **175 fpm (0.89 m/s) in up direction, 200 fpm (1.0 m/s) in down direction**.
 - 5. Operation System: **Group automatic operation**.
 - 6. Auxiliary Operations:
 - a. Battery-powered lowering.
 - b. Automatic operation of lights and ventilation fans.
 - c. Independent service for **all cars in group**.
 - 7. Car Enclosures:
 - a. Inside Width: **68 inches (1727 mm)** from side wall to side wall.
 - b. Inside Depth: **108 inches (2743 mm)** from back wall to front wall (return panels).
 - c. Inside Height: Not less than **100 inches** to underside of ceiling.
 - d. Front Walls (Return Panels): **Satin stainless steel, No. 4 finish** with integral car door frames.
 - e. Car Fixtures: **Satin stainless steel, No. 4 finish**.
 - f. Side and Rear Wall Panels: **Satin stainless steel, No. 4 finish**.
 - g. Reveals: **Satin stainless steel, No. 4 finish**.
 - h. Door Faces (Interior): **Satin stainless steel, No. 4 finish**.
 - i. Door Sills: **Aluminum**.
 - j. Ceiling: **Brushed stainless steel**.
 - k. Handrails: **1-1/2 inches (38 mm) round**, at [sides] [and] [rear] of car.
 - l. Floor: 3/8" Resinous Matrix Terrazzo, by flooring sub-contractor.

- m. Floor prepared to receive carpet (specified in Section 096816 "Sheet Carpeting").
 - n. Floor prepared to receive resilient flooring (specified in Section 096500 "Resilient Flooring").
 - o. Floor recessed and prepared to receive [**dimension stone tile (specified in Section 093033 "Stone Tiling")**] [**ceramic tile (specified in Section 093013 "Ceramic Tiling")**].
 - p. Floor Thickness, Including Setting Materials: 3/8" recess above plywood subfloor.
8. Hoistway Entrances:
- a. Width: **54 inches (1372 mm)**.
 - b. Height: 96 **inches (2134 mm)**.
 - c. Type: **Two-speed side sliding**
 - d. Frames **Satin stainless steel, No. 4 finish** Plastic-laminate doors are about as expensive as stainless-steel doors but are not as durable.
 - e. Doors: **Satin stainless steel, No. 4 finish**
 - f. Sills: **Aluminum**.
9. Hall Fixtures **Satin stainless steel, No. 4 finish**
10. Additional Requirements:
- a. Provide inspection certificate in each car, mounted under acrylic cover with frame made from **satin stainless steel, No. 4**.
 - b. Provide hooks for protective pads in **all cars** and **one** complete set(s) of full-height protective pads.

2.4 SYSTEMS AND COMPONENTS

- A. Pump Units: Positive-displacement type with a maximum of 10 percent variation between no load and full load and with minimum pulsations.
 - 1. Pump shall be **submersible type with submersible squirrel-cage induction motor, and shall be suspended inside oil tank from vibration isolation mounts**.
 - 2. Motor shall have **solid-state** starting.
 - 3. Motor shall have variable-voltage, variable-frequency control.
- B. Hydraulic Silencers: System shall have hydraulic silencer containing pulsation-absorbing material in blowout-proof housing at pump unit.
- C. Piping: Size, type, and weight of piping as recommended by elevator manufacturer, with flexible connectors to minimize sound and vibration transmissions from power unit.
 - 1. Cylinder units shall be connected with dielectric couplings.
 - 2. Casing for Underground Piping: Schedule 40 PVC pipe complying with ASTM D 1785, joined with PVC fittings complying with ASTM D 2466 and solvent cement complying with ASTM D 2564.
- D. Hydraulic Fluid: Elevator manufacturer's standard **fire-resistant** fluid with additives as needed to prevent oxidation of fluid, corrosion of cylinder and other components, and other adverse effects.
- E. Hydraulic Fluid: Nontoxic, biodegradable, **fire-resistant** fluid, made from vegetable oil with antioxidant, anticorrosive, antifoaming, and metal-passivating additives, that is approved by elevator manufacturer for use with elevator equipment. Oil Type: Readily biodegradable that is

USDA certified biobased product, ultra low toxicity, readily biodegradable, energy efficient, high performing fluid made from canola oil with antioxidant, anticorrosive, antifoaming, and metal-passivating additives. Especially formulated for operating in environmentally sensitive areas. USDA certified biobased product, 95% bio-based content, per ASTM D6866.

- F. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing guide rails, machinery, and other components of elevator work. Device installation is specified in another Section.
- G. Protective Cylinder Casing: PVC or HDPE pipe casing complying with ASME A17.1/CSA B44, of sufficient size to provide not less than **1-inch (25-mm)** clearance from cylinder and extending above pit floor. Casing shall have means of monitoring effectiveness to comply with ASME A17.1/CSA B44.
- H. Car Frame and Platform: Welded[**or bolted**] steel units.
- I. Guides: **Roller guides**. Provide guides at top and bottom of car frame.

2.5 OPERATION SYSTEMS

- A. General: Provide manufacturer's standard microprocessor operation system as required to provide type of operation indicated.
 - 1. Group Battery-Powered Lowering: If power fails, cars that are at a floor remain at that floor, open their doors, and shut down. Cars that are between floors are lowered to a preselected floor, open their doors, and shut down. Cars that are below the preselected floor are lowered to the next lower floor, open their doors, and shut down. System includes rechargeable battery and automatic recharging system.
 - 2. Group Battery-Powered Lowering: When power fails, cars are lowered to the lowest floor, open their doors, and shut down. System includes rechargeable battery and automatic recharging system.
 - 3. Automatic Dispatching of Loaded Car: When car load exceeds 80 percent of rated capacity, doors start closing.
 - 4. Nuisance Call Cancel: When car calls exceed a preset number while car load is less than a predetermined weight, all car calls are canceled. Preset number of calls[**and predetermined weight**] can be adjusted.
 - 5. Loaded-Car Bypass: When car load exceeds 80 percent of rated capacity, car responds only to car calls, not to hall calls.
 - 6. Off-Peak Operation: During periods of low traffic, half of the elevators in a group shall be taken out of service and switched to low-power mode.
 - 7. Independent Service: Keyswitch in car-control station removes car from group operation and allows it to respond only to car calls. Key cannot be removed from keyswitch when car is in independent service. When in independent service, doors close only in response to door close button.
 - 8. Automatic Operation of Lights and Fan: When elevator is stopped and unoccupied with doors closed, lighting, ventilation fan, and cab displays are de-energized after 5 minutes and are re-energized before car doors open.

2.6 DOOR-REOPENING DEVICES

- A. Infrared Array: Provide door-reopening device with uniform array of 36 or more microprocessor-controlled, infrared light beams projecting across car entrance. Interruption of one or more light beams shall cause doors to stop and reopen.

- B. Nudging Feature: After car doors are prevented from closing for predetermined adjustable time, through activating door-reopening device, a loud buzzer shall sound and doors shall begin to close at reduced kinetic energy.

2.7 CAR ENCLOSURES

- A. General: Provide **steel-framed car enclosures with nonremoveable** wall panels, with **removable** car roof, access doors, power door operators, and ventilation.
 - 1. Provide standard railings complying with ASME A17.1/CSA B44 on car tops where required by ASME A17.1/CSA B44.
- B. Materials and Finishes: Manufacturer's standards, but not less than the following:
 - 1. Subfloor: Exterior, underlayment-grade plywood, not less than **5/8-inch (15.9-mm)** nominal thickness.
 - 2. Floor Finish: 3/8" **Resinous Matrix Terrazzo** by flooring sub-contractor
 - 3. Stainless-Steel Wall Panels: Flush, formed-metal construction; fabricated from stainless-steel sheet.
 - 4. Fabricate car with recesses and cutouts for signal equipment.
 - 5. Fabricate car door frame integrally with front wall of car.
 - 6. Stainless-Steel Doors: Flush, hollow-metal construction; fabricated **from stainless-steel sheet**.
 - 7. Sight Guards: Provide sight guards on car doors.
 - 8. Sills: Extruded aluminum.
 - 9. **Metal** Ceiling: Flush panels, with LED down lights in the center of each panel. **Align ceiling panel joints with joints between wall panels.**
 - 10. Light Fixture Efficiency: Not less than 35 lumens/W.
 - 11. Ventilation Fan Efficiency: Not less than **3.0 cfm/W (1.4 L/s per W)**.

2.8 HOISTWAY ENTRANCES

- A. Hoistway Entrance Assemblies: Manufacturer's standard horizontal-sliding, door-and-frame hoistway entrances complete with track systems, hardware, sills, and accessories. Frame size and profile shall accommodate hoistway wall construction.
 - 1. Where gypsum board wall construction is indicated, frames shall be self-supporting with reinforced head sections.
- B. Fire-Rated Hoistway Entrance Assemblies: Door-and-frame assemblies shall comply with NFPA 80 and be listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction based on testing at as close-to-neutral pressure as possible according to **NFPA 252**.
- C. Materials and Fabrication: Manufacturer's standards, but not less than the following:
 - 1. Stainless-Steel Frames: Formed from stainless-steel sheet.
 - 2. Stainless-Steel Doors: Flush, hollow-metal construction; fabricated **from stainless-steel sheet**.
 - 3. Sight Guards: Provide sight guards on doors matching door edges.
 - 4. Sills: Extruded aluminum.

2.9 SIGNAL EQUIPMENT

- A. General: Provide hall-call and car-call buttons that light when activated and remain lit until call has been fulfilled. Provide **vandal-resistant** buttons and lighted elements illuminated with LEDs.
- B. Swing-Return Car-Control Stations: Provide car-control stations mounted on rear of hinged return panel adjacent to car door and with buttons, switches, controls, and indicator lights projecting through return panel but substantially flush with face of return panel.
 - 1. Mark buttons and switches for function. Use both tactile symbols and Braille.
 - 2. Provide "No Smoking" sign matching car-control station, either integral with car-control station or mounted adjacent to it, with text and graphics as required by authorities having jurisdiction.
- C. Emergency Communication System: Two-way voice communication system, with visible signal, which dials preprogrammed number of monitoring station and does not require handset use. System is contained in car control station, with identification, instructions for use, and battery backup power supply.
- D. Car Position Indicator: Provide **illuminated**, digital-type car position indicator, located above car door or above car-control station. Also, provide audible signal to indicate to passengers that car is either stopping at or passing each of the floors served. Include travel direction arrows if not provided in car-control station.
- E. Hall Push-Button Stations: **Provide one hall push-button station at each landing**
 - 1. Provide **vandal resistant units with flat faceplate for mounting with body of unit recessed in wall.**
 - 2. Equip units with buttons for calling elevator and for indicating applicable direction of travel.
- F. Traditional Hall Lanterns: Units with illuminated arrows; however, provide single arrow at terminal landings. Provide the following:
 - 1. Manufacturer's standard wall-mounted units, for mounting above entrance frames.
- G. Hall Annunciator: With each hall lantern, provide audible signals indicating car arrival and direction of travel. Signals sound once for up and twice for down.
 - 1. At manufacturer's option, audible signals may be placed on cars.

2.10 FINISH MATERIALS

- A. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, commercial steel, Type B, exposed, matte finish.
- B. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, commercial steel, Type B, pickled.
- C. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 441.
- D. Stainless-Steel Bars: ASTM A 276, Type 441.
- E. Stainless-Steel Tubing: ASTM A 554, Grade MT 441.

- F. Aluminum Extrusions: **ASTM B 221** (**ASTM B 221M**), Alloy 6063.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elevator areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work. Verify critical dimensions and examine supporting structure and other conditions under which elevator work is to be installed.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Excavation for Cylinder: Drill well hole in[**each**] elevator pit to accommodate installation of cylinder; comply with applicable requirements in Section 312000 "Earth Moving."
- B. Provide **waterproof** well casing **as necessary** to retain well-hole walls.
- C. Install cylinder in protective casing within well hole. Before installing protective casing, remove water and debris from well hole **and provide permanent waterproof seal at bottom of well casing**.
 - 1. Align cylinder and fill space around protective casing with fine sand.
- D. Install cylinder plumb and accurately centered for elevator car position and travel. Anchor securely in place, supported at pit floor. Seal between **well protective** casing and pit floor with **4 inches (100 mm)** of nonshrink, nonmetallic grout.
- E. Install cylinder plumb and accurately centered for elevator car position and travel. Anchor securely in place, supported at pit floor and braced at intervals as needed to maintain alignment. Anchor cylinder guides at spacing needed to maintain alignment and avoid overstressing guides.
- F. Welded Construction: Provide welded connections for installing elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance, and replacement of worn parts. Comply with AWS workmanship and welding operator qualification standards.
- G. Sound Isolation: Mount rotating and vibrating equipment on vibration-isolating mounts to minimize vibration transmission to structure and structure-borne noise due to elevator system.
- H. Install piping above the floor, where possible. Install underground piping in casing.
 - 1. Excavate for piping and backfill encased piping according to applicable requirements in Section 312000 "Earth Moving."
- I. Lubricate operating parts of systems as recommended by manufacturers.

- J. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with car. Where possible, delay installation of sills and frames until car is operable in shaft. Reduce clearances to minimum, safe, workable dimension at each landing.
- K. Leveling Tolerance: **1/4 inch (6 mm)**, up or down, regardless of load and travel direction.
- L. Set sills flush with finished floor surface at landing. Fill space under sill solidly with nonshrink, nonmetallic grout.
- M. Locate hall signal equipment for elevators as follows unless otherwise indicated:
 - 1. For groups of elevators, locate hall push-button stations between two elevators at center of group or at location most convenient for approaching passengers.
 - 2. Place hall lanterns either above or beside each hoistway entrance.
 - 3. Mount hall lanterns at a minimum of **72 inches (1829 mm)** above finished floor.

3.3 FIELD QUALITY CONTROL

- A. Acceptance Testing: On completion of elevator installation and before permitting elevator use (either temporary or permanent), perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by governing regulations and agencies.
- B. Advise Owner, Architect, and authorities having jurisdiction in advance of dates and times that tests are to be performed on elevators.

3.4 PROTECTION

- A. Temporary Use: **Limit temporary use for construction purposes to one elevator.** Comply with the following requirements for **each** elevator used for construction purposes:
 - 1. Provide car with temporary enclosure, either within finished car or in place of finished car, to protect finishes from damage.
 - 2. Provide strippable protective film on entrance and car doors and frames.
 - 3. Provide padded wood bumpers on entrance door frames covering jambs and frame faces.
 - 4. Provide other protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
 - 5. Do not load elevators beyond their rated weight capacity.
 - 6. Engage elevator Installer to provide full maintenance service. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleanup, and adjustment as necessary for proper elevator operation at rated speed and capacity. Provide parts and supplies same as those used in the manufacture and installation of original equipment.
 - 7. Engage elevator Installer to restore damaged work, if any, so no evidence remains of correction. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate, **adjust, and maintain** elevator(s).

- B. Check operation of **each** elevator with Owner's personnel present before date of Substantial Completion **and again not more than one month before end of warranty period**. Determine that operation systems and devices are functioning properly.

3.6 MAINTENANCE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include twelve (12) months' full maintenance by skilled employees of elevator Installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
 - 1. Perform maintenance during normal working hours.
 - 2. Perform emergency callback service during normal working hours with response time of **two** hours or less.
 - 3. Include 24-hour-per-day, 7-day-per-week emergency callback service with response time of **two** hours or less.

END OF SECTION 142400

SECTION 211000

WATER-BASED FIRE-SUPPRESSION SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes the following fire-suppression piping inside the building:
 - 1. Automatic wet-type, Class I standpipe systems.
 - 2. Automatic dry-type, Class I standpipe systems.
 - 3. Manual dry-type, Class I standpipe systems.
 - 4. Wet-pipe sprinkler systems.
 - 5. Dry-pipe sprinkler systems.
 - 6. Preaction sprinkler systems.
- B. Related Sections include the following:
 - 1. Division 10 Section "Fire Extinguisher Cabinets" and "Fire Extinguishers" for cabinets and fire extinguishers.
 - 2. Division 21 Section "Electric-Drive, Centrifugal Fire Pumps" for fire pumps, pressure-maintenance pumps, and pump controllers.
 - 3. Division 21 Section "Clean-Agent Fire Extinguishing Systems" for extinguishing systems.
 - 4. Division 28 Section "Fire Detection and Alarm" for alarm devices not specified in this Section.
 - 5. Division 31 Section "Earth Moving" for excavating, trenching, and backfilling.

1.2 DEFINITIONS

- A. CR: Chlorosulfonated polyethylene synthetic rubber.
- B. Underground Service-Entrance Piping: Underground service piping below the building.

1.3 SYSTEM DESCRIPTIONS

- A. Combined Standpipe and Sprinkler System: Fire-suppression system with both standpipe and sprinkler systems. Sprinkler system is supplied from standpipe system.
- B. Automatic Wet-Type, Class I Standpipe System: Includes NPS 2-1/2 hose connections. Has open water-supply valve with pressure maintained and is capable of supplying water demand.
- C. Automatic Dry-Type, Class I Standpipe System: Includes NPS 2-1/2 hose connections. Has open water-supply valve and dry-pipe valve with standpipes containing compressed air. Opening fire-hose valve releases compressed air and permits water pressure to open dry-pipe valve. Water then flows into standpipes.
- D. Manual Dry-Type, Class I Standpipe System: Includes NPS 2-1/2 hose connections. Does not have permanent water supply. Piping is dry. Water must be pumped into standpipes to satisfy demand.

- E. Wet-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing water and that is connected to water supply. Water discharges immediately from sprinklers when they are opened. Sprinklers open when heat melts fusible link or destroys frangible device. Hose connections are included if indicated.
- F. Dry-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing compressed air. Opening of sprinklers releases compressed air and permits water pressure to open dry-pipe valve. Water then flows into piping and discharges from opened sprinklers.
- G. Pre-action Sprinkler System: Automatic sprinklers are attached to piping containing air. Actuation of fire-detection system in same area as sprinklers opens deluge valve, permitting water to flow into piping and to discharge from sprinklers that have opened.

1.4 PERFORMANCE REQUIREMENTS

- A. Standard Piping System Component Working Pressure: Listed for at least 175 psig.
- B. Fire-suppression standpipe system design shall be approved by authorities having jurisdiction.
 - 1. Minimum residual pressure at each hose-connection outlet is the following:
 - a. NPS 2-1/2 Hose Connections: 100 psig.
 - 2. Unless otherwise indicated, the following is maximum residual pressure at required flow at each hose-connection outlet:
 - a. NPS 2-1/2 Hose Connections: 175 psig.
- C. Fire-suppression sprinkler system design shall be approved by authorities having jurisdiction.
 - 1. Margin of Safety for Available Water Flow and Pressure: 10 percent, including losses through water-service piping, valves, and backflow preventers.
 - 2. Sprinkler Occupancy Hazard Classifications shall be in accordance with the latest edition of NFPA 13.
 - 3. Minimum Density for Automatic-Sprinkler Piping Design: Per NFPA 13
 - 4. Minimum Density for Deluge-Sprinkler Piping Design: Per NFPA 13
 - 5. Maximum Protection Area per Sprinkler: Per NFPA 13
 - 6. Total Combined Hose-Stream Demand Requirement: Per NFPA 13

1.5 SUBMITTALS

- A. Product Data: For the following:
 - 1. Piping materials, including dielectric fittings, flexible connections, and sprinkler specialty fittings.
 - 2. Pipe hangers and supports.
 - 3. Valves, including listed fire-protection valves, unlisted general-duty valves, and specialty valves and trim.
 - 4. Air compressors, including electrical data.
 - 5. Sprinklers, escutcheons, and guards. Include sprinkler flow characteristics, mounting, finish, and other pertinent data.
 - 6. Hose connections, including size, type, and finish.

7. Fire department connections, including type; number, size, and arrangement of inlets; caps and chains; size and direction of outlet; escutcheon and marking; and finish.
 8. Alarm devices, including electrical data.
- B. Shop Drawings: Diagram power, signal, and control wiring.
 - C. Fire-hydrant flow test report.
 - D. Approved Sprinkler Piping Drawings: Working plans, prepared according to NFPA 13, that have been approved by authorities having jurisdiction, including hydraulic calculations, if applicable.
 - E. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13 and NFPA 14. Include "Contractor's Material and Test Certificate for Aboveground Piping" and "Contractor's Material and Test Certificate for Underground Piping."
 - F. Welding certificates.
 - G. Field quality-control test reports.
 - H. Operation and Maintenance Data: For standpipe and sprinkler specialties to include in emergency, operation, and maintenance manuals.
 - I. Grooved joint couplings and fittings shall be shown on drawings and product submittals and shall be specifically identified with the applicable style or series number.
 - J. Sprinklers shall be referred to on drawings, submittals and other documentation, by the sprinkler identification or Model number as specifically published in the appropriate agency listing or approval. Trade names or other abbreviated designations shall not be allowed.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications:
 1. Installer's responsibilities include designing, fabricating, and installing fire-suppression systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
 - a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.
- B. Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
- C. NFPA Standards: Fire-suppression-system equipment, specialties, accessories, installation, and testing shall comply with the following:
 1. NFPA 13, "Installation of Sprinkler Systems."
 2. NFPA 14, "Installation of Standpipe, Private Hydrant, and Hose Systems."
 3. NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances."
- D. To assure uniformity and compatibility of piping components in grooved piping systems, all grooved products utilized shall be supplied by a single manufacturer. Grooving tools shall be supplied from the same manufacturer as the grooved components.

1.7 COORDINATION

- A. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.

1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Sprinkler Cabinets: Finished, wall-mounting, steel cabinet with hinged cover, with space for minimum of six spare sprinklers plus sprinkler wrench. Include number of sprinklers required by NFPA 13 and sprinkler wrench. Include separate cabinet with sprinklers and wrench for each type of sprinkler on Project.

PART 2 - PRODUCTS

2.1 DUCTILE-IRON PIPE AND FITTINGS

- A. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell end and plain end.
 - 1. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
 - 2. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron gland, rubber gasket, and steel bolts and nuts.
- B. Grooved-End, Ductile-Iron Pipe: AWWA C151, with factory- or field-formed, radius-cut-grooved ends according to AWWA C606.
 - 1. Grooved-Joint Piping Systems:
 - a. Manufacturers:
 - 1) Victaulic Co. of America.
 - 2) Anvil International.
 - b. Grooved-End Fittings: ASTM A 536, ductile-iron casting with OD matching ductile-iron-pipe OD.
 - c. Grooved-End-Pipe Couplings: AWWA C606, gasketed fitting matching ductile-iron-pipe OD. Include ductile-iron housing with keys matching ductile-iron-pipe and fitting grooves, synthetic rubber gasket with center leg, and steel bolts and nuts.
 - d. Grooved-End-Pipe Transition Coupling: UL 213 and AWWA C606, gasketed fitting with end matching ductile-iron-pipe OD and end matching steel-pipe OD. Include ductile-iron housing with key matching ductile-iron-pipe groove and key matching steel-pipe groove, cast with offsetting, angle-pattern bolt pads, synthetic rubber gasket with center leg, listed for use with housing, and steel bolts and nuts.
 - e. Grooved-End Transition Flange: UL 213, gasketed fitting with key for ductile-iron-pipe dimensions. Include flange-type, ductile-iron housing with synthetic rubber gasket listed for use with housing and steel bolts and nuts.

2.2 STEEL PIPE AND FITTINGS

- A. Threaded-End, Standard-Weight Steel Pipe: ASTM A 53/A 53M, ASTM A 135, or ASTM A 795, with factory- or field-formed threaded ends.
 - 1. Cast-Iron Threaded Flanges: ASME B16.1.
 - 2. Malleable-Iron Threaded Fittings: ASME B16.3.
 - 3. Gray-Iron Threaded Fittings: ASME B16.4.
 - 4. Steel Threaded Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M or ASTM A 106, Schedule 40, seamless steel pipe. Include ends matching joining method.
 - 5. Steel Threaded Couplings: ASTM A 865.
- B. Plain-End, Standard-Weight Steel Pipe: ASTM A 53/A 53M, ASTM A 135, or ASTM A 795.
 - 1. Steel Welding Fittings: ASTM A 234/A 234M, and ASME B16.9 or ASME B16.11.
 - 2. Steel Flanges and Flanged Fittings: ASME B16.5.
- C. Grooved-End, Standard-Weight Steel Pipe: ASTM A 53/A 53M, ASTM A 135, or ASTM A 795, with factory- or field-formed, roll-grooved ends.
 - 1. Grooved-Joint Piping Systems:
 - a. Manufacturers:
 - 1) Anvil International, Inc.
 - 2) TYCO
 - 3) Victaulic Co. of America.
 - b. Grooved-End Fittings: UL-listed, ASTM A 536, ductile-iron casting with OD matching steel-pipe OD or ASTM A 53 forged or fabricated from carbon steel pipe with factory grooved ends designed to accept grooved mechanical couplings from the same manufacturer.
 - c. Grooved-End-Pipe Couplings: UL 213 and AWWA C606, rigid pattern, unless otherwise indicated; gasketed fitting matching steel-pipe OD. Include ductile-iron housing with keys matching steel-pipe and fitting grooves, synthetic rubber gasket listed for use with housing, and steel bolts and nuts.
 - 1) Rigid Type: Housings shall be cast with offsetting, angle-pattern bolt pads to provide system rigidity and support and hanging in accordance with NFPA 13. Tongue and recess rigid type couplings shall only be used if the contractor uses a torque wrench for installation. Required torque shall be in accordance with the manufacturer's latest recommendations.
 - a) 1-1/4" through 4": "Installation Ready" stab-on design, for direct 'stab' installation onto grooved end pipe without prior field disassembly and no loose parts.
 - b) 5" and larger: Standard rigid coupling.
 - 2) Flexible Type: Use in seismic areas where required by NFPA 13.
 - a) 2" through 8": "Installation Ready" stab-on design, for direct 'stab' installation onto grooved end pipe without prior field disassembly and no loose parts.
 - b) 10" and larger: Standard flexible coupling.

- d. Grooved-End-Pipe Flange Adapters: UL213 and AWWA C606, steel pipe OD dimensions, ASTM A536 ductile iron housing, flat faced, designed for incorporating flanged components with ANSI Class 125 bolt-hole patterns to a grooved piping system.
- D. Plain-End, Schedule 10 Steel Pipe: ASTM A 135 or ASTM A 795, Schedule 10 in NPS 5 and smaller; and NFPA 13 specified wall thickness in NPS 6 to NPS 10.
 - 1. Steel Welding Fittings: ASTM A 234/A 234M, and ASME B16.9 or ASME B16.11.
 - 2. Steel Flanges and Flanged Fittings: ASME B16.5.
- E. Grooved-End, Schedule 10 Steel Pipe: ASTM A 135 or ASTM A 795, Schedule 10 in NPS 4 and smaller; and NFPA 13-specified wall thickness in NPS 6 to NPS 10; with factory- or field-formed, roll-grooved ends.
 - 1. Grooved-Joint Piping Systems:
 - a. Manufacturers:
 - 1) Anvil International, Inc.
 - 2) TYCO
 - 3) Victaulic Co. of America.
 - b. Grooved-End Fittings: UL-listed, ASTM A 536, ductile-iron casting with OD matching steel-pipe OD or ASTM A 53 forged or fabricated from carbon steel pipe with factory grooved ends designed to accept grooved mechanical couplings from the same manufacturer.
 - c. Grooved-End-Pipe Couplings: UL 213 and AWWA C606, rigid pattern, unless otherwise indicated; gasketed fitting matching steel-pipe OD. Include ductile-iron housing with keys matching steel-pipe and fitting grooves, rubber gasket listed for use with housing, and steel bolts and nuts.
 - 1) Rigid Type: Housings shall be cast with offsetting, angle-pattern bolt pads to provide system rigidity and support and hanging in accordance with NFPA 13. Tongue and recess rigid type couplings shall only be used if the contractor uses a torque wrench for installation. Required torque shall be in accordance with the manufacturer's latest recommendations.
 - a) 1-1/4" through 4": "Installation Ready" stab-on design, for direct 'stab' installation onto grooved end pipe without prior field disassembly and no loose parts.
 - b) 5" and larger: Standard rigid coupling.
 - 2) Flexible Type: Use in seismic areas where required by NFPA 13.
 - a) 2" through 8": "Installation Ready" stab-on design, for direct 'stab' installation onto grooved end pipe without prior field disassembly and no loose parts.
 - b) 10" and larger: Standard flexible coupling.
 - d. Grooved-End-Pipe Flange Adapters: UL213 and AWWA C606, steel pipe OD dimensions, ASTM A536 ductile iron housing, flat faced, designed for incorporating flanged components with ANSI Class 125 bolt-hole patterns to a grooved piping system.

2.3 DIELECTRIC FITTINGS

- A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the manufacturers specified.
- B. Assembly shall be copper alloy, ferrous, and insulating materials with ends matching piping system.
- C. Dielectric Unions: Factory-fabricated assembly, designed for 250-psig minimum working pressure at 180 deg F. Include insulating material that isolates dissimilar materials and ends with inside threads according to ASME B1.20.1.
- D. Dielectric Flanges: Factory-fabricated companion-flange assembly, for 175-psig minimum working-pressure rating as required for piping system.
- E. Dielectric Couplings: Galvanized steel with inert and noncorrosive thermoplastic lining and threaded ends and 300-psig working-pressure rating at 225 deg F.
- F. Dielectric Nipples: Electroplated steel or ductile iron with inert and noncorrosive thermoplastic lining, with combination of plain, threaded, or grooved ends and 300-psig working-pressure rating at 230 deg F.

2.4 FLEXIBLE CONNECTORS

- A. Flexible connectors shall have materials suitable for system fluid. Include [175-psig minimum] [250-psig minimum] working-pressure rating and ends according to the following:
 - 1. NPS 2 and Smaller: Threaded.
 - 2. NPS 2-1/2 and Larger: Flanged.
 - 3. Option for NPS 2-1/2 and Larger: Grooved for use with grooved-end-pipe couplings.
- B. Manufacturers:
 - 1. Flexhead Industries, Inc.
 - 2. Flexicraft Industries.
 - 3. Flex-Pression, Ltd.
 - 4. Proco Products, Inc.
 - 5. Unaflex Inc.
- C. Bronze-Hose, Flexible Connectors: Corrugated, bronze, inner tubing covered with bronze wire braid. Include copper-tube ends or bronze flanged ends, braze welded to hose.
- D. Stainless-Steel-Hose/Steel Pipe, Flexible Connectors: Corrugated, stainless-steel, inner tubing covered with stainless-steel wire braid. Include steel nipples or flanges, welded to hose.
- E. Stainless-Steel-Hose/Stainless-Steel Pipe, Flexible Connectors: Corrugated, stainless-steel, inner tubing covered with stainless-steel wire braid. Include stainless-steel nipples or flanges, welded to hose.

2.5 CORROSION-PROTECTIVE ENCASEMENT FOR PIPING

- A. Encasement for Underground Metal Piping: ASTM A 674 or AWWA C105, PE film, 0.008-inch minimum thickness, tube or sheet.

2.6 SPRINKLER SPECIALTY FITTINGS

- A. Sprinkler specialty fittings shall be UL listed or FMG approved, with 175-psig minimum working-pressure rating, and made of materials compatible with piping. Sprinkler specialty fittings shall have 300-psig working-pressure rating if fittings are components of high-pressure piping system.

- B. Outlet Specialty Fittings:

- 1. Manufacturers:

- a. Anvil International, Inc.
 - b. TYCO
 - c. Victaulic Co. of America.

- 2. Mechanical-T and -Cross Fittings: UL 213, ductile-iron housing with locating collar to ensure proper installation, synthetic rubber gaskets, bolts and nuts, and threaded or grooved outlets.

- 3. Snap-On and Strapless Outlet Fittings: UL 213, ductile-iron housing or casting with gasket and threaded outlet.

- C. Sprinkler Drain and Alarm Test Fittings: Bronze, Cast- or ductile-iron body; with threaded or grooved inlet and outlet, test valve, and orifice and sight glass.

- 1. Manufacturers:

- a. TYCO
 - b. Fire-End and Croker Corp.
 - c. Viking Corp.
 - d. Victaulic Co. of America.

- D. Sprinkler Branch-Line Test Fittings: Brass body with threaded inlet, capped drain outlet, and threaded outlet for sprinkler.

- 1. Manufacturers:

- a. Elkhart Brass Mfg. Co., Inc.
 - b. Fire-End and Croker Corp.
 - c. Potter-Roemer; Fire-Protection Div.

- E. Sprinkler Inspector's Test Fitting: Bronze, Cast- or ductile-iron housing with threaded or grooved inlet and drain outlet and sight glass.

- 1. Manufacturers:

- a. AGF Manufacturing Co.
 - b. TYCO
 - c. G/J Innovations, Inc.
 - d. Triple R Specialty of Ajax, Inc.

- e. Victaulic Company
- F. Drop-Nipple Fittings: UL 1474, adjustable with threaded inlet and outlet, and seals.
 - 1. Manufacturers:
 - a. CECA, LLC.
 - b. Merit.
- G. Dry-Pipe-System Fittings: UL listed for dry-pipe service.
- H. Flexible, Sprinkler Hose Fittings:
 - 1. Manufacturers:
 - a. Fivalco Inc.
 - b. FlexHead Industries, Inc.
 - c. Gateway Tubing, Inc.
 - d. Victaulic AquaFlex
 - 2. Standard: UL 2443.
 - 3. Type: Braided or unbraided, multiple-use stainless steel Flexible hose for connection to sprinkler, and with bracket for connection to ceiling grid.
 - 4. Pressure Rating: [175 psig minimum] [300 psig].
 - 5. Size: Same as connected piping, for sprinkler.

2.7 LISTED FIRE-PROTECTION VALVES

- A. Valves shall be UL listed or FMG approved, with 175-psig minimum pressure rating. Valves shall have 300-psig pressure rating if valves are components of high-pressure piping system.
- B. Gate Valves with Wall Indicator Posts:
 - 1. Gate Valves: UL 262, cast-iron body, bronze mounted, with solid disc, nonrising stem, operating nut, and flanged ends.
 - 2. Gate Valves: UL 262, ductile-iron body, bronze mounted, EPDM coated cast iron disc, brass stem, grooved ends, with horizontal-wall type, or upright post indicator.
 - 3. Indicator Posts: UL 789, horizontal-wall type, cast-iron body, with operating wrench or hand wheel, extension rod, locking device, and cast-iron barrel.
 - 4. Manufacturers:
 - a. Grinnell Fire Protection.
 - b. McWane, Inc.; Kennedy Valve Div.
 - c. NIBCO.
 - d. Stockham.
 - e. Victaulic Company.
- C. Ball Valves: Comply with UL 1091, except with ball instead of disc.
 - 1. NPS 1-1/2 and Smaller: Bronze body with threaded or grooved ends.
 - 2. NPS 2 and NPS 2-1/2: Bronze body with threaded or grooved ends or ductile-iron body with grooved ends.
 - 3. Manufacturers:

- a. NIBCO.
- b. Victaulic Co. of America.

D. Butterfly Valves: UL 1091.

- 1. NPS 3 and Larger: Bronze, cast-iron, or ductile-iron body; wafer type or with flanged or grooved ends. Weather-proof actuator with pre-wired supervisory switches monitoring the valve in the open or closed positions. Maximum 365 psig (2517 kPa) working pressure.

- a. Manufacturers:

- 1) TYCO
- 2) Global Safety Products, Inc.
- 3) McWane, Inc.; Kennedy Valve Div.
- 4) Mueller Company.
- 5) NIBCO.
- 6) Pratt, Henry Company.
- 7) Victaulic Co. of America.

E. Check Valves NPS 2 and Larger: UL 312, swing type, cast-iron or ductile-iron body with flanged or grooved ends. Up to 365 psig (2517 kPa) maximum working pressure.

- 1. Manufacturers:

- a. TYCO
- b. Crane Co.; Crane Valve Group; Crane Valves.
- c. Globe Fire Sprinkler Corporation.
- d. Grinnell Fire Protection.
- e. Mueller Company.
- f. NIBCO.
- g. Potter-Roemer; Fire Protection Div.
- h. Reliable Automatic Sprinkler Co., Inc.
- i. Stockham.
- j. Victaulic Co. of America.
- k. Watts Industries, Inc.; Water Products Div.

F. Gate Valves: UL 262, OS&Y type.

- 1. NPS 2 and Smaller: Bronze body with threaded ends.

- a. Manufacturers:

- 1) Crane Co.; Crane Valve Group; Crane Valves.
- 2) NIBCO.

- 2. NPS 2-1/2 and Larger: Cast-iron body with flanged ends.

- a. Manufacturers:

- 1) Crane Co.; Crane Valve Group; Crane Valves.
- 2) Milwaukee Valve Company.
- 3) Mueller Company.
- 4) NIBCO.
- 5) Victaulic Company.

G. Indicating Valves: UL 1091, with integral indicating device and ends matching connecting piping.

1. Indicator: Electrical, 115-V ac, prewired, single-circuit, supervisory switch, Electrical, 115-V ac, prewired, 2-circuit, supervisory switch, Visual.
2. NPS 2-1/2 and Smaller: Ball or butterfly valve with bronze body and threaded ends.

a. Manufacturers:

- 1) Milwaukee Valve Company.
- 2) NIBCO.
- 3) Victaulic Co. of America.

3. NPS 3 and Larger: Butterfly valve with cast- or ductile-iron body; wafer type or with flanged or grooved ends.

a. Manufacturers:

- 1) TYCO
- 2) Grinnell Fire Protection.
- 3) Milwaukee Valve Company.
- 4) NIBCO.
- 5) Victaulic Co. of America.

2.8 BACKFLOW PREVENTERS

A. Double-Check Backflow-Prevention Assemblies:

1. Manufacturers:

- a. Conbraco Industries, Inc.
- b. FEBCO; SPX Valves & Controls.
- c. Watts Industries, Inc.; Water Products Div.
- d. Zurn Plumbing Products Group.

2. Standard: ASSE 1015.

3. Operation: Continuous-pressure applications, unless otherwise indicated.

4. Pressure Loss: 5 psig maximum, through middle 1/3 of flow range.

5. Body: Bronze for NPS 2 and smaller; cast iron with interior lining complying with AWWA C550 or steel with interior lining complying with AWWA C550 for NPS 2-1/2 and larger.

6. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.

7. Configuration: Designed for horizontal, straight through flow.

8. Accessories:

- a. Valves: Ball type with threaded ends on inlet and outlet of NPS 2 and smaller; outside screw and yoke gate-type with flanged ends on inlet and outlet of NPS 2-1/2 and larger.

B. Reduced-Pressure-Detector, Fire-Protection Backflow-Preventer Assemblies:

1. Manufacturers:

- a. Conbraco Industries, Inc.

- b. FEBCO; SPX Valves & Controls.
 - c. Watts Industries, Inc.; Water Products Div.
 - d. Zurn Plumbing Products Group.
 - 2. Standard: ASSE 1047 and FMG approved or UL listed.
 - 3. Operation: Continuous-pressure applications.
 - 4. Pressure Loss: 12 psig maximum, through middle 1/3 of flow range.
 - 5. Body: Cast iron with interior lining complying with AWWA C550 or Steel with interior lining complying with AWWA C550.
 - 6. End Connections: Flanged.
 - 7. Configuration: Designed for horizontal, straight through flow.
 - 8. Accessories:
 - a. Valves: Outside screw and yoke gate-type with flanged ends on inlet and outlet.
 - b. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.
 - c. Bypass: With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.
- C. Double-Check, Detector-Assembly Backflow Preventers:
- 1. Manufacturers:
 - a. Conbraco Industries, Inc.
 - b. FEBCO; SPX Valves & Controls.
 - c. Watts Industries, Inc.; Water Products Div.
 - d. Zurn Plumbing Products Group; Wilkins Div.
 - 2. Standard: ASSE 1048 and FMG approved or UL listed.
 - 3. Operation: Continuous-pressure applications.
 - 4. Pressure Loss: 5 psig maximum, through middle 1/3 of flow range.
 - 5. Body: Cast iron with interior lining complying with AWWA C550 or Steel with interior lining complying with AWWA C550.
 - 6. End Connections: Flanged.
 - 7. Configuration: Designed for horizontal, straight through flow.
 - 8. Accessories:
 - a. Valves: Outside screw and yoke gate-type with flanged ends on inlet and outlet.
 - b. Bypass: With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.

2.9 SPECIALTY VALVES

- A. Sprinkler System Control Valves: UL listed or FMG approved, cast- or ductile-iron body with flanged or grooved ends, and 175-psig minimum pressure rating. Control valves shall have 300-psig pressure rating if valves are components of high-pressure piping system.
- 1. Manufacturers:
 - a. TYCO
 - b. Globe Fire Sprinkler Corporation.
 - c. Grinnell Fire Protection.
 - d. Reliable Automatic Sprinkler Co., Inc.
 - e. Victaulic Co. of America.
 - f. Viking Corp.

2. Alarm Check Valves: UL 193, designed for vertical installation, with bronze grooved seat with O-ring seals, single-hinge pin, and latch design. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, retarding chamber, and fill-line attachment with strainer. Valve internal components shall be replaceable without removing the valve from the installed position.
 - a. Drip Cup Assembly: Pipe drain without valves and separate from main drain piping.
3. Dry-Pipe Valves: UL 260, differential type; with bronze or brass seat with Nitrile O-ring seals, single-hinge pin, and latch design. Include UL 1486, quick-opening devices, trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment. Minimum required air pressure is 13 psi with low pressure actuator and 300 psig maximum water pressure rating in all sizes. Valve internal components shall be replaceable without removing the valve from the installed position and shall be externally resettable. Valve shall be supplied completely assembled with shutoff valve, pre-set pressure switches and drain kit.
 - a. Air Compressor: UL 753, fractional horsepower, 120-V ac, 60 Hz, single phase.
 - 1) Manufacturers:
 - a) TYCO
 - b) Gast Manufacturing, Inc.
 - c) Grinnell Fire Protection.
 - d) Reliable Automatic Sprinkler Co., Inc.
 - e) Viking Corp.
 - f) Victaulic Company
 - b. Air Compressor/Air Maintenance Assembly: Consisting of a riser mounted compressor, air maintenance device, and flexible hoses for installation. Assemble shall be designed to ensure operational air pressure within 30 minutes of discharge.
4. Pre-Action Valves: UL 260, low differential, latched clapper design, with black enamel coated ductile iron body, tapped for main drain and all available trim configurations, aluminum bronze clapper with synthetic rubber seat, stainless steel spring and shaft, brass seat and Nitrile seat o-rings. Valve internal parts shall be replaceable without removing the valve from the installed position and shall be externally resettable. Maximum water pressure is 300 psig in all sizes and minimum required air pressure is 13 psig with low pressure actuator for pneumatic activation or solenoid valve for electrical activation. Valve shall have grooved ends for vertical installation. Separate check valve downstream is not required.
 - a. Air Compressor: UL 753, fractional horsepower, 120-V ac, 60 Hz, single phase.
 - 1) Manufacturers:
 - a) TYCO
 - b) Gast Manufacturing, Inc.
 - c) Grinnell Fire Protection.
 - d) Reliable Automatic Sprinkler Co., Inc.
 - e) Viking Corp.
 - f) Victaulic Company

- B. Pressure-Regulating Valves: UL 1468, brass or bronze, NPS 1-1/2 and NPS 2-1/2, 400-psig minimum rating. Include female NPS inlet and outlet, adjustable setting feature, and straight or 90-degree-angle pattern design as indicated.
 - 1. Finish: Rough metal.
 - 2. Manufacturers:
 - a. Elkhart Brass Mfg. Co., Inc.
 - b. Fire-End and Croker Corp.
 - c. GMR International Equipment Corporation.
 - d. Grinnell Fire Protection.
 - e. Potter-Roemer; Fire Protection Div.
 - f. Zurn Industries, Inc.; Wilkins Div.
- C. Automatic Drain Valves: UL 1726, NPS 3/4, ball-check device with threaded ends.
 - 1. Manufacturers:
 - a. AFAC Inc.
 - b. Grinnell Fire Protection.

2.10 SPRINKLERS

- A. Sprinklers shall be UL listed or FMG approved, with 175-psig minimum pressure rating. Sprinklers shall have [300-psig] pressure rating if sprinklers are components of high-pressure piping system.
- B. Manufacturers:
 - 1. TYCO
 - 2. Reliable Automatic Sprinkler Co., Inc.
 - 3. Victaulic Co. of America.
 - 4. Viking Corp.
- C. Automatic Sprinklers: With heat-responsive element complying with the following:
 - 1. UL 199, for nonresidential applications.
 - 2. UL 1767, for early-suppression, fast-response applications.
- D. Sprinkler Types and Categories: Nominal 1/2-inch orifice for "Ordinary" temperature classification rating, unless otherwise indicated or required by application.
 - 1. All Sprinklers shall be Quick Response.
- E. Sprinkler types, features, and options as follows:
 - 1. Concealed ceiling sprinklers, including cover plate.
 - 2. Extended-coverage sprinklers.
 - 3. Flush ceiling sprinklers, including escutcheon.
 - 4. High-pressure sprinklers.
 - 5. Institution sprinklers, made with a small, breakaway projection.
 - 6. Pendent sprinklers.
 - 7. Pendent, dry-type sprinklers.
 - 8. Quick-response sprinklers.

9. Recessed sprinklers, including escutcheon.
10. Sidewall sprinklers.
11. Sidewall, dry-type sprinklers.
12. Upright sprinklers.

F. Sprinkler Finishes: Chrome plated, bronze, and painted.

G. Special Coatings: Corrosion-resistant paint or Nickel-Teflon.

H. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.

1. Ceiling Mounting: Chrome-plated steel, one piece, flat.
2. Sidewall Mounting: Chrome-plated steel, one piece, flat.

I. Sprinkler Guards: Wire-cage type, including fastening device for attaching to sprinkler. Sprinkler guards shall be listed, supplied, and approved for use with the sprinkler, by the sprinkler manufacturer.

2.11 FIRE HOSE VALVES

A. Manufacturers:

1. Elkhart Brass Mfg. Co., Inc.
2. Croker Corp.
3. Guardian Fire Equipment Incorporated.
4. McWane, Inc.; Kennedy Valve Div.
5. Mueller Company.
6. Potter-Roemer; Fire-Protection Div.

B. Description: UL 668, brass or bronze, 300-psig minimum pressure rating, hose valve for connecting fire hose. Include angle pattern design; female NPS inlet and male hose outlet; and lugged cap, gasket, and chain. NPS 2-1/2 by NPS 1-1/2 reducer adapter and hose valve threads according to NFPA 1963 and matching local fire department threads.

1. Valve Operation: Nonadjustable type, unless pressure-regulating type is required.
2. Finish: Rough metal or chrome-plated.

2.12 FIRE VALVE CABINETS

A. Manufacturers:

1. Elkhart Brass Mfg. Co., Inc.
2. Croker Corp.
3. Grinnell Fire Protection.
4. Guardian Fire Equipment Incorporated.
5. McWane, Inc.; Kennedy Valve Div.
6. Mueller Company.
7. Potter-Roemer; Fire-Protection Div.

B. Description: UL 668, brass or bronze, 300-psig minimum pressure rating, hose valve for connecting fire hose. Include angle pattern design; female NPS inlet and male hose outlet; and

lugged cap, gasket, and chain. NPS 2-1/2 by NPS 1-1/2 reducer adapter and hose valve threads according to NFPA 1963 and matching local fire department threads.

1. Valve Operation: Nonadjustable type, unless pressure-regulating type is required.
 2. Finish: Rough metal or chrome-plated.
 3. Mountings: Pipe escutcheon for cabinet-mounted units.
- C. Recessed mounted valve cabinet of 20 ga. Steel. Refer to architect for door and finish requirements. Cabinet must be large enough to accommodate hose valve indicated.

2.13 FIRE DEPARTMENT CONNECTIONS

- A. Manufacturers:
1. TYCO
 2. Elkhart Brass Mfg. Co., Inc.
 3. Croker Corp.
 4. Guardian Fire Equipment Incorporated.
 5. Potter-Roemer; Fire-Protection Div.
- B. Wall-Type, Fire Department Connection: UL 405, 175-psig minimum pressure rating; with corrosion-resistant-metal body with brass inlets, brass wall escutcheon plate, brass lugged caps with gaskets and brass chains, and brass lugged swivel connections. Include inlets with threads according to NFPA 1963 and matching local fire department sizes and threads, outlet with pipe threads, extension pipe nipples, check devices or clappers for inlets, and escutcheon plate with marking similar to "AUTO SPKR & STANDPIPE."
1. Type: Flush, with [two] [three] [four] inlets and square or rectangular escutcheon plate.
 2. Type: Exposed, projecting, with two inlets and round escutcheon plate.
 3. Finish: Polished chrome-plated.
- C. Exposed, Freestanding-Type, Fire Department Connection: UL 405, [175-psig minimum] [300-psig] pressure rating; with corrosion-resistant-metal body, brass inlets with threads according to NFPA 1963 and matching local fire department sizes and threads, and bottom outlet with pipe threads. Include brass lugged caps, gaskets, and brass chains; brass lugged swivel connection and drop clapper for each hose-connection inlet; 18-inch-high, brass sleeve; and round, floor, brass escutcheon plate with marking "AUTO SPKR & STANDPIPE."
1. Finish Including Sleeve: Polished chrome-plated.

2.14 ALARM DEVICES

- A. Alarm-device types shall match piping and equipment connections.
- B. Water-Motor-Operated Alarm: UL 753, mechanical-operation type with pelton-wheel operator with shaft length, bearings, and sleeve to suit wall construction and 10-inch-diameter, cast-aluminum alarm gong with red-enamel factory finish. Include NPS 3/4 inlet and NPS 1 drain connections.
1. Manufacturers:
 - a. TYCO
 - b. Globe Fire Sprinkler Corporation.

- c. Reliable Automatic Sprinkler Co., Inc.
 - d. Victaulic Company.
 - e. Viking Corp.
- C. Electrically Operated Alarm: UL 464, with 8-inch-minimum- diameter, vibrating-type, metal alarm bell with red-enamel factory finish and suitable for outdoor use.
 - 1. Manufacturers:
 - a. Potter Electric Signal Company.
 - b. System Sensor.
- D. Water-Flow Indicator: UL 346, electrical-supervision, paddle-operated-type, water-flow detector with 250-psig pressure rating and designed for horizontal or vertical installation. Include two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
 - 1. Manufacturers:
 - a. ADT Security Services, Inc.
 - b. Grinnell Fire Protection.
 - c. ITT McDonnell & Miller.
 - d. Potter Electric Signal Company.
 - e. System Sensor.
 - f. Viking Corp.
 - g. Watts Industries, Inc.; Water Products Div.
- E. Pressure Switch: UL 753, electrical-supervision-type, water-flow switch with retard feature. Include single-pole, double-throw, normally closed contacts and design that operates on rising pressure and signals water flow.
 - 1. Manufacturers:
 - a. Grinnell Fire Protection.
 - b. Potter Electric Signal Company.
 - c. System Sensor.
 - d. Viking Corp.
- F. Valve Supervisory Switch: UL 753, electrical, single-pole, double-throw switch with normally closed contacts. Include design that signals controlled valve is in other than fully open position.
 - 1. Manufacturers:
 - a. McWane, Inc.; Kennedy Valve Div.
 - b. Potter Electric Signal Company.
 - c. System Sensor.
- G. Indicator-Post Supervisory Switch: UL 753, electrical, single-pole, double-throw switch with normally closed contacts. Include design that signals controlled indicator-post valve is in other than fully open position.
 - 1. Manufacturers:
 - a. Potter Electric Signal Company.

- b. System Sensor.

2.15 PRESSURE GAGES

A. Available Manufacturers:

1. AGF Manufacturing Co.
2. AMETEK, Inc.; U.S. Gauge.
3. Brecco Corporation.
4. Dresser Equipment Group; Instrument Div.
5. Marsh Bellofram.
6. WIKA Instrument Corporation.

B. Description: UL 393, 3-1/2- to 4-1/2-inch-diameter, dial pressure gage with range of 0 to 300 psig.

1. Water System Piping: Include caption "WATER" or "AIR/WATER" on dial face.
2. Air System Piping: Include retard feature and caption "AIR" or "AIR/WATER" on dial face.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Perform fire-hydrant flow test according to NFPA 13, NFPA 14, and NFPA 291. Use results for system design calculations required in Part 1 "Quality Assurance" Article.
- B. Report test results promptly and in writing.

3.2 EXAMINATION

- A. Examine roughing-in for hose valves and fire valve cabinets to verify actual locations of piping connections before installation.
- B. Examine walls and partitions for suitable thicknesses, fire- and smoke-rated construction, framing for hose-station cabinets, and other conditions where hose valve cabinets are to be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PIPING APPLICATIONS, GENERAL

- A. Flanges, flanged fittings, unions, nipples, and transition and special fittings with finish and pressure ratings same as or higher than system's pressure rating may be used in aboveground applications, unless otherwise indicated.
- B. Underground Service Piping: Ductile-iron, grooved-end pipe and fittings; grooved-end-pipe couplings; and grooved joints. Include corrosion-protective encasement.

3.4 STANDPIPE SYSTEM PIPING APPLICATIONS

- A. Standard-Pressure, Wet-Type or Dry-Type Standpipe System, 175-psig Maximum Working Pressure:
1. NPS 8 and smaller: Threaded-end, black or galvanized, standard-weight steel pipe; cast- or malleable-iron threaded fittings; and threaded joints.
 2. NPS 8 and smaller: Plain-end, black, standard-weight steel pipe; steel welding fittings; and welded joints.
 3. NPS 8 and smaller: Grooved-end, black or galvanized, standard-weight steel pipe with roll-grooved ends; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.
 4. NPS 8: Plain-end, Schedule 10 steel pipe; steel welding fittings; and welded joints.
 5. NPS 8: Grooved-end, Schedule 10 steel pipe; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.
- B. High-Pressure, Wet-Type or Dry-Type Standpipe System, 175- to 250-psig Working Pressure:
1. NPS 8 and Smaller: Threaded-end, black or galvanized, standard-weight steel pipe; cast- or malleable-iron threaded fittings; and threaded joints.
 2. NPS 8 and Smaller: Plain-end, black, standard-weight steel pipe; steel welding fittings; and welded joints.
 3. NPS 8 and Smaller: Grooved-end, black or galvanized, standard-weight steel pipe with roll-grooved ends; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.

3.5 SPRINKLER SYSTEM PIPING APPLICATIONS

- A. Standard-Pressure, Wet-Pipe or Dry-pipe Sprinkler System, 175-psig Maximum Working Pressure:
1. Sprinkler-Piping Fitting Option: Specialty sprinkler fittings, NPS 2 NPS 2-1/2 NPS 3 and smaller, including mechanical-T and -cross fittings, may be used downstream from sprinkler zone valves.
 2. NPS 2: Threaded-end, black or galvanized, standard-weight steel pipe; cast- or malleable-iron threaded fittings; and threaded joints.
 3. NPS 2-1/2 to NPS 6: Threaded-end, black or galvanized, standard-weight steel pipe; cast- or malleable-iron threaded fittings; and threaded joints.
 4. NPS 2-1/2 to NPS 6: Plain-end, black, standard-weight steel pipe; steel welding fittings; and welded joints.
 5. NPS 2-1/2 to NPS 6: Grooved-end, black or galvanized, standard-weight steel pipe; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.
- B. High-Pressure, Wet-Pipe and Dry-pipe Sprinkler System, 175- to 250-psig Working Pressure:
1. NPS 2: Threaded-end, black or galvanized, standard-weight steel pipe; cast- or malleable-iron threaded fittings; and threaded joints.
 2. NPS 2-1/2 to NPS 6: Threaded-end, black or galvanized, standard-weight steel pipe; cast- or malleable-iron threaded fittings; and threaded joints.
 3. NPS 2-1/2 to NPS 6: Plain-end, black, standard-weight steel pipe; steel welding fittings; and welded joints.
 4. NPS 2-1/2 to NPS 6: Grooved-end, black or galvanized, standard-weight steel pipe; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.

3.6 VALVE APPLICATIONS

- A. Listed Fire-Protection Valves: UL listed and FMG approved for applications where required by NFPA 13 and NFPA 14.
 - 1. Shutoff Duty: Use ball, butterfly, or gate valves.

3.7 JOINT CONSTRUCTION

- A. Refer to Division 21 Section "Common Work Results for Fire Suppression" for basic piping joint construction.
- B. Threaded Joints: Comply with NFPA 13 for pipe thickness and threads. Do not thread pipe smaller than NPS 8 (DN 200) with wall thickness less than Schedule 40 unless approved by authorities having jurisdiction and threads are checked by a ring gage and comply with ASME B1.20.1.
- C. Grooved Joints: Assemble joints with listed coupling and gasket, lubricant, and bolts.
 - 1. Ductile-Iron Pipe: Radius-cut-groove ends of piping. Use grooved-end fittings and grooved-end-pipe couplings.
 - 2. Steel Pipe: Roll-groove piping as indicated. Use grooved-end fittings and rigid, grooved-end-pipe couplings, unless otherwise indicated.
 - 3. Dry-Pipe Systems: Use fittings and gaskets listed for dry-pipe service.
 - 4. The gasket style and elastomeric material (grade) shall be verified as suitable for the intended service as specified. Gaskets shall be molded and produced by the grooved coupling manufacturer.
 - 5. Grooved end shall be clean and free from indentations, projections, and roll marks in the area from pipe end to groove for proper gasket sealing.
- D. Dissimilar-Metal Piping Joints: Construct joints using dielectric fittings compatible with both piping materials.
 - 1. NPS 2 and Smaller: Use dielectric unions, couplings, or nipples.
 - 2. NPS 2-1/2 to NPS 4: Use dielectric flanges.
 - 3. NPS 5 and Larger: Use dielectric flange insulation kits.

3.8 SERVICE-ENTRANCE PIPING

- A. Connect fire-suppression piping to water-service piping of size and in location indicated for service entrance to building. Refer to Division 22 Section "Facility Water Distribution Piping" for exterior piping.
- B. Install shutoff valve, backflow preventer, pressure gage, drain, and other accessories indicated at connection to water-service piping. Refer to Division 22 Section "Facility Water Distribution Piping" for backflow preventers.

3.9 WATER-SUPPLY CONNECTION

- A. Connect fire-suppression piping to building's interior water distribution piping. Refer to Division 22 Section "Domestic Water Piping" for interior piping.

- B. Install shutoff valve, backflow preventer, pressure gage, drain, and other accessories indicated at connection to water distribution piping. Refer to Division 22 Section "Domestic Water Piping Specialties" for backflow preventers.

3.10 PIPING INSTALLATION

- A. Refer to Division 21 Section "Common Work Results for Fire Suppression" for basic piping installation.
- B. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
 - 1. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with Architect before deviating from approved working plans.
- C. Install underground ductile-iron service-entrance piping according to NFPA 24 and with restrained joints. Encase piping in corrosion-protective encasement.
- D. Use approved fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- E. Install unions adjacent to each valve in pipes NPS 2 and smaller. Unions are not required on flanged devices or in piping installations using grooved joints.
- F. Install flanges or flange adapters on valves, apparatus, and equipment having NPS 2-1/2 and larger connections.
- G. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, sized and located according to NFPA 13.
- H. Install sprinkler piping with drains for complete system drainage.
- I. Install sprinkler zone control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.
- J. Install drain valves on standpipes.
- K. Install ball drip valves to drain piping between fire department connections and check valves. Drain to floor drain or outside building.
- L. Install alarm devices in piping systems.
- M. Hangers and Supports: Comply with NFPA 13 for hanger materials.
 - 1. Install standpipe system piping according to NFPA 14.
 - 2. Install sprinkler system piping according to NFPA 13.
- N. Install pressure gages on riser or feed main, at each sprinkler test connection, and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 and with soft metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.
- O. Drain dry-type standpipe piping.

- P. Drain dry-pipe sprinkler piping.
- Q. Pressurize and check dry-pipe sprinkler system piping and air compressors.
- R. Fill wet-standpipe system piping with water.
- S. Fill wet-pipe sprinkler system piping with water.
- T. Install flexible connectors on fire-pump and jockey pump supply and discharge connections.
- U. Grooved-end-pipe flexible couplings may be used in lieu of flexible connectors for vibration isolation at equipment connections. A minimum of three (3) couplings, for each connector, shall be placed in close proximity to the source of vibration.

3.11 VALVE INSTALLATION

- A. Install listed fire-protection valves, unlisted general-duty valves, specialty valves and trim, controls, and specialties according to NFPA 13 and NFPA 14 and authorities having jurisdiction.
- B. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply except from fire department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water supply sources.
- D. Specialty Valves:
 - 1. Alarm Check Valves: Install in vertical position for proper direction of flow, including bypass check valve and retarding chamber drain-line connection.
 - 2. Dry-Pipe Valves: Install trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
 - a. Install air compressor and compressed-air supply piping.

3.12 SPRINKLER APPLICATIONS

- A. Where specific types are not indicated, use the following sprinkler types:
 - 1. Rooms without Ceilings: Upright sprinklers.
 - 2. Public areas with Suspended Ceilings: Concealed sprinklers.
 - 3. Non public areas with Suspended Ceilings: Semi-Recessed sprinklers.
 - 4. Wall Mounting: Sidewall sprinklers.
 - 5. Spaces Subject to Freezing: Upright sprinklers Pendent, dry sprinklers Sidewall, dry sprinklers.
 - 6. Special Applications: All Sprinkler heads to be Quick Response type.
 - 7. Sprinkler Finishes:
 - a. Upright, Pendent, and Sidewall Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view; wax coated where exposed to acids, chemicals, or other corrosive fumes.
 - b. Concealed Sprinklers: Rough brass, with factory-painted bright white cover plate.
 - c. Flush Sprinklers: Bright chrome, with painted bright white escutcheon.

- d. Semi-Recessed Sprinklers: Bright chrome, with bright chrome escutcheon.

3.13 SPRINKLER INSTALLATION

- A. Install sprinklers in suspended ceilings in center of acoustical ceiling panels and tiles.
- B. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing. Use dry-type sprinklers with water supply from heated space.
- C. Install sprinklers into flexible, sprinkler hose fittings and install hose into bracket on ceiling grid.
- D. The sprinkler bulb protector must remain in place until the sprinkler is completely installed and before the system is placed in service. Remove bulb protectors carefully by hand after installation. Do not use any tools to remove bulb protectors.
- E. Do not install sprinklers that have been dropped, damaged, or show a visible loss of fluid. Never install sprinklers with cracked bulbs.

3.14 FIRE HOSE VALVE INSTALLATION

- A. Install hose connections adjacent to standpipes, unless otherwise indicated.
- B. Install freestanding hose connections for access and minimum passage restriction.
- C. Install NPS 2-1/2 hose connections with quick-disconnect NPS 2-1/2 by NPS 1-1/2 reducer adapter and flow-restricting device, unless otherwise indicated.

3.15 FIRE VALVE CABINET INSTALLATION

- A. Install recessed hose stations for access and minimum passage restriction.
- B. Install NPS 2-1/2 hose connections with quick-disconnect NPS 2-1/2 by NPS 1-1/2 reducer adapter and flow-restricting device, unless otherwise indicated.
- C. Install wall-mounting, recessed type fire hose valves in cabinets. Include pipe escutcheons, with finish matching valves, inside cabinet where water-supply piping penetrates cabinet. Install valves at angle required for connection of fire hose. Cabinets are specified in Division 10 Section "Fire Extinguisher Cabinets."

3.16 FIRE DEPARTMENT CONNECTION INSTALLATION

- ~~A. Install wall-type, fire department connections in vertical wall.~~
- B. Install freestanding-type, fire department connections in level surface.
 - 1. Install protective pipe bollards as required. Refer to Division 05 Section "Metal Fabrications" for pipe bollards.
- C. Install ball drip valve at each check valve for fire department connection.

- D. Install ball drip valve and check valve for free standing fire department connections in accessible pit.

3.17 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.
- C. Connect water-supply piping to fire-suppression piping. Include backflow preventer between potable-water piping and fire-suppression piping. Refer to Division 22 Section "Domestic Water Piping Specialties" for backflow preventers.
- D. Install ball drip valves at each check valve for fire department connection. Drain to floor drain or outside building.
- E. Connect piping to specialty valves, hose valves, specialties, fire department connections, and accessories.
- F. Connect compressed-air supply to dry-pipe sprinkler piping.
- G. Connect air compressor to the following piping and wiring:
 - 1. Pressure gages and controls.
 - 2. Electrical power system.
 - 3. Fire alarm devices, including low-pressure alarm.
- H. Electrical Connections: Power wiring is specified in Division 26.
- I. Connect alarm devices to fire alarm.
- J. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- K. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- L. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.18 LABELING AND IDENTIFICATION

- A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13 and NFPA 14.

3.19 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.

2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Energize circuits to electrical equipment and devices.
4. Start and run air compressors.
5. Flush, test, and inspect sprinkler systems according to NFPA 13, "Systems Acceptance" Chapter.
6. Flush, test, and inspect standpipe systems according to NFPA 14, "System Acceptance" Chapter.
7. Coordinate with fire alarm tests. Operate as required.
8. Coordinate with fire-pump tests. Operate as required.
9. Verify that equipment hose threads are same as local fire department equipment.

- B. Report test results promptly and in writing to Architect and authorities having jurisdiction.

3.20 CLEANING AND PROTECTION

- A. Clean dirt and debris from sprinklers.
- B. Remove and replace sprinklers with paint other than factory finish.
- C. Protect sprinklers from damage until Substantial Completion.

3.21 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain specialty valves. Refer to Division 01 Section "Demonstration and Training."
- B. Grooved coupling manufacturer's factory-trained field representative shall provide on-site training for contractor's field personnel in the proper use of grooving tools and installation of grooved piping products. Factory-trained representative shall periodically review the product installation. Contractor shall remove and replace any improperly installed products.

END OF SECTION

SECTION 213400

JOCKEY PUMPS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Regenerative-turbine, jockey pumps.

1.2 PERFORMANCE REQUIREMENTS

- ###### **A. Pump Equipment, Accessory, and Specialty Pressure Rating:** 175 psig minimum unless higher pressure rating is indicated.

1.3 SUBMITTALS

- ###### **A. Product Data:** For each type of product indicated. Include rated capacities, operating characteristics, performance curves, electrical characteristics, and furnished specialties and accessories.
- ###### **B. Shop Drawings:** For pumps, accessories, and specialties. Include plans, elevations, sections, details, and attachments to other work.
1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Wiring Diagrams: For power, signal, and control wiring.
- ###### **C. Field quality-control reports.**
- ###### **D. Operation and Maintenance Data:** For pumps to include in operation and maintenance manuals.

1.4 QUALITY ASSURANCE

- ###### **A. Electrical Components, Devices, and Accessories:** Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.5 COORDINATION

- ###### **A. Coordinate sizes and locations of concrete bases with actual equipment provided.**

PART 2 - PRODUCTS

2.1 REGENERATIVE-TURBINE, JOCKEY PUMPS

- A. Manufacturers:
 - 1. A-C Fire Pump Systems; a business of ITT Industries.
 - 2. PACO Pumps; Grundfos Pumps Corporation U.S.A.
 - 3. Aurora Pump.
 - 4. S.A. Armstrong Limited.
- B. Description: Factory-assembled and -tested, close-coupled, single-stage, regenerative-turbine centrifugal pump as defined in ANSI HI 1.1-1.2 and HI 1.3; with pump and motor mounted horizontally.
- C. Pump Construction:
 - 1. Casing: Radially split, cast iron, with threaded inlet and outlet.
 - 2. Impeller: Bronze, balanced, and keyed to shaft.
 - 3. Pump Shaft: Stainless steel with deflector.
 - 4. Shaft Sleeve: Bronze.
 - 5. Seal: Mechanical type with spring-loaded rotating head.
- D. Motor: Single speed with permanently lubricated ball bearings. Comply with requirements in Division 21 Section "Common Motor Requirements for Fire Suppression Equipment."
- E. Nameplate: Permanently attached to pump and indicating capacity and characteristics.
- F. Capacities and Characteristics: REFER TO SCHEDULE ON DRAWINGS

2.2 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 21 Section "Common Motor Requirements for Fire Suppression Equipment."
 - 1. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 - 2. Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.

PART 3 - EXECUTION

3.1 EQUIPMENT INSTALLATION

- A. NFPA Standard: Comply with NFPA 20 for installation of jockey pumps.
- B. Base-Mounted Pump Mounting: Install pumps on concrete bases. Comply with requirements for concrete bases specified in Division 03 Section "Cast-in-Place Concrete."
- C. Install regenerative-turbine, jockey pumps according to ANSI HI 1.4.

- D. Provide minimum 18" clear on all sides for maintenance.

3.2 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Tests and Inspections:
 - 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Jockey pumps will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.3 ADJUSTING

- A. Lubricate pumps as recommended by manufacturer.
- B. Set field-adjustable pressure-switch ranges as indicated.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 213900
CONTROLLERS FOR FIRE-PUMP DRIVERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Full-service, full-voltage controllers rated 600 V and less.
 - 2. Remote alarm panels.
- B. Related Sections:
 - 1. Division 21 Section "Jockey Pump" for jockey-pump controllers.

1.2 DEFINITIONS

- A. ATS: Automatic transfer switch(es).
- B. ECM: Electronic control module.
- C. MCCB: Molded-case circuit breaker.
- D. N.O.: Normally open.

1.3 PERFORMANCE REQUIREMENTS

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For each type of product indicated. Include dimensioned plans, elevations, sections, details, and attachments to other work, including required clearances and service spaces around controller enclosures.
 - 1. Show tabulations of the following:
 - a. Each installed unit's type and details.
 - b. Enclosure types and details for types other than NEMA 250, Type 2.
 - c. Factory-installed devices.
 - d. Nameplate legends.
 - e. Short-circuit current (withstand) rating of integrated unit.
 - f. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices.
 - g. Specified modifications.

2. Detail equipment assemblies and indicate dimensions, weights, loads, method of field assembly, components, and location and size of each field connection.
 3. Schematic and Connection Diagrams: For power, signal, alarm, and control wiring and for pressure-sensing tubing.
- C. Qualification Data: For qualified testing agency.
 - D. Product Certificates: For each type of product indicated, from manufacturer.
 - E. Manufacturer's factory test reports of fully assembled and tested equipment.
 - F. Source quality-control reports.
 - G. Operation and Maintenance Data: For each type of product indicated to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 1. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.
 2. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor-based logic controls.

1.5 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Member company of an NRTL.
- B. Source Limitations: Obtain fire-pump controllers and all associated equipment from single source or producer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with standards of authorities having jurisdiction pertaining to materials and installation.
- E. Comply with NFPA 20 and NFPA 70.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations:
 1. Ambient Temperature Rating: Not less than 40 deg F and not exceeding 122 deg F unless otherwise indicated.
 2. Altitude Rating: Not exceeding 6600 feet unless otherwise indicated.
- B. Interruption of Existing Electric Service: Notify Construction Manager and Owner no fewer than seven days in advance of proposed interruption of electric service, and comply with NFPA 70E.

1.8 COORDINATION

- A. Coordinate layout and installation of controllers with other construction including conduit, piping, fire-pump equipment, and adjacent surfaces. Maintain required NEC clearances for workspace and equipment access doors and panels. Ensure that controllers are within sight of fire-pump drivers.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.9 EXTRA MATERIALS

- A. ~~Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.~~
 - 1. ~~Indicating Lights: Two of each type and color of lens installed; two of each type and size of lamp installed.~~
 - 2. ~~Auxiliary Contacts: One for each size and type of magnetic contactor installed.~~
 - 3. ~~Power Contacts: Three for each size and type of magnetic contactor installed.~~
 - 4. ~~Contactor Coils: One for each size and type of magnetic controller installed.~~
 - 5. ~~Relay Boards: One for each size and type of relay board installed.~~
 - 6. ~~Operator Interface: One microprocessor board(s), complete with display and membrane keypad.~~

PART 2 - PRODUCTS

2.1 FULL-SERVICE CONTROLLERS

- A. Manufacturers:
 - 1. ASCO Power Technologies, LP; Firetrol Products.
 - 2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - 3. Master Control Systems, Inc.
 - 4. Metron, Inc.
- B. General Requirements for Full-Service Controllers:
 - 1. Comply with NFPA 20 and UL 218.
 - 2. Listed by an NRTL for electric-motor driver for fire-pump service.
 - 3. Combined automatic and nonautomatic operation.
 - 4. Factory assembled, wired, and tested; continuous-duty rated.
 - 5. Service Equipment Label: NRTL labeled for use as service equipment.
- C. Method of Starting:
 - 1. Pressure-switch actuated.
 - a. Water-pressure-actuated switch and pressure transducer with independent high- and low-calibrated adjustments responsive to water pressure in fire-suppression piping.
 - b. System pressure recorder, electric ac driven, with spring backup.
 - c. Programmable minimum-run-time relay to prevent short cycling.
 - d. Programmable timer for weekly tests.

2. Magnetic Controller: Wye-delta (open transition) type.
 3. Solid-State Controller: Reduced-voltage type.
 4. Emergency Start: Mechanically operated start handle that closes and retains the motor RUN contactor independent of all electric or pressure actuators.
- D. Method of Stopping: Automatic and nonautomatic shutdown after automatic starting.
- E. Method of Isolation and Overcurrent Protection: Interlocked isolating switch and nonthermal MCCB; with a common, externally mounted operating handle, and providing locked-rotor protection.
- F. Door-Mounted Operator Interface and Controls:
1. Monitor, display, and control the devices, alarms, functions, and operations listed in NFPA 20 as required for drivers and controller types used.
 2. Method of Control and Indication:
 - a. Microprocessor-based logic controller, with multiline digital readout.
 - b. Membrane keypad.
 - c. LED alarm and status indicating lights.
 3. Local and Remote Alarm and Status Indications:
 - a. Controller power on.
 - b. Motor running condition.
 - c. Loss-of-line power.
 - d. Line-power phase reversal.
 - e. Line-power single-phase condition.
 4. Audible alarm, with silence push button.
 5. Nonautomatic START and STOP push buttons or switches.
- G. Optional Features:
1. Extra Output Contacts:
 - a. One N.O. contact(s) for motor running condition.
 - b. One set(s) of contacts for loss-of-line power.
 - c. One each, Form C contacts for high and low reservoir level.
 2. Local alarm bell.
 3. Door-mounted thermal or impact printer for alarm and status logs.
 4. Operator Interface Communications Ports: USB, Ethernet, and RS485.
- H. Automatic Transfer Switch (ATS):
1. Complies with NFPA 20, UL 218, and UL 1008.
 2. Integral with controller as a listed combination fire-pump controller and power transfer switch.
 3. Automatically transfers fire-pump controller from normal power supply to alternate power supply in event of power failure.
 4. Allows manual transfer from one source to the other.
 5. Alternate-Source Isolating and Disconnecting Means: Integral molded-case switch, with an externally mounted operating handle.
 6. Local and Remote Alarm and Status Indications:

- a. Normal source available.
 - b. Alternate source available.
 - c. In normal position.
 - d. In alternate position.
 - e. Isolating means open.
- 7. Audible alarm, with silence push button.
 - 8. Nonautomatic (manual, nonelectric) means of transfer.
 - 9. Engine test push button.
 - 10. Start generator output contacts.
 - 11. Timer for weekly generator tests.

2.2 REMOTE ALARM PANELS

- A. General Requirements for Remote Alarm Panels: Comply with NFPA 20 and UL 218; listed by an NRTL for fire-pump service.
- B. Manufacturers:
 - 1. ASCO Power Technologies, LP; Firetrol Products.
 - 2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - 3. Master Control Systems, Inc.
 - 4. Metron, Inc.
- C. General Requirements for Remote Alarm Panels: Factory assembled, wired, and tested.
- D. Supervisory and Normal Control Voltage: 120-V ac; single source.
- E. Audible and Visual Alarm and Status Indications:
 - 1. Driver running.
 - 2. Loss of phase.
 - 3. Phase reversal.
 - 4. Supervised power on.
 - 5. Common trouble on the controller.
 - 6. Controller connected to alternate power source.
- F. Audible alarm, with silence push button.
- G. Pump REMOTE START push button.

2.3 ENCLOSURES

- A. Fire-Pump Controllers, ATS, Remote Alarm Panels, and Low-Suction-Shutdown Panels: NEMA 250, to comply with environmental conditions at installed locations and NFPA 20.
 - 1. Indoor, Dry and Clean Locations: Type 1 (IEC IP10).
 - 2. Indoor Locations Subject to Dripping Noncorrosive Liquids: Type 2 (IEC IP11).
- B. Enclosure Color: Manufacturer's standard "fire-pump-controller red".
- C. Nameplates: Comply with NFPA 20; complete with capacity, characteristics, approvals, listings, and other pertinent data.

D. Optional Features:

1. Floor stands, 12 inches high, for floor-mounted controllers.

2.4 SOURCE QUALITY CONTROL

- A. Testing: Test and inspect fire-pump controllers according to requirements in NFPA 20 and UL 218.
 1. Verification of Performance: Rate controllers according to operation of functions and features specified.
- B. Fire-pump controllers will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and surfaces to receive equipment, with Installer present, for compliance with requirements and other conditions affecting performance.
- B. Examine equipment before installation. Reject equipment that is wet or damaged by moisture or mold.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CONTROLLER INSTALLATION

- A. Install controllers within sight of their respective drivers.
- B. Connect controllers to their dedicated pressure-sensing lines.
- C. Floor-Mounting Controllers: Install controllers on 4-inch nominal-thickness concrete bases, using floor stands high enough so that the bottom of enclosure cabinet is not less than 12 inches above finished floor. Comply with requirements for concrete bases specified in Division 03 Section "Cast-in-Place Concrete."
- D. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- E. Comply with NEMA ICS 15.

3.3 REMOTE ALARM PANEL INSTALLATION

- A. Install panels on walls with tops not higher than 72 inches above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For ATS not on walls, provide freestanding racks complying with Division 26 Section "Hangers and Supports for Electrical Systems."

3.4 POWER WIRING INSTALLATION

- A. Install power wiring between controllers and their services or sources, and between controllers and their drivers. Comply with requirements in NFPA 20, NFPA 70, and Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.5 CONTROL AND ALARM WIRING INSTALLATION

- A. Install wiring between controllers and remote devices and facility's central monitoring system. Comply with requirements in NFPA 20, NFPA 70, and Division 26 Section "Control-Voltage Electrical Power Cables."
- B. Install wiring between remote alarm and low-suction-shutdown panels and controllers. Comply with requirements in NFPA 20, NFPA 70, and Division 26 Section "Control-Voltage Electrical Power Cables."
- C. Install wiring between controllers and the building's fire-alarm system. Comply with requirements specified in Division 28 Section "Digital, Addressable Fire-Alarm System."
- D. Bundle, train, and support wiring in enclosures.
- E. Connect remote manual and automatic activation devices where applicable.

3.6 IDENTIFICATION

- A. Comply with requirements in NFPA 20 for marking fire-pump controllers.
- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification in NFPA 20 and as specified in Division 26 Section "Identification for Electrical Systems."

3.7 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Acceptance Testing Preparation:
 - 1. Inspect and Test Each Component:
 - a. Inspect wiring, components, connections, and equipment installations. Test and adjust components and equipment.
 - b. Test insulation resistance for each element, component, connecting supply, feeder, and control circuits.
 - c. Test continuity of each circuit.
 - 2. Verify and Test Each Electric-Driver Controller:

- a. Verify that voltages at controller locations are within plus 10 or minus 1 percent of motor nameplate rated voltages, with motors off. If outside this range for any motor, notify Architect and Construction Manager before starting the motor(s).
 - b. Test each motor for proper phase rotation.
- 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
- 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Field Acceptance Tests:
 - 1. Do not begin field acceptance testing until suction piping has been flushed and hydrostatically tested and the certificate for flushing and testing has been submitted to Architect, Construction Manager, Owner and authorities having jurisdiction.
 - 2. Prior to starting, notify authorities having jurisdiction of the time and place of the acceptance testing.
 - 3. Engage manufacturer's factory-authorized service representative to be present during the testing.
 - 4. Perform field acceptance tests as outlined in NFPA 20.
- E. Controllers will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

3.8 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.

3.9 ADJUSTING

- A. Adjust controllers to function smoothly and as recommended by manufacturer.
- B. Set field-adjustable switches, auxiliary relays, time-delay relays, and timers.
- C. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.
- D. Set field-adjustable pressure switches.

3.10 PROTECTION

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until enclosed controllers are ready to be energized and placed into service.
- B. Replace controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.11 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain controllers, remote alarm panels, low-suction-shutdown panels, and to use and reprogram microprocessor-based controls within this equipment.

END OF SECTION

SECTION 220500

COMMON WORK RESULTS FOR PLUMBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. In addition to Division 01 Specification Sections, related sections include the following:
 - 1. Division 01 Section "Cutting and Patching"
 - 2. Division 02 Section "Selective Structure Demolition" for general demolition requirements and procedures.
 - 3. Division 03 Sections "Cast-in-Place Concrete" and "Miscellaneous Cast-in-Place Concrete".
 - 4. Division 05 Section "Metal Fabrications" for structural steel.
 - 5. Division 09 Sections "Interior Painting" and "Exterior Painting".
 - 6. Division 08 Section "Access Doors and Frames" for access panels and doors.

1.2 RELATED REQUIREMENTS

- A. All conditions imposed by these documents shall be applicable to all portions of the Work under this Division. These references are intended to point out specific items to the Contractor, but in no way relieve him of the responsibility of reading and complying with all relevant parts of the entire Specification.
- B. The Contractor shall examine and coordinate with all Contract Drawings and Specifications, and all Addenda issued. Failure to comply shall not relieve them of responsibility. The omission of details of other portions of the Work from this Division shall not be used as a basis for a request for additional compensation.
- C. The specific features and details for other portions of the Work related to the construction in progress or to the building(s) shall be determined by examination at the site.

1.3 SUMMARY

- A. This Section includes the following:
 - 1. Scope of work.
 - 2. Piping materials and installation instructions common to most piping systems.
 - 3. Transition fittings.
 - 4. Dielectric fittings.
 - 5. Mechanical sleeve seals.
 - 6. Sleeves.
 - 7. Escutcheons.
 - 8. Grout.
 - 9. Plumbing demolition.
 - 10. Equipment installation requirements common to equipment sections.
 - 11. Painting and finishing.
 - 12. Concrete bases.

13. Supports and anchorages.

1.4 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.
- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.
- F. Products and Materials: Components and assemblies for the construction of the systems as indicated in the Documents including, but not limited to pipes, tubes, valves, and equipment.
- G. Products or Materials: See "Products and Materials".
- H. Provide: The materials and equipment described shall be furnished, installed and connected under this Division, complete for operation, unless specifically noted to the contrary. Identical to the phrase "furnish and install".
- I. Furnish: The material, equipment, etc. to be supplied, but not installed by the supplier.
- J. The following are industry abbreviations for materials:
 - 1. CPVC: Chlorinated polyvinyl chloride plastic.
 - 2. PE: Polyethylene plastic.
 - 3. PVC: Polyvinyl chloride plastic.
 - 4. EPDM: Ethylene-propylene-diene terpolymer rubber.
 - 5. NBR: Acrylonitrile-butadiene rubber.
- K. VFD: Variable frequency drive. This may be used interchangeably with VSD (variable speed drive), VSC (variable speed controller), and VFMC (variable frequency motor controller). This technology varies the frequency of the incoming electrical signal to change the speed of driven equipment.

1.5 SCOPE OF WORK

- A. Inspection Of Site
 - 1. The accompanying drawings do not indicate existing plumbing installations other than to identify modifications of and extensions thereof. The Contractor shall visit the site, inspect the installations and ascertain the conditions to be met and the work.

2. Failure to comply with an inspection of the site shall not constitute ground for any additional payments in connection with removing or modifying any part of the existing installations and/or installing any new work under this Division.
3. Review all construction details of the new portion of the building as illustrated on the architectural and structural drawings and be guided thereby.

B. Products and Materials Description

1. Where two or more units of the same kind or class of a specific item are required, these shall be the products of a single manufacturer; however, the component parts of the item need not be the products of one manufacturer.
2. In describing the various products and materials, in general each item will be described singularly, even though there may be a multiplicity of identical items. Also, where the description is only general in nature, exact sizes, duties, space arrangements, horsepower requirements and other data shall be determined by reference to the Documents.

C. The Work shall include modifications and extensions to existing systems, and the modification of the existing structure as required accommodating the installation of the Work.

D. Refer to other Divisions of the Specifications for related Work.

E. Contractor shall install, hang, support, etc. all MEP systems and equipment to satisfy all requirements of the applicable seismic zone using performance requirements and design criteria for project site as indicated by architect.

F. It is the intent, unless otherwise indicated, that all products and materials described and specified under this Division, shall be provided for a complete working system irrespective of use of the phrases "install", "furnish", "furnish and install", or "provide" as described above has been actually included.

G. The Contractor shall be responsible for all Work of every description in connection with this Division of the Specifications.

H. The Contractor shall specifically and distinctly assume, and does so assume, all risk for damage or injury from whatever cause to property or person used or employed on or in connection with this Work and of all damages or injury to any person or property wherever located, resulting from an action or operation under the Contract in connection with the Work, and undertake the promise to defend the Owner against all claims on account of any such damage or injury.

I. The Contractor will be held responsible for the satisfactory execution and completion of the Work in accordance with the true intent of the Documents.

J. The Contractor shall provide without extra charge all incidental items required as part of the Work, even though it may not be specifically indicated. If the Contractor has reason for objecting to the use of any material, equipment, device or method of construction as indicated, he shall make report of such objections to the Owner's Representative, obtain proper approval and adjustment to the Contract, and shall proceed with the Work.

K. Electric wiring

1. All electric wiring shall be installed under Division 26, except for such equipment items as are prewired at their point of manufacture and so delivered to the project, and except for the following:

- a. Temperature Control Wiring and Power Wiring provided by controls contractor.
2. Prepare and submit for review wiring diagrams for all equipment furnished under this Division. Show on these diagrams all power, interlock, and control circuits. When the Architect takes no exception to these drawings, they shall become installation drawings for the Contractor.
3. All domestic cold and hot water piping shall be heat traced when routed external to the building or in areas susceptible to freezing conditions.

1.6 ORDINANCES, PERMITS AND CODES

- A. It shall be the Contractor's duty to perform the work and provide the materials covered by these specifications in conformance with all ordinances and regulations of all authorities having jurisdiction.
- B. All work herein shall conform to all applicable laws, ordinances, and regulations of the local utility companies.
- C. The work shall be in accordance with, but not limited to, the requirements of:
 1. National Fire Protection Association
 2. National Safety Code
 3. Wichita Falls Building Codes
 4. Texas Safety Code
 5. Texas Boiler Code
 6. Texas Department Of State Health Services
- D. Codes and standards referred to are minimum standards. Where the requirements of these specifications or drawings exceed those of the codes and regulations, the drawings, and specifications govern.
- E. The Contractor shall obtain permits, plan checks, connection and specification fees, inspections, and approvals applicable to the Work as required by the regulatory authorities.
- F. Fees and costs of any nature whatsoever incidental to permits, inspections, and approvals shall be assumed and paid by the Contractor.
- G. The pro-rata costs, if any, for utilities serving this property will be paid for by the Owner and shall not be included as part of this Contract.

1.7 REFERENCE STANDARDS

- A. Where differences between building codes, state laws, local ordinances, industry standards, utility company regulations and the Contract Documents occur, the most stringent shall govern. The Contractor shall promptly notify the Owner's Representative in writing of any such difference.
- B. Should the Contractor perform any Work that does not comply with local codes, laws and ordinances, industry standards or other governing regulations, the Work shall be corrected on noncompliance deficiencies with the Contractor bearing all costs.
- C. In addition to the aforementioned ordinances, industry standards published by the following organizations shall apply:

1. AIA AMERICAN INSTITUTE OF ARCHITECTS
2. AASHTO AMERICAN ASSOCIATION OF STATE HIGHWAY OFFICIALS
3. ACI AMERICAN CONCRETE INSTITUTE
4. AGA AMERICAN GAS ASSOCIATION
5. AISC AMERICAN INSTITUTE OF STEEL CONSTRUCTION
6. ANSI AMERICAN NATIONAL STANDARDS INSTITUTE
7. API AMERICAN PETROLEUM INSTITUTE
8. ARI AIR CONDITIONING & REFRIGERATION INSTITUTE
9. ASHRAE AMERICAN SOCIETY OF HEATING, REFRIGERATING AND AIR CONDITIONS ENGINEERS, INC.
10. ASME AMERICAN SOCIETY OF MECHANICAL ENGINEERS
11. ASTM AMERICAN SOCIETY FOR TESTING AND MATERIALS
12. AWS AMERICAN WELDING SOCIETY CODE
13. AWWA AMERICAN WATER WORKS ASSOCIATION
14. CISPI CAST IRON SOIL PIPE INSTITUTE
15. ASPE AMERICAN SOCIETY OF PLUMBING ENGINEERS
16. FM FACTORY MUTUAL
17. IRI INDUSTRIAL RISK INSURERS
18. NBS NATIONAL BUREAU OF STANDARDS
19. NFPA NATIONAL FIRE PROTECTION ASSOCIATION
20. PDI PLUMBING AND DRAINAGE INSTITUTE
21. UL UNDERWRITER'S LABORATORIES

- D. Where the Contract Documents exceed the above requirements, the Contract Documents shall govern. In no case shall Work be installed contrary to or below the minimum legal standards.

1.8 DRAWINGS AND SPECIFICATIONS

- A. The inter-relation of the specifications, the drawings, and the schedules are as follows:
1. The specifications provide the written requirements for the quality, standard, nature of the materials, equipment and construction systems.
 2. The drawings establish the quantities, approximate dimensions, details and location of equipment.
 3. The schedules give the capacities, characteristics and components.
- B. For any individual project, if there is conflict between the drawings and or specifications, they are equivalent in authority and priority. Should they disagree in themselves, or with each other, prices shall be based on the most expensive combination of quality and quantity of work indicated. In the event of the above mentioned disagreements the resolution shall be determined by the Architect.
- C. Contractor is responsible to bring any conflicts in drawings and/or specifications to the attention of the Architect, immediately, prior to any work being done.
- D. Where the specifications do not fully agree with the schedules, the schedules shall govern. Figures given on drawings govern scale measurements and large scale details govern small scale drawings.
- E. Review all construction details illustrated on the architectural and structural drawings and be guided thereby.

1.9 SUBMITTAL PROCEDURES

- A. Common Requirements for Product Data: Where this Section and other Sections of this Division require Product Data to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures". In addition to the requirements of Division 01 comply with the following:
1. Submit hardcopy of Product Data in the quantity as required under Division 01 Section "Submittal Procedures". Hardcopies of product data submittals shall be bound materials as defined above. Separate products under distinct subheadings that correspond to paragraphs in specification text. Divide sections in binder with labeled divider tabs.
 2. In addition to hardcopies required by Division 01, submit one copy of product data in electronic format. All files on disc shall be in Portable Document Format (.pdf).
 3. Product Data shall not consist of manufacturer's catalogs or cut sheets that contain no indication of the exact item offered. The submission on individual items shall designate the exact item offered.
- B. Product Data: For the following:
1. Dielectric fittings.
 2. Mechanical sleeve seals.
 3. Escutcheons.
- C. Common Requirements for Shop Drawings: Where this Section and other Sections of this Division require Shop Drawings to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures". In addition to the requirements of Division 01 comply with the following:
1. Prepare Shop Drawings using computerized drafting software compatible with AutoDesk's AutoCAD®.
 2. Submit hardcopy of Shop Drawings in the quantity as required under Division 01 Section "Submittal Procedures". Hardcopies of Shop Drawings shall have each sheet clearly labeled with a unique sheet identification number.
 3. In addition to hardcopies required by Division 01, submit one copy of Shop Drawings in electronic format. Files shall include both AutoCAD® compatible source files and files printed to Portable Document Format (.pdf).
 4. Shop Drawings shall be of appropriate scale based on the following:
 - a. Piping Systems, including all underfloor work: Minimum 1/8" = 1'-0".
 - b. Mechanical rooms: 1/4" = 1' – 0".
 5. Shop drawings shall include the following items:
 - a. Concrete pads and foundations.
 - b. Equipment room layouts with actual dimensions and offsets for all systems.
 - c. Roof layouts.
 - d. Trench locations and sizes.
 - e. Dimensioned floor drain locations.
- D. Common Requirements for Coordination Drawings: Where this Section and other Sections of this Division require Coordination Drawings to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures" and Division 01 Section "Project Management and Coordination". In addition to the requirements of Division 01 comply with the following:

1. Prepare Coordination Drawings using computerized drafting software compatible with AutoDesk's AutoCAD®. Drawings files must be composite with multiple distinctive layers for each of the various trades.
2. Submit hardcopy of Coordination Drawings in the quantity as required under Division 01. Hardcopies of Coordination Drawings shall have each sheet clearly labeled with a unique sheet identification number.
3. In addition to hardcopies required by Division 01, submit one copy of Shop Drawings in electronic format. Files shall include both AutoCAD® compatible source files and files printed to Portable Document Format (.pdf).
4. Coordination Drawings shall be of appropriate scale but shall not be smaller than a scale of 1/4-inch equals one foot.

E. Coordination Drawings: Prepare drawings showing dimensioned layout for the following:

1. Penetration and Structural Opening: Floor plans showing sleeves and formed structural penetrations. Show sleeve and formed penetration layouts and relationships between structural components and other adjacent building elements, including but not limited to pre-tensioning and post-tensioning members where used.
2. Shop drawings shall be provided for the following:
 - 1) Sheet Metal and Duct Systems, including all underfloor work (prepared at a minimum scale of 1/8"=1'-0")
 - 2) Piping and equipment systems for storm, domestic water, waste and vent and other plumbing piping systems. (Preferably at 1/4" = 1' – 0" and not less than 1/8" = 1' – 0").
 - 3) Equipment room layouts with actual equipment, piping, and duct at 1/4" = 1' – 0" scale. Show clearances, access spaces, relative heights of piping.
 - 4) Housekeeping and equipment concrete pads.
 - 5) Dimensioned floor drain locations and the equipment each serves.
 - 6) Roof layouts.
 - 7) Trench locations and sizes.
- b. Equipment support locations, type of support, and weight on each support.
- c. Location of structural supports for structure-supported raceways.
- d. For floor mounted equipment: concrete base dimension, outline of equipment, and required clearances.
- e. **Location of structural supports for seismic bracing.**

F. Common Requirements for Specification Compliance Certification: Where this Section and other Sections of this Division require Specification Compliance Certification to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures" for "Other Informational Submittals". In addition to the requirements of Division 01 comply with the following:

1. Prepare a line-by-line Specification Compliance Certification by marking up a copy of the Contract Document specification section in the left margin. Accompany the markup with a written report explaining all items that are not marked with "Compliance". Submit line-by-line markup, written report of deviations and alternates and a cover letter certified by Manufacturer or Installer that prepared the Specification Compliance Certification. Use the following key for preparing the line-by-line markup.
 - a. "C" for Compliance: By noting the term "compliance" or "C" in the margin, it shall be understood that the manufacturer is in full compliance with the item specified and will provide exactly the same with no deviations.

- b. "D" for Deviation: By noting the term "deviation" or "D" in the margin, it shall be understood that the manufacturer prefers to provide a different component in lieu of that specified.
- c. "A" for Alternate: By noting the term "alternate" or "A" in the margin, it shall be understood that the manufacturer proposes to provide the same operating function but prefers to do it in a different manner.
- d. "N/A" for Not Applicable: By noting the term "not applicable" or "N/A" in the margin, it shall be understood that the specified item is not applicable to the project.

G. Common Requirements For Qualification Data:

- 1. Professional Engineer Qualifications: Where this Section and other Sections of this Division require a Professional Engineer to be responsible for Delegated Design requirements; Submit Qualification data for Professional Engineer including, but not limited to, proof of registration in the Project location.
- 2. Independent Testing and Inspecting Agency Certification: Where this Section and other Sections of this Division require an Independent Testing and Inspecting agency to be responsible for Acceptance Testing and Field Quality Control requirements; Submit certification documentation for such agency that demonstrates compliance with the Quality Assurance paragraph of this Section.

H. Qualification Data: For Independent Testing and Inspecting Agency.

I. Welding certificates.

1.10 SUBSTITUTIONS

- A. Where the product of a single manufacturer is mentioned by trade name or manufacturer's name in this Division, it is the only acceptable manufacturer.
- B. Where two or more manufacturers are named, only those manufacturers will be considered or approved.
- C. Manufacturers not listed will be considered for substitution prior to bid only. The substitute manufacturer shall submit a complete copy of the appropriate technical specification section minimum ten (10) business days prior to bid with each sub-paragraph noted with the comment, "compliance", "deviation", "alternate" or "not applicable". In the case of non-primary, vendor-supplied items, the name of the sub-vendor supplying said item, including model number, shall be indicated.
 - 1. By noting the term "compliance" or "C", it shall be understood that the manufacturer is in full compliance with the item specified and will provide exactly the same with no deviations.
 - 2. By noting the term "deviation" or "D", it shall be understood that the manufacturer prefers to provide a different component in lieu of that specified. Manufacturer shall indicate all deviations.
 - 3. By noting the term "alternate" or "A", it shall be understood that the manufacturer proposes to provide the same operating function but prefers to do it in a different manner. An alternate shall be fully described as to what the manufacturer proposes to provide.
 - 4. By noting the term "not applicable" or "N/A", it shall be understood that the specified item is not applicable to the project.

- D. It shall be understood that space allocations have been made on the basis of present and known future requirements and the dimensions of items of equipment or devices of a particular manufacturer whether indicated or not.
- E. Any product or material offered in substitution which differs in dimension or configuration from the Documents, the Contractor shall provide as part of the submittal a drawing, minimum 1/4" = 1'-0" scale, showing that the substitution can be installed in the space available without interfering with other portions of the work or with access for operations and maintenance in the completed project.
- F. Where substitute products or materials requiring different arrangement or connections from that indicated is accepted by the Owner's Representative, install the equipment or devices to operate properly and in harmony with the intent of the Documents, making all incidental changes in piping or wiring resulting from the substitution without any additional cost to the Owner.
- G. The Contractor shall pay all additional costs incurred by other portions of the work in connection with all substitutions.
- H. The Owner's Representative reserves the right to call for samples of any item of product or material offered in substitution, together with a sample of the specific item when, in their opinion, the quality of the item and/or the appearance is involved, and it is deemed that an evaluation of the item may be better made by visual inspection.
- I. When any request for a substitution of a product or material is submitted and rejected, the item named in the Documents shall be furnished. Repetitive submittal of substitutions for the same item will not be considered.

1.11 QUALITY ASSURANCE

- A. All Work shall be performed by properly licensed technicians skilled in their respective trades. All materials, equipment and devices shall be installed in accordance with the recommendations of the manufacturer and in the best standard practice to bring about results of a first class condition.
- B. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."
- C. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
- D. Electrical Characteristics for Plumbing Equipment:
 - 1. Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.
 - 2. Where variable frequency drives are provided for equipment, whether installed separately or integral to the equipment, the VFDs shall conform to Division 26 section, "Variable Frequency Motor Controllers".

- E. Wherever a UL standard has been established for a particular type of material, equipment or device, each item of such material, equipment or device provided on this project shall meet the requirements of the UL standard in every way, and shall be UL listed and labeled.
- F. Products and materials shall be of the best quality customarily applied in quality commercial practice, and shall be by reputable manufacturers.
- G. Each major component shall bear a nameplate giving the name and address of the manufacturer, and the catalog number or designation of the component.
- H. Products and materials provided under this Division of the Specifications shall be essentially the standard item, unless otherwise noted, of the specified manufacturer, or where allowed, an alternate manufacturer.

1.12 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products and materials with factory-applied end caps or "heat shrink" wrappings to protect openings. Maintain opening protection through shipping, storage, and handling to prevent damage and the entrance of dirt, debris, and moisture.
- B. Store light sensitive products and materials away from and protected against direct sunlight.
- C. Support products and materials at all times to prevent sagging and bending.
- D. The area provided for product and material storage at the jobsite shall be clean, dry and exposure to dust minimized.
- E. Responsibility for the protection of products and materials shall extend to existing equipment, systems, and products and materials. Erect temporary sheltering structures, provide temporary bracing and supports, or cover existing equipment, systems, and products and materials to prevent damage and the entrance of dirt, debris, and moisture.
- F. Failure on the part of the Contractor to comply with the above to the satisfaction of the Architect, Engineer, or either's authorized representative shall be sufficient cause for the rejection of products and materials in question.

1.13 COORDINATION

- A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for plumbing installations.
- B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
- C. Coordinate requirements for access panels and doors for plumbing items requiring access that are concealed behind finished surfaces.
- D. Installation Drawings
 - 1. Prepare special drawings as called for elsewhere herein or directed by the Architect to coordinate this work with the work of other Divisions, to illustrate changes in this work to facilitate its concealment in finished spaces, to avoid obstructions, or to illustrate the installation of a substitute equipment item.

2. Use these drawings in the field for the installation of the work. Unless otherwise directed, do not submit these drawings for review, but provide 3 copies to the Architect for information.

E. Schedule And Sequence Of Work

1. The Contractor shall meet and cooperate with the Owner and Owner's Representative to schedule and sequence Work so as to ensure meeting scheduled completion dates and avoid delaying other portions of the Work. Work requiring special sequencing shall be at no additional cost to the Owner and shall have no impact on the schedule.
2. Work schedules and completion dates as established shall be rigidly adhered to. Cooperate in establishing these schedules and perform the work under this Division at such times as directed so as to ensure meeting scheduled dates and avoid delaying any other Contractor.
3. Any work involving a service suspension shall be scheduled in advance with the Owner.
4. Should it be necessary to perform certain operations on an "overtime" basis in order not to interrupt the normal usage of the facility, include the costs of such overtime without change in the Contract amount.
5. The Contractor shall be responsible for coordinating the demolition and tie-in of the central plant system with the Owner and construction manager.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:
 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the manufacturers specified.
 2. Manufacturers: Subject to compliance with requirements, provide products by the manufacturers specified.

2.2 PIPE, TUBE, AND FITTINGS

- A. Refer to individual Division 22 piping Sections for pipe, tube, and fitting materials and joining methods.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.
- C. All piping and tubing shall be American manufactured, unless otherwise indicated.

2.3 JOINING MATERIALS

- A. Refer to individual Division 22 piping Sections for special joining materials not listed below.
- B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
 2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.
- C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- E. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated.
- F. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- G. Solvent Cements for Joining Plastic Piping:
 1. CPVC Piping: ASTM F 493.
 2. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
- H. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.

2.4 TRANSITION FITTINGS

- A. Plastic-to-Metal Transition Fittings: CPVC and PVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.
- B. Plastic-to-Metal Transition Adaptors: One-piece fitting with manufacturer's SDR 11 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.
- C. Plastic-to-Metal Transition Unions: MSS SP-107, CPVC and PVC four-part union. Include brass end, solvent-cement-joint end, rubber O-ring, and union nut.
- D. Flexible Transition Couplings for Underground Nonpressure Drainage Piping: ASTM C 1173 with elastomeric sleeve, ends same size as piping to be joined, and corrosion-resistant metal band on each end.

2.5 DIELECTRIC FITTINGS

- A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
- B. Insulating Material: Suitable for system fluid, pressure, and temperature.
- C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 deg F.

- D. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.
- E. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
 - 1. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.
- F. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.
- G. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.

2.6 MECHANICAL SLEEVE SEALS

- A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
 - 1. Manufacturers:
 - a. Innerlinx by Mason Dallas.
 - b. Metraflex Co.
 - c. Linkseal by Thunderline.
 - 2. Sealing Elements: EPDM for high temperature applications and NBR for all others unless otherwise indicated, interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
 - 3. Pressure Plates: Include two for each sealing element.
 - 4. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.7 SLEEVES

- A. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 10, galvanized, plain ends.

2.8 ESCUTCHEONS

- A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.
- B. One-Piece, Cast-Brass Type: With set screw.
 - 1. Finish: Polished chrome-plated and rough brass, pending approval by Architect.
- C. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
 - 1. Finish: Polished chrome-plated and rough brass, pending approval by Architect.

- D. One-Piece, Floor-Plate Type: Cast-iron floor plate.
- E. Split-Casting, Floor-Plate Type: Cast brass with concealed hinge and set screw.

2.9 GROUT

- A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
 - 1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 - 2. Design Mix: 5000-psi, 28-day compressive strength.
 - 3. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 PLUMBING DEMOLITION

- A. Disconnect, demolish, and remove plumbing systems, equipment, and components indicated to be removed.
 - 1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
 - 2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
 - 3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
 - 4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
 - 5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
- B. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.2 SALVAGED MATERIALS

- A. Reuse no salvaged material except as noted on the Drawings, specified herein, or directed by the Architect. Remove from the premises all present materials falling under this Division, which are removed from the existing building. Upon completion, leave no "dead" line or equipment installed in any portion of the area being remodeled.

3.3 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. Install piping according to the following requirements and Division 22 Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction

loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings.

- C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping to permit valve servicing.
- G. Install piping at indicated slopes.
- H. Install piping free of sags and bends.
- I. Install fittings for changes in direction and branch connections.
- J. Install piping to allow application of insulation.
- K. Select system components with pressure rating equal to or greater than system operating pressure.
- L. Install escutcheons, after Architect's final approval of finish, for penetrations of walls, ceilings, and floors according to the following:
 - 1. New piping penetrations shall be one-piece escutcheons.
 - 2. Existing piping penetrations shall be two-piece escutcheons.
 - 3. All sleeved penetrations shall be deep-drawn to allow flush installation between escutcheon and finished surface.
- M. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.
 - 1. Cut sleeves to length for mounting flush with both surfaces.
 - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level to prevent water entrance to the sleeved hole. Vertical pipe supports must be extended to and supported by the floor and not the sleeve.
 - b. Strike above subparagraph and retain subparagraph below when a pipe curb is required at all floor penetrations in lieu of extended sleeves.
 - c. Provide concrete pipe curb in floors of mechanical equipment areas or other wet areas 4 inches above finished floor level.
 - 2. Install sleeves in new walls and slabs as new walls and slabs are constructed.
 - 3. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
 - a. Steel Pipe Sleeves: For pipes smaller than NPS 6.
 - b. Steel Sheet Sleeves: For pipes NPS 6 and larger, penetrating gypsum-board partitions.

- c. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level. Refer to Division 07 Section "Sheet Metal Flashing and Trim" for flashing.
 - 1) Seal space outside of sleeve fittings with grout.
 - 4. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Division 07 Section "Joint Sealants" for materials and installation.
 - N. Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 - 1. Install steel pipe for sleeves smaller than 6 inches in diameter for above ground locations.
 - 2. Install cast-iron "wall pipes" for sleeves 6 inches and larger in diameter for above ground and all underground locations.
 - 3. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
 - O. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 - 1. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
 - P. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 07 Section "Penetration Firestopping" for materials.
 - Q. Verify final equipment locations for roughing-in.
 - R. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.
- 3.4 PIPING JOINT CONSTRUCTION
- A. Join pipe and fittings according to the following requirements and Division 22 Sections specifying piping systems.
 - B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
 - C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
- F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- I. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
 - 1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
 - 2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
 - 3. PVC Pressure Piping: Join schedule number ASTM D 1785, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D 2855.
 - 4. PVC Nonpressure Piping: Join according to ASTM D 2855.
- J. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
 - 1. Plain-End Pipe and Fittings: Use butt fusion.
 - 2. Plain-End Pipe and Socket Fittings: Use socket fusion.
- K. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

3.5 PIPING CONNECTIONS

- A. Make connections according to the following, unless otherwise indicated:
 - 1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
 - 2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.
 - 3. Dry Piping Systems: Install dielectric unions and flanges to connect piping materials of dissimilar metals.
 - 4. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.6 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Equipment called for on the plans and not listed herein shall be provided as though it were fully described herein.
- B. Equipment called for herein shall be completely provided, whether fully detailed or not on the plans, and/or scheduled.
- C. All equipment as indicated on the plans and as described herein shall be installed per manufacturer's recommendations to allow for proper operation and maintenance of the equipment.
- D. Install equipment to allow maximum possible headroom unless specific mounting heights are indicated.
- E. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- F. Install plumbing equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- G. Where any piece of equipment is too large for ingress through normal building openings, it shall be placed in its containing space before the enclosing structure is completed.
- H. Install equipment to allow right of way for piping installed at required slope.

3.7 PAINTING

- A. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.8 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
 - 1. Construct concrete bases not less than 4 inches larger in both directions than supported unit.
 - 2. Concrete bases for all equipment shall be 4 inches (100 mm) tall above finished floor.

3.9 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.
- B. Field Welding: Comply with AWS D1.1.

3.10 ERECTION OF WOOD SUPPORTS AND ANCHORAGES

- A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor plumbing materials and equipment.
- B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
- C. Attach to substrates as required to support applied loads.

3.11 GROUTING

- A. Mix and install grout for plumbing equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.
- E. Place grout, completely filling equipment bases.
- F. Place grout on concrete bases and provide smooth bearing surface for equipment.
- G. Place grout around anchors.
- H. Cure placed grout.

3.12 INSTALLATION, INSPECTIONS AND CERTIFICATIONS

- A. The Contractor shall obtain timely inspections of the installation by the constituted authorities. Remedy any deficiencies to the satisfaction of the inspecting authority.
- B. Upon final completion of the work, obtain certificates of acceptance from the constituted authorities. Deliver the certificates to the Architect for transmission to the Owner.

3.13 OPERATION PRIOR TO COMPLETION

- A. When any piece of mechanical or electrical equipment is operable and it is to the advantage of the contractor to operate the equipment, he may do so with permission of Owner, providing that he properly supervises the operation, retains full responsibility for the equipment operated, and protects against dirt accumulations during operation. The warranty period shall, however, not commence until such time as the equipment is operated for the beneficial use of the Owner or until final acceptance by the Owner.
- B. Regardless of whether or not the equipment has or has not been operated, the Contractor shall properly clean the equipment, install clean filter media, and properly adjust the operation of the equipment before final acceptance by the Owner.

3.14 INSTRUCTION OF OWNER'S PERSONNEL

- A. Provide the services of competent engineers and/or technicians acceptable to the Owner's Representative to instruct other representatives of the Owner in the complete and detailed operation of each item of equipment or device of all the various electrical systems. These instructions shall be provided for whatever periods may be necessary to accomplish the desired results.
- B. Upon completion of these instructions, the Contractor shall obtain a letter of release, acknowledged by the Owner or his authorized representative, stating the dates on which the various kinds of instruction were given, and the personnel to whom the instructions were given.
- C. The Contractor shall be fully responsible for proper maintenance of equipment and systems until the instructions have been given the Owner's personnel and the letter of release acknowledged.
- D. In providing the instructions to the Owner's personnel, the written operating and maintenance manuals shall be followed in all instances, and the Owner's personnel shall be familiarized with such manuals.
- E. Operating and maintenance manuals used for instructions shall include wiring diagrams, manufacturer's operating and maintenance instructions, parts lists (with sources identified), and other data as appropriate for each system.

3.15 SEALANT

- A. Apply sealant to penetrations of all floor and wall assemblies to maintain pressure differentials required by AIA for all pressure sensitive rooms. Sealant materials and installation requirements are specified in Division 07 Section "Joint Sealants" and Division 09 Section "Gypsum Board Assemblies."

END OF SECTION

SECTION 220519

METERS AND GAGES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Thermometers.
2. Gages.
3. Test plugs.

B. Related Sections:

1. Division 22 Section "Facility Water Distribution Piping" for domestic and fire-protection water service meters outside the building.
2. Division 22 Section "Domestic Water Piping" for domestic and fire-protection water service meters inside the building.
3. Division 23 Section "Facility Natural-Gas Piping" for gas meters.

1.2 DEFINITIONS

- A. CR:** Chlorosulfonated polyethylene synthetic rubber.
- B. EPDM:** Ethylene-propylene-diene terpolymer rubber.

1.3 SUBMITTALS

- A. Product Data:** For each type of product indicated; include performance curves.
- B. Shop Drawings:** Schedule for thermometers and gages indicating manufacturer's number, scale range, and location for each.
- C. Product Certificates:** For each type of thermometer and gage, signed by product manufacturer.

PART 2 - PRODUCTS

2.1 THERMOMETERS

- A. Digital Vari-angle Thermometer, self-powered and within 1% accuracy, Similar to Weiss Model DVU35.**
1. Case: Hi-impact ABS
 2. Range: -40/300 °F (-40/150 °C)
 3. Display: 3/8" LCD digits, wide ambient formula
 4. Accuracy: 1% of reading or 1° whichever is greater

5. Resolution: 1/10° between -19.9/199.9 °F (-28/93 °C)
6. Recalibration: Internal potentiometer
7. Lux Rating: 10 Lux (one foot-candle)
8. Update Rate: 10 seconds
9. Ambient Operating Range: -30/140 °F (-35/60 °C)
10. Ambient Temp. Error: Zero
11. Humidity: 100%
12. Sensor: Glass passivated thermistor
13. Connector: adjustable angle

2.2 THERMOWELLS

- A. Manufacturers: Same as manufacturer of thermometer being used.
- B. Description: Pressure-tight, socket-type 304 stainless steel fitting made for insertion into piping and of type, diameter, and length required to hold thermometer.

2.3 PRESSURE GAGES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Ernst Gage Co.
 2. Miljoco Corp.
 3. Trerice, H. O. Co.
 4. Weiss Instruments, Inc.
 5. Weksler Instruments Operating Unit; Dresser Industries; Instrument Div.
 6. Dwyer Instruments, Inc.
- B. Direct-Mounting, Dial-Type Pressure Gages: Indicating-dial type complying with ASME B40.100.
 1. Case: Liquid-filled type, cast aluminum, 4 1/2-inch (114-mm) diameter.
 2. Pressure-Element Assembly: Bourdon tube, unless otherwise indicated.
 3. Pressure Connection: Brass, NPS 1/4, bottom-outlet type unless back-outlet type is indicated.
 4. Movement: Mechanical, with link to pressure element and connection to pointer.
 5. Dial: Satin-faced, nonreflective aluminum with permanently etched scale markings.
 6. Pointer: Red or Black metal.
 7. Window: Glass.
 8. Ring: Stainless steel.
 9. Accuracy: Grade B, plus or minus 2 percent of middle half scale.
 10. Vacuum-Pressure Range: 30-in. Hg of vacuum to 50 psig of pressure.
 11. Range for Fluids under Pressure: Two times operating pressure.
- C. Pressure-Gage Fittings:
 1. Valves: NPS 1/4 brass or stainless-steel ball type.
 2. Snubbers: ASME B40.5, NPS 1/4 brass bushing with corrosion-resistant, porous-metal disc of material suitable for system fluid and working pressure.
 3. Syphons: NPS 1/4 (DN 8) coil of brass tubing with threaded ends.

2.4 TEST PLUGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Flow Design, Inc.
 - 2. MG Piping Products Co.
 - 3. National Meter, Inc.
 - 4. Peterson Equipment Co., Inc.
 - 5. Sisco Manufacturing Co.
 - 6. Trerice, H. O. Co.
 - 7. Watts Industries, Inc.; Water Products Div.
- B. Description: Corrosion-resistant brass or stainless-steel body with core inserts and gasketed and threaded cap, with extended stem for units to be installed in insulated piping.
- C. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F.
- D. Core Inserts: One or two self-sealing rubber valves.
 - 1. Insert material for water service at 20 to 200 deg F shall be CR.
 - 2. Insert material for water service at minus 30 to plus 275 deg F shall be EPDM.

PART 3 - EXECUTION

3.1 THERMOMETER APPLICATIONS

- A. Install digital thermometers in the following locations:
 - 1. Inlet and outlet of each domestic water heater.
 - 2. Inlet and outlet of each thermostatic mixing valve.
- B. Install thermometers in separable sockets at each additional location indicated on the Drawings or specified elsewhere herein.
- C. Provide the following temperature ranges for thermometers:
 - 1. Domestic Hot Water: 30 to 200 deg F, with 2-degree scale divisions.
 - 2. Domestic Cold Water: 0 to 100 deg F, with 2-degree scale divisions.

3.2 GAGE COCK APPLICATIONS

- A. Install test plugs adjacent to all control sensors (except Insertion Type Flow Meters) installed in piping systems.
- B. Valved pressure gage connections shall be installed in each location indicated on the Drawings and/or specified elsewhere herein.
- C. Install each gage cock on a nipple of sufficient length so that the cock handle will be free of the pipe insulation. Position each cock so that a 4 1/2" diameter dial gage may be easily read and screwed into and out of the cock.

- D. On pumps use a single pressure gage connected by ball valves and metal tubing to the inlet and discharge flanges as well as the suction diffuser inlet flange, if applicable.
- E. Install gage cocks at each pump as close to pump suction and discharge connections as practicable. Use any gage connections provided in the pump casing.

3.3 GAGE APPLICATIONS

- A. Install dry-case-type pressure gages for discharge of each pressure-reducing valve.
- B. Install liquid-filled-case-type pressure gages at suction and discharge of each pump.
- C. Furnish and install calibrated pressure gauges at each location indicated on the Drawings, specified elsewhere herein, and/or as a standard.

3.4 INSTALLATIONS

- A. Install direct-mounting thermometers and adjust vertical and tilted positions.
- B. Install thermowells with socket extending one-third of diameter of pipe and in vertical position in piping tees where thermometers are indicated.
- C. Install direct-mounting pressure gages in piping tees with pressure gage located on pipe at most readable position.
- D. Install ball-valve and snubber or syphon fitting in piping for each pressure gage.
- E. Install test plugs in tees in piping.
- F. Install connection fittings for attachment to portable indicators in accessible locations.
- G. Install thermometers and gages adjacent to machines and equipment to allow service and maintenance for thermometers, gages, machines, and equipment.
- H. Adjust faces of thermometers and gages to proper angle for best visibility.

END OF SECTION

SECTION 220523

GENERAL-DUTY VALVES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following general-duty valves:

1. Copper-alloy ball valves.
2. Ferrous-alloy ball valves.
3. Ductile-iron butterfly valves.
4. Bronze check valves.
5. Cast-iron swing check valves.
6. Spring-loaded, lift-disc check valves.

B. Related Sections include the following:

1. Division 21 fire-suppression piping and fire pump Sections for fire-protection valves.
2. Division 22 Section "Identification for Plumbing Piping and Equipment" for valve tags and charts.
3. Division 22 piping Sections for specialty valves applicable to those Sections only.
4. Division 23 "Facility Natural Gas Piping" for natural gas valves.

1.2 DEFINITIONS

A. The following are standard abbreviations for valves:

1. CWP: Cold working pressure.
2. EPDM: Ethylene-propylene-diene terpolymer rubber.
3. NBR: Acrylonitrile-butadiene rubber.
4. PTFE: Polytetrafluoroethylene plastic.
5. TFE: Tetrafluoroethylene plastic.
6. NRS: Nonrising stem.
7. OS&Y: Outside screw and yoke.

1.3 SUBMITTALS

A. Product Data: For each type of valve indicated. Include body, seating, and trim materials; valve design; pressure and temperature classifications; end connections; arrangement; dimensions; and required clearances. Include list indicating valve and its application. Include rated capacities; furnished specialties; and accessories.

1.4 QUALITY ASSURANCE

A. ASME Compliance for Ferrous Valves: ASME B16.10 and ASME B16.34 for dimension and design criteria.

- B. NSF Compliance: NSF 61-G for valve materials for potable-water service.
- C. Bronze valves shall be made with dezincification-resistant materials. All valves shall comply with the current edition of recognized industry standards for design, materials and testing. These standards include but are not limited to MSS SP-80 and MSS SP-110.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 - 1. Protect internal parts against rust and corrosion.
 - 2. Protect threads, flange faces, grooves, and weld ends.
 - 3. Set ball and plug valves open to minimize exposure of functional surfaces.
 - 4. Set butterfly valves closed or slightly open.
 - 5. Block check valves in either closed or open position.
- B. Use the following precautions during storage:
 - 1. Maintain valve end protection.
 - 2. Store valves indoors and maintain at higher than ambient dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 - PRODUCTS

2.1 VALVES, GENERAL

- A. Refer to Part 3 "Valve Applications" Article for applications of valves.
- B. Bronze Valves: NPS 2 and smaller with threaded ends, unless otherwise indicated.
- C. Ferrous Valves: NPS 2-1/2 and larger with flanged or grooved ends, unless otherwise indicated.
- D. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- E. Valve Sizes: Same as upstream pipe, unless otherwise indicated.
- F. Valve Actuators:
 - 1. Chainwheel: For attachment to valves, of size and mounting height, as indicated in the "Valve Installation" Article in Part 3.
 - 2. Gear Drive: For quarter-turn valves NPS 8 and larger.
 - 3. Lever Handle: For quarter-turn valves NPS 6 and smaller, except plug valves.
 - 4. Wrench: For plug valves with square heads. Furnish Owner with 1 wrench for every 10 plug valves, for each size square plug head.
- G. Extended Valve Stems: On insulated valves. Valves shall have 2-inch (50-mm) stem extensions and the following features:

1. Ball Valves: Shall have extended operating handle of non-thermal-conductive material, protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation, and memory stops that are fully adjustable after insulation is applied.

- 1) NIBCO Nib-seal handle extension
- 2) Conbraco Industries, Inc.; Apollo Div.
- 3) Jamesbury, Inc.
- 4) Kitz Insulated Stem Extension Model #ISE 1 thru 4
- 5) Milwaukee Valve: The Insulator/MS

2. Butterfly Valves: Shall have extended necks.

H. Valve Flanges: ASME B16.1 for cast-iron valves, ASME B16.5 for steel valves, and ASME B16.24 for bronze valves.

I. Valve Grooved Ends: AWWA C606.

J. Solder Joint: With sockets according to ASME B16.18.

1. Caution: Use solder with melting point below 840 deg F for check valves; below 421 deg F for ball valves.

K. Threaded: With threads according to ASME B1.20.1.

L. Valve Bypass and Drain Connections: MSS SP-45.

2.2 COPPER-ALLOY BALL VALVES

A. Brass Ball Valves, General: MSS SP-110 and have a brass body complying with ASTM B 283.

B. Bronze Ball Valves, General: MSS SP-110 and have a copper alloy body complying with ASTM B 584, except for Class 250 which shall comply with ASTM B 61, full-depth ASME B1.20.1 threaded, solder or press connection ends, and blowout-proof stems.

C. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: Chrome-plated bronze ball and bronze stem and; reinforced TFE seats; threaded body packnut design (no threaded stem designs allowed) with adjustable stem packing, solder, threaded or press connection ends; and 150 psig SWP 600-psigCWP rating.

1. NIBCO Model S-585-80-LF or T-585-80-LF
2. Conbraco Industries, Inc.; Apollo Div.
3. Crane Co.
4. Watts Model

5. Kitz Model 868 or 869
6. Milwaukee UPBA450 or UPBA400
7. Hammond UP8311A or UP88301A

D. Two-Piece, Full-Port, Copper-alloy Ball Valves with Stainless-Steel Trim: Type 316 stainless-steel vented ball and stem, reinforced TFE seats, threaded body packnut design (no threaded stem designs allowed) with adjustable stem packing, soldered or threaded or press connection ends; 150 psig SWP and 600-psig CWP ratings.

1. NIBCO Model S-585-66-LF or T-585-66-LF
 2. Conbraco Industries, Inc.; Apollo Div.
 3. Crane Co. Model
 4. Watts Model

 5. Kitz Model 868M or 896M
 6. Milwaukee UPBA400S, UPBA450S
 7. Hammond UP8303A, UP8313A
- E. Three-Piece, Full Port, Copper-alloy Ball Valves with Stainless-Steel Trim: Type 316 stainless-steel vented ball and stem, threaded body packnut design (no threaded stem designs allowed) with adjustable stem packing, stainless nuts and bolts on valve body, soldered or threaded or press connection ends; 150 psig SWP and 600-psig CWP rating.
1. NIBCO Model S-595-Y-66-LF or T-595-Y-66-LF
 2. Conbraco Industries, Inc.; Apollo Div.
 3. Crane Co.

 4. Kitz Model 862M or 863M
 5. Milwaukee UPBA350S, UPBA300S
 6. Hammond UP8613, UP8603

2.3 BRONZE BUTTERFLY VALVES

- A. Bronze Butterfly Valves, General: CTS 2 (DN50) – 8 (DN300), 300-psig CWP rating with offset, aluminum-bronze disc and bronze cast body. Bubble tight bi-directional and dead-end service at full rated pressure.
1. Victaulic Company Style 608N

2.4 DUCTILE or CAST IRON BUTTERFLY VALVES

- A. Butterfly Valves, General: MSS SP-67, for bubble-tight shutoff, extended-neck for insulation, disc and lining suitable for potable water, unless otherwise indicated, and with the following features:
1. Full lug, grooved and flanged valves shall be suitable for bi-directional dead end service at full rated pressure without the use or need of a downstream flange. Valves NPS 12 and smaller shall not have exposed stem to disc fasteners and no exterior mounted fasteners to hold the liner.
 2. Valve sizes NPS 2 through NPS 6 shall have lever lock operator.
- B. Class 150: 175-psig CWP Rating, Aluminum-Bronze Disc, EPDM Seat, Ferrous-Alloy Butterfly Valves: Full-lug type with ductile-iron body, one- or two-piece Type 400 series stainless-steel stem, bronze bushing, aluminum-bronze disc, and phenolic-backed EPDM seat (liner) attached to the body.
1. NIBCO Model LD-1000
 2. Cooper Cameron Corp. Model NF-C (238 Series) 511435-A
 3. DeZURIK; SPX Corporation Model BRS Series BHP, (Size),LD-DI-EPDM-EPDM-BZ-S4-*

 4. Kitz Model #6123E
 5. Crane

6. Milwaukee ML333E
7. Hammond 6411
8. Grinnell

- C. Class 200: 200-psig CWP Rating, Aluminum-Bronze Disc, EPDM Seat, Ferrous-Alloy Butterfly Valves: Full-lug type with ductile-iron body, one-piece Type 400 series stainless-steel stem, copper bushing, fasteners and pins shall not be used to attach stem, to disc, no pins or fasteners in waterway, aluminum-bronze disc, and molded-in EPDM seat (liner).

1. NIBCO Model LD-2000
2. Cooper Cameron Corp. Model NF-C (221Series) 511435-*
3. DeZURIK; SPX Corporation Model BRS (Size) LD-DI-EPDM-EPDM-BZ-S4-*
4. Kitz Model #6123E
5. Crane
6. Milwaukee ML333E
7. Hammond 6411
8. Grinnell

- D. Grooved-End, Ferrous-Alloy Butterfly Valves with EPDM-Encapsulated Ductile-Iron Disc or electroless nickel coated ductile iron disc with EPDM seal, Ductile-iron body or stainless steel body with grooved ends, polyamide coating inside and outside or alkyd enamel inside and outside, two-piece Type 416 stainless-steel stem, PTFE bronze sintered on steel bushing or TFE lined fiberglass and brass bushing, fasteners and pins shall not be used to attach stem to disc, no pins or fasteners in waterway, and 300-psig CWP Rating for Valves NPS 2 through NPS 8, 200 psig CWP Rating for Valves NPS 10 through NPS 12.

1. NIBCO Model GD-4765
2. Victaulic Co. of America. Model Vic-300-Master Seal Style 361 or Style 461.

2.5 BRONZE CHECK VALVES

- A. Bronze Check Valves, General: MSS SP-80.
- B. Class 125, Bronze, Lift Check Valves with TFE Disc: ASTM B-584 bronze body and integral seat with soldered or threaded end connections, and having 250-psig CWP rating.

1. Crane Co.; Crane Valve Group; Crane Valves.
2. Kitz Model 836 or 826
3. NIBCO Model S-480-Y-LF or T-480-Y-LF
4. Powell, Wm. Co.
5. Milwaukee UP1548T, UP548T
6. Hammond UP947, UP943

- C. Class 125, Bronze, Swing Check Valves with TFE Disc: ASTM B-62 bronze body and seat with TFE disc in bronze seat holder, Y-pattern design, soldered or threaded end connections, and having 200 psig CWP rating.

1. Crane Co.; Crane Valve Group; Crane Valves.
2. Kitz Model 822T or 823T
3. NIBCO Model S-413-Y-LF or T-413-Y-LF
4. Powell, Wm. Co.
5. Milwaukee UP1509, UP509
6. Hammond UP912, UP904

- D. Class 150, Bronze, Swing Check Valves with TFE Disc: ASTM B-62 bronze body and seat with TFE disc in bronze seat holder, Y-pattern design, soldered or threaded end connections, and having 300 psig CWP rating.

1. Crane Co.; Crane Valve Group; Crane Valves.
2. Kitz #30T or #29T
3. NIBCO Model S-433-Y or T-433-Y
4. Powell, Wm. Co.
5. Milwaukee 1510T, 510T
6. Hammond IB945

2.6 IRON SWING CHECK VALVES

- A. Iron Swing Check Valves, General: MSS SP-71.
- B. Class 125, Gray-Iron, Standard Swing Check Valves: ASTM A-126, Class B cast-iron body and bolted bonnet with flanged end connections; non-asbestos synthetic-fiber gaskets; bronze disc and seat; and having 200 psig CWP rating.

1. Crane Co.; Crane Valve Group; Crane Valves.
2. Kitz Model 78
3. NIBCO Model F-918-N
4. Powell, Wm. Co.
5. Milwaukee F-2974-M
6. Hammond IR1126-HI

- C. Grooved-End, Spring Assisted Check Valves: ASTM A536 Ductile-iron body with grooved ends, stainless steel spring and synthetic seats and having 250-psig CWP Rating.

1. Anvil International, Inc.
2. NIBCO Model G-917-W
3. Victaulic Co. of America

2.7 IRON SPRING-LOADED, LIFT-DISC CHECK VALVES

- A. Lift-Disc Check Valves, General: FCI 74-1 and MIL-V-18436F, with spring-loaded, center-guided bronze disc and seat.
- B. Class 125, Globe, Flanged Lift-Disc Check Valves: Globe style with cast-iron body and flanged ends, and having 200 psig CWP rating.

1. NIBCO Model F-910-B-LF
2. Metraflex Co.
3. Kitz Model 7022
4. Milwaukee 1800
5. Hammond IR9354

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine piping system for compliance with requirements for installation tolerances and other conditions affecting performance.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.
- B. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- C. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- D. Examine threads on valve and mating pipe for form and cleanliness.
- E. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- F. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE APPLICATIONS

- A. Refer to piping Sections for specific valve applications. If valve applications are not indicated, use the following:
 - 1. Shutoff Service: Ball or butterfly valves.
 - 2. Throttling Service: Ball or butterfly valves.
 - 3. Pump Discharge: Spring-loaded, lift-disc check valves.
- B. If valves with specified CWP ratings are not available, the same types of valves with higher CWP ratings may be substituted.
- C. Domestic Water Piping: Use the following types of valves:
 - 1. Ball Valves, NPS 2 and Smaller: Two -piece, full port, stainless-steel trim, bronze.
 - 2. Ball Valves, NPS 2-1/2 and Larger: Class 150, full port, ferrous alloy.
 - 3. Butterfly Valves, NPS 2 to NPS 12 (DN 50 to DN 300): Single-flange, full lug, 200-psig CWP rating, bronze disc, EPDM liner, ductile iron.
 - 4. Butterfly Valves, NPS 14 (DN 350) and Larger: Single-flange, full lug, 150-psig CWP rating, bronze disc, EPDM liner, ductile iron.
 - 5. High-Pressure Butterfly Valves, NPS 2-1/2 (DN 65) and Smaller: Single-flange full lug, 285 psig (1964 kPa) CWP rating.
 - 6. Grooved-End, Bronze Butterfly Valves, CTS 2 to 8 (DN 50 to DN 300): 300-psig (2070-kPa) CWP rating, EPDM-encapsulated aluminum-bronze or stainless steel disc.
 - 7. Grooved-End, Ductile-Iron Butterfly Valves, NPS 2 to NPS 8: 300-psig CWP rating, EPDM- encapsulated ductile-iron disc.
 - 8. Grooved-End, Ductile-Iron Butterfly Valves, NPS 10 to NPS 12 250 to DN 300): 200-psig CWP rating, EPDM- encapsulated ductile-iron disc.
 - 9. Lift Check Valves, NPS 2 and Smaller: Class 125, bronze with TFE disc.

10. Swing Check Valves, NPS 2 and Smaller: Class 150, bronze with TFE disc.
11. Swing Check Valves, NPS 2-1/2 and Larger: Class 125, cast-iron, standard.
12. Grooved-End Swing Check Valves, NPS 2-1/2 and Larger: Grooved-end, ductile-iron, swing check valves.
13. Spring-Loaded, Center-Guided, Lift-Disc Check Valves, NPS 2-1/2 and Larger: Class 125, flanged end, iron.

D. Select valves, except wafer and flangeless types, with the following end connections:

1. For Copper Tubing, NPS 2 and Smaller: Solder-joint or threaded or press connection ends.
2. For Copper Tubing, NPS 2-1/2: Flanged ends.
3. For Grooved-End, Copper Tubing: Valve ends may be grooved.

3.3 VALVE INSTALLATION

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- C. Locate valves for easy access and provide separate support where necessary.
- D. Install valves in horizontal piping with stem at or above center of pipe.
- E. Install valves in position to allow full stem movement.
- F. Install chainwheel operators on valves NPS 4 and larger and more than 96 inches above floor. Extend chains to 60 inches above finished floor elevation.
- G. Install check valves for proper direction of flow and as follows:
 1. Swing Check Valves: In horizontal position with hinge pin level.
 2. Lift Check Valves: With stem upright and plumb.

3.4 JOINT CONSTRUCTION

- A. Refer to Division 22 Section "Common Work Results for Plumbing" for basic piping joint construction.
- B. Grooved Joints: Assemble joints with keyed coupling housing, gasket, lubricant, and bolts according to coupling and fitting manufacturer's written instructions.
- C. Soldered Joints: Use ASTM B 813, water-flushable, lead-free flux; ASTM B 32, lead-free-alloy solder; and ASTM B 828 procedure, unless otherwise indicated.

3.5 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 220529

HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following hangers and supports for plumbing system piping and equipment:
 - 1. Steel pipe hangers and supports.
 - 2. Trapeze pipe hangers.
 - 3. Metal framing systems.
 - 4. Fastener systems.
 - 5. Pipe stands.
 - 6. Pipe positioning systems.
 - 7. Equipment supports.
- B. Related Sections include the following:
 - 1. Division 05 Section "Metal Fabrications" for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.
 - 2. Division 21 Section "Water-Based Fire-Suppression Systems" for pipe hangers for fire-suppression piping.
 - 3. Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment" for vibration isolation devices.

1.2 DEFINITIONS

- A. MSS: Manufacturers Standardization Society for The Valve and Fittings Industry Inc.
- B. Terminology: As defined in MSS SP-90, "Guidelines on Terminology for Pipe Hangers and Supports."

1.3 PERFORMANCE REQUIREMENTS

- A. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
- B. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
- C. Pipe hangers and supports shall conform to the recommendations of ASHRAE, ASPE, ANSI, and MSS, unless otherwise indicated.

1.4 SUBMITTALS

- A. Product Data: For the following:

Midwestern State University
Health Science & Human Services Center
RSA Project No. 1612.00

220529 - 1

HANGERS AND SUPPORTS FOR
PLUMBING PIPING AND
EQUIPMENT
100% Construction Documents
September 1, 2017

1. Steel pipe hangers and supports.
 2. Fiberglass pipe hangers.
 3. Thermal-hanger shield inserts.
 5. Pipe positioning systems.
- B. Shop Drawings: Show fabrication and installation details and include calculations for the following:
1. Trapeze pipe hangers. Include Product Data for components.
 2. Metal framing systems. Include Product Data for components.
 3. Fiberglass strut systems. Include Product Data for components.
 4. Pipe stands. Include Product Data for components.
 5. Equipment supports.
- C. Welding certificates.

1.5 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code--Steel." AWS D1.4, "Structural Welding Code--Reinforcing Steel." ASME Boiler and Pressure Vessel Code: Section IX.
- B. Welding: Qualify procedures and personnel according to the following:
1. AWS D1.1, "Structural Welding Code--Steel."
 2. AWS D1.2, "Structural Welding Code--Aluminum."
 3. AWS D1.4, "Structural Welding Code--Reinforcing Steel."
 4. ASME Boiler and Pressure Vessel Code: Section IX.

PART 2 - PRODUCTS

2.1 STEEL PIPE HANGERS AND SUPPORTS

- A. Description: MSS SP-58, Types 1 through 58, factory-fabricated components. Refer to Part 3 "Hanger and Support Applications" Article for where to use specific hanger and support types.
- B. Available Manufacturers:
1. AAA Technology & Specialties Co., Inc.
 2. Bergen-Power Pipe Supports.
 3. B-Line Systems, Inc.; a division of Cooper Industries.
 4. Carpenter & Paterson, Inc.
 5. Empire Industries, Inc.
 6. ERICO/Michigan Hanger Co.
 7. Globe Pipe Hanger Products, Inc.
 8. Grinnell Corp.
 9. GS Metals Corp.
 10. National Pipe Hanger Corporation.
 11. PHD Manufacturing, Inc.
 12. PHS Industries, Inc.
 13. Piping Technology & Products, Inc.
 14. Tolco Inc.

15. Anvil International

- C. Galvanized, Metallic Coatings: Pregalvanized or hot dipped.
- D. Nonmetallic Coatings: Plastic coating, jacket, or liner.
- E. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion for support of bearing surface of piping.

2.2 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural-steel shapes with MSS SP-58 hanger rods, nuts, saddles, and U-bolts.

2.3 METAL FRAMING SYSTEMS

- A. Description: MFMA-3, shop- or field-fabricated pipe-support assembly made of steel channels and other components.
- B. Available Manufacturers:
 - 1. B-Line Systems, Inc.; a division of Cooper Industries.
 - 2. ERICO/Michigan Hanger Co.; ERISTRUT Div.
 - 3. GS Metals Corp.
 - 4. Power-Strut Div.; Tyco International, Ltd.
 - 5. Thomas & Betts Corporation.
 - 6. Tolco Inc.
 - 7. Unistrut Corp.; Tyco International, Ltd.
 - 8. Anvil International
- C. Coatings: Manufacturer's standard finish unless bare metal surfaces are indicated.
- D. Nonmetallic Coatings: Plastic coating, jacket, or liner.

2.4 CUSHION CLAMPS FOR MEDICAL GAS

- A. Clamps for trapeeze style hangers, designed to isolate copper medical gas piping from dissimilar metals.
- B. Manufacturers:
 - 1. Tolco Inc.
 - 2. HOLDRITE Corp.; Hubbard Enterprises.

2.5 FASTENER SYSTEMS

- B. Mechanical-Expansion Anchors: Insert-wedge-type zinc-coated or stainless steel, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
 - 1. Available Manufacturers:

- a. B-Line Systems, Inc.; a division of Cooper Industries.
- b. Empire Industries, Inc.
- c. Hilti, Inc.
- d. ITW Ramset/Red Head.
- e. MKT Fastening, LLC.
- f. Powers Fasteners.

2.6 PIPE STAND FABRICATION

- A. Pipe Stands, General: Shop or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.
- B. Compact Pipe Stand: One-piece plastic unit with integral-rod-roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.
 - 1. Available Manufacturers:
 - a. ERICO/Caddy Pyramid
 - b. MIRO Industries.
- C. Low-Type, Single-Pipe Stand: One-piece plastic or stainless-steel base unit with plastic roller, for roof installation without membrane penetration.
 - 1. Available Manufacturers:
 - a. MIRO Industries.
 - b. Portable Pipe Hangers.
 - c. ERICO/Caddy Pyramid
- D. High-Type, Single-Pipe Stand: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
 - 1. Available Manufacturers:
 - a. ERICO/Caddy Pyramid
 - b. MIRO Industries.
 - c. Portable Pipe Hangers.
 - 2. Base: Plastic or Stainless steel.
 - 3. Vertical Members: Two or more cadmium-plated-steel or stainless-steel, continuous-thread rods.
 - 4. Horizontal Member: Cadmium-plated-steel or stainless-steel rod with plastic or stainless-steel, roller-type pipe support.
- E. High-Type, Multiple-Pipe Stand: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.
 - 1. Available Manufacturers:
 - a. Portable Pipe Hangers.
 - 2. Bases: One or more plastic.
 - 3. Vertical Members: Two or more protective-coated-steel channels.
 - 4. Horizontal Member: Protective-coated-steel channel.

5. Pipe Supports: Galvanized-steel, clevis-type pipe hangers.
- F. Curb-Mounting-Type Pipe Stands: Shop- or field-fabricated pipe support made from structural-steel shape, continuous-thread rods, and rollers for mounting on permanent stationary roof curb.
 1. Available Manufacturers:
 - a. Pate.
 - b. Thy Curb.
 - 1) Models:
 - a) TC-1 for insulated roof decks.
 - b) TC-2 for un-insulated and existing roof decks.
 - c) TC-3 for Bulb-T roof decks.
 2. Pipe curbs and rails with covers shall be all welded 18 gauge galvanized steel shell and baseplate, wood nailer, and TP-1 Duro EPDM cover or TP-2 pipe cover, as detailed on the drawings, for pipe penetration(s).

2.7 PIPE POSITIONING SYSTEMS

- A. Description: IAPMO PS 42, system of metal brackets, clips, and straps for positioning piping in pipe spaces for plumbing fixtures for commercial applications.
- B. Manufacturers:
 1. C & S Mfg. Corp.
 2. HOLDRITE Corp.; Hubbard Enterprises.
 3. Samco Stamping, Inc.

2.8 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural-steel shapes.
 1. Available Manufacturers:
 - a. Pate.
 - b. Thy Curb.
 - 1) Models:
 - a) TEMS-1 for insulated roof decks.
 - b) TEMS-2 for un-insulated and existing roof decks.
 - c) TEMS-3 for single-ply roof systems.
 2. Equipment supports shall be all welded 18 gauge galvanized steel shell, baseplate and counterflashing with internal bulkhead re-enforcement and wood nailer.

2.9 MISCELLANEOUS MATERIALS

- A. Structural Steel: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
- B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
 - 1. Properties: Nonstaining, noncorrosive, and nongaseous.
 - 2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Proceed with installation of hangers, supports and anchors only after required building structural work has been completed in areas where the work is to be installed. Correct inadequacies including, but not limited to proper placement of inserts, anchors and other building structural attachments.

3.2 HANGER AND SUPPORT APPLICATIONS

- A. Use only one type hangers and supports, by one manufacturer, for each piping service.
- B. Specific hanger and support requirements are specified in Sections specifying piping systems and equipment.
- C. Comply with MSS SP-69 for pipe hanger selections and applications that are not specified in piping system Sections.
- D. Use hangers and supports with galvanized, metallic coatings for piping and equipment that will not have field-applied finish.
- E. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- F. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing or provide copper-plated hangers and supports for copper piping systems where hangers are in contact with bare pipe.
- G. Use padded hangers for piping that is subject to scratching.
- H. Horizontal-Piping Hangers and Supports, Select size of hangers and supports to exactly fit pipe size for bare piping, and around piping insulation with saddle or shield for insulated piping. Unless otherwise indicated and except as specified in piping system Sections, install the following types. Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 - 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated stationary pipes, NPS 1/2 to NPS 30.
 - 2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of 120 to 450 deg F pipes, NPS 4 to NPS 16, requiring up to 4 inches of insulation.

3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes, NPS 3/4 to NPS 24, requiring clamp flexibility and up to 4 inches of insulation.
 4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes, NPS 1/2 to NPS 24, if little or no insulation is required.
 5. Pipe Hangers (MSS Type 5): For suspension of pipes, NPS 1/2 to NPS 4, to allow off-center closure for hanger installation before pipe erection.
 6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated stationary pipes, NPS 3/4 to NPS 8.
 7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated stationary pipes, NPS 1/2 to NPS 8.
 8. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated stationary pipes, NPS 1/2 to NPS 8.
 9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated stationary pipes, NPS 1/2 to NPS 2.
 10. Split Pipe-Ring with or without Turnbuckle-Adjustment Hangers (MSS Type 11): For suspension of noninsulated stationary pipes, NPS 3/8 to NPS 8.
 11. Extension Hinged or 2-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated stationary pipes, NPS 3/8 to NPS 3.
 12. U-Bolts (MSS Type 24): For support of heavy pipes, NPS 1/2 to NPS 30.
 13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
 14. Pipe Saddle Supports (MSS Type 36): For support of pipes, NPS 4 to NPS 36, with steel pipe base stanchion support and cast-iron floor flange.
 15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes, NPS 4 to NPS 36, with steel pipe base stanchion support and cast-iron floor flange and with U-bolt to retain pipe.
 16. Adjustable, Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes, NPS 2-1/2 to NPS 36, if vertical adjustment is required, with steel pipe base stanchion support and cast-iron floor flange.
 17. Single Pipe Rolls (MSS Type 41): For suspension of pipes, NPS 1 to NPS 30, from 2 rods if longitudinal movement caused by expansion and contraction might occur.
 18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes, NPS 2-1/2 to NPS 20, from single rod if horizontal movement caused by expansion and contraction might occur.
 19. Complete Pipe Rolls (MSS Type 44): For support of pipes, NPS 2 to NPS 42, if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.
 20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes, NPS 2 to NPS 24, if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is not necessary.
 21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes, NPS 2 to NPS 30, if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.
- I. Vertical-Piping Clamps: Select size of vertical piping clamps to exactly fit pipe size of bare pipe. Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers, NPS 3/4 to NPS 20.
 2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers, NPS 3/4 to NPS 20, if longer ends are required for riser clamps.
- J. Hanger-Rod Attachments: Select size of hanger rod attachments to suit hanger rods. Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
 2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
 3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
 4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
 5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.
- K. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
 2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joint construction to attach to top flange of structural shape.
 3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
 4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
 5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
 6. C-Clamps (MSS Type 23): For structural shapes.
 7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
 8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
 9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
 10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
 11. Malleable Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
 12. Welded-Steel Brackets: For support of pipes from below, or for suspending from above by using clip and rod. Use one of the following for indicated loads:
 - a. Light (MSS Type 31): 750 lb.
 - b. Medium (MSS Type 32): 1500 lb.
 - c. Heavy (MSS Type 33): 3000 lb.
 13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
 14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
 15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.
- L. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
 2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
 3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- M. Spring Hangers and Supports: Select spring hangers and supports to suit pipe size and loading. Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.

2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.
 3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41 roll hanger with springs.
 4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
 5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from hanger.
 6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from base support.
 7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from trapeze support.
 8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
 - a. Horizontal (MSS Type 54): Mounted horizontally.
 - b. Vertical (MSS Type 55): Mounted vertically.
 - c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.
- N. Comply with MSS SP-69 for trapeze pipe hanger selections and applications that are not specified in piping system Sections.
- O. Comply with MFMA-102 for metal framing system selections and applications that are not specified in piping system Sections.
- Q. Use pipe positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.

3.3 MEDICAL GAS HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment" for pipe hanger and support devices.
- B. Use cushion clamps on all medical gas piping
- C. Vertical Piping: MSS Type 8 or 42, clamps.
- D. Individual, Straight, Horizontal Piping Runs:
 1. 100 Feet and Less: MSS Type 1, adjustable, steel, clevis hangers.
 2. Longer Than 100 Feet: MSS Type 43, adjustable, roller hangers.
- E. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze. Comply with requirements in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment" for trapeze hangers.
- F. Base of Vertical Piping: MSS Type 52, spring hangers.
- G. Support horizontal piping within 12 inches of each fitting and coupling.

- H. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch minimum rods.
- I. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1/4: 60 inches with 3/8-inch rod.
 2. NPS 3/8 and NPS 1/2: 72 inches with 3/8-inch rod.
 3. NPS 3/4: 84 inches with 3/8-inch rod.
 4. NPS 1: 96 inches with 3/8-inch rod.
 5. NPS 1-1/4: 108 inches with 3/8-inch rod.
 6. NPS 1-1/2: 10 feet with 3/8-inch rod.
 7. NPS 2: 11 feet with 3/8-inch rod.
 8. NPS 2-1/2: 13 feet with 1/2-inch rod.
 9. NPS 3: 14 feet with 1/2-inch rod.
 10. NPS 3-1/2: 15 feet with 1/2-inch rod.
 11. NPS 4: 16 feet with 1/2-inch rod.
 12. NPS 5: 18 feet with 1/2-inch rod.
 13. NPS 6: 20 feet with 5/8-inch rod.
 14. NPS 8: 23 feet with 3/4-inch rod.
- J. Install supports for vertical copper tubing every 10 feet.

3.4 HANGER AND SUPPORT INSTALLATION

- A. Steel Pipe Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required by the following table to properly support piping from building structure.

Pipe Size (in)	Max. Hanger Spacing (ft)	Min. Rod Size (in)	Max. Alternate Hanger Spacing (ft)	Min. Alternate Rod Size (in)
1/2	6	3/8	--	--
3/4	6	3/8	--	--
1	7	3/8	--	--
1-1/4	8	3/8	--	--
1-1/2	9	3/8	--	--
2	10	3/8	--	--
2-1/2	11	1/2	--	--
3	12	1/2	8	3/8
3-1/2	13	5/8	8	3/8
4	14	5/8	8	3/8
5	16	5/8	10	1/2
6	17	3/4	10	1/2
8	19	7/8	10	1/2
10	20	7/8	10	1/2
12	20	7/8	10	1/2
14	20	1	16	7/8
16	20	1-1/8	14	7/8
18	20	1-1/4	10	7/8
20	20	1-1/4	10	7/8
24	20	1-1/4	8	7/8

- B. Trapeze Pipe Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping and support together on field-fabricated trapeze pipe hangers.
1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified above for individual pipe hangers.
 2. Field fabricate from ASTM A 36/A 36M, steel shapes selected for loads being supported. Weld steel according to AWS D1.1.
- C. Metal Framing System Installation: Arrange for grouping of parallel runs of piping and support together on field-assembled metal framing systems.
- D. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- E. Fastener System Installation:
2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- F. Pipe Stand Installation:
1. Pipe Stand Types except Curb-Mounting Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
 2. Curb-Mounting-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. Refer to Division 07 Section "Roof Accessories" for curbs.
- G. Pipe Positioning System Installation: Install support devices to make rigid supply and waste piping connections to each plumbing fixture. Refer to Division 22 Section "Plumbing Fixtures" for plumbing fixtures.
- H. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers, and other accessories.
- I. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- J. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- K. Install lateral bracing with pipe hangers and supports to prevent swaying.
- L. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- M. Load Distribution: Install hangers and supports so piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- N. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and so maximum pipe deflections allowed by ASME B31.9 (for building services piping) are not exceeded.
- O. Insulated Piping: Comply with the following:

1. Attach clamps and spacers to piping.
 - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
 - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
 - c. Do not exceed pipe stress limits according to ASME B31.9 for building services piping.
2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
 - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
 - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
4. Shield Dimensions for Pipe: Not less than the following:
5. Pipes NPS 8 and Larger: Include wood inserts.
6. Insert Material: Length at least as long as protective shield.
7. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.5 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make smooth bearing surface.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.6 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1 procedures for shielded metal arc welding, appearance and quality of welds, and methods used in correcting welding work, and with the following:
 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. Finish welds at exposed connections so no roughness shows after finishing and contours of welded surfaces match adjacent contours.

3.7 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1 inch

3.8 PAINTING

- A. Touch Up: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 - 1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.
- B. Touch Up: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Division 09 painting Sections.
- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 220553

IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Equipment labels.
 - 2. Warning signs and labels.
 - 3. Pipe labels.
 - 4. Valve tags.
 - 5. Warning tags.

1.2 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- D. Valve numbering scheme.
- E. Valve Schedules: For each piping system to include in maintenance manuals.

1.3 COORDINATION

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

- A. Plastic Labels for Equipment:
 - 1. Material and Thickness: Multilayer, multicolor, laminated phenolic with a black surface and white substrate for mechanical engraving, 1/16 inch Minimum thick, and having predrilled holes for attachment hardware and beveled edges.

2. Letter Color: White
 3. Background Color: Black
 4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
 5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
 6. Minimum Letter Size: 1/2 inch. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
 7. Fasteners: Stainless-steel rivets or self-tapping screws.
 8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Label Content: Include equipment's Drawing designation or unique equipment number, as directed by the owner. Secondary lettering shall indicate date of installation.
- C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.
- D. Punched plastic tape for labels is not acceptable.

2.2 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch thick, and having predrilled holes for attachment hardware.
- B. Letter Color: White
- C. Background Color: Red
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- F. Minimum Letter Size: 1 inch for name of units. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets or self-tapping screws.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

2.3 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction. Labels shall conform to ANSI A13.1 and the following table:

Outside Diameter of Pipe of Covering	Height of Letters
3/4" to 1-1/4"	1/2"

1-1/2" to 2"	3/4"
2-1/2" to 6"	1-1/4"
8" to 10"	2-1/2"
Over 10"	3-1/2"

- B. Available Manufacturers: Seton, Brady, or Westline.
- C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to partially cover or cover full circumference of pipe.
- D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.

2.4 VALVE TAGS

- A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.
 - 1. Tag Material: Brass, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
 - 2. Fasteners: Brass wire-link and S-hook or beaded chain
- B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
 - 1. Valve-tag schedule shall be included in operation and maintenance data.

2.5 WARNING TAGS

- A. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.
 - 1. Size: 3 by 5-1/4 inches minimum.
 - 2. Fasteners: Reinforced grommet and wire.
 - 3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
 - 4. Color: Yellow background with black lettering.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

3.3 PIPE LABEL INSTALLATION

- A. Piping Color-Coding: Painting of piping is specified in Division 09 Section "High-Performance Coatings."
- B. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
 - 1. Near each valve and control device.
 - 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
 - 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
 - 4. At access doors, manholes, and similar access points that permit view of concealed piping.
 - 5. Near major equipment items and other points of origination and termination.
 - 6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
 - 7. In no case shall an exposed line enter or leave a room without being identified.
 - 8. Secure identification markers to piping by firmly pressing markers in place, following removal of protective covering. Additionally secure by banding ends of markers in place using 1/2 inch wide aluminum bands of the type normally used to secure insulation in place.
- C. Pipe Label Color Schedule: COORDINATE WITH OWNER
 - 1. Low-Pressure, Compressed-Air Piping:
 - a. Background Color: Black.
 - b. Letter Color: White.
 - 2. Medium-Pressure, Compressed-Air Piping:
 - a. Background Color: Blue.
 - b. Letter Color: White.
 - 3. Domestic Water Piping:

- a. Background Color: Blue.
- b. Letter Color: Black.

4. Sanitary Waste and Storm Drainage Piping:

- a. Background Color: White.
- b. Letter Color: Black.

3.4 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.

3.5 WARNING-TAG INSTALLATION

- A. Write required message on, and attach warning tags to, equipment and other items where required.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 220700

PLUMBING INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Insulation Materials:
 - a. Calcium silicate.
 - b. Cellular glass.
 - c. Flexible elastomeric.
2. Factory-applied jackets.
3. Field-applied cloths.
4. Field-applied jackets.
5. Adhesives.
6. Mastics.
7. Sealants.
8. Tapes.
9. Securements.
10. Thermal Hanger-Shield Inserts

1.2 SUBMITTALS

- A. Product Data:** For each type of product indicated. Include thermal conductivity, thickness, and jackets (both factory and field applied, if any).
- B. Calculations:** For insulation submitted outside of the conductivity range per the "Minimum Pipe Insulation Thickness" Table for the application listed, submit thickness calculations.
- C. Shop Drawings:**
1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
 2. Detail attachment and covering of heat tracing inside insulation.
 3. Detail insulation application at pipe expansion joints for each type of insulation.
 4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
 5. Detail removable insulation at piping specialties, equipment connections, and access panels.
 6. Detail application of field-applied jackets.
 7. Detail application at linkages of control devices.
 8. Detail field application for each equipment type.
- D. Samples:** For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use.

1. Sample Sizes:

- a. Preformed Pipe Insulation Materials: 12 inches long by NPS 2.
- b. Sheet Form Insulation Materials: 12 inches square.
- c. Jacket Materials for Pipe: 12 inches long by NPS 2.
- d. Sheet Jacket Materials: 12 inches square.
- e. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

E. Qualification Data: For qualified Installer.

F. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

G. Field quality-control reports.

1.3 QUALITY ASSURANCE

A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

B. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing and inspecting agency.

- 1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
- 2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.5 COORDINATION

A. Coordinate size and location of supports, hangers, and insulation shields specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

B. Coordinate clearance requirements with piping Installer for piping insulation application and equipment Installer for equipment insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

C. Coordinate installation and testing of heat tracing.

1.6 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 Manufacturers:

- A. Owens-Corning
- B. Johns-Manville
- C. Pittsburg-Corning
- D. Manson (Certain Teed)
- E. Knauf Fiberglass
- F. Aerocel EPDM
- G. Armacell

2.2 INSULATION MATERIALS

- A. Comply with requirements in Part 3 schedule articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Calcium Silicate:
 - 1. Preformed Pipe Sections: Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.
 - 2. Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.
 - 3. Prefabricated Fitting Covers: Comply with ASTM C 450 and ASTM C 585 for dimensions used in preforming insulation to cover valves, elbows, tees, and flanges.

- G. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. Block Insulation: ASTM C 552, Type I.
 2. Special-Shaped Insulation: ASTM C 552, Type III.
 3. Preformed Pipe Insulation with Factory-Applied ASJ - SSL: Comply with ASTM C 552, Type II, Class 2.
 4. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.

2.3 ADHESIVES

- A. Products: Subject to compliance with requirements, insulation manufacturer shall provide insulation adhesive and jacket manufacturer shall provide jacket adhesive.
- B. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.
- C. Calcium Silicate Adhesive: Fibrous, sodium-silicate-based adhesive with a service temperature range of 50 to 800 deg F.
- D. Cellular-Glass Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F.
- E. ASJ Adhesive, and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
- F. PVC Jacket Adhesive: Compatible with PVC jacket.

2.4 MASTICS

- A. Products: Subject to compliance with requirements, insulation manufacturer shall provide mastics.
- B. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-C-19565C, Type II.
- C. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.
1. Water-Vapor Permeance: ASTM E 96, Procedure B, 0.013 perm at 43-mil dry film thickness.
 2. Service Temperature Range: Minus 20 to plus 180 deg F.
 3. Solids Content: ASTM D 1644, 59 percent by volume and 71 percent by weight.
 4. Color: White.
- D. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
1. Water-Vapor Permeance: ASTM F 1249, 3 perms at 0.0625-inch dry film thickness.
 2. Service Temperature Range: Minus 20 to plus 200 deg F.
 3. Solids Content: 63 percent by volume and 73 percent by weight.
- E. Color: White.

2.5 SEALANTS

- A. Products: Subject to compliance with requirements, insulation manufacturer shall provide sealants
- B. Joint Sealants for Cellular-Glass Products:
 - 1. Materials shall be compatible with insulation materials, jackets, and substrates.
 - 2. Permanently flexible, elastomeric sealant.
 - 3. Service Temperature Range: Minus 100 to plus 300 deg F.
 - 4. Color: White or gray.
- C. FSK and Metal Jacket Flashing Sealants:
 - 1. Materials shall be compatible with insulation materials, jackets, and substrates.
 - 2. Fire- and water-resistant, flexible, elastomeric sealant.
 - 3. Service Temperature Range: Minus 40 to plus 250 deg F.
 - 4. Color: Aluminum.
- D. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
 - 1. Materials shall be compatible with insulation materials, jackets, and substrates.
 - 2. Fire- and water-resistant, flexible, elastomeric sealant.
 - 3. Service Temperature Range: Minus 40 to plus 250 deg F.
 - 4. Color: White.

2.6 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
 - 1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
 - 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
 - 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
 - 4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
 - 5. PVDC Jackets
 - a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - b. PVDC Jacket for Indoor Applications: 4-mil-thick, white PVDC biaxially oriented barrier film with a permeance at 0.02 perms when tested according to ASTM E 96 and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E 84.
 - c. for Outdoor Applications: 6-mil-thick, white PVDC biaxially oriented barrier film with a permeance at 0.01 perms when tested according to ASTM E 96 and with a

flame-spread index of 5 and a smoke-developed index of 25 when tested according to ASTM E 84.

- d. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.
6. Vinyl Jacket: White vinyl with a permeance of 1.3 perms when tested according to ASTM E 96, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.7 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd..
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Alpha Associates, Inc.; Alpha-Maritex 84215 and 84217/9485RW, Luben 59.

2.8 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
- B. Metal Jacket:
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Products, Division of ITW; Metal Jacketing Systems.
 - b. PABCO Metals Corporation; Surefit.
 - c. RPR Products, Inc.; Insul-Mate.
 - 2. Aluminum Jacket: Comply with ASTM B 209, Alloy 3003, 3005, 3105 or 5005, Temper H-14.
 - a. Factory cut and rolled to size.
 - b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

2.9 TAPES

- A. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Avery Dennison Corporation, Specialty Tapes Division.
 - 2. Compac Corp.
 - 3. Ideal Tape Co., Inc., an American Biltrite Company.
 - 4. Venture Tape.
 - 5. Dow Chemical Company (The).
- B. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
 - 1. Width: 3 inches.
 - 2. Thickness: 11.5 mils.
 - 3. Adhesion: 90 ounces force/inch in width.
 - 4. Elongation: 2 percent.
 - 5. Tensile Strength: 40 lbf/inch in width.
 - 6. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- C. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
 - 1. Width: 3 inches.
 - 2. Thickness: 6.5 mils.
 - 3. Adhesion: 90 ounces force/inch in width.
 - 4. Elongation: 2 percent.
 - 5. Tensile Strength: 40 lbf/inch in width.
 - 6. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
 - 1. Width: 2 inches.
 - 2. Thickness: 3.7 mils.
 - 3. Adhesion: 100 ounces force/inch in width.
 - 4. Elongation: 5 percent.
 - 5. Tensile Strength: 34 lbf/inch in width.

2.10 SECUREMENTS

- A. Bands:
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Products; Bands.
 - b. PABCO Metals Corporation; Bands.
 - c. RPR Products, Inc.; Bands.
 - 2. Aluminum: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 3/4 inch wide with wing or closed seal.

2.11 PIPE INSULATION HANGER SHIELDS:

- A. Provide shields for hangers on all insulated pipe.
- B. Insulation and shields shall consist of a 180 degree galvanized sheet steel shield. Shield lengths and minimum sheet metal gauges shall be as directed below:

<u>PIPE SIZE</u>	<u>SHIELD LENGTH</u>	<u>MINIMUM GAUGE</u>
1/2" to 8"	12"	16
10" & Larger	22"	16

- C. Shields shall be Model CS-CW, except for pipe roller applications and where pipe hanger spacing exceeds 10 feet, then provide Model CSX-CW.
- D. At the Contractor's option, shop-fabricated galvanized metal shields may be provided based on approved shop drawings. Length and gauge of sheet metal shall be as specified above.

2.12 PREMANUFACTURED COVERS

- A. Preformed manufactured PVC fitting covers with rigid one piece (half-shell) preformed rigid insulation.

PART 3 - EXECUTION

3.1 GENERAL

- A. Materials shall be applied by a qualified insulation applicator/workman skilled in this trade. Insulation shall be installed in accordance with the manufacturers written instructions and in accordance with recognized industry standards. Mechanical fasteners shall be used whenever possible to assure permanent construction. Unsightly work shall be cause for rejection.
- B. Materials shall be applied only after surfaces have been tested and thoroughly cleaned of all mill scale, grease and dirt.
- C. Non-compressible insulation material shall be installed at hanger supports on cold piping to prevent damage to insulation and vapor barrier. All wet pipe insulation shall be replaced.
- D. Insulation of cold surfaces shall be vapor-sealed to prevent condensation.
- E. Minimum thickness of insulation shall be as scheduled.
- F. Install Pipe Insulation Hanger Shields.
- G. Where piping system insulation is specified, cover valves, strainers, unions, flanges, and fittings. Refer to Preformed fitting and valve covers.
- H. Extend piping insulation without interruption through walls, floors and similar piping penetrations, there shall be no exceptions.

3.2 APPLICATION TYPES

- A. Equipment

- E1: Cut insulation to fit contour of equipment, and secure by means of bands or adhesives as required for each individual piece of equipment. Provide vapor barrier and finish as required for each specific application. Provide new cold surfaces of pumps with accessible boxes that easily separate coincidental with parting line of evaporator heads and pump casings. Resulting insulation joints shall be covered with a self-sealing, vapor-barrier tape. Seal all laps and penetrations in vapor barrier jacket with an approved vapor barrier mastic.

B. Piping

- P1: Butt insulation together and securely tape. Install factory-furnished laps at the butt joints. Neatly bevel and finish insulation where it terminates. Use of double tape self-sealing adhesives systems will negate requirements for staples.
- P2: Butt insulation together and securely tape. Install factory-furnished laps at the butt joints. Neatly bevel and finish insulation where it terminates. Seal all laps and penetrations in vapor barrier jacket with an approved vapor barrier mastic.
- P3: Same as P2, except install insulation over heat trace tape. Finish with metal jacket.

3.3 INSULATION SCHEDULE KEYS

Insulation Types Key					
	Type	Maximum K Factor @ 75°F	Temp. Limit °F	Density Lb. Per Cubic Foot	Federal Spec. Compliance
1.	Calcium Silicate	0.38	1200	14	HH-I-523C
2.	Fiberglass (Rigid)	0.23	450	3	ASTM C 547 Type 1
3.	Foamed Glass (Cellular)	0.36	850	9	HH-I-1751/3A
4.	Foamed Plastic (Flexible)	0.25	220	5	HH-I-573
5.	Insulating Cement	0.7	1700		SS-C-160

Finishes Key	
F1.	8-ounce glass cloth
F2.	Insulation cement
F3.	0.016 aluminum, plain, up through 12" pipe size; 0.016 aluminum, corrugated, for pipe sizes 14" and larger
F4.	White all-service jacket (vapor barrier) with self-sealing lap, or taped joints
F5.	Two coats vinyl lacquer type white paint

3.4 EQUIPMENT AND PIPING INSULATION SCHEDULES

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following unless there is a potential for personnel injury.
1. Drainage piping located in crawl spaces.
 2. Underground piping.

3. Chrome-plated pipes and fittings.

C. Fitting and Valve Covers:

1. Fitting covers shall be of preformed PVC for indoor service and metal for outdoor service.
2. Insulation material shall be rigid and of the same or greater material type and thickness, density and conductivity as the adjoining pipe. Blanket inserts will not be allowed.
3. Field fabricated fitting covers of same or similar material as pipe covering with preformed rigid inserts as specified in paragraph 1 above

- D. Exposed piping for ADA compliant lavatories shall be provided with premanufactured covers complying with ASTM E-84 for P-traps, waste piping and angle stop valves.

EQUIPMENT AND PIPING INSULATION SCHEDULE						
	INSULATION TYPE	THICKNESS	APPLICATION TYPE	INSULATION FINISH		
				INDOOR CONCEALED	INDOOR EXPOSED	OUTDOOR
Domestic cold water; bottom of roof drains and overflow drains; horizontal storm drains and overflow drains within building; waste piping conveying cooling coil condensate; waste from chilled drinking water fountains.						
Indoor:	2	1"	P2	F4	F4	--
Outdoor:	2	1"	P2/P3		--	F4 & F3
Domestic hot water supply & recirculation.						
Indoor:	2	Note 1	P1	F4	F4	--
Domestic water pumps.						
Indoor:	2 3 4	2"	E1	--	F1 F2 F3 F5	F3 F5
Domestic water storage tank						
Indoor:	2	1 1/2"	E1	--	F2 & F1	F4 & F3
Medical Vacuum pump exhaust piping						
Indoor:	1	2"	P1	--	F2	--

* Provide insulation where piping is heat traced.

** Refer to insulation types and finishes keys.

*** Table does not apply to factory insulated equipment

Note 1 – See "Domestic Hot Water Pipe Insulation Thickness" table below.

DOMESTIC HOT WATER PIPE INSULATION THICKNESS				
SUPPLY WATER TEMP °F	NON-CIRCULATING RUNOUTS UP TO 1"	CIRCULATING MAINS AND BRANCHES		
		UP TO 1 1/4"	1 1/2" & 2"	OVER 2"
170-180	1"	1"	1 1/2"	2"
140-160	1"	1"	1"	1 1/2"
100-130	1"	1"	1"	1"

Note:

1. The above table is only applicable to insulations in the conductivity range of 0.23 to 0.25. For insulation outside these conductivity ranges, the minimum thickness (T) shall be determined by the following calculation and the calculation submitted for approval:

$$T = r \{ (1 + t/r)^{K/k} - 1 \}$$

T = Thickness

r = Actual outside radius of pipe (in.)

t = Insulation thickness per the above table

K = Conductivity of alternate material

k = Upper value of the Conductivity Range per the above table

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 221116
DOMESTIC WATER PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Under-building slab and aboveground domestic water pipes, tubes, fittings, and specialties inside the building.
2. Encasement for piping.

B. Related Section:

1. Division 22 Section "Meters and Gages for Plumbing Piping" for thermometers, pressure gages, and fittings.
2. Division 22 Section "Domestic Water Piping Specialties" for water distribution piping specialties.

1.2 PERFORMANCE REQUIREMENTS

- A.** Provide components and installation capable of producing domestic water piping systems with 80 psig, unless otherwise indicated.

1.3 SUBMITTALS

- A.** Product Data: For pipe, tube, fittings, and couplings.
- B.** Water Sample Reports: Specified in Part 3 "Cleaning" Article.
- C.** Field quality-control test reports.

1.4 QUALITY ASSURANCE

- A.** Piping materials shall bear label, stamp, or other markings of specified testing agency.
- B.** Comply with NSF 61 and NSF 372 for potable domestic water piping and components.
- C.** Installer Qualifications:

1.5 PROJECT CONDITIONS

- A.** Interruption of Existing Water Service: Do not interrupt water service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:

1. Notify Architect, Construction Manager and Owner no fewer than two days in advance of proposed interruption of water service.
2. Do not proceed with interruption of water service without Owner's written permission.

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

- A. Hard Copper Tube: ASTM B 88, Type L water tube, drawn temper.
1. Cast-Copper Solder-Joint Fittings: ASME B16.18, pressure fittings.
 2. Wrought-Copper Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.
 3. Bronze Flanges: ASME B16.24, Class 150, with solder-joint ends.
 4. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.
- B. Copper or Bronze Pressure-Seal Fittings:
1. Manufacturers:
 - a. Elkhart Products ("Apolloexpress").
 - b. NIBCO Inc. ("Press System").
 - c. Viega ("ProPress").
 2. Housing: Copper.
 3. O-Rings and Pipe Stops: EPDM.
 4. Tools: Manufacturer's special tools.
 5. Minimum 200-psig working-pressure rating at 250 deg F.
 6. Smart Connect feature to guarantee identification of un-pressed connections during the testing process.
 7. Grooved-Joint Copper-Tube Appurtenances:
 - a. Manufacturers:
 - 1) Anvil International.
 - 2) Shurjoint Piping Products.
 - 3) Victaulic Company.
 - b. Copper Grooved-End Fittings: ASTM B 75 copper tube or ASTM B 584 bronze castings.
 - c. Grooved-End-Tube Couplings: Copper-tube dimensions and design similar to AWWA C606. Include rigid angled bolt pad design, ferrous housing sections, flush-seal grade E or installation-ready grade EHP gasket suitable and NSF 61 and NSF 372 approved for cold and hot water, and bolts and nuts.
- C. Soft Copper Tube: ASTM B 88, Type K and ASTM B 88, Type L water tube, annealed temper.
1. Copper Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.

2.2 DUCTILE-IRON PIPE AND FITTINGS

- A. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.

- 1. Standard-Pattern, Mechanical-Joint Fittings: AWWA C110, ductile or gray iron.

2.3 PIPING JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch thick or ASME B16.21, nonmetallic and asbestos free, unless otherwise indicated; full-face or ring type unless otherwise indicated.
- B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- C. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- D. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.

2.4 ENCASEMENT FOR PIPING

- A. Standard: ASTM A 674 or AWWA C105.
- B. Form: Sheet or Tube.
- C. Material: LLDPE film of 0.008-inch minimum thickness or high-density, cross-laminated PE film of 0.004-inch minimum thickness.
- D. Color: Black.

2.5 SPECIALTY VALVES

- A. Comply with requirements in Division 22 Section "General-Duty Valves for Plumbing Piping" for general-duty metal valves.
- B. Comply with requirements in Division 22 Section "Domestic Water Piping Specialties" for balancing valves, drain valves, backflow preventers, and vacuum breakers.

2.6 TRANSITION FITTINGS

- A. General Requirements:
 - 1. Same size as pipes to be joined.
 - 2. Pressure rating at least equal to pipes to be joined.
 - 3. End connections compatible with pipes to be joined.
- B. Sleeve-Type Transition Coupling: AWWA C219.
 - 1. Manufacturers:

- a. Cascade Waterworks Manufacturing.
- b. Dresser, Inc.; Dresser Piping Specialties.
- c. Ford Meter Box Company, Inc. (The).
- d. JCM Industries.
- e. Romac Industries, Inc.
- f. Smith-Blair, Inc; a Sensus company.
- g. Viking Johnson; c/o Mueller Co.

2.7 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials or ferrous material body with separating nonconductive insulating material suitable for system fluid, pressure, and temperature.
- B. Dielectric Unions:
 - 1. Manufacturers:
 - a. EPCO Sales, Inc.
 - b. Hart Industries International, Inc.
 - c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - d. Zurn Plumbing Products Group; Wilkins Water Control Products.
 - 2. Description:
 - a. Pressure Rating: 150 psig at 180 deg F.
 - b. End Connections: Solder-joint copper alloy and threaded ferrous.
- C. Dielectric-Flange Kits:
 - 1. Manufacturers:
 - a. Advance Products & Systems, Inc.
 - b. Calpico, Inc.
 - c. Central Plastics Company.
 - d. Pipeline Seal and Insulator, Inc.
 - 2. Description:
 - a. Nonconducting materials for field assembly of companion flanges.
 - b. Pressure Rating: 150 psig.
 - c. Gasket: Neoprene or phenolic.
 - d. Bolt Sleeves: Phenolic or polyethylene.
 - e. Washers: Phenolic with steel backing washers.
- D. Dielectric Couplings:
 - 1. Manufacturers:
 - a. Calpico, Inc.
 - b. Lochinvar Corporation.
 - 2. Description:

- a. Galvanized-steel coupling.
- b. Pressure Rating: 300 psig at 225 deg F.
- c. End Connections: Female threaded.
- d. Lining: Inert and noncorrosive, thermoplastic.

PART 3 - EXECUTION

3.1 EARTHWORK

- A. Comply with requirements in Division 31 Section "Earth Moving" for excavating, trenching, and backfilling.

3.2 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Install copper tubing under building slab according to CDA's "Copper Tube Handbook."
- C. Install ductile-iron piping under building slab with restrained joints according to AWWA C600 and AWWA M41.
- D. Install underground ductile-iron pipe in PE encasement according to ASTM A 674 or AWWA C105.
- E. Install shutoff valve, hose-end drain valve, strainer and pressure gage inside the building at each domestic water service entrance. Comply with requirements in Division 22 Section "Meters and Gages for Plumbing Piping" for pressure gages and Division 22 Section "Domestic Water Piping Specialties" for drain valves and strainers.
- F. Install domestic water piping level with 0.25 percent slope downward toward drain and plumb.
- G. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
- H. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- I. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.
- J. Install piping adjacent to equipment and specialties to allow service and maintenance.
- K. Install piping to permit valve servicing.
- L. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than system pressure rating used in applications below unless otherwise indicated.
- M. Install piping free of sags and bends.

- N. Install fittings for changes in direction and branch connections.
- O. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.
- P. Install pressure gages on suction and discharge piping from each plumbing pump and packaged booster pump. Comply with requirements in Division 22 Section "Meters and Gages for Plumbing Piping" for pressure gages.
- Q. Install thermometers on inlet and outlet piping from each water heater. Comply with requirements in Division 22 Section "Meters and Gages for Plumbing Piping" for thermometers.
- R. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 22 Section "Common Work Results for Plumbing."
- S. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 Section "Common Work Results for Plumbing."

3.3 JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- C. Brazed Joints: Join copper tube and fittings according to CDA's "Copper Tube Handbook," "Braze Joints" Chapter.
- D. Soldered Joints: Apply ASTM B 813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B 828 or CDA's "Copper Tube Handbook."
- E. Pressure-Sealed Joints:
 - 1. Use manufacturer-recommended tool and procedure. Leave insertion marks on pipe after assembly.
 - 2. Sealing element shall be verified for the intended use.
 - 3. Tube ends shall be cut on a right angle (square) to the tube.
 - 4. Tube ends shall be reamed and chamfered, all grease, oil or dirt shall be removed from the tube end with a clean rag.
 - 5. Visually examine the fitting sealing element to ensure there is no damage, and it is properly seated into the fitting.
 - 6. Utilizing an Insertion Depth Inspection Gauge mark the tube wall, with a felt tip pen, at the appropriate location, or insert the tube fully into the fitting and mark the tube wall at the face of the fitting.
 - 7. Always examine the tube to ensure it is fully inserted into the fitting prior to pressing the joint.
 - 8. Pressure-seal fittings ½-inch thru 4-inch shall be joined using appropriate sized tools.
 - 9. Pressure-seal fittings shall be installed according to the most current edition of the Manufacturer's installation guidelines.
- F. Grooved Joints: Pipe: Roll groove pipe with grooving tools specifically designed for pipe material. Assemble coupling with housing, gasket, lubricant, and bolts. Join pipe and grooved-end fittings according to AWWA C606 for roll-grooved joints.

1. All grooved components (including couplings, fittings, valves and accessories) to be supplied by one manufacturer. Grooving tools shall be of the same manufacturer as the groove components.
 2. Grooving tools shall be equipped with roll sets specifically designed for pipe material. (Flaring of tube or fitting ends to accommodate IPS sized couplings is not permitted.)
 3. A factory trained representative shall provide on-site training for contractor's field personnel in the use of grooving tools, application of groove, and product installation. Factory representative shall periodically visit the job site and review installation. Contractor shall remove and replace any improperly installed products.
- G. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Join flanges with gasket and bolts according to ASME B31.9.
- H. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems and provide Dielectric isolator.
- 3.4 VALVE INSTALLATION
- A. General-Duty Valves: Comply with requirements in Division 22 Section "General-Duty Valves for Plumbing Piping" for valve installations.
- B. Install shutoff valve close to water main on each branch and riser serving plumbing fixtures or equipment, on each water supply to equipment, and on each water supply to plumbing fixtures that do not have supply stops. Use ball valves for piping NPS 2 and smaller. Use butterfly valves for piping NPS 2-1/2 and larger.
- C. Install hose end drain valves for equipment at base of each water riser, at low points in horizontal piping, and where required to drain water piping. Drain valves are specified in Division 22 Section "Domestic Water Piping Specialties."
- D. Install automatic balancing valves in each hot-water circulation return branch. Comply with requirements in Division 22 Section "Domestic Water Piping Specialties" for automatic balancing valves.
- E. Install automatic balancing valves with a strainer upstream and a check valve immediately downstream.
- 3.5 TRANSITION FITTING INSTALLATION
- A. Install transition couplings at joints of dissimilar piping.
- B. Transition Fittings in Underground Domestic Water Piping:
1. NPS 2 and Larger: Sleeve-type coupling.
- 3.6 DIELECTRIC FITTING INSTALLATION
- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric couplings, nipples or unions.

- C. Dielectric Fittings for NPS 2-1/2: Use dielectric flange kits.

3.7 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment" for pipe hanger and support products and installation.

3.8 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment and machines to allow service and maintenance.
- C. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.

3.9 IDENTIFICATION

- A. Identify system components. Comply with requirements in Division 22 Section "Identification for Plumbing Piping and Equipment" for identification materials and installation.

3.10 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Piping Inspections:
 - 1. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.
 - 2. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:
 - a. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
 - b. Final Inspection: Arrange final inspection for authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
 - 3. Reinspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections and arrange for reinspection.
 - 4. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
- C. Piping Tests:
 - 1. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
 - 2. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.

3. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
4. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
5. Repair leaks and defects with new materials and retest piping or portion thereof until satisfactory results are obtained.
6. Prepare reports for tests and for corrective action required.

D. Perform the following tests on pressure-seal piping:

1. After fittings have been installed a "two step test" shall be followed.
 - a. Pressurize the system with application appropriate test medium, water between 15 and 85 psi, or air/dry nitrogen between .5 and 45 psi.
 - b. Check the pressure gauge for pressure loss.
 - c. If the system does not hold pressure, walk the system and check for un-pressed fittings.
 - d. Should an un-pressed fitting/s be identified, ensure the tube is fully inserted into the fitting, and properly marked, prior to pressing the joint.
 - e. After appropriate repairs have been made, retest the system per local code, or specification requirements, not to exceed 600 psi with water.

E. Domestic water piping will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

3.11 ADJUSTING

A. Perform the following adjustments before operation:

1. Close drain valves, hydrants, and hose bibbs.
2. Open shutoff valves to fully open position.
3. Open throttling valves to proper setting.
4. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
5. Remove and clean strainer screens. Close drain valves and replace drain plugs.
6. Check plumbing specialties and verify proper settings, adjustments, and operation.

3.12 CLEANING

A. Clean and disinfect potable and non-potable domestic water piping as follows:

1. Purge new piping before using.
2. Use purging and disinfecting procedures prescribed by authorities having jurisdiction; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652 or follow procedures described below:
 - a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
 - b. Fill and isolate system according to either of the following:

- 1) Fill system or part thereof with water/chlorine solution with at least 50 ppm of chlorine. Isolate with valves and allow to stand for 24 hours.
 - 2) Fill system or part thereof with water/chlorine solution with at least 200 ppm of chlorine. Isolate and allow to stand for three hours.
- c. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
 - d. Submit water samples for testing in sterile bottles to authorities having jurisdiction. Repeat procedures if biological examination shows contamination.

3.13 PIPING SCHEDULE

- A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.
- B. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.
- C. Under-building-slab, domestic water, building-service entrance piping, NPS 8 and smaller, shall be the following:
 1. Mechanical-joint, ductile-iron pipe; standard-pattern mechanical-joint fittings; and mechanical joints.
- D. Under-building-slab, domestic water piping, NPS 2 and smaller, shall be the following:
 1. Soft copper tube, ASTM B 88, Type k; No joints below grade.
- E. Aboveground domestic water piping, NPS 2 and smaller, shall be **[one of]** the following:
 1. Hard copper tube, ASTM B 88, Type L ASTM B 88; cast- or wrought- copper solder-joint fittings; and soldered joints.
 2. Hard copper tube, ASTM B 88, Type L; copper pressure-seal fittings; and pressure-seal joints.
- F. Aboveground domestic water piping, NPS 2 1/2 and larger, shall be one of the following:
 1. Hard copper tube, ASTM B 88, Type L ASTM B 88; cast- or wrought- copper solder-joint fittings; and soldered joints.
 2. Hard copper tube, ASTM B 88, Type L; copper pressure-seal fittings; and pressure-seal joints.
 3. Hard copper tube, ASTM B 88, Type L; grooved-joint copper-tube appurtenances; and grooved joints.
- G. Non-Potable-Water Piping: Use same materials as domestic water piping

3.14 VALVE SCHEDULE

- A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
 1. Shutoff Duty: Use ball valves for piping NPS 2 and smaller. Use butterfly valves with flanged **[or grooved]** ends for piping NPS 2-1/2 and larger.

2. Throttling Duty: Use ball valves for piping NPS 2 and smaller. Use butterfly valves with flanged [**or grooved**] ends for piping NPS 2-1/2 and larger.
 3. Hot-Water Circulation Piping, Balancing Duty: Automatic balancing valves.
 4. Drain Duty: Hose-end drain valves.
- B. Use check valves to maintain correct direction of domestic water flow to and from equipment.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 221119

DOMESTIC WATER PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

- A. ~~[Provide plumbing fixtures and drains as listed on Drawings and described herein. Fixture numbers are Zurn products. All products to be purchased from Ferguson Enterprises.]~~
- B. This Section includes the following domestic water piping specialties:
1. Vacuum breakers.
 2. Backflow preventers.
 3. Water pressure-reducing valves.
 4. Balancing valves.
 5. Thermostatic mixing valves.
 6. Strainers.
 7. Outlet boxes.
 8. Hose bibbs.
 9. Wall hydrants.
 10. Ground hydrants.
 11. Drain valves.
 12. Water hammer arresters.
 13. Air vents.
 14. Trap-seal primer valves.
 15. Electrical trap-seal primer systems.
- C. Related Sections include the following:
1. Division 22 Section "Meters and Gages for Plumbing Piping" for thermometers, pressure gages, and flow meters in domestic water piping.
 2. Division 22 Section "Domestic Water Piping" for water meters.

1.2 PERFORMANCE REQUIREMENTS

- A. Minimum Working Pressure for Domestic Water Piping Specialties: 125 psig, unless otherwise indicated.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Field quality-control test reports.

- D. Operation and Maintenance Data: For domestic water piping specialties to include operation, and maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. NSF Compliance:
 - 1. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic domestic water piping components.
 - 2. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9."
 - 3. NSF Compliance: NSF 61-G for valve materials for potable-water service.

PART 2 - PRODUCTS

2.1 VACUUM BREAKERS

- A. Pipe-Applied, Atmospheric-Type Vacuum Breakers:
 - 1. Manufacturers:
 - a. Conbraco Industries, Inc.
 - b. FEBCO; SPX Valves & Controls.
 - c. Watts Industries, Inc.; Water Products Div.
 - d. Zurn Plumbing Products Group; Wilkins Div.
 - 2. Standard: ASSE 1001.
 - 3. Size: NPS 1/4 to NPS 3, as required to match connected piping.
 - 4. Body: Bronze.
 - 5. Inlet and Outlet Connections: Threaded.
 - 6. Finish: **[Rough bronze] [Chrome plated]**.
- B. Hose-Connection Vacuum Breakers:
 - 1. Manufacturers:
 - a. Conbraco Industries, Inc.
 - b. MIFAB, Inc.
 - c. Watts Industries, Inc.; Water Products Div.
 - d. Woodford Manufacturing Company.
 - e. Zurn Plumbing Products Group.
 - 2. Standard: ASSE 1011.
 - 3. Body: Brass, nonremovable, with manual drain.
 - 4. Outlet Connection: Garden-hose threaded complying with ASME B1.20.7.
 - 5. Finish: Chrome or Rough bronze.
- C. Pressure Vacuum Breakers:

1. Manufacturers:
 - a. Conbraco Industries, Inc.
 - b. FEBCO; SPX Valves & Controls.
 - c. Watts Industries, Inc.; Water Products Div.
 - d. Zurn Plumbing Products Group; Wilkins Div.
 - e. Beeco, LLC.
2. Standard: ASSE 1020.
3. Operation: Continuous-pressure applications.
4. Pressure Loss: 5 psig maximum, through middle 1/3 of flow range.
5. Accessories:
 - a. Valves: Ball type, on inlet.

D. Laboratory-Faucet Vacuum Breakers:

1. Manufacturers:
 - a. Conbraco Industries, Inc.
 - b. Watts Industries, Inc.; Water Products Div.
 - c. Woodford Manufacturing Company.
 - d. Zurn Plumbing Products Group; Wilkins Div.
2. Standard: ASSE 1035.
3. Size: NPS 1/4 or NPS 3/8 matching faucet size.
4. Body: Bronze.
5. End Connections: Threaded.
6. Finish: Chrome plated.

E. Spill-Resistant Vacuum Breakers:

1. Manufacturers:
 - a. Conbraco Industries, Inc.
 - b. Watts Industries, Inc.; Water Products Div.
2. Standard: ASSE 1056.
3. Operation: Continuous-pressure applications.
4. Accessories:
 - a. Valves: Ball type, on inlet.

2.2 BACKFLOW PREVENTERS

A. Intermediate Atmospheric-Vent Backflow Preventers:

1. Manufacturers:
 - a. Conbraco Industries, Inc.
 - b. FEBCO; SPX Valves & Controls.
 - c. Honeywell Water Controls.
 - d. Watts Industries, Inc.; Water Products Div.
 - e. Zurn Plumbing Products Group; Wilkins Div.

2. Standard: ASSE 1012.
3. Operation: Continuous-pressure applications.
4. Body: Bronze.
5. End Connections: Union or solder joint.
6. Finish: Rough bronze.

B. Reduced-Pressure-Principle Backflow Preventers:

1. Manufacturers:
 - a. Conbraco Industries, Inc.
 - b. FEBCO; SPX Valves & Controls.
 - c. Watts Industries, Inc.; Water Products Div.
 - d. Zurn Plumbing Products Group; Wilkins Div.
 - e. Beeco, LLC.
2. Standard: ASSE 1013.
3. Operation: Continuous-pressure applications.
4. Pressure Loss: 12 psig maximum, through middle 1/3 of flow range.
5. Body: Bronze for NPS 2 and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved or steel with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 and larger.
6. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.
7. Configuration: Designed for horizontal, straight through flow.
8. Accessories:
 - a. Valves: Ball type with threaded ends on inlet and outlet of NPS 2 and smaller; **[rising stem gate valve] [outside screw and yoke gate-type]** with flanged ends on inlet and outlet of NPS 2-1/2 and larger.
 - b. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.

2.3 WATER PRESSURE-REDUCING VALVES

A. Water Pressure Regulators:

1. Manufacturers:
 - a. Conbraco Industries, Inc.
 - b. Honeywell Water Controls.
 - c. Watts Industries, Inc.; Water Products Div.
 - d. Zurn Plumbing Products Group; Wilkins Div.
 - e. Beeco, LLC.
2. Standard: ASSE 1003.
3. Pressure Rating: Initial working pressure of 150 psig.
4. Body: Bronze for NPS 2 and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 and NPS 3.
5. Valves for Booster Heater Water Supply: Provide integral bypass on PRV serving booster heaters.
6. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and NPS 3.

B. Water Control Valves:

1. Manufacturers:

- a. CLA-VAL Automatic Control Valves.
 - b. OCV Control Valves.
 - c. Watts Industries, Inc.; Watts ACV.
 - d. Zurn Plumbing Products Group; Wilkins Div.
 - e. Beeco, LLC.
- 2. Description: Pilot-operation, diaphragm-type, single-seated main water control valve.
 - 3. Pressure Rating: Initial working pressure of 150 psig minimum with AWWA C550 or FDA-approved, interior epoxy coating. Include small pilot-control valve, restrictor device, specialty fittings, and sensor piping.
 - 4. Main Valve Body: Cast- or ductile-iron body with AWWA C550 or FDA-approved, interior epoxy coating; or stainless-steel body.
 - a. Pattern: Angle or Globe-valve design.
 - b. Trim: Stainless steel.
 - 5. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.

2.4 BALANCING VALVES

A. Automatic Balancing Valves:

- 1. Manufacturers:
 - a. Flow Design, Inc.
 - b. Griswold Controls
- 2. Type: Ball valve with two readout ports and stainless steel flow regulating cartridge.
- 3. Body: Brass.
- 4. Size: Same as connected piping, but not larger than NPS 2.
- 5. Pressure Rating: 400-psig minimum CWP.
- 6. Ball: Chrome-plated brass.
- 7. Seats and Seals: Replaceable.
- 8. End Connections: Solder joint or threaded.
- 9. Handle: Vinyl-covered steel.
- 10. Accuracy: plus or minus 5%

2.5 THERMOSTATIC MIXING VALVES

A. Thermostatic, Water Mixing Valves:

- 1. Manufacturers:
 - a. Armstrong International, Inc. (RADA)
 - b. Lawler Manufacturing Company, Inc.
 - c. Leonard Valve Company.
 - d. Powers; a Watts Industries Co.
 - e. Symmons Industries, Inc.
- 2. Standard: ASSE 1017.
- 3. Pressure Rating: 125 psig.
- 4. Type: **[Exposed-mounting] [Cabinet-type]**, thermostatically controlled water mixing valve.

5. Material: Bronze body with corrosion-resistant interior components.
6. Connections: Threaded or union inlets and outlet.
7. Accessories: Manual temperature control, check stops on hot- and cold-water supplies, and adjustable, temperature-control handle.
8. Valve Pressure Rating: 125 psig minimum, unless otherwise indicated.
9. Valve Finish: [**Chrome plated**] [**Polished, chrome plated**] [**Rough bronze**].
10. Piping Finish: [**Chrome plated**] [**Copper**].
11. Cabinet: Factory-fabricated, stainless steel, for [**recessed**] [**surface**] mounting and with hinged, stainless-steel door.

B. Manifold, Thermostatic, Water-Mixing-Valve Assemblies:

1. Manufacturers:
 - a. Leonard Valve Company.
 - b. Powers; a Watts Industries Co.
 - c. Symmons Industries, Inc.
 - d. Armstrong International, Inc. (RADA)
2. Description: Factory-fabricated, [**cabinet-type**] [**exposed-mounting**], thermostatically controlled, water-mixing-valve assembly in [**two**] [**three**]-valve parallel arrangement.
3. Large-Flow Parallel: Thermostatic water mixing valve and downstream pressure regulator with pressure gages on inlet and outlet.
4. Intermediate-Flow Parallel: Thermostatic water mixing valve and downstream pressure regulator with pressure gages on inlet and outlet.
5. Small-Flow Parallel: Thermostatic water mixing valve.
6. Thermostatic Mixing Valves: Comply with ASSE 1017. Include check stops on hot- and cold-water inlets and shutoff valve on outlet.
7. Water Pressure Regulator(s): Comply with ASSE 1003. Include pressure gage on inlet and outlet.
8. Component Pressure Ratings: 125 psig minimum, unless otherwise indicated.
9. Cabinet: Factory-fabricated, stainless steel, for [**recessed**] [**surface**] mounting and with hinged, stainless-steel door.
10. Thermostatic Mixing Valve and Water Regulator Finish: [**Chrome plated**] [**Polished, chrome plated**] [**Rough bronze**].
11. Piping Finish: [**Chrome plated**] [**Copper**].

C. Individual-Fixture, Water Tempering Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Leonard Valve Company.
 - b. Powers.
 - c. Watts; a Watts Water Technologies company.
 - d. Zurn Industries, LLC.
2. Standard: ASSE 1016, thermostatically controlled, water tempering valve.
3. Pressure Rating: 125 psig minimum unless otherwise indicated.
4. Body: Bronze body with corrosion-resistant interior components.
5. Temperature Control: Adjustable.
6. Inlets and Outlet: Threaded.
7. Finish: Rough or chrome-plated bronze.

2.6 STRAINERS FOR DOMESTIC WATER PIPING

A. Y-Pattern Strainers:

1. Pressure Rating: 125 psig minimum, unless otherwise indicated.
2. Body: Bronze for NPS 2 and smaller; cast iron with interior lining complying with AWWA C550 or FDA-approved, epoxy coating for NPS 2-1/2 and larger.
3. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.
4. Screen: Stainless steel with round perforations, unless otherwise indicated.
5. Perforation Size:
 - a. Strainers NPS 2 and Smaller: 0.020 inch.
 - b. Strainers NPS 2-1/2 to NPS 4: 0.045 inch.
 - c. Strainers NPS 5 and Larger: 0.10 inch.
6. Drain: Factory-installed, hose-end drain valve.

2.7 OUTLET BOXES

A. Clothes Washer Outlet Boxes:

1. Manufacturers:
 - a. Acorn Engineering Company.
 - b. Guy Gray Manufacturing Co., Inc.
 - c. IPS Corporation. (Guy Gray)
 - d. Oatey.
 - e. Symmons Industries, Inc.
 - f. Watts Industries, Inc.; Water Products Div.
 - g. Whitehall Manufacturing; a div. of Acorn Engineering Company.
 - h. Zurn Plumbing Products Group.
2. Mounting: Recessed.
3. Material and Finish: **[Epoxy-painted-steel] [Stainless-steel]** box and faceplate.
4. Faucet: Combination, valved fitting or separate hot- and cold-water, valved fittings complying with ASME A112.18.1. Include garden-hose thread complying with ASME B1.20.7 on outlets.
5. Supply Shutoff Fittings: NPS 1/2 ball valves and NPS 1/2 copper, water tubing.
6. Drain: NPS 2 standpipe and P-trap for direct waste connection to drainage piping.

B. Icemaker Outlet Boxes:

1. Manufacturers:
 - a. Acorn Engineering Company.
 - b. IPS Corporation. (Guy Gray)
 - c. Oatey.
2. Mounting: Recessed.
3. Material and Finish: **[Epoxy-painted-steel] [Stainless-steel]** box and faceplate.
4. Faucet: Valved fitting complying with ASME A112.18.1. Include NPS 1/2 or smaller copper tube outlet.
5. Supply Shutoff Fitting: NPS 1/2 ball valve and NPS 1/2 copper, water tubing.

2.8 HOSE BIBBS

A. Hose Bibbs:

1. Standard: ASME A112.18.1 for faucets.
2. Body Material: Bronze.
3. Seat: Bronze, replaceable.
4. Supply Connections: NPS 3/4 threaded or solder-joint inlet.
5. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
6. Pressure Rating: 125 psig.
7. Vacuum Breaker: Integral nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1011.
8. Refer to Plumbing Fixture Schedule on drawings for finishes.

2.9 WALL HYDRANTS

A. Nonfreeze Wall Hydrants:

1. Manufacturers:
 - a. Josam Company.
 - b. MIFAB, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Tyler Pipe; Wade Div.
 - e. Watts Drainage Products Inc.
 - f. Woodford Manufacturing Company.
 - g. Zurn Plumbing Products Group.
2. Standard: ASME A112.21.3M for **[concealed]** **[exposed]**-outlet, self-draining wall hydrants.
3. Pressure Rating: 125 psig.
4. Operation: Loose key.
5. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
6. Inlet: NPS 3/4 [or NPS 1].
7. Outlet: Concealed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
8. Box: Deep, flush mounting with cover.
9. Outlet: Exposed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
10. Operating Keys(s): One with each wall hydrant.
11. Refer to Plumbing Fixture Schedule on drawings for finishes.

B. Nonfreeze, Hot- and Cold-Water Wall Hydrants:

1. Manufacturers:
 - a. Josam Company.
 - b. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - c. Tyler Pipe; Wade Div.
 - d. Watts Drainage Products Inc.
 - e. Woodford Manufacturing Company.
 - f. Zurn Plumbing Products Group.

2. Standard: ASME A112.21.3M for [concealed] [exposed]-outlet, self-draining wall hydrants.
3. Pressure Rating: 125 psig.
4. Operation: Loose key.
5. Casings and Operating Rods: Of length required to match wall thickness. Include wall clamps.
6. Inlets: NPS 3/4 or NPS 1.
7. Outlet: Concealed.
8. Box: Deep, flush mounting with cover.
9. Vacuum Breaker: Nonremovable, manual-drain-type, hose-connection vacuum breaker complying with ASSE 1011 or backflow preventer complying with ASSE 1052 and with garden-hose thread complying with ASME B1.20.7 on outlet.
10. Operating Keys(s): One with each wall hydrant.
11. Refer to Plumbing Fixture Schedule on drawings for finishes.

2.10 DRAIN VALVES

A. Ball-Valve-Type, Hose-End Drain Valves:

1. Standard: MSS SP-110 for standard-port, two-piece ball valves.
2. Pressure Rating: 400-psig minimum CWP.
3. Body: Copper alloy.
4. Ball: Chrome-plated brass.
5. Seats and Seals: Replaceable.
6. Handle: Vinyl-covered steel.
7. Inlet: Threaded or solder joint.
8. Outlet: Threaded, short nipple with garden-hose thread complying with ASME B1.20.7 and cap with brass chain.

2.11 WATER HAMMER ARRESTERS

A. Water Hammer Arresters:

1. Manufacturers:
 - a. Josam Company.
 - b. MIFAB, Inc.
 - c. PPP Inc.
 - d. Sioux Chief Manufacturing Company, Inc.
 - e. Tyler Pipe; Wade Div.
 - f. Watts Drainage Products Inc.
 - g. Zurn Plumbing Products Group.
2. Standard: ASSE 1010 or PDI-WH 201.
3. Type: Copper tube with piston.
4. Size: ASSE 1010, Sizes AA and A through F or PDI-WH 201, Sizes A through F.

2.12 AIR VENTS

A. Bolted-Construction Automatic Air Vents:

1. Body: Bronze.

2. Pressure Rating: 125-psig minimum pressure rating at 140 deg F.
3. Float: Replaceable, corrosion-resistant metal.
4. Mechanism and Seat: Stainless steel.
5. Inlet and Vent Outlet End Connections: Threaded.

B. Welded-Construction Automatic Air Vents:

1. Body: Stainless steel.
2. Pressure Rating: 150-psig minimum pressure rating.
3. Float: Replaceable, corrosion-resistant metal.
4. Mechanism and Seat: Stainless steel.
5. Inlet and Vent Outlet End Connections: Threaded.

2.13 TRAP-SEAL PRIMER VALVES

A. Supply-Type, Trap-Seal Primer Valves:

1. Manufacturers:
 - a. MIFAB, Inc.
 - b. PPP Inc.
 - c. Sioux Chief Manufacturing Company, Inc.
 - d. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - e. Watts Industries, Inc.; Water Products Div.
2. Standard: ASSE 1018.
3. Pressure Rating: 125 psig minimum.
4. Body: Bronze.
5. Inlet and Outlet Connections: NPS 1/2 threaded, union, or solder joint.
6. Gravity Drain Outlet Connection: NPS 1/2 threaded or solder joint.
7. Distribution box as required.
8. Finish: Chrome plated, or rough bronze for units used with pipe or tube that is not chrome finished.

2.14 ELECTRIC TRAP-SEAL PRIMER SYSTEMS

A. Electric Trap-Seal Primer Systems:

1. Manufacturers:
 - a. PPP Inc.
 - b. MIFAB, Inc.
2. Standard: ASSE 1044,
3. Piping: NPS 3/4, ASTM B 88, Type L; copper, water tubing.
4. Cabinet: **[Recessed]** **[Surface]**-mounting steel box with stainless-steel cover.
5. Electric Controls: 24-hour timer, solenoid valve, and manual switch for 120-V ac power.
6. Vacuum Breaker: ASSE 1001.
7. Number Outlets: as indicated on drawings.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Refer to Division 22 Section "Common Work Results for Plumbing" for piping joining materials, joint construction, and basic installation requirements.
- B. Install backflow preventers in each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination. Comply with authorities having jurisdiction.
 - 1. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe to floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are not acceptable for this application.
 - 2. Do not install bypass piping around backflow preventers.
- C. Install water pressure regulators with inlet and outlet shutoff valves and bypass with memory-stop balancing valve. Install pressure gages on inlet and outlet.
- D. Install water control valves with inlet and outlet shutoff valves and bypass with globe valve. Install pressure gages on inlet and outlet.
- E. Install balancing valves in locations where they can easily be adjusted.
- F. Install thermostatic mixing valves with check stops or shutoff valves and strainers on inlets and with shutoff valve on outlet.
 - 1. Install thermometers on inlets and outlet and water regulators if specified.
 - 2. Install cabinet-type units recessed in or surface mounted on wall as specified.
- G. Install Y-pattern strainers for water on supply side of each control valve, water pressure-reducing valve, solenoid valve, and pump.
- H. Install outlet boxes recessed in wall. Install 2-by-4-inch fire-retardant-treated-wood blocking wall reinforcement between studs. Fire-retardant-treated-wood blocking is specified in Division 06 Section "Rough Carpentry."
- I. Install water hammer arresters in water piping according to PDI-WH 201 and drawings.
- J. Install air vents at high points of water piping. Install drain piping and discharge to floor drain.
- K. Install supply-type, trap-seal primer valves with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting.
- L. Install electric trap-seal primer systems with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust system for proper flow.

3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping and specialties.

- B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- C. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.3 LABELING AND IDENTIFYING

- A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
 - 1. Pressure vacuum breakers.
 - 2. Intermediate atmospheric-vent backflow preventers.
 - 3. Reduced-pressure-principle backflow preventers.
 - 4. Double-check backflow-prevention assemblies.
 - 5. Pressure-reducing valves.
 - 6. Automatic balancing valves.
 - 7. Thermostatic mixing valves.
 - 8. Manifold, thermostatic mixing valve assemblies.
 - 9. Outlet boxes.
 - 10. Supply-type, trap-seal primer valves.
 - 11. Electric trap-seal primer systems.
- B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and prepare test reports:
 - 1. Test each pressure vacuum breaker reduced-pressure-principle backflow preventer, double-check backflow-prevention assembly and vacuum breaker assembly according to authorities having jurisdiction and the device's reference standard.
- B. Remove and replace malfunctioning domestic water piping specialties and retest as specified above.

3.5 ADJUSTING

- A. Set field-adjustable pressure set points of water pressure-reducing valves.
- B. Confirm flow rate and direction of flow for automatic balancing valves.
- C. Set field-adjustable temperature set points of thermostatic mixing valves.

END OF SECTION

SECTION 221123

DOMESTIC WATER PUMPS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following all-bronze and bronze-fitted centrifugal pumps for domestic hot-water circulation:
 - 1. Close-coupled, horizontally mounted, in-line centrifugal pumps.
 - 2. Close-coupled, vertically mounted, in-line centrifugal pumps.
- B. Related Sections include the following:
 - 1. Division 22 Section "Domestic-Water Packaged Booster Pumps" for booster systems.

1.2 SUBMITTALS

- A. Simultaneous Action Submittals: Domestic water pumps Product Data submittal shall be made in conjunction with action submittals required under Division 26 Section "Overcurrent Protective Device Coordination Study." The release of plumbing equipment submittals is dependent on the receipt of a complete and accurate overcurrent protective device coordination study. The Architect and Engineer require a full submittal review period as delineated in Division 01 Section "Submittal Procedures" to adequately review the OCPD study against the submitted electrical components prior to release of submittals for equipment procurement. The submittal schedule required by Division 01 requirements shall provide for this review time in the action submittal process. Delay claims arising due to Contractor's failure to coordinate simultaneous action submittals will not be considered by the Owner.
- B. Product Data: For each type and size of domestic water pump specified. Include certified performance curves with operating points plotted on curves; and rated capacities of selected models, furnished specialties, and accessories.
- C. Shop Drawings:
 - 1. Diagram power, signal, and control wiring.
 - 2. Short-circuit current rating of equipment assembly.
- D. Operation and Maintenance Data: For domestic water pumps to include in emergency, operation, and maintenance manuals.

1.3 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Retain shipping flange protective covers and protective coatings during storage.
- B. Protect bearings and couplings against damage.
- C. Comply with pump manufacturer's written rigging instructions for handling.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Pump Manufacturers:

- 1. Armstrong Pumps Inc.
- 2. Aurora Pump; Pentair Pump Group (The).
- 3. Bell & Gossett Domestic Pump; ITT Industries.
- 4. Grundfos Pumps Corp.
- 5. Paco Pumps, Inc.
- 6. Sterling Peerless; Sterling Fluid Systems Group.
- 7. Taco, Inc.
- 8. Thrush Company, Inc.
- 9. Weinman Div.; Crane Pumps & Systems.

2.2 Ratings:

- A. Short-Circuit Current: Match rating of overcurrent protective device serving domestic water pumps.
- B. Available Short-Circuit Current: As indicated on the Drawings. Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.

2.3 CLOSE-COUPLED, HORIZONTALLY MOUNTED, IN-LINE CENTRIFUGAL PUMPS

- A. Description: Factory-assembled and -tested, overhung impeller, single-stage, close-coupled, horizontally mounted, in-line centrifugal pumps as defined in ANSI HI 1.1-1.2 and HI 1.3; and designed for installation with pump and motor shafts mounted horizontally.

1. Pump Construction: All bronze.

- a. Casing: Radially split, cast iron, with threaded companion-flange connections for pumps with NPS 2 pipe connections and flanged connections for pumps with NPS 2-1/2 pipe connections.
- b. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, closed, and keyed to shaft.
- c. Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve.
- d. Seal: Mechanical, with carbon-steel rotating ring, stainless-steel spring, ceramic seat, and rubber bellows and gasket. Include water slinger on shaft between motor and seal.
- e. Bearings: Oil-lubricated; bronze-journal or ball type.

2. Shaft Coupling: Rigid type if pump is provided with coupling.
3. Motor: Single speed, with grease-lubricated ball bearings. Comply with requirements in Division 22 Section "Common Motor Requirements for Plumbing Equipment."

B. Capacities and Characteristics: REFER TO SCHEDULE ON DRAWINGS

~~2.4 CLOSE-COUPLED, VERTICALLY MOUNTED, IN-LINE CENTRIFUGAL PUMPS~~

~~A. Description: Factory assembled and tested, overhung impeller, single stage, close-coupled, vertically mounted, in-line centrifugal pumps as defined in ANSI HI 1.1-1.2 and HI 1.3; and designed for installation with pump and motor shafts mounted vertically.~~

~~1. Pump Construction: Bronze fitted.~~

- ~~a. Casing: Radially split, cast iron, with wear rings and threaded companion-flange connections for pumps with NPS 2 pipe connections and flanged connections for pumps with NPS 2-1/2 pipe connections.~~
- ~~b. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, closed, and keyed to shaft.~~
- ~~c. Shaft and Shaft Sleeve: Stainless-steel shaft, with copper-alloy shaft sleeve.~~
- ~~d. Seal: Mechanical, with carbon-steel rotating ring, stainless-steel spring, ceramic seat, and rubber bellows and gasket. Include water slinger on shaft between motor and seal.~~
- ~~e. Bearings: Oil-lubricated; bronze journal or ball type.~~

~~2. Shaft Coupling: Rigid type if pump is provided with coupling.~~

~~3. Motor: Single speed, with grease-lubricated ball bearings; and directly mounted to pump casing. Comply with requirements in Division 22 Section "Common Motor Requirements for Plumbing Equipment."~~

~~a. Lifting and Supporting Lug: Factory mounted in top of motor enclosure.~~

~~B. Capacities and Characteristics: REFER TO SCHEDULE ON DRAWINGS~~

2.5 CONTROLS

A. Aquastats: Electric; adjustable for control of hot-water circulation pump.

1. Manufacturers:

- a. Honeywell International, Inc.
- b. Square D.
- c. White-Rodgers Div.; Emerson Electric Co.

2. Type: Water-immersion sensor, for installation in hot-water circulation piping.
3. Range: 65 to 200 deg F.
4. Operation of Pump: On or off.
5. Transformer: Provide if required.
6. Power Requirement: 120 V, ac.
7. Settings: Start pump at 115 deg F and stop pump at 120 deg F.

B. Timers: Electric time clock for control of hot-water circulation pump.

1. Manufacturers:
 - a. Honeywell International, Inc.
 - b. Intermatic, Inc.
 - c. Johnson Controls, Inc.
 - d. TORK.
2. Type: Programmable, seven-day clock with manual override on-off switch.
3. Enclosure: Suitable for wall mounting.
4. Operation of Pump: On or off.
5. Transformer: Provide if required.
6. Power Requirement: 120 V, ac.
7. Programmable Sequence of Operation: Up to two on-off cycles each day for seven days.

C. Time Delay Relay: Control for hot-water storage tank circulation pump.

1. Manufacturers:
 - a. Honeywell International, Inc.
 - b. Intermatic, Inc.
 - c. Johnson Controls, Inc.
 - d. Square D.
 - e. White-Rodgers Div.; Emerson Electric Co.
2. Type: Adjustable time delay relay.
3. Range: Up to five minutes.
4. Setting: Five minutes.
5. Operation of Pump: On or off.
6. Transformer: Provide if required.
7. Power Requirement: 120 V, ac.
8. Programmable Sequence of Operation: Limit pump operation to periods of burner operation plus maximum five minutes after the burner stops.

2.6 BUILDING-AUTOMATION-SYSTEM INTERFACE

- A. Provide auxiliary contacts in pump controllers for interface to building automation system. Include the following:
 1. On-off status of each pump.
 2. Alarm status.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of domestic-water-piping system to verify actual locations of connections before pump installation.

3.2 PUMP INSTALLATION

- A. Comply with ANSI HI 1.4.

- B. Install pumps with access for periodic maintenance including removal of motors, impellers, couplings, and accessories.
- C. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.
- D. Install close-coupled, horizontally mounted, in-line centrifugal pumps with motor and pump shafts horizontal.
- E. Install continuous-thread hanger rods and spring hangers of sufficient size to support pump weight. Vibration isolation devices are specified in Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment." Fabricate brackets or supports as required. Hanger and support materials are specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

3.3 CONTROL INSTALLATION

- A. Install immersion-type aquastats in hot-water return piping.
- B. Install timers.

3.4 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install pumps to allow service and maintenance.
- C. Connect domestic water piping to pumps. Install suction and discharge piping equal to or greater than size of pump nozzles. Refer to Division 22 Section "Domestic Water Piping."
 - 1. Install shutoff valve and strainer on suction side of pumps, and check valve and throttling valve on discharge side of pumps. Install valves same size as connected piping. Refer to Division 22 Section "General-Duty Valves for Plumbing Piping" for general-duty valves for domestic water piping and Division 22 Section "Domestic Water Piping Specialties" for strainers.
 - 2. Install pressure gages at suction and discharge of pumps. Refer to Division 22 Section "Meters and Gages for Plumbing Piping" for pressure gages and gage connectors.
- D. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- E. Connect aquastats and timers to pumps that they control.
- F. Interlock pump with water heater burner and time delay relay.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Check piping connections for tightness.

3. Clean strainers on suction piping.
4. Set aquastats and timers for automatic starting and stopping operation of pumps.
5. Perform the following startup checks for each pump before starting:
 - a. Verify bearing lubrication.
 - b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
 - c. Verify that pump is rotating in the correct direction.
6. Prime pump by opening suction valves and closing drains, and prepare pump for operation.
7. Start motor.
8. Open discharge valve slowly.
9. Adjust temperature settings on thermostats.
10. Adjust timer settings.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain controls and pumps. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

SECTION 221123.13

DOMESTIC-WATER PACKAGED BOOSTER PUMPS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes variable-speed, multiplex, packaged booster pumps for domestic water piping systems.
- B. Related Sections include the following:
 - 1. Division 22 Section "Domestic Water Pumps" for domestic water circulation pumps.
 - 2. Division 23 Section "Variable-Frequency Drives"
 - 3. Division 26 Section "Variable-Frequency Drives"

1.2 SUBMITTALS

- A. Product Data: For each packaged booster pump specified. Include certified performance curves with operating points plotted on curves; and rated capacities of selected models, furnished specialties, and accessories.
- B. Shop Drawings: For packaged booster pumps and accessories. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails and equipment mounting frames.
 - 2. Wiring Diagrams: Detail power, signal, and control wiring.
 - 3. Short-circuit current rating of controller assembly.
- C. Operation and Maintenance Data: For each packaged booster pump to include in emergency, operation, and maintenance manuals.

1.3 QUALITY ASSURANCE

- A. Product Options: Drawings indicate size, profiles, and dimensional requirements of packaged booster pumps and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. ASME Compliance: Comply with ASME B31.9 for piping.
- D. Packaged booster pumps shall be listed and labeled as pumping systems by testing agency acceptable to authorities having jurisdiction.

1. The pumping package components shall be certified by an approved independent testing and certification organization as being compliant with the requirements of NSF/ANSI 61 for potable drinking water and NSF-61 Annex G for low lead content.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Retain shipping flange protective covers and protective coatings during storage.
- B. Protect bearings and couplings against damage.
- C. Comply with pump manufacturer's written rigging instructions for handling.

1.5 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

PART 2 - PRODUCTS

2.1 VARIABLE-SPEED, MULTIPLEX BOOSTER PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ~~Bell & Gossett; a Xylem brand.~~
2. Canariis Corporation.
3. Grundfos Pumps Corporation U.S.A.
4. SyncroFlo, Inc. ("Iron heart")
5. TIGERFLOW Systems, Inc.

- B. Description: Factory-assembled and -tested, fluid-handling system for domestic water, with pumps, piping, valves, specialties, and controls, and mounted on base.

- C. System Working-Pressure Rating: 150 psig minimum.

- D. Pumps:

1. Type: End suction as defined in HI 1.1-1.2 and HI 1.3 for end-suction, close-coupled, single-stage, overhung-impeller, centrifugal pump.
2. Casing: Radially split; ~~bronze~~ cast iron ~~stainless steel~~.
3. Impeller: Closed, ASTM B 584 cast bronze/ stainless steel; statically and dynamically balanced and keyed to shaft.
4. Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve and deflector.
5. Seal: Mechanical.
6. Orientation: Mounted horizontally or vertically.

- ~~E. Pumps:~~

1. ~~Type: End suction as defined in HI 1.1-1.2 and HI 1.3 for end-suction, frame-mounted, separately coupled, single-stage, overhung-impeller, centrifugal pump. Include back-pullout design.~~

2. ~~Casing: Radially split; bronze cast iron stainless steel.~~
3. ~~Impeller: Closed, ASTM B 584 cast bronze, stainless steel; statically and dynamically balanced and keyed to shaft.~~
4. ~~Shaft and Shaft Sleeve: Stainless steel shaft, with copper alloy shaft sleeve and deflector.~~
5. ~~Seal: Mechanical.~~
6. ~~Bearing: Grease lubricated ball type.~~
7. ~~Coupling: Flexible, with metal guard.~~

F. ~~Pumps:~~

1. ~~Type: In line, single stage as defined in HI 1.1 1.2 and HI 1.3 for in line, single stage, close coupled, overhung impeller, centrifugal pump.~~
2. ~~Casing: Radially split; [bronze] [cast iron] [stainless steel].~~
3. ~~Impeller: Closed, [ASTM B 584 cast bronze] [stainless steel]; statically and dynamically balanced and keyed to shaft.~~
4. ~~Shaft and Shaft Sleeve: Stainless steel shaft, with copper alloy shaft sleeve.~~
5. ~~Seal: Mechanical.~~
6. ~~Bearing: Grease lubricated ball type.~~

G. ~~Pumps:~~

1. ~~Type: Vertical, multistage as defined in HI 1.1 1.2 and HI 1.3 for in line, multistage, separately coupled, overhung impeller, centrifugal pump.~~
2. ~~Casing: Cast iron or steel base and stainless steel chamber.~~
3. ~~Impeller: Closed, stainless steel; statically and dynamically balanced and keyed to shaft.~~
4. ~~Shaft: Stainless steel.~~
5. ~~Seal: Mechanical.~~
6. ~~Bearing: Water lubricated sleeve type.~~

H. ~~Pumps:~~

1. ~~Type: Vertical, multistage can, as defined in HI 2.1 2.2 and HI 2.3 for in line, barrel or can, lineshaft, vertical pump.~~
2. ~~Impeller: Closed, ASTM B 584, cast bronze or 304/316 stainless steel; statically and dynamically balanced and keyed to shaft.~~
3. ~~Bowls: [Epoxy coated cast iron] [stainless steel].~~
4. ~~Shaft: Stainless steel.~~
5. ~~Seals: Mechanical and stuffing box types.~~
6. ~~Bearings: Water lubricated bushing type.~~

I. Motors: Single speed, with grease-lubricated, ball-type bearings. Select motors that will not overload through full range of pump performance curve.

J. Piping: ASME B31.9 for piping materials and installation. Copper tube and copper fittings, Stainless-steel pipe and fittings, Stainless-steel pipe and fitting headers and copper tube and copper fittings between headers and pump. Piping, including valves and other components, may have grooved ends for grooved joints.

K. Valves:

1. Shutoff Valves NPS 2 and Smaller: two-piece, full-port ball valve, in each pump's suction and discharge piping.
2. Shutoff Valves NPS 2-1/2 and Larger: lug-type butterfly valve, in each pump's suction and discharge piping and in inlet and outlet headers.

3. Check Valves NPS 2 and Smaller: Silent or swing type in each pump's discharge piping.
 4. Check Valves NPS 2-1/2 and Larger: Silent type in each pump's discharge piping.
 5. Thermal-Relief Valve: Temperature-and-pressure relief type in pump's discharge header piping.
- L. Dielectric Fittings: With insulating material isolating joined dissimilar metals.
- M. Control Panel: Factory installed and connected as an integral part of booster pump complying with NEMA ICS 2 and UL 508; automatic for multiple-pump, variable-speed operation, with load control and protection functions.
1. Control Logic: Solid-state system with transducers, programmable microprocessor, VFD, and other devices in controller. Install VFD for pump motors larger than 25 hp in separate panel; same type as motor control panel enclosure.
 2. Motor Controller: NEMA ICS 2, variable-frequency, solid-state type.
 - a. Control Voltage: 24 or 120-V ac, with integral control-power transformer.
 3. Enclosure: NEMA 250, ~~Type 1 Type 3R Type 4 Type 12.~~
 4. Motor Overload Protection: Overload relay in each phase.
 5. Starting Devices: Hand-off-automatic selector switch for each pump in cover of control panel, plus pilot device for automatic control.
 - a. Duplex, Automatic, Alternating Starter: Switches lead pump to lag main pump and to two-pump operation.
 - b. ~~Triplex, Sequence (Lead-Lag-Lag) Starter: Switches lead pump to one lag main pump and to three-pump operation.~~
 6. Pump Operation and Sequencing: Pressure-sensing method ~~[or] [flow-sensing method]~~
~~[Pressure-sensing method for lead pump and flow-sensing method for lag pumps].~~
 - a. Time Delay: Controls pump on-off operation; adjustable from 1 to 300 seconds.
 7. VFD: Voltage-source, pulse-width, modulating-frequency converter for each pump.
 8. Manual Bypass: Magnetic contactor arranged to transfer to constant-speed operation upon VFD failure.
 9. Instrumentation: Suction and discharge pressure gages.
 10. Lights: Running light for each pump.
 11. Alarm Signal Device: Sounds alarm when backup pumps are operating.
 - a. Time Delay: Controls alarm operation; adjustable from 1 to 300 seconds, with automatic ~~[manual]~~-reset.
 12. Thermal-bleed cutoff.
 13. Low-suction-pressure, Water-storage-tank, low-level cutout.
 14. High-suction-pressure cutout.
 15. High-discharge-pressure cutout.
 16. Short Circuit Current Rating
 - a. Short-Circuit Current: Match rating of overcurrent protective device serving domestic water packaged booster pumps.
 - b. Available Short-Circuit Current: As indicated on the Drawings. Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.

- N. Base: Structural steel.
- O. Manufacturer's Preparation for Shipping: Clean flanges and exposed machined metal surfaces and treat with anticorrosion compound after assembling and testing. Protect flanges, pipe openings, and pump nozzles.
- P. Capacity and Characteristics: REFER TO SCHEDULE ON DRAWINGS

2.2 FLEXIBLE CONNECTORS

- A. Manufacturers:
 - 1. Anamet, Inc.
 - 2. Flex-Hose Co., Inc.
 - 3. Hyspan Precision Products, Inc.
 - 4. Metraflex, Inc.
 - 5. Unaflex Inc.
- B. Description: Corrugated, bronze inner tubing covered with bronze wire braid. Include copper-tube ends or bronze flanged ends, braze-welded to tubing. Include ~~[150-psig]~~ 175-psig minimum working-pressure rating and ends according to the following:
 - 1. Provide ends to match pump or system connections and pressure rating.

2.3 FACILITY MANAGMENT SYSTEM INTERFACE

- A. The following communication features shall be provided to the Building Automation System via an onboard RS-485 port utilizing Johnson Controls Metasys N2, Modicon Modbus or BACnet MS/TP protocol:
 - 1. All sensor process variables
 - 2. Individual zone setpoints
 - 3. Individual pump failure
 - 4. Individual pump on/off status
 - 5. Individual VFD on/off status
 - 6. VFD speed
 - 7. Individual VFD Failure
 - 8. Individual sensor failure

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for packaged booster pumps to verify actual locations of connections before booster pump installation.

3.2 CONCRETE BASES

- A. Install concrete bases of dimensions indicated for packaged booster pumps. Refer to Division 22 Section "Common Work Results for Plumbing."

- B. Cast-in-place concrete materials and placement requirements are specified in Division 03.

3.3 BOOSTER PUMP INSTALLATION

- A. Install packaged booster pumps level on concrete bases with access for periodic maintenance including removal of pumps, motors, impellers, couplings, and accessories.
 - 1. Do not dismantle packaged booster pumps or remove individual components.
- B. Vibration Isolation: Install on spring isolators. Vibration isolation devices are specified in Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- C. Support connected domestic water piping so weight of piping is not supported by packaged booster pumps.

3.4 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect domestic water piping to packaged booster pumps. Install suction and discharge pipe equal to or greater than size of unit suction and discharge headers.
 - 1. Install flexible connectors on piping connections to unit suction and discharge headers. Install flexible connectors same size as piping.
 - 2. Install shutoff valves on piping connections to each booster pump suction and discharge headers. Install ball, butterfly, or gate valves same size as suction and discharge headers. General-duty valves are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
 - 3. Install union or flanged connections on pump suction and discharge headers at connection to domestic water piping.
 - 4. Install piping adjacent to packaged booster pumps to allow service and maintenance.
- C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform the following startup service:
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Check piping connections for tightness.
 - 3. Clean strainers if any.
 - 4. Verify that pump controls are correct for required application.
 - 5. Verify that vibration isolator springs are not completely compressed.
- B. Perform the following startup checks for each pump of packaged booster pump unit before starting:

1. Verify bearing lubrication.
 2. Prime pumps by opening suction valves and closing discharge valves, and prepare pumps for operation.
 3. Start motors and Open discharge valves slowly.
 4. Adjust settings.
- C. Start-up shall not be considered complete until the sequence of operation, including all alarms, has been sufficiently demonstrated to the owner or owner's designated representative. This job site visit shall occur only after all hook-ups, tie-ins, and terminations have been completed and signed-off on the manufacturer's start-up request form.
- D. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting packaged booster pumps to suit actual occupied conditions. Provide up to two visits to Project outside normal occupancy hours for this purpose.

3.6 LABELING AND IDENTIFICATION

- A. Install identifying equipment markers and equipment signs on booster pumps. Labeling and identification materials are specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.7 DEMONSTRATION
