- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain packaged booster pumps. Refer to Division 01 Section "Demonstration and Training"
- B. The system manufacturer's factory qualified representative shall be capable of providing on-site training for owner's personnel. This training shall fully cover maintenance and operation of all system components.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 1316
SANITARY WASTE AND VENT PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following for soil, waste, and vent piping inside the building:
 - 1. Pipe, tube, and fittings.
- B. Related Sections include the following:
 - 1. Division 22 Section "Sanitary Sewerage Pumps."
 - 2. Division 22 Section "Chemical Waste Systems for Laboratory and Healthcare Facilities" for chemical-waste and vent piping systems.
 - 3. Division 31 Section "Earth Moving" for excavating, trenching, and backfilling.

1.2 DEFINITIONS

- A. EPDM: Ethylene-propylene-diene terpolymer rubber.
- B. LLDPE: Linear, low-density polyethylene plastic.
- C. NBR: Acrylonitrile-butadiene rubber.
- D. PE: Polyethylene plastic.
- E. PVC: Polyvinyl chloride plastic.
- F. TPE: Thermoplastic elastomer.

1.3 PERFORMANCE REQUIREMENTS

- A. Components and installation shall be capable of withstanding the following minimum working pressure, unless otherwise indicated:
 - 1. Soil, Waste, and Vent Piping: 10-foot head of water.
 - 2. Sanitary Sewer, Force-Main Piping: 50 psig.

1.4 SUBMITTALS

- A. Product Data: For pipe, tube, fittings, and couplings.
- B. Shop Drawings:
- C. Field quality-control inspection and test reports.

1.5 QUALITY ASSURANCE

- A. Piping materials shall be American manufactured and bear label, stamp, or other markings of specified testing agency.
- B. All cast iron Piping and fittings shall be marked with the collective trademark of the Cast Iron Soil Pipe Institute and be listed with NSF international.
- C. Comply with NSF 14, "Plastics Piping Systems Components and Related Materials," for plastic piping components. Include marking with "NSF-dwv" for plastic drain, waste, and vent piping; "NSF-drain" for plastic drain piping; "NSF-tubular" for plastic continuous waste piping; and "NSF-sewer" for plastic sewer piping.

PART 2 - PRODUCTS

2.1 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

- A. Pipe and Fittings: ASTM A 74, Service class.
- B. Gaskets: ASTM C 564, rubber.
- C. Calking Materials: ASTM B 29, pure lead and oakum or hemp fiber.

2.2 HUBLESS CAST-IRON SOIL PIPE AND FITTINGS

- A. Pipe and Fittings: ASTM A 888 or CISPI 301.
- B. Shielded Couplings: Assembly of metal shield or housing, corrosion-resistant fasteners, and rubber sleeve with integral, center pipe stop.
 - 1. Standard, Shielded, Stainless-Steel Couplings: CISPI 310 and ASTM C 1277, with stainless steel corrugated shield; stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve & bear the NSF Trademark.
 - a. Manufacturers:
 - 1) ANACO.
 - 2) Mission Rubber Co.
 - 3) Tyler Pipe; Soil Pipe Div.

2.3 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, Type E or S, Grade A or B, Standard Weight or Schedule 40, galvanized. Include ends matching joining method.
- B. Drainage Fittings: ASME B16.12, galvanized, threaded, cast-iron drainage pattern.
- C. Pressure Fittings:
 - 1. Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M or ASTM A 106, Schedule 40, galvanized, seamless steel pipe. Include ends matching joining method.

2. Malleable-Iron Unions: ASME B16.39; Class 150; hexagonal-stock body with ball-and-socket, metal-to-metal, bronze seating surface; and female threaded ends.
3. Gray-Iron, Threaded Fittings: ASME B16.4, Class 125, galvanized, standard pattern.
4. Cast-Iron Flanges: ASME B16.1, Class 125.
5. Cast-Iron, Flanged Fittings: ASME B16.1, Class 125, galvanized.

D. Grooved-Joint Systems:

1. Manufacturers:
 - a. Anvil International.
 - b. Victaulic Company.
2. Grooved-End, Steel-Piping Fittings: ASTM A 47/A 47M, galvanized, malleable-iron casting; ASTM A 106, galvanized-steel pipe; or ASTM A 536, galvanized, ductile-iron casting; with dimensions matching steel pipe.
3. Grooved-End, Steel-Piping Couplings: AWWA C606, for steel-pipe dimensions. Include ferrous housing sections, gasket suitable for water, and bolts and nuts.

2.4 DUCTILE-IRON PIPE AND FITTINGS

A. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell and plain spigot end, unless grooved or flanged ends are indicated.

1. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
2. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

B. Grooved-Joint Systems:

1. Manufacturers:
 - a. Victaulic Company.
2. Grooved-End, Ductile-Iron Fittings: ASTM A 47/A 47M, malleable-iron castings or ASTM A 536, ductile-iron castings with dimensions matching pipe.
3. Grooved-End, Ductile-Iron-Piping Couplings: AWWA C606, for ductile-iron-pipe dimensions. Include ferrous housing sections, gasket suitable for water, and bolts and nuts.

C. Flanges: ASME 16.1, Class 125, cast iron.

2.5 COPPER TUBE AND FITTINGS

A. Copper DWV Tube: ASTM B 306, drainage tube, drawn temper.

1. Copper Drainage Fittings: ASME B16.23, cast copper or ASME B16.29, wrought copper, solder-joint fittings.

B. Hard Copper Tube: ASTM B 88, Types L and M, water tube, drawn temper.

1. Copper Pressure Fittings: ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint fittings. Furnish wrought-copper fittings if indicated.
2. Copper Flanges: ASME B16.24, Class 150, cast copper with solder-joint end.
3. Copper Unions: MSS SP-123, copper-alloy, hexagonal-stock body with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.

C. Soft Copper Tube: ASTM B 88, Type L, water tube, annealed temper.

1. Copper Pressure Fittings: ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint fittings. Furnish wrought-copper fittings if indicated.

2.6 PVC PIPE AND FITTINGS

A. Solid-Wall PVC Pipe: ASTM D 2665, drain, waste, and vent.

1. PVC Socket Fittings: ASTM D 2665, socket type, made to ASTM D 3311, drain, waste, and vent patterns.

2.7 DRIP PANS

A. Of not less than 14-gauge galvanized steel with raised sides and galvanized steel pipe nipple drains welded in place at low points.

2.8 ENCASEMENT FOR FERROUS PIPING

A. Standard: ASTM A 674 or AWWA C105.

B. Form: Sheet or Tube.

C. Material: LLDPE film of 0.008-inch minimum thickness or high-density, cross-laminated PE film of 0.004-inch minimum thickness.

D. Color: Black.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

A. Flanges and unions may be used on aboveground pressure piping, unless otherwise indicated.

B. PVC piping shall not be used within occupied spaces or plenums of occupied spaces, ***unless separated and protected from the plenum by a barrier conforming to ASTM E84 flame and smoke spread index to perform at not less than 25 / 50. Final means of separation to be approved by AHJ.***

C. Aboveground, soil and waste piping shall be any of the following:

1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless cast-iron soil pipe and fittings; heavy-duty shielded, stainless-steel couplings; and hubless-coupling joints.

3. Steel pipe, drainage fittings, and threaded joints.
4. Copper DWV tube, copper drainage fittings, and soldered joints.
5. **Solid wall PVC pipe, PVC socket fittings, and solvent-cemented joints.**

D. Aboveground, vent piping shall be any of the following:

1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless cast-iron soil pipe and fittings; heavy-duty shielded, stainless-steel couplings; and hubless-coupling joints.
3. Steel pipe, drainage fittings, and threaded joints.
4. Copper DWV tube, copper drainage fittings, and soldered joints.
5. **Solid wall PVC pipe, PVC socket fittings, and solvent-cemented joints.**

E. Underground, soil, waste, and vent piping shall be any of the following:

1. Service class, cast-iron soil piping; gaskets; and gasketed joints.
2. Stainless-steel pipe and fittings, gaskets, and gasketed joints.
3. Solid wall PVC pipe, PVC socket fittings, and solvent-cemented joints.

F. Aboveground sanitary-sewage force mains shall be any of the following:

1. Hard copper tube, Type L; copper pressure fittings; and soldered joints.
2. Steel pipe, pressure fittings, and threaded joints.

G. Underground sanitary-sewage force mains shall be any of the following:

1. Hard copper tube, Type L; wrought-copper pressure fittings; and soldered joints.
2. Mechanical-joint, ductile-iron pipe; mechanical-joint, ductile-iron fittings; glands, gaskets, and bolts; and mechanical joints.
 - a. Include grooved-joint system fittings and couplings and grooved joints where indicated.
3. Pressure pipe couplings, if dissimilar pipe materials or piping with small difference in OD must be joined.

3.2 PIPING INSTALLATION

- A. Sanitary sewer piping outside the building is specified in Division 22 Section "Facility Sanitary Sewers."
- B. Basic piping installation requirements are specified in Division 22 Section "Common Work Results for Plumbing."
- C. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers.
- D. Install cleanout fitting with closure plug inside the building in sanitary force-main piping.
- E. Install cast-iron sleeve with water stop and mechanical sleeve seal at each service pipe penetration through foundation wall. Select number of interlocking rubber links required to make installation watertight. Sleeves and mechanical sleeve seals are specified in Division 22 Section "Common Work Results for Plumbing."

- F. Install wall-penetration fitting at each service pipe penetration through foundation wall. Make installation watertight.
- G. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
- H. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch and 1/8-bend fittings if 2 fixtures are installed back to back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.
- I. Lay buried building drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
- J. Install soil and waste drainage and vent piping downward in direction of flow at the slopes required by local code or Authorities Having Jurisdiction, unless otherwise indicated on drawings.
- K. Install engineered soil and waste drainage and vent piping systems as follows:
 - 1. Combination Waste and Vent: Comply with standards of authorities having jurisdiction.
 - 2. Reduced-Size Venting: Comply with standards of authorities having jurisdiction.
- L. Sleeves are not required for cast-iron soil piping passing through concrete slabs-on-grade if slab is without membrane waterproofing.
- M. Install underground PVC soil and waste drainage piping according to ASTM D 2321.
- N. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
- O. Hubless cast-iron piping 6" and larger shall be restrained at any direction change using blocks, rods, bracing or other suitable methods.
- P. Provide drip pans under waste lines concealed above operating, cysto and delivery rooms, cath labs, nurseries, food preparation centers, food serving facilities, food storage areas, central services, electronic data processing areas, electric and telecommunication closets, and other sensitive areas, or as shown on the plans. Pans shall be of galvanized steel, arranged to drain outside these areas, or as noted on Drawings.

3.3 JOINT CONSTRUCTION

- A. Basic piping joint construction requirements are specified in Division 22 Section "Common Work Results for Plumbing."
- B. Join hub-and-spigot, cast-iron soil piping with gasket joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

- C. Join hubless cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-coupling joints.
- D. Soldered Joints: Use ASTM B 813, water-flushable, lead-free flux; ASTM B 32, lead-free-alloy solder; and ASTM B 828 procedure, unless otherwise indicated.
- E. Grooved Joints: Assemble joint with keyed coupling, gasket, lubricant, and bolts according to coupling and fitting manufacturer's written instructions.
- F. PVC Nonpressure Piping Joints: Join piping according to ASTM D 2665.

3.4 VALVE INSTALLATION

- A. General valve installation requirements are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
- B. Shutoff Valves: Install shutoff valve on each sewage pump discharge.
 - 1. Install gate or full-port ball valve for piping NPS 2 and smaller.
 - 2. Install gate valve for piping NPS 2-1/2 and larger.
- C. Check Valves: Install swing check valve, between pump and shutoff valve, on each sewage pump discharge.
- D. Backwater Valves: Install backwater valves in piping subject to sewage backflow.
 - 1. Horizontal Piping: Horizontal backwater valves. Use normally closed type, unless otherwise indicated.
 - 2. Floor Drains: Drain outlet backwater valves, unless drain has integral backwater valve.
 - 3. Install backwater valves in accessible locations.
 - 4. Backwater valve are specified in Division 22 Section "Sanitary Waste Piping Specialties."

3.5 HANGER AND SUPPORT INSTALLATION

- A. Seismic-restraint devices are specified in Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- B. Pipe hangers and supports are specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment." Install the following:
 - 1. Vertical Piping: MSS Type 8 or Type 42, clamps.
 - 2. Install individual, straight, horizontal piping runs according to the following:
 - a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
 - b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
 - c. Longer Than 100 Feet, if Indicated: MSS Type 49, spring cushion rolls.
 - 3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
 - 4. Base of Vertical Piping: MSS Type 52, spring hangers.
- C. Install supports according to Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

- D. Support vertical piping and tubing at base and at each floor.
- E. Install supports for vertical cast-iron soil piping every 15 feet.
- F. Install supports for vertical steel piping every 15 feet.
- G. Install supports for vertical stainless-steel piping every 10 feet.
- H. Install supports for vertical copper tubing every 10 feet.
- I. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.6 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.
- C. Connect drainage and vent piping to the following:
 - 1. Plumbing Fixtures: Connect drainage piping in sizes indicated, but not smaller than required by plumbing code.
 - 2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by authorities having jurisdiction.
 - 3. Plumbing Specialties: Connect drainage and vent piping in sizes indicated, but not smaller than required by plumbing code.
 - 4. Equipment: Connect drainage piping as indicated. Provide shutoff valve, if indicated, and union for each connection. Use flanges instead of unions for connections NPS 2-1/2 and larger.
- D. Connect force-main piping to the following:
 - 1. Sanitary Sewer: To exterior force main or sanitary manhole.
 - 2. Sewage Pumps: To sewage pump discharge.

3.7 FIELD QUALITY CONTROL

- A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
 - 1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
 - 2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
- B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.
- C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

- D. Test sanitary drainage and vent piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 2. Leave uncovered and unconcealed new, altered, extended, or replaced drainage and vent piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
 3. Roughing-in Plumbing Test Procedure: Test drainage and vent piping, except outside leaders, on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
 4. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of 1-inch wg. Use U-tube or manometer inserted in trap of water closet to measure this pressure. Air pressure must remain constant without introducing additional air throughout period of inspection. Inspect plumbing fixture connections for gas and water leaks.
 5. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
 6. Prepare reports for tests and required corrective action.
- E. Test force-main piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
 2. Cap and subject piping to static-water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
 3. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
 4. Prepare reports for tests and required corrective action.

3.8 CLEANING

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.

3.9 PROTECTION

- A. Exposed PVC Piping: Protect plumbing vents exposed to sunlight with two coats of water-based latex paint.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 1319

SANITARY WASTE PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following sanitary drainage piping specialties:
 - 1. Cleanouts.
 - 2. Floor drains.
 - 3. Trench drains.
 - 4. Roof flashing assemblies.
 - 5. Through-penetration firestop assemblies.
 - 6. Miscellaneous sanitary drainage piping specialties.
 - 7. Flashing materials.
- B. Related Sections include the following:
 - 1. Division 22 Section "Storm Drainage Piping Specialties" for trench drains for storm water, channel drainage systems for storm water, roof drains, and catch basins.
 - 2. Division 22 Section "Plumbing Fixtures" for hair interceptors.
 - 3. Division 22 Section "Healthcare Plumbing Fixtures" for plaster sink interceptors.
 - 4. Refer to Division 22 Section "Common Work Results for Plumbing" for piping joining materials, joint construction, and basic installation requirements.

1.2 DEFINITIONS

- A. PVC: Polyvinyl chloride plastic.

1.3 SUBMITTALS

- A. Product Data: For each type of product. Include rated capacities, operating characteristics, and accessories:
- B. Shop Drawings: Show fabrication and installation details for frost-resistant vent terminals.
- C. Field quality-control test reports.
- D. Operation and Maintenance Data: For drainage piping specialties to include in emergency, operation, and maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic sanitary piping specialty components.

1.5 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- B. Coordinate size and location of roof penetrations.

PART 2 - PRODUCTS

2.1 CLEANOUTS

A. Cleanouts:

1. Basis-of-Design Product: Subject to compliance with requirements, Refer to table for area and provide the product indicated or a comparable product by one of the following:
 - 1) Linoleum Floors: J.R. Smith Series 4140 - round top with insert
 - 2) Carpeted Floors: J.R. Smith Series 4240-Y - round with carpet marker
 - 3) Exterior: J. R. Smith 4240 - round with cast iron cover
 - 4) Wall: J.R. Smith Series 4710
 - 5) Quarry Floor: J.R. Smith Series 4053-PB - square bronze top
 - 6) Ceramic Floor: J.R. Smith Series 4053-NB - square nickel bronze top
 - 7) Concrete Floors: J. R. Smith Series 4100 – round galvanized cast iron top.
 - 8) Truck/Loading Dock Areas: J. R. Smith Series 4231 – ductile iron top.
 - a. Josam Company; Josam Div.
 - b. MIFAB, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Tyler Pipe; Wade Div.
 - e. Watts Drainage Products Inc.
 - f. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.36.2M for cast iron for cleanout test tee.
3. Body Material: cast-iron as required to match connected piping.
4. Closure: Countersunk or raised-head, brass plug.
5. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

2.2 FLOOR DRAINS AND FLOOR SINKS

A. Floor Drains and Floor Sinks:

1. Manufacturers:
 - a. Josam Company; Josam Div.

- b. MIFAB, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Tyler Pipe; Wade Div.
 - e. Watts Drainage Products Inc.
 - f. Zurn Plumbing Products Group; Light Commercial Operation.
 - g. Zurn Plumbing Products Group; Specification Drainage Operation.
- 2. Standard: ASME A112.6.3.
 - 3. Refer to schedule on drawings

2.3 TRENCH DRAINS

A. Trench Drains:

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
 - a. Josam Company; Josam Div.
 - b. MIFAB, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Tyler Pipe; Wade Div.
 - e. Watts Drainage Products Inc.
 - f. Zurn Plumbing Products Group; Specification Drainage Operation.
- 2. Standard: ASME A112.6.3 for trench drains.
- 3. Material: Ductile or gray iron.
- 4. Flange: Anchor.
- 5. Clamping Device: Required.
- 6. Outlet: End.
- 7. Grate Material: Stainless steel.
- 8. Grate Finish: Not required.

2.4 ROOF FLASHING ASSEMBLIES

A. Roof Flashing Assemblies:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Acorn Engineering Company; Elmdor/Stoneman Div.
 - b. Thaler Metal Industries Ltd.

- B. Description: Manufactured assembly made of 6.0-lb/sq. ft., 0.0938-inch-thick, lead flashing collar and skirt extending at least 8 inches from pipe, with galvanized-steel boot reinforcement and counterflashing fitting.

2.5 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

A. Hub Drain:

1. Description: Shop or field fabricate from ASTM A 74, Service class, hub-and-spigot, cast-iron, soil-pipe fittings. Include P-trap, hub-and-spigot riser section; and where required, increaser fitting joined with ASTM C 564, rubber gaskets.
2. Size: as indicated on drawings.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install backwater valves in building drain piping. For interior installation, provide cleanout deck plate flush with floor and centered over backwater valve cover, and of adequate size to remove valve cover for servicing.
- B. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
 1. Size same as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
 2. Locate at each change in direction of piping greater than 45 degrees.
 3. Locate at minimum intervals of 50 feet for piping NPS 4 and smaller and 100 feet for larger piping.
 4. Locate at base of each vertical soil and waste stack.
- C. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
- D. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- E. Install floor drains/sinks at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
 1. Position floor drains/sinks for easy access and maintenance.
 2. Set floor drains/sinks below elevation of surrounding finished floor to allow floor drainage. Set with grates depressed according to the following drainage area radii:
 - a. Radius, 30 Inches or Less: Equivalent to 1 percent slope, but not less than 1/4-inch total depression.
 - b. Radius, 30 to 60 Inches: Equivalent to 1 percent slope.
 - c. Radius, 60 Inches or Larger: Equivalent to 1 percent slope, but not greater than 1-inch total depression.
 3. Install floor-drain/sink flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.
 4. Install individual traps for floor drains/sinks connected to sanitary building drain, unless otherwise indicated.
- F. Install trench drains at low points of surface areas to be drained. Set grates of drains flush with finished surface, unless otherwise indicated.
- G. Install roof flashing assemblies on sanitary stack vents and vent stacks that extend through roof.
- H. Install flashing fittings on sanitary stack vents and vent stacks that extend through roof.

- I. Assemble open drain fittings and install with top of hub 1 inch above floor.
- J. Install deep-seal traps on floor drains and other waste outlets, if indicated.
- K. Install floor-drain/sink, trap-seal primer fittings on inlet to floor drains that require trap-seal primer connection.
 - 1. Exception: Fitting may be omitted if trap has trap-seal primer connection.
 - 2. Size: Same as floor drain inlet.
- L. Install air-gap fittings on draining-type backflow preventers and on indirect-waste piping discharge into sanitary drainage system.
- M. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.
- N. Install frost-resistant vent terminals on each vent pipe passing through roof. Maintain 1-inch clearance between vent pipe and roof substrate.
- O. Install frost-proof vent caps on each vent pipe passing through roof. Maintain 1-inch clearance between vent pipe and roof substrate.
- P. Install wood-blocking reinforcement for wall-mounting-type specialties.
- Q. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.
- R. Install escutcheons at wall, floor, and ceiling penetrations in exposed finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding pipe fittings.

3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.

3.3 FLASHING INSTALLATION

- A. Fabricate flashing from single piece unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:
 - 1. Lead Sheets: Burn joints of lead sheets 6.0-lb/sq. ft., 0.0938-inch thickness or thicker.
 - 2. Copper Sheets: Solder joints of copper sheets.
- B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
- C. Set flashing on floors and roofs in solid coating of bituminous cement.
- D. Secure flashing into sleeve and specialty clamping ring or device.

- E. Install flashing for piping passing through roofs with counterflashing or commercially made flashing fittings, according to Division 07 Section "Sheet Metal Flashing and Trim."
- F. Extend flashing up vent pipe passing through roofs and turn down into pipe, or secure flashing into cast-iron sleeve having calking recess.
- G. Fabricate and install flashing and pans, sumps, and other drainage shapes.

3.4 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION

SECTION 221323

SANITARY WASTE INTERCEPTORS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following types of interceptors outside the building:

1. Grease interceptors.
2. Oil interceptors.
3. Sand interceptors.
4. Sediment interceptors.

1.2 DEFINITIONS

- A. FRP: Fiberglass-reinforced plastic.
- B. HDPE: High-density polyethylene plastic.
- C. PE: Polyethylene plastic.
- D. PP: Polypropylene plastic.

1.3 SUBMITTALS

- A. Product Data: For each type of interceptor indicated. Include materials of fabrication, dimensions, rated capacities, retention capacities, operating characteristics, size and location of each pipe connection, furnished specialties, and accessories.
- B. Shop Drawings: For each type and size of precast concrete interceptor indicated.
1. Include materials of construction, dimensions, rated capacities, retention capacities, location and size of each pipe connection, furnished specialties, and accessories.
- C. Coordination Drawings: Interceptors, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
1. Interceptors.
 2. Piping connections. Include size, location, and elevation of each.
 3. Interface with underground structures and utility services.

1.4 PROJECT CONDITIONS

- A. Interruption of Existing Sewer Services: Do not interrupt services to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary sewer services according to requirements indicated:

1. Notify Construction Manager and Owner no fewer than seven days in advance of proposed interruption of service.
2. Do not proceed with interruption of sewer services without Owner's written permission.

PART 2 - PRODUCTS

2.1 GREASE INTERCEPTORS

- A. Grease Interceptors: Precast concrete complying with ASTM C 913. Include rubber-gasketed joints, vent connections, manholes, compartments or baffles, and piping or openings to retain grease and to permit wastewater flow.
1. Protective Coating: Plant-applied, SSPC-Paint 16, coal-tar, epoxy-polyamide paint; 15-mil minimum thickness applied to all exterior and interior concrete surfaces.
 2. Structural Design Loads:
 - a. Heavy-Traffic Load: Comply with ASTM C 890, A-16 (ASSHTO HS20-44).
 3. Resilient Pipe Connectors: ASTM C 923, cast or fitted into interceptor walls, for each pipe connection.
 4. Grade Rings: Reinforced-concrete rings, 6- to 9-inch total thickness, to match diameter of manhole frame and cover.
 5. Manhole Frames and Covers: Ferrous; 24-inch ID by 7- to 9-inch riser with 4-inch-minimum width flange and 26-inch-diameter cover.
 - a. Include indented top design with lettering cast into cover, using wording equivalent to "GREASE INTERCEPTOR."
- B. Grease Interceptor Capacity and Characteristics: REFER TO DRAWINGS

2.2 OIL INTERCEPTORS

- A. Oil Interceptors: Precast concrete comply with ASTM C 913. Include rubber-gasketed joints, vent connections, manholes, compartments or baffles, and piping or openings to retain grease and to permit wastewater flow.
1. Protective Coating: Plant-applied, SSPC-Paint 16, coal-tar, epoxy-polyamide paint; 15-mil minimum thickness applied to all exterior and interior concrete surfaces.
 2. Structural Design Loads:
 - a. Heavy-Traffic Load: Comply with ASTM C 890, A-16 (ASSHTO HS20-44).
 3. Resilient Pipe Connectors: ASTM C 923, cast or fitted into interceptor walls, for each pipe connection.
 4. Grade Rings: Reinforced-concrete rings, 6- to 9-inch total thickness, to match diameter of manhole frame and cover.
 5. Manhole Frames and Covers: Ferrous; 24-inch ID by 7- to 9-inch riser with 4-inch-minimum width flange and 26-inch-diameter cover.
 - a. Include indented top design with lettering cast into cover, using wording equivalent to "OIL INTERCEPTOR."

6. Waste-oil storage tank and piping are specified in Division 23 Section "Facility Fuel-Oil Piping."
- B. Oil Interceptors: Factory-fabricated, cast-iron or steel body; with removable sediment bucket or strainer, baffles, vents, and flow-control fitting on inlet.
1. Manufacturers:
 - a. Josam Company.
 - b. MIFAB Manufacturing Inc.
 - c. Rockford Sanitary Systems, Inc.
 - d. Smith, Jay R. Mfg. Co.
 - e. Wade Div.; Tyler Pipe.
 - f. Watts Industries, Inc.
 - g. Zurn Specification Drainage Products; Zurn Plumbing Products Group.
 2. Inlet, Outlet, Vent, and Waste-Oil Outlet Piping Connections: Hub, hubless, or threaded, unless otherwise indicated.
 3. Extension: Cast-iron or steel shroud, full size of interceptor, extending from top of interceptor to grade.
 4. Cover: Cast iron or steel, with steel reinforcement to provide ASTM C 890, [**A-03, walkway**] <Insert other> load.
 5. Protective Coating: Factory-applied, SSPC-Paint 16, coal-tar, epoxy-polyamide paint; 15-mil minimum thickness applied to all ferrous surfaces, except bucket or strainer, unless otherwise indicated.
 6. Waste-oil storage tank and piping are specified in Division 23 Section "Facility Fuel-Oil Piping."
- C. Oil Interceptor Capacity and Characteristics: REFER TO DRAWINGS

2.3 SAND INTERCEPTORS

- A. Description: Factory-fabricated, cast-iron or steel body and inlet grate; with settlement chamber and removable basket or strainer.
1. Manufacturers:
 - a. MIFAB Manufacturing Inc.
 - b. Rockford Sanitary Systems, Inc.
 - c. Smith, Jay R. Mfg. Co.
 - d. Wade Div.; Tyler Pipe.
- B. Outlet Piping Connection: Hub, hubless, or threaded, unless otherwise indicated.
- C. Grate: Cast iron or steel with reinforcement to provide ASTM C 890, [**A-03, walkway**] <Insert other> load.
- D. Protective Coating: Factory-applied, SSPC-Paint 16, coal-tar, epoxy-polyamide paint; 15-mil minimum thickness applied to all exterior and interior ferrous surfaces except basket or screens.
- E. Sand Interceptor Capacity and Characteristics: REFER TO DRAWINGS

2.4 SEDIMENT INTERCEPTORS

- A. Sediment Interceptors: Precast concrete comply with ASTM C 913. Include rubber-gasketed joints, vent connections, manholes, compartments or baffles, and piping or openings to retain grease and to permit wastewater flow.
1. Protective Coating: Plant-applied, SSPC-Paint 16, coal-tar, epoxy-polyamide paint; 15-mil minimum thickness applied to all exterior and interior concrete surfaces.
 2. Structural Design Loads:
 - a. Heavy-Traffic Load: Comply with ASTM C 890, A-16 (ASSHTO HS20-44).
 3. Resilient Pipe Connectors: ASTM C 923, cast or fitted into interceptor sidewalls, for each pipe connection.
 4. Grade Rings: Reinforced-concrete rings, 6- to 9-inch total thickness, to match diameter of manhole frame and cover.
 5. Manhole Frames and Covers: Ferrous; 24-inch ID by 7- to 9-inch riser with 4-inch-minimum width flange and 26-inch-diameter cover.
 - a. Include indented top design with lettering cast into cover, using wording equivalent to the following:
 - 1) Sediment Interceptors in Sanitary or storm Sewerage System: "SEDIMENT INTERCEPTOR."
 6. Cast Ferrous Gratings: Frame and flat grate with small-square or short slotted drainage openings.
 - a. Ductile Iron: ASTM A 536, Grade 60-40-18, unless otherwise indicated.
 - b. Gray Iron: ASTM A 48, Class 35, unless otherwise indicated.
 - c. Minimum Size: 24 by 24 inches, unless otherwise indicated.
 - d. Free Area: Approximately 50 percent, unless otherwise indicated.
- B. Sediment Interceptors: Factory-fabricated, cast-iron or steel body and cover; with settlement chambers; baffles; and removable basket, strainer, or screens.
1. Manufacturers:
 - a. Josam Company.
 - b. MIFAB Manufacturing Inc.
 - c. Rockford Sanitary Systems, Inc.
 - d. Smith, Jay R. Mfg. Co.
 - e. Wade Div.; Tyler Pipe.
 - f. Watts Industries, Inc.
 - g. Zurn Specification Drainage Products; Zurn Plumbing Products Group.
 2. Inlet and Outlet Piping Connections: Hub, hubless, or threaded, unless otherwise indicated.
 3. Extension: Cast-iron or steel shroud, full size of interceptor, extending from top of interceptor to grade.
 4. Cover: Cast iron or steel, with steel reinforcement to provide ASTM C 890, [**A-03, walkway**] <Insert other> load.
 5. Protective Coating: Factory-applied, SSPC-Paint 16, coal-tar, epoxy-polyamide paint; 15-mil minimum thickness applied to all ferrous surfaces except basket or strainer.

- C. Sediment Interceptor Capacity and Characteristics: REFER TO DRAWINGS

2.5 PRECAST CONCRETE MANHOLE RISERS

- A. Precast Concrete Manhole Risers: ASTM C 913, 36-inch ID. Include rubber-gasketed joints.
 - 1. Structural Design Loads:
 - a. Heavy-Traffic Load: Comply with ASTM C 890, A-16 (ASSHTO HS20-44).
 - 2. Length: From top of underground concrete structure to grade.
 - 3. Riser Sections: 3-inch minimum thickness and 36-inch diameter.
 - 4. Top Section: Eccentric cone, unless otherwise indicated. Include top of cone to match grade ring size.
 - 5. Gaskets: ASTM C 443, rubber.
 - 6. Steps: ASTM A 615/A 615M, deformed, 1/2-inch steel reinforcing rods encased in ASTM D 4101, PP, wide enough to allow worker to place both feet on 1 step and designed to prevent lateral slippage off of step. Cast or anchor steps into sidewalls at 12- to 16-inch intervals.
- B. Grade Rings: Reinforced-concrete rings, 6- to 9-inch total thickness, to match diameter of manhole frame and cover.
- C. Protective Coating: Plant-applied, SSPC-Paint 16, coal-tar, epoxy-polyamide paint; 15-mil minimum thickness applied to all exterior and interior concrete surfaces.
- D. Manhole Frames and Covers: Ferrous; 24-inch ID by 7- to 9-inch riser with 4-inch-minimum width flange and 26-inch-diameter cover.

PART 3 - EXECUTION

3.1 EARTHWORK

- A. Excavating, trenching, and backfilling are specified in Division 22 Section "Earth Moving."

3.2 INSTALLATION

- A. Install interceptor inlets and outlets at elevations indicated.
- B. Install precast concrete interceptors according to ASTM C 891. Set level and plumb.
- C. Install manhole risers from top of underground concrete interceptors to manholes and gratings at finished grade.
- D. Set tops of manhole frames and covers flush with finished surface in pavements. Set tops 3 inches above finish surface elsewhere, unless otherwise indicated.
- E. Set tops of grating frames and grates flush with finished surface.

- F. Clean and prepare concrete surfaces to be field painted. Remove loose efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen surface as required to remove glaze. Paint the following concrete surfaces as recommended by paint manufacturer:
 - 1. Precast Concrete Interceptors: All exterior and interior.
- G. Clean and prepare metal surfaces to be field painted according to SSPC- PA 1. Paint the following metal surfaces according to SSPC-PA 1 and SSPC-Paint 16:
 - 1. Metal Interceptors: All surfaces except baskets, screens, and strainers.
 - 2. Do not paint metal surfaces with factory-applied, corrosion-resistant coating.
- H. Set metal interceptors level and plumb.
- I. Set tops of metal interceptor covers flush with finished surface in pavements. Set tops 3 inches above finish surface elsewhere, unless otherwise indicated.
- J. Prepare and paint metal components, to be field painted, according to SSPC-Paint 16.
- K. Install piping and oil storage tanks according to Division 23 Section "Facility Fuel-Oil Piping."
- L. Repair and restore protective coatings to original condition.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Make piping connections between interceptors and piping systems.

3.4 IDENTIFICATION

- A. Identification materials and installation are specified in Division 22 Section "Earth Moving." Arrange for installation of green warning tapes directly over piping and at outside edges of underground interceptors.
 - 1. Use warning tapes or detectable warning tape over ferrous piping.
 - 2. Use detectable warning tape over nonferrous piping and over edges of underground structures.

END OF SECTION

SECTION 221413

FACILITY STORM DRAINAGE PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. ~~{Provide piping, valves, fittings and related products as listed on Drawings and described herein. All products to be purchased from Ferguson Enterprises.}~~
- B. This Section includes the following storm drainage piping inside the building:
 - 1. Pipe, tube, and fittings.
 - 2. Special pipe fittings.
 - 3. Encasement for underground metal piping.
- C. Related Sections include the following:
 - 1. Division 22 Section "Sump Pumps."
 - 2. Division 31 Section "Earth Moving".
 - 3. Division 33 Section "Storm Utility Drainage Piping."
 - 4. Division 22 Section "Common Work Results for Plumbing."
 - 5. Division 22 Section "General-Duty Valves for Plumbing Piping."

1.2 DEFINITIONS

- A. PVC: Polyvinyl chloride plastic.

1.3 PERFORMANCE REQUIREMENTS

- A. Components and installation shall be capable of withstanding the following minimum working-pressure, unless otherwise indicated:
 - 1. Storm Drainage Piping: 10-foot head of water.
 - 2. Storm Drainage, Force-Main Piping: 100 psig.
- B. **Seismic Performance:** Soil, waste, and vent piping and support and installation shall be capable of withstanding the effects of seismic events determined according to ASCE 7, "Minimum Design Loads for Buildings and Other Structures."

1.4 SUBMITTALS

- A. Product Data: For pipe, tube, fittings, and couplings.
- B. **Shop Drawings:**
 - 1. **Design Calculations:** Signed and sealed by a qualified professional engineer for selecting seismic restraints.

- C. Field quality-control inspection and test reports.

1.5 QUALITY ASSURANCE

- A. Piping materials shall be American manufactured and bear label, stamp, or other markings of specified testing agency.
- B. All cast iron Piping and fittings shall be marked with the collective trademark of the Cast Iron Soil Pipe Institute and be listed with NSF international.
- C. For below grade applications comply with NSF 14, "Plastics Piping Systems Components and Related Materials," for plastic piping components. Include marking with "NSF-drain" for plastic drain piping and "NSF-sewer" for plastic sewer piping.

PART 2 - PRODUCTS

2.1 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

- A. Pipe and Fittings: ASTM A 74, Extra-Heavy class(es).
- B. Gaskets: ASTM C 564, rubber.
- C. Calking Materials: ASTM B 29, pure lead and oakum or hemp fiber.

2.2 HUBLESS CAST-IRON SOIL PIPE AND FITTINGS

- A. Pipe and Fittings: ASTM A 888 or CISPI 301.
- B. Shielded Couplings: Assembly of metal shield or housing, corrosion-resistant fasteners, and rubber sleeve with integral, center pipe stop.
 - 1. Heavy-Duty, Shielded, Stainless-Steel Couplings: With stainless-steel shield, stainless-steel bands and tightening devices, and ASTM C 564, rubber sleeve.
 - a. Manufacturers:
 - 1) Husky SD 4000
 - 2) Clamp-All Corp.-125
 - 2. Heavy-Duty, Shielded, Cast-Iron Couplings: ASTM A 48/A 48M, two-piece, cast-iron housing; stainless-steel bolts and nuts; and ASTM C 564, rubber sleeve.
 - a. Manufacturers:
 - 1) MG Piping Products Co.

2.3 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, Type E or S, Grade A or B, Standard Weight. Include ends matching joining method.

- B. Drainage Fittings: ASME B16.12, threaded, cast-iron drainage pattern.
- C. Pressure Fittings:
 - 1. Malleable-Iron Unions: ASME B16.39; Class 150; hexagonal-stock body with ball-and-socket, metal-to-metal, bronze seating surface; and female threaded ends.
 - 2. Cast-Iron Flanges: ASME B16.1, Class 125.
 - 3. Cast-Iron, Flanged Fittings: ASME B16.1, Class 125.
- D. Grooved-Joint Systems:
 - 1. Manufacturers:
 - a. Anvil International.
 - b. Victaulic Co. of America.
 - c. Ward Manufacturing, Inc.
 - 2. Grooved-End, Steel-Piping Fittings: ASTM A 47/A 47M, malleable-iron casting; or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
 - 3. Grooved-End, Steel-Piping Couplings: AWWA C606, for steel-pipe dimensions. Include ferrous housing sections, gasket suitable for water, and bolts and nuts.

2.4 DUCTILE-IRON PIPE AND FITTINGS

- A. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell and plain spigot end, unless grooved or flanged ends are indicated.
 - 1. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
 - 2. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.
- B. Push-on-Joint, Ductile-Iron Pipe: AWWA C151, with push-on-joint bell and plain spigot end, unless grooved or flanged ends are indicated.
 - 1. Push-on-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
 - 2. Gaskets: AWWA C111, rubber.
- C. Grooved-Joint Systems:
 - 1. Manufacturers:
 - a. Victaulic Co. of America.
 - b. Ward Manufacturing, Inc.
 - c. Anvil International.
 - 2. Grooved-End, Ductile-Iron Fittings: ASTM A 47/A 47M, malleable-iron castings or ASTM A 536, ductile-iron castings with dimensions matching pipe.
 - 3. Grooved-End, Ductile-Iron-Piping Couplings: AWWA C606, for ductile-iron-pipe dimensions. Include ferrous housing sections, gasket suitable for water, and bolts and nuts.
- D. Flanges: ASME 16.1, Class 125, cast iron.

2.5 PVC PIPE AND FITTINGS

- A. Solid-Wall PVC Pipe: ASTM D 2665, drain, waste, and vent.

2.6 SPECIAL PIPE FITTINGS

- A. Flexible, Nonpressure Pipe Couplings: Comply with ASTM C 1173, elastomeric, sleeve-type, reducing or transition pattern. Include shear ring, ends of same sizes as piping to be joined, and corrosion-resistant-metal tension band and tightening mechanism on each end.

- 1. Manufacturers:

- a. Dallas Specialty & Mfg. Co.
 - b. Fernco, Inc.
 - c. Logan Clay Products Company (The).
 - d. Mission Rubber Co.
 - e. NDS, Inc.

- 2. Sleeve Materials:

- a. For Cast-Iron Soil Pipes: ASTM C 564, rubber.
 - b. For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
 - c. For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.

- B. Shielded Nonpressure Pipe Couplings: ASTM C 1460, elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.

- 1. Available Manufacturers:

- a. Cascade Waterworks Mfg. Co.
 - b. Mission Rubber Co.

- C. Pressure Pipe Couplings: AWWA C219 metal, sleeve-type same size as, with pressure rating at least equal to, and ends compatible with, pipes to be joined.

- 1. Available Manufacturers:

- a. Cascade Waterworks Mfg. Co.
 - b. Dresser, Inc.; DMD Div.
 - c. EBAA Iron Sales, Inc.
 - d. Ford Meter Box Company, Inc. (The); Pipe Products Div.
 - e. JCM Industries, Inc.
 - f. Romac Industries, Inc.
 - g. Smith-Blair, Inc.
 - h. Viking Johnson.

- 2. Center-Sleeve Material: Manufacturer's standard.
 - 3. Gasket Material: Natural or synthetic rubber.
 - 4. Metal Component Finish: Corrosion-resistant coating or material.

- D. Expansion Joints: Two or three-piece, ductile-iron assembly consisting of telescoping sleeve(s) with gaskets and restrained-type, ductile-iron, bell-and-spigot end sections complying with

AWWA C110 or AWWA C153. Select and assemble components for expansion indicated. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.

1. Available Manufacturers:
 - a. EBAA Iron Sales, Inc.
 - b. Romac Industries, Inc.
 - c. Star Pipe Products; Star Fittings Div.

2.7 ~~[ENCASEMENT FOR FERROUS PIPING~~

- ~~A. Standard: ASTM A 674 or AWWA C105.~~
- ~~B. Form: Sheet or Tube.~~
- ~~C. Material: LLDPE film of 0.008-inch minimum thickness or high-density, cross-laminated PE film of 0.004-inch minimum thickness.~~
- ~~D. Color: Black.]~~

2.8 DRIP PANS

- A. Of not less than 14-gauge galvanized steel with raised sides and galvanized steel pipe nipple drains welded in place at low points.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

- A. Flanges and unions may be used on aboveground pressure piping, unless otherwise indicated.
- B. PVC piping shall not be used within occupied spaces or plenums of occupied spaces, ***unless separated and protected from the plenum by a barrier conforming to ASTM E84 flame and smoke spread index to perform at not less than 25 / 50. Final means of separation to be approved by AHJ.***
- C. Aboveground storm drainage piping shall be any of the following:
 1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
 2. Hubless cast-iron soil pipe and fittings; heavy-duty shielded, stainless-steel couplings; and coupled joints.
 3. Steel pipe, drainage fittings, and threaded joints.
 4. Dissimilar Pipe-Material Couplings: Flexible, Shielded, nonpressure pipe couplings for joining dissimilar pipe materials with small difference in OD.
 5. ***Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.***
- D. Underground storm drainage piping shall be any of the following:
 1. Extra-heavy class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
 2. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.

3. Dissimilar Pipe-Material Couplings: Flexible, Shielded, nonpressure pipe couplings for joining dissimilar pipe materials with small difference in OD.
- E. Aboveground storm drainage force mains shall be any of the following:
1. Steel pipe, pressure fittings, and threaded joints.
 2. Grooved-end steel pipe, grooved-joint system fittings and couplings, and grooved joints.
- F. Underground storm drainage force mains shall be any of the following:
1. Steel pipe, pressure fittings, and threaded joints.
 2. Mechanical-joint, ductile-iron pipe; mechanical-joint, ductile-iron fittings; glands, gaskets, and bolts; and mechanical-joint joints.
 3. Pressure pipe couplings if dissimilar pipe materials or piping with small difference in OD must be joined.

3.2 PIPING INSTALLATION

- A. Install seismic restraints on piping. Seismic-restraint devices are specified in Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- B. Install cleanouts at grade and extend to where building storm drains connect to building storm sewers. Cleanouts are specified in Division 22 Section "Storm Drainage Piping Specialties."
- C. Install cleanout fitting with closure plug inside the building in storm drainage force-main piping.
- D. Install underground, steel, force-main piping. **[Install encasement on piping according to ASTM A 674 or AWWA C105.]**
- E. Install underground, ductile-iron, force-main piping according to AWWA C600. Install buried piping inside building between wall and floor penetrations and connection to storm sewer piping outside building with restrained joints. Anchor pipe to wall or floor. Install thrust-block supports at vertical and horizontal offsets.
1. Install encasement on piping according to ASTM A 674 or AWWA C105.
- F. Install underground, ductile-iron, special pipe fittings according to AWWA C600.
1. Install encasement on piping according to ASTM A 674 or AWWA C105.
- G. Install wall-penetration fitting system at each service pipe penetration through foundation wall. Make installation watertight.
- H. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
1. Install encasement on underground piping according to ASTM A 674 or AWWA C105.
- I. Make changes in direction for storm drainage piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

- J. Lay buried building storm drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
- K. Install storm drainage piping at the following minimum slopes, unless otherwise indicated:
 - 1. Building Storm Drain: 1 percent downward in direction of flow for piping NPS 3 and smaller; 1 percent downward in direction of flow for piping NPS 4 and larger.
 - 2. Horizontal Storm-Drainage Piping: 1 percent downward in direction of flow.
- L. Install force mains at elevations indicated.
- M. Sleeves are not required for cast-iron soil piping passing through concrete slabs-on-grade if slab is without membrane waterproofing.
- N. Install underground PVC storm drainage piping according to ASTM D 2321.
- O. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
- P. Hubless cast-iron piping 6" and larger shall be restrained at any direction change using blocks, rods, bracing or other suitable methods.
- Q. Provide drip pans under waste lines concealed above operating, cysto and delivery rooms, cath labs, nurseries, food preparation centers, food serving facilities, food storage areas, central services, electronic data processing areas, electric and telecommunication closets, and other sensitive areas, or as shown on the plans. Pans shall be of galvanized steel, arranged to drain outside these areas, or as noted on Drawings.

3.3 JOINT CONSTRUCTION

- A. Basic piping joint construction requirements are specified in Division 22 Section "Common Work Results Plumbing."
- B. Hub-and-Spigot, Cast-Iron Soil Piping Gasketed Joints: Join according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.
- C. Hubless Cast-Iron Soil Piping Coupled Joints: Join according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-coupling joints.
- D. Grooved Joints: Cut groove ends of pipe and assemble grooved ends of pipes, grooved-end fittings, and grooved-end-piping couplings according to AWWA C606.
- E. PVC Nonpressure Piping Joints: Join piping according to ASTM D 2665.

3.4 VALVE INSTALLATION

- A. Shutoff Valves: Install shutoff valve on each sump pump discharge.
 - 1. Install gate or full-port ball valve for piping NPS 2 and smaller.
 - 2. Install gate valve for piping NPS 2-1/2 and larger.

- B. Check Valves: Install swing check valve, between pump and shutoff valve, on each sump pump discharge.
- C. Backwater Valves: Install backwater valves in piping subject to backflow.
 - 1. Horizontal Piping: Horizontal backwater valves. Use normally closed type.
 - 2. Install backwater valves in accessible locations.
 - 3. Backwater valve are specified in Division 22 Section "Storm Drainage Piping Specialties."

3.5 HANGER AND SUPPORT INSTALLATION

- A. Seismic-restraint devices are specified in Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- B. Pipe hangers and supports are specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

3.6 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.
- C. Connect storm drainage piping to roof drains and storm drainage specialties.
- D. Connect force-main piping to sump pump discharge.

3.7 FIELD QUALITY CONTROL

- A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
 - 1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
 - 2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
- B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.
- C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
- D. Test storm drainage piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
 - 1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 - 2. Leave uncovered and unconcealed new, altered, extended, or replaced storm drainage piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.

3. Test Procedure: Test storm drainage piping on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
 4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
 5. Prepare reports for tests and required corrective action.
- E. Test force-main piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
 2. Cap and subject piping to static-water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
 3. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
 4. Prepare reports for tests and required corrective action.

3.8 CLEANING

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.

SECTION 221415
FACILITY SUB SOIL DRAINAGE PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. **[Provide piping, valves, fittings and related products as listed on Drawings and described herein. All products to be purchased from Ferguson Enterprises.]**
- B. This Section includes the following sub soil drainage piping inside and outside the building:
 - 1. Pipe and fittings.
 - 2. Special pipe fittings.
 - 3. Wrapping of piping with geotextile screen material
- C. Related Sections include the following:
 - 1. Division 22 Section "Sump Pumps."
 - 2. Division 31 Section "Earth Moving".
 - 3. Division 33 Section "Storm Utility Drainage Piping."
 - 4. Division 22 Section "Common Work Results for Plumbing."

1.2 DEFINITIONS

- A. PVC: Polyvinyl chloride plastic.
- B. PE: Polyethylene

1.3 SUBMITTALS

- A. Product Data: For pipe, fittings, and drainage fabric.
- B. Field quality-control inspection and test reports.

1.4 QUALITY ASSURANCE

- A. Piping materials shall bear label, stamp, or other markings of specified testing agency.
- B. For below grade applications comply with NSF 14, "Plastics Piping Systems Components and Related Materials," for plastic piping components. Include marking with "NSF-drain" for plastic drain piping and "NSF-sewer" for plastic sewer piping.

PART 2 - PRODUCTS

2.1 Manufacturers:

1. ADS
2. HANCOR

2.2 SUB-SOIL DRAINAGE PIPING

- A. Perforated pipe: ASTM F2648, high density polyethylene conforming with the minimum requirement of cell classifications 424420C, perforated pipe conforming to AASHTO class II perforations, with a smooth interior and annular exterior corrugations. With Bell and spigot fittings or plain end pipe with snap couplings complying with ASTM F2306.
- B. Solid Wall pipe: ADS heavy duty polyethylene pipe with joints of split or snap couplings meeting ASTM F2306.
- C. Filter Wrap: Geotex 401 polypropylene, staple fiber, needlepunched nonwoven geotextile manufactured by Propex Geosynthetics or equal. The material shall be resistant to ultraviolet degradation and to biological and chemical environments normally found in soils and conform to ASTM D-4491, ASTM D-4751 and ASTM D-4355.

2.3 CLEANOUTS

- A. 8" Nyloplast series 2708AG inline drain fitting with 8" diameter solid ductile iron grate model number 0899CGC.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

- A. Sub-Soil Drainage Piping shall be the following:
 1. High density polyethylene perforated pipe with Bell and spigot fittings or plain ends.
- B. Sub-Soil Drainage Piping up to clean outs shall be the following:
 1. High density polyethylene solid wall pipe with split or snap coupling fittings.

3.2 PIPING INSTALLATION

- A. The Sub-Soil drainage piping shall follow the bottom of the grade beam with the flow line the same elevation as the bottom of the grade beam. In this case the piping shall be laid level with no slope. There shall be no low points in the system such that drainage is trapped.
- B. Make changes in direction for sub-soil drainage piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees.

- C. Install cleanouts at grade and extend to where sub-soil drains connect to sump pump. Polyethylene piping shall be extended up to grade at each turn of 90 degrees and at each run of piping of 100 feet or multiples of 100 feet. At each point where the piping is extended up to grade a cleanout will be installed to be able to flush the piping from that point to the point where the piping enters into the sump pump. The covers on the cleanouts shall be labeled for "sub-soil" drainage.
- D. Install cleanouts in the direction of flow.
- E. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
- F. Wrap perforated piping with geotextile fabric as indicated on the drawings.

3.3 JOINT CONSTRUCTION

- A. Basic piping joint construction requirements are specified in Division 22 Section "Common Work Results Plumbing."
- B. Assemble piping in accordance with ASTM D-2321, and manufacturers written instructions.

3.4 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect sub-soil drainage piping to sump pump.

3.5 FIELD QUALITY CONTROL

- A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
 - 1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
 - 2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
- B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.
- C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

3.6 CLEANING

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.

END OF SECTION

SECTION 221423

STORM DRAINAGE PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following storm drainage piping specialties:

- ~~1. Backwater valves.~~
2. Cleanouts.
3. Trench drains.
4. Through-penetration firestop assemblies.
5. Roof drains.
6. Miscellaneous storm drainage piping specialties.

- B. Related Sections include the following:

1. Division 07 Section "Sheet Metal Flashing and Trim"

1.2 DEFINITIONS

- A. PVC: Polyvinyl chloride plastic.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.

1.4 QUALITY ASSURANCE

- A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

1.5 COORDINATION

- A. Coordinate size and location of roof penetrations.

PART 2 - PRODUCTS

~~2.1 BACKWATER VALVES~~

- ~~A. Manufacturers:~~

- ~~1. Josam Company; Josam Div.~~
- ~~2. MIFAB, Inc.~~

3. ~~Smith, Jay R. Mfr. Co.; Division of Smith Industries, Inc.~~
4. ~~Tyler Pipe; Wade Div.~~
5. ~~Watts Drainage Products Inc.~~
6. ~~Zurn Plumbing Products Group.~~
7. ~~NDS Inc.~~
8. ~~Oatey.~~
9. ~~Sioux Chief Manufacturing Company, Inc.~~

~~B. Horizontal, Cast Iron Backwater Valves:~~

1. ~~Standard: ASME A112.14.1.~~
2. ~~Size: Same as connected piping.~~
3. ~~Body: Cast iron.~~
4. ~~Cover: Cast iron with bolted or threaded access check valve.~~
5. ~~End Connections: Hub and spigot.~~
6. ~~Type Check Valve: Removable, bronze, swing check, factory assembled or field modified to hang closed.~~
7. ~~Extension: ASTM A 74, Service class; full-size, cast iron, soil-pipe extension to field-installed cleanout at floor; replaces backwater valve cover.~~

~~C. Drain-Outlet Backwater Valves:~~

1. ~~Size: Same as area drain outlet.~~
2. ~~Body: Cast iron or bronze made for vertical installation in bottom outlet of area drain.~~
3. ~~Check Valve: Removable ball float.~~
4. ~~Inlet: Threaded.~~
5. ~~Outlet: Threaded or spigot.~~

~~D. Horizontal, Plastic Backwater Valves:~~

1. ~~Size: Same as connected piping.~~
2. ~~Body: PVC.~~
3. ~~Cover: Same material as body with threaded access to check valve.~~
4. ~~Check Valve: Removable swing check.~~
5. ~~End Connections: Socket type.~~

2.2 CLEANOUTS

A. Cleanouts

1. Basis-of-Design Product: Subject to compliance with requirements, Refer to table for area and provide the product indicated or a comparable product by one of the following:
 - 1) Linoleum Floors: J.R. Smith Series 4140 - round top with insert
 - 2) Carpeted Floors: J.R. Smith Series 4240-Y - round with carpet marker
 - 3) Exterior: J. R. Smith 4240 - round with cast iron cover
 - 4) Wall: J.R. Smith Series 4710
 - 5) Quarry Floor: J.R. Smith Series 4053-PB - square bronze top
 - 6) Ceramic Floor: J.R. Smith Series 4053-NB - square nickel bronze top
 - 7) Concrete Floors: J. R. Smith Series 4100 – round galvanized cast iron top.
 - 8) Truck/Loading Dock Areas: J. R. Smith Series 4231 – ductile iron top.
 - a. Josam Company; Josam Div.
 - b. MIFAB, Inc.

- c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Tyler Pipe; Wade Div.
 - e. Watts Drainage Products Inc.
 - f. Zurn Plumbing Products Group; Specification Drainage Operation.
- 2. Standard: ASME A112.36.2M for cast iron for cleanout test tee.
 - 3. Body Material: cast-iron as required to match connected piping.
 - 4. Closure: Countersunk or raised-head, brass plug.
 - 5. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

2.3 TRENCH DRAINS

A. Trench Drains:

- 1. Manufacturers:
 - a. Josam Company; Josam Div.
 - b. MIFAB, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Tyler Pipe; Wade Div.
 - e. Watts Drainage Products Inc.
 - f. Zurn Plumbing Products Group; Specification Drainage Operation.
- 2. Standard: ASME A112.6.3 for trench drains.
- 3. Material: Ductile or gray iron.
- 4. REFER TO FIXTURE SCHEDULE FOR FIXTURE PARAMETERS.

2.4 THROUGH-PENETRATION FIRESTOP ASSEMBLIES

A. Through-Penetration Firestop Assemblies:

- 1. Available Manufacturers:
 - a. ProSet Systems Inc.
- 2. Standard: UL 1479 assembly of sleeve and stack fitting with firestopping plug.
- 3. Size: Same as connected pipe.
- 4. Sleeve: Molded PVC plastic, of length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.

2.5 ROOF DRAINS

A. Metal Roof Drains:

- 1. Manufacturers:
 - a. Josam Company; Josam Div.
 - b. MIFAB, Inc.
 - c. Portals Plus, Inc.
 - d. Prier Products, Inc.
 - e. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - f. Tyler Pipe; Wade Div.

- g. Watts Drainage Products Inc.
 - h. Zurn Plumbing Products Group.
- 2. Standard: ASME A112.21.2M.
 - 3. REFER TO FIXTURE SCHEDULE FOR UNIT DESCRIPTION.

2.6 MISCELLANEOUS STORM DRAINAGE PIPING SPECIALTIES

A. Expansion Joints:

- 1. Standard: ASME A112.21.2M.
- 2. Body: Cast iron with bronze sleeve, packing, and gland.
- 3. End Connections: Matching connected piping.
- 4. Size: Same as connected piping.

B. Downspout Boots:

- 1. Description: Manufactured, ASTM A 48/A 48M, gray-iron casting, with strap or ears for attaching to building; NPS 4 outlet; and shop-applied bituminous coating.
- 2. Size: Inlet size to match downspout.
- 3. Description: ASTM A 74, Service class, hub-and-spigot, cast-iron soil pipe.
- 4. Size: Same as or larger than connected downspout.

C. Downspout Nozzles:

- 1. REFER TO FIXTURE SCHEDULE.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Refer to Division 22 Section "Common Work Results for Plumbing" for piping joining materials, joint construction, and basic installation requirements.
- B. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
 - 1. Size same as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
 - 2. Locate at each change in direction of piping greater than 45 degrees.
 - 3. Locate at minimum intervals of 100 feet.
 - 4. Locate at base of each vertical stack.
 - 5. Do not locate cleanouts above finished ceilings.
- C. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor. Do not install in public areas.
- D. For cleanouts located in concealed locations, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- E. Install trench drains at low points of surface areas to be drained. Set grates of drains flush with finished surface.

- F. Install roof drains at low points of roof areas according to roof membrane manufacturer's written installation instructions. Roofing materials are specified in Division 07.
 - 1. Install roof-drain flashing collar or flange so that there will be no leakage between drain and adjoining roofing. Maintain integrity of waterproof membranes where penetrated.
 - 2. Position roof drains for easy access and maintenance.
- G. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.
- H. Install expansion joints on vertical stacks and conductors. Position expansion joints for easy access and maintenance.
- ~~I. Install manufactured, gray iron downspout boots at grade with top [6 inches] [12 inches] [18 inches] <Insert dimension> above grade. Secure to building wall. Provide splash block.~~
- ~~J. Install cast iron soil pipe downspout boots at grade with top of hub [6 inches] [12 inches] [18 inches] <Insert dimension> above grade. Provide splash block.~~
- K. Install downspout nozzles at exposed bottom of conductors where they spill onto grade. Provide splash block.
- L. Install escutcheons at wall, floor, and ceiling penetrations in exposed finished locations.

3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

3.3 PROTECTION

- A. Protect drains during construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 223100
DOMESTIC WATER SOFTENERS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes commercial water softeners.
 - 1. Chemicals.
 - 2. Water testing kits.

1.2 DEFINITIONS

- A. ABS: Acrylonitrile-butadiene-styrene plastic.
- B. FRP: Fiberglass-reinforced plastic.
- C. PE: Polyethylene plastic.
- D. PVC: Polyvinyl chloride plastic.

1.3 SUBMITTALS

- A. Product Data: For the following:
 - 1. Water Softeners. Include rated capacities, operating characteristics, furnished specialties, and accessories.
 - 2. Water testing kits.
- B. Shop Drawings: For water softeners. Include plans, elevations, sections, details, and connections to piping systems.
 - 1. Wiring Diagrams: Power, signal, and control wiring.
- C. Manufacturer Certificates: Signed by manufacturers certifying that water softeners comply with requirements.
- D. Source quality-control test reports.
- E. Field quality-control test reports.
- F. Operation and Maintenance Data: For water softeners to include in emergency, operation, and maintenance manuals.
- G. Warranty: Special warranty specified in this Section.

- H. Maintenance service agreement.

1.4 QUALITY ASSURANCE

- A. Product Options: Drawings indicate size, profiles, and dimensional requirements of water softeners and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. ASME Compliance:
 - 1. Steel Tanks: Fabricate and label mineral tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 01, where indicated.

1.5 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.6 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of water softener that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures of mineral and brine tanks.
 - b. Faulty operation of controls.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal use.
 - d. Attrition loss of resin exceeding 3 percent per year.
 - e. Mineral washed out of system during service run or backwashing period.
 - f. Effluent turbidity greater and color darker than incoming water.
 - g. Fouling of underdrain system, gravel, and resin, with turbidity or by dirt, rust, or scale from softener equipment or soft water, while operating according to manufacturer's written operating instructions.
 - 2. Commercial Water Softener, Warranty Period: From date of Substantial Completion.
 - a. Mineral Tanks:
 - 1) Steel Tanks: 1 year.
 - 2) Fiberglass Tanks: 5 years.
 - b. Brine Tanks: 5 years.
 - c. Controls: 1 year.
 - d. Underdrain Systems: 5 years.

1.7 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Salt for Brine Tanks: Furnish same form as and at least four two times original load, but not less than ~~200-lb~~ 1000 lb.
 2. Deliver salt on pallets in 50-lb bags
 3. Store salt on raised platform where directed by Owner. Do not store in contact with concrete floor.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers:
- a. Marlo, Inc.
 - b. Culligan International Company
 - c. Ecodyne Water Treatment
 - d. Hungerford & Terry, Inc.
 - e. Unity
 - f. Lakeside Water Treatment
 - g. Watt's Water Conditioning

2.2 COMMERCIAL WATER SOFTENERS

- A. Description: Factory-assembled, pressure-type water softener.
1. Comply with NSF 61, "Drinking Water System Components--Health Effects."
 2. Configuration: ~~[Single unit with one mineral tank]~~ Twin unit with two mineral tanks ~~[Triple unit with three mineral tanks]~~ and one brine tank, factory mounted on skids.
 3. Mineral Tanks: FRP, pressure-vessel quality.
 - a. Construction: Fabricated and stamped to comply with ASME Boiler and Pressure Vessel Code: Section X, "Fiber-Reinforced Plastic Pressure Vessels."
 - b. Pressure Rating: ~~400 psig~~ 125 psig minimum.
 - c. Wetted Components: Suitable for water temperatures from ~~40 to at least 100 deg F~~ ~~40 to at least 120 deg F~~ ~~40 to at least 150 deg F~~.
 - d. Freeboard: 50 percent minimum for backwash expansion above normal resin bed level.
 - e. Support Legs or Skirt: Constructed of structural steel, welded to tank before testing and labeling.
 - f. Upper Distribution System: Single, point type, fabricated from non-metallic pipe and fittings.

- g. Lower Distribution System: Hub and radial-arm or header-lateral type; fabricated from nonmetallic pipe and fittings with individual, fine-slotted, nonclogging plastic strainers; arranged for even flow distribution through resin bed.
 - h. Liner: PE, ABS, or other material suitable for potable water.
4. Mineral Tanks: ~~Steel~~Stainless steel, electric welded; pressure-vessel quality.
- a. Fabricate supports and attachments to tank with reinforcement strong enough to resist tank movement during seismic event when tank supports are anchored to building structure.
 - b. Construction: Fabricated and stamped to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels."
 - c. Pressure Rating: ~~100 psig~~ 125 psig ~~150 psig~~ minimum.
 - d. Wetted Components: Suitable for water temperatures from ~~40 to at least 100 deg F~~ 40 to at least 120 deg F ~~40 to at least 150 deg F~~.
 - e. Freeboard: 50 percent minimum for backwash expansion above normal resin bed level.
 - f. Handholes: 4 inches round or 4 by 6 inches elliptical, in top head and lower sidewall of tanks 30 inches and smaller in diameter.
 - g. Manhole: 11 by 15 inches in top head of tanks larger than 30 inches in diameter.
 - h. Support Legs or Skirt: Constructed of structural steel, welded to tank before testing and labeling.
 - i. Finish: Exterior of tank spray painted with rust-resistant prime coat, 2- to 3-mil dry film thickness. Interior sandblasted and lined with epoxy-polyamide coating, 8- to 10-mil dry film thickness.
 - j. Upper Distribution System: Single, point type, fabricated from non-metallic pipe and fittings.
 - k. Lower Distribution System: Hub and radial-arm or header-lateral type; fabricated from PVC pipe and fittings with individual, fine-slotted, nonclogging PE strainers; arranged for even flow distribution through resin bed.
 - l. Liner: PE, ABS, or other material suitable for potable water.
5. Controls: Fully automatic; factory mounted on unit and factory wired.
- a. PLC programmable logic controller in a NEMA-4X enclosure featuring digital display flow rate, peak flow rate, batch volume remaining, totalizer, and a regeneration cycle timer/indicator. A regeneration required visual alarm is provided and is located on the controller front panel display. PLC controller is provided with extra I/O cards for future expansion. Provided with Modbus for connection to BMS. Controller is programmed to operate the system in either an alternating/additive flow (based on flow requirement) mode.
 - b. Adjustable duration of various regeneration steps.
 - c. Push-button start and complete manual operation.
 - d. Electric time clock and switch for fully automatic operation, adjustable to initiate regeneration at any hour of day and any day of week or at fixed intervals.
 - e. Sequence of Operation: Program multiport pilot-control valve to automatically pressure-actuate main operating valve through steps of regeneration and return to service.
 - f. Pointer on pilot-control valve shall indicate cycle of operation.
 - g. Means of manual operation of pilot-control valve if power fails.
 - h. Main Operating Valves: Industrial, automatic, multiport, diaphragm type with the following features:
 - 1) Slow opening and closing, nonslam operation.
 - 2) Diaphragm guiding on full perimeter from fully open to fully closed.
 - 3) Isolated dissimilar metals within valve.

- 4) Self-adjusting, internal, automatic brine injector that draws brine and rinses at constant rate independent of pressure.
 - 5) Valve for single mineral-tank unit with internal automatic bypass of raw water during regeneration.
 - 6) Sampling cocks for soft water.
 - 7) Special tools are not required for service.
- i. Flow Control: Automatic, to control backwash and flush rates over wide variations in operating pressures, and that does not require field adjustments.
- 1) Meter Control: Equip each mineral tank with signal-register-head water meter that will produce electrical signal indicating need for regeneration on reaching hand-set total in gallons. Design so signal will continue until reset.
 - 2) Demand-Initiated Control: Equip single mineral-tank units with automatic-reset-head water meter that electrically activates cycle controller to initiate regeneration at preset total in gallons. Design so head automatically resets to preset total in gallons for next service run.
 - 3) Demand-Initiated Control: Equip each mineral tank of twin mineral-tank units with automatic-reset-head water meters that electrically activate cycle controllers to initiate regeneration at preset total in gallons. Design so heads automatically reset to preset total in gallons for next service run. Include electrical lockout to prevent simultaneous regeneration of both tanks.
 - 4) Demand-Initiated Control: Equip each mineral tank of twin mineral-tank units with automatic-reset-head water meter in common outlet header that electrically activates cycle controller to automatically regenerate one mineral tank at preset total in gallons and divert flow to other tank. Set to repeat with other tank. Include electrical lockout to prevent simultaneous regeneration of both tanks.
 - 5) Demand-Initiated Control: Equip each mineral tank of multiple mineral-tank units with automatic-reset-head water meters that electrically activate cycle controllers to automatically regenerate at preset total in gallons. Design so heads automatically reset to preset total in gallons for next service run. Include electrical lockouts to prevent simultaneous regeneration of more than one tank.
 - 6) Demand-Initiated Control: Equip each mineral tank of multiple mineral-tank units with automatic-reset-head water meter in common outlet header that electrically activates cycle controller to automatically regenerate one mineral tank at preset total in gallons and divert flow to other tanks. Set to repeat with other tanks. Include electrical lockouts to prevent simultaneous regeneration of more than one tank.
6. Brine Tank: Combination measuring and wet-salt storing system.
- a. Tank and Cover Material: Fiberglass, 3/16 inch thick; or molded PE, 3/8 inch thick.
 - b. Brine Valve: Float operated and plastic fitted for automatic control of brine withdrawn and freshwater refill.
 - c. Size: Large enough for at least four regenerations at full salting.
7. Factory-Installed Accessories:
- a. Piping, valves, tubing, and drains.
 - b. Sampling cocks.
 - c. Main-operating-valve position indicators.
 - d. Water meters.

B. Capacity and Characteristics:

1. Service: Cold Hot water.
2. Water Analysis:
 - a. Hardness: <Insert grains/gal. or ppm.>
 - b. Iron: <Insert ppm.>
 - c. Dissolved Solids: <Insert ppm.>
 - d. Concentration: <Insert pH.>
 - e. Inlet Water Pressure: <Insert psig.>
 - f. Water Temperature: <Insert deg F.>
3. Refer to schedule on drawings

2.3 CHEMICALS

- A. Mineral: High-capacity, sulfonated-polystyrene ion-exchange resin that is stable over entire pH range with good resistance to bead fracture from attrition or shock.
1. ~~Exchange Capacity: <Insert capacity> of calcium carbonate of resin when regenerated with 15 lb of salt.~~
- B. Salt for Brine Tanks: High-purity sodium chloride, free of dirt and foreign material. Rock and granulated forms are not acceptable.

2.4 WATER TESTING SETS

- A. Description: Manufacturer's standard water-hardness testing apparatus and chemicals with testing procedure instructions. Include metal container suitable for wall mounting.

2.5 SOURCE QUALITY CONTROL

- A. Hydrostatically test mineral tanks before shipment to minimum of one and one-half times pressure rating.
- B. Prepare test reports.

PART 3 - EXECUTION

3.1 CONCRETE BASES

- A. Install concrete bases of dimensions indicated for commercial water softeners. Refer to Division 22 Section "Common Work Results for Plumbing."
- B. Cast-in-place concrete materials and placement requirements are specified in Division 03.

3.2 WATER SOFTENER INSTALLATION

- A. Install commercial water softener equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor mineral and brine tanks and floor-mounting accessories to substrate.
- B. Install brine lines and fittings furnished by equipment manufacturer but not specified to be factory installed.
- C. Prepare mineral-tank distribution system and underbed for minerals and place specified mineral into mineral tanks.
- D. Install water testing sets mounted on wall, unless otherwise indicated, and near water softeners.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.
- C. Make piping connections between water-softener-unit headers and dissimilar-metal water piping with dielectric fittings. Dielectric fittings are specified in Division 22 Section "Common Work Results for Plumbing."
- D. Install shutoff valves on raw-water inlet and soft-water outlet piping of each mineral tank, and on inlet and outlet headers.
 - 1. Metal general-duty valves are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
 - 2. Plastic valves are specified in Division 22 Section "Domestic Water Piping."
 - 3. Exception: Water softeners with factory-installed shutoff valves at locations indicated.
- E. Install pressure gages on raw-water inlet and soft-water outlet piping of each mineral tank. Pressure gages are specified in Division 22 Section "Meters and Gages for Plumbing Piping."
 - 1. Exception: Water softeners with factory-installed pressure gages at locations indicated.
 - 2. Exception: Water softeners in hot-water service.
- F. Install valved bypass water piping around water softeners.
 - 1. Metal general-duty valves are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
 - 2. Plastic valves are specified in Division 22 Section "Domestic Water Piping."
 - 3. Water piping is specified in Division 22 Section "Domestic Water Piping."
- G. Install drains as indirect wastes to spill into open drains or over floor drains.

- H. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- I. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.
- B. Perform the following field tests and inspections and prepare test reports:
 - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Remove and replace malfunctioning water softeners that do not pass tests and inspections and retest as specified above.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
- B. Add water to brine tanks and fill with salt.
- C. Sample water softener effluent after startup and at three consecutive seven-day intervals (total of four samples), and prepare certified test reports for required water performance characteristics. Comply with the following:
 - 1. ASTM D 859, "Test Method for Silica in Water."
 - 2. ASTM D 1067, "Test Methods for Acidity or Alkalinity of Water."
 - 3. ASTM D 1068, "Test Methods for Iron in Water."
 - 4. ASTM D 1126, "Test Method for Hardness in Water."
 - 5. ASTM D 1129, "Terminology Relating to Water."
 - 6. ASTM D 3370, "Practices for Sampling Water from Closed Conduits."

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain water softeners. Refer to Division 01 "Demonstration and Training" Section

SECTION 223300

ELECTRIC DOMESTIC WATER HEATERS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following electric water heaters:

1. Electric booster heaters.
2. Storage electric water heaters.
3. Expansion tanks.
4. Water heater accessories.

1.2 SUBMITTALS

A. Product Data: For each type and size of water heater indicated. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings:

1. Diagram power, signal, and control wiring.
2. Short-circuit current rating of equipment assembly.

C. Product Certificates: For each type of electric water heater, signed by product manufacturer.

D. **Manufacturer Seismic Qualification Certification:** Refer to Architect for seismic criteria. Submit certification that commercial water heaters, accessories, and components will withstand seismic forces defined in Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment." Include the following:

1. **Basis for Certification:** Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - b. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. **Dimensioned Outline Drawings of Equipment Unit:** Identify center of gravity and locate and describe mounting and anchorage provisions.
3. **Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.**

E. Source quality-control test reports.

F. Field quality-control test reports.

- G. Operation and Maintenance Data: For electric water heaters to include in emergency, operation, and maintenance manuals.
- H. Warranty: Special warranty specified in this Section.

1.3 QUALITY ASSURANCE

- A. Source Limitations: Obtain same type of electric water heaters through one source from a single manufacturer.
- B. Product Options: Drawings indicate size, profiles, and dimensional requirements of electric water heaters and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. ASME Compliance: Where indicated, fabricate and label commercial water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- E. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9," for all components that will be in contact with potable water.

1.4 COORDINATION

- A. Coordinate size and location of concrete bases with Architectural and Structural Drawings.

1.5 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of electric water heaters that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including storage tank and supports.
 - b. Faulty operation of controls.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal use.
 - d. Consider "rusty water" a failure.
 - 2. Warranty Period(s): From date of Substantial Completion:
 - a. Electric Water Heaters:
 - 1) Storage Tank: Five years.
 - 2) Controls and Other Components: One year.
 - b. Expansion Tanks: Five years.

PART 2 - PRODUCTS

2.1 ELECTRIC WATER HEATERS

- A. Commercial Electric Booster Heaters: Comply with UL 1453 requirements for booster-type water heaters.

1. Manufacturers:

- a. Bradford White Corporation.
- b. Lochinvar Corporation.
- c. Ruud Water Heater Div.; Rheem Manufacturing Company.
- d. Smith, A. O. Water Products Company.

2. Storage-Tank Construction: [**Corrosion-resistant metal**] [**Corrosion-resistant metal or steel**].

- a. Fittings: ASME B1.20.1 pipe thread.
- b. Pressure Rating: 150 psig.
- c. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into Fittings.

3. Factory-Installed Storage-Tank Appurtenances:

- a. Anode Rod (if needed): Replaceable magnesium.
- b. Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
- c. Insulation: Comply with ASHRAE/IESNA 90.1.
- d. Heating Elements: Electric, screw-in or bolt-on immersion type.
 - 1) Option: Booster heaters with 9 kW or less total may have 2 or 3 elements.
 - 2) Staging: Input not exceeding [**36 kW**] <Insert kW> per step.
- e. Temperature Control: Adjustable thermostat, to setting of at least 180 deg F.
- f. Safety Controls: High-temperature-limit and low-water cutoff devices or systems.
- g. Relief Valve: ASME rated and stamped and complying with ASME PTC 25.3, combination temperature and pressure relief valve. Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select relief valve with sensing element that extends into storage tank.
- h. Gages: Combination temperature and pressure type or separate thermometer and pressure gage.

4. Special Requirements: NSF 5 construction.

5. Capacity and Characteristics: REFER TO SCHEDULE ON DRAWINGS

- B. Storage Electric Water Heaters: Comply with UL 1453 requirements for storage-tank-type water heaters.

1. Manufacturers:

- a. Patterson-Kelly
- b. Bradford White Corporation.
- c. Lochinvar Corporation.
- d. PVI Industries, LLC.

- e. Ruud Water Heater Div.; Rheem Manufacturing Company.
 - f. Smith, A. O. Water Products Company.
 - g. State Industries, Inc.
2. Storage-Tank Construction: ASME-code, steel vertical or horizontal arrangement.
- a. Fittings: Factory fabricated of materials compatible with tank and piping connections.
 - 1) NPS 3 and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) NPS 4 and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.
 - b. Pressure Rating: **[150 psig] <Insert psig (kPa)>**.
 - c. Interior Finish: Apply interior finish after tank fabrication. Tank lining **[Plastic] [Glass] [Nickel plate]**. Comply with NSF 61 barrier materials for potable-water tank linings,
3. Factory-Installed Storage-Tank Appurtenances:
- a. Anode Rod (if needed): Replaceable magnesium.
 - b. Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
 - c. Insulation: Comply with ASHRAE/IESNA 90.1.
 - d. Jacket: Steel with enameled finish.
 - e. Heating Elements: Electric, screw-in or bolt-on immersion type.
 - 1) Staging: Input not exceeding **[36 kW] <Insert kW>** per step.
 - f. Temperature Control: Adjustable thermostat.
 - g. Safety Controls: High-temperature-limit and low-water cutoff devices or systems.
 - h. Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3, for combination temperature and pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
4. Facility Management System Interface: Normally closed dry contacts for enabling and disabling water heater.
5. Capacity and Characteristics: REFER TO SCHEDULE ON DRAWINGS

2.2 EXPANSION TANKS

- A. Description: Steel ASME pressure-rated tank constructed with welded joints and factory-installed butyl-rubber diaphragm. Include air precharge to minimum system-operating pressure at tank.
1. Manufacturers:
- a. AMTROL Inc.
 - b. Taco, Inc.
 - c. Watts Regulator Co.
 - d. ELBI

2. Construction:

- a. Fittings: Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1, pipe thread.
- b. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
- c. Air-Charging Valve: Factory installed.

3. Capacity and Characteristics: REFER TO SCHEDULE ON DRAWINGS

2.3 WATER HEATER ACCESSORIES

- A. Combination Temperature and Pressure Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3. Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select relief valves with sensing element that extends into storage tank.
- B. Water Heater Stands: Water heater manufacturer's factory-fabricated steel stand for floor mounting and capable of supporting water heater and water. Include dimension that will support bottom of water heater a minimum of 18 inches above the floor.
- C. Water Heater Mounting Brackets: Water heater manufacturer's factory-fabricated steel bracket for wall mounting and capable of supporting water heater and water.
- D. Piping-Type Heat Traps for non-circulated systems: Field-fabricated piping arrangement according to International Plumbing Code.

2.4 SOURCE QUALITY CONTROL

- A. Test and inspect water heater storage tanks, specified to be ASME-code construction, according to ASME Boiler and Pressure Vessel Code.
- B. Hydrostatically test water heater storage tanks before shipment to minimum of one and one-half times pressure rating.
- C. Prepare test reports.

PART 3 - EXECUTION

3.1 WATER HEATER INSTALLATION

- A. Install water heaters on concrete bases.
 - 1. Exception: Omit concrete bases for water heaters if installation on stand, bracket, suspended platform, or direct on floor is indicated.
 - 2. Concrete base construction requirements are specified in Division 22 Section "Common Work Results for Plumbing."
- B. Install water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.

- C. Install seismic restraints for water heaters. Anchor to substrate.
- D. Install combination temperature and pressure relief valves in top portion of water heaters. Use relief valves with sensing elements that extend into tanks. Extend water-heater relief-valve outlet, with drain piping same as domestic water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
- E. Install water-heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains.
- F. Install thermometer on inlet and outlet piping of water heaters. Refer to Division 22 Section "Meters and Gages for Plumbing Piping" for thermometers.
- G. Install pressure gage(s) on inlet and outlet of commercial electric water- heater piping. Refer to Division 22 Section "Meters and Gages for Plumbing Piping" for pressure gages.
- H. Install piping-type heat traps on inlet and outlet piping of water heater storage tanks without integral or fitting-type heat traps.
- I. Fill water heaters with water.
- J. Charge expansion tanks with air.

3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to water heaters to allow service and maintenance. Arrange piping for easy removal of water heaters.
- C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections. Report results in writing.
- B. Perform the following field tests and inspections and prepare test reports:
 - 1. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Operational Test: After electrical circuitry has been energized, confirm proper operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Remove and replace water heaters that do not pass tests and inspections and retest as specified above.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain electric water heaters. Refer to Division 01 Section "Demonstration and Training."

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 223500

DOMESTIC WATER HEAT EXCHANGERS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following heat exchangers:

1. ~~Semi-Instantaneous heat exchangers.~~
2. ~~Circulating, storage heat exchangers.~~
3. ~~Expansion tanks.~~
4. ~~Heat-exchanger accessories.~~

1.2 SUBMITTALS

- A. Product Data: For each type and size of heat exchanger indicated. Include rated capacities, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Product Certificates: For each type of ~~[Semi-instantaneous]~~ **[circulating]** heat exchanger, signed by product manufacturer.
- D. Source quality-control test reports.
- E. Field quality-control test reports.
- F. Operation and Maintenance Data: For heat exchangers to include in emergency, operation, and maintenance manuals.
- G. Warranty: Special warranty specified in this Section.

1.3 QUALITY ASSURANCE

- A. Source Limitations: Obtain same type of heat exchangers through one source from a single manufacturer.
- B. Product Options: Drawings indicate size, profiles, and dimensional requirements of heat exchangers and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. ASME Compliance: Where ASME-code construction is indicated, fabricate and label heat-exchanger storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

- E. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9" for all components that will be in contact with water.

1.4 COORDINATION

- A. Coordinate size and location of concrete bases with Architectural and Structural Drawings.

1.5 WARRANTY

- A. Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of heat exchangers that fail in materials or workmanship within specified warranty period.

~~1. Failures include, but are not limited to, the following:~~

- a. Structural failures including heat exchanger, storage tank, and supports.
- b. Faulty operation of controls.
- c. Deterioration of metals, metal finishes, and other materials beyond normal use.
- d. Consider "rusty water" a failure

~~2. Warranty Period(s): From date of Substantial Completion:~~

- a. Instantaneous Heat Exchangers:
 - 1) Tube Coil and Shell: Five years.
 - 2) Controls and Other Components: Five years.
- b. Circulating, Storage Heat Exchangers:
 - 1) Storage Tank: Five years.
 - 2) Tube Coil: Five years.
 - 3) Controls and Other Components: Five years.
- c. Expansion Tanks: Five years.

PART 2 - PRODUCTS

2.1 SEMI-INSTANTANEOUS HEAT EXCHANGERS

- A. Semi-Instantaneous Heat Exchangers:

~~1. Manufacturers:~~

- a. Aerco
- b. Patterson-Kelley.
- c. PVI Industries, LLC.

~~2. Description: Packaged assembly of heat exchanger coil, controls, and specialties for heating domestic water in shell with heating hot water [steam] in coil.~~

~~3. Construction: ASME code, negligible capacity, carbon steel or copper alloy shell with 150-psig minimum working pressure rating.~~

- a. Configuration: Horizontal **Vertical**.
- b. Shell Fittings: Factory fabricated of materials compatible with water heater shell. Attach fittings to shell before testing and labeling.

- 1) NPS 3 and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) NPS 4 and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.
- c. Insulation: Complying with ASHRAE/IESNA 90.1, unless otherwise indicated, and suitable for operating temperature.
- d. Heat-Exchanger Coil: Copper, **double** single-wall, for heating fluid.
- 1) Tube Pressure Rating: Equal to or greater than heating-fluid supply pressure.
4. ~~Temperature Control: Adjustable thermostat that operates water control valve [steam-control valve] and that is capable of maintaining outlet water temperature within ± 5 deg F of setting.~~
 5. ~~Safety Control: Automatic, high-temperature-limit cutoff device or system.~~
 6. ~~Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3, for combination temperature and pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than working pressure rating of heat exchanger. Select one relief valve with sensing element that extends into shell.~~
 7. ~~Miscellaneous Components for Heating Hot-Water Unit: Control valve, valves, and piping.~~
 8. ~~Miscellaneous Components for Steam Unit: Strainers, steam-control valve, steam trap, valves, pressure gage, thermometer, and piping.~~
 9. ~~Stand: Factory fabricated for floor mounting.~~
 10. ~~Capacity and Characteristics: REFER TO SCHEDULE ON DRAWINGS~~

2.2 CIRCULATING, STORAGE HEAT EXCHANGERS

A. Circulating, Storage Heat Exchangers:

1. ~~Manufacturers:~~
 - a. Patterson-Kelley.
 - b. PVI Industries, LLC.
 - c. Smith, A. O. Water Products Company.
2. ~~Description: Packaged, large-capacity, hot-water storage tank with heat-exchanger coil, circulator, controls, and specialties for heating domestic water with heating hot water [steam] in coil.~~
3. ~~Flow Pattern: Standard-flow arrangement, with water from bottom of storage tank circulated across heat-exchanger coil and returned to tank. Include hot-water outlet located at top of tank and temperature sensor in tank.~~
4. ~~Flow Pattern: Reverse-flow arrangement, with water from storage tank drawn across heat-exchanger coil and returned to bottom of tank. Include hot-water outlet and temperature sensor located in or at coil shell.~~
5. ~~Storage Tank Construction: ASME-code [steel] <Insert material> with [125-psig] [150-psig] <Insert psig (kPa)> working-pressure rating. Include nozzle and head for heat-exchanger tube coil.~~
 - a. ~~Configuration: [Horizontal] [Vertical].~~
 - b. ~~Manhole: 11 by 15 inches in 36" diameter and greater storage tank shell.~~
 - c. ~~Fittings: Factory fabricated of materials compatible with tank. Attach fittings to tank before testing and labeling.~~
- 1) ~~NPS 3 and Smaller: Threaded ends according to ASME B1.20.1.~~

- 2) ~~NPS 4 and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.~~
- d. ~~Lining: [Plastic] [Glass] [Nickel plate] [Copper] complying with NSF 61 barrier materials for potable-water tank linings. Apply interior finish after tank fabrication.~~
- e. ~~Anode Rods (if needed): Factory installed, magnesium.~~
- f. ~~Insulation: Complying with ASHRAE/IESNA 90.1, unless otherwise indicated, and suitable for operating temperature. Surround entire storage tank and nozzle except connections and controls.~~
6. ~~Heat-Exchanger Coil: [NPS 3/4] [NPS 1-1/4] <Insert size> diameter, [vented, double-wall,] copper or copper-alloy, U tubes with tube sheet and supporting baffles.~~
 - a. ~~Heat-Exchanger Pressure Rating: Equal to or greater than heating-fluid supply pressure.~~
7. ~~Temperature Control: Adjustable temperature aquastat, mounted in storage tank shell head, unless otherwise indicated.~~
8. ~~Safety Control: Automatic, high-temperature-limit cutoff device or system. Include automatic low-water cutoff device or system.~~
9. ~~Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3, for combination temperature and pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than working-pressure rating of heat exchanger. Select one relief valve with sensing element that extends into storage tank.~~
10. ~~Gages: Factory-mounted thermometer and pressure gage.~~
11. ~~Circulating Pump: UL 778, all-bronze, centrifugal, overhung impeller, separately coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3. Include mechanical seals, [125-psig] <Insert psig (kPa)> minimum working-pressure rating, and 225 deg F continuous-water-temperature rating.~~
 - a. ~~Pump Control: Sensor for operating pump and control valve.~~
12. ~~Support: Factory mounted on skids.~~
13. ~~Facility Management System Interface: Normally closed dry contacts for enabling and disabling heat exchanger.~~
14. ~~Capacity and Characteristics: REFER TO SCHEDULE ON DRAWINGS~~

2.3 EXPANSION TANKS

- A. Description: Steel, ASME pressure-rated tank constructed with welded joints and factory-installed, butyl-rubber diaphragm. Include air precharge to minimum system-operating pressure at tank.
 1. Manufacturers:
 - a. AMTROL Inc.
 - b. Taco, Inc.
 - c. Watts Regulator Co.
 - d. ELBI
 2. Construction:
 - a. Fittings: Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1 pipe thread.
 - b. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
 - c. Air-Charging Valve: Factory installed.
 3. Capacity and Characteristics: REFER TO SCHEDULE ON DRAWINGS

2.4 HEAT-EXCHANGER ACCESSORIES

- A. Combination Temperature and Pressure Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3. Include relieving capacity at least as great as heat input, and include pressure setting less than working-pressure rating of heat exchanger. Select relief valves with sensing element that extends into heat-exchanger storage tank.
- B. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE/IESNA 90.1 or ASHRAE 90.2.

2.5 SOURCE QUALITY CONTROL

- A. Test and inspect heat-exchanger storage tanks, specified to be ASME-code construction, according to ASME Boiler and Pressure Vessel Code.
- B. Hydrostatically test heat-exchanger storage tanks before shipment to minimum of one and one-half times pressure rating.
- C. Prepare test reports.

PART 3 - EXECUTION

3.1 HEAT-EXCHANGER INSTALLATION

- A. Install heat exchangers on concrete bases.
 - 1. Concrete base construction requirements are specified in Division 22 Section "Common Work Results for Plumbing."
- B. Install heat exchangers level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
- C. Anchor heat exchangers to substrate.
- D. Install temperature and pressure relief valves in top portion of storage tank shells of heat exchangers with domestic water storage. Use relief valves with sensing elements that extend into shells. Extend relief-valve outlet, with drain piping same as water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
- E. Install combination temperature and pressure relief valves in water piping for heat exchangers without storage. Extend relief-valve outlet, with drain piping same as water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
- F. Install heat-exchanger drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for heat exchangers that do not have tank drains. Refer to Division 22 Section "Domestic Water Piping Specialties" for hose-end drain valves.
- G. Install thermometer on each heat-exchanger domestic-water inlet and outlet piping, and install thermometer on each heat-exchanger heating-fluid inlet and outlet piping. Refer to Division 22 Section "Meters and Gages for Plumbing Piping" for thermometers.

- H. Install pressure gages on heat-exchanger heating-fluid piping. Refer to Division 22 Section "Meters and Gages for Plumbing Piping" for pressure gages.
- I. Fill heat exchangers with water.
- J. Charge compression tanks with air.

3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to heat exchangers to allow service and maintenance. Arrange piping for easy removal of heat exchangers.
- C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections. Report results in writing.
- B. Perform the following field tests and inspections and prepare test reports:
 - 1. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Operational Test: After electrical circuitry has been energized, confirm proper operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Remove and replace heat exchangers that do not pass tests and inspections and retest as specified above.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain heat exchangers. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 224000
PLUMBING FIXTURES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following conventional plumbing fixtures and related components:
1. Faucets for lavatories ~~bathtubs bathtub/showers~~ showers and sinks.
 2. Flushometers.
 3. Toilet seats.
 4. Protective shielding guards.
 5. P-traps, Supplies and strainers.
 6. Fixture supports.
 7. Interceptors.
 8. Shower receptors.
 9. Dishwasher air-gap fittings.
 10. Disposers.
 11. ~~Hot water dispensers.~~
 12. Water closets.
 13. Urinals.
 14. Lavatories.
 15. Sinks.
 16. ~~Shampoo bowls.~~
 17. ~~Wash fountains.~~
 18. ~~Bathtubs.~~
 19. Showers.
 20. ~~[Whirlpool bathtubs.]~~
 21. Service sinks.
 22. Service basins.
 23. ~~Laundry trays.~~
- B. Related Sections include the following:
1. Division 10 Section "Toilet, Bath, and Laundry Accessories."
 2. Division 22 Section "Domestic Water Piping Specialties" for backflow preventers, floor drains, and specialty fixtures not included in this Section.
 3. Division 22 Section "Healthcare Plumbing Fixtures."
 4. Division 22 Section "Emergency Plumbing Fixtures."
 5. Division 22 Section "Drinking Fountains and Water Coolers."
 6. Division 31 Section "Facility Water Distribution Piping" for exterior plumbing fixtures and hydrants.

1.2 DEFINITIONS

- A. ABS: Acrylonitrile-butadiene-styrene plastic.
- B. Accessible Fixture: Plumbing fixture that can be approached, entered, and used by people with disabilities.

- C. Cast Polymer: Cast-filled-polymer-plastic material. This material includes cultured-marble and solid-surface materials.
- D. Cultured Marble: Cast-filled-polymer-plastic material with surface coating.
- E. Fitting: Device that controls the flow of water into or out of the plumbing fixture. Fittings specified in this Section include supplies and stops, faucets and spouts, shower heads and tub spouts, drains and tailpieces, and traps and waste pipes. Piping and general-duty valves are included where indicated.
- F. FRP: Fiberglass-reinforced plastic.
- G. PMMA: Polymethyl methacrylate (acrylic) plastic.
- H. PVC: Polyvinyl chloride plastic.
- I. Solid Surface: Nonporous, homogeneous, cast-polymer-plastic material with heat-, impact-, scratch-, and stain-resistance qualities.

1.3 SUBMITTALS

- A. Product Data: For each type of plumbing fixture indicated. Include selected fixture and trim, fittings, accessories, appliances, appurtenances, equipment, and supports. Indicate materials and finishes, dimensions, construction details, and flow-control rates.
- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Operation and Maintenance Data: For plumbing fixtures to include in emergency, operation, and maintenance manuals.
- D. Warranty: Special warranty specified in this Section.

1.4 QUALITY ASSURANCE

- A. Source Limitations: Obtain plumbing fixtures, faucets, and other components of each category through one source from a single manufacturer.
 - 1. Exception: If fixtures, faucets, or other components are not available from a single manufacturer, obtain similar products from other manufacturers specified for that category.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Regulatory Requirements: Comply with requirements in ICC A117.1, "Accessible and Usable Buildings and Facilities"; Public Law 90-480, "Architectural Barriers Act" ; and Public Law 101-336, "Americans with Disabilities Act" ; for plumbing fixtures for people with disabilities.
- D. Regulatory Requirements: Comply with requirements in Public Law 102-486, "Energy Policy Act," about water flow and consumption rates for plumbing fixtures.
- E. NSF Standard: Comply with NSF 61, "Drinking Water System Components--Health Effects," for fixture materials that will be in contact with potable water.

- F. Select combinations of fixtures and trim, faucets, fittings, and other components that are compatible.
- G. Comply with the following applicable standards and other requirements specified for plumbing fixtures:
1. Enameled, Cast-Iron Fixtures: ASME A112.19.1M.
 2. Plastic Bathtubs: ANSI Z124.1.
 3. Plastic Lavatories: ANSI Z124.3.
 4. Plastic Laundry Trays: ANSI Z124.6.
 5. Plastic Mop-Service Basins: ANSI Z124.6.
 6. Plastic Shower Enclosures: ANSI Z124.2.
 7. Plastic Sinks: ANSI Z124.6.
 8. Plastic Urinal Fixtures: ANSI Z124.9.
 9. Plastic Whirlpool Bathtubs: ANSI Z124.1 and ASME A112.19.7M.
 10. Porcelain-Enameled, Formed-Steel Fixtures: ASME A112.19.4M.
 11. Slip-Resistant Bathing Surfaces: ASTM F 462.
 12. Solid-Surface-Material Lavatories and Sinks: ANSI/ICPA SS-1.
 13. Stainless-Steel Commercial, Handwash Sinks: NSF 2 construction.
 14. Stainless-Steel Residential Sinks: ASME A112.19.3.
 15. Vitreous-China Fixtures: ASME A112.19.2M.
 16. Water-Closet, Flush Valve, Tank Trim: ASME A112.19.5.
 17. Water-Closet, Flushometer Tank Trim: ASSE 1037.
 18. Whirlpool Bathtub Fittings: ASME A112.19.8M.
- H. Comply with the following applicable standards and other requirements specified for lavatory and sink faucets:
1. Backflow Protection Devices for Faucets with Side Spray: ASME A112.18.3M.
 2. Backflow Protection Devices for Faucets with Hose-Thread Outlet: ASME A112.18.3M.
 3. Diverter Valves for Faucets with Hose Spray: ASSE 1025.
 4. Faucets: ASME A112.18.1.
 5. Hose-Connection Vacuum Breakers: ASSE 1011.
 6. Hose-Coupling Threads: ASME B1.20.7.
 7. Integral, Atmospheric Vacuum Breakers: ASSE 1001.
 8. NSF Potable-Water Materials: NSF 61.
 9. Pipe Threads: ASME B1.20.1.
 10. Sensor-Actuated Faucets and Electrical Devices: UL 1951.
 11. Supply Fittings: ASME A112.18.1.
 12. Brass Waste Fittings: ASME A112.18.2.
- I. Comply with the following applicable standards and other requirements specified for bathtub/shower faucets:
1. Backflow Protection Devices for Hand-Held Showers: ASME A112.18.3M.
 2. Combination, Pressure-Equalizing and Thermostatic-Control Antiscald Faucets: ASSE 1016.
 3. Deck-Mounted Bath/Shower Transfer Valves: ASME 18.7.
 4. Faucets: ASME A112.18.1.
 5. Hand-Held Showers: ASSE 1014.
 6. High-Temperature-Limit Controls for Thermal-Shock-Preventing Devices: ASTM F 445.
 7. Hose-Coupling Threads: ASME B1.20.7.
 8. Manual-Control Antiscald Faucets: ASTM F 444.
 9. Pipe Threads: ASME B1.20.1.
 10. Pressure-Equalizing-Control Antiscald Faucets: ASTM F 444 and ASSE 1016.
 11. Sensor-Actuated Faucets and Electrical Devices: UL 1951.
 12. Thermostatic-Control Antiscald Faucets: ASTM F 444 and ASSE 1016.

- J. Comply with the following applicable standards and other requirements specified for miscellaneous fittings:
1. Atmospheric Vacuum Breakers: ASSE 1001.
 2. Brass and Copper Supplies: ASME A112.18.1.
 3. Dishwasher Air-Gap Fittings: ASSE 1021.
 4. Manual-Operation Flushometers: ASSE 1037.
 5. Plastic Tubular Fittings: ASTM F 409.
 6. Brass Waste Fittings: ASME A112.18.2.
 7. Sensor-Operation Flushometers: ASSE 1037 and UL 1951.
- K. Comply with the following applicable standards and other requirements specified for miscellaneous components:
1. Disposers: ASSE 1008 and UL 430.
 2. Dishwasher Air-Gap Fittings: ASSE 1021.
 3. Flexible Water Connectors: ASME A112.18.6.
 4. Floor Drains: ASME A112.6.3.
 5. Grab Bars: ASTM F 446.
 6. Hose-Coupling Threads: ASME B1.20.7.
 7. Hot-Water Dispensers: ASSE 1023 and UL 499.
 8. Off-Floor Fixture Supports: ASME A112.6.1M.
 9. Pipe Threads: ASME B1.20.1.
 10. Plastic Shower Receptors: ANSI Z124.2.
 11. Plastic Toilet Seats: ANSI Z124.5.
 12. Supply and Drain Protective Shielding Guards: ICC A117.1.
 13. Whirlpool Bathtub Equipment: UL 1795.

1.5 WARRANTY

- A. Special Warranties: Manufacturer's standard form in which manufacturer agrees to repair or replace components of whirlpools that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Structural failures of unit shell.
 - b. Faulty operation of controls, blowers, pumps, heaters, and timers.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal use.
 2. Warranty Period for Commercial Applications: One year(s) from date of Substantial Completion.

1.6 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Faucet Washers and O-Rings: Equal to 10 percent of amount of each type and size installed.
 2. Faucet Cartridges and O-Rings: Equal to 5 percent of amount of each type and size installed.
 3. Flushometer Valve, Repair Kits: Equal to 10 percent of amount of each type installed, but no fewer than 12 of each type.
 4. Provide hinged-top wood or metal box, or individual metal boxes, with separate compartments for each type and size of extra materials listed above.
 5. Water-Closet Tank, Repair Kits: Equal to 5 percent of amount of each type installed.
 6. Toilet Seats: Equal to 5 percent of amount of each type installed.
 7. Dry Urinal Trap-Seal Cartridges: 10 of each type installed.

8. Dry Urinal Trap-Seal Liquid: Equal to 1 gal for each urinal installed.

PART 2 - PRODUCTS

2.1 LAVATORY AND SINK FAUCETS

- A. Lavatory and Sink Faucets:
1. Manufacturers:
 - a. American Standard Companies, Inc.
 - b. Chicago Faucets.
 - c. Delta Faucet Company.
 - d. Eljer.
 - e. Elkay Manufacturing Co.
 - f. Just Manufacturing Company.
 - g. Kohler Co.
 - h. Moen, Inc.
 - i. Speakman Company.
 - j. T & S Brass and Bronze Works, Inc.
 - k. Zurn Plumbing Products Group.

~~2.2 BATHTUB/SHOWER FAUCETS~~

- ~~A. Bathtub/Shower Faucets:~~
- ~~1. Manufacturers:~~
 - ~~a. American Standard Companies, Inc.~~
 - ~~b. Chicago Faucets.~~
 - ~~c. Delta Faucet Company.~~
 - ~~d. Eljer.~~
 - ~~e. Kohler Co.~~
 - ~~f. Moen, Inc.~~
 - ~~g. Speakman Company.~~
 - ~~h. Symmons Industries, Inc.~~
 - ~~i. T & S Brass and Bronze Works, Inc.~~
 - ~~j. Zurn Plumbing Products Group.~~

2.3 FLUSHOMETERS

- A. Flushometers:
1. Manufacturers:
 - a. Coyne & Delany Co.
 - b. Sloan Valve Company.
 - c. Zurn Plumbing Products Group.

2.4 TOILET SEATS

- A. Toilet Seats:
1. Manufacturers:

- a. American Standard Companies, Inc.
- b. Bemis Manufacturing Company.
- c. Centoco Manufacturing Corp.
- d. Church Seats.
- e. Eljer.
- f. Kohler Co.
- g. Olsonite Corp.
- h. Sperzel.

2.5 PROTECTIVE SHIELDING GUARDS

A. Protective Shielding Pipe Covers:

- 1. Manufacturers:
 - a. Engineered Brass Co.
 - b. McGuire Manufacturing Co., Inc.
 - c. TRUEBRO, Inc.
 - d. Zurn Plumbing Products Group.
- 2. Description: Manufactured plastic wraps for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with Americans with Disabilities Act (ADA) requirements and ASTM E-84.

2.6 P-TRAPS, SUPPLIES, STRAINERS

A. Manufacturers:

- 1. McGuire Manufacturing Co., Inc.
- 2. Elkay Manufacturing Co.
- 3. American Standard Companies, Inc.
- 4. Kohler Co.
- 5. Engineered Brass Co.
- 6. Zurn Plumbing Products Group.

2.7 FIXTURE SUPPORTS

A. Manufacturers:

- 1. Josam Company.
- 2. MIFAB Manufacturing Inc.
- 3. Smith, Jay R. Mfg. Co.
- 4. Tyler Pipe; Wade Div.
- 5. Watts Drainage Products Inc.; a div. of Watts Industries, Inc.
- 6. Zurn Plumbing Products Group.

2.8 INTERCEPTORS

A. Manufacturers:

- 1. Josam Company.
- 2. MIFAB Manufacturing Inc.
- 3. Smith, Jay R. Mfg. Co.
- 4. Tyler Pipe; Wade Div.
- 5. Watts Drainage Products Inc.; a div. of Watts Industries, Inc.
- 6. Zurn Plumbing Products Group.

B. ~~Hair Interceptors:~~

- ~~1. Description: Manufactured unit with removable screen or strainer and removable cover; designed to trap and retain hair.~~

~~a. Material: stainless steel body.~~

~~b. Pipe Connections: NPS 1-1/2.~~

C. Sediment Interceptors:

1. Description: Manufactured unit with removable screens or strainer and removable cover; designed to trap and retain waste material.

a. Material: carbon-steel body with acid-resistant lining and coating.

b. Pipe Connections: NPS 1-1/2 NPS 2.

2.9 SHOWER RECEPTORS

A. Shower Receptors:

1. Manufacturers:
- a. Crane Plumbing, L.L.C./Fiat Products.
 - b. Florestone Products Co., Inc.
 - c. LASCO Bathware.
 - d. Acorn Engineering Company.
 - e. Precast Terrazzo Enterprises, Inc.
 - f. Stern-Williams Co., Inc.
 - g. Bradley Corporation.
 - h. Formica Corporation.
 - i. Jacuzzi, Inc.
 - j. Swan Corporation (The).

2.10 DISHWASHER AIR-GAP FITTINGS

A. Dishwasher Air-Gap Fittings:

1. Manufacturers:
- a. Brass Craft Mfg. Co.; a Subsidiary of Masco Corporation.
 - b. Dearborn Brass; a div. of Moen, Inc.
 - c. Sioux Chief Manufacturing Company, Inc.
 - d. Watts Brass & Tubular; a division of Watts Regulator Co.
2. Description: Fitting suitable for use with domestic dishwashers and for deck mounting; with plastic body, chrome-plated brass cover; and capacity of at least 5 gpm; and inlet pressure of at least 5 psig at a temperature of at least 140 deg F. Include 5/8-inch-ID inlet and 7/8-inch-ID outlet hose connections.
3. Hoses: Rubber and suitable for temperature of at least 140 deg F.
- a. Inlet/Outlet Hose: 5/8-inch ID and 48 inches long.

2.11 DISPOSERS

A. Disposers:

1. Manufacturers:

- a. In-Sink-Erator; a div. of Emerson Electric Co.
 - b. KitchenAid.
- 2. Description: Batch-feed household, food-waste disposer. Include reset button; wall switch; corrosion-resistant chamber with jam-resistant, cutlery- or stainless-steel grinder or shredder; NPS 1-1/2 outlet; quick-mounting, stainless-steel sink flange; antisplash guard; and combination cover/stopper.

~~2.12~~ ~~HOT WATER DISPENSERS~~

~~A. Hot Water Dispensers:~~

~~1. Manufacturers:~~

- ~~a. In-Sink-Erator; a div. of Emerson Electric Co.~~
- ~~b. Just Manufacturing Company.~~

2.13 WATER CLOSETS

A. Water Closets:

1. Manufacturers:

- a. American Standard Companies, Inc.
- b. Zurn Plumbing Products Group.
- c. Eljer.
- d. Kohler Co.

2.14 URINALS

A. Urinals:

1. Manufacturers:

- a. American Standard Companies, Inc.
- b. Zurn Plumbing Products Group.
- c. Eljer.
- d. Kohler Co.

2.15 LAVATORIES

A. Lavatories:

1. Manufacturers:

- a. American Standard Companies, Inc.
- b. Eljer.
- c. Kohler Co.
- d. Zurn Plumbing Products Group.

2.16 SINKS

A. Sinks:

1. Manufacturers:

- a. Elkay Manufacturing Co.
- b. Just Manufacturing Company.
- c. Metal Masters Foodservice Equipment Co., Inc.

2.17 ~~SHAMPOO BOWLS~~

A. ~~Shampoo Bowls:~~

1. ~~Manufacturers:~~

- a. ~~Belvedere USA Corporation; a Subsidiary of the Wella Corporation, North America.~~
- b. ~~Marble Products USA; a division of Takara Belmont.~~

2.18 ~~WASH FOUNTAINS~~

A. ~~Wash Fountains:~~

1. ~~Manufacturers:~~

- a. ~~Acorn Engineering Company.~~
- b. ~~Bradley Corporation.~~
- c. ~~Intersan Manufacturing Company.~~

2.19 ~~BATHTUBS~~

A. ~~Bathtubs:~~

1. ~~Manufacturers:~~

- a. ~~Eljer.~~
- b. ~~Kohler Co.~~
- c. ~~American Standard Companies, Inc.~~

2.20 SHOWERS

A. Showers:

1. Manufacturers:

- a. Aqua Glass Corporation.
- b. Florestone Products Co., Inc.
- c. LASCO Bathware.
- d. Swan Corporation (The).
- e. Aqua Bath Company, Inc.
- f. Kohler Co.

2.21 ~~[WHIRLPOOL BATHTUBS]~~

A. ~~[Whirlpool Bathtubs, <Insert drawing designation>:~~

1. ~~Manufacturers:~~

- a. ~~Eljer.~~
- b. ~~Kohler Co.~~
- c. ~~<Insert manufacturer's name.>~~

- d. ~~Aker Plastics Co., Inc.~~
 - e. ~~Best Bath Systems; a div. of Fiberglass Systems, Inc.~~
 - f. ~~Clarion Bathware.~~
 - g. ~~Praxis Industries, Inc.; Aquarius Products.~~
 - h. ~~Sterling Plumbing Group, Inc.~~
 - i. ~~<Insert manufacturer's name.>~~
 - j. ~~Aker Plastics Co., Inc.~~
 - k. ~~American Standard Companies, Inc.~~
 - l. ~~American Whirlpool Products Corp.~~
 - m. ~~Aqua Glass Corporation.~~
 - n. ~~Aquatic Industries, Inc.~~
 - o. ~~Benjamin Manufacturing Co., Inc.~~
 - p. ~~Clarion Bathware.~~
 - q. ~~Clarke Products, Inc.~~
 - r. ~~Crane Plumbing, L.L.C./Fiat Products.~~
 - s. ~~Eljer.~~
 - t. ~~Florestone Products Co., Inc.~~
 - u. ~~Jacuzzi, Inc.~~
 - v. ~~Jason International, Inc.~~
 - w. ~~Kohler Co.~~
 - x. ~~LASCO Bathware.~~
 - y. ~~Lyons Industries, Inc.~~
 - z. ~~Mansfield Plumbing Products, Inc.; Acrylic Operations.~~
 - aa. ~~Praxis Industries, Inc.; Aquarius Products.~~
 - bb. ~~Royal Baths Manufacturing Co.~~
 - cc. ~~Southland Spa & Sauna Inc.~~
 - dd. ~~<Insert manufacturer's name.>~~
 - ee. ~~American Standard Companies, Inc.~~
 - ff. ~~Mansfield Plumbing Products, Inc.~~
 - gg. ~~<Insert manufacturer's name.>~~
2. ~~Description: Packaged, [enameled, cast iron] [FRP] [PMMA] [porcelain-enameled, formed steel] hydromassage bathtub with air entrained water jet nozzles and water circulation.~~
- a. ~~Seating Capacity: [One] [Two] <Insert number> person(s).~~
 - b. ~~Bathing Surface: Slip resistant.~~
 - c. ~~Size: [60 by 30 inches] [66 by 30 inches] [60 by 42 inches] <Insert dimensions>.~~
 - d. ~~Nominal Water Capacity: <Insert gal.>~~
 - e. ~~Base for Drop-in Unit: <Insert description> with access panel.~~
 - f. ~~Apron: Matching unit, covering exposed front and sides, and with access panel.~~
 - g. ~~Color: [White] <Insert color>.~~
 - h. ~~Drain Location: [Left] [Right] end.~~
 - i. ~~Controls: For pump[, timer,] [and water heater].~~
 - j. ~~Faucet: Fixture manufacturer's [individual valves] [mixing valve] with over-rim tub filler.~~
 - k. ~~Supplies: NPS 1/2 copper tubing with ball, gate, or globe valves.~~
 - l. ~~Drain: NPS 1-1/2; chrome-plated exposed parts; brass pop-up waste and overflow.~~
 - m. ~~Drain Piping: NPS 1-1/2 cast-brass P-trap and waste.~~
 - n. ~~Drain Piping: Schedule 40 [ABS] [or] [PVC], NPS 1-1/2 P-trap and waste.~~
 - o. ~~Water-Circulating System: Electric circulating pump and plastic piping.~~
 - p. ~~Water Heater: Electric, inline.~~
 - q. ~~Unit Electrical Characteristics:~~

- ~~1) Volts: [120] [240] [277] [480] <Insert number> V.~~
- ~~2) Phase(s): [One] [Three].~~
- ~~3) Hertz: [60] <Insert number> Hz.~~
- ~~4) Full-Load Amperes: <Insert value> A.~~
- ~~5) Minimum Circuit Ampacity: <Insert value> A.~~
- ~~6) Maximum Overcurrent Protection: <Insert value> A.]~~

2.22 SERVICE SINKS

- A. Service Sinks:
 1. Manufacturers:
 - a. American Standard Companies, Inc.
 - b. Eljer.
 - c. Kohler Co.
 - d. Zurn Plumbing Products Group.

2.23 SERVICE BASINS

- A. Service Basins:
 1. Manufacturers:
 - a. Acorn Engineering Company.
 - b. Florestone Products Co., Inc.
 - c. Stern-Williams Co., Inc.

~~2.24 LAUNDRY TRAYS~~

- ~~A. Laundry Trays:~~
 - ~~1. Manufacturers:~~
 - ~~a. Eljer.~~
 - ~~b. Swan Corporation (The).~~
 - ~~c. Zurn Plumbing Products Group; Light Commercial Operation.~~

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before plumbing fixture installation.
- B. Examine cabinets, counters, floors, and walls for suitable conditions where fixtures will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Assemble plumbing fixtures, trim, fittings, and other components according to manufacturers' written instructions.
- B. Install off-floor supports, affixed to building substrate, for wall-mounting fixtures.
 - 1. Use carrier supports with waste fitting and seal for back-outlet fixtures.
 - 2. Use carrier supports without waste fitting for fixtures with tubular waste piping.
 - 3. Use chair-type carrier supports with rectangular steel uprights for accessible fixtures.
- C. Install back-outlet, wall-mounting fixtures onto waste fitting seals and attach to supports.
- D. Install floor-mounting fixtures on closet flanges or other attachments to piping or building substrate.
- E. Install wall-mounting fixtures with tubular waste piping attached to supports.
- F. Install floor-mounting, back-outlet water closets attached to building floor substrate and wall bracket and onto waste fitting seals.
- G. Install counter-mounting fixtures in and attached to casework.
- H. Install fixtures level and plumb according to roughing-in drawings.
- I. Install water-supply piping with stop on each supply to each fixture to be connected to water distribution piping. Attach supplies to supports or substrate within pipe spaces behind fixtures. Install stops in locations where they can be easily reached for operation.
 - 1. Exception: Use ball valves if supply stops are not specified with fixture. Valves are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
- J. Install trap and tubular waste piping on drain outlet of each fixture to be directly connected to sanitary drainage system.
- K. Install tubular waste piping on drain outlet of each fixture to be indirectly connected to drainage system.
- L. Install flushometer valves for accessible water closets and urinals with handle mounted on wide side of compartment. Install other actuators in locations that are easy for people with disabilities to reach.
- M. Install tanks for accessible, tank-type water closets with lever handle mounted on wide side of compartment.
- N. Install toilet seats on water closets.
- O. Install trap-seal liquid in dry urinals.
- P. Install faucet-spout fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.
- Q. Install water-supply flow-control fittings with specified flow rates in fixture supplies at stop valves.
- R. Install faucet flow-control fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.

- S. Install shower flow-control fittings with specified maximum flow rates in shower arms.
- T. Install traps on fixture outlets.
 - 1. Exception: Omit trap on fixtures with integral traps.
 - 2. Exception: Omit trap on indirect wastes, unless otherwise indicated.
- U. Install disposer in outlet of each sink indicated to have disposer. Install switch where indicated or in wall adjacent to sink if location is not indicated.
- V. Install dishwasher air-gap fitting at each sink indicated to have air-gap fitting. Install in sink deck. Connect inlet hose to dishwasher and outlet hose to disposer.
- W. Install hot-water dispensers in back top surface of sink or in countertop with spout over sink.
- X. Install escutcheons at piping wall ceiling penetrations in exposed, finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding fittings. Escutcheons are specified in Division 22 Section "Common Work Results for Plumbing."
- Y. Set shower receptors in leveling bed of cement grout. Grout is specified in Division 22 Section "Common Work Results for Plumbing."
- Z. Seal joints between fixtures and walls, floors, and countertops using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Sealants are specified in Division 07 Section "Joint Sealants."

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Verify that installed plumbing fixtures are categories and types specified for locations where installed.
- B. Check that plumbing fixtures are complete with trim, faucets, fittings, and other specified components.
- C. Inspect installed plumbing fixtures for damage. Replace damaged fixtures and components.
- D. Test installed fixtures after water systems are pressurized for proper operation. Replace malfunctioning fixtures and components, then retest. Repeat procedure until units operate properly.

- E. Install fresh batteries in sensor-operated mechanisms.

3.5 ADJUSTING

- A. Operate and adjust faucets and controls. Replace damaged and malfunctioning fixtures, fittings, and controls.
- B. Operate and adjust disposers hot-water dispensers and controls. Replace damaged and malfunctioning units and controls.
- C. Adjust water pressure at faucets and flushometer valves to produce proper flow and stream.
- D. Replace washers and seals of leaking and dripping faucets and stops.
- E. Install fresh batteries in sensor-operated mechanisms.

3.6 CLEANING

- A. Clean fixtures, faucets, and other fittings with manufacturers' recommended cleaning methods and materials. Do the following:
 - 1. Remove faucet spouts and strainers, remove sediment and debris, and reinstall strainers and spouts.
 - 2. Remove sediment and debris from drains.
- B. After completing installation of exposed, factory-finished fixtures, faucets, and fittings, inspect exposed finishes and repair damaged finishes.

3.7 PROTECTION

- A. Provide protective covering for installed fixtures and fittings.
- B. Do not allow use of plumbing fixtures for temporary facilities unless approved in writing by Owner.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 224500
EMERGENCY PLUMBING FIXTURES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following emergency plumbing fixtures:
 - 1. Emergency showers.
 - 2. Eyewash equipment.
 - 3. Eye/face wash equipment.
 - 4. Hand-held drench hoses.
 - 5. Combination units.
 - 6. Water-tempering equipment.
- B. Related Sections include the following:
 - 1. Division 22 Section "Sanitary Waste Piping Specialties" for floor drains.

1.2 DEFINITIONS

- A. Accessible Fixture: Emergency plumbing fixture that can be approached, entered, and used by people with disabilities.
- B. Plumbed Emergency Plumbing Fixture: Fixture with fixed, potable-water supply.
- C. Tepid: Moderately warm.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated. Include flow rates and capacities, furnished specialties, and accessories.
- B. Product Certificates: Submit certificates of performance testing specified in "Source Quality Control" Article.
- C. Field quality-control test reports.
- D. Operation and Maintenance Data: For emergency plumbing fixtures to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. ANSI Standard: Comply with ANSI Z358.1, "Emergency Eyewash and Shower Equipment."

- B. Regulatory Requirements: Comply with requirements in ICC A117.1, "Accessible and Usable Buildings and Facilities"; Public Law 90-480, "Architectural Barriers Act" ; and Public Law 101-336, "Americans with Disabilities Act" ; for plumbing fixtures for people with disabilities.
- C. NSF Standard: Comply with NSF 61, "Drinking Water System Components--Health Effects," for fixture materials that will be in contact with potable water.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers for Emergency Showers, Eyewash Equipment, Eye/Face-wash Equipment, Hand held Drench Hoses and Combination Units:
 - 1. Bradley Corporation.
 - 2. Guardian Equipment Co.
 - 3. Haws Corporation.
 - 4. Lab Safety Supply Inc.
 - 5. Speakman Company.

2.2 EMERGENCY SHOWERS

A. Emergency Showers:

- 1. Description: Plumbed, single-shower-head ~~[horizontal, wall-mounting]~~ **[vertical, ceiling-mounting]** ~~[freestanding]~~ emergency shower.
 - a. Capacity: Deliver potable water at rate not less than 20 gpm for at least 15 minutes.
 - b. Supply Piping: NPS 1-1/4 chrome-plated brass or stainless steel with flow regulator and stay open control valve.
 - c. Control Valve Actuator: Pull ~~[red]~~ **[chain]**.
 - d. Shower Head: 8-inch minimum diameter, ~~[chrome-plated brass or stainless steel]~~ **[plastic]**.

B. Emergency Showers, <DECONTAM SHOWER>:

1. Manufacturers:

- a. Guardian Equipment Co.
- b. Haws Corporation.
- c. Speakman Company.

- 2. Description: Plumbed, multiple-spray emergency shower with ~~[eight]~~ **[12]** small shower heads or nozzles.
 - a. Capacity: Deliver potable water at rate not less than 20 gpm for at least 15 minutes.
 - b. Supply Piping: NPS 1-1/4 minimum chrome-plated brass or stainless steel with flow regulator and stay open control valve.
 - c. Control Valve Actuator: Paddle.

2.3 EYEWASH EQUIPMENT

A. Eyewash Equipment:

1. Description: Plumbed, freestanding eyewash equipment.
 - a. Capacity: Deliver potable water at rate not less than 0.4 gpm for at least 15 minutes.
 - b. Supply Piping: NPS 1/2 chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: Paddle.
 - d. Receptor: Chrome-plated brass or stainless-steel **Plastic** bowl.
 - e. Drain Piping: NPS 1-1/4 minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2.

B. Eyewash Equipment:

1. Description: Plumbed, accessible, wall-mounting eyewash equipment with receptor and wall bracket.
 - a. Capacity: Deliver potable water at rate not less than 0.4 gpm for at least 15 minutes.
 - b. Supply Piping: NPS 1/2 chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: Paddle.
 - d. Receptor: Chrome-plated brass or stainless-steel **Plastic** bowl.
 - e. Drain Piping: NPS 1-1/4 minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2.

C. Eyewash Equipment:

1. Description: Plumbed, adjacent-to-sink, swivel, counter-mounting eyewash equipment.
 - a. Capacity: Deliver potable water at rate not less than 0.4 gpm for at least 15 minutes.
 - b. Supply Piping: NPS 1/2 chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: Paddle.

2.4 EYE/FACE WASH EQUIPMENT

A. Eye/Face Wash Equipment:

1. Description: Plumbed, accessible, wall-mounting eye/face wash equipment with receptor and wall bracket.
 - a. Capacity: Deliver potable water at rate not less than 3.0 gpm for at least 15 minutes.
 - b. Supply Piping: NPS 1/2 chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: Paddle.
 - d. Receptor: Chrome-plated brass or stainless-steel **Plastic** bowl.
 - e. Drain Piping: NPS 1-1/4 minimum, chrome-plated brass, receptor drain, P-trap, waste to wall, and wall flange complying with ASME A112.18.2.

2.5 HAND HELD DRENCH HOSES

A. Hand-Held Drench Hoses, <Insert drawing designation>:

1. Description: Plumbed, wall-mounting, hand-held drench hose with wall bracket.

- a. Capacity: Deliver potable water at rate not less than 3.0 gpm for at least 15 minutes.
- b. Supply Piping: NPS 1/2 chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
- c. Control Valve Actuator: Paddle.
- d. Hose: Coiled, rubber or plastic.
- e. Spray Heads: [Single] [Twin].

B. Hand-Held Drench Hoses, <Insert drawing designation>:

1. Description: Plumbed, counter-mounting, hand-held drench hose.

- a. Capacity: Deliver potable water at rate not less than 3.0 gpm for at least 15 minutes.
- b. Supply Fitting: NPS 1/2 brass with flow regulator.
- c. Hose: Rubber or plastic.
- d. Control Valve Actuator: Hand-held squeeze valve.
- e. Spray Heads: [Single] [Twin].

2.6 COMBINATION UNITS

A. Combination Units, <Insert drawing designation>:

1. Description: Plumbed, accessible, freestanding, with emergency shower and eye/face wash equipment.

a. Piping: Chrome-plated brass or stainless steel.

- 1) Unit Supply: NPS 1-1/2 from [top] [side].
- 2) Unit Drain: Outlet at side near bottom.
- 3) Shower Supply: NPS 1 with flow regulator and stay-open control valve.
- 4) Eye/Face Wash Supply: NPS 1/2 with flow regulator and stay-open control valve.

b. Shower Capacity: Deliver potable water at rate not less than 20 gpm for at least 15 minutes.

- 1) Control Valve Actuator: [Pull rod] [Pull chain].
- 2) Shower Head: 8-inch minimum diameter, [chrome-plated brass or stainless steel] [plastic].

c. Eye/Face Wash Equipment: With capacity to deliver potable water at rate not less than 3.0 gpm for at least 15 minutes.

- 1) Control Valve Actuator: [Paddle] [Push bar].
- 2) Receptor: [Chrome-plated brass or stainless steel] [Plastic] bowl.

2.7 WATER-TEMPERING EQUIPMENT

A. Water-Tempering Equipment:

1. Manufacturers:

- a. Armstrong International, Inc.
- b. Bradley Corporation.
- c. Haws Corporation.
- d. Lawler Manufacturing Co., Inc.
- e. Leonard Valve Company.
- f. Powers, a Watts Industries Co.

2. Description: Factory-fabricated, hot- and cold-water-tempering equipment with thermostatic mixing valve.

- a. Thermostatic Mixing Valve: Designed to provide 85 deg F tepid, potable water at emergency plumbing fixtures, to maintain temperature at plus or minus 2 deg F throughout required 15-minute test period, and in case of unit failure to continue cold-water flow, with union connections, controls, metal piping, and corrosion-resistant enclosure.

2.8 SOURCE QUALITY CONTROL

A. Certify performance of plumbed emergency plumbing fixtures by independent testing agency acceptable to authorities having jurisdiction.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in for water and waste piping systems to verify actual locations of piping connections before plumbed emergency plumbing fixture installation.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EMERGENCY PLUMBING FIXTURE INSTALLATION

A. Assemble emergency plumbing fixture piping, fittings, control valves, and other components.

B. Install fixtures level and plumb.

C. Fasten fixtures to substrate.

D. Install shutoff valves in water-supply piping to fixtures. Use ball valve if specific type valve is not indicated. Install valves chained or locked in open position if permitted. Install valves in locations where they can easily be reached for operation. Valves are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."

1. Exception: Omit shutoff valve on supply to emergency equipment if prohibited by authorities having jurisdiction.

- E. Install dielectric fitting in supply piping to fixture if piping and fixture connections are made of different metals. Dielectric fittings are specified in Division 22 Section "Common Work Results for Plumbing."
- F. Install thermometers in supply and outlet piping connections to water-tempering equipment. Thermometers are specified in Division 22 Section "Meters and Gages for Plumbing Piping."
- G. Install trap and waste to wall on drain outlet of fixture receptors that are indicated to be directly connected to drainage system.
- H. Install indirect waste piping to wall on drain outlet of fixture receptors that are indicated to be indirectly connected to drainage system. Drainage piping is specified in Division 22 Section "Sanitary Waste and Vent Piping."
- I. Install escutcheons on piping wall and ceiling penetrations in exposed, finished locations. Escutcheons are specified in Division 22 Section "Common Work Results for Plumbing."
- J. Install equipment nameplates or equipment markers on fixtures and equipment signs on water-tempering equipment. Identification materials are specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect cold-water-supply piping to plumbed emergency plumbing fixtures not having water-tempering equipment.
- C. Connect hot- and cold-water-supply piping to hot- and cold-water-tempering equipment. Connect output from water-tempering equipment to emergency plumbing fixtures.
- D. Directly connect emergency plumbing fixture receptors with trapped drain outlet to sanitary drainage and vent piping.
- E. Indirectly connect emergency plumbing fixture receptors without trapped drain outlet to sanitary drainage piping.

3.4 FIELD QUALITY CONTROL

- A. Mechanical-Component Testing: After plumbing connections have been made, test for compliance with requirements. Verify ability to achieve indicated capacities and temperatures.
- B. Repair or replace malfunctioning units. Retest as specified above after repairs or replacements are made.
- C. Report test results in writing.

3.5 ADJUSTING

- A. Adjust or replace fixture flow regulators for proper flow.

- B. Adjust equipment temperature settings.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 224700

DRINKING FOUNTAINS AND WATER COOLERS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following water coolers and related components:
 - 1. Electric water coolers.
 - 2. Remote water coolers.
 - 3. Fixture supports.

1.2 DEFINITIONS

- A. Accessible Water Cooler: Fixture that can be approached and used by people with disabilities.
- B. Cast Polymer: Dense, cast-filled-polymer plastic.
- C. Drinking Fountain: Fixture with nozzle for delivering stream of water for drinking.
- D. Fitting: Device that controls flow of water into or out of fixture.
- E. Fixture: Drinking fountain or water cooler unless one is specifically indicated.
- F. Remote Water Cooler: Electrically powered equipment for generating cooled drinking water.
- G. Water Cooler: Electrically powered fixture for generating and delivering cooled drinking water.

1.3 SUBMITTALS

- A. Product Data: For each fixture indicated. Include rated capacities, furnished specialties, and accessories.
- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Field quality-control test reports.
- D. Operation and Maintenance Data: For fixtures to include in emergency, operation, and maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

- B. Regulatory Requirements: Comply with requirements in ICC A117.1, "Accessible and Usable Buildings and Facilities"; Public Law 90-480, "Architectural Barriers Act" ; and Public Law 101-336, "Americans with Disabilities Act" ; for fixtures for people with disabilities.
- C. NSF Standard: Comply with NSF 61, "Drinking Water System Components--Health Effects," for fixture materials that will be in contact with potable water.
- D. ARI Standard: Comply with ARI's "Directory of Certified Drinking Water Coolers" for style classifications.
- E. ARI Standard: Comply with ARI 1010, "Self-Contained, Mechanically Refrigerated Drinking-Water Coolers," for water coolers and with ARI's "Directory of Certified Drinking Water Coolers" for type and style classifications.
- F. ASHRAE Standard: Comply with ASHRAE 34, "Designation and Safety Classification of Refrigerants," for water coolers. Provide HFC 134a (tetrafluoroethane) refrigerant, unless otherwise indicated.

PART 2 - PRODUCTS

2.1 MANUFACTURERES

- A. Manufacturers:
 - 1. Halsey Taylor.
 - 2. Haws Corporation.
 - 3. Elkay

2.2 DRINKING FOUNTAINS

2.3 ELECTRIC WATER COOLERS

- A. Electric Water Coolers, REFER TO FIXTURE SCHEDULE:
 - 1. Description: Accessible, ARI 1010, wall-mounting electric water cooler for adult & child-mounting height.
 - a. Cabinet: Bilevel with two attached cabinets, all stainless steel.
 - b. Bubbler: One, with adjustable stream regulator, located on each cabinet deck.
 - c. Control: Push button.
 - d. Supply: NPS 3/8 with ball or angle stop valve.
 - e. Drain(s): Grid with NPS 1-1/4 minimum horizontal waste and trap complying with ASME A112.18.1.
 - f. Cooling System: Electric, with hermetically sealed compressor, cooling coil, air-cooled condensing unit, corrosion-resistant tubing, refrigerant, corrosion-resistant-metal storage tank, and adjustable thermostat.
 - 1) Capacity: 8 gph of 50 deg F cooled water from 80 deg F inlet water and 90 deg F ambient air temperature.
 - 2) Electrical Characteristics: 120-V ac; single phase; 60 Hz.

~~g. Support: Type I, II, water cooler carrier. Refer to "Fixture Supports" Article.~~

h. Filter: One or more water filters complying with NSF 42 and NSF 53 for cyst and lead reduction to below EPA standards; with capacity sized for unit peak flow rate.

~~2.4~~ **FIXTURE SUPPORTS**

~~A. Manufacturers:~~

- ~~1. Josam Co.~~
- ~~2. MIFAB Manufacturing, Inc.~~
- ~~3. Smith, Jay R. Mfg. Co.~~
- ~~4. Tyler Pipe; Wade Div.~~
- ~~5. Watts Drainage Products Inc.; a div. of Watts Industries, Inc.~~
- ~~6. Zurn Plumbing Products Group; Specification Drainage Operation.~~

~~B. Description: ASME A112.6.1M, water cooler carriers. Include vertical, steel uprights with feet and tie rods and bearing plates with mounting studs matching fixture to be supported.~~

- ~~1. Type I: Hanger-type carrier with two vertical uprights.~~
- ~~2. Type II: Bilevel, hanger-type carrier with three vertical uprights.~~
- ~~3. Supports for Accessible Fixtures: Include rectangular, vertical, steel uprights instead of steel pipe uprights.~~

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for water and waste piping systems to verify actual locations of piping connections before fixture installation. Verify that sizes and locations of piping and types of supports match those indicated.
- B. Examine walls and floors for suitable conditions where fixtures are to be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

- A. Use carrier floor supports for wall-mounting fixtures, unless otherwise indicated.
- B. Use mounting frames for recessed water coolers, unless otherwise indicated.
- C. Set remote water coolers above ceiling, unless otherwise indicated.
- D. Use chrome-plated brass or copper tube, fittings, and valves in locations exposed to view. Plain copper tube, fittings, and valves may be used in concealed locations.

3.3 INSTALLATION

- A. Install floor supports affixed to building substrate and attach wall-mounting fixtures, unless otherwise indicated.
- B. Install mounting frames affixed to building construction and attach recessed water coolers to mounting frames, unless otherwise indicated.
- C. Install fixtures level and plumb. For fixtures indicated for children, install at height required by authorities having jurisdiction.
- D. Install water-supply piping with shutoff valve on supply to each fixture to be connected to water distribution piping. Use ball or angle stop valve. Install valves in locations where they can be easily reached for operation. Valves are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
- E. Install trap and waste piping on drain outlet of each fixture to be connected to sanitary drainage system.
- F. Install pipe escutcheons at wall penetrations in exposed, finished locations. Use deep-pattern escutcheons where required to conceal protruding pipe fittings. Escutcheons are specified in Division 22 Section "Common Work Results for Plumbing."

3.4 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

- A. Water Cooler Testing: After electrical circuitry has been energized, test for compliance with requirements. Test and adjust controls.
 - 1. Remove and replace malfunctioning units and retest as specified above.
 - 2. Report test results in writing.

3.6 ADJUSTING

- A. Adjust fixture flow regulators for proper flow and stream height.
- B. Adjust water cooler temperature settings.

3.7 CLEANING

- A. After completing fixture installation, inspect unit. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.
- B. Clean fixtures, on completion of installation, according to manufacturer's written instructions.

END OF SECTION

SECTION 226113

MEDICAL COMPRESSED-AIR PIPING FOR HEALTHCARE FACILITIES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Medical air piping and specialties, designated "medical air," operating at 50 to 55 psig
2. Gas-powered-tool air piping and specialties, designated "instrument air," operating at 175 psig.

B. Related Sections include the following:

1. Division 12 Section "Healthcare Casework" for compressed-air outlets in medical casework.
2. Division 22 Section "General-Service Compressed-Air Piping" for general-service compressed-air piping.
3. Division 22 Section "Compressed-Air Equipment for Healthcare Facilities" for medical air compressors.
4. Division 22 Section "Compressed-Air Piping for Laboratory Facilities" for laboratory air piping.
5. Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment" for hangers and supports.
6. Division 22 Section "Common Work Results for Plumbing" for Sleeves and Escutcheons.

1.2 DEFINITIONS

- A. D.I.S.S.: Diameter-index safety system.**
- B. Low Voltage:** As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- C. Medical Compressed-Air Piping Systems:** Include medical air and instrument air piping systems.

1.3 SUBMITTALS

A. Product Data: For the following:

1. Medical / Instrument-air tubes and fittings.
2. Medical / Instrument -air valves and valve boxes.
3. Medical compressed-air outlets.
4. Medical compressed-air manifolds.
5. Medical compressed-air alarm system components.

B. Shop Drawings: Diagram power, signal, and control wiring.

- C. Piping Material Certification: Signed by Installer certifying that medical compressed-air piping materials comply with NFPA 99 requirements.
- D. Qualification Data: For Installer and testing agency.
- E. Brazing certificates.
- F. Field quality-control test reports.
- G. Operation and Maintenance Data: For Medical compressed-air piping specialties to include in emergency, operation, and maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Medical Compressed-Air Piping Systems for Healthcare Facilities: Qualify installers according to ASSE Standard #6010.
- B. Testing Agency Qualifications: An independent testing agency, with the experience and capability to conduct the piping testing indicated, that is a member of the Medical Gas Professional Healthcare Organization or is an NRTL, and that is acceptable to authorities having jurisdiction.
 - 1. Qualify testing personnel according to ASSE Standard #6020 for inspectors and ASSE Standard #6030 for verifiers.
- C. Source Limitations: Obtain Medical Air outlets of same type and from same manufacturer provided for in Division 22 Section "Gas Piping for Healthcare Facilities."
- D. Brazing: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications," or AWS B2.2, "Standard for Brazing Procedure and Performance Qualification."
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- F. Comply with NFPA 99, "Health Care Facilities," for medical compressed-air system materials and installation in healthcare facilities.

1.5 PROJECT CONDITIONS

- A. Interruption of Existing Medical Compressed-Air Service(s): Do not interrupt medical compressed-air service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
 - 1. Notify Architect, Construction Manager and Owner no fewer than five days in advance of proposed interruption of medical compressed-air service(s).
 - 2. Do not proceed with interruption of medical compressed-air service(s) without Owner's written permission.

1.6 COORDINATION

- A. Coordinate medical compressed-air service connections with other service connections. Medical vacuum service connections are specified in Division 22 Section "Vacuum Piping for Healthcare Facilities," and medical gas service connections are specified in Division 22 Section "Gas Piping for Healthcare Facilities."

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

- A. Copper Medical Gas Tube: ASTM B 819, Types K and L, seamless, drawn temper, that has been manufacturer cleaned, purged, and sealed for medical gas service or according to CGA G-4.1 for oxygen service. Include standard color marking "OXY," "MED," "OXY/MED," "OXY/ACR," or "ACR/MED" in green for Type K tube and in blue for Type L tube.
 - 1. General Requirements for Copper Fittings: Manufacturer cleaned, purged, and bagged for oxygen service according to CGA G-4.1.
 - 2. Wrought-Copper Fittings: ASME B16.22, solder-joint pressure type or MSS SP-73, with dimensions for brazed joints.
- B. Memory-Metal Couplings "SMART TAP": Cryogenic compression fitting made of ASTM F 2063, nickel-titanium, shape-memory alloy, and that has been manufacturer cleaned, purged, and sealed for oxygen service according to CGA G-4.1.
 - 1. Manufacturers:
 - a. Smart Technology, Inc.
- C. Copper Water Tube: ASTM B 88, Type M, seamless, drawn temper.
 - 1. Copper Fittings: ASME B16.18, cast-copper or ASME B16.22, wrought-copper, solder-joint pressure type.
- ~~D. [PVC Pipe: ASTM D 1785, Schedule 40. (Protective conduit)~~
- ~~1. [PVC Fittings: ASTM D 2466, Schedule 40, socket type.]~~

2.2 JOINING MATERIALS

- A. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
- ~~B. [Solvent Cement for Joining PVC Piping: ASTM D 2564. Include primer complying with ASTM F 656.]~~

2.3 Manufacturers for All products listed below including valves, zone valve boxes, alarms and manifolds:

- a. Allied Healthcare Products, Inc.
- b. Amico Corporation.

- c. BeaconMedaes.

2.4 VALVES

- A. General Requirements for Valves: Manufacturer cleaned, purged, and bagged according to CGA G-4.1 for oxygen service.
- B. Ball Valves: MSS SP-110, 3-piece body, brass or bronze.
 - 1. Pressure Rating: 300 psig minimum.
 - 2. Ball: Full-port, chrome-plated brass.
 - 3. Seats: PTFE or TFE.
 - 4. Handle: Lever type with locking device.
 - 5. Stem: Blowout proof with PTFE or TFE seal.
 - 6. Ends: Manufacturer-installed ASTM B 819, copper-tube extensions.
- C. Check Valves: In-line pattern, bronze.
 - 1. Pressure Rating: 300 psig minimum.
 - 2. Operation: Spring loaded.
 - 3. Ends: Manufacturer-installed ASTM B 819, copper-tube extensions.
- D. Zone Valves: MSS SP-110, 3-piece-body, brass or bronze ball valve with gage.
 - 1. Pressure Rating: 300 psig minimum.
 - 2. Ball: Full-port, chrome-plated brass.
 - 3. Seats: PTFE or TFE.
 - 4. Handle: Lever.
 - 5. Stem: Blowout proof with PTFE or TFE seal.
 - 6. Ends: Manufacturer-installed ASTM B 819, copper-tube extensions.
 - 7. Pressure Gage: Manufacturer installed on one copper-tube extension.
- E. Zone Valve Boxes: Formed steel with anchors for recessed mounting, holes with grommets in box sides for tubing extension protection, and of size for single or multiple zone valves with pressure gages and in sizes required to permit manual operation of zone valves.
 - 1. Interior Finish: Factory-applied white enamel.
 - 2. Cover Plate: Aluminum or extruded-anodized aluminum with frangible or removable windows.
 - 3. Valve-Box Windows: Clear or tinted transparent plastic with labeling that includes rooms served, according to NFPA 99.
- F. Safety Valves: Bronze-body, ASME-construction, poppet, pressure-relief type with settings to match system requirements.
- G. Pressure Regulators: Bronze body and trim; spring-loaded, diaphragm-operated relieving type; manual pressure-setting adjustment; rated for 250-psig minimum inlet pressure; and capable of controlling delivered air pressure within 0.5 psig for each 10-psig inlet pressure.

2.5 MEDICAL COMPRESSED-AIR OUTLETS

- A. Connection Devices: For specific medical compressed-air pressure and service listed. Include roughing-in assemblies, finishing assemblies, and cover plates. Individual cover plates are not

required if service connection is in multiple unit or assembly with cover plate. Furnish recessed-type units made for concealed piping unless otherwise indicated.

1. Roughing-in Assembly:

- a. Steel outlet box for recessed mounting and concealed piping.
- b. Brass-body outlet block with secondary check valve that will prevent gas flow when primary valve is removed.
- c. Double seals that will prevent air leakage.
- d. ASTM B 819, NPS 3/8 copper outlet tube brazed to valve with service marking and tube-end dust cap.

2. Finishing Assembly:

- a. Brass housing with primary check valve.
- b. Double seals that will prevent air leakage.
- c. Cover plate with gas-service label.

3. Quick-Coupler gas outlets: Pressure outlet with noninterchangeable keyed indexing to prevent interchange between services, constructed to permit one-handed connection and removal of equipment, and with positive-locking ring that retains equipment stem in valve during use.

4. D.I.S.S. gas outlets: Pressure outlets, complying with CGA V-5, with threaded indexing to prevent interchange between services, constructed to permit one-handed connection and removal of equipment.

- a. Medical Air outlets: CGA V-5, D.I.S.S. No. 1160.
- b. Instrument Air outlets: CGA V-5, D.I.S.S. No. 2080.

5. Cover Plates: One piece, ~~[stainless steel, with NAAMM AMP 503, No. 4 finish]~~ metal, with chrome-plated finish ~~[anodized aluminum]~~ and permanent, color-coded, identifying label matching corresponding service.

2.6 INSTRUMENT COMPRESSED-AIR PRESSURE CONTROL PANELS

A. Description: Steel box and support brackets for recessed roughing in with stainless-steel or anodized-aluminum cover plate with printed operating instructions. Include manifold assembly consisting of inlet supply valve, inlet supply pressure gage, line-pressure control regulator, outlet supply pressure gage, D.I.S.S. service connection, and piping outlet for remote service connection.

1. Minimum Working Pressure: 200 psig.
2. Line-Pressure Control Regulator: Self-relieving diaphragm type with precision manual adjustment.
3. Pressure Gages: 0- to 300-psig range.
4. Service Connection: CGA V-5, D.I.S.S. No. 1160, instrument air outlet.
5. Before final assembly, provide temporary dust shield and U-tube for testing.
6. Label cover plate "Air Pressure Control."

~~2.7 MEDICAL COMPRESSED-AIR MANIFOLDS~~

~~A. General Requirements for Medical Compressed-Air Manifolds: Comply with NFPA 99, "Manifolds for Gas Cylinders without Reserve Supply."~~

- ~~B. Central Control Panel Unit: Weatherproof cabinet, supply and delivery pressure gages, electrical alarm system connections and transformer, indicator lights or devices, manifold connection, pressure changeover switch, line-pressure regulator, shutoff valves, and safety valve.~~
- ~~C. Manifold and Headers: Duplex, nonferrous-metal header for number of cylinders indicated, divided into two equal banks. Units include design for 2000-psig minimum inlet pressure. Include cylinder bank headers with inlet (pigtail) connections complying with CGA V-1, individual inlet check valves, shutoff valve, pressure regulator, check valve, and pressure gage.~~
- ~~D. Compressed Air Cylinders: [Will be furnished by Owner] [Number and type of compressed-air cylinders required for complete manifold systems].~~
- ~~E. Operation: Automatic, pressure-switch-activated changeover from one cylinder bank to the other when first bank becomes exhausted, without line-pressure fluctuation or resetting of regulators and without supply interruption by shutoff of either cylinder bank header.~~
- ~~F. Mounting: [Wall with mounting brackets for manifold control cabinet and headers] [Floor with support legs for manifold control cabinet].~~
- ~~G. Label manifold control unit with permanent label identifying compressed air and system operating pressure.~~
- ~~H. Medical Air Manifolds: For <Insert number of cylinders per bank> at 55-psig line pressure.~~
- ~~I. Instrument Air Manifolds: For <Insert number of cylinders and capacity> capacity at 200-psig minimum line pressure.~~

~~2.8 COMPRESSED-AIR-CYLINDER STORAGE RACKS~~

- ~~A. Wall Storage Racks: Fabricate racks with chain restraints for upright cylinders as indicated or provide equivalent manufactured wall racks.~~
- ~~B. Freestanding Storage Racks: Fabricate racks as indicated or provide equivalent manufactured storage racks.~~

2.9 MEDICAL COMPRESSED-AIR-PIPING ALARM SYSTEMS

- A. Panels for medical compressed-air piping systems may be combined in single panels with medical vacuum and medical gas piping systems.
- B. Components: Designed for continuous service and to operate on power supplied from 120-V ac power source to alarm panels and with connections for low-voltage wiring to remote sensing devices. Include step-down transformers if required.
- C. Dew Point Monitors: Continuous line monitoring, having panel with gage or digital display, pipeline sensing element, electrical connections for alarm system, factory- or field-installed valved bypass, and visual and cancelable audio signal for dryer site and master alarm panels. Alarm signals when pressure dew point rises above 39 deg F at 55 psig.
 - 1. Operation: Chilled-mirror method or hygrometer moisture analyzer with sensor probe.

- D. Pressure Switches or Transducer Sensors: Continuous line monitoring with electrical connections for alarm system.
 - 1. Low-Pressure Operating Range: 0- to 100-psig.
 - 2. High-Pressure Operating Range: Up to 250-psig.
- E. Carbon Monoxide Monitors: Panel with gage or digital display, pipeline sensing element, electrical connections for alarm system, and factory- or field-installed valved bypass. Alarm signals when carbon monoxide level rises above 10 ppm.
- F. General Requirements for Medical Compressed-Air Alarm Panels: Factory wired with audible and color-coded visible signals to indicate specified functions.
 - 1. Mounting: Recessed installation.
 - 2. Enclosures: Fabricated from minimum 0.047-inch-thick steel or minimum 0.05-inch-thick aluminum, with knockouts for electrical and piping connections.
- G. Master Alarm Panels: Separate trouble alarm signals, pressure gages, and indicators for medical compressed-air piping systems.
 - 1. Include alarm signals when the following conditions exist:
 - a. Medical Air: Pressure drops below 40 psig or rises above 60 psig, backup air compressor is in operation, pressure drop across filter assembly increases more than 2 psig, dew point rises above 39 deg F at 55 psig, carbon monoxide level rises above 10 ppm, and high water level is reached in receiver for liquid-ring, medical air compressor systems.
 - b. Instrument Air: Pressure drops below 165 psig or rises above 185 psig.
- H. Area Alarm Panels: Separate trouble alarm signals, pressure gages, and indicators for medical compressed-air piping systems.
 - 1. Include alarm signals when the following conditions exist:
 - a. Medical Air: Pressure drops below 40 psig or rises above 60 psig.
 - b. Instrument Air: Pressure drops below 165 psig or rises above 185 psig.

2.10 COMPUTER INTERFACE CABINET

- A. Description: Wall-mounting, welded-steel control cabinet with gasketed door, mounting brackets, grounding device, and white-enamel finish for connection of medical compressed-air-piping-system alarms to facility computer. Include factory-installed signal circuit boards, power transformer, circuit breaker, wiring terminal board, and internal wiring capable of interfacing all alarm signals.

2.11 FLEXIBLE PIPE CONNECTORS

- A. Manufacturers:
 - 1. Flex-Hose Co., Inc.
 - 2. Flexicraft Industries.
 - 3. Hyspan Precision Products, Inc.
 - 4. Mercer Rubber Co.

5. Metraflex, Inc.
 6. Proco Products, Inc.
 7. Unaflex.
 8. Universal Metal Hose; a Hyspan Co.
- B. Description: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.
1. Working-Pressure Rating: 250 psig minimum.
 2. End Connections: Threaded copper pipe or plain-end copper tube.

~~2.12 NITROGEN~~

- ~~A. Description: Comply with USP 28 NF 23 for oil free dry nitrogen, for blow down and testing.~~

PART 3 - EXECUTION

3.1 PREPARATION

- A. Cleaning of Medical Gas Tubing: If manufacturer-cleaned and -capped fittings or tubing are not available or if precleaned fittings or tubing must be recleaned because of exposure, have supplier or separate agency acceptable to authorities having jurisdiction perform the following procedures:
1. Clean medical gas tube and fittings, valves, gages, and other components of oil, grease, and other readily oxidizable materials as required for oxygen service according to CGA G-4.1, "Cleaning Equipment for Oxygen Service."
 2. Wash medical gas tubing and components in hot, alkaline-cleaner-water solution of sodium carbonate or trisodium phosphate in proportion of 1 lb of chemical to 3 gal. of water.
 - a. Scrub to ensure complete cleaning.
 - b. Rinse with clean, hot water to remove cleaning solution.

3.2 PIPING APPLICATIONS

- A. Connect new tubing to existing tubing with memory-metal couplings.
- B. Medical Air Piping: Use Type L, copper medical gas tube; wrought-copper fittings; and brazed joints.
- C. Instrument Air Piping:
1. NPS 3 and Smaller: Use ~~Type K~~ Type L, copper medical gas tube; wrought-copper fittings; and brazed joints.
 2. NPS 3-1/2 and Larger: Use Type K, copper medical gas tube; wrought-copper fittings; and brazed joints.
- D. Drain Piping: Use the following piping materials:
1. Copper water tube, cast- or wrought-copper fittings, and soldered joints.

~~E. [Protective Conduit: Use PVC pipe, PVC fittings, and solvent-cemented joints.]~~

3.3 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of compressed-air piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Comply with ASSE Standard #6010 for installation of compressed-air piping.
- C. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and coordinate with other services occupying that space.
- F. Install piping adjacent to equipment and specialties to allow service and maintenance.
- G. Install nipples, special fittings and valves with pressure ratings same as or higher than system pressure rating used in applications below unless otherwise indicated.
- H. Install branch connections to compressed-air mains from top of main.
- I. Install piping to permit valve servicing.
- J. Install piping free of sags and bends.
- K. Install fittings for changes in direction and branch connections.
- L. Install medical compressed-air piping to medical compressed-air outlets.
- M. Install compressed-air outlets recessed in walls. Attach roughing-in assembly to substrate; attach finishing assembly to roughing-in assembly.
- N. Connect compressed-air piping to air compressors and to compressed-air outlets and equipment requiring compressed-air service.
- ~~O. [Install exterior, buried medical gas piping in protective conduit fabricated with PVC pipe and fittings.]~~

3.4 VALVE INSTALLATION

- A. Install shutoff valve at each connection to and from compressed-air equipment and specialties.
- B. Install check valves to maintain correct direction of compressed-air flow from compressed-air equipment.

- C. Install valve boxes recessed in wall and anchored to substrate. Single boxes may be used for multiple valves that serve same area or function.
- D. Install zone valves and gages in valve boxes. Rotate valves to angle that prevents closure of cover when valve is in closed position.
- E. Install safety valves on compressed-air receivers where required by NFPA 99 and where recommended by specialty manufacturers.
- F. Install pressure regulators on compressed-air piping where reduced pressure is required.
- G. Install automatic drain valves on equipment, specialties, and piping with drain connection. Run drain piping to floor drain so contents spill over or into it.
- H. Install flexible pipe connectors in discharge piping of each air compressor.

3.5 JOINT CONSTRUCTION

- A. Remove scale, slag, dirt, and debris from outside of cleaned tubing and fittings before assembly.
- B. Threaded Joints: Apply appropriate tape to external pipe threads.
- C. Brazed Joints: Join copper tube and fittings according to CDA's "Copper Tube Handbook," "Braze Joints" Chapter. Continuously purge joint with oil-free dry nitrogen during brazing.
- D. Memory-Metal Coupling "SMART TAP" Joints: Join new copper tube to existing tube according to procedures developed by fitting manufacturer for installation of memory-metal coupling joints.
- ~~E. [Solvent-Cemented Joints: Clean and dry joining surfaces. Join PVC pipe and fittings according to the following:~~
 - ~~1. Comply with ASTM F 402 for safe handling practice of cleaners, primers, and solvent cements.~~
 - ~~2. Apply primer and join according to ASME B31.9 for solvent-cemented joints, and ASTM D 2672.]~~

~~3.6 MEDICAL COMPRESSED-AIR SERVICE COMPONENT INSTALLATION~~

- ~~A. Install compressed-air pressure control panel in walls. Attach to substrate.~~
- ~~B. Install compressed-air manifolds anchored to substrate.~~
- ~~C. Install compressed-air cylinders and connect to manifold piping.~~
- ~~D. Install compressed-air manifolds with seismic restraints as required.~~
- ~~E. Install compressed-air cylinder wall storage racks attached to substrate.~~

3.7 MEDICAL COMPRESSED-AIR-PIPING ALARM SYSTEM INSTALLATION

- A. Alarm panels for medical compressed-air piping systems may be combined in single panels with medical vacuum piping systems and medical gas piping systems.
- B. Install alarm system components for medical compressed-air-piping according to and in locations required by NFPA 99.
- C. Install area and master alarm panels for medical compressed-air piping system where indicated.
- D. Install computer interface cabinet with connection to medical compressed-air-piping alarm system and to facility computer.

3.8 LABELING AND IDENTIFICATION

- A. Install identifying labels and devices for medical compressed-air piping systems according to NFPA 99. Use the following or similar captions and color-coding for piping products where required by NFPA 99:
 - 1. Medical Air: Black letters on yellow background.
 - 2. Instrument Air: White letters on red background.

3.9 FIELD QUALITY CONTROL FOR MEDICAL COMPRESSED-AIR PIPING IN HEALTHCARE FACILITIES

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections of medical compressed-air piping in healthcare facilities and prepare test reports.
- B. Perform tests and inspections of medical compressed-air piping systems in healthcare facilities and prepare test reports.
- C. Tests and Inspections:
 - 1. Medical Compressed-Air Testing Coordination: Perform tests, inspections, verifications, and certification of medical compressed-air piping systems concurrently with tests, inspections, and certification of medical vacuum piping and medical gas piping systems.
 - 2. Preparation: Perform the following Installer tests according to requirements in NFPA 99 and ASSE Standard #6010:
 - a. Initial blowdown.
 - b. Initial pressure test.
 - c. Cross-connection test.
 - d. Piping purge test.
 - e. Standing pressure test for positive-pressure medical compressed-air piping.
 - f. Repair leaks and retest until no leaks exist.
 - 3. System Verification: Comply with requirements in NFPA 99, ASSE Standard #6020, and ASSE Standard #6030 for verification of medical compressed-air piping systems and perform the following tests and inspections:
 - a. Standing pressure test.
 - b. Individual-pressurization or pressure-differential cross-connection test.
 - c. Valve test.

- d. Master and area alarm tests.
 - e. Piping purge test.
 - f. Piping particulate test.
 - g. Piping purity test.
 - h. Final tie-in test.
 - i. Operational pressure test.
 - j. Medical air purity test.
 - k. Verify correct labeling of equipment and components.
4. Testing Certification: Certify that specified tests, inspections, and procedures have been performed and certify report results. Include the following:
- a. Inspections performed.
 - b. Procedures, materials, and gases used.
 - c. Test methods used.
 - d. Results of tests.
- D. Remove and replace components that do not pass tests and inspections and retest as specified above.

3.10 DEMONSTRATION

- A. Engage factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain medical compressed-air alarm systems. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

SECTION 226119

COMPRESSED-AIR EQUIPMENT FOR HEALTHCARE FACILITIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Packaged, oil-free reciprocating air compressors.
2. Packaged, oil-less reciprocating air compressors.
3. Packaged, rotary-scroll air compressors.
4. Inlet-air filters.
5. Desiccant compressed-air dryers.
6. Compressed-air purification systems.
7. Compressed-air filter assemblies.
8. Medical compressed-air equipment alarm systems.
9. Computer interface cabinet.

1.2 DEFINITIONS

- A. **Actual Air:** Air delivered at air-compressor outlet. Flow rate is compressed air delivered and measured in scfm.
- B. **Low Voltage:** As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- C. **Medical Air Equipment:** Compressed-air equipment and accessories for healthcare facilities.
- D. **Standard Air:** Free air at 68 deg F and 1 atmosphere before compression or expansion and measured in scfm.

1.3 PERFORMANCE REQUIREMENTS

1.4 SUBMITTALS

- A. **Product Data:** For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 1. **Wiring Diagrams:** For power, signal, and control wiring.
 2. **Short-circuit current rating of controller assembly.**
- B. **Qualification Data:** For qualified Installer and testing agency.
- C. **Field quality-control reports.**
- D. **Operation and Maintenance Data:** For compressed-air equipment to include in operation and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Medical Air System Equipment for Healthcare Facilities: Qualify installers according to ASSE 6010.
- B. Testing Agency Qualifications: An independent testing agency, with the experience and capability to conduct the compressed-air equipment testing indicated, that is a member of the Medical Gas Professional Healthcare Organization or is an NRTL and that is acceptable to authorities having jurisdiction.
 - 1. Qualify testing personnel according to ASSE 6020 for inspectors and ASSE 6030 for verifiers.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. ASME Compliance: Fabricate and label receivers to comply with ASME Boiler and Pressure Vessel Code.
- E. Comply with NFPA 99, "Health Care Facilities," for compressed-air equipment and accessories for medical air systems.

1.6 PROJECT CONDITIONS

- A. Interruption of Existing Medical Compressed-Air Service(s): Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
 - 1. Notify Architect, Construction Manager and Owner no fewer than five days in advance of proposed interruption of service.
 - 2. Do not proceed with interruption of service without Owner's written permission.

1.7 COORDINATION

- A. Coordinate sizes and locations of concrete bases with equipment provided.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR PACKAGED AIR COMPRESSORS

- A. Description: Factory-assembled, -wired, -piped, and -tested; electric-motor-driven; air-cooled; with inlet air filters and dryers, Single point of connection. continuous-duty air compressors and receivers that deliver air of quality equal to intake air.
- B. Control Panels: Automatic control station with load control and protection functions. Comply with NEMA ICS 2 and UL 508.
 - 1. Enclosure: NEMA ICS 6, Type 12 control panel unless otherwise indicated.

2. Motor Controllers: Full-voltage, combination-magnetic type with undervoltage release feature and motor-circuit-protector-type disconnecting means and short-circuit protective device.
 3. Control Voltage: 120-V ac or less, using integral control power transformer.
 4. Motor Overload Protection: Overload relay in each phase.
 5. Starting Devices: Hand-off-automatic selector switch in cover of control panel, plus pilot device for automatic control.
 6. Wired for two power circuits, equal number of pumps per circuit.
 7. Automatic control switches to sequence lead-lag air compressors for multiplex air compressors.
 8. Instrumentation: Include discharge-air and receiver pressure gages, air-filter maintenance indicator, hour meter, air-compressor discharge-air and coolant temperature gages, and control transformer.
 9. Alarm Signal Device: For connection to alarm system to indicate high dewpoint, CO2 level high and when stand-by air compressor is operating.
 10. Short Circuit Current Ratings:
 - a. Short-Circuit Current: Match rating of overcurrent protective device serving medical air compressors.
 - b. Available Short-Circuit Current: As indicated on the Drawings. Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.
- C. Receivers: Steel tank constructed according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
1. Pressure Rating: At least as high as highest discharge pressure of connected air compressors and bearing appropriate code symbols.
 2. Interior Finish: Corrosion-resistant coating.
 3. Accessories: Include safety valve, pressure gage, automatic drain, and pressure regulator.
- D. Mounting Frame: Fabricate base and attachment to pressure vessel with reinforcement strong enough to resist packaged equipment movement during a seismic event when base is anchored to building structure.

2.2 MANUFACTURERS

- A. Manufacturers for fully assembled packaged air compressor units:
1. Allied Healthcare Products, Inc.
 2. BeaconMedas
 3. Amico
 4. **Champion**
 5. Pattons Medical

2.3 OIL-FREE, RECIPROCATING AIR COMPRESSORS

- A. Description: Packaged unit.
- B. Air Compressor(s): Oil-free, reciprocating-piston type with nonlubricated compression chamber and lubricated crankcase, and of construction that prohibits oil from entering compression chamber.

1. Submerged gear-type oil pump, and oil filter.
2. Intercooler between stages of two-stage units.
3. Combined high discharge-air temperature and low lubrication-oil pressure switch.
4. Belt guard totally enclosing pulleys and belts.

C. Capacities and Characteristics: REFER TO SCHEDULE ON DRAWINGS

2.4 OILLESS, RECIPROCATING AIR COMPRESSORS

A. Description: Packaged unit.

B. Air Compressor(s): Single- or two-stage, oilless (nonlubricated), reciprocating-piston type, with sealed oil-free bearings, that will deliver air of quality equal to intake air.

1. High discharge-air temperature switch.
2. Belt guard totally enclosing pulleys and belts.
3. Intercooler between stages of two-stage units.

C. Capacities and Characteristics: REFER TO SCHEDULE ON DRAWINGS

2.5 ROTARY-SCROLL AIR COMPRESSORS

A. Description: Packaged unit.

B. Air Compressor(s): Single-stage, oil-free, rotary, scroll type of construction that prohibits oil from entering compression chamber.

1. Cooling System: Unit-mounted, air-cooled exchanger package.
2. Air Filter: Dry type, with maintenance indicator and cleanable replaceable filter element.
3. Air/Coolant Receiver and Separation System: 150-psig-rated steel tank with ASME safety valve, coolant-level gage, multistage air-coolant separator element, minimum pressure valve, blowdown valve, discharge check valve, coolant stop valve, full-flow coolant filter, and thermal-bypass valve.
4. Capacity Control: Capacity modulation between 0 and 100 percent air delivery, with operating pressures between 50 and 100 psig. Include necessary control to hold constant pressure. When air demand is zero, unload compressor by using pressure switch and blowdown valve.
5. Mounting: Freestanding.

C. Capacities and Characteristics: REFER TO SCHEDULE ON DRAWINGS

2.6 INLET-AIR FILTERS

A. Description: Combination inlet-air filter-silencer, suitable for remote installation, for each air compressor.

1. Construction: Weatherproof housing for replaceable, dry-type filter element, with silencer tubes or other method of sound reduction.
2. Capacity: Match capacity of air compressor, with collection efficiency of 99 percent retention of particles larger than 10 micrometers.

- B. Description: Combination inlet-air filter-silencer, suitable for remote installation, for multiple air compressors.
 - 1. Construction: Weatherproof housing for replaceable, dry-type filter element, with silencer tubes or other method of sound reduction.
 - 2. Capacity: Match total capacity of connected air compressors, with collection efficiency of 99 percent retention of particles larger than 10 micrometers.

2.7 DESICCANT COMPRESSED-AIR DRYERS

- A. Manufacturers:
 - 1. BeaconMedaes.
 - 2. Domnick Hunter Limited; ZANDER, Inc.
 - 3. EMSE Corporation.
 - 4. Gardner Denver; Champion Pneumatic.
 - 5. Ingersoll-Rand; Air Solutions Group.
 - 6. Kaeser Compressors, Inc.
 - 7. Zeks Compressed Air Solutions.
- B. Description: Twin-tower unit with purge system, mufflers, and capability to deliver plus 10 deg F, 100-psig air at dew point. Include dew point controlled purge, step-down transformers, disconnect switches, inlet and outlet pressure gages, thermometers, automatic controls, and filters.
- C. Capacities and Characteristics: REFER TO SCHEDULE ON DRAWINGS

2.8 COMPRESSED-AIR PURIFICATION SYSTEMS

- A. Manufacturers:
 - 1. Allied Healthcare Products, Inc.; Chemetron Div.
 - 2. Domnick Hunter Limited; ZANDER, Inc.
 - 3. Ingersoll-Rand; Air Solutions Group.
 - 4. Kaeser Compressors, Inc.
- B. Description: Compressed-air purification system sized for maximum connected equipment capacity with coalescing, particulate, and activated-charcoal filters; compressed-air dryer; catalytic converter; gages and thermometers; and controls.
 - 1. Include the following capabilities:
 - a. Removal of excessive moisture, solid particulates, oil and oil mist, carbon monoxide, and hydrocarbon vapors.
 - b. Automatic ejection of condensate from airstream.
 - c. Production of air complying with USP - NF for medical air.
 - d. Capacity and dew point indicated, but not higher than 35 deg F at 100 psig.
 - 2. Filters: Parallel duplex filters, each sized for maximum system demand, with valved bypass for filter servicing.
 - a. Inlet Filters: 5 micrometers.
 - b. Outlet Filters: 1 micrometer(s).

3. Accessories: Inlet and outlet pressure gages, thermometers, safety valves, and shutoff valves; and automatic ejection of condensate from airstream.
4. Differential Pressure Switch: Adjustable, diaphragm type, with electrical connections for alarm system, to indicate when air-pressure drop through filters rises to more than 2 psig greater than when new and clean.
 - a. Inlet Connection: From inlet to particulate filter.
 - b. Outlet Connection: To outlet from final activated-charcoal filter.
5. Compressed-Air Dryer: Twin-tower desiccant type with automatic controls, purge system, and mufflers.

C. Capacities and Characteristics: REFER TO SCHEDULE ON DRAWINGS

2.9 MEDICAL COMPRESSED-AIR EQUIPMENT ALARM SYSTEMS

- A. General Requirements for Medical Compressed-Air Equipment Alarm System: Compatible alarm panels, remote sensing devices, and other related components as required by NFPA 99 for Level 1 alarm systems. Refer to Division 22 Section "Compressed-Air Piping for Laboratory and Healthcare Facilities" for medical compressed-air piping and alarm systems. Power wiring is specified in Division 26 Sections.
- B. Components: Designed for continuous service and to operate on power supplied from 120-V ac power source to alarm panels and with connections for low-voltage wiring to remote sensing devices. Include step-down transformers if required.
- C. Dew Point Monitors: Continuous line monitoring, having panel with gage or digital display, pipeline sensing element, electrical connections for alarm system, factory- or field-installed valved bypass, and visual and cancelable audio signal for dryer site and master alarm panels. Alarm signals when pressure dew point rises above 39 deg F at 55 psig.
 1. Operation: Chilled-mirror method or hygrometer moisture analyzer with sensor probe.
- D. Pressure Switches or Pressure Transducer Sensors: Continuous line monitoring with electrical connections for alarm system.
 1. Low-Pressure Switches: 0- to 100-psig operating range.
 2. High-Pressure Switches: Up to 250-psig operating range.
- E. Carbon Monoxide Monitors: Panel with gage or digital display, pipeline sensing element, electrical connections for alarm system, and factory- or field-installed valved bypass. Alarm signals when carbon monoxide level rises above 10 ppm.
- F. General Requirements for Medical Compressed-Air Equipment Alarm Panels: Factory wired with audible and color-coded visible signals to indicate specified functions.
 1. Mounting: Exposed, surface installation.
 2. Enclosures: Fabricated from minimum 0.047-inch-thick steel or minimum 0.05-inch-thick aluminum, with knockouts for electrical and piping connections.

2.10 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 22 Section "Common Motor Requirements for Plumbing Equipment."
 - 1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 - 2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.

2.11 COMPUTER INTERFACE CABINET

- A. Description:
 - 1. Wall mounting.
 - 2. Welded steel with white-enamel finish.
 - 3. Gasketed door.
 - 4. Grounding device.
 - 5. Factory-installed signal circuit boards.
 - 6. Power transformer.
 - 7. Circuit breaker.
 - 8. Wiring terminal board.
 - 9. Internal wiring capable of interfacing all alarm signals.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean compressed-air equipment, accessories, and components that have not been cleaned for oxygen service and sealed or that are furnished unsuitable for medical air applications, according to CGA G-4.1, "Cleaning Equipment for Oxygen Service."

3.2 COMPRESSED-AIR EQUIPMENT INSTALLATION

- A. Install compressed-air equipment for healthcare facilities according to ASSE 6010 and NFPA 99.
- B. Equipment Mounting: Install vacuum producers on concrete bases using elastomeric pads ~~elastomeric mounts~~ restrained spring isolators. Comply with requirements in Division 03 Section "Cast-in-Place Concrete." Comply with requirements for vibration isolation devices specified in Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment."
 - 1. Minimum Deflection: 1/4 inch ~~[1 inch]~~.
 - 2. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 3. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Install equipment anchored to substrate.

- D. Orient equipment so controls and devices are accessible for servicing with clearances per the NEC.
- E. Maintain manufacturer's recommended clearances for service and maintenance.
- F. General Requirements for Compressed-Air Equipment Installation:
 - 1. Install compressed-air equipment to allow maximum headroom unless specific mounting heights are indicated.
 - 2. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces unless otherwise indicated.
 - 3. Install mechanical equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations.
 - 4. Install equipment to allow right of way for piping installed at required slope.
 - 5. Install the following devices on compressed-air equipment:
 - a. Thermometer, Pressure Gage, and Safety Valve: Install on each compressed-air receiver.
 - b. Pressure Regulators: Install downstream from air compressors, dryers, purification units, and filter assemblies.
 - c. Drain Valves: Install on aftercoolers, receivers, and dryers. Discharge condensate over nearest floor drain.

3.3 MEDICAL COMPRESSED-AIR EQUIPMENT ALARM SYSTEM INSTALLATION

- A. Alarm panels for medical compressed-air equipment may be combined in single panels with medical vacuum equipment and medical gas piping systems.
- B. Install medical compressed-air equipment alarm system components in locations required by and according to NFPA 99.

3.4 COMPUTER INTERFACE CABINET INSTALLATION

- A. Install computer interface cabinet with connection to medical compressed-air piping alarm system and to facility computer.

3.5 CONNECTIONS

- A. Comply with requirements for water-supply piping specified in Division 22 Section "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements for drain piping specified in Division 22 Section "Sanitary Waste and Vent Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Comply with requirements for compressed-air piping specified in Division 22 Section "Compressed-Air Piping for Healthcare Facilities." Drawings indicate general arrangement of piping, fittings, and specialties.
- D. Install piping adjacent to equipment to allow service and maintenance.

- E. Connect compressed-air piping to compressed-air equipment, accessories, and specialties with shutoff valve and union or flanged connection.

3.6 IDENTIFICATION

- A. Identify medical compressed-air equipment system components. Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment." and comply with NFPA 99.

3.7 FIELD QUALITY CONTROL FOR HEALTHCARE-FACILITY MEDICAL COMPRESSED-AIR EQUIPMENT

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Tests and Inspections:
 - 1. Medical Compressed-Air Equipment Testing Coordination: Perform tests, inspections, verifications, and certification of medical compressed-air equipment concurrently with tests, inspections, and certification of medical vacuum equipment, medical vacuum piping, medical compressed-air piping and medical gas piping systems.
 - 2. Preparation: Perform medical compressed-air equipment tests according to requirements in NFPA 99 for the following:
 - a. Air-quality purity test.
 - b. System operation test.
 - 3. Equipment Verification: Comply with requirements in ASSE 6020, ASSE 6030, and NFPA 99 for verification of medical compressed-air equipment.
 - 4. Replace damaged and malfunctioning controls and equipment.
 - 5. Testing Certification: Certify that specified tests, inspections, and procedures have been performed and certify report results. Include the following:
 - a. Inspections performed.
 - b. Procedures, materials, and gases used.
 - c. Test methods used.
 - d. Results of tests.
- E. Components will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

3.8 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Check for lubricating oil in lubricated-type equipment.
 - 3. Check belt drives for proper tension.
 - 4. Verify that air-compressor inlet filters and piping are clear.
 - 5. Check for equipment vibration-control supports and flexible pipe connectors and verify that equipment is properly attached to substrate.
 - 6. Check safety valves for correct settings. Ensure that settings are higher than air-compressor discharge pressure but not higher than rating of system components.
 - 7. Check for proper seismic restraints.
 - 8. Drain receiver tanks.
 - 9. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 10. Test and adjust controls and safeties.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain air compressors, compressed-air dryer, compressed-air purification units.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 226213

VACUUM PIPING FOR HEALTHCARE FACILITIES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Medical surgical vacuum piping and specialties, designated "medical vacuum" operating at ~~[15 inches mercury]~~ 20 inches mercury ~~[30 inches mercury]~~ <Insert vacuum>.
- ~~2. Waste anesthetic gas disposal piping and specialties, designated "WAGD evacuation" operating at [14 inches mercury] [15 inches mercury] <Insert vacuum>.~~

B. Related Sections include the following:

1. Division 11 Section "Laboratory Fume Hoods" for vacuum outlets in laboratory fume hoods.
2. Division 12 Section "Laboratory Casework" for vacuum outlets in casework.
3. Division 12 Section "Healthcare Casework" for vacuum outlets in metal medical casework.
4. Division 22 Section "Vacuum Equipment for Healthcare Facilities" for medical vacuum producers.
5. Division 22 Section "Vacuum Piping for Laboratory Facilities" for laboratory vacuum piping.
6. Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment" for hangers and supports.
7. Division 22 Section "Common Work Results for Plumbing" for Sleeves and Escutcheons.

1.2 DEFINITIONS

- A. D.I.S.S.: Diameter-index safety system.
- B. HVE: High-volume (oral) evacuation.
- C. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- D. WAGD: Waste anesthetic gas disposal.
- E. Medical vacuum piping systems include medical vacuum and WAGD evacuation piping systems.

1.3 SUBMITTALS

A. Product Data: For the following:

1. Vacuum pipes tubes and fittings.
2. Vacuum valves and valve boxes.

- 3. Medical vacuum outlets and vacuum-bottle brackets.
- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Piping Material Certification: Signed by Installer certifying that medical vacuum piping materials comply with NFPA 99 requirements.
- D. Qualification Data: For Installer and testing agency.
- E. Brazing certificates.
- F. Field quality-control test reports.
- G. Operation and Maintenance Data: For vacuum piping specialties to include in emergency, operation, and maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Medical Vacuum Piping Systems for Healthcare Facilities: Qualify installers according to ASSE Standard #6010.
- B. Testing Agency Qualifications: An independent testing agency, with the experience and capability to conduct the vacuum piping testing indicated, that is a member of the Medical Gas Professional Healthcare Organization or is an NRTL, and that is acceptable to authorities having jurisdiction.
 - 1. Qualify testing personnel according to ASSE Standard #6020 for inspectors and ASSE Standard #6030 for verifiers.
- C. Source Limitations: Obtain vacuum outlets of same type and from same manufacture as provided for in Division 22 Section "Gas Piping for Healthcare Facilities."
- D. Brazing: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications," or AWS B2.2, "Standard for Brazing Procedure and Performance Qualification."
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- F. NFPA Compliance: Comply with NFPA 99, "Health Care Facilities," for medical vacuum system materials and installation in healthcare facilities.

1.5 PROJECT CONDITIONS

- A. Interruption of Existing Medical Vacuum Service(s): Do not interrupt medical vacuum service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
 - 1. Notify Architect, Construction Manager and Owner no fewer than five days in advance of proposed interruption of medical vacuum service(s).

2. Do not proceed with interruption of medical vacuum service(s) without Owner's written permission.

1.6 COORDINATION

- A. Coordinate medical vacuum outlets with other medical gas outlets. Medical compressed-air outlets are specified in Division 22 Section "Medical Compressed-Air Piping for Healthcare Facilities," and medical gas outlets are specified in Division 22 Section "Gas Piping for Healthcare Facilities."

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

- A. Copper Medical Gas Tube: ASTM B 819, Type L, seamless, drawn temper that has been manufacturer cleaned, purged, and sealed for medical gas service or according to CGA G-4.1 for oxygen service. Include standard color marking "OXY," "MED," "OXY/MED," "OXY/ACR," or "ACR/MED" in blue.
 1. General Requirements for Copper Fittings: Manufacturer cleaned, purged, and bagged for oxygen service according to CGA G-4.1.
 2. Wrought-Copper Fittings: ASME B16.22, solder-joint pressure type or MSS SP-73, with dimensions for brazed joints.
- B. Copper Water Tube: ASTM B 88, Type M, seamless, drawn temper.
 1. Cast-Copper Fittings: ASME B16.18, solder-joint pressure type.
 2. Wrought-Copper Fittings: ASME B16.22, solder-joint pressure type.
 3. Cast-Copper-Alloy Flanges: ASME B16.24, Class 150.
- C. Memory-Metal Couplings "SMART TAP": Cryogenic compression fitting made of ASTM F 2063, nickel-titanium, shape-memory alloy, and that has been manufacturer cleaned, purged, and sealed for oxygen service according to CGA G-4.1.
 1. Manufacturers:
 - a. Smart Technology, Inc.
 - b. <Insert manufacturer's name>.
- D. PVC Pipe: ASTM D 1785, Schedule 40. (Protective conduit)
 1. PVC Fittings: ASTM D 2466, Schedule 40, socket type.

2.2 JOINING MATERIALS

- A. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
- B. Threaded-Joint Tape: PTFE.
- C. Pipe-Flange Gasket Materials: ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness, full-face type.

- D. Flange Bolts and Nuts: ASME B18.2.1, carbon steel.
- E. Solvent Cement for Joining PVC Piping: ASTM D 2564. Include primer complying with ASTM F 656.

- 2.3 Manufacturers for All products listed below including valves, zone valve boxes and alarms:
- a. Allied Healthcare Products, Inc.
 - b. Amico Corporation.
 - c. BeaconMedaes.

2.4 VALVES

- A. General Requirements for Valves: Manufacturer cleaned, purged, and bagged according to CGA G-4.1 for oxygen service.
- B. Copper-Alloy Ball Valves: MSS SP-110, 3-piece body, brass or bronze.
 - 1. Pressure Rating: 300 psig minimum.
 - 2. Ball: Full-port, chrome-plated brass.
 - 3. Seats: PTFE or TFE.
 - 4. Handle: Lever type with locking device.
 - 5. Stem: Blowout proof with PTFE or TFE seal.
 - 6. Ends: Manufacturer-installed ASTM B 819, copper-tube extensions.
- C. Copper-Alloy Butterfly Valves:
 - 1. Pressure Rating: 300 psig minimum.
 - 2. Ball: Full-port, chrome-plated brass.
 - 3. Seats: PTFE or TFE.
 - 4. Handle: Lever type with locking device.
 - 5. Stem: Blowout proof with PTFE or TFE seal.
 - 6. Ends: Manufacturer-installed ASTM B 819, copper-tube extensions.
- D. Bronze Check Valves: In-line pattern.
 - 1. Pressure Rating: 300 psig minimum.
 - 2. Operation: Spring loaded.
 - 3. Ends: Manufacturer-installed ASTM B 819, copper-tube extensions.
- E. Zone Valves: MSS SP-110, 3-piece-body, brass or bronze ball valve with gage.
 - 1. Pressure Rating: 300 psig minimum.
 - 2. Ball: Full-port, chrome-plated brass.
 - 3. Seats: PTFE or TFE.
 - 4. Handle: Lever.
 - 5. Stem: Blowout proof with PTFE or TFE seal.
 - 6. Ends: Manufacturer-installed ASTM B 819, copper-tube extensions.
 - 7. Vacuum Gage: Manufacturer installed on one copper-tube extension.
- F. Zone Valve Boxes: Formed steel with anchors for recessed mounting, holes with grommets in box sides for tubing extension protection, and of size for single or multiple valves with vacuum gages and in sizes required to permit manual operation of valves.

1. Interior Finish: Factory-applied white enamel.
 2. Cover Plate: Aluminum or extruded-anodized aluminum with frangible or removable windows.
 3. Valve-Box Windows: Clear or tinted transparent plastic with labeling that includes rooms served, according to NFPA 99.
- G. Safety Valves: Bronze-body, ASME-construction, pressure-relief type with settings to match system requirements.

2.5 MEDICAL VACUUM OUTLETS

- A. Connection Devices: For specific medical vacuum service listed. Include roughing-in assemblies, finishing assemblies, and cover plates. Individual cover plates are not required if service connection is in multiple unit or assembly with cover plate. Furnish recessed-type units made for concealed piping unless otherwise indicated.
1. Roughing-in Assembly:
 - a. Steel outlet box for recessed mounting and concealed piping.
 - b. Brass-body inlet block.
 - c. Seals that will prevent vacuum leakage.
 - d. ASTM B 819, NPS 3/8 copper outlet tube brazed to valve with service marking and tube-end dust cap.
 2. Finishing Assembly:
 - a. Brass housing with primary check valve.
 - b. Seals that will prevent vacuum leakage.
 - c. Cover plate with gas-service label.
 3. Quick-Coupler gas outlets: Suction inlets for medical vacuum and WAGD evacuation service outlets with noninterchangeable keyed indexing to prevent interchange between services, constructed to permit one-handed connection and removal of equipment, and with positive-locking ring that retains equipment stem in valve during use.
 4. D.I.S.S. gas outlets: Suction inlets, complying with CGA V-5, with threaded indexing to prevent interchange between services, constructed to permit one-handed connection and removal of equipment.
 - a. Medical Vacuum outlets: CGA V-5, D.I.S.S. No. 1220.
 - b. WAGD Evacuation outlets: CGA V-5, D.I.S.S. No. 2220.
 5. Vacuum Slides: One piece, with pattern and finish matching corresponding service cover plate.
 6. Cover Plates: One piece, ~~stainless steel, with NAAMM AMP 503, No. 4 finish~~ metal, with chrome-plated finish ~~anodized aluminum~~ and permanent, color-coded, identifying label matching corresponding service.

2.6 MEDICAL VACUUM PIPING ALARM SYSTEMS

- A. Panels for medical vacuum piping systems may be combined in single panels with medical compressed-air and medical gas piping systems.
- B. Components: Designed for continuous service and to operate on power supplied from 120-V ac power source to alarm panels and with connections for low-voltage wiring to remote sensing devices. Include step-down transformers if required.

- C. Vacuum Switches or Transducer Sensors: Continuous line monitoring with electrical connections for alarm system.
 - 1. Vacuum Operating Range: 0- to 30-in. Hg.
- D. General Requirements for Medical Vacuum Alarm Panels: Factory wired with audible and color-coded visible signals to indicate specified functions.
 - 1. Mounting: Recessed installation.
 - 2. Enclosures: Fabricated from minimum 0.047-inch-thick steel or minimum 0.05-inch-thick aluminum, with knockouts for electrical and piping connections.
- E. Master Alarm Panels: With separate trouble alarm signals, vacuum gages, and indicators for medical vacuum piping systems.
 - 1. Include alarm signals when the following conditions exist:
 - a. Medical Vacuum: Vacuum drops below 12-in. Hg and backup vacuum pump is in operation.
 - b. ~~WAGD Evacuation: Vacuum drops below 12-in. Hg.~~
- F. Area Alarm Panels: Separate trouble alarm signals; vacuum gages; and indicators for medical vacuum piping systems.
 - 1. Include alarm signals when the following conditions exist:
 - a. Medical Vacuum: Vacuum drops below 12-in. Hg.
 - b. ~~WAGD Evacuation: Vacuum drops below 12-in. Hg.~~

2.7 COMPUTER INTERFACE CABINET

- A. Description: Wall-mounting, welded-steel, control cabinet with gasketed door, mounting brackets, grounding device, and white-enamel finish for connection of medical vacuum piping system alarms to facility computer. Include factory-installed signal circuit boards, power transformer, circuit breaker, wiring terminal board, and internal wiring capable of interfacing all alarm signals.

2.8 FLEXIBLE PIPE CONNECTORS

- A. Manufacturers:
 - 1. Flex-Hose Co., Inc.
 - 2. Flexicraft Industries.
 - 3. Hyspan Precision Products, Inc.
 - 4. Mercer Rubber Co.
 - 5. Metraflex, Inc.
 - 6. Proco Products, Inc.
 - 7. Unaflex.
 - 8. Universal Metal Hose; a Hyspan Co.
- B. Description: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.
 - 1. Working-Pressure Rating: 200 psig ~~250 psig~~ minimum.

2. End Connections: Threaded copper pipe or plain-end copper tube.

2.9 NITROGEN

- A. Description: Comply with USP 28 - NF 23 for oil-free dry nitrogen, for blow down and testing.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Cleaning of Medical Gas Tubing: If manufacturer-cleaned and -capped fittings or tubing are not available or if precleaned fittings or tubing must be recleaned because of exposure, have supplier or separate agency acceptable to authorities having jurisdiction perform the following procedures:
 1. Clean medical gas tube and fittings, valves, gages, and other components of oil, grease, and other readily oxidizable materials as required for oxygen service according to CGA G-4.1, "Cleaning Equipment for Oxygen Service."
 2. Wash medical gas tubing and components in hot, alkaline-cleaner-water solution of sodium carbonate or trisodium phosphate in proportion of 1 lb of chemical to 3 gal. of water.
 - a. Scrub to ensure complete cleaning.
 - b. Rinse with clean, hot water to remove cleaning solution.

3.2 PIPING APPLICATIONS

- A. Connect new copper tubing to existing tubing with memory-metal couplings.
- B. Medical Vacuum Piping: Use the following piping materials for each size range:
 1. NPS 8 and Smaller: Type L, copper medical gas tube; wrought-copper fittings; and brazed joints.

~~C. WAGD Evacuation Piping: Use the following piping materials for each size range:~~

- ~~1. NPS 4 and Smaller: Type L, copper medical gas tube; wrought-copper fittings; and brazed joints.~~

- D. Drain Piping: Use the following piping materials:
 1. Copper water tube, cast- or wrought-copper fittings, and soldered joints.

~~E. [Protective Conduit: Use PVC pipe, PVC fittings, and solvent-cemented joints.]~~

3.3 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of vacuum piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

- B. Comply with ASSE Standard #6010 for installation of vacuum piping.
- C. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and coordinate with other services occupying that space.
- F. Install piping adjacent to equipment and specialties to allow service and maintenance.
- G. Install nipples, special fittings, and valves with pressure ratings same as or higher than piping pressure rating used in applications below unless otherwise indicated.
- H. Install piping to permit valve servicing.
- I. Install piping free of sags and bends.
- J. Install medical vacuum piping to medical vacuum outlets specified in this Section and to equipment specified in other Sections requiring medical vacuum service.
- K. Install medical vacuum outlets recessed in walls. Attach roughing-in assembly to substrate; attach finishing assembly to roughing-in assembly.
- L. Install medical vacuum bottle bracket adjacent to each wall-mounted medical vacuum service connection suction inlet.
- M. Connect vacuum piping to vacuum producers and to equipment requiring vacuum service.
- N. [Install exterior, buried medical gas piping in protective conduit fabricated with PVC pipe and fittings.]

3.4 VALVE APPLICATIONS

- A. Valves for Copper Vacuum Tubing:
 - 1. NPS 4 and Smaller: Use copper alloy ball and bronze check types.
 - 2. NPS 6 (DN 200) and larger: Use copper alloy butterfly type.

3.5 VALVE INSTALLATION

- A. Install shutoff valve at each connection to and from vacuum equipment and specialties.
- B. Install check valves to maintain correct direction of vacuum flow to vacuum-producing equipment.
- C. Install valve boxes recessed in wall and anchored to substrate. Single boxes may be used for multiple valves that serve same area or function.

- D. Install zone valves and gages in valve boxes. Rotate valves to angle that prevents closure of cover when valve is in closed position.
- E. Install safety valves on vacuum receivers, where required by NFPA 99, and where recommended by specialty manufacturers.
- F. Install automatic drain valves on equipment, specialties, and piping with drain connection. Run drain piping to floor drain, so contents spill over or into it.
- G. Install flexible pipe connectors in suction inlet piping to each vacuum producer.

3.6 JOINT CONSTRUCTION

- A. Remove scale, slag, dirt, and debris from outside of cleaned tubing and fittings before assembly.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints: Apply appropriate tape to external pipe threads.
- D. Brazed Joints: Join copper tube and fittings according to CDA's "Copper Tube Handbook," "Brazed Joints" Chapter. Continuously purge joint with oil-free dry nitrogen during brazing.
- E. Flanged Joints:
 - 1. Copper Tubing: Install flange on copper tubes. Use pipe-flange gasket between flanges. Join flanges with gasket and bolts according to ASME B31.9 for bolting procedure.
- F. Memory-Metal Coupling Joints "SMART TAP": Join new copper tube to existing tube according to procedures developed by fitting manufacturer for installation of memory-metal coupling joints.
- G. Solvent-Cemented Joints: Clean and dry joining surfaces. Join PVC pipe and fittings according to the following:
 - 1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
 - 2. Apply primer and join according to ASME B31.9 for solvent-cemented joints and to ASTM D 2672.

3.7 MEDICAL VACUUM PIPING ALARM SYSTEM INSTALLATION

- A. Panels for medical vacuum piping systems may be combined in single panels with medical compressed-air piping systems and medical gas piping systems.
- B. Install medical vacuum piping system alarm system components in locations required by and according to NFPA 99.
- C. Install medical vacuum piping system area and master alarm panels where indicated.
- D. Install computer interface cabinet with connection to medical vacuum piping alarm system and to facility computer.

3.8 LABELING AND IDENTIFICATION

- A. Install identifying labels and devices for medical vacuum piping systems according to NFPA 99. Use the following or similar captions and color-coding for piping products where required by NFPA 99:
 - 1. Medical Vacuum: Black letters on white background.
 - 2. WAGD: White letters on violet background.

3.9 FIELD QUALITY CONTROL FOR HEALTHCARE FACILITY MEDICAL VACUUM PIPING

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections of medical vacuum piping systems in healthcare facilities and prepare test reports.
- B. Perform tests and inspections of medical vacuum piping systems in healthcare facilities and prepare test reports.
- C. Tests and Inspections:
 - 1. Medical Vacuum Testing Coordination: Perform tests, inspections, verifications, and certification of medical vacuum piping systems concurrently with tests, inspections, and certification of medical compressed-air piping and medical gas piping systems.
 - 2. Perform the following Installer tests according to requirements in NFPA 99 and ASSE Standard #6010:
 - a. Initial blow down.
 - b. Initial pressure test.
 - c. Cross-connection test.
 - d. Piping purge test.
 - e. Standing pressure test for vacuum systems.
 - f. Repair leaks and retest until no leaks exist.
 - 3. System Verification: Comply with requirements in NFPA 99, ASSE Standard #6020, and ASSE Standard #6030 for verification of medical vacuum piping systems and perform the following tests and inspections:
 - a. Standing pressure test.
 - b. Individual-pressurization or pressure-differential cross-connection test.
 - c. Valve test.
 - d. Master and area alarm tests.
 - e. Piping purge test.
 - f. Final tie-in test.
 - g. Operational vacuum test.
 - h. Verify correct labeling of equipment and components.
 - 4. Testing Certification: Certify that specified tests, inspections, and procedures have been performed and certify report results. Include the following:
 - a. Inspections performed.
 - b. Procedures, materials, and gases used.
 - c. Test methods used.
 - d. Results of tests.
- D. Remove and replace components that do not pass tests and inspections and retest as specified above.

3.10 DEMONSTRATION

- A. Engage factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain medical vacuum alarm systems. Refer to Division 01 Section "Demonstration and Training."

THIS PAGE INTENTIONALLY LEFT BLANK

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 226219

VACUUM EQUIPMENT FOR HEALTHCARE FACILITIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Packaged, oil-free, rotary claw vacuum pumps.
2. Packaged, oil-free, rotary, sliding-vane vacuum pumps.
3. Packaged, oil-sealed, rotary, sliding-vane vacuum pumps.
4. Medical vacuum equipment alarm systems.
5. Computer interface cabinets.

1.2 DEFINITIONS

- A. Actual Air:** Air delivered at vacuum producer inlet. Flow rate is air measured in expanded cfm.
- B. Low Voltage:** As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- C. Medical vacuum equipment** includes medical vacuum equipment and accessories for healthcare facilities.
- D. Standard Air:** Free air at 68 deg F and 1 atmosphere before compression or expansion and measured in scfm.
- E. WAGD Evacuation:** Waste anesthetic gas disposal for medical-surgical applications in healthcare facilities.

1.3 PERFORMANCE REQUIREMENTS

1.4 SUBMITTALS

- A. Product Data:** For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
1. Wiring Diagrams: For power, signal, and control wiring.
 2. Short-circuit current rating of controller assembly.
- B. Qualification Data:** For qualified Installer and testing agency.
- C. Field quality-control reports.**
- D. Operation and Maintenance Data:** For vacuum equipment to include in operation and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Medical Vacuum System Equipment for Healthcare Facilities: Qualify installers according to ASSE 6010.
- B. Testing Agency Qualifications: An independent testing agency, with the experience and capability to conduct the vacuum equipment testing indicated, that is a member of the Medical Gas Professional Healthcare Organization or is an NRTL, and that is acceptable to authorities having jurisdiction.
 - 1. Qualify testing personnel according to ASSE 6020 for inspectors and ASSE 6030 for verifiers.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. ASME Compliance: Fabricate and label receivers to comply with ASME Boiler and Pressure Vessel Code.
- E. Comply with NFPA 99, "Health Care Facilities," for vacuum equipment and accessories for medical vacuum systems.

1.6 PROJECT CONDITIONS

- A. Interruption of Existing Medical Vacuum Service(s): Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
 - 1. Notify Architect, Construction Manager and Owner no fewer than five days in advance of proposed interruption of service.
 - 2. Do not proceed with interruption of service without Owner's written permission.

1.7 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR PACKAGED VACUUM PUMPS

- A. Description: Factory-assembled, -wired, -piped, and -tested; electric-motor-driven; air-cooled; continuous-duty vacuum pumps and receivers, with a single point of connection.
- B. Control Panels: Automatic control station with load control and protection functions. Comply with NEMA ICS 2 and UL 508.
 - 1. Enclosure: NEMA ICS 6, Type 12 control panel unless otherwise indicated.

2. Motor Controllers: Full-voltage, combination-magnetic type with undervoltage release feature and motor-circuit-protector-type disconnecting means and short-circuit protective device.
 3. Control Voltage: 120-V ac or less, using integral control power transformer.
 4. Motor Overload Protection: Overload relay in each phase.
 5. Starting Devices: Hand-off-automatic selector switch in cover of control panel, plus pilot device for automatic control.
 6. Wired for two power circuits, equal number of pumps per circuit.
 7. Automatic control switches to alternate lead-lag vacuum pumps for duplex ~~and~~ ~~sequence lead-lag vacuum pumps for multiplex~~ vacuum pumps.
 8. Instrumentation: Include vacuum pump inlet and receiver vacuum gages, hour meter, vacuum pump discharge-air and coolant temperature gages, and control transformer.
 9. Alarm Signal Device: For connection to alarm system to indicate when stand-by vacuum pump is operating.
 10. Short Circuit Current Ratings:
 - a. Short-Circuit Current: Match rating of overcurrent protective device serving vacuum equipment.
 - b. Available Short-Circuit Current: As indicated on the Drawings. Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.
- C. Receivers: Steel tank constructed according to ASME Boiler and Pressure Vessel Code, Section VIII, Division 1; bearing appropriate code symbols.
1. Interior Finish: Corrosion-resistant coating.
 2. Accessories: Include vacuum relief valve, vacuum gage, and drain.
- D. Mounting Frame: Fabricate base and attachment to pressure vessel with reinforcement strong enough to resist packaged equipment movement during a seismic event when base is anchored to building structure.

2.2 MANUFACTURERS

- A. Manufacturers for fully assembled packaged vacuum pump units:
1. Allied Healthcare Products, Inc.
 2. BeaconMedas
 3. Amico
 4. Pattons Medical

2.3 OIL-FREE, ROTARY CLAW VACUUM PUMPS

- A. Description: Packaged unit.
- B. Vacuum Pump(s): Oil-free, rotary, claw type.
1. Air-cooled
 2. Direct drive
 3. Heavy duty precision timing gears
 4. Outlet silencers on discharge connections.

- C. Capacities and Characteristics: REFER TO SCHEDULE ON DRAWINGS

2.4 OIL-FREE, ROTARY, SLIDING-VANE VACUUM PUMPS

- A. Description: Packaged unit.
- B. Vacuum Pump(s): Nonpulsating, oil-free, rotary, sliding-vane type.
 - 1. Cleanable inlet screens.
 - 2. Outlet silencers on discharge connections.
- C. Capacities and Characteristics: REFER TO SCHEDULE ON DRAWINGS

2.5 OIL-SEALED, ROTARY, SLIDING-VANE VACUUM PUMPS

- A. Description: Packaged unit.
- B. Vacuum Pumps: Nonpulsating, oil-sealed, rotary, sliding-vane type.
 - 1. Cleanable inlet screens.
 - 2. Outlet silencers and oil-mist separators on discharge connections.
- C. Capacities and Characteristics: REFER TO SCHEDULE ON DRAWINGS

2.6 MEDICAL VACUUM EQUIPMENT ALARM SYSTEMS

- A. General Requirements for Medical Vacuum Equipment Alarm System: Compatible alarm panels, remote sensing devices, and other related components as required by NFPA 99 for Level 1 alarm systems. Refer to Division 22 Section "Vacuum Piping for Healthcare Facilities" for medical vacuum piping and alarm systems. Power wiring is specified in Division 26 Sections.
- B. Components: Designed for continuous service and to operate on power supplied from 120-V ac power source to alarm panels and with connections for low-voltage wiring to remote sensing devices. Include a minimum of two step-down transformers.
- C. Vacuum Switches or Transducer Sensors: Continuous equipment monitoring with electrical connections for alarm system.
 - 1. Vacuum Switches: 0- to 30-in. Hg vacuum operating range.
- D. General Requirements for Medical Vacuum Equipment Alarm Panels: Factory wired with audible and color-coded visible signals to indicate specified functions.
 - 1. Mounting: Exposed, surface installation.
 - 2. Enclosures: Fabricated from minimum 0.047-inch-thick steel or minimum 0.05-inch-thick aluminum, with knockouts for electrical and piping connections.

2.7 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 22 Section "Common Motor Requirements for Plumbing Equipment."
 - 1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 - 2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.

2.8 COMPUTER INTERFACE CABINET

- A. Description:
 - 1. Wall mounting.
 - 2. Welded steel with white-enamel finish.
 - 3. Gasketed door.
 - 4. Grounding device.
 - 5. Factory-installed signal circuit boards.
 - 6. Power transformer.
 - 7. Circuit breaker.
 - 8. Wiring terminal board.
 - 9. Internal wiring capable of interfacing all alarm signals.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean vacuum equipment, accessories, and components that have not been cleaned for oxygen service and sealed or that are furnished unsuitable for medical vacuum applications, according to CGA G4.1, "Cleaning Equipment for Oxygen Service."

3.2 VACUUM EQUIPMENT INSTALLATION

- A. Install vacuum equipment for healthcare facilities according to ASSE 6010 and NFPA 99.
- B. Equipment Mounting: Install vacuum producers on concrete bases using ~~[elastomeric pads]~~ ~~[elastomeric mounts]~~ restrained spring isolators. Comply with requirements in Division 03 Section "Cast-in-Place Concrete." Comply with requirements for vibration isolation devices specified in Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment."
 - 1. Minimum Deflection: 1/4 inch ~~[1 inch]~~ ~~<Insert dimension>~~.
 - 2. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 3. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Install vacuum equipment anchored to substrate.

- D. Orient equipment so controls and devices are accessible for servicing with clearances per the NEC.
- E. Maintain manufacturer's recommended clearances for service and maintenance.
- F. General Requirements for Compressed-Air Equipment Installation:
 - 1. Install compressed-air equipment to allow maximum headroom unless specific mounting heights are indicated.
 - 2. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces unless otherwise indicated.
 - 3. Install mechanical equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations.
 - 4. Install equipment to allow right of way for piping installed at required slope.
 - 5. Install the following devices on vacuum equipment:
 - a. Thermometer, Vacuum Gage, and Pressure Relief Valve: Install on each vacuum pump receiver.
 - b. Drain Valves: Install on receivers. Discharge receiver condensate over nearest floor drain. Discharge separator oral evacuation fluids by direct connection into sanitary waste piping system.

3.3 MEDICAL VACUUM EQUIPMENT ALARM SYSTEM INSTALLATION

- A. Alarm panels for medical vacuum equipment may be combined in single panels with medical air equipment and medical gas piping systems.
- B. Install medical vacuum equipment alarm system components in locations required by and according to NFPA 99.

3.4 COMPUTER INTERFACE CABINET INSTALLATION

- A. Install computer interface cabinet with connection to medical vacuum piping alarm system and to facility computer.

3.5 CONNECTIONS

- A. Comply with requirements for drain piping specified in Division 22 Section "Sanitary Waste and Vent Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements for vacuum piping specified in Division 22 Section "Vacuum Piping for Healthcare Facilities." Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Install piping adjacent to equipment to allow service and maintenance.
- D. Connect vacuum piping to vacuum equipment, accessories, and specialties with shutoff valve and union or flanged connection.

3.6 IDENTIFICATION

- A. Identify medical vacuum equipment system components. Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment." and with NFPA 99.

3.7 FIELD QUALITY CONTROL FOR HEALTHCARE-FACILITY MEDICAL VACUUM EQUIPMENT

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Tests and Inspections:
 - 1. Medical Vacuum Equipment Testing Coordination: Perform tests, inspections, verifications, and certification of medical vacuum equipment concurrently with tests, inspections, and certification of medical compressed-air equipment, medical compressed-air piping, medical vacuum piping and medical gas piping systems.
 - 2. Preparation: Perform medical vacuum equipment tests according to requirements in NFPA 99 for the following:
 - a. System operation test.
 - 3. Equipment Verification: Comply with requirements in ASSE 6020, ASSE 6030, and NFPA 99 for verification of medical vacuum equipment.
 - 4. Replace damaged and malfunctioning controls and equipment.
 - 5. Testing Certification: Certify that specified tests, inspections, and procedures have been performed and certify report results. Include the following:
 - a. Inspections performed.
 - b. Procedures and materials used.
 - c. Test methods used.
 - d. Results of tests.
- E. Components will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

3.8 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Check for lubricating oil in lubricated-type equipment.
 - 3. Check belt drives for proper tension.
 - 4. Verify that vacuum producer outlet piping is clear.

5. Check for equipment vibration-control supports and flexible pipe connectors and verify that equipment is properly attached to substrate.
 6. Check safety valves for correct settings.
 7. Check for proper seismic restraints.
 8. Drain receiver tank.
 9. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 10. Test and adjust controls and safeties.
- B. Verify that vacuum equipment is installed and connected according to the Contract Documents.
- C. Verify that electrical wiring installation complies with manufacturer's submittal and written installation requirements in Division 26 Sections.
- D. Prepare written report documenting testing procedures and results.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain vacuum producers.

END OF SECTION

SECTION 226313

GAS PIPING FOR HEALTHCARE FACILITIES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. ~~Carbon dioxide piping and specialties designated "medical carbon dioxide" operating at [50 to 55 psig] <Insert pressure range>.~~
2. ~~Helium piping, designated "medical helium" operating at [50 to 55 psig] <Insert pressure range>.~~
3. ~~Nitrogen piping and specialties designated "medical nitrogen" operating at [160 to 185 psig] [higher than 200 psig] <Insert pressure range>.~~
4. ~~Nitrous oxide piping and specialties designated "medical nitrous oxide" operating at [50 to 55 psig] <Insert pressure range>.~~
5. ~~Oxygen piping and specialties designated "medical oxygen" operating at 50 to 55 psig~~
6. ~~<Insert specialty gas> piping and specialties designated "specialty <Insert designation>" operating at [50 to 55 psig] <Insert pressure range>.~~

B. Owner-Furnished Material:

1. ~~Medical gas manifolds.~~
2. ~~Ceiling columns.~~
3. ~~Bulk gas storage tanks.~~
4. ~~Med Gas booms.~~
5. ~~Modular Headwalls.~~
6. ~~Owner will furnish gases for medical gas concentration testing specified in this Section.~~

C. Related Sections include the following:

1. ~~Division 12 Section "Healthcare Casework" for gas outlets in metal medical casework.~~
2. ~~Division 22 Section "Compressed Air Piping for Healthcare Facilities" for compressed air piping systems for healthcare facilities.~~
3. ~~Division 22 Section "Vacuum Piping for Healthcare Facilities" for vacuum piping systems for healthcare facilities.~~

- ~~4. Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment" for hangers and supports.~~
- ~~5. Division 22 Section "Common Work Results for Plumbing" for Sleeves and Escutcheons.~~

1.2 DEFINITIONS

- A. CR: Chlorosulfonated polyethylene synthetic rubber.
- B. D.I.S.S.: Diameter-index safety system.
- C. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- D. Medical gas piping systems include medical carbon dioxide, medical helium, medical nitrogen, medical nitrous oxide, and medical oxygen nonflammable gas for healthcare facility patient care or for healthcare laboratory applications.

1.3 SUBMITTALS

- A. Product Data: For the following:
 - ~~1. Tubes and fittings.~~
 - ~~2. Valves and valve boxes.~~
 - ~~3. Medical gas outlets.~~
 - ~~4. Electrical service connections.~~
 - ~~5. Medical nitrogen pressure control panels.~~
 - ~~6. Ceiling hose assemblies. Include integral service connections.~~
 - ~~7. Gas manifolds.~~
 - ~~8. Medical gas alarm system components.~~
 - ~~9. Gas cylinder storage racks.~~
- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Piping Material Certification: Signed by Installer certifying that medical gas piping materials comply with NFPA 99 requirements.
- D. Qualification Data: For Installer and testing agency.
- E. Brazing certificates.
- F. Field quality-control test reports.
- G. Operation and Maintenance Data: For specialty and medical gas piping specialties to include in emergency, operation, and maintenance manuals.

1.4 QUALITY ASSURANCE

A. Installer Qualifications:

- ~~1. Medical Gas Piping Systems for Healthcare Facilities: Qualify installers according to ASSE Standard #6010 for installers.~~

B. Testing Agency Qualifications: An independent testing agency, with the experience and capability to conduct the medical gas piping testing indicated, that is a member of the Medical Gas Professional Healthcare Organization or is an NRTL as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

- ~~1. Qualify testing personnel according to ASSE Standard #6020 for inspectors and ASSE Standard #6030 for verifiers.~~

C. Brazing: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications"; or AWS B2.2, "Standard for Brazing Procedure and Performance Qualification."

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. ASME Compliance: Fabricate and label bulk medical gas storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

F. NFPA Compliance:

- ~~1. Comply with NFPA 99, for bulk oxygen storage tanks.~~
- ~~2. Comply with NFPA 99, "Health Care Facilities," for medical gas piping system materials and installation.~~

G. CGA Compliance: Comply with CGA G-8.1, "Nitrous Oxide Systems at Consumer Sites," for bulk nitrous oxide storage tanks.

H. UL Compliance:

- ~~1. Comply with UL 498, "Attachment Plugs and Receptacles," for electrical service connections.~~

1.5 PROJECT CONDITIONS

~~A. Interruption of Existing [Specialty] [and] [Medical] Gas Service(s): Do not interrupt [specialty] [or] [medical] gas service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:~~

- ~~1. Notify Architect, Construction Manager and Owner no fewer than five days in advance of proposed interruption of [specialty] [and] [medical] gas service(s).~~
- ~~2. Do not proceed with interruption of [specialty] [and] [medical] gas service(s) without Owner's written permission.~~

1.6 COORDINATION

- A. Coordinate medical gas outlets with other service connections. Compressed-air service connections are specified in Division 22 Sections "Compressed-Air Piping for Healthcare Facilities" and "Vacuum Piping for Healthcare Facilities."

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

- A. Copper Medical Gas Tube: ASTM B 819, Types K and L, seamless, drawn temper that has been manufacturer cleaned, purged, and sealed for medical gas service or according to CGA G-4.1 for oxygen service. Include standard color marking "OXY," "MED," "OXY/MED," "OXY/ACR," or "ACR/MED" in green for Type K tube and blue for Type L tube.

- ~~1. General Requirements for Copper Fittings: Manufacturer cleaned, purged, and bagged for oxygen service according to CGA G-4.1.~~
- ~~2. Wrought Copper Fittings: ASME B16.22, solder-joint pressure type or MSS SP-73, with dimensions for brazed joints.~~
- ~~3. Memory-Metal Couplings (Smart Tap): Cryogenic compression fitting made of ASTM F 2063, nickel-titanium, shape-memory alloy, and that has been manufacturer cleaned, purged, and sealed for oxygen service according to CGA G-4.1.~~

- a. Manufacturers:

- 1) Smart Technology, Inc.

- B. PVC Pipe: ASTM D 1785, Schedule 40. (Protective conduit)

- ~~1. PVC Fittings: ASTM D 2466, Schedule 40; socket type.]~~

2.2 JOINING MATERIALS

- A. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys.
- B. [Solvent Cement for Joining PVC Piping: ASTM D 2564. Include primer complying with ASTM F 656.]

- 2.3 Manufacturers for all products listed below including valves, zone valve boxes, alarms and manifolds:

- a. Allied Healthcare Products, Inc.
 - b. Amico Corporation.
 - c. BeaconMedaes.

2.4 VALVES

- A. General Requirements for Valves: Manufacturer cleaned, purged, and bagged according to CGA G-4.1 for oxygen service.
- B. Ball Valves: MSS SP-110, 3-piece body, brass or bronze.
 - 1. ~~Pressure Rating: 300 psig minimum.~~
 - 2. ~~Ball: Full port, chrome-plated brass.~~
 - 3. ~~Seats: PTFE or TFE.~~
 - 4. ~~Handle: Lever type with locking device.~~
 - 5. ~~Stem: Blowout proof with PTFE or TFE seal.~~
 - 6. ~~Ends: Manufacturer installed ASTM B 819, copper tube extensions.~~
- C. Check Valves: In-line pattern, bronze.
 - 1. ~~Pressure Rating: 300 psig minimum.~~
 - 2. ~~Operation: Spring loaded.~~
 - 3. ~~Ends: Manufacturer installed ASTM B 819, copper tube extensions.~~
- D. Zone Valves: MSS SP-110, 3-piece-body, brass or bronze ball valve with gage.
 - 1. ~~Pressure Rating: 300 psig minimum.~~
 - 2. ~~Ball: Full port, chrome-plated brass.~~
 - 3. ~~Seats: PTFE or TFE.~~
 - 4. ~~Handle: Lever.~~
 - 5. ~~Stem: Blowout proof with PTFE or TFE seal.~~
 - 6. ~~Ends: Manufacturer installed ASTM B 819, copper tube extensions.~~
 - 7. ~~Pressure Gage: Manufacturer installed on one copper tube extension.~~
- E. Zone Valve Boxes: Formed steel with anchors for recessed mounting, holes with grommets in box sides for tubing extension protection, and of size for single or multiple valves with pressure gages and in sizes required to permit manual operation of valves.
 - 1. ~~Interior Finish: Factory applied white enamel.~~
 - 2. ~~Cover Plate: Aluminum or extruded anodized aluminum with frangible or removable windows.~~
 - 3. ~~Valve Box Windows: Clear or tinted transparent plastic with labeling that includes rooms served, according to NFPA 99.~~

- F. Emergency Oxygen Connections: Low-pressure oxygen inlet assembly for connection to building oxygen piping systems.
1. ~~Enclosure: Weatherproof hinged locking cover with caption similar to "Emergency Low-Pressure Gaseous Oxygen Inlet."~~
 2. ~~Inlet: Manufacturer installed, NPS 1, ASTM B 819, copper tubing with NPS 1 minimum ball valve and plugged inlet.~~
 3. ~~Safety Valve: Bronze body, pressure relief valve set at 75 or 80 psig.~~
 4. ~~Instrumentation: Pressure gage.~~
- G. Safety Valves: Bronze-body, ASME-construction, poppet, pressure-relief type with settings to match system requirements.
- H. Pressure Regulators: Bronze body and trim; spring-loaded, diaphragm-operated, relieving type; manual pressure-setting adjustment; rated for 250-psig minimum inlet pressure; and capable of controlling delivered gas pressure within 0.5 psig for each 10-psig inlet pressure.

2.5 MEDICAL GAS OUTLETS

- A. General Requirements for Medical Gas Outlets: For specific medical gas pressure and suction service listed. Include roughing-in assemblies, finishing assemblies, and cover plates. Individual cover plates are not required if service connection is in multiple unit or assembly with cover plate. Furnish recessed-type units made for concealed piping unless otherwise indicated.
1. ~~Roughing in Assembly:~~
 - a. Steel outlet box for recessed mounting and concealed piping.
 - b. Brass-body outlet block with secondary check valve that will prevent gas flow when primary valve is removed. Suction inlets to be without secondary valve.
 - c. Double seals that will prevent gas leakage.
 - d. ASTM B 819, NPS 3/8 copper outlet tube brazed to valve with service marking and tube-end dust cap.
 2. ~~Finishing Assembly:~~
 - a. Brass housing with primary check valve.
 - b. Double seals that will prevent gas leakage.
 - c. Cover plate with gas-service label.
 3. ~~Quick-Coupler gas outlets: Pressure outlets for [carbon dioxide] [nitrous oxide] oxygen [and] <Insert medical gas> service connections with noninterchangeable keyed indexing to prevent interchange between services, constructed to permit one-handed connection and removal of equipment, and with positive locking ring that retains equipment stem in valve during use.~~
 4. ~~D.I.S.S. gas outlets: Pressure outlets, complying with CGA V-5, with threaded indexing to prevent interchange between services, constructed to permit one-handed connection and removal of equipment.~~
 - a. ~~Medical Carbon Dioxide outlets: D.I.S.S. No. 1080.~~
 - b. ~~Medical Helium outlets: D.I.S.S. No. 1060.~~

- ~~c. Medical Nitrogen outlets: D.I.S.S. No. 1120.~~
- ~~d. Medical Nitrous Oxide outlets: D.I.S.S. No. 1040.~~
- ~~e. Medical Oxygen outlets: D.I.S.S. No. 1240.~~
- ~~f. <Insert medical gas> outlets: <Insert D.I.S.S. number>, [pressure outlet] [suction inlet].~~

- ~~5. Cover Plates: One piece, [stainless steel, with NAAMM AMP 503, No. 4 finish] metal, with chrome-plated finish and permanent, color-coded, identifying label matching corresponding service.~~

2.6 ELECTRICAL SERVICE CONNECTIONS

- A. Power Outlets: UL 498, Hospital Grade, 125-V receptacles; color selected by Architect. Include the following configurations complying with NEMA WD 1:

- ~~1. L5-20R, locking type, 20 A, single or duplex.~~
- ~~2. L5-20R, isolated ground, locking type, 20 A, single or duplex.~~
- ~~3. Explosion proof, 20 A, 2 pole, 3 wire, single; suitable for Class I, Group C hazardous location and interchangeable with receptacles used in nonhazardous areas; flush mounted.~~
- ~~4. 5-20R, straight blade, 20 A, duplex.~~
- ~~5. 5-20R, isolated ground, straight blade, 20 A, duplex.~~

- B. Electrical Accessory Outlets: Provide the following configured receptacles in color selected by Architect:

- ~~1. Patient Equipment Ground Jack: Single pole, 30 A.~~
- ~~2. Patient Monitoring: Single, 5 and 37 pin.~~

- C. Wall Outlet Cover Plates: One piece, [stainless steel, with NAAMM AMP 503, No. 4 finish] [metal, with chrome-plated finish] [anodized aluminum] and permanent identifying label.

2.7 MEDICAL NITROGEN PRESSURE CONTROL PANELS

- A. Description: Steel box and support brackets for recessed roughing-in with stainless-steel or anodized-aluminum cover plate with printed operating instructions. Include manifold assembly consisting of inlet supply valve, inlet supply pressure gage, line-pressure control regulator, outlet supply pressure gage, D.I.S.S. service connection, and piping outlet for remote service connection.

- ~~1. Minimum Working Pressure: 200 psig.~~
- ~~2. Line Pressure Control Regulator: Self-relieving diaphragm type with precision manual adjustment.~~
- ~~3. Pressure Gages: 0 to 300 psig range.~~
- ~~4. Service Connection: CGA V-5, D.I.S.S. No. 1120, nitrogen outlet.~~

5. ~~Before final assembly, provide temporary dust shield and U-tube for testing.~~
6. ~~Label cover plate "Nitrogen Pressure Control."~~

2.8 CEILING HOSE ASSEMBLIES

- A. Fixed Hose Service Assemblies: Individual, concealed hose connection with stainless-steel face plates, steel mounting boxes, factory- or field-fabricated mounting brackets, and color-coded service hoses with retractor device and service connections matching hoses. Include 72 inches of conductive, CR, 1/4- or 5/16-inch-, ID, medical gas hoses rated for 200-psig minimum working pressure, and the following service hose connections:

1. ~~Instrument Air Hose: D.I.S.S. No. 1160 pressure outlet.~~
2. ~~Medical Air Hose: Quick-coupler D.I.S.S. No. 1160 pressure outlet.~~
3. ~~Medical Carbon Dioxide Hose: [Quick-coupler] [D.I.S.S. No. 1080] pressure outlet.~~
4. ~~Medical Nitrogen Hose: D.I.S.S. No. 1120 pressure outlet.~~
5. ~~Medical Nitrous Oxide Hose: [Quick-coupler] [D.I.S.S. No. 1040] pressure outlet.~~
6. ~~Medical Oxygen Hose: Quick-coupler pressure outlet.~~
7. ~~Medical Vacuum Hose: Quick-coupler suction inlet.~~
8. ~~WAGD Evacuation Hose: [Quick-coupler] [D.I.S.S. No. 2220] suction inlet.~~
9. ~~<Insert medical gas> Hose: <Insert number and type>.~~

2.9 GAS MANIFOLDS

- A. Medical Gas Manifolds: Comply with NFPA 99, Ch. 5, for high-pressure medical gas cylinders.

1. ~~Central Control Panel Unit: Weatherproof cabinet, supply and delivery pressure gages, electrical alarm system connections and transformer, indicator lights or devices, manifold connection, pressure changeover switch, line pressure regulator, shutoff valves, and safety valve.~~
2. ~~Manifold and Headers: Duplex, nonferrous metal header for number of cylinders indicated, divided into two equal banks. Units include design for 2000-psig minimum inlet pressure, except nitrous oxide manifolds may be designed for 800 psig and carbon dioxide manifolds may be designed for 1500 psig <Insert pressure>. Include cylinder bank headers with inlet (pigtail) connections complying with CGA V-1, individual inlet check valves, shutoff valve, pressure regulator, check valve, and pressure gage.~~
3. ~~Operation: Automatic, pressure-switch-activated changeover from one cylinder bank to the other when first bank becomes exhausted, without line pressure fluctuation or resetting of regulators and without supply interruption by shutoff of either cylinder bank header.~~
4. ~~Medical Carbon Dioxide Manifolds: For <Insert number of cylinders per bank> at [55-psig] <Insert pressure> line pressure.~~

- ~~5. Medical Helium Manifolds: For <Insert number of cylinders per bank> at [55-psig] <Insert pressure> line pressure.~~
- ~~6. Medical Nitrous Oxide Manifolds: For <Insert number of cylinders per bank> at [55-psig] <Insert pressure> line pressure, with electric heater or orifice design that will prevent freezing during high demand.~~
- ~~7. Medical Nitrogen Manifolds: For <Insert number of cylinders per bank> at [180-psig] [higher than 200-psig] <Insert pressure> line pressure.~~
- ~~8. Medical Oxygen Manifolds: For 3 cylinders per bank at 55-psig line pressure.~~
- ~~9. Medical Gas Cylinders: Will be furnished by Owner Number and type of medical gas cylinders required for complete manifold systems].~~
- ~~10. Label manifold control unit with permanent label identifying medical gas type and system operating pressure.~~
- ~~11. Mounting: Wall with mounting brackets for manifold control cabinet and headers [Floor with support legs for manifold control cabinet].~~

2.10 GAS CYLINDER STORAGE RACKS

- A. Wall Storage Racks: Fabricate racks with chain restraints for upright cylinders as indicated or provide equivalent manufactured wall racks.
- B. Freestanding Storage Racks: Fabricate racks as indicated or provide equivalent manufactured storage racks.

2.11 BULK GAS STORAGE TANKS

- A. Contractor to coordinate with owner and bulk gas supplier for bulk gas storage tanks and systems.

2.12 MEDICAL GAS PIPING ALARM SYSTEMS

- A. Panels for medical gas piping systems may be combined in single panels with medical compressed-air and medical vacuum piping systems.
- B. Components: Designed for continuous service and to operate on power supplied from 120-V ac power source to alarm panels and with connections for low-voltage wiring to remote sensing devices. Include step-down transformers if required.
- C. Pressure Switches or Pressure Transducer Sensors: Continuous line monitoring with electrical connections for alarm system.
 - ~~1. Low Pressure Operating Range: 0 to 100-psig.~~
 - ~~2. High Pressure Operating Range: Up to 250-psig.~~
- D. General Requirements for Medical Gas Alarm Panels: Factory wired with audible and color-coded visible signals to indicate specified functions.

1. ~~Mounting: Recessed installation.~~

2. ~~Enclosures: Fabricated from minimum 0.047-inch-thick steel or minimum 0.05-inch-thick aluminum, with knockouts for electrical and piping connections.~~

E. Master Alarm Panels: With separate trouble alarm signals, pressure gages, and indicators for medical gas piping systems.

1. ~~Include alarm signals when the following conditions exist:~~

a. ~~Medical Carbon Dioxide: Pressure drops below 40 psig or rises above 60 psig and changeover is made to alternate bank.~~

b. ~~Medical Helium: Pressure drops below 40 psig or rises above 60 psig and changeover is made to alternate bank.~~

c. ~~Medical Nitrogen: Pressure drops below 145 psig or rises above 200 psig and changeover is made to alternate bank.~~

d. ~~Medical Nitrous Oxide: Liquid level is low, pressure downstream from main shutoff valve drops below 40 psig or rises above 60 psig, changeover is made to reserve, reserve is in use, and reserve level is low.~~

e. ~~Medical Nitrous Oxide: Pressure drops below 40 psig or rises above 60 psig and changeover is made to alternate bank.~~

f. Medical Oxygen: Liquid level is low, pressure downstream from main shutoff valve drops below 40 psig or rises above 60 psig, changeover is made to reserve, reserve is in use, reserve level is low, and reserve pressure is low.

g. Medical Oxygen: Pressure downstream from main shutoff valve drops below 40 psig or rises above 60 psig and changeover is made to alternate bank.

F. Area Alarm Panels: Separate trouble alarm signals; pressure gages; and indicators for medical gas piping systems.

1. ~~Include alarm signals when the following conditions exist:~~

a. ~~Medical Carbon Dioxide: Pressure drops below 40 psig or rises above 60 psig.~~

b. ~~Medical Helium: Pressure drops below 40 psig or rises above 60 psig.~~

c. ~~Medical Nitrous Oxide: Pressure drops below 40 psig or rises above 60 psig.~~

d. ~~Medical Nitrogen: Pressure drops below 145 psig or rises above 200 psig.~~

e. Medical Oxygen: Pressure drops below 40 psig or rises above 60 psig.

2.13 COMPUTER INTERFACE CABINET

A. Description: Wall-mounting, welded-steel, control cabinet with gasketed door, mounting brackets, grounding device, and white-enamel finish for connection of medical gas system alarms to facility computer. Include factory-installed signal circuit boards, power transformer, circuit breaker, wiring terminal board, and internal wiring capable of interfacing all alarm signals.

2.14 NITROGEN

A. Description: Comply with USP 28 - NF 23 for oil-free dry nitrogen for blow down and testing.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Cleaning of Medical Gas Tubing: If manufacturer-cleaned and -capped fittings or tubing are not available or if precleaned fittings or tubing must be recleaned because of exposure, have supplier or separate agency acceptable to authorities having jurisdiction, perform the following procedures:
- ~~1. Clean medical gas tube and fittings, valves, gages, and other components of oil, grease, and other readily oxidizable materials as required for oxygen service according to CGA G-4.1, "Cleaning Equipment for Oxygen Service."~~
 - ~~2. Wash medical gas tubing and components in hot, alkaline cleaner water solution of sodium carbonate or trisodium phosphate in proportion of 1 lb of chemical to 3 gal. of water.~~
 - a. Scrub to ensure complete cleaning.
 - b. Rinse with clean, hot water to remove cleaning solution.

3.2 EARTHWORK

- A. Comply with requirements in Division 31 Section "Earth Moving" for excavating, trenching, and backfilling and for underground warning tapes.

3.3 PIPING APPLICATIONS

- A. Medical Gas Piping Except Nitrogen: Use Type L, copper medical gas tube; wrought-copper fittings; and brazed joints.
- B. Medical Nitrogen Piping NPS 2-1/2 and Smaller: Type L, copper medical gas tube; wrought-copper fittings; and brazed joints.
- C. Medical Nitrogen Piping NPS 3 and Larger: Type K, copper tube; wrought-copper fittings; and brazed joints.
- D. [Protective Conduit: Use PVC pipe, PVC fittings, and solvent-cemented joints.]

3.4 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of gas piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, equipment sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Comply with ASSE Standard #6010 for installation of medical gas piping.
- C. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.

- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and coordinate with other services occupying that space.
- F. Install piping adjacent to equipment and specialties to allow service and maintenance.
- G. Install nipples, and special fittings, and valves with pressure ratings same as or higher than system pressure rating used in applications below unless otherwise indicated.
- H. Install piping to permit valve servicing.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and branch connections.
- K. Install exterior, buried medical gas piping in protective conduit fabricated with PVC pipe and fittings.
- L. Install medical gas outlets recessed in walls. Attach roughing-in assembly to substrate; attach finishing assembly to roughing-in assembly.
- M. Connect medical gas piping to medical gas sources and to medical gas outlets and equipment requiring medical gas service.

3.5 VALVE INSTALLATION

- A. Install shutoff valve at each connection to healthcare equipment and specialties.
- B. Install check valves to maintain correct direction of gas flow from healthcare gas supplies.
- C. Install zone valve boxes recessed in wall and anchored to substrate. Single boxes may be used for multiple valves that serve same area or function.
- D. Install zone valves and gages in zone valve boxes. Rotate valves to angle that prevents closure of cover when valve is in closed position.
- E. Install pressure regulators on gas piping where reduced pressure is required.
- F. Install emergency oxygen connection with pressure relief valve and full-size discharge piping to outside, with check valve downstream from pressure relief valve and with ball valve and check valve in supply main from bulk oxygen storage tank.

3.6 JOINT CONSTRUCTION

- A. Remove scale, slag, dirt, and debris from outside of cleaned tubing and fittings before assembly.
- B. Threaded Joints: Apply appropriate tape to external pipe threads.

- C. Brazed Joints: Join copper tube and fittings according to CDA's "Copper Tube Handbook," "Braze Joints" Chapter. Continuously purge joint with oil-free, dry nitrogen during brazing.
- D. Memory-Metal Coupling "Smart Tap" joints: Join new copper tube to existing tube according to procedures developed by fitting manufacturer for installation of memory-metal coupling joints.
- E. ~~Solvent-Cemented Joints: Clean and dry joining surfaces. Join PVC pipe and fittings according to the following:~~
 - 1. ~~Comply with ASTM F 402 for safe handling practice of cleaners, primers, and solvent cements.~~
 - 2. ~~Apply primer and join according to ASME B31.9 for solvent-cemented joints and to ASTM D 2672.~~

3.7 GAS SERVICE COMPONENT INSTALLATION

- A. Assemble patient headwall units with outlets. Install with supplies concealed, in walls. Attach console box or mounting bracket to substrate.
- B. Install nitrogen pressure-control panels in walls. Attach to substrate.
- C. Assemble ceiling assemblies and install anchored to substrate. Provide structural steel, hanger rods, anchors, and fasteners in addition to components furnished with specialties necessary to fabricate supports.
- D. Install gas manifolds anchored to substrate.
- E. Install gas cylinders and connect to manifold piping.
- F. Install gas manifolds with seismic restraints as indicated.

3.8 MEDICAL GAS PIPING ALARM SYSTEM INSTALLATION

- A. Install medical gas alarm system components in locations required by and according to NFPA 99.
- B. Install medical gas area and master alarm panels where indicated.
- C. Install computer interface cabinet with connection to medical compressed-air-piping alarm system and to facility computer.

3.9 LABELING AND IDENTIFICATION

- A. Install identifying labels and devices for healthcare medical gas piping systems according to NFPA 99. Use the following or similar captions and color-coding for piping products where required by NFPA 99:
 - 1. ~~Carbon Dioxide: Black or white letters on gray background.~~
 - 2. ~~Helium: White letters on brown background.~~

- ~~3. Nitrogen: White letters on black background.~~
- ~~4. Nitrous Oxide: White letters on blue background.~~
- ~~5. Oxygen: White letters on green background or green letters on white background.~~

3.10 FIELD QUALITY CONTROL FOR HEALTHCARE FACILITY MEDICAL GAS

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections of medical gas piping systems in healthcare facilities and prepare test reports.
- B. Perform tests and inspections of medical gas piping systems in healthcare facilities and prepare test reports.
- C. Tests and Inspections:
 - ~~1. Medical Gas Piping Testing Coordination: Perform tests, inspections, verifications, and certification of medical gas piping systems concurrently with tests, inspections, and certification of medical compressed air piping and medical vacuum piping systems.~~
 - ~~2. Preparation: Perform the following Installer tests according to requirements in NFPA 99 and ASSE Standard #6010:~~
 - a. Initial blow down.
 - b. Initial pressure test.
 - c. Cross-connection test.
 - d. Piping purge test.
 - e. Standing pressure test for positive pressure medical gas piping.
 - f. Standing pressure test for vacuum systems.
 - g. Repair leaks and retest until no leaks exist.
 - ~~3. System Verification: Comply with requirements in NFPA 99, ASSE Standard #6020, and ASSE Standard #6030 for verification of medical gas piping systems and perform the following tests and inspections:~~
 - a. Standing pressure test.
 - b. Individual-pressurization or pressure-differential cross-connection test.
 - c. Valve test.
 - d. Master and area alarm tests.
 - e. Piping purge test.
 - f. Piping particulate test.
 - g. Piping purity test.
 - h. Final tie-in test.
 - i. Operational pressure test.
 - j. Medical gas concentration test.
 - k. Medical air purity test.
 - l. Verify correct labeling of equipment and components.
 - m. Verify the following source equipment:
 - 1) Medical gas supply sources.
 - ~~4. Testing Certification: Certify that specified tests, inspections, and procedures have been performed and certify report results. Include the following:~~

- a. Inspections performed.
 - b. Procedures, materials, and gases used.
 - c. Test methods used.
 - d. Results of tests.
- D. Remove and replace components that do not pass tests and inspections and retest as specified above.

3.11 DEMONSTRATION

- A. Engage factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain medical gas alarm system. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 230130.51

HVAC AIR DUCT CLEANING

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes cleaning of the following duct systems:
 - 1. Supply system.
 - 2. Return system.
 - 3. Exhaust system.
- B. Related Sections:
 - 1. Division 23 Section "Metal Ducts" for duct construction and connection methods.
 - 2. Division 23 Section "Air Duct Accessories" for additional duct connection requirements.

1.2 DEFINITIONS

- A. ASCS: Air system cleaning specialist.
- B. NADCA: National Air Duct Cleaners Association.
- C. SMACNA: Sheet Metal and Air Conditioning Contractors' National Association.

1.3 INFORMATIONAL SUBMITTALS

- A. Manufacturer Certificates: Signed by manufacturers certifying that products comply with requirements.
- B. Qualification Data: For ASCS.
- C. Field quality-control test reports.

1.4 QUALITY ASSURANCE

- A. ASCS Qualifications: A certified member of NADCA.
 - 1. Certification: Employ an ASCS certified by NADCA on a full-time basis.
 - 2. Supervisor Qualifications: Certified as an ASCS by NADCA.
 - 3. Experience: Submit records of experience in the field of HVAC systems cleaning.
 - 4. Equipment, Materials, and Labor: Have equipment, materials, and labor required to perform specified services.
- B. Comply with current published standards of NADCA.

PART 2 - PRODUCTS (No products listed)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine systems to determine appropriate methods, tools, and equipment required for performance of work.
- B. Prepare written report listing conditions detrimental to performance of work.
- C. Proceed with work only after unsatisfactory conditions have been corrected.

3.2 CLEANING

- A. Engage a qualified ASCS to clean the following systems:
 - 1. Supply system.
 - 2. Return system.
 - 3. Exhaust system.
- B. Perform cleaning before air balancing or mark position of dampers and air-directional mechanical devices before cleaning.
- C. Use duct-mounted access doors, as required, for physical and mechanical entry and for inspection.
 - 1. Install additional duct-mounting access doors to comply with duct cleaning standards. Comply with requirements in Division 23 Section "Air Duct Accessories" for additional duct-mounting access doors.
 - 2. Disconnect and reconnect flexible ducts as needed for cleaning and inspection. Replace damaged and deteriorated flexible ducts. Comply with requirements in Division 23 Section "Air Duct Accessories" for flexible ducts.
 - 3. Disconnect and reconnect flexible connectors as needed for cleaning and inspection. Replace damaged and deteriorated flexible connectors. Comply with requirements in Division 23 Section "Air Duct Accessories" for flexible connectors.
 - 4. Reseal rigid-fiberglass-duct systems according to NAIMA recommended practices.
 - 5. Replace damaged fusible links on fire and smoke dampers. Replacement fusible links shall be same rating as those being replaced. Comply with requirements in Division 23 Section "Air Duct Accessories" for fusible links.
 - 6. Remove and reinstall ceiling components to gain access for duct cleaning. Clean ceiling components after they have been removed and replaced.
- D. Mark position of dampers and air-directional mechanical devices before cleaning, and restore to their marked position on completion.
- E. Particulate Collection and Odor Control:
 - 1. Where venting vacuuming system inside building, use HEPA filtration with 99.97 percent collection efficiency for 0.3-micron size (or greater) particles.

2. When venting vacuuming system outside building, use filtration to contain debris removed from the HVAC system and locate exhaust down wind and away from air intakes and other points of entry into building.

F. Clean the following metal-duct system components by removing visible surface contaminants and deposits:

1. Air outlets and inlets (registers, grilles, and diffusers).
2. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
3. Air-handling-unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
4. Coils and related components.
5. Return-air ducts, dampers, and actuators, except in ceiling plenums and mechanical room.
6. Supply-air ducts, dampers, actuators, and turning vanes.
7. Dedicated exhaust and ventilation components.

G. Mechanical Cleaning Methodology:

1. Clean metal-duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
2. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of ducts so areas being cleaned are under negative pressure.
3. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts or duct liner.
4. Clean fibrous-glass duct liner with HEPA vacuuming equipment, and do not permit duct liner to get wet. Replace fibrous-glass duct liner that is damaged, deteriorated, or delaminated or that has friable material, mold, or fungus growth.
5. Clean coils and coil drain pans according to NADCA 1992. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
6. Provide operative drainage system for washdown procedures.
7. Biocidal Agents and Coatings: Apply biocidal agents if fungus is present; use according to manufacturer's written instructions after removal of surface deposits and debris.

H. Cleanliness Verification:

1. Verify cleanliness after mechanical cleaning and before application of treatment, including biocidal agents and protective coatings.
2. Visually inspect metal-duct systems for contaminants.
3. Where contaminants are discovered, reclean and reinspect duct systems.

3.3 CONNECTIONS

- A. Reconnect ducts to fans and air-handling units with existing flexible connectors after cleaning ducts and flexible connectors. Replace existing damaged and deteriorated flexible connectors.
- B. For fans developing static pressures of 5-inch wg and higher, cover replacement flexible connectors with loaded vinyl sheet held in place with metal straps.

- C. Reconnect terminal units to supply ducts with existing flexible ducts or replace damaged and deteriorated existing flexible ducts with maximum 12-inch lengths of new flexible duct.
- D. Reconnect diffusers or light troffer boots to low-pressure ducts with existing flexible ducts or replace damaged and deteriorated existing flexible ducts with maximum 60-inch lengths of flexible duct clamped or strapped in place.
- E. Reconnect existing and new flexible ducts to metal ducts with methods described in Division 23 Section "Metal Ducts".

3.4 FIELD QUALITY CONTROL

- A. Gravimetric Analysis: Sections of metal-duct system, chosen randomly by Architect may be tested for cleanliness according to NADCA vacuum test gravimetric analysis.
 - 1. If analysis determines that levels of debris are equal to or lower than suitable levels, system shall have passed cleanliness verification.
 - 2. If analysis determines that levels of debris exceed suitable levels, system cleanliness verification will have failed and metal-duct system shall be recleaned and reverified.
- B. Verification of Coil Cleaning: Cleaning shall restore coil pressure drop to within 10 percent of pressure drop measured when coil was first installed. If original pressure drop is not known, coil will be considered clean only if it is free of foreign matter and chemical residue, based on thorough visual inspection.
- C. Report results of tests in writing.

END OF SECTION

SECTION 230500

COMMON WORK RESULTS FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Common terminology and requirements used throughout this Division.
2. Requirements for Acceptance Testing Agency.
3. Requirements for Professional Engineers responsible for Delegated Design.
4. Piping materials and installation instructions common to most piping systems.
5. Transition fittings.
6. Dielectric fittings.
7. Mechanical sleeve seals.
8. Sleeves.
9. Escutcheons.
10. Grout.
11. HVAC demolition.
12. Equipment installation requirements common to equipment sections.
13. Painting and finishing.
14. Concrete bases.
15. Supports and anchorages.

1.2 RELATED DOCUMENTS

A. In addition to Division 01 Specification Sections, related sections include the following:

1. Division 01 Section "Cutting and Patching"
2. Division 02 Section "Selective Structure Demolition" for general demolition requirements and procedures.
3. Division 03 Sections "Cast-in-Place Concrete" and "Miscellaneous Cast-in-Place Concrete".
4. Division 05 Section "Metal Fabrications" for structural steel.
5. Division 09 Sections "Interior Painting" and "Exterior Painting".
6. Division 08 Section "Access Doors and Frames" for access panels and doors.

1.3 DEFINITIONS

A. This section includes the following definitions that are common to most Division 23 Specifications.

1. Definitions found within this section, Division 23 "Common Work Results for HVAC," are considered to generally apply to all sections unless otherwise noted.
2. Other sections may increase or decrease the scope and usage of a particular word, phrase, or abbreviation for the section in which it appears.

- B. AHJ: Authority Having Jurisdiction. This abbreviation is the general term for all agencies having oversight and/or inspection authority for a scope of work, trade, or system. AHJ includes agencies such as local and state fire marshals, city inspectors, et. al.
- C. AHU: Air handling unit. This abbreviation is the general term for systems that filter and/or changes the sensible and/or latent properties of air supplied to a space. Its use is synonymous with RTU, roof top unit, irrespective of a system's physical location.
- D. Bound Material: Bound refers to materials permanently bound, as by stitching or glue, or materials securely fastened in their covers by multiple fasteners that penetrate all papers. Ring binders, spiral binders, brads and screw posts are acceptable fasteners. Loose papers clipped together or stapled at one (1) corner are not acceptable.
- E. Business Day: Where this Section and other Sections of this Division use the term "Business Day" it shall mean Monday thru Friday, excluding Holidays recognized by Federal, State and Local government.
- F. CAV: Constant air volume.
- G. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.
- H. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and chases.
- I. CPVC: Chlorinated polyvinyl chloride plastic.
- J. DDC: Direct-digital controls.
- K. ECM: Electrically commutated motor.
- L. EPDM: Ethylene propylene diene monomer rubber.
- M. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- N. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- O. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- P. FMS: Facility Management System. May be used interchangeably with BAS, Building Automation System.
- Q. Furnish: The material, equipment, etc. to be supplied, but not installed by the supplier.
- R. Manufacturers:
 - 1. Available Manufacturers: When used, this allows any manufacturer in compliance with the requirements to be submitted and used for the system indicated, pending engineer's approval. The list of manufacturers is intended to illustrate typical providers.

2. Basis-of-Design: The manufacturer indicated as such is required to be furnished. The Owner reserves the right to select additional manufacturers listed and adjust the bid amount up or down as is indicated on the bid form for the selected manufacturer.
3. Manufacturers: When used, restricts the list of acceptable manufacturers to only the entities indicated that comply with the requirements detailed.
 - a. Where the product of a single manufacturer is mentioned by trade name or manufacturer's name in this Division, it is the only acceptable manufacturer.
 - b. Where two (2) or more manufacturers are named, only those manufacturers will be considered or approved.
- S. NBR: Acrylonitrile-butadiene rubber.
- T. NRTL: Nationally Recognized Testing Laboratory.
- U. PE: Polyethylene plastic.
- V. Products and Materials: Components and assemblies for the construction of the systems as indicated in the Documents including, but not limited to pipes, tubes, ducts, and equipment.
- W. Products or Materials: See "Products and Materials".
- X. Provide: The materials and equipment described shall be furnished, installed and connected under this Division, complete for operation, unless specifically noted to the contrary. Identical to the phrase "furnish and install".
- Y. PVC: Polyvinyl chloride plastic.
- Z. RTU: Rooftop unit. The abbreviation means packaged, outdoor, central station AHUs. This abbreviation may be used regardless of whether the unit is located on a roof or at grade.
- AA. VAV: Variable air volume.
- BB. VFD: Variable frequency drive. This may be used interchangeably with VSD (variable speed drive), VSC (variable speed controller), and VFMC (variable frequency motor controller). This technology varies the frequency of the incoming electrical signal to change the speed of driven equipment.

1.4 RELATED REQUIREMENTS

- A. All conditions imposed by these documents shall be applicable to all portions of the Work under this Division. These references are intended to point out specific items to the Contractor, but in no way relieve him of the responsibility of reading and complying with all relevant parts of the entire Specification.
- B. The Contractor shall examine and coordinate with all Contract Drawings and Specifications, and all Addenda issued. Failure to comply shall not relieve them of responsibility. The omission of details of other portions of the Work from this Division shall not be used as a basis for a request for additional compensation.
- C. The specific features and details for other portions of the Work related to the construction in progress or to the building(s) shall be determined by examination at the site.

1.5 RELATED REQUIREMENTS

- A. All conditions imposed by these documents shall be applicable to all portions of the Work under this Division. These references are intended to point out specific items to the Contractor, but in no way relieve him of the responsibility of reading and complying with all relevant parts of the entire Specification.

1.6 ORDINANCES, PERMITS AND CODES

- A. It shall be the Contractor's duty to perform the work and provide the materials covered by these Specifications in conformance with all ordinances and regulations of all authorities having jurisdiction.
- B. All work herein shall conform to all applicable laws, ordinances, and regulations of the local utility companies.
- C. The work shall be in accordance with, but not limited to, the requirements of:
 - 1. National Fire Protection Association
 - 2. Wichita Falls Building Codes
 - 3. Texas Safety Code
 - 4. Texas Boiler Code
 - 5. Texas Department Of State Health Services
- D. Codes and standards referred to are minimum standards. Where the requirements of these Specifications or drawings exceed those of the codes and regulations, the drawings, and Specifications govern.
- E. The Contractor shall obtain permits, plan checks, connection and specification fees, inspections, and approvals applicable to the Work as required by the regulatory authorities.
- F. Fees and costs of any nature whatsoever incidental to permits, inspections, and approvals shall be assumed and paid by the Contractor.
- G. The pro-rata costs, if any, for utilities serving this property will be paid for by the Owner and shall not be included as part of this Contract.

1.7 REFERENCE STANDARDS

- A. Where differences between building codes, state laws, local ordinances, industry standards, utility company regulations and the Contract Documents occur, the most stringent shall govern. The Contractor shall promptly notify the Owner's Representative in writing of any such difference.
- B. Should the Contractor perform any Work that does not comply with local codes, laws and ordinances, industry standards or other governing regulations, the Work shall be corrected on noncompliance deficiencies with the Contractor bearing all costs.
- C. In addition to the aforementioned ordinances, industry standards published by the following organizations shall apply:
 - 1. AIA - AMERICAN INSTITUTE OF ARCHITECTS
 - 2. AABC - ASSOCIATED AIR BALANCE COUNCIL

3. AASHO - AMERICAN ASSOCIATION OF STATE HIGHWAY OFFICIALS
4. ACI - AMERICAN CONCRETE INSTITUTE
5. ADC - AIR DIFFUSION COUNCIL
6. AGA - AMERICAN GAS ASSOCIATION
7. AHRI - AIR CONDITIONING HEATING & REFRIGERATION INSTITUTE
8. AISC - AMERICAN INSTITUTE OF STEEL CONSTRUCTION
9. AMCA - AIR MOVING AND CONDITIONING ASSOCIATION
10. ANSI - AMERICAN NATIONAL STANDARDS INSTITUTE
11. API - AMERICAN PETROLEUM INSTITUTE
12. ASCE - AMERICAN SOCIETY OF CIVIL ENGINEERS
13. ASHRAE - AMERICAN SOCIETY OF HEATING, REFRIGERATING AND AIR
CONDITIONING ENGINEERS, INC.
14. ASME - AMERICAN SOCIETY OF MECHANICAL ENGINEERS
15. ASTM - AMERICAN SOCIETY FOR TESTING AND MATERIALS
16. AWS - AMERICAN WELDING SOCIETY CODE
17. AWWA - AMERICAN WATER WORKS ASSOCIATION
18. CDA - COPPER DEVELOPMENT ASSOCIATION
19. CISPI - CAST IRON SOIL PIPE INSTITUTE
20. CTI - COOLING TOWER INSTITUTE
21. FGI - FACILITY GUIDELINES INSTITUTE
22. FMG - FACTORY MUTUAL GLOBAL
23. ICC - INTERNATIONAL CODE COUNCIL
24. IRI - INDUSTRIAL RISK INSURERS
25. NBS - NATIONAL BUREAU OF STANDARDS
26. NFPA - NATIONAL FIRE PROTECTION ASSOCIATION
27. OSHPD - OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
28. PDI - PLUMBING AND DRAINAGE INSTITUTE
29. SMACNA - SHEET METAL AND AIR CONDITIONING CONTRACTORS NATIONAL
ASSOCIATION
30. TDLR - TEXAS DEPARTMENT OF LICENSING AND REGULATION
31. TSDHS - TEXAS DEPARTMENT OF STATE HEALTH SERVICES
32. UL - UNDERWRITER'S LABORATORIES

- D. Where the Documents exceed the above requirements, the Documents shall govern. In no case shall Work be installed contrary to or below the minimum legal standards.

1.8 DRAWINGS AND SPECIFICATIONS

- A. The inter-relation of the specifications, the drawings, and the schedules are as follows:
1. The specifications provide the written requirements for the quality, standard, nature of the materials, equipment and construction systems.
 2. The drawings establish the quantities, approximate dimensions, details and location of equipment.
 3. The schedules give the capacities, characteristics and components.
- B. For any individual project, if there is conflict between the drawings and or specifications, they are equivalent in authority and priority. Should they disagree in themselves, or with each other, prices shall be based on the most expensive combination of quality and quantity of work indicated. In the event of the above mentioned disagreements the resolution shall be determined by the Architect.
- C. Contractor is responsible to bring any conflicts in drawings and/or specifications to the attention of the Architect, immediately, prior to any work being done.

- D. Review all construction details illustrated on the architectural and structural drawings and be guided thereby.

1.9 SUBMITTAL PROCEDURES

- A. Simultaneous Action Submittals: When submittals are required and a simultaneous action is indicated, the equipment is to be coordinated across trades prior to forwarding to the Engineer.
 - 1. The release of mechanical equipment submittals (pumps, air handling units, chillers, fans cooling towers, etc.) is dependent on the receipt of a complete and accurate overcurrent protective device coordination study as required by Division 26.
 - 2. The Architect and Engineer require a full submittal review period as delineated in Division 01 Section "Submittal Procedures" to adequately review the OCPD study against the submitted electrical components prior to release of submittals for equipment procurement.
 - 3. The submittal schedule required by Division 01 requirements shall provide for this review time in the action submittal process.
 - 4. Delay claims arising due to Contractor's failure to coordinate simultaneous action submittals will not be considered by the Owner.
- B. Documents for submittal may be hard copies in a three ring binder or soft copies in an electronic file using the Portable Document Format (PDF) standard. In any case, where multiple products, trades, floors, disciplines, etc. are combined into one (1) submittal, provide tabs for binders or 'bookmarks' for PDF files for efficient navigation between items to be reviewed and a table of contents at the front. Documents that do not conform may be rejected.
- C. Common Requirements for Product Data: Where this Section and other Sections of this Division require Product Data to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures". In addition to the requirements of Division 01 comply with the following:
 - 1. Submit hardcopy of Product Data in the quantity as required under Division 01 Section "Submittal Procedures". Hardcopies of product data submittals shall be bound materials as defined above. Separate products under distinct subheadings that correspond to paragraphs in specification text. Divide sections in binder with labeled divider tabs.
 - 2. In addition to hardcopies required by Division 01, submit one copy of product data in electronic format. All files shall be in Portable Document Format (.pdf).
 - 3. Product Data shall not consist of manufacturer's catalogs or cut sheets that contain no indication of the exact item offered. The submission on individual items shall designate the exact item offered.
- D. Common Requirements for Shop Drawings: Where this Section and other Sections of this Division require Shop Drawings to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures". In addition to the requirements of Division 01 comply with the following:
 - 1. Prepare Shop Drawings using computerized drafting software compatible with AutoDesk's AutoCAD®.
 - 2. Submit hardcopy of Shop Drawings in the quantity as required under Division 01 Section "Submittal Procedures". Hardcopies of Shop Drawings shall have each sheet clearly labeled with a unique sheet identification number.
 - 3. In addition to hardcopies required by Division 01, submit one (1) copy of Shop Drawings in electronic format. Files shall include both AutoCAD® compatible source files and files printed to Portable Document Format (.pdf).

4. Shop Drawings shall be of appropriate scale based on the following:
 - a. Ductwork and Piping Systems, including all underfloor work:
Minimum 1/8" = 1'-0".
 - 1) Double-line congested areas.
 - 2) Double-line duct widths greater than 24".
 - b. Mechanical rooms: 1/4" = 1' – 0".
 - 1) Double-line all systems.
 - c. Temperature Control Diagrams with Sequence of Operations on same drawing.
 5. Shop drawings shall include the following items:
 - a. Concrete pads and foundations.
 - b. Equipment room layouts with actual dimensions and offsets for all systems.
 - c. Roof layouts.
 - d. Trench locations and sizes.
 - e. Dimensioned floor drain locations.
- E. Common Requirements for Coordination Drawings: Where this Section and other Sections of this Division require Coordination Drawings to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures" and Division 01 Section "Project Management and Coordination". In addition to the requirements of Division 01 comply with the following:
1. Prepare Coordination Drawings using computerized drafting software compatible with AutoDesk's AutoCAD®. Drawings files must be composite with multiple distinctive layers for each of the various trades.
 2. Submit hardcopy of Coordination Drawings in the quantity as required under Division 01. Hardcopies of Coordination Drawings shall have each sheet clearly labeled with a unique sheet identification number.
 3. In addition to hardcopies required by Division 01, submit one (1) copy of Shop Drawings in electronic format. Files shall include both AutoCAD® compatible source files and files printed to Portable Document Format (.pdf).
 4. Coordination Drawings shall be of appropriate scale but shall not be smaller than a scale of 1/4-inch equals one foot.
- F. Coordination Drawings: Prepare drawings showing dimensioned layout for the following:
1. Penetration and Structural Opening: Floor plans showing sleeves and formed structural penetrations. Show sleeve and formed penetration layouts and relationships between structural components and other adjacent building elements, including but not limited to pre-tensioning and post-tensioning members where used.
 2. Reflected Ceiling Plans: ceiling plans, sections, and other necessary details showing dimensioned layouts for equipment located in or on the ceiling plane. Base dimensions on exact dimensioned data obtained from product submittals for products to be included in the Work. Differentiate between field measurements and assumed dimensions. Include the all items in the ceiling plane coordinated with each other, based on input from installers of the items involved.
 3. Include the following items coordinated with each other, based on input from installers of the items involved:
 - a. Suspended ceiling components.

- b. Structural members to which suspension systems for luminaires will be attached.
- c. Perimeter moldings, decorative ceiling elements, and Architectural features.
- d. Luminaires.
- e. HVAC Diffusers, Registers and Grilles.
- f. Speakers.
- g. Sprinklers.
- h. Fire Alarm initiating devices, including but not limited to the following:
 - 1) Smoke detectors.
 - 2) Heat detectors.
- i. Fire Alarm notification appliances.
- j. Occupancy sensors.
- k. Access panels.
- l. Security cameras and occupancy detectors.
- m. Wireless Access Points.
- n. Wiring Diagrams
- o. Short-circuit current rating of equipment assembly.

4. HVAC Layouts:

- a. Single-line drawings of duct and piping systems are satisfactory except for the following, which shall be double-lined:
 - 1) All mechanical equipment rooms.
 - 2) Main duct runs to and from air handling equipment rooms.
 - 3) Ductwork and piping in congested areas.
 - 4) Ductwork with widths 36" and greater.
- b. Shop drawings shall be provided for the following:
 - 1) Sheet Metal and Duct Systems, including all underfloor work (prepared at a minimum scale of 1/8"=1'-0")
 - 2) Piping and equipment systems for chilled water, condenser water, refrigerant, heating water, steam and other HVAC piping systems. (Preferably at 1/4" = 1' – 0" and not less than 1/8" = 1' – 0").
 - 3) Equipment room layouts with actual equipment, piping, and duct at 1/4" = 1' – 0" scale. Show clearances, access spaces, relative heights of piping, main ducts, outside and relief louvers. Provide at least one (1) section through each equipment room showing the same.
 - 4) Temperature Control Diagrams with Sequence of Operations on same drawing.
 - 5) Housekeeping and equipment concrete pads.
 - 6) Dimensioned floor drain locations and the equipment each serves.
 - 7) Roof layouts.
 - 8) Trench locations and sizes.
 - 9) Catwalk or equipment maintenance platform assemblies.
- c. Equipment support locations, type of support, and weight on each support.
- d. Location of structural supports for structure-supported raceways.
- e. For floor mounted equipment: concrete base dimension, outline of equipment, and required clearances.
- f. **Location of structural supports for seismic bracing.**

- G. Common Requirements for Specification Compliance Certification: Where this Section and other Sections of this Division require Specification Compliance Certification to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures" for "Other Informational Submittals". In addition to the requirements of Division 01 comply with the following:

1. Prepare a line-by-line Specification Compliance Certification by marking up a copy of the Contract Document specification section in the left margin. Accompany the markup with a written report explaining all items that are not marked with "Compliance". Submit line-by-line markup, written report of deviations and alternates and a cover letter certified by Manufacturer or Installer that prepared the Specification Compliance Certification. Use the following key for preparing the line-by-line markup.
 - a. "C" for Compliance: By noting the term "compliance" or "C" in the margin, it shall be understood that the manufacturer is in full compliance with the item specified and will provide exactly the same with no deviations.
 - b. "D" for Deviation: By noting the term "deviation" or "D" in the margin, it shall be understood that the manufacturer prefers to provide a different component in lieu of that specified.
 - c. "A" for Alternate: By noting the term "alternate" or "A" in the margin, it shall be understood that the manufacturer proposes to provide the same operating function but prefers to do it in a different manner.
 - d. "N/A" for Not Applicable: By noting the term "not applicable" or "N/A" in the margin, it shall be understood that the specified item is not applicable to the project.

- H. Common Requirements For Qualification Data:

1. Professional Engineer Qualifications: Where this Section and other Sections of this Division require a licensed Professional Engineer to be responsible for Delegated Design requirements; Submit Qualification data for Professional Engineer including, but not limited to, proof of licensing registration in the state where the Project is located.
2. Independent Testing and Inspecting Agency Certification: Where this Section and other Sections of this Division require an Independent Testing and Inspecting agency to be responsible for Acceptance Testing and Field Quality Control requirements; submit certification documentation for such agency that demonstrates compliance with the Quality Assurance paragraph of this Section.

- I. Qualification Data: For Independent Testing and Inspecting Agency.

- J. Welding certificates.

1.10 PRODUCT SUBSTITUTIONS

- A. Comply with provisions of Division 01 Section "Product Requirements".

1. If item of equipment or device offered as Substitution differs in dimension or configuration from that indicated in the Contract Documents, provide, as part of the substitution submittal, a drawing that shows that the equipment or devices proposed for Substitution can be installed in the space available without interfering with other trades or with access requirements for operations and maintenance in the completed project. Drawings shall be of appropriate scale but shall not be smaller than a scale of 1/4-inch equals one foot.
2. Where substitute equipment or devices requires different arrangement or connections from that indicated in the Contract Documents, install the equipment or devices to

operate properly and in accordance with the requirements of the Contract Documents. Make incidental changes necessary in piping, ductwork or wiring which results from the inclusion of the substitute equipment or device without any additional cost to the Owner. Pay all additional costs incurred by other trades in connection with changes required by the inclusion of the substituted equipment or device in the Work.

3. When submitting a manufacturer that is not the Basis of Design, the Contractor shall provide an itemized list of all deviations from and compliances with the information detailed in both the specification section and schedule. An additional itemized list shall account for scope increase and deductions based on substitutions for the following minimum items:

- a. Electrical panels, distribution, and safeties.
- b. Structural modifications.
- c. Civil modifications.
- d. Plumbing modifications.
- e. Duct and pipe connections or arrangements.
- f. Space heating and cooling requirements.
- g. Exhaust or ventilation modifications.
- h. Seismic restraint modifications.
- i. Vibration isolation requirements.

- B. Manufacturers not listed are subject to design Engineer's review and may not be acceptable. The substitute manufacturer shall submit a complete copy of the appropriate technical specification section minimum ten (10) business days prior to bid with each sub-paragraph noted with the comment, "compliance", "deviation", "alternate" or "not applicable" as described above. In the case of non-primary, vendor-supplied items, the name of the sub-vendor supplying said item, including model number, shall be indicated.
- C. Where substitute products or materials requiring different arrangement or connections from that indicated are accepted by the Owner's Representative, install the equipment or devices to operate properly and in harmony with the intent of the Documents, making all incidental changes in piping, ductwork, wiring, and any other trade resulting from the substitution without any additional cost to the Owner.
- D. The Owner's Representative reserves the right to call for samples of any item of product or material offered in substitution, together with a sample of the specific item when, in their opinion, the quality of the item and/or the appearance is involved, and it is deemed that an evaluation of the item may be better made by visual inspection.
- E. When any request for a substitution of a product or material is submitted and rejected, the item named in the Documents shall be furnished. Repetitive submittal of substitutions for the same item will not be considered.

1.11 QUALITY ASSURANCE

- A. All Work shall be performed by properly licensed technicians skilled in their respective trades. All materials, equipment and devices shall be installed in accordance with the recommendations of the manufacturer and in the best standard practice to bring about results of a first class condition.
- B. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

- C. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved in the systems they are working on and that certification is current.
- D. Electrical Characteristics for HVAC Equipment:
 - 1. Equipment having higher electrical characteristics other than those specified should be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.
 - 2. Where variable frequency drives are provided for equipment, whether installed separately or integral to the equipment, the VFDs shall conform to Division 26 Section, "Variable Frequency Motor Controllers".
- E. Wherever a UL standard has been established for a particular type of material, equipment or device, each item of such material, equipment or device provided on this project shall meet the requirements of the UL standard in every way, and shall be UL listed and labeled.
- F. Products and materials shall be of the best quality customarily applied in quality commercial practice, and shall be by reputable manufacturers.
- G. Each major component shall bear a nameplate giving the name and address of the manufacturer, and the catalog number or designation of the component.
- H. Products and materials provided under this Division of the Specifications shall be essentially the standard item, unless otherwise noted, of the specified manufacturer, or where allowed, an alternate manufacturer.
- I. Common Requirements for Independent Testing and Inspecting Agency Qualifications: Where this Section and other Sections of this Division call for an Independent Testing and Inspecting Agency (Testing Agency); the Testing Agency shall comply with the following requirements:
 - 1. Have the experience and capability to conduct the testing indicated,
 - 2. Be a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to the AHJ and the Engineer-of-Record.
 - 3. Meet the following:
 - a. Be an independent, third party entity which can function as an unbiased testing authority, professionally independent of the manufacturers, suppliers, and installers of equipment or systems being evaluated.
 - b. Be regularly engaged in the testing of seismic support of HVAC equipment devices, installations, and systems.
 - c. Use technicians who are regularly employed for testing services.

1.12 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products and materials with factory-applied end caps or "heat shrink" wrappings to protect openings. Maintain opening protection through shipping, storage, and handling to prevent damage and the entrance of dirt, debris, and moisture.

- B. Store light sensitive products and materials away from and protected against direct sunlight.
- C. Support products and materials at all times to prevent sagging and bending.
- D. The area provided for product and material storage at the jobsite shall be clean, dry and exposure to dust minimized.
- E. Responsibility for the protection of products and materials shall extend to existing equipment, systems, and products and materials. Erect temporary sheltering structures, provide temporary bracing and supports, or cover existing equipment, systems, and products and materials to prevent damage and the entrance of dirt, debris, and moisture.
- F. Failure on the part of the Contractor to comply with the above to the satisfaction of the Architect, Engineer, or either's authorized representative shall be sufficient cause for the rejection of products and materials in question.

1.13 COORDINATION

- A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for HVAC installations.
- B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
- C. Coordinate requirements for access panels and doors for HVAC items requiring access that are concealed behind finished surfaces.
- D. Installation Drawings
 - 1. Prepare special drawings as called for elsewhere herein or directed by the Architect to coordinate this work with the work of other Divisions, to illustrate changes in this work to facilitate its concealment in finished spaces, to avoid obstructions, or to illustrate the installation of a substitute equipment item.
 - 2. Use these drawings in the field for the installation of all systems and components. Unless otherwise directed, do not submit these drawings for review, but provide 3 copies to the Architect for information.
- E. ACTION SUBMITTALS

- 1. Product Data: For the following:
 - a. Dielectric fittings.
 - b. Mechanical sleeve seals.
 - c. Escutcheons.

PART 2 - PRODUCTS

2.1 PIPE, TUBE, AND FITTINGS

- A. Refer to individual Division 23 piping Sections for pipe, tube, and fitting materials and joining methods.

- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.
- C. All piping and tubing shall be American manufactured, unless otherwise indicated.

2.2 JOINING MATERIALS

- A. Refer to individual Division 23 piping Sections for special joining materials not listed below.
- B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
 - 2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.
- C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- E. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.
- F. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- G. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.

2.3 DIELECTRIC FITTINGS

- A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
- B. Insulating Material: Suitable for system fluid, pressure, and temperature.
- C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 deg F.
- D. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.
- E. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
 - 1. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.

- F. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.
- G. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.

2.4 MECHANICAL SLEEVE SEALS

- A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
 - 1. Manufacturers:
 - a. Innerlynx.
 - b. Link-Seal by PSI.
 - c. Metraflex Co.
 - 2. Sealing Elements: EPDM for high temperature applications and NBR for all others unless otherwise indicated, interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe. Seal shall be same manufacturer as sleeve.
 - 3. Pressure Plates: Stainless steel. Include two (2) for each sealing element.
 - 4. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one (1) for each sealing element.

2.5 SLEEVES

- A. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 10, galvanized, plain ends.

2.6 ESCUTCHEONS

- A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.
- B. One-Piece, Cast-Brass Type: With set screw.
 - 1. Finish: Polished chrome-plated and rough brass, pending approval by Architect.
- C. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
 - 1. Finish: Polished chrome-plated and rough brass, pending approval by Architect.
- D. One-Piece, Floor-Plate Type: Cast-iron floor plate.
- E. Split-Casting, Floor-Plate Type: Cast brass with concealed hinge and set screw.

2.7 GROUT

- A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.

1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi, 28-day compressive strength.
3. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SCOPE OF WORK

A. Inspection of Site

1. The accompanying drawings do not indicate existing mechanical installations other than to identify modifications of and extensions thereof. Site visits and installation inspections to ascertain the conditions to be met are included in the scope.
2. Failure to comply with an inspection of the site shall not constitute ground for any additional payments in connection with removing or modifying any part of the existing installations and/or installing any new work under this Division.
3. Review all construction details of the new portion of the building as illustrated on the architectural and structural drawings and be guided thereby.

B. Products and Materials Description

1. Where two (2) or more units of the same kind or class of a specific item are required, these shall be the products of a single manufacturer; however, the component parts of the item need not be the products of one (1) manufacturer.
2. In describing the various products and materials, in general each item will be described singularly, even though there may be a multiplicity of identical items. Also, where the description is only general in nature, exact sizes, duties, space arrangements, horsepower requirements and other data shall be determined by reference to the Documents.

C. Refer to other Divisions of the Specifications for related Work.

D. Install, hang, support, etc. all MEP systems and equipment to satisfy all requirements of the applicable seismic zone using performance requirements and design criteria for project site as indicated by Architect.

E. It is the intent, unless otherwise indicated, that all products and materials described and specified under this Division, shall be provided for a complete working system irrespective of use of the phrases "install", "furnish", "furnish and install", or "provide" as described above has been actually included.

F. The Contractor is responsible for all Work of every description in connection with this Division of the Specifications.

G. The Contractor specifically and distinctly assumes all risk for damage or injury from whatever cause to property or person used or employed on or in connection with this Work and of all damages or injury to any person or property wherever located, resulting from an action or operation under the Contract in connection with the Work, and undertake the promise to defend the Owner against all claims on account of any such damage or injury.

H. The Contractor will be held responsible for the satisfactory execution and completion of the Work in accordance with the true intent of the Documents.

- I. Provide without extra charge all incidental items required as part of the Work, even though it may not be specifically indicated. If the Contractor has reason for objecting to the use of any material, equipment, device or method of construction as indicated, he shall make report of such objections to the Owner's Representative, obtain proper approval and adjustment to the Contract, and shall proceed with the Work.

J. Electrical Installation

- 1. All electric wiring shall be installed under Division 26, except for such equipment items as are prewired at their point of manufacture and so delivered to the project, and except for the following:
 - a. Temperature Control Wiring and Power Wiring provided by controls contractor.
- 2. Prepare and submit for review wiring diagrams for all equipment furnished under this Division. Show on these diagrams all power, interlock, and control circuits. When the Architect takes no exception to these drawings, they shall become installation drawings for the Contractor.
- 3. All chilled water, condenser water piping, domestic cold and hot water piping, and wet fire protection system shall be heat traced when routed external to the building or in areas susceptible to freezing conditions.

3.2 Schedule And Sequence Of Work

- A. The Contractor shall meet and cooperate with the Owner and Owner's Representative to schedule and sequence Work so as to ensure meeting scheduled completion dates and avoid delaying other portions of the Work. Work requiring special sequencing shall be at no additional cost to the Owner and shall have no impact on the schedule.
- B. Work schedules and completion dates as established shall be rigidly adhered to. Cooperate in establishing these schedules and perform the work under this Division at such times as directed so as to ensure meeting scheduled dates and avoid delaying any other Contractor.
- C. Any work involving a service suspension shall be scheduled in advance with the Owner.
- D. Should it be necessary to perform certain operations on an "overtime" basis in order not to interrupt the normal usage of the facility, include the costs of such overtime without change in the Contract amount.

3.3 TEMPORARY HEATING AND COOLING

- A. Provide all temporary heating and cooling equipment for spaces that require continued use.
- B. Should the work in the designated areas affect any services to areas that are to remain in use, provide temporary services as required to enable those occupied areas to function properly. Additional valves, ductwork, equipment and piping required shall be installed without added cost to the Owner.

3.4 HVAC DEMOLITION

- A. Disconnect, demolish, and remove HVAC systems, equipment, and components indicated to be removed.

1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
 2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
 3. Ducts to Be Removed: Remove portion of ducts indicated to be removed and plug remaining ducts with same or compatible ductwork material.
 4. Ducts to Be Abandoned in Place: Cap or plug ducts with same or compatible ductwork material.
 5. Equipment to Be Removed: Disconnect and cap services and remove equipment.
 6. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
 7. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
- B. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.5 SALVAGED MATERIALS

- A. Reuse no salvaged material except as noted on the Drawings, specified herein, or directed by the Architect. Remove from the premises all present materials falling under this Division, which are removed from the existing building. Upon completion, leave no "dead" line or equipment installed in any portion of the area being remodeled, unless otherwise indicated.

3.6 ACCESS – COMMON REQUIREMENTS

- A. Provide an access door in non-lay-in ceilings to maintain and inspect HVAC components. Components include, but are not limited to, the following:
1. Actuators.
 2. Control Modules.
 3. Filter Boxes.
 4. Fire Protectives.
 5. Manual balancing dampers.
 6. Terminal boxes.
 7. Valves.
- B. Unless otherwise indicated, access door shall provide a minimum clear opening of 30" x 30".

3.7 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. Install piping according to the following requirements and Division 23 Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings.

- C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping to permit valve servicing.
- G. Install piping at indicated slopes.
- H. Install piping free of sags and bends.
- I. Install fittings for changes in direction and branch connections.
- J. Install piping to allow application of insulation.
- K. Select system components with pressure rating equal to or greater than system operating pressure.
- L. Install escutcheons, after Architect's final approval of finish, for penetrations of walls, ceilings, and floors according to the following:
 - 1. New piping penetrations shall be one-piece escutcheons.
 - 2. Existing piping penetrations shall be two-piece escutcheons.
 - 3. All sleeved penetrations shall be deep-drawn allow flush installation between escutcheon and finished surface.
- M. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board rated partitions, and concrete floor and roof slabs.
 - 1. Penetration assemblies shall comply with U.L. Fire Resistance Directory requirements for wall penetrations.
 - 2. Cut sleeves to length for mounting flush with both surfaces, unless otherwise indicated.
 - a. Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level to prevent water entrance into sleeved hole. Vertical pipe supports must be extended to and be supported by the floor rather than the sleeve.
 - b. Provide concrete pipe curb in floors of mechanical equipment areas or other wet areas 4 inches above finished floor level, minimum, in lieu of extended sleeves.
 - 3. Install sleeves in new walls and slabs as new walls and slabs are constructed.
 - 4. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
 - a. Steel Pipe Sleeves: For pipes smaller than NPS 6.
 - b. Steel Sheet Sleeves: For pipes NPS 6 and larger, penetrating gypsum-board partitions.
 - c. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level. Refer to Division 07 Section "Sheet Metal Flashing and Trim" for flashing.

- 1) Seal space outside of sleeve fittings with grout.
5. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Division 07 Section "Joint Sealants" for materials and installation.
- N. Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
1. Install steel pipe for sleeves smaller than 6 inches in diameter for above ground locations.
 2. Install cast-iron "wall pipes" for sleeves 6 inches and larger in diameter for above ground and all underground locations.
 3. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- O. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
1. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- P. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations.
- Q. Verify final equipment locations for roughing-in.
- R. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.
- 3.8 PIPING JOINT CONSTRUCTION
- A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.
 - B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
 - C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
 - D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
 - E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

- F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- I. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

3.9 PIPING CONNECTIONS

- A. Make connections according to the following, unless otherwise indicated:
 - 1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
 - 2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.
 - 3. Dry Piping Systems: Install dielectric unions and flanges to connect piping materials of dissimilar metals.
 - 4. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.10 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Equipment called for on the plans and not listed herein shall be provided as though it were fully described herein.
- B. Equipment called for herein shall be completely provided, whether fully detailed or not on the plans, and/or scheduled.
- C. All equipment as indicated on the plans and as described herein shall be installed per manufacturer's recommendations to allow for proper operation and maintenance of the equipment.
- D. Install equipment to allow maximum possible headroom unless specific mounting heights are indicated.
- E. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- F. Install HVAC equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.

- G. Where any piece of equipment is too large for ingress through normal building openings, it shall be placed in its containing space before the enclosing structure is completed.
- H. Install equipment to allow right of way for piping installed at required slope.

3.11 PAINTING

- A. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.12 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
 - 1. Construct concrete bases not less than 4 inches larger in both directions than supported unit.
 - 2. Concrete bases for internally isolated AHU's shall be 6 inches (150 mm) tall above finished floor.
 - 3. Concrete bases for all other equipment shall be 4 inches (100 mm) tall above finished floor.

3.13 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor HVAC materials and equipment.
- B. Field Welding: Comply with AWS D1.1.

3.14 ERECTION OF WOOD SUPPORTS AND ANCHORAGES

- A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor HVAC materials and equipment.
- B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
- C. Attach to substrates as required to support applied loads.

3.15 GROUTING

- A. Mix and install grout for HVAC equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.

- E. Place grout, completely filling equipment bases.
- F. Place grout on concrete bases and provide smooth bearing surface for equipment.
- G. Place grout around anchors.
- H. Cure placed grout.

3.16 INSTALLATION INSPECTIONS AND CERTIFICATIONS

- A. The Contractor shall obtain timely inspections of the installation by the constituted authorities. Remedy any deficiencies to the satisfaction of the inspecting authority.
- B. Upon final completion of the work, obtain certificates of acceptance from the constituted authorities. Deliver the certificates to the Architect for transmission to the Owner.

3.17 OPERATION PRIOR TO COMPLETION

- A. When any piece of mechanical or electrical equipment is operable and it is to the advantage of the contractor to operate the equipment, he may do so with permission of Owner, providing that he properly supervises the operation, retains full responsibility for the equipment operated, and protects against dirt accumulations during operation. The warranty period shall, however, not commence until such time as the equipment is operated for the beneficial use of the Owner or until final acceptance by the Owner.
- B. Regardless of whether or not the equipment has or has not been operated, the Contractor shall properly clean the equipment, install clean filter media, and properly adjust the operation of the equipment before final acceptance by the Owner.
- C. All equipment is to be maintained per the manufacturer's instructions until Owner's maintenance staff is responsible for operation and upkeep.

3.18 INSTRUCTION OF OWNER'S PERSONNEL

- A. Provide the services of competent engineers and/or technicians acceptable to the Owner's Representative to instruct other representatives of the Owner in the complete and detailed operation of each item of equipment or device of all the various electrical systems. These instructions shall be provided for whatever periods may be necessary to accomplish the desired results.
- B. Upon completion of these instructions, the Contractor shall obtain a letter of release, acknowledged by the Owner or his authorized representative, stating the dates on which the various kinds of instruction were given, and the personnel to whom the instructions were given.
- C. The Contractor shall be fully responsible for proper maintenance of equipment and systems until the instructions have been given the Owner's personnel and the letter of release acknowledged.
- D. In providing the instructions to the Owner's personnel, the written operating and maintenance manuals shall be followed in all instances, and the Owner's personnel shall be familiarized with such manuals.

- E. Operating and maintenance manuals used for instructions shall include wiring diagrams, manufacturer's operating and maintenance instructions, parts lists (with sources identified), and other data as appropriate for each system.

3.19 SEALANT

- A. Apply sealant to penetrations of all floor and wall assemblies to maintain pressure differentials required by AIA for all pressure sensitive rooms.
- B. Pressure sensitive rooms include, but are not limited to:
 - 1. Central sterile clean and decontamination rooms.
- C. Sealant materials and installation requirements are specified in Division 07 Section "Joint Sealants" and Division 09 Section "Gypsum Board Assemblies."

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 230513

COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.
- B. Related Sections include the following:
 - 1. Division 26 Section "Enclosed Controllers".
 - 2. Division 26 Section "Variable Frequency Drives".

1.2 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
 - 1. Motor controllers.
 - 2. Torque, speed, and horsepower requirements of the load.
 - 3. Ratings and characteristics of supply circuit and required control sequence.
 - 4. Ambient and environmental conditions of installation location.

1.3 WARRANTY

- A. All inverter-duty motors shall have minimum 5-year warranty.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. MagneTek/Century
- B. Lincoln
- C. Marathon
- D. General Electric
- E. Gould
- F. Toshiba

- G. Baldor
- H. Reliance
- I. US Motors

2.2 GENERAL MOTOR REQUIREMENTS

- A. Comply with requirements in this Section except when stricter requirements are specified in HVAC equipment schedules or Sections.
- B. Comply with NEMA MG 1 unless otherwise indicated.
- C. Comply with IEEE 841 for severe-duty motors.

2.3 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet above sea level.
- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.4 POLYPHASE MOTORS

- A. Description: $\frac{3}{4}$ hp and larger NEMA MG 1, Design B, medium induction motor, unless otherwise indicated.
- B. Efficiency: Provide premium efficiency type for all motors 1 HP and greater and conform to the minimum efficiencies as listed in ASHRAE 90.1-2013.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.
 - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
 - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Multispeed Motors: Separate winding for each speed.
- F. Rotor: Random-wound, squirrel cage.
- G. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- H. Temperature Rise: Match insulation rating.
- I. Insulation: Class F.
- J. Code Letter Designation:
 - 1. Motors 15 HP and Larger: NEMA starting Code F or Code G.

- 2. Motors smaller than 15 HP: Manufacturer's standard starting characteristic.
- K. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.
- L. Provide shaft grounding rings.

2.5 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

- A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
- B. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
 - 1. Spike-proof inverter motor such that voltage spikes will not damage motor insulation.
 - 2. No distance restrictions between any inverter and motor.
 - 3. No frequency limitations.
 - 4. Inverter power conditioning equipment shall not be required to protect motor.
- C. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
 - 1. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
 - 2. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
 - 3. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
- D. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

2.6 SINGLE-PHASE MOTORS

- A. Motors less than $\frac{3}{4}$ hp shall be one of the following to suit starting torque and requirements of specific motor application, unless noted otherwise:
- B. Permanent-split capacitor.
 - 1. Split phase.
 - 2. Capacitor start, inductor run.
 - 3. Capacitor start, capacitor run.
- C. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
- D. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
- E. Motors 1/20 HP and Smaller: Shaded-pole type.
- F. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor

insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

2.7 MOTOR ENCLOSURES

- A. Provide motor enclosures according to the following list as a minimum, unless recommended by the manufacturer for the given application or unless indicated otherwise.
 - 1. Indoor Service: ODP type.
 - 2. Outdoor Service: TEFC type.
 - 3. Inside an Air Stream: For fan motors installed in the air stream by the fan manufacturer the motor enclosure shall be TEAO unless indicated otherwise by the manufacturer.
 - 4. Hazardous Service: For NEC hazardous locations motor enclosures shall be rated for the division, class, and group indicated or required.

PART 3 - EXECUTION

3.1 STARTER AND MOTOR CONTROLS

- A. Provide a suitable NEMA rated starter, one per motor, for control of each motor furnished under this Division. All motors 3/4 horsepower and larger require magnetic or electronic starters, no exceptions. All motors of any size that are automatically controlled require "Hand-Auto" or "Hand-off-Auto" magnetic or electronic starters, no exceptions. All magnetic and electronic starters shall have H-O-A switches.
- B. Provide each motor that does not require a starter, a manual starting switch with thermal overload protection with identifying nameplate, green pilot light and stainless steel cover plate equal to Westinghouse Type MS. Switches installed on finished walls shall be flush type.
- C. Starter shall have overload protection on all phases. This will require three overload relays for three phase motors and one overload relay for one phase/line voltage motor. Provide NEMA 1B control voltage transformer, "on" green pilot light, and 1-normally open and 2-normally closed auxiliary contacts on each starter, unless otherwise noted.
- D. Certain starters and motor controls for motors furnished under this Division are scheduled on the Drawings to be elements of motor control centers provided under Division 26. Except for those scheduled starters, provide a suitable starter for control of each motor furnished under this Division.
- E. Each starter shall have a capacity rating within the required limits of the motor which it serves; it shall have overload elements selected to provide protection for the motor.
- F. Where a combination starter and disconnect switch or starter and circuit breaker in a common enclosure is scheduled, provide auxiliary contacts on the switch or breaker as required to assure that, when the disconnecting means is open, there are no "live" contact points on the starter.
- G. Where a holding coil voltage differs from line voltage, install a transformer with secondary fusing in the starter enclosure.
- H. Unless otherwise indicated, furnish starters mounted indoors with NEMA Type 1 enclosures; and furnish those exposed to the weather with NEMA Type 3R enclosures.

- I. Where starters are not installed in heated and cooled spaces, the heater elements shall be of the ambient temperature-compensated, bimetallic type.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 230516

EXPANSION FITTINGS AND LOOPS FOR HVAC PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Metal-bellows expansion joints.
 - 2. Expansion compensators.
 - 3. Rubber expansion joints.
 - 4. Flexible-hose expansion joints.
 - 5. Packed slip expansion joints.
 - 6. Flexible ball joints.
 - 7. Pipe bends and loops.
 - 8. Alignment guides and anchors.

1.2 DEFINITIONS

- A. BR: Butyl rubber.
- B. Buna-N: Nitrile rubber.
- C. CR: Chlorosulfonated polyethylene synthetic rubber.
- D. CSM: Chlorosulfonyl-polyethylene rubber.
- E. EPDM: Ethylene-propylene-diene terpolymer rubber.
- F. NR: Natural rubber.
- G. PTFE: Polytetrafluoroethylene plastic.

1.3 PERFORMANCE REQUIREMENTS

- A. Compatibility: Products shall be suitable for piping system fluids, materials, working pressures, and temperatures.
- B. Capability: Products shall absorb 200 percent of maximum axial movement between anchors.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Delegated-Design Submittal: For each anchor and alignment guide indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Design Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and bends.
2. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
3. Alignment Guide Details: Detail field assembly and attachment to building structure.
4. Schedule: Indicate type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.

1.5 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For pipe expansion joints to include in maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:

1. Steel Shapes and Plates: AWS D1.1, "Structural Welding Code - Steel."
2. Welding to Piping: ASME Boiler and Pressure Vessel Code: Section IX.

PART 2 - PRODUCTS

2.1 EXPANSION JOINTS

- A. Metal-Bellows Expansion Joints: ASTM F 1120, circular-corrugated-bellows type with external tie rods.

1. Manufacturers:
 - a. Adsko Manufacturing, LLC.
 - b. Anamet, Inc.
 - c. Badger Industries.
 - d. Expansion Joint Systems, Inc.
 - e. Flex-Hose Co., Inc.
 - f. Flexicraft Industries.
 - g. Flex-Pression, Ltd.
 - h. Flex-Weld, Inc.
 - i. Hyspan Precision Products, Inc.
 - j. Metraflex, Inc.
 - k. Piping Technology & Products, Inc.
 - l. Proco Products, Inc.
 - m. Senior Flexonics, Inc.; Pathway Division.
 - n. Tozen America Corp.
 - o. Unaflex Inc.
 - p. WahlcoMetroflex.

2. Metal-Bellows Expansion Joints for Copper Piping: Multiple-ply phosphor-bronze bellows, copper pipe end connections, and brass shrouds.
 3. Metal-Bellows Expansion Joints for Stainless-Steel Waterway: Single-ply stainless-steel bellows, stainless-steel-pipe end connections, and steel shroud.
 4. Metal-Bellows Expansion Joints for Steel Piping: Multiple-ply stainless-steel bellows, steel pipe end connections, and carbon-steel shroud.
 5. Minimum Pressure Rating: 150 psig, unless otherwise indicated.
 6. Configuration: Double-bellows type with base, unless otherwise indicated.
 7. End Connections: Flanged.
- B. Expansion Compensators: Double-ply corrugated steel, stainless-steel, or copper-alloy bellows in a housing with internal guides, antitorque device, and removable end clip for positioning.
1. Manufacturers:
 - a. Adscro Manufacturing, LLC.
 - b. Flexicraft Industries.
 - c. Flex-Pression, Ltd.
 - d. Flex-Weld, Inc.
 - e. Hyspan Precision Products, Inc.
 - f. Metraflex, Inc.
 - g. Senior Flexonics, Inc.; Pathway Division.
 - h. Unaflex Inc.
 2. Minimum Pressure Rating: 150 psig, unless otherwise indicated.
 3. Configuration for Copper Piping: Two-ply phosphor-bronze or stainless-steel bellows and bronze or stainless-steel shroud.
 4. Configuration for Steel Piping: Two-ply stainless-steel bellows and carbon-steel shroud.
 5. End Connections for Copper Tubing NPS 2 and Smaller: Solder joint or threaded.
 6. End Connections for Copper Tubing NPS 2-1/2 to NPS 4: Solder joint or threaded.
 7. End Connections for Steel Pipe NPS 2 and Smaller: Threaded.
 8. End Connections for Steel Pipe NPS 2-1/2 to NPS 4: Flanged or threaded.
- C. Rubber Expansion Joints: ASTM F 1123, fabric-reinforced rubber with external control rods and complying with FSA's "Technical Handbook: Non-Metallic Expansion Joints and Flexible Pipe Connectors."
1. Manufacturers:
 - a. Flex-Hose Co., Inc.
 - b. Flexicraft Industries.
 - c. Flex-Weld, Inc.
 - d. Garlock Sealing Technologies.
 - e. General Rubber Corp.
 - f. Mason Industries, Inc.; Mercer Rubber Co.
 - g. Metraflex, Inc.
 - h. MG Piping Products Co.
 - i. Proco Products, Inc.
 - j. Red Valve Company, Inc.
 - k. Senior Flexonics, Inc.; Pathway Division.
 - l. Tozen America Corp.
 - m. Unaflex Inc.
 - n. Vibration Mountings & Controls, Inc.
 2. Arch Type: Multiple arches.
 3. Spherical Type: Multiple spheres.

- a. Minimum Pressure and Temperature Ratings for NPS 1-1/2 to NPS 4: 150 psig at 220 deg F.
 - b. Minimum Pressure and Temperature Ratings for NPS 5 and NPS 6: 140 psig at 200 deg F.
 - c. Minimum Pressure and Temperature Ratings for NPS 8 to NPS 12: 140 psig at 180 deg F.
 - 4. Material: Buna-N or EPDM.
 - 5. End Connections: Full-faced, integral, steel flanges with steel retaining rings.
- D. Flexible-Hose Expansion Joints: Manufactured assembly with two flexible-metal-hose legs joined by long-radius, 180-degree return bend or center section of flexible hose; with inlet and outlet elbow fittings, corrugated-metal inner hoses, and braided outer sheaths.
- 1. Manufacturers:
 - a. Flex-Hose Co., Inc.
 - b. Flexicraft Industries.
 - c. Flex-Pression, Ltd.
 - d. Metraflex, Inc.
 - 2. Flexible-Hose Expansion Joints for Copper Piping: Copper-alloy fittings with solder- joint end connections.
 - a. NPS 2 and Smaller: Bronze hoses and single-braid bronze sheaths with 450 psig at 70 deg F and 340 psig at 450 deg F ratings.
 - b. NPS 2-1/2 to NPS 4: Stainless-steel hoses and single-braid, stainless-steel sheaths with 300 psig at 70 deg F and 225 psig at 450 deg F ratings.
 - 3. Flexible-Hose Expansion Joints for Copper Piping: Copper-alloy fittings with solder- joint end connections.
 - a. NPS 2 and Smaller: Bronze hoses and double-braid bronze sheaths with 700 psig at 70 deg F and 500 psig at 450 deg F ratings.
 - b. NPS 2-1/2 to NPS 4: Stainless-steel hoses and double-braid, stainless-steel sheaths with 420 psig at 70 deg F and 315 psig at 450 deg F ratings.
 - 4. Flexible-Hose Expansion Joints for Steel Piping: Carbon-steel fittings with threaded end connections for NPS 2 and smaller and flanged end connections for NPS 2-1/2 and larger.
 - a. NPS 2 and Smaller: Stainless-steel hoses and single-braid, stainless-steel sheaths with 450 psig at 70 deg F and 325 psig at 600 deg F ratings.
 - b. NPS 2-1/2 to NPS 6: Stainless-steel hoses and single-braid, stainless-steel sheaths with 200 psig at 70 deg F and 145 psig at 600 deg F ratings.
 - c. NPS 8 to NPS 12: Stainless-steel hoses and single-braid, stainless-steel sheaths with 125 psig at 70 deg F and 90 psig at 600 deg F ratings.
 - 5. Flexible-Hose Expansion Joints for Steel Piping: Carbon-steel fittings with threaded end connections for NPS 2 and smaller and flanged end connections for NPS 2-1/2 and larger.
 - a. NPS 2 and Smaller: Stainless-steel hoses and double-braid, stainless-steel sheaths with 700 psig at 70 deg F and 515 psig at 600 deg F ratings.

- b. NPS 2-1/2 to NPS 6: Stainless-steel hoses and double-braid, stainless-steel sheaths with 275 psig at 70 deg F and 200 psig at 600 deg F ratings.
- c. NPS 8 and Larger: Stainless-steel hoses and double-braid, stainless-steel sheaths with 165 psig at 70 deg F and 120 psig at 600 deg F ratings.

2.2 ALIGNMENT GUIDES

- A. Description: Steel, factory fabricated, with bolted two-section outer cylinder and base for alignment of piping and two-section guiding spider for bolting to pipe.

1. Manufacturers:

- a. Adscro Manufacturing, LLC.
- b. Advanced Thermal Systems, Inc.
- c. Flex-Hose Co., Inc.
- d. Flexicraft Industries.
- e. Flex-Weld, Inc.
- f. Hyspan Precision Products, Inc.
- g. Metraflex, Inc.
- h. Piping Technology & Products, Inc.
- i. Senior Flexonics, Inc.; Pathway Division.

2.3 MATERIALS FOR ANCHORS

- A. Steel Shapes and Plates: ASTM A 36/A 36M.
- B. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel, hex head.
- C. Washers: ASTM F 844, steel, plain, flat washers.
- D. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, and tension and shear capacities appropriate for application.
 - 1. Stud: Threaded, zinc-coated carbon steel.
 - 2. Expansion Plug: Zinc-coated steel.
 - 3. Washer and Nut: Zinc-coated steel.
- E. Chemical Fasteners: Insert-type-stud bonding system anchor for use with hardened portland cement concrete, and tension and shear capacities appropriate for application.
 - 1. Bonding Material: ASTM C 881, Type IV, Grade 3, 2-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
 - 2. Stud: ASTM A 307, zinc-coated carbon steel with continuous thread on stud, unless otherwise indicated.
 - 3. Washer and Nut: Zinc-coated steel.
- F. Concrete: Portland cement mix, 3000 psi minimum. Comply with requirements in Division 03 Section "Cast-in-Place Concrete" for formwork, reinforcement, and concrete.
- G. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink, nonmetallic grout; suitable for interior and exterior applications.
 - 1. Properties: Nonstaining, noncorrosive, and nongaseous.

2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.1 EXPANSION-JOINT INSTALLATION

- A. Install manufactured, nonmetallic expansion joints according to FSA's "Technical Handbook: Non-Metallic Expansion Joints and Flexible Pipe Connectors."
- B. Install expansion joints of sizes matching size of piping in which they are installed.
- C. Install alignment guides to allow expansion and to avoid end-loading and torsional stress.

3.2 PIPE BEND AND LOOP INSTALLATION

- A. Install pipe bends and loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.
- B. Attach pipe bends and loops to anchors.
 1. Steel Anchors: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 2. Concrete Anchors: Attach by fasteners. Follow fastener manufacturer's written instructions.

3.3 ANCHOR INSTALLATION

- A. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
- B. Fabricate and install steel anchors by welding steel shapes, plates, and bars to piping and to structure. Comply with ASME B31.9 and AWS D1.1.
- C. Construct concrete anchors of poured-in-place concrete of dimensions indicated and include embedded fasteners.
- D. Install pipe anchors according to expansion-joint manufacturer's written instructions if expansion joints or compensators are indicated.
- E. Use grout to form flat bearing surfaces for expansion fittings, guides, and anchors installed on or in concrete.

END OF SECTION

SECTION 230519
METERS AND GAUGES FOR HVAC PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Thermometers.
2. Gauges.
3. Test plugs.

B. Related Sections:

1. Division 23 Section "Steam and Condensate Heating Piping" for steam and condensate meters.
2. Division 23 Section "Facility Natural-Gas Piping" for gas meters.

1.2 DEFINITIONS

- A. CR:** Chlorosulfonated polyethylene synthetic rubber.
- B. EPDM:** Ethylene propylene diene monomer rubber.

1.3 ACTION SUBMITTALS

- A. Product Data:** For each type of product indicated; include performance curves.
- B. Wiring Diagrams:** For power, signal, and control wiring.
- C. Shop Drawings:** Schedule for thermometers, gauges, and flowmeters indicating manufacturer's number, scale range, and location for each.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Certificates:** For each type of thermometer, gauge, and flowmeters signed by product manufacturer.

1.5 CLOSEOUT SUBMITTALS

- A. A. Operation and Maintenance Data:** For meters and gauges to include in operation and maintenance manuals.

1.6 EXTRA MATERIALS

- A. Provide a PT measurement kit with thermometers and gauges chosen to indicate system pressures and temperatures at mid-scale. Provide multiple of each as mid-scale measurement dictates.

PART 2 - PRODUCTS

2.1 THERMOMETERS

- A. Digital Vari-angle Thermometer, self-powered and within 1% accuracy, Similar to Weiss Model DVU35.
 - 1. Case: Hi-impact ABS
 - 2. Range: -40/300 °F (-40/150 °C)
 - 3. Display: 3/8" LCD digits, wide ambient formula
 - 4. Accuracy: 1% of reading or 1° whichever is greater
 - 5. Resolution: 1/10° between -19.9/199.9 °F (-28/93 °C)
 - 6. Recalibration: Internal potentiometer
 - 7. Lux Rating: 10 Lux (one foot-candle)
 - 8. Update Rate: 10 seconds
 - 9. Ambient Operating Range: -30/140 °F (-35/60 °C)
 - 10. Ambient Temp. Error: Zero
 - 11. Humidity: 100%
 - 12. Sensor: Glass passivated thermistor
 - 13. Connector: Adjustable Angle

2.2 THERMOWELLS

- A. Manufacturers: Same as manufacturer of thermometer being used.
- B. Description: Pressure-tight, socket-type 304 Stainless Steel fitting made for insertion into piping and of type, diameter, and length required to hold thermometer.

2.3 PRESSURE GAUGES

- A. Manufacturers:
 - 1. Ernst Gauge Co.
 - 2. Miljoco Corp.
 - 3. Trerice, H. O. Co.
 - 4. Weiss Instruments, Inc.
 - 5. Weksler Instruments Operating Unit; Dresser Industries; Instrument Div.
 - 6. Dwyer Instruments, Inc.
- B. Direct-Mounting, Dial-Type Pressure Gauges: Indicating-dial type complying with ASME B40.100.
 - 1. Case: Liquid-filled type, cast aluminum, 4-1/2-inch diameter.
 - 2. Pressure-Element Assembly: Bourdon tube, unless otherwise indicated.

3. Pressure Connection: Brass, NPS 1/4, bottom-outlet type unless back-outlet type is indicated.
4. Movement: Mechanical, with link to pressure element and connection to pointer.
5. Dial: Satin-faced, nonreflective aluminum with permanently etched scale markings.
6. Pointer: Red or Black metal.
7. Window: Glass.
8. Ring: Stainless steel.
9. Accuracy: Grade B, plus or minus 1/2 percent of middle half scale.
10. Vacuum-Pressure Range: 30-in. Hg of vacuum to 50 psig of pressure.
11. Range for Fluids under Pressure: Two times operating pressure.

C. Direct-Mounting, Dial-Type Pressure Gauges: Indicating-dial type complying with ASME B40.100.

1. Case: Dry type, cast aluminum, 4-1/2-inch diameter.
2. Pressure-Element Assembly: Bourdon tube, unless otherwise indicated.
3. Pressure Connection: Brass, NPS 1/4, bottom-outlet type unless back-outlet type is indicated.
4. Movement: Mechanical, with link to pressure element and connection to pointer.
5. Dial: Satin-faced, nonreflective aluminum with permanently etched scale markings.
6. Pointer: Red or Black metal.
7. Window: Glass.
8. Ring: Stainless steel.
9. Accuracy: Grade B, plus or minus 2 percent of middle half scale.
10. Vacuum-Pressure Range: 0 to 50 psig of pressure.
11. Range for Fluids under Pressure: Two times operating pressure.

D. Pressure-Gauge Fittings:

1. Valves: NPS 1/4 brass or stainless-steel ball type.
2. Syphons: NPS 1/4 coil of brass tubing with threaded ends.
3. Snubbers: ASME B40.5, NPS 1/4 brass bushing with corrosion-resistant, porous-metal disc of material suitable for system fluid and working pressure.

2.4 TEST PLUGS

A. Manufacturers:

1. Flow Design, Inc.
2. MG Piping Products Co.
3. National Meter, Inc.
4. Peterson Equipment Co., Inc.
5. Sisco Manufacturing Co.
6. Trerice, H. O. Co.
7. Watts Industries, Inc.; Water Products Div.

B. Description: Corrosion-resistant brass or stainless-steel body with core inserts and gasketed and threaded cap, with extended stem for units to be installed in insulated piping.

C. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F.

D. Core Inserts: One or two self-sealing rubber valves.

1. Insert material for air, water, oil, or gas service at 20 to 200 deg F shall be CR.

2. Insert material for air or water service at minus 30 to plus 275 deg F shall be EPDM.

PART 3 - EXECUTION

3.1 THERMOMETER APPLICATIONS

- A. Install digital thermometers in the following locations:
 1. Inlet and outlet of each hydronic zone.
 2. Inlet and outlet of each hydronic boiler and chiller.
 3. Inlet and outlet of each hydronic coil in air-handling units and built-up central systems.
 4. Inlet and outlet of each hydronic heat exchanger.
- B. Install thermometers in separable sockets at each additional location indicated on the Drawings or specified elsewhere herein, and/or as a standard.
- C. Provide the following temperature ranges for thermometers, unless otherwise indicated:
 1. Heating Hot Water: 30 to 240 deg F, with 2-degree scale divisions
 2. Condenser Water: 0 to 160 deg F, with 2-degree scale divisions.
 3. Chilled Water: 0 to 100 deg F, with 2-degree scale divisions.
 4. Steam and Condensate: 50 to 400 deg F, with 5-degree scale divisions.

3.2 GAUGE COCK APPLICATIONS

- A. Install test plugs adjacent to all control sensors (except Insertion Type Flow Meters) installed in piping systems.
- B. Valved pressure gauge connections shall be installed in each location indicated on the Drawings and/or specified elsewhere herein.
- C. Install each gauge cock on a nipple of sufficient length so that the cock handle will be free of the pipe insulation. Position each cock so that a 4-1/2" diameter dial gauge may be easily read and screwed into and out of the cock.
- D. On pumps use a single pressure gauge connected by ball valves and metal tubing to the inlet and discharge flanges as well as the suction diffuser inlet flange, if applicable.
- E. Install gauge cocks at each pump as close to pump suction and discharge connections as practicable. Use any gauge connections provided in the pump casing.

3.3 GAUGE APPLICATIONS

- A. Install dry-case-type pressure gauges at the following locations:
 1. Discharge of each pressure-reducing valve.
 2. At each steam connection to a heat exchanger in the mechanical equipment rooms.
- B. Install liquid-filled-case-type pressure gauges at chilled- and condenser-water inlets and outlets of chillers.

- C. On pumps use a single pressure gauge connected by ball valves and metal tubing to the inlet and discharge flanges as well as the suction diffuser inlet flange, if applicable.
- D. Furnish and install calibrated pressure gauges at each location indicated on the Drawings, specified elsewhere herein, and/or as a standard.

3.4 INSTALLATIONS

- A. Install thermometers and adjust vertical and tilted positions.
- B. Install thermowells with socket extending one-third of diameter of pipe and in vertical position in piping tees where thermometers are indicated. Install thermowells using thermally conductive grease.
- C. Install direct-mounting pressure gauges in piping tees with pressure gauge located on pipe at most readable position.
- D. Install ball-valve and snubber or syphon fitting in piping for each pressure gauge for fluids (except steam).
- E. Install needle-valve and siphon fitting in piping for each pressure gauge for steam.
- F. Assemble and install connections, tubing, and accessories between flow-measuring elements and flowmeters as prescribed by manufacturer's written instructions.
- G. Install flowmeter elements in accessible positions in piping systems.
- H. Install flowmeter elements with at least (10) pipe diameters minimum straight lengths of pipe upstream and (5) pipe diameters downstream from element as prescribed by manufacturer's written instructions.
- I. Install flowmeters at discharge of hydronic system pumps and at inlet of hydronic air coils, as indicated.
- J. Install test plugs adjacent to all gauges and control sensors (except insertion type flow meters) installed in piping systems.

3.5 CONNECTIONS

- A. Install meters and gauges adjacent to machines and equipment to allow service and maintenance for meters, gauges, machines, and equipment.
- B. Connect flowmeter-system elements to meters.
- C. Connect flowmeter transmitters to meters.
- D. Install test plugs adjacent to the temperature sensing device used for controls for simultaneous reading with test instrument for calibration purposes.

3.6 ADJUSTING

- A. Calibrate meters according to manufacturer's written instructions, after installation.

END OF SECTION

SECTION 230523

GENERAL-DUTY VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following general-duty valves:

1. Bronze angle valves.
2. Cast-iron angle valves.
3. Copper-alloy ball valves.
4. Ferrous-alloy ball valves.
5. Ductile-iron butterfly valves.
6. High-pressure butterfly valves.
7. Bronze check valves.
8. Cast-iron swing check valves.
9. Spring-loaded, lift-disc check valves.
10. Bronze gate valves.
11. Cast-iron gate valves.
12. Bronze globe valves.
13. Cast-iron globe valves.
14. Cast-iron plug valves.
15. Resilient-seated, cast-iron, eccentric plug valves.
16. Chainwheel actuators.

B. Related Sections include the following:

1. Division 21 fire-suppression piping and fire pump Sections for fire-protection valves.
2. Division 23 Sections for specialty valves applicable to specific services only.
3. Division 23 Section "Identification for HVAC Piping and Equipment" for valve tags and charts.
4. Division 23 Section "Instrumentation and Control for HVAC" for actuators in control valve applications.
5. Division 23 Section "Hydronic Piping" for additional valves and fittings.

1.2 DEFINITIONS

- A. CWP: Cold working pressure.
- B. EPDM: Ethylene-propylene-diene terpolymer rubber.
- C. HPS: High-pressure Steam. Any system pressure above 15 psig is HPS.
- D. LPS: Low-pressure Steam. Any system pressure less than or equal to 15 psig is LPS.
- E. NRS: Nonrising stem.
- F. OS&Y: Outside screw and yoke.

- G. PTFE: Polytetrafluoroethylene plastic.
- H. Single Flange: Any valve design where lugs are evenly spaced around the circumference of the valve face and attach to adjoining piping using full length bolts.
- I. Spring-loaded, Lift-disc Check Valve: Non-slam check valve.
- J. SWP: Steam working pressure.
- K. TFE: Tetrafluoroethylene plastic.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of valve indicated. Include body the following:

1. Seating, and trim materials
2. Valve design
3. Pressure and temperature classifications
4. End connections
5. Arrangement
6. Dimensions
7. Required clearances.
8. Include list indicating valve and its application by system and size.
9. Include rated capacities
10. Shipping, installed, and operating weights
11. Furnished specialties
12. Accessories.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each valve include operation and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. ASME Compliance: ASME B31.1 for power piping valves and ASME B31.9 for building services piping valves.
- B. ASME Compliance for Ferrous Valves: ASME B16.10 and ASME B16.34 for dimension and design criteria.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 1. Protect internal parts against rust and corrosion.
 2. Protect threads, flange faces, grooves, and weld ends.
 3. Set angle, gate, and globe valves closed to prevent rattling.
 4. Set ball and plug valves open to minimize exposure of functional surfaces.
 5. Set butterfly valves closed or slightly open.
 6. Block check valves in either closed or open position.

- B. Use the following precautions during storage:
 - 1. Maintain valve end protection.
 - 2. Store valves indoors and maintain at higher than ambient dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 - PRODUCTS

2.1 VALVES, GENERAL

- A. Refer to Part 3 "Valve Applications" Article for applications of valves.
- B. Copper-alloy Valves: NPS 2 and smaller with threaded ends, unless otherwise indicated. All valves shall comply with recognized industry standards such as MSS SP-80 and SP-110.
- C. Ferrous Valves: NPS 2-1/2 and larger with flanged ends, unless otherwise indicated.
- D. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- E. Valve Sizes: Same as upstream pipe, unless otherwise indicated.
- F. Valve Actuators:
 - 1. Chainwheel: For attachment to valves, of size and mounting height, as indicated in the "Valve Installation" Article in Part 3.
 - 2. Gear Drive: Enclosed worm gear.
 - 3. Handwheel: For valves other than quarter-turn types.
 - 4. Lever Handle: Clamp lock.
 - 5. Wrench: For plug valves with square heads. Furnish Owner with 1 wrench for every 10 plug valves, for each size square plug head.
- G. Valves in Insulated Piping: Valves shall have 3-inch stem extensions and the following features:
 - 1. Gate Valves: Shall be rising-stem type.
 - 2. Ball Valves: Shall have extended operating handle of non-thermal-conductive material, protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation, and memory stops that are fully adjustable after insulation is applied.
 - a. Conbraco Industries, Inc.; Apollo Div.
 - b. Jamesbury, Inc.
 - c. Kitz Insulated Stem Extension Model #ISE 1 thru 4
 - d. NIBCO Nib-seal handle extension
 - 3. Butterfly Valves: Shall have extended necks.
- H. Valve Flanges: ASME B16.1 for cast-iron valves, ASME B16.5 for steel valves, and ASME B16.24 for bronze valves.

- I. Valve Grooved Ends: AWWA C606.
- J. Solder Joint: With sockets according to ASME B16.18.
 - 1. Use solder with melting point below 840 deg F for angle, check, gate, and globe valves; below 421 deg F for ball valves.
- K. Threaded: With threads according to ASME B1.20.1.
- L. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRONZE ANGLE VALVES

- A. Bronze Angle Valves, General: MSS SP-80, with silicon bronze stem, non-asbestos packing and malleable-iron handwheel.
- B. Class 150, Bronze Angle Valves: ASTM B 62 bronze body with TFE disc, union-ring bonnet, threaded ends, and having 300-psig CWP rating.
 - 1. Crane Co.; Crane Valve Group; Crane Valves.
 - 2. NIBCO Model T-335-Y
 - 3. Powell, Wm. Co.
- C. Class 300, Bronze Angle Valves with Stainless-Steel Disc: ASTM B 61 bronze body with stainless-steel plug and renewable seat, union-ring bonnet, threaded ends, and having 600-psig CWP rating.
 - 1. Crane Co.; Crane Valve Group; Crane Valves.
 - 2. NIBCO Model T-376-AP
 - 3. Powell, Wm. Co.

2.3 CAST-IRON ANGLE VALVES

- A. Cast-Iron Angle Valves, General: MSS SP-85, Type II; having ASTM A 126, Class B cast-iron body and bolted bonnet; bronze mounted, non-asbestos packing and gaskets; and flanged-end connections.
- B. Class 125, Cast-Iron, Standard Angle Valves: 200-psig CWP rating.
 - 1. Crane Co.; Crane Valve Group; Crane Valves.
 - 2. NIBCO Model F-818-B
 - 3. Powell, Wm. Co.
- C. Class 250, Cast-Iron, Stop-Check Angle Valves: Stop-check design with non-asbestos packing and gaskets, and having 500-psig (3450-kPa) CWP rating.
 - 1. Crane Co.; Crane Valve Group; Crane Valves.
 - 2. NIBCO Model NIBCO Model F-869-B
 - 3. Powell, Wm. Co.

2.4 COPPER ALLOY BALL VALVES

- A. Brass Ball Valves, General: MSS SP-110 and have a brass body complying with ASTM B 283.
- B. Bronze Ball Valves, General: MSS SP-110 and have a copper alloy body complying with ASTM B 584, except for Class 250 which shall comply with ASTM B 61, full-depth ASME B1.20.1 threaded or solder ends, and blowout-proof stems.
- C. Two-Piece, Full-Port, Copper Alloy Ball Valves with Stainless-Steel Trim: Type 316 stainless-steel vented ball and stem, reinforced TFE seats, threaded body packnut design, blow-out proof stems, with adjustable stem packing, soldered or threaded ends; 150 psig SWP and 600-psig CWP ratings.
 - 1. Conbraco Industries, Inc.; Apollo Div.
 - 2. Jamesbury, Inc.
 - 3. Kitz Model #68M or #69M
 - 4. NIBCO Model S-585-70-66 or T-585-70-66
- D. Two-Piece, Full-Port, 250 psig SWP, Copper Alloy Ball Valves with Stainless-Steel Trim: Type 316 stainless-steel vented ball and stem, carbon-filled TFE seats, threaded body packnut design, blow-out proof stems, with adjustable stem packing, threaded ends; 250 psig SWP and 600-psig CWP ratings.
 - 1. Conbraco Industries, Inc.; Apollo Div.
 - 2. Jamesbury, Inc.
 - 3. Kitz Model #68PM
 - 4. NIBCO Model T-585-70-66-ST
- E. Three-Piece, Full Port, Copper Alloy Ball Valves with Stainless-Steel Trim: Type 316 stainless-steel vented ball and stem, threaded body packnut, blow-out proof stems, with adjustable stem packing, stainless nuts and bolts on valve body, soldered or threaded ends; 150 psig SWP and 600-psig CWP rating.
 - 1. Conbraco Industries, Inc.; Apollo Div.
 - 2. Jamesbury, Inc.
 - 3. Kitz Model #62M or #63M
 - 4. NIBCO Model S-595-Y-66-SS or T-595-Y-66-SS

2.5 FERROUS-ALLOY BALL VALVES

- A. Ferrous-Alloy Ball Valves, General: MSS SP-72, with ASTM A-216 Type WCB, carbon-steel body; ASTM A-351, Type CF8M vented stainless-steel ball; and ASTM A-276, Type 316 stainless-steel stem; fire rated according to API 607 (4th edition); and having flanged ends and blowout-proof stem.
- B. Class 150, Full-Port, Ferrous-Alloy Ball Valves: Split-body construction, carbon-filled TFE seats; 285 psig CWP rating.
 - 1. Conbraco Industries, Inc.; Apollo Div.
 - 2. Jamesbury, Inc.
 - 3. Kitz 150SCTDZM-FS BZM-FS(C)
 - 4. NIBCO Model F-515-CS-F-66-FS

- C. Class 300, Full-Port, Ferrous-Alloy Ball Valves: Split-body construction, carbon-filled TFE seats; 720 psig CWP rating.

1. Conbraco Industries, Inc.; Apollo Div.
2. Jamesbury, Inc.
3. Kitz 300SCTDZM-FS BZM-FS(C)
4. NIBCO Model F-535-CS-F-66-FS

2.6 FERROUS-ALLOY BUTTERFLY VALVES

- A. Ferrous-Alloy Butterfly Valves, General: MSS SP-67, for bubble-tight shutoff, extended-neck for insulation, disc and lining suitable for potable water, unless otherwise indicated, and with the following features:

1. Full lug, grooved and flanged valves shall be suitable for bi-directional dead end service at full rated pressure without the use or need of a downstream flange. Valves NPS 12 and smaller shall not have exposed stem to disc fasteners and no exterior mounted fasteners to hold the liner.
2. Valve sizes NPS 2 through NPS 6 shall have lever lock operator; valve sizes NPS 8 and larger shall have weatherproof gear operator.

- B. Single-Flange, 150-psig CWP Rating, Aluminum-Bronze Disc, EPDM Seat, Ferrous-Alloy Butterfly Valves: Full-lug type with ductile-iron body, one- or two-piece Type 416 stainless-steel stem, bronze bushing, aluminum-bronze disc, and phenolic-backed EPDM seat (liner) attached to the body.

1. Cooper Cameron Corp.; Cooper Cameron Valves Div.
2. DeZURIK; SPX Corporation
3. Kitz Model #6123EG
4. NIBCO Model LD-1000-5

- C. Single-Flange, 200-psig CWP Rating, Aluminum-Bronze Disc, EPDM Seat, Ferrous-Alloy Butterfly Valves: Full-lug type with ductile-iron body, one- or two-piece, Type 410 or 416 stainless-steel stem, copper bushing, fasteners and pins shall not be used to attach stem, to disc, no pins or fasteners in waterway, aluminum-bronze disc, and molded-in EPDM seat (liner).

1. Cooper Cameron Corp.; Cooper Cameron Valves Div.
2. DeZURIK; SPX Corporation
3. Kitz Model #6123EL or #6123EG
4. NIBCO Model LD-2000-3/5

- D. Grooved-End, Ferrous-Alloy Butterfly Valves with EPDM-Encapsulated Ductile-Iron Disc: Ductile-iron with grooved or shouldered ends, polyamide coating inside and outside, two-piece Type 416 stainless-steel stem, PTFE bronze sintered on steel bushing, fasteners and pins shall not be used to attach stem to disc, no pins or fasteners in waterway, and 300-psig CWP Rating for Valves NPS 2 through NPS 8, 200 psig CWP Rating for Valves NPS 10 through NPS 12.

1. Anvil International, Inc.
2. Grinnell Mechanical Products.
3. NIBCO Model GD-4765-3/5
4. Victaulic Co. of America.

2.7 HIGH-PRESSURE BUTTERFLY VALVES

- A. High-Pressure Butterfly Valves, General: MSS SP-68 API 609 seat pressure and temperature ratings, ANSI B1634A body pressure and temperature ratings, ANSI B16.5 flange dimensions, ISO 5211, EN 12116 actuator mounting top works, capable of bi-directional dead-end service at full-rated pressure without use of downstream flange, carbon-steel body, offset design, extended-neck for insulation, permanently lubricated 300-series stainless-steel bushings with graphite and modified PTFE seats, graphite packing and gasket, one-piece duplex stainless-steel stem, and stainless-steel disc. Maximum steam rating of 50 psig. Valves NPS 6 and smaller shall have lever-lock operator; valves NPS 8 and larger shall have weatherproof gear operator.
- B. Single-Flange, Full-Lug, 285 psig CWP Rating, High-Pressure Butterfly Valves:
 - 1. Jamesbury, Inc.
 - 2. NIBCO Model LCS6822-3/5
 - 3. Xomox Corporation.
- C. Single-Flange, Full-Lug, 720 psig CWP Rating, High-Pressure Butterfly Valves:
 - 1. Jamesbury, Inc.
 - 2. NIBCO Model LCS7822-3/5
 - 3. Xomox Corporation.

2.8 BRONZE CHECK VALVES

- A. Bronze Check Valves, General: MSS SP-80.
- B. Class 125, Bronze, Lift Check Valves with TFE Disc: ASTM B-584 bronze body and integral seat with soldered or threaded end connections, and having 250-psig CWP rating.
 - 1. Crane Co.; Crane Valve Group; Crane Valves.
 - 2. Kitz Model #26 or #36
 - 3. NIBCO Model S-480-Y or T-480-Y
 - 4. Powell, Wm. Co.
- C. Class 125, Bronze, Swing Check Valves with TFE Disc: ASTM B-62 bronze body and seat with TFE disc in bronze seat holder, Y-pattern design, soldered or threaded end connections, and having 200 psig CWP rating.
 - 1. Crane Co.; Crane Valve Group; Crane Valves.
 - 2. Kitz Model #23T or #22T
 - 3. NIBCO Model S-413-Y or T-413-Y
 - 4. Powell, Wm. Co.
- D. Class 150, Bronze, Swing Check Valves with TFE Disc: ASTM B-62 bronze body and seat with TFE disc in bronze seat holder, Y-pattern design, soldered or threaded end connections, and having 300 psig CWP rating.
 - 1. Crane Co.; Crane Valve Group; Crane Valves.
 - 2. Kitz #30T or #29T
 - 3. NIBCO Model S-433-Y or T-433-Y
 - 4. Powell, Wm. Co.

- E. Class 300, Bronze, Swing Check Valves with Bronze Disc: ASTM B-61 bronze body and seat with regrinding-type bronze disc, Y-pattern design, threaded end connections, and having 600 psig CWP rating.
 - 1. Crane Co.; Crane Valve Group; Crane Valves.
 - 2. Kitz Model #19
 - 3. NIBCO Model T-473-B
 - 4. Powell, Wm. Co.

2.9 IRON SWING CHECK VALVES

- A. Iron Swing Check Valves, General: MSS SP-71.
- B. Class 125, Gray-Iron, Standard Swing Check Valves: ASTM A-126, Class B cast-iron body and bolted bonnet with flanged end connections; non-asbestos synthetic-fiber gaskets; bronze disc and seat; and having 200 psig CWP rating.
 - 1. Crane Co.; Crane Valve Group; Crane Valves.
 - 2. Kitz Model #78
 - 3. NIBCO Model F-918-B
 - 4. Powell, Wm. Co.
- C. Class 250, Gray-Iron, Swing Check Valves: ASTM A-126, Class B cast-iron body and bolted bonnet with flanged end connections; non-asbestos synthetic-fiber gaskets; and bronze disc and seat; and having 500 psig CWP rating.
 - 1. Crane Co.; Crane Valve Group; Crane Valves.
 - 2. NIBCO Model F-968-B
 - 3. Powell, Wm. Co.
- D. Grooved-End, Swing Check Valves: Ductile-iron body with grooved or shouldered ends; nonasbestos, synthetic-fiber gaskets; rubber seats; and having 250-psig CWP Rating.
 - 1. Anvil International, Inc.
 - 2. Grinnell Mechanical Products
 - 3. NIBCO Model G-917-W
 - 4. Victaulic Co. of America

2.10 SPRING-LOADED, CENTER-GUIDED LIFT-DISC, IRON CHECK VALVES

- A. Lift-Disc Check Valves, General: FCI 74-1 and MIL-V-18436F, with spring-loaded, center-guided bronze disc and seat.
- B. Class 125, Globe, Flanged Lift-Disc Check Valves: Globe style with cast-iron body and flanged ends, and having 200 psig CWP rating.
 - 1. NIBCO Model F-910-B
 - 2. Kitz #7022 (wafer)
 - 3. Metraflex Co.
 - 4. Val-Matic Valve & Mfg. Corp.
- C. Class 250, Globe, Flanged Lift-Disc Check Valves: Globe style with cast-iron body and flanged ends, and having 400 psig CWP rating.

1. NIBCO Model F-960-B
2. Metraflex Co.
3. Val-Matic Valve & Mfg. Corp.

2.11 BRONZE GATE VALVES

- A. Bronze Gate Valves, General: MSS SP-80, with malleable-iron handwheel.
- B. Class 150, Rising-Stem, Union-Ring Bonnet, Bronze Gate Valves: ASTM B-62 bronze body, bonnet, and wedge, copper-silicone bronze stem, union-ring bonnet, soldered or threaded end connections; and having 300 psig CWP rating.
 1. Crane Co.; Crane Valve Group; Crane Valves.
 2. Kitz Model #43 or #42T
 3. NIBCO Model S-134 or T-134
 4. Powell, Wm. Co.
- C. Class 300, Rising-Stem, Stainless-Steel Wedge, Bronze Gate Valves: ASTM B-61 bronze body, bonnet and seat, stainless-steel wedge and seat, copper-silicone bronze stem, union-ring bonnet, and threaded end connections; and having 600 psig CWP rating.
 1. Crane Co.; Crane Valve Group; Crane Valves.
 2. NIBCO Model T-174-SS
 3. Powell, Wm. Co.

2.12 CAST-IRON GATE VALVES

- A. Cast-Iron Gate Valves, General: MSS SP-70, Type I with bolted bonnet, flanged end connections, and non-asbestos packing and gasket.
- B. Class 125, OS&Y, Bronze-Mounted, Cast-Iron Gate Valves: ASTM A-126, Class B cast-iron body and bonnet with bronze trim, and solid-wedge disc; and having 200 psig CWP rating.
 1. Crane Co.; Crane Valve Group; Crane Valves.
 2. Kitz Model #72
 3. NIBCO Model F-617-O
 4. Powell, Wm. Co.
- C. Class 250, OS&Y, Bronze-Mounted, Cast-Iron Gate Valves: ASTM A-126, Class B cast-iron body and bonnet with bronze trim, and solid-wedge disc; and having 500 psig CWP rating.
 1. Crane Co.; Crane Valve Group; Crane Valves.
 2. NIBCO Model F-667-O
 3. Powell, Wm. Co.

2.13 BRONZE GLOBE VALVES

- A. Bronze Globe Valves, General: MSS SP-80, with malleable-iron handwheel.
- B. Class 150, TFE Disc, Bronze Globe Valves: ASTM B-62 bronze body, bonnet, and seat, TFE disc, copper-silicone bronze stem, union-ring bonnet, soldered or threaded end connections; and having 300 psig CWP rating.

1. Crane Co.; Crane Valve Group; Crane Valves.
2. Kitz Model #10 or #9
3. NIBCO Model S-235-Y or T-235-Y
4. Powell, Wm. Co.

- C. Class 300, Stainless-Steel Disc, Bronze Globe Valves: ASTM B-61 bronze body and bonnet, stainless-steel disc and seat, copper-silicone bronze stem, union-ring bonnet, threaded end connections; and having 600 psig CWP rating.

1. Crane Co.; Crane Valve Group; Crane Valves.
2. Kitz Model #17S
3. NIBCO Model T-276-AP
4. Powell, Wm. Co.

2.14 CAST-IRON GLOBE VALVES

- A. Cast-Iron Globe Valves, General: MSS SP-85 with bolted bonnet, flanged end connections, and non-asbestos packing and gasket.

- B. Class 125, Metal Seat, Cast-Iron Globe Valves: ASTM A-126, Class B cast-iron body and bonnet with bronze trim and having 200 psig CWP rating.

1. Crane Co.; Crane Valve Group; Crane Valves.
2. Kitz Model #76
3. NIBCO Model F-718-B
4. Powell, Wm. Co.

- C. Class 250, Metal Seat, Cast-Iron Globe Valves: ASTM A-126, Class B cast-iron body and bonnet with bronze trim and having 500 psig CWP rating.

1. Crane Co.; Crane Valve Group; Crane Valves.
2. NIBCO Model F-768-B
3. Powell, Wm. Co.

2.15 CAST-IRON PLUG VALVES

- A. Available Manufacturers:

1. Lubricated-Type, Cast-Iron Plug Valves:

- a. Milliken Valve Co., Inc.
- b. Nordstrom Valves, Inc.
- c. Olson Technologies; Homestead Div.
- d. R & M Energy Systems (Tomball, TX).
- e. Walworth Co.

2. Nonlubricated-Type, Cast-Iron Plug Valves:

- a. General Signal; DeZurik Unit.
- b. Grinnell Corporation.
- c. Mueller Flow Technologies.
- d. Tyco International, Ltd.; Tyco Valves & Controls.
- e. Wheatley Gaso, Inc.

f. Xomox Corporation.

- B. Cast-Iron Plug Valves, General: MSS SP-78.
- C. Class 125 or 150, lubricated-type, cast-iron plug valves.
- D. Class 250 or 300, lubricated-type, cast-iron plug valves.
- E. Class 125 or 150, nonlubricated-type, cast-iron plug valves.
- F. Class 250, nonlubricated-type, cast-iron plug valves.

2.16 RESILIENT-SEATED, CAST-IRON, ECCENTRIC PLUG VALVES

- A. Available Manufacturers:
 - 1. General Signal; DeZurik Unit.
 - 2. Milliken Valve Company.
 - 3. Olson Technologies; Homestead Div.
 - 4. Pratt, Henry Company.
 - 5. Val-Matic Valve & Mfg. Corp.
- B. Resilient-Seated, Cast-Iron, Eccentric Plug Valves, NPS 2-1/2 and Smaller: Design similar to MSS SP-108, and rated for 175-psig minimum CWP.
- C. Resilient-Seated, Cast-Iron, Eccentric Plug Valves, NPS 3 and Larger: MSS SP-108, and rated for 175-psig minimum CWP.

2.17 CHAINWHEEL ACTUATORS

- A. Manufacturers:
 - 1. Babbitt Steam Specialty Co.
 - 2. Roto Hammer Industries, Inc.
- B. Description: Valve actuation assembly with sprocket rim, brackets, and chain.
 - 1. Sprocket Rim with Chain Guides: Ductile iron of type and size required for valve
 - 2. Brackets: Type, number, size, and fasteners required to mount actuator on valve.
 - 3. Chain: Hot-dip, galvanized steel of size required to fit sprocket rim.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine piping system for compliance with requirements for installation tolerances and other conditions affecting performance.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

- B. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- C. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- D. Examine threads on valve and mating pipe for form and cleanliness.
- E. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- F. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE APPLICATIONS

A. Chilled-Water Piping:

1. Ball Valves, NPS 2 and Smaller: Two -piece, full port, stainless-steel trim, copper alloy.
2. Ball Valves, NPS 2-1/2 and Larger: Class 150, full -port, ferrous alloy.
3. Butterfly Valves, NPS 2-1/2 to NPS 12: Single-flange, full lug, 200-psig CWP rating, bronze disc, EPDM liner, ductile iron.
4. Butterfly Valves, NPS 14: Single-flange, full lug, 150-psig CWP rating, bronze disc, EPDM liner, ductile iron.
5. Gate Valves, NPS 2 and Smaller: bronze body with extended stem, Class 200.
6. Gate Valves, NPS 2-1/2 and Larger: bronze body with extended stem, Class 200.
7. High-Pressure Butterfly Valves, NPS 2-1/2 and Larger: Single-flange, 285 psig CWP rating.
8. Grooved-End, Ductile-Iron Butterfly Valves, NPS 2-1/2 to NPS 8 300-psig CWP rating, EPDM- encapsulated ductile-iron disc.
9. Grooved-End, Ductile-Iron Butterfly Valves, NPS 10 to NPS 12: 200-psig CWP rating, EPDM- encapsulated ductile-iron disc.
10. Lift Check Valves, NPS 2 and Smaller: Class 125, non-slam type, bronze with TFE disc.
11. Swing Check Valves, NPS 2 and Smaller: Class 150, bronze with TFE disc.
12. Swing Check Valves, NPS 2-1/2 and Larger: Class 125, non-slam type, cast-iron, standard.
13. Grooved-End Swing Check Valves, NPS 2-1/2 and Larger: Grooved-end, ductile-iron, swing check valves.
14. Spring-Loaded, Center-Guided Lift-Disc Check Valves, NPS 2-1/2 and Larger: Class 125, flanged end, iron.
15. Plug Valves, NPS 2 and Larger: Class 125 or 150, nonlubricated-type, cast iron.
16. Resilient-Seated, Eccentric Plug Valves, NPS 3 and Larger: 175-psig CWP rating, cast iron.

B. Heating Water Piping:

1. Gate Valves, NPS 2 and Smaller: bronze body with extended stem, Class 150.
2. Gate Valves, NPS 2-1/2 and Larger: bronze body with extended stem, Class 150.
3. Butterfly Valves, NPS 2-1/2 to NPS 12 Single-flange, full lug, 200-psig CWP rating, bronze disc, EPDM liner, ductile iron.

4. Butterfly Valves, NPS 14: Single-flange, full lug, 150-psig CWP rating, bronze disc, EPDM liner, ductile iron.
5. High-Pressure Butterfly Valves, NPS 2-1/2 and Larger: Single-flange, 285 psig CWP rating.
6. Grooved-End, Ductile-Iron Butterfly Valves, NPS 2-1/2 to NPS 8: 300-psig CWP rating, EPDM- encapsulated ductile-iron disc.
7. Grooved-End, Ductile-Iron Butterfly Valves, NPS 10 to NPS 12: 200-psig CWP rating, EPDM- encapsulated ductile-iron disc.
8. Lift Check Valves, NPS 2 and Smaller: Class 125, bronze with TFE disc.
9. Swing Check Valves, NPS 2 and Smaller: Class 150, bronze with TFE disc.
10. Swing Check Valves, NPS 2-1/2 and Larger: Class 125, cast iron, standard.
11. Grooved-End Swing Check Valves, NPS 2-1/2 and Larger: Grooved-end, ductile-iron, swing check valves.
12. Spring-Loaded, Center-Guided, Lift-Disc Check Valves, NPS 2-1/2 and Larger: Class 125, flanged end, iron.

C. Steam Piping, 0 - 125 psig Operating Pressure:

1. Angle Valves, NPS 2 and Smaller: Class 150, with TFE disc, bronze.
2. Angle Valves, NPS 2-1/2 and Larger: Class 125, cast iron.
3. Ball Valves, NPS 2 and Smaller: Two -piece, full port, stainless-steel trim, bronze.
4. Ball Valves, NPS 2-1/2 and Larger: Class 150, full -port, ferrous alloy.
5. High-Pressure Butterfly Valves, NPS 2-1/2 and Larger: Single-flange 285 psig CWP rating.
6. Swing Check Valves, NPS 2 and Smaller: Class 125, bronze with TFE disc.
7. Swing Check Valves, NPS 2-1/2 and Larger: Class 125, cast-iron, standard.
8. Gate Valves, NPS 2 and Smaller: Class 150, bronze.
9. Gate Valves, NPS 2-1/2 and Larger: Class 125, cast iron.
10. Globe Valves, NPS 2 and Smaller: Type 2, Class 150, TFE disc, bronze.
11. Globe Valves, NPS 2-1/2 and Larger: Class 125; cast iron.

D. Steam Condensate Piping:

1. Angle Valves, NPS 2 and Smaller: Class 150, TFE disc, bronze.
2. Angle Valves, NPS 2-1/2 and Larger: Class 250, cast iron.
3. Ball Valves, NPS 2 and Smaller: Class 250, Two -piece, full port, stainless-steel trim, copper alloy.
4. Ball Valves, NPS 2-1/2 and Larger: Class 300, full -port, ferrous alloy.
5. High-Pressure Butterfly Valves, NPS 2-1/2 and Larger: Single-flange, 720 psig CWP rating.
6. Swing Check Valves, NPS 2 and Smaller: Class 300, bronze with bronze disc.
7. Swing Check Valves, NPS 2-1/2 and Larger: Class 250, gray iron, standard.
8. Gate Valves, NPS 2 and Smaller: Class 300, bronze.
9. Gate Valves, NPS 2-1/2 and Larger: Class 250, cast iron.
10. Globe Valves, NPS 2 and Smaller: Class 300, stainless-steel disc, bronze.
11. Globe Valves, NPS 2-1/2 and Larger: Class 250, cast iron.

E. Select valves, with the following end connections:

1. For Copper Tubing, NPS 2 and Smaller: Solder-joint or threaded ends, for chilled or condenser water piping systems only.
2. For Copper Tubing, NPS 2-1/2 and Larger: Flanged ends.
3. For Steel Piping, NPS 2 and Smaller: Threaded ends.
4. For Steel Piping, NPS 2-1/2 and Larger: Flanged ends.
5. For Grooved-End, Copper Tubing and Steel Piping: Valve ends may be grooved. Do not use for steam or steam condensate piping.

3.3 VALVE INSTALLATION

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- C. For shut-off service of hydronic systems, use
 - 1. Up to NPS 2: Gate type.
 - 2. NPS 2-1/2 and greater: Gate or Butterfly type.
- D. Locate valves for easy access and provide separate support where necessary.
- E. Install valves in horizontal piping with stem at or above center of pipe.
- F. Install valves in position to allow full stem movement.
- G. Provide clamp lock lever handle for all valves, other than plug type, NPS 4 or smaller.
- H. Provide hand wheel for all valves, other than plug type, NPS 6 and greater.
- I. Install chainwheel operators on valves NPS 4 and larger and more than 78 inches above floor. Extend chains to 60 inches above finished floor elevation.
- J. Install check valves for proper direction of flow and as follows:
 - 1. Swing Check Valves: In horizontal position with hinge pin level.
 - 2. Lift Check Valves: With stem upright and plumb.

3.4 JOINT CONSTRUCTION

- A. Refer to Division 23 Section "Common Work Results for HVAC" for basic piping joint construction.
- B. Grooved Joints: Assemble joints with keyed coupling housing, gasket, lubricant, and bolts according to coupling and fitting manufacturer's written instructions.
- C. Soldered Joints: Use ASTM B 813, water-flushable, lead-free flux; ASTM B 32, lead-free-alloy solder; and ASTM B 828 procedure, unless otherwise indicated.

3.5 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

END OF SECTION

SECTION 230529

HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following hangers and supports for HVAC system piping and equipment:
 - 1. Steel pipe hangers and supports.
 - 2. Trapeze pipe hangers.
 - 3. Metal framing systems.
 - 4. Thermal-hanger shield inserts.
 - 5. Fastener systems.
 - 6. Pipe stands.
 - 7. Equipment supports.
- B. Related Sections include the following:
 - 1. Division 05 Section "Metal Fabrications" for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.
 - 2. Division 21 Section "Water-Based Fire-Suppression Systems" for pipe hangers for fire-protection piping.
 - 3. Division 23 Section "Expansion Fittings and Loops for HVAC Piping" for pipe guides and anchors.
 - 4. Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment" for vibration isolation devices.
 - 5. Division 23 Sections "Metal Ducts" and "Nonmetal Ducts" for duct hangers and supports.
 - 6. Division 23 Section "HVAC Insulation" for pipe saddles at pipe hangers.

1.2 DEFINITIONS

- A. MFMA: Metal Framing Manufacturers Association.
- B. MSS: Manufacturers Standardization Society of the Valve and Fittings Industry Inc.
- C. Terminology: As defined in MSS SP-90, "Guidelines on Terminology for Pipe Hangers and Supports."

1.3 PERFORMANCE REQUIREMENTS

- A. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
- B. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

1.4 ACTION SUBMITTALS

- A. Product Data: For the following:
 - 1. Steel pipe hangers and supports.
 - 2. Fiberglass pipe hangers.
 - 3. Thermal-hanger shield inserts.
 - 4. Powder-actuated fastener systems.
- B. Shop Drawings: Signed and sealed by a qualified professional engineer. Show fabrication and installation details and include calculations for the following:
 - 1. Trapeze pipe hangers. Include Product Data for components.
 - 2. Metal framing systems. Include Product Data for components.
 - 3. Fiberglass strut systems. Include Product Data for components.
 - 4. Pipe stands. Include Product Data for components.
 - 5. Equipment supports.
- C. Delegated-Design Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Detail fabrication and assembly of trapeze hangers.
 - 2. Design Calculations: Calculate requirements for designing trapeze hangers.

1.5 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

1.6 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code--Steel", AWS D1.3, "Structural Welding Code--Sheet Steel", AWS D1.4, "Structural Welding Code--Reinforcing Steel", ASME Boiler and Pressure Vessel Code: Section IX as required.
- B. Welding: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1, "Structural Welding Code--Steel."
 - 2. AWS D1.2, "Structural Welding Code--Aluminum."
 - 3. AWS D1.3, "Structural Welding Code--Sheet Steel."
 - 4. AWS D1.4, "Structural Welding Code--Reinforcing Steel."
 - 5. ASME Boiler and Pressure Vessel Code: Section IX.
- C. Pipe hangers and supports shall conform to the recommendations of ASHRAE, ASPE, ANSI, and MSS, unless otherwise indicated.
- D. Ensure anchors are acceptable per ICC for use in cracked concrete.
- E. Furnish and install hangers and supports that conform to the requirements of the following codes and standards:
 - 1. Metal Framing Manufacturers Association

- a. MFMA-4, Metal Framing Standards Publication.
- b. MFMA-103, Guidelines for the Use of Metal Framing.

PART 2 - PRODUCTS

2.1 STEEL PIPE HANGERS AND SUPPORTS

- A. Description: MSS SP-58, Types 1 through 58, factory-fabricated components. Refer to Part 3 "Hanger and Support Applications" Article for where to use specific hanger and support types.
- B. Available Manufacturers:
 - 1. AAA Technology & Specialties Co., Inc.
 - 2. Anvil.
 - 3. Bergen-Power Pipe Supports.
 - 4. B-Line Systems, Inc.; a division of Cooper Industries.
 - 5. Carpenter & Paterson, Inc.
 - 6. Empire Industries, Inc.
 - 7. ERICO/Michigan Hanger Co.
 - 8. Globe Pipe Hanger Products, Inc.
 - 9. Grinnell Corp.
 - 10. GS Metals Corp.
 - 11. National Pipe Hanger Corporation.
 - 12. PHD Manufacturing, Inc.
 - 13. PHS Industries, Inc.
 - 14. Piping Technology & Products, Inc.
 - 15. Tolco Inc.
- C. Galvanized, Metallic Coatings: Pregalvanized or hot dipped.
- D. Nonmetallic Coatings: Plastic coating, jacket, or liner.
- E. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion for support of bearing surface of piping.

2.2 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural-steel shapes with MSS SP-58 hanger rods, nuts, saddles, and U-bolts.

2.3 METAL FRAMING SYSTEMS

- A. Description: MFMA-3, shop- or field-fabricated pipe-support assembly made of steel channels and other components.
- B. Available Manufacturers:
 - 1. B-Line Systems, Inc.; a division of Cooper Industries.
 - 2. ERICO/Michigan Hanger Co.; ERISTRUT Div.
 - 3. GS Metals Corp.
 - 4. Power-Strut Div.; Tyco International, Ltd.

5. Thomas & Betts Corporation.
6. Tolco Inc.
7. Unistrut Corp.; Tyco International, Ltd.

C. Coatings: Manufacturer's standard finish, unless bare metal surfaces are indicated.

D. Nonmetallic Coatings: Plastic coating, jacket, or liner.

2.4 FASTENER SYSTEMS

A. Mechanical-Expansion Anchors: Insert-wedge-type or threaded-anchor-type zinc-coated or stainless steel, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

1. Available Manufacturers:

- a. B-Line Systems, Inc.; a division of Cooper Industries.
- b. Empire Industries, Inc.
- c. Hilti, Inc.
- d. ITW Ramset/Red Head.
- e. MKT Fastening, LLC.
- f. Powers Fasteners.

2. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.

3. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.

4. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.

5. Toggle Bolts: All-steel springhead type.

6. Hanger Rods: Solid, threaded steel.

2.5 PIPE STAND FABRICATION

A. Pipe Stands, General: Shop or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.

B. Compact Pipe Stand: One-piece plastic unit with integral-rod-roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.

1. Manufacturers:

- a. ERICO/Michigan Hanger Co.
- b. MIRO Industries.

C. Low-Type, Single-Pipe Stand: One-piece plastic or stainless-steel base unit with plastic roller, for roof installation without membrane penetration.

1. Manufacturers:

- a. MIRO Industries.
- b. Portable Pipe Hangers.

- D. High-Type, Single-Pipe Stand: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.

1. Manufacturers:

- a. ERICO/Michigan Hanger Co.
- b. MIRO Industries.
- c. Portable Pipe Hangers.

2. Base: Plastic or stainless steel.

3. Vertical Members: Two or more cadmium-plated-steel or stainless-steel, continuous-thread rods.

4. Horizontal Member: Cadmium-plated-steel or stainless-steel rod with plastic or stainless-steel, roller-type pipe support.

- E. High-Type, Multiple-Pipe Stand: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.

1. Manufacturers:

- a. Portable Pipe Hangers.

2. Bases: One or more plastic.

3. Vertical Members: Two or more protective-coated-steel channels.

4. Horizontal Member: Protective-coated-steel channel.

5. Pipe Supports: Galvanized-steel, clevis-type pipe hangers.

- F. Curb-Mounting-Type Pipe Stands: Shop- or field-fabricated pipe support made from structural-steel shape, continuous-thread rods, and rollers for mounting on permanent stationary roof curb.

1. Available Manufacturers:

- a. Curb Technologies.
- b. Pate.
- c. Thy Curb.

1) Models:

- a) TC-1 for insulated roof decks.
- b) TC-2 for un-insulated and existing roof decks.
- c) TC-3 for Bulb-T roof decks.

d. United Air

2. Pipe curbs and rails with covers shall be all welded 18 gauge galvanized steel shell and baseplate, wood nailer, and TP-1 Duro EPDM cover or TP-2 pipe cover, as detailed on the drawings, for pipe penetration(s).

2.6 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural-steel shapes.

1. Available Manufacturers:

- a. Curb Technologies.
- b. Pate.
- c. Thy Curb.

1) Models:

- a) TEMS-1 for insulated roof decks.
- b) TEMS-2 for un-insulated and existing roof decks.
- c) TEMS-3 for single-ply roof systems.

d. United Air

2. Equipment supports shall be all welded 18 gauge galvanized steel shell, baseplate and counterflashing with internal bulkhead re-enforcement and wood nailer.

2.7 MISCELLANEOUS MATERIALS

- A. Structural Steel: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
- B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
 - 1. Properties: Nonstaining, noncorrosive, and nongaseous.
 - 2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Proceed with installation of hangers, supports and anchors only after required building structural work has been completed in areas where the work is to be installed. Correct inadequacies including, but not limited to proper placement of inserts, anchors and other building structural attachments.

3.2 HANGER AND SUPPORT APPLICATIONS

- A. Use only one type hangers and supports, by one manufacturer, for each piping service.
- B. Specific hanger and support requirements are specified in Sections specifying piping systems and equipment.
- C. Comply with MSS SP-69 for pipe hanger selections and applications that are not specified in piping system Sections.
- D. Use galvanized steel, painted, or cadmium plated components in hangers and supports unless otherwise indicated.

- E. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing or provide copper-plated hangers and supports for copper piping systems where hangers are in contact with bare pipe.
- F. Use padded hangers for piping that is subject to scratching.
- G. Horizontal-Piping Hangers and Supports: Select size of hangers and supports to exactly fit pipe size for bare piping, and around piping insulation with saddle or shield for insulated piping. Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 - 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of non-insulated or insulated stationary pipes, NPS 1/2 to NPS 30.
 - 2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of 120 to 450 deg F pipes, NPS 4 to NPS 16, requiring up to 4 inches of insulation.
 - 3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes, NPS 3/4 to NPS 24, requiring clamp flexibility and up to 4 inches of insulation.
 - 4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes, NPS 1/2 to NPS 24, if little or no insulation is required.
 - 5. Pipe Hangers (MSS Type 5): For suspension of pipes, NPS 1/2 to NPS 4, to allow off-center closure for hanger installation before pipe erection.
 - 6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of non-insulated stationary pipes, NPS 3/4 to NPS 8.
 - 7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of non-insulated stationary pipes, NPS 1/2 to NPS 8.
 - 8. Adjustable Band Hangers (MSS Type 9): For suspension of non-insulated stationary pipes, NPS 1/2 to NPS 8.
 - 9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of non-insulated stationary pipes, NPS 1/2 to NPS 2.
 - 10. Split Pipe-Ring with or without Turnbuckle-Adjustment Hangers (MSS Type 11): For suspension of non-insulated stationary pipes, NPS 3/8 to NPS 8.
 - 11. Extension Hinged or 2-Bolt Split Pipe Clamps (MSS Type 12): For suspension of non-insulated stationary pipes, NPS 3/8 to NPS 3.
 - 12. U-Bolts (MSS Type 24): For support of heavy pipes, NPS 1/2 to NPS 30.
 - 13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
 - 14. Pipe Slide and Slide Plate (MSS Type 35): For support of piping where horizontal movement due to expansion and contraction may occur, and where a low coefficient of friction is desired. Support system shall include guided plate mounted on a concrete pedestal or structural steel support.
 - 15. Pipe Saddle Supports (MSS Type 36): For support of pipes, NPS 4 to NPS 36, with steel pipe base stanchion support and cast-iron floor flange.
 - 16. Pipe Stanchion Saddles (MSS Type 37): For support of pipes, NPS 4 to NPS 36, with steel pipe base stanchion support and cast-iron floor flange and with U-bolt to retain pipe.
 - 17. Adjustable, Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes, NPS 2-1/2 to NPS 36, if vertical adjustment is required, with steel pipe base stanchion support and cast-iron floor flange.
 - 18. Single Pipe Rolls (MSS Type 41): For suspension of pipes, NPS 1 to NPS 30, from 2 rods if longitudinal movement caused by expansion and contraction might occur.
 - 19. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes, NPS 2-1/2 to NPS 20, from single rod if horizontal movement caused by expansion and contraction might occur.
 - 20. Complete Pipe Rolls (MSS Type 44): For support of pipes, NPS 2 to NPS 42, if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.

21. Pipe Roll and Plate Units (MSS Type 45): For support of pipes, NPS 2 to NPS 24, if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is not necessary.
 22. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes, NPS 2 to NPS 30, if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.
- H. Vertical-Piping Clamps: Select size of vertical piping clamps to exactly fit pipe size of bare pipe. Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers, NPS 3/4 to NPS 20.
 2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers, NPS 3/4 to NPS 20, if longer ends are required for riser clamps.
- I. Hanger-Rod Attachments: Select size of hanger rod attachments to suit hanger rods. Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
 2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
 3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
 4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
 5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.
- J. Building Attachments: Select size of building attachments to suit hanger rods. Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
 2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction to attach to top flange of structural shape.
 3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
 4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
 5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
 6. C-Clamps (MSS Type 23): For structural shapes.
 7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
 8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
 9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
 10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
 11. Malleable Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
 12. Welded-Steel Brackets: For support of pipes from below, or for suspending from above by using clip and rod. Use one of the following for indicated loads:
 - a. Light (MSS Type 31): 750 lb.
 - b. Medium (MSS Type 32): 1500 lb.
 - c. Heavy (MSS Type 33): 3000 lb.

13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
 14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
 15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.
- K. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
 2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
 3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- L. Spring Hangers and Supports: Select spring hangers and supports to suit pipe size and loading. Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
 2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.
 3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41 roll hanger with springs.
 4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
 5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from hanger.
 6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from base support.
 7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from trapeze support.
 8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
 - a. Horizontal (MSS Type 54): Mounted horizontally.
 - b. Vertical (MSS Type 55): Mounted vertically.
 - c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.
- M. Comply with MSS SP-69 for trapeze pipe hanger selections and applications that are not specified in piping system Sections.
- N. Comply with MFMA-102 for metal framing system selections and applications that are not specified in piping system Sections.
- O. Use powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where required in concrete construction.

3.3 HANGER AND SUPPORT INSTALLATION

- A. Steel Pipe Hanger Installation: Comply with MSS SP-58 and MSS SP-69 for construction standards and applications. Install hangers, supports, clamps, and attachments as required by the following table to properly support piping from building structure.

Pipe Size (in)	Max. Hanger Spacing (ft)	Min. Rod Size (in)	Max. Alternate Hanger Spacing (ft)	Min. Alternate Rod Size (in)
1/2	6	3/8	--	--
3/4	6	3/8	--	--
1	7	3/8	--	--
1-1/4	8	3/8	--	--
1-1/2	9	3/8	--	--
2	10	3/8	--	--
2-1/2	11	1/2	--	--
3	12	1/2	8	3/8
3-1/2	13	5/8	8	3/8
4	14	5/8	8	3/8
5	16	5/8	10	1/2
6	17	3/4	10	1/2
8	19	7/8	10	1/2
10	20	7/8	10	1/2
12	20	7/8	10	1/2
14	20	1	16	7/8
16	20	1-1/8	14	7/8
18	20	1-1/4	10	7/8
20	20	1-1/4	10	7/8
24	20	1-1/4	8	7/8

- B. Trapeze Pipe Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping and support together on field-fabricated trapeze pipe hangers.
1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified above for individual pipe hangers.
 2. Field fabricated from ASTM A 36/A 36M, steel shapes selected for loads being supported. Weld steel according to AWS D1.1.
 3. Neither wire nor perforated metal shall be used to support piping, unless otherwise indicated or approved.
 4. Do not support piping from other piping, unless otherwise indicated.
- C. Metal Framing System Installation: Arrange for grouping of parallel runs of piping and support together on field-assembled metal framing systems.
- D. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- E. Fastener System Installation:
1. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- F. Pipe Stand Installation:

1. Pipe Stand Types except Curb-Mounting Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
 2. Curb-Mounting-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. Refer to Division 07 Section "Roof Accessories" for curbs.
- G. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers, and other accessories.
- H. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- I. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- J. Install lateral bracing with pipe hangers and supports to prevent swaying.
- K. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- L. Load Distribution: Install hangers and supports so piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- M. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and so maximum pipe deflections allowed by ASME B31.1 (for power piping) and ASME B31.9 (for building services piping) are not exceeded.
- N. Insulated Piping: Comply with Division 23 Section "HVAC Insulation" and the following:
1. Attach clamps and spacers to piping.
 - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
 - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
 - c. Do not exceed pipe stress limits according to ASME B31.1 for power piping and ASME B31.9 for building services piping.
 2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
 - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
 3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier.
 - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
 - b. Shield Dimensions for Pipe: Not less than the following:
 - 1) Pipes NPS 8 and Larger: Include wood inserts.
 - 2) Insert Material: Length at least as long as protective shield.
 - c. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.4 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make smooth bearing surface.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.5 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports, as required, unless otherwise indicated.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1 procedures for shielded metal arc welding, appearance and quality of welds, and methods used in correcting welding work, and with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. Finish welds at exposed connections so no roughness shows after finishing and contours of welded surfaces match adjacent contours.

3.6 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1 inch.

3.7 PAINTING

- A. Touch Up: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 - 1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.
- B. Touch Up: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Division 09 painting Sections.
- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

3.8 TUNNEL SUPPORTS

- A. The tunnel piping shall be supported. Supports shall be a delegated design. The Mechanical Contractor shall coordinate with the General Contractor to insure that the proper steel supports are provided.
- B. Where systems leave a tunnel and enter grade, provide a coordinated, delegated design to ensure soil-borne forces and adequate cover are provided for direct buried systems.

3.9 THRUST BLOCKS

- A. Concrete thrust blocks as a part of a delegated design shall be installed at underground mechanical piping connections to prevent separation under pressure at the following locations:
 - 1. Changes in direction 22-1/2 deg. And greater (both horizontal and vertical).
 - 2. Terminal ends.
 - 3. All valves, so as to support the body weight and prevent excessive torque on pipe connections.
- B. Each thrust block shall be sized to accommodate the piping and soil conditions.
- C. Thrust blocks:
 - 1. Provide concrete thrust blocks at all changes in direction of piping of non-restrained mechanical jointed pressure systems and other systems as required.
 - a. Provide thrust blocks for restrained mechanical jointed piping systems where indicated.
 - 2. Provide 3,000 psi minimum concrete mix.
 - 3. Provide thrust blocks of the required size and shape necessary for the specific system pressure and soil bearing capacity at the particular location.
 - 4. Exercise Care to avoid encasing fittings, bends, valves, etc., in concrete to the extent that it will hamper maintenance.

3.10 SECURING UNDERGROUND LINES

- A. Install pipe clamps and braces using poured in place concrete blocks, or other anchors and supports required to insure stability of all underground lines to prevent joint separation either during tests or thereafter when lines are in service. Provide a delegated design for this application.
- B. Pipe Braces and nuts installed in the ground shall be fabricated of stainless steel to resist corrosion.

SECTION 230548

VIBRATION AND SEISMIC CONTROLS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Delegated Design requirements for system design.
2. Requirements for Manufacturer Seismic Certification.
3. Isolation pads.
4. Freestanding and restrained spring isolators.
5. Elastomeric hangers.
6. Spring hangers.
7. Spring hangers with vertical-limit stops.
8. Pipe riser resilient supports.
9. Resilient pipe guides.
10. Restrained vibration isolation roof-curb rails.
11. Seismic snubbers.
12. Restraining braces and cables.
13. Steel and inertia, vibration isolation equipment bases.

B. Related Sections:

1. Division 23 Section "Common Work Results" for description of concrete bases used as vibration isolation.
2. Division 23 Section "Hangers and Supports for HVAC Piping and Equipment" for installation locations of pipe saddles at pipe hangers.

1.2 DEFINITIONS

A. IBC: International Building Code.

B. ICC-ES: ICC-Evaluation Service.

C. Seismic Certification: Seismic certification refers to a manufacturer's certification for architectural, mechanical, and electrical components, supports, and attachments pursuant to ASCE/SEI 7-05 Section 13.2.1.2.

D. Seismic Qualification: Same as Special Seismic Certification

E. Special Seismic Certification: Seismic certification of mechanical and electrical equipment based on ASCE/SEI 7-05 Section 13.2.2. Special Seismic Certification is required for active mechanical and electrical equipment that must remain operable following the design earthquake.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design supports for vibration and seismic controls, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
 - 1. Do not use more than one pre-approved seismic-force resistance system on any single run of pipe, duct or conduit. Mixing of multiple pre-approved systems is not acceptable.
- B. Seismic-Restraint Loading: In preparation of Delegated Design, utilize seismic forces as described in ASCE 7-02 "Minimum Design Loads for Buildings and Other Structures" as published by the American Society of Civil Engineers, unless requirements in this Section are more stringent.
 - 1. Site Class as Defined in the IBC: D.
 - 2. Assigned Seismic Use Group or Building Category as Defined in the IBC: III.
 - a. Component Importance Factor: As defined by ASCE 7-10 Section 13.1.3.
 - b. Assign component factors based on ASCE-7 Table 13.6-1 for the following:
 - 1) Component Response Modification Factor.
 - 2) Component Amplification Factor.
 - 3. Design Spectral Response Acceleration at Short Periods (0.2 Second): 0.138g.
 - 4. Design Spectral Response Acceleration at 1-Second Period: 0.088g.
- C. Wind-Restraint Loading:
 - 1. Basic Wind Speed: 120 mph.
 - 2. Building Classification Category: III.
 - 3. Minimum 10 lb/sq. ft. multiplied by the maximum area of the HVAC component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.
- D. Submittal Review Conference: At time of Delegated Design Shop Drawing submission, schedule a submittal review conference with the Architect and Structural Engineer-of-Record for the project. The purpose of this conference is to review attachment locations and insure supplementary framing that is needed to resist the loads, maintain stability or to meet other installation requirements of a pre-approved system have been accounted for in the Structural Engineer-of-Record's design.

1.4 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 23 Section "Common Work Results for HVAC" for products specified under PART 2 – PRODUCTS.
- B. General Submittal Requirements:
 - 1. Submittals shall be reviewed by Architect and the Structural Engineer-of-Record prior to submitting them to authorities having jurisdiction.

C. Contractor Statement of Responsibility:

1. Submit a written statement in accordance with IBC Chapter 17.
2. Statement shall be submitted on company letterhead.
3. In instances where trade sub-contractors are responsible for construction and implementation of seismic-force resisting systems, the representatives of these various trade sub-contractors shall sign the Contractor Statement of Responsibility.

D. Product Data: For the following:

1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.
 - a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated by an agency acceptable to authorities having jurisdiction.
 - b. Annotate to indicate application of each product submitted and compliance with requirements.
3. Restrained-Isolation Devices: Include ratings for horizontal, vertical, and combined loads.

E. Delegated-Design Submittal: For vibration isolation and seismic-restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation, seismic and wind forces required to select vibration isolators, seismic and wind restraints, and for designing vibration isolation bases.
 - a. Coordinate design calculations with wind load calculations required for equipment mounted outdoors. Comply with requirements in other Division 23 Sections for equipment mounted outdoors.
2. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure, spring deflection changes, and seismic loads. Include certification that riser system has been examined for excessive stress and that none will exist.
3. Vibration Isolation Base Details: Detail overall dimensions, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, base weights, equipment static loads, power transmission, component misalignment, and cantilever loads.
4. Indicate materials and dimensions and identify hardware, including attachment and anchorage devices.
5. Field-fabricated supports.
6. Seismic- and Wind-Restraint Details:
 - a. Design Analysis: To support selection and arrangement of seismic and wind restraints. Include calculations of combined tensile and shear loads.

- b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events. Indicate association with vibration isolation devices.
- c. Coordinate seismic-restraint and vibration isolation details with wind-restraint details required for equipment mounted outdoors. Comply with requirements in other Division 23 Sections for equipment mounted outdoors.
- d. Preapproval and Evaluation Documentation: By an agency acceptable to authorities having jurisdiction, showing maximum ratings of restraint items and the basis for approval (tests or calculations).

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings:

- 1. Show coordination of seismic bracing for HVAC piping and equipment with other systems and equipment in the vicinity, including other supports and seismic restraints.
- 2. Submit approval from Structural Engineer where supports are directly connected to structure.

B. Welding certificates.

C. Common Requirements For Qualification Data:

- 1. Manufacturer Seismic Qualification Certification: Where this Section and other Sections of this Division require products to meet seismic requirements; Submit certification that equipment, devices, accessories, and components will withstand seismic forces defined in this Section. Include the following:
 - a. Basis of Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- 2. Manufacturer Special Seismic Certification: Where this Section and other Sections of this Division require products to meet seismic requirements; Submit certification that equipment, devices, accessories, and components will withstand seismic forces defined in this Section. Include the following:
 - a. Basis of Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 1) The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 - b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

- c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- D. Qualification Data: For professional engineer and testing agency.
- E. Air-Mounting System Performance Certification: Include natural frequency, load, and damping test data performed by an independent agency.
- F. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For seismic-force restraint systems and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 - 1. Copy of the Delegated Design Shop Drawings, including AHJ approval stamp.
 - 2. Copy of the Delegated Design Submittal, including AHJ approval stamp.

1.7 QUALITY ASSURANCE

- A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
- B. Comply with seismic-restraint requirements in the IBC, unless requirements in this Section are more stringent.
- C. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- D. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage preapproval OPA number from OSHPD, preapproval by ICC-ES, or preapproval by another agency acceptable to authorities having jurisdiction, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are not available, submittals based on independent testing are preferred. Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a qualified professional engineer.
- E. Special Seismic Certification: Unless otherwise allowed by OSHPD, mechanical components, supports, and attachments shall be certified pursuant to ASCE/SEI 7-05 Section 13.2.2. Items requiring certification are as follows, but not limited to:
 - 1. Components with hazardous contents, excluding pipes and ducts.
 - 2. Smoke control fans.
 - 3. Built-up or field assembled equipment.
 - 4. Air handling and air conditioning units.
 - 5. HVAC chillers.

6. Cooling Towers.
 7. Control panels.
- F. Rugged Equipment: Factory assembled, discrete components are considered rugged and deemed to comply with ASCE/SEI 7-05 Section 13.2.6, and do not require Special Seismic Certification, unless otherwise indicated by OSHPD. Items considered exempt are as follows:
1. Equipment and components weighing not more than 20 lbs. supported directly on structures (and not mounted on other equipment or components) with supports and attachments in accordance with Chapter 13, ASCE/SEI 7-05, as modified by Section 1614A, 2007 CBC.
- G. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Vibration Isolation and Control

1. Amber/Booth Company, Inc.
2. California Dynamics Corporation.
3. ISAT
4. Kinetics Noise Control.
5. Korfund Company.
6. Mason Industries.
7. Vibro-Acoustics

B. Seismic Restraint

1. Amber/Booth Company, Inc.
2. California Dynamics Corporation.
3. Cooper B-Line, Inc.
4. Hyspan.
5. ISAT
6. Kinetics Noise Control.
7. Korfund Company.
8. Mason Industries.
9. TOLCO Incorporated.
10. Unistrut; Tyco International, Ltd.
11. Vibro-Acoustics

2.2 VIBRATION ISOLATORS

- A. Pads: Arranged in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a non-slip pattern and galvanized-steel base plates, and factory cut to sizes that match requirements of supported equipment.
 - 1. Resilient Material: Oil- and water-resistant neoprene.
- B. Spring Isolators: Freestanding, laterally stable, open-spring isolators.
 - 1. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 - 2. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 - 3. Minimum Lateral Stiffness: $K_x/K_y = 1.0$.
 - 4. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 - 5. Base plates: Factory drilled for bolting to structure and bonded to 1/4-inch-thick, rubber isolator pad attached to base plate underside. Base plates shall limit floor load to 100 psig.
 - 6. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.
- C. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic or limit-stop restraint.
 - 1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to weight being removed; factory-drilled base plate bonded to 1/4-inch-thick, neoprene or rubber isolator pad attached to base plate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
 - 2. Restraint: Seismic or limit stop as required for equipment and authorities having jurisdiction.
 - 3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 - 4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 - 5. Minimum Lateral Stiffness: $K_x/K_y = 1.0$.
 - 6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
- D. Elastomeric Hangers: Single or double-deflection type, fitted with molded, oil-resistant elastomeric isolator elements bonded to steel housings with threaded connections for hanger rods. Color-code or otherwise identify to indicate capacity range.
- E. Spring Hangers: Combination coil-spring and elastomeric-insert hanger with spring and insert in compression.
 - 1. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
 - 2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 - 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 - 4. Minimum Lateral Stiffness: $K_x/K_y = 1.0$.
 - 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

6. Elastomeric Element: Molded, oil-resistant rubber or neoprene. Steel-washer-reinforced cup to support spring and bushing projecting through bottom of frame.
 7. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.
- F. Spring Hangers with Vertical-Limit Stop: Combination coil-spring and elastomeric-insert hanger with spring and insert in compression and with a vertical-limit stop.
1. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
 2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 4. Minimum Lateral Stiffness: $K_x/K_y = 1.0$.
 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 6. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
 7. Adjustable Vertical Stop: Steel washer with neoprene washer "up-stop" on lower threaded rod.
 8. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.
- G. Pipe Riser Resilient Support: All-directional, acoustical pipe anchor consisting of 2 steel tubes separated by a minimum of 1/2-inch-thick neoprene. Include steel and neoprene vertical-limit stops arranged to prevent vertical travel in both directions. Design support for a maximum load on the isolation material of 500 psig and for equal resistance in all directions.
- H. Resilient Pipe Guides: Telescopic arrangement of 2 steel tubes or post and sleeve arrangement separated by a minimum of 1/2-inch-thick neoprene. Where clearances are not readily visible, a factory-set guide height with a shear pin to allow vertical motion due to pipe expansion and contraction shall be fitted. Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of motion to meet location requirements.

2.3 RESTRAINED VIBRATION ISOLATION ROOF-CURB RAILS

- A. General Requirements for Restrained Vibration Isolation Roof-Curb Rails: Factory-assembled, fully enclosed, insulated, air- and watertight curb rail designed to resiliently support equipment and to withstand seismic and wind forces.
- B. Lower Support Assembly: Formed sheet-metal section containing adjustable and removable steel springs that support upper frame. Upper frame shall provide continuous support for equipment and shall be captive to resiliently resist seismic and wind forces. Lower support assembly shall have a means for attaching to building structure and a wood nailer for attaching roof materials, and shall be insulated with a minimum of 2 inches of rigid, glass-fiber insulation on inside of assembly.
- C. Spring Isolators: Adjustable, restrained spring isolators shall be mounted on 1/4-inch-thick, elastomeric vibration isolation pads and shall have access ports, for level adjustment, with removable waterproof covers at all isolator locations. Isolators shall be located so they are accessible for adjustment at any time during the life of the installation without interfering with the integrity of the roof.

1. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic or wind restraint.
 - a. Housing: Steel with resilient vertical-limit stops and adjustable equipment mounting and leveling bolt.
 - b. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 - c. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 - d. Minimum Lateral Stiffness: $K_x/K_y = 1.0$.
 - e. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 2. Pads: Oil and water resistant neoprene arranged in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel base plates, and factory cut to sizes that match requirements of supported equipment.
- D. Snubber Bushings: All-directional, elastomeric snubber bushings at least 1/4 inch thick.
- E. Water Seal: Galvanized sheet metal with EPDM seals at corners, attached to upper support frame, extending down past wood nailer of lower support assembly, and counterflashed over roof materials.

2.4 VIBRATION ISOLATION EQUIPMENT BASES

- A. Housekeeping Pads: Reinforced concrete 4" or 6" tall with 1" chamfer on all top edges.
- B. Steel Base: Factory-fabricated, welded, structural-steel bases and rails.
 1. Design Requirements: Lowest possible mounting height with not less than 1-inch clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.
 - a. Include supports for suction and discharge elbows for pumps.
 2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Bases shall have shape to accommodate supported equipment.
 3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
- C. Inertia Base: Factory-fabricated, welded, structural-steel bases and rails ready for placement of cast-in-place concrete.
 1. Design Requirements: Lowest possible mounting height with not less than 1-inch clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.
 - a. Include supports for suction and discharge elbows for pumps.
 - b. The weight of each inertial block shall not be less than 150% of supported equipment.
 - c. Extend block minimum 4" beyond equipment base.
 - d. Chamfer edges minimum 1".

2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Channels shall be minimum 6" deep. Bases shall have shape to accommodate supported equipment.
3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
4. Fabrication: Fabricate steel templates to hold equipment anchor-bolt sleeves and anchors in place during placement of concrete. Obtain anchor-bolt templates from supported equipment manufacturer.

2.5 SEISMIC-RESTRAINT DEVICES

- A. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by an agency acceptable to authorities having jurisdiction.
 1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least four times the maximum seismic forces to which they will be subjected.
- B. Snubbers: Factory fabricated using welded structural-steel shapes and plates, anchor bolts, and replaceable resilient isolation washers and bushings.
 1. Anchor bolts for attaching to concrete shall be seismic-rated, drill-in, and stud-wedge or female-wedge type.
 2. Resilient Isolation Washers and Bushings: Oil- and water-resistant neoprene.
 3. Maximum 1/4-inch (6-mm) air gap, and minimum 1/4-inch- (6-mm-) thick resilient cushion.
- C. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.
- D. Restraint Cables: ASTM A 603 galvanized or ASTM A 492 stainless-steel cables with end connections made of steel assemblies with thimbles, brackets, swivel, and bolts designed for restraining cable service; and with a minimum of two clamping bolts for cable engagement.
- E. Hanger Rod Stiffener:
 1. Steel tube or steel slotted-support-system sleeve with internally bolted connections to hanger rod.
 2. Reinforcing steel angle clamped to hanger rod.
- F. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.
- G. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices used.
- H. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.

- I. Mechanical Anchor: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchors with strength required for anchor and as tested according to ASTM E 488. Minimum length of eight times diameter.

2.6 FACTORY FINISHES

- A. Finish: Manufacturer's standard paint applied to factory-assembled and -tested equipment before shipping.
 1. Powder coating on springs and housings.
 2. All hardware shall be galvanized. Hot-dip galvanize metal components for exterior use.
 3. Baked enamel or powder coat for metal components on isolators for interior use.
 4. Color-code or otherwise mark vibration isolation and seismic- and wind-control devices to indicate capacity range.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and equipment to receive vibration isolation and seismic- and wind-control devices for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

- A. Base: None.
 1. Suspended Equipment:
 - a. Fan Coil Units.
 - b. Piping in Mechanical Rooms, up to 3" NPS.
 2. Isolator: Spring hanger with 1" deflection.
- B. Base: None.
 1. Suspended Equipment:
 - a. Fan Systems:
 - 1) Axial Fans.
 - 2) Centrifugal, in-line Fans.
 - 3) Factory Fabricated AHUs.

- a) Provide structural steel channel to support unit and suspend frame from structure.
 - b) Piping in Mechanical Rooms, greater than 3" NPS.
 - 2. Isolator: Spring hanger with 2" deflection.
- C. Base: Roof Curbs or Rails.
 - 1. Equipment:
 - a. Roof Exhaust Fans.
 - b. Air Cooled Condensing Units.
 - c. Factory Fabricated AHUs without internal isolation.
 - 2. Isolator:
 - a. Pad integral with curb.
 - b. Restrained, open spring type with 1" deflection.
- D. Base: Reinforced Concrete Inertia Block
 - 1. Equipment: Pumping Systems
 - a. Fire.
 - b. Heating water.
 - 2. Isolator: Freestanding, open spring type with 1.5" deflection.
- E. Base: 4" Housekeeping Pad
 - 1. Equipment:
 - a. Floor mounted Fan Systems.
 - 1) Cabinet fans.
 - 2) Centrifugal fans:
 - a) DWDI.
 - b) In-line.
 - c) Utility vent sets.
 - 3) Factory Fabricated AHUs.
 - b. Floor mounted Reciprocating Air Compressors.
 - 2. Isolator: Restrained, open spring type with 2" deflection.
- F. Miscellaneous Systems
 - 1. Factory Fabricated, Internally Isolated, AHUs.
 - a. Base:
 - 1) 6" Housekeeping pad.
 - 2) Factory fabricated, sound attenuating curb.

- b. Isolator: Pad.
- 2. Jockey Pump
 - a. Base: 6" housekeeping pad.
 - b. Isolator: None.

3.3 VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE INSTALLATION

- A. Comply with requirements in Division 07 Section "Roof Accessories" for installation of roof curbs, equipment supports, and roof penetrations.
- B. Secure pipes to trapeze member with clamps approved for application by an agency acceptable to authorities having jurisdiction.
- C. Install seismic isolators and restraints as required by delegate design calculations.
- D. Install hanger rod stiffeners to prevent buckling of hanger rods due to seismic forces.
- E. Install spring isolators for the closest three hangers for all piping attached to rotating equipment.
- F. Equipment Restraints:
 - 1. Install seismic snubbers on HVAC equipment mounted on vibration isolators. Locate snubbers as close as possible to vibration isolators and bolt to equipment base and supporting structure.
 - 2. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch.
 - 3. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction providing required submittals for component.
- G. Piping Restraints:
 - 1. Comply with requirements in MSS SP-127.
 - 2. Space lateral supports a maximum of 40 feet o.c., and longitudinal supports a maximum of 80 feet o.c.
 - 3. Brace a change of direction longer than 12 feet.
- H. Install cables so they do not bend across edges of adjacent equipment or building structure.
- I. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction providing required submittals for component.
- J. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.
- K. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- L. Strength of Support and Seismic-Restraint Assemblies: Select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

M. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.

N. Drilled-in Anchors:

1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid pre-stressed tendons, electrical and telecommunications conduit, and gas lines.
2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
5. Set anchors to manufacturer's recommended torque, using a torque wrench.
6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.4 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

A. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach equipment. Comply with requirements in Division 23 Section "Hydronic Piping" for piping flexible connections.

3.5 IDENTIFICATION

A. Install brass identification tags at all seismic brace locations. Tags to include the following information:

1. Unique keyed identification number that corresponds to nomenclature used to mark location on shop drawings and calculations.
2. Specific G-force the system at that location is designed to resist.
3. Maximum brace reaction to the structure.
4. For Individually suspended items: Maximum conduit size.
5. For Trapeze or Multiple pipe hangers: Maximum pounds-per-lineal-foot.
6. For Suspended Equipment: Maximum weight of equipment.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

- B. Perform tests and inspections.
- C. Tests and Inspections:
 - 1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
 - 2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless postconnection testing has been approved), and with at least seven days' advance notice.
 - 3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
 - 4. Test at least four of each type and size of installed anchors and fasteners selected by Architect.
 - 5. Test to 90 percent of rated proof load of device.
 - 6. Measure isolator restraint clearance.
 - 7. Measure isolator deflection.
 - 8. Verify snubber minimum clearances.
 - 9. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.
- F. Prepare a report that identifies unit components and devices checked and describes results. Include notation of deficiencies detected, remedial action taken, and observations and test results after remedial action.

3.7 ADJUSTING

- A. Adjust isolators after piping system is at operating weight.
- B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.
- C. Adjust active height of spring isolators.
- D. Adjust restraints to permit free movement of equipment within normal mode of operation.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 230553

IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Equipment labels.
 - 2. Warning signs and labels.
 - 3. Pipe labels.
 - 4. Duct labels.
 - 5. Valve tags.
 - 6. Warning tags.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- D. Valve numbering scheme.
- E. Valve Schedules: For each piping system to include in maintenance manuals.

1.3 COORDINATION

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

- A. Plastic Labels for Equipment:

1. Material and Thickness: Multilayer, multicolor, laminated phenolic with a black surface and white substrate for mechanical engraving, 1/16 inch minimum thickness, beveled edges, and having predrilled holes for attachment hardware.
 2. Letter Color: White.
 3. Background Color: Black.
 4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
 5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
 6. Minimum Letter Size: 1/2 inch. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
 7. Fasteners: Stainless-steel rivets or self-tapping screws.
 8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Label Content: Include equipment's Drawing designation or unique equipment number as directed by owner. Secondary lettering shall indicate date of installation.
- C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.
- D. Punched plastic tape for labels is not acceptable.

2.2 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch minimum thickness, and having predrilled holes for attachment hardware.
- B. Letter Color: White.
- C. Background Color: Red.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- F. Minimum Letter Size: 1 inch for name of units. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets or self-tapping screws.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

2.3 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction. Labels shall conform to ANSI A13.1 and the following table:

Outside Diameter of Pipe or of Covering	Height of Letters
$\frac{3}{4}$ " to 1-1/4"	$\frac{1}{2}$ "
1-1/2" to 2"	$\frac{3}{4}$ "
2-1/2" to 6"	1-1/4"
8" to 10"	2-1/2"
Over 10"	3-1/2"

- B. Available Manufacturers: Seton, Brady, or Westline.
- C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to partially cover or cover full circumference of pipe.
- D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, and an arrow indicating flow direction. For steam systems, also include line pressure on label.
 - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.

2.4 DUCT LABELS

- A. Material and Thickness: Multicolor, plastic labels having adhesive for attachment.
- B. Service:
 - 1. Non-hazardous
 - a. Supply
 - b. Return
 - c. Outside air
 - d. Relief
 - e. General Exhaust
 - 2. Hazardous
 - a. Isolation Exhaust
 - b. Nuclear Medicine Exhaust
 - c. Laboratory Exhaust
 - d. Pharmacy Exhaust
 - e. Other air streams as indicated
- C. Letter Color:
 - 1. Non-hazardous Service: Black
 - 2. Hazardous Service: Black
- D. Background Color:
 - 1. Non-hazardous Service: White
 - 2. Hazardous Service: Orange

- E. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- F. Minimum Label Size: Length and width vary for required label content.
- G. Minimum Letter Size: 2-1/2 inch for name of service.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions or as separate unit on each duct label to indicate flow direction.

2.5 VALVE TAGS

- A. Valve Tags: Stamped or engraved with minimum 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.
 - 1. Tag Material: Brass, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
 - 2. Fasteners: Brass wire-link chain and S-hook or beaded chain.
- B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
 - 1. Valve-tag schedule shall be included in operation and maintenance data.

2.6 FIRE DAMPERS AND SMOKE DAMPERS

- A. Provide identification for all fire damper or smoke damper access openings.
- B. Stencils: Prepared with letter sizes according to ASME A13.1 for piping; minimum letter height of 1-1/4 inches for ducts; and minimum letter height of 3/4 inch for access panel and door labels, equipment labels, and similar operational instructions.
 - 1. Stencil Material: Fiberboard or metal.
 - 2. Stencil Paint: Exterior, gloss, acrylic enamel red unless otherwise indicated. Paint may be in pressurized spray-can form.
 - 3. Identification Paint: Exterior, acrylic enamel in colors according to ASME A13.1 unless otherwise indicated.
- C. Labels
 - 1. A. Material and Thickness: Multilayer, multicolor, laminated phenolic with a red surface and white substrate for mechanical engraving, 1/16 inch (1.6 mm) minimum thickness, beveled edges, and having predrilled holes for attachment hardware.
 - 2. Letter Color: White.
 - 3. Background Color: Red.
 - 4. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).

5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
6. Minimum Letter Size: 1 inch (25.4 mm) for name of units. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
7. Fasteners: Stainless-steel rivets or self-tapping screws.
8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

D. Fire Damper and Smoke Damper Stencil and Labels Contents

1. "FIRE DAMPER" or "SMOKE DAMPER" as appropriate for each device.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment using fasteners or adhesives.
- B. Locate equipment labels where accessible and visible.

3.3 PIPE LABEL INSTALLATION

- A. Piping Color-Coding:
 1. Painting of piping is specified in Division 09 Section "High-Performance Coatings."
 2. Provide color coding of all pipe services, either paint or PVC wrap, in the following:
 - a. Boiler Rooms
 - b. Central Plants / Power Houses
 - c. Mechanical Rooms
- B. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
 1. Near each valve and control device.
 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
 4. At access doors, manholes, and similar access points that permit view of concealed piping.
 5. Near major equipment items and other points of origination and termination.
 6. Spaced at maximum intervals of 20 feet along each run. Reduce intervals to 10 feet in areas of congested piping and equipment.
 7. In no case shall a line enter or leave a room without being identified.

8. Secure identification markers to piping by firmly pressing markers in place, following removal of protective covering. Additionally secure by banding ends of markers in place using 1/2 inch wide aluminum bands of the type normally used to secure insulation in place.

3.4 DUCT LABEL INSTALLATION

- A. Install self-adhesive duct labels with permanent adhesive on the outermost surface of an installed air ducts system.
- B. Locate labels near points where ducts enter into concealed spaces and at maximum intervals of 50 feet in each space where ducts are exposed or concealed by removable ceiling system.

3.5 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems except:
 1. Check valves
 2. Valves within factory-fabricated equipment.
 3. Shutoff valves directly adjacent to equipment
 4. Faucets
 5. Convenience and lawn-watering hose connections
 6. HVAC terminal devices
- B. Emergency shut-off valves: Provide permanent equipment label with minimum 1" high lettering. These valves include valves 2" and larger for the following services:
 1. Domestic cold water.
 2. Domestic hot water.
 3. Chilled water.
 4. Heating water.
 5. Steam.
 6. Steam condensate.
 7. Natural gas.
- C. Mark ceiling grid with colored marker in style and material as required by Owner indicating valve locations above ceiling.
- D. List tagged valves in a valve schedule and provide to Owner with floor plans indicating location.

3.6 FIRE DAMPER AND SMOKE DAMPER LABEL INSTALLATION

- A. Stencil the words "FIRE DAMPER", "FIRE-SMOKE DAMPER" or "SMOKE DAMPER" on access doors that are in sheet metal ducts. Ensure overspray of stencil medium is cleaned, removed, or covered from adjacent piping, walls, and as otherwise indicated.
- B. Install tags on access doors that are in walls or ceilings where such doors conceal fire damper access plates, or on the T-bars of removable ceilings immediately below the location of fire damper access openings above.

END OF SECTION

SECTION 230593

TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes TAB to produce design objectives for the following:
 - 1. Air Systems:
 - a. Constant-volume air systems.
 - b. Variable-air-volume systems.
 - 2. Hydronic Piping Systems:
 - a. Constant-flow systems.
 - b. Variable-flow systems.
 - 3. Steam systems.
 - 4. HVAC equipment quantitative-performance settings.
 - 5. Space pressurization testing and adjusting.
 - 6. Smoke-control systems testing and adjusting.
 - 7. Verifying that automatic control devices are functioning properly.
 - 8. Reporting results of activities and procedures specified in this Section.

1.2 DEFINITIONS

- A. Adjust: To regulate fluid flow rate and air patterns at the terminal equipment, such as to reduce fan speed or adjust a damper.
- B. Balance: To proportion flows within the distribution system, including submains, branches, and terminals, according to indicated quantities.
- C. Barrier or Boundary: Construction, either vertical or horizontal, such as walls, floors, and ceilings that are designed and constructed to restrict the movement of airflow, smoke, odors, and other pollutants.
- D. Draft: A current of air, when referring to localized effect caused by one or more factors of high air velocity, low ambient temperature, or direction of airflow, whereby more heat is withdrawn from a person's skin than is normally dissipated.
- E. NC: Noise criteria.
- F. Procedure: An approach to and execution of a sequence of work operations to yield repeatable results.
- G. RC: Room criteria.
- H. Report Forms: Test data sheets for recording test data in logical order.

- I. Smoke-Control System: An engineered system that uses fans to produce airflow and pressure differences across barriers to limit smoke movement.
- J. Smoke-Control Zone: A space within a building that is enclosed by smoke barriers and is a part of a zoned smoke-control system.
- K. Stair Pressurization System: A type of smoke-control system that is intended to positively pressurize stair towers with outdoor air by using fans to keep smoke from contaminating the stair towers during an alarm condition.
- L. Static Head: The pressure due to the weight of the fluid above the point of measurement. In a closed system, static head is equal on both sides of the pump.
- M. Suction Head: The height of fluid surface above the centerline of the pump on the suction side.
- N. System Effect: A phenomenon that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
- O. System Effect Factors: Allowances used to calculate a reduction of the performance ratings of a fan when installed under conditions different from those presented when the fan was performance tested.
- P. TAB: Testing, adjusting, and balancing.
- Q. Terminal: A point where the controlled medium, such as fluid or energy, enters or leaves the distribution system.
- R. Test: A procedure to determine quantitative performance of systems or equipment.
- S. Testing, Adjusting, and Balancing (TAB) Firm: The entity responsible for performing and reporting TAB procedures.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: Within 30 days from Contractor's Notice to Proceed, submit 6 copies of evidence that TAB firm and this Project's TAB team members meet the qualifications specified in "Quality Assurance" Article.
- B. Contract Documents Examination Report: Within 30 days from Contractor's Notice to Proceed, submit copies of the Contract Documents review report as specified in Part 3.
- C. Strategies and Procedures Plan: Within 30 days from Contractor's Notice to Proceed, submit 4 copies of TAB strategies and step-by-step procedures as specified in Part 3 "Preparation" Article. Include a complete set of report forms intended for use on this Project.
- D. System Readiness Checklists: Within 30 days of Contractor's Notice to Proceed, submit system readiness checklists as specified in "Preparation" Article.
- E. Examination Report: Submit a summary report of the examination review based on system readiness reports and pre-functional check lists.
- F. Certified TAB Reports: Submit two copies of reports prepared, as specified in this Section, on approved forms certified by TAB firm.

- G. Sample Report Forms: Submit two sets of sample TAB report forms.
- H. Instrument calibration reports, to include the following:
 - 1. Instrument type and make.
 - 2. Serial number.
 - 3. Application.
 - 4. Dates of use.
 - 5. Dates of calibration.
- I. Warranties specified in this Section.

1.4 QUALITY ASSURANCE

- A. The TAB firm shall be organized to provide independent professional testing and balancing services. The firm shall have a minimum of one (1) Professional Engineer licensed in the project's state, in good standing with the board and have a current registration.
- B. All personnel used on the job site shall be either TAB engineers or TAB technicians, who shall have been permanent, full-time employees of the Tab firm for a minimum of six (6) months prior to working on the project.
- C. Upon request, the TAB Firm shall submit the following to the Architect/Engineer and/or Owner for approval prior to commencing services:
 - 1. Name and biographical data of the Professional Engineer and all personnel to be assigned to this project.
 - 2. Proof of company operation for minimum of five (5) years.
- D. TAB Firm Qualifications: Engage a TAB firm certified by AABC.
- E. TAB Conference: Meet with Owner's and Architect's representatives on approval of TAB strategies and procedures plan to develop a mutual understanding of the details. Ensure the participation of TAB team members, equipment manufacturers' authorized service representatives, HVAC controls installers, and other support personnel. Provide seven days' advance notice of scheduled meeting time and location.
 - 1. Agenda Items: As a minimum, include the following:
 - a. Submittal distribution requirements.
 - b. The Contract Documents examination report.
 - c. TAB plan.
 - d. Work schedule and Project-site access requirements.
 - e. Coordination and cooperation of trades and subcontractors.
 - f. Coordination of documentation and communication flow.
 - g. Coordinate submission of FMS sequence and schematics for review by TAB firm.
- F. Certification of TAB Reports: Certify TAB field data reports. This certification includes the following:
 - 1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.
 - 2. Certify that TAB team complied with approved TAB plan and the procedures specified and referenced in this Specification.

- G. TAB Report Forms: Use standard forms from AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems."
- H. Instrumentation Type, Quantity, and Accuracy: As described in AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems."
- I. Instrumentation Calibration: Calibrate instruments at least every six months or more frequently if required by instrument manufacturer.
 - 1. Keep an updated record of instrument calibration that indicates date of calibration and the name of party performing instrument calibration.

1.5 COORDINATION

- A. Notice: Provide minimum seven days' advance notice for each test. Include scheduled test dates and times.
- B. Perform TAB after leakage and pressure tests on air and water distribution systems have been satisfactorily completed.
- C. The Contractor shall start up and test all materials and equipment which normally require testing. All piping, etc., shall be tested to meet code requirements or the specification requirements, whichever is the more stringent. All equipment shall operate a sufficient length of time at the Contractor's expense to prove to the Architect/Engineer and/or Owner that the equipment is free from mechanical defects, runs smoothly and quietly and performs satisfactorily to meet the requirements set forth in the mechanical plans and specifications.
- D. In order that all HVAC systems can be properly tested, adjusted and balanced, the Contractor shall operate the HVAC systems at his expense for the length of time necessary to properly verify their completion and readiness for TAB, and shall further operate and pay all costs of operation during the TAB period. Operating expenses to be paid for by the Contractor will include, but not necessarily be limited to, the following:
 - 1. Utility costs; electrical, water, gas, etc.
 - 2. Personnel costs to start, operate and stop all HVAC equipment.
 - 3. All start-up labor and material costs.
 - 4. All maintenance costs.
 - 5. Water treatment.
- E. The plans and specifications have indicated valves, dampers and miscellaneous adjustment devices for the purpose of testing and balancing the HVAC systems to obtain optimum operating conditions. The Contractor shall install these devices in a manner that will leave them accessible and readily adjustable. Should any such device not be readily accessible, the Contractor shall provide access as required.
- F. The Contractor shall provide and coordinate services to repair or replace any and all deficient items or conditions found before and during the TAB period.
- G. As a part of this Project Contract, the Contractor shall make any changes in the sheaves, belts, motors, dampers and valves or the addition of dampers and/or valves as required to correctly balance the HVAC systems as required at no additional cost.
- H. Provide sufficient time in Project Contract completion schedule to permit the completion of TAB services prior to Owner occupancy of the Project.

- I. The Contractor shall furnish without charge to the TAB Firm:
 1. One set of mechanical specifications and all addenda.
 2. All pertinent change orders.
 3. Complete set of mechanical plans with latest revisions.
 4. "As-installed" drawings.
 5. Approved control diagrams and submittals.
 6. Approved manufacturer's submittals for all HVAC equipment.

1.6 WARRANTY

- A. National Project Performance Guarantee: Provide a guarantee on AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems" forms stating that AABC will assist in completing requirements of the Contract Documents if TAB firm fails to comply with the Contract Documents. Guarantee includes the following provisions:
 1. The certified TAB firm has tested and balanced systems according to the Contract Documents.
 2. Systems are balanced to optimum performance capabilities within design and installation limits.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine the Contract Documents to become familiar with Project requirements.
 1. Contract Documents are defined in the General and Supplementary Conditions of Contract.
 2. Verify that balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers, are required by the Contract Documents. Verify that quantities and locations of these balancing devices are accessible and appropriate for effective balancing and for efficient system and equipment operation.
 3. Based on examination of the Contract Documents, to recommend changes and additions to systems' balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.
- B. Examine approved submittal data of HVAC systems and equipment.
- C. Examine Project Record Documents described in Division 01 Section "Project Record Documents."
- D. Examine design data, including HVAC system descriptions, statements of design assumptions for environmental conditions and systems' output, and statements of philosophies and assumptions about HVAC system and equipment controls.

- E. Examine equipment performance data including fan and pump curves. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system. Calculate system effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from those presented when the equipment was performance tested at the factory. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," Sections 7 through 10; or in SMACNA's "HVAC Systems--Duct Design," Sections 5 and 6. Compare this data with the design data and installed conditions.
- F. Examine system and equipment installations to verify that they are complete and that testing, cleaning, adjusting, and commissioning specified in individual Sections have been performed.
- G. Examine system and equipment test reports.
- H. Examine HVAC system and equipment installations to verify that indicated balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers, are properly installed, and that their locations are accessible and appropriate for effective balancing and for efficient system and equipment operation.
- I. Examine systems for functional deficiencies that cannot be corrected by adjusting and balancing.
- J. Examine terminal units, such as variable-air-volume boxes, to verify that they are accessible and their controls are connected and functioning.
- K. Examine heat-transfer coils for correct piping connections and for clean and straight fins.
- L. Examine system pumps to ensure absence of entrained air in the suction piping.
- M. Examine equipment for installation and for properly operating safety interlocks and controls.
- N. Examine control system components to verify the following:
 - 1. Dampers, valves, and other controlled devices are operated by the intended controller.
 - 2. Dampers and valves are in the position indicated by the controller.
 - 3. Integrity of valves and dampers for free and full operation and for tightness of fully closed and fully open positions. This includes dampers in multizone units, mixing boxes, and variable-air-volume terminals.
 - 4. Automatic modulating and shutoff valves, including two-way valves and three-way mixing and diverting valves, are properly connected.
 - 5. Thermostats and humidistats are located to avoid adverse effects of sunlight, drafts, and cold walls.
 - 6. Sensors are located to sense only the intended conditions.
 - 7. Sequence of operation for control modes is according to the Contract Documents.
 - 8. Controller set points are set at indicated values.
 - 9. Interlocked systems are operating.
 - 10. Changeover from heating to cooling mode occurs according to indicated values.
- O. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

3.2 PREPARATION

- A. Coordinate the efforts of factory-authorized service representatives for systems and equipment, HVAC controls installers, and other mechanics to operate HVAC systems and equipment to support and assist TAB activities.
- B. Prepare a TAB plan that includes strategies and step-by-step procedures.
- C. The Contractor shall complete system readiness checks, prepare system readiness reports, and prefunctional tests including the following:
 - 1. Permanent electrical power wiring is complete.
 - 2. Hydronic systems are filled, clean, and free of air.
 - 3. Control systems are operational.
 - 4. Equipment and duct access doors are securely closed.
 - 5. Balance, smoke, and fire dampers are open.
 - 6. Isolating and balancing valves are open and control valves are operational.
 - 7. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
 - 8. Windows and doors can be closed so indicated conditions for system operations can be met.

3.3 GENERAL PROCEDURES FOR TESTING AND BALANCING

- A. TAB firm shall coordinate with Contractor to gather all required system points and data without voiding manufacturers' warranties. Facility personnel and factory-authorized service representatives may also be required.
- B. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems" and this Section.
- C. Cut insulation, penetrate pipes, and equipment cabinets for installation of test probes to the minimum extent necessary to allow adequate performance of procedures. After testing and balancing, close probe holes and patch insulation with new materials identical to those removed. Restore vapor barrier and finish according to insulation Specifications for this Project.
- D. Mark equipment and balancing device settings with paint or other suitable, permanent identification material, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, to show final settings.
- E. Take and report testing and balancing measurements in inch-pound (IP) units.

3.4 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

- A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.
- B. Provide a marked-up set of mechanical plans or "as-built" duct layouts of systems that includes numbering of each HVAC device that corresponds to the respective item in the TAB report.
- C. For variable-air-volume systems, develop a plan to simulate diversity.

- D. Determine the best locations in main and branch ducts for accurate duct airflow measurements.
- E. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
- F. Verify that motor starters are equipped with properly sized thermal protection.
- G. Check dampers for proper position to achieve desired airflow path.
- H. Check for airflow blockages.
- I. Check condensate drains for proper connections and functioning.
- J. Check for proper sealing of air-handling unit components.
- K. Check for proper sealing of air duct system.

3.5 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

- A. Prepare test reports for pumps, coils, and heat exchangers. Obtain approved submittals and manufacturer-recommended testing procedures. Crosscheck the summation of required coil and heat exchanger flow rates with pump design flow rate.
- B. Prepare schematic diagrams of systems' "as-built" piping layouts.
- C. In addition to requirements in "Preparation" Article, prepare hydronic systems for testing and balancing as follows:
 - 1. Check liquid level in expansion tank.
 - 2. Check highest vent for adequate pressure.
 - 3. Check flow-control valves for proper position.
 - 4. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
 - 5. Verify that motor starters are equipped with properly sized thermal protection.
 - 6. Check that air has been purged from the system.

3.6 GENERAL PROCEDURES FOR DOMESTIC HOT WATER SYSTEMS

- A. Balance domestic hot water recirculation, to ensure proper flow through all mains and branches. Tune system until hot water is delivered to the most remote fixture within the allowable time as required by the AHJ.

3.7 PROCEDURES FOR SPACE PRESSURIZATION MEASUREMENTS AND ADJUSTMENTS

- A. Pressure testing shall be limited to the following room types:
 - 1. Soiled / Decontamination.
- B. Before testing for space pressurization, observe the space to verify the integrity of the space boundaries. Verify that windows and doors are closed and applicable safing, gaskets, and sealants are installed. Report deficiencies and postpone testing until after the reported deficiencies are corrected.

- C. Measure, adjust, and record the pressurization of each room, each zone, and each building by adjusting the supply, return, and exhaust airflows to achieve the indicated conditions.
- D. Measure space pressure differential where pressure is used as the design criteria, and measure airflow differential where differential airflow is used as the design criteria for space pressurization.
 - 1. For pressure measurements, measure and record the pressure difference between the intended spaces at the door with all doors in the space closed. Record the high-pressure side, low-pressure side, and pressure difference between each adjacent space.
 - 2. For applications with cascading levels of space pressurization, begin in the most critical space and work to the least critical space.
 - 3. Test room pressurization first, then zones, and finish with building pressurization.
- E. To achieve indicated pressurization, set the supply airflow to the indicated conditions and adjust the exhaust and return airflow to achieve the indicated pressure or airflow difference.
- F. For spaces with pressurization being monitored and controlled automatically, observe and adjust the controls to achieve the desired set point.
 - 1. Compare the values of the measurements taken to the measured values of the control system instruments and report findings.
 - 2. Check the repeatability of the controls by successive tests designed to temporarily alter the ability to achieve space pressurization. Test overpressurization and underpressurization, and observe and report on the system's ability to revert to the set point.
 - 3. For spaces served by variable-air-volume supply and exhaust systems, measure space pressurization at indicated airflow and minimum airflow conditions.
- G. In spaces that employ multiple modes of operation, such as normal mode and emergency mode or occupied mode and unoccupied mode, measure, adjust, and record data for each operating mode.
- H. Record indicated conditions and corresponding initial and final measurements. Report deficiencies.

3.8 PROCEDURES FOR SMOKE-CONTROL SYSTEM TESTING

- A. Before testing smoke-control systems, verify that construction is complete and verify the integrity of each smoke-control zone boundary. Verify that windows and doors are closed and that applicable safing, gasket, and sealants are installed. Report deficiencies and postpone testing until after the reported deficiencies are corrected.
- B. Measure and record wind speed and direction, outside-air temperature, and relative humidity on each test day.
- C. Measure, adjust, and record airflow of each smoke-control system with all fans that are a part of the system operating as intended by the design.
- D. Measure, adjust, and record the airflow of each fan. For ducted systems, measure the fan airflow by duct Pitot-tube traverse.
- E. After air balancing is complete, perform the following pressurization testing for each smoke-control zone in the system:

1. Verify the boundaries of each smoke-control zone.
2. With the HVAC systems in their normal mode of operation and smoke control not operating, measure and record the pressure difference across each smoke-control zone. Make measurements after closing doors that separate the zones. Make one measurement across each door. Clearly indicate the high and low pressure side of each door.
3. With the system operating in the smoke-control mode and with each zone in the smoke-control system activated, perform the following:
 - a. Measure and record the pressure difference across each door that separates the smoke zone from adjacent zones. Make measurements with doors that separate the smoke zone from the other zones closed. Clearly indicate the high and low pressure side of the door. Doors that have a tendency to open slightly due to the pressure difference should have one pressure measurement made while held closed and another measurement made with the door open.
 - b. Continue to activate each separate zoned smoke-control system and make pressure difference measurements.
 - c. After testing a smoke zone's smoke-control system, deactivate the HVAC systems involved and return them to their normal operating mode before activating another zone's smoke-control system.
 - d. Verify that controls necessary to prevent excessive pressure differences are functional.

F. Operational Tests:

1. Check the proper activation of each zoned smoke-control system in response to all means of activation, both automatic and manual.
2. Check automatic activation in response to fire alarm signals received from the building's fire alarm and detection system. Initiate a separate alarm for each means of activation to ensure that the proper operation of the correct zoned smoke-control system occurs.
3. TAB firm involvement shall provide air flow and pressure measurements and verification of HVAC equipment and EMS control activation when Smoke-Control system is activated by others.
4. Check and record the proper operation of fans, dampers, and related equipment as outlined below for each separate zone of the smoke-control system.
 - a. Fire zone in which a smoke-control system automatically activates.
 - b. Type of signal that activates a smoke-control system, such as pull station, sprinkler water flow, or smoke detector.
 - c. Smoke zone(s) where maximum mechanical exhaust to the outside is implemented and no supply air is provided.
 - d. Positive pressure smoke-control zone(s) where maximum air supply is implemented and no exhaust to the outside is provided.
 - e. Fan(s) "ON" as required to implement the smoke-control system. Multiple- or variable-speed fans should be further noted as "MAX. VOLUME" to verify that the intended control configuration is achieved.
 - f. Fan(s) "OFF" as required to implement the smoke-control system.
 - g. Damper(s) "OPEN" where maximum airflow must be achieved.
 - h. Damper(s) "CLOSED" where no airflow should take place.
 - i. Auxiliary functions to achieve the smoke-control system configuration such as changes or override of normal operating pressure and temperature-control set points.
 - j. If standby power is provided for the smoke-control system, test to verify that the system functions while operating under both normal and standby power.

- G. Conduct additional tests required by authorities having jurisdiction. Unless required by authorities having jurisdiction, perform testing without the use of smoke or products that simulate smoke.
- H. Using the air flow and pressure measurements taken by the TAB firm, the Contractor shall prepare a complete report of observations, measurements, and deficiencies.

3.9 TEMPERATURE-CONTROL VERIFICATION

- A. Verify that controllers are calibrated and commissioned.
- B. Check transmitter and controller locations and note conditions that would adversely affect control functions.
- C. Record controller settings and note variances between set points and actual measurements.
- D. Check the operation of limiting controllers (i.e., high- and low-temperature controllers).
- E. Check free travel and proper operation of control devices such as damper and valve operators.
- F. Check the sequence of operation of control devices. Note air pressures for systems with pneumatic components and device positions and correlate with airflow and water flow measurements.
- G. Check the interaction of electrically operated switch transducers.
- H. Check the interaction of interlock and lockout systems.
- I. For pneumatic systems, check main control supply-air pressure and observe compressor and dryer operations.
- J. Note operation of electric actuators using spring return for proper fail-safe operations.

3.10 TOLERANCES

- A. Set HVAC system airflow and water flow rates within the following tolerances:
 - 1. Supply, Return, and Exhaust Fans and Equipment with Fans:
 - a. Up to 5000 cfm: 0 to plus 10 percent.
 - b. Larger than 5000 cfm: 0 to plus 5 percent.
 - 2. Air Devices
 - a. Exhaust: 0 to -10 percent.
 - b. Return: +/-5 percent.
 - c. Supply: 0 to +10 percent.
 - 3. Hydronic Flow Rates
 - a. Pumps: 0 to +10 percent.
 - b. Equipment: 0 to +5 percent.

3.11 REPORTING

- A. Status Reports: As Work progresses, prepare reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

3.12 FINAL REPORT

- A. General: Typewritten, or computer printout in letter-quality font, on standard bond paper, in three-ring binder, tabulated and divided into sections by tested and balanced systems. A single, PDF document with navigational bookmarks by section may be substituted for a manual binder.
- B. Include a certification sheet in front of binder signed and sealed by the certified testing and balancing engineer.
 - 1. Include a list of instruments used for procedures, along with proof of calibration.
- C. Final Report Contents: In addition to certified field report data, include the following:
 - 1. Pump curves.
 - 2. Fan curves.
 - 3. Manufacturers' test data.
 - 4. Field test reports prepared by system and equipment installers.
 - 5. Other information relative to equipment performance, but do not include Shop Drawings and Product Data.
- D. General Report Data: In addition to form titles and entries, include the following data in the final report, as applicable:
 - 1. Title page.
 - 2. Name and address of TAB firm.
 - 3. Project name.
 - 4. Project location.
 - 5. Architect's name and address.
 - 6. Engineer's name and address.
 - 7. Contractor's name and address.
 - 8. Report date.
 - 9. Signature of TAB firm who certifies the report.
 - 10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
 - 11. Summary of contents including the following:
 - a. Indicated versus final performance.
 - b. Notable characteristics of systems.
 - c. Description of system operation sequence if it varies from the Contract Documents.
 - 12. Nomenclature sheets for each item of equipment.
 - 13. Data for terminal units, including manufacturer, type size, and fittings.
 - 14. Notes to explain why certain final data in the body of reports varies from indicated values.
- E. Provide a marked-up set of mechanical plans or "as-built" layouts of systems that include numbering of each HVAC device that corresponds to the respective item in the TAB report.

1. Quantities of outside, supply, return, and exhaust airflows.
2. Water and steam flow rates.
3. Duct, outlet, and inlet sizes.
4. Pipe and valve sizes and locations.
5. Terminal units.
6. Balancing stations.
7. Position of balancing devices.

F. Air-Handling Unit Test Reports: For air-handling units with coils, include the following:

1. Unit Data: Include the following:
 - a. Unit identification.
 - b. Location.
 - c. Make and type.
 - d. Model number and unit size.
 - e. Manufacturer's serial number.
 - f. Unit arrangement and class.
 - g. Discharge arrangement.
 - h. Sheave make, size in inches, and bore.
 - i. Sheave dimensions, center-to-center, and amount of adjustments in inches.
 - j. Number of belts, make, and size.
 - k. Number of filters, type, and size.
2. Motor Data:
 - a. Make and frame type and size.
 - b. Horsepower and rpm.
 - c. Volts, phase, and hertz.
 - d. Full-load amperage and service factor.
 - e. Sheave make, size in inches, and bore.
 - f. Sheave dimensions, center-to-center, and amount of adjustments in inches.
3. Test Data (Indicated and Actual Values):
 - a. Total airflow rate in cfm.
 - b. Total system static pressure in inches wg.
 - c. Fan rpm.
 - d. Discharge static pressure in inches wg.
 - e. Filter static-pressure differential in inches wg.
 - f. Filter condition.
 - g. Preheat coil static-pressure differential in inches wg.
 - h. Cooling coil static-pressure differential in inches wg.
 - i. Heating coil static-pressure differential in inches wg.
 - j. Outside airflow in cfm.
 - k. Return airflow in cfm.
 - l. Relief airflow in cfm (L/s).
 - m. Outside-air damper position.
 - n. Return-air damper position.
 - o. Relief-air damper position.
 - p. Fan drive settings including VFD settings and percentage of maximum pitch diameter.
 - q. Settings for supply-air static-pressure controller.

G. Apparatus-Coil Test Reports:

1. Coil Data:

- a. System identification.
- b. Location.
- c. Coil type.
- d. Number of rows.
- e. Fin spacing in fins per inch o.c.
- f. Make and model number.
- g. Face area in sq. ft..
- h. Tube size in NPS.
- i. Tube and fin materials.
- j. Circuiting arrangement.

2. Test Data (Indicated and Actual Values):

- a. Airflow rate in cfm.
- b. Average face velocity in fpm.
- c. Air pressure drop in inches wg.
- d. Outside-air, wet- and dry-bulb temperatures in deg F.
- e. Return-air, wet- and dry-bulb temperatures in deg F.
- f. Entering-air, wet- and dry-bulb temperatures in deg F.
- g. Leaving-air, wet- and dry-bulb temperatures in deg F.
- h. Water flow rate in gpm.
- i. Water pressure differential in feet of head or psig.
- j. Entering-water temperature in deg F.
- k. Leaving-water temperature in deg F.
- l. Refrigerant expansion valve and refrigerant types.
- m. Refrigerant suction pressure in psig.
- n. Refrigerant suction temperature in deg F.
- o. Inlet steam pressure in psig.

H. Gas- and Oil-Fired Heat Apparatus Test Reports: In addition to manufacturer's factory startup equipment reports, include the following:

1. Unit Data:

- a. System identification.
- b. Location.
- c. Make and type.
- d. Model number and unit size.
- e. Manufacturer's serial number.
- f. Fuel type in input data.
- g. Output capacity in Btuh.
- h. Ignition type.
- i. Burner-control types.
- j. Motor horsepower and rpm.
- k. Motor volts, phase, and hertz.
- l. Motor full-load amperage and service factor.
- m. Sheave make, size in inches, and bore.
- n. Sheave dimensions, center-to-center, and amount of adjustments in inches.

2. Test Data (Indicated and Actual Values):

- a. Total airflow rate in cfm.
- b. Entering-air temperature in deg F.
- c. Leaving-air temperature in deg F.

- d. Air temperature differential in deg F.
 - e. Entering-air static pressure in inches wg.
 - f. Leaving-air static pressure in inches wg.
 - g. Air static-pressure differential in inches wg.
 - h. Low-fire fuel input in Btuh.
 - i. High-fire fuel input in Btuh.
 - j. Manifold pressure in psig.
 - k. High-temperature-limit setting in deg F.
 - l. Operating set point in Btuh.
 - m. Motor voltage at each connection.
 - n. Motor amperage for each phase.
 - o. Heating value of fuel in Btuh.
- I. Electric-Coil Test Reports: For electric furnaces, duct coils, and electric coils installed in central-station air-handling units, include the following:
- 1. Unit Data:
 - a. System identification.
 - b. Location.
 - c. Coil identification.
 - d. Capacity in Btuh.
 - e. Number of stages.
 - f. Connected volts, phase, and hertz.
 - g. Rated amperage.
 - h. Airflow rate in cfm.
 - i. Face area in sq. ft..
 - j. Minimum face velocity in fpm.
 - 2. Test Data (Indicated and Actual Values):
 - a. Heat output in Btuh.
 - b. Airflow rate in cfm.
 - c. Air velocity in fpm.
 - d. Entering-air temperature in deg F.
 - e. Leaving-air temperature in deg F.
 - f. Voltage at each connection.
 - g. Amperage for each phase.
- J. Fan Test Reports: For supply, return, and exhaust fans, include the following:
- 1. Fan Data:
 - a. System identification.
 - b. Location.
 - c. Make and type.
 - d. Model number and size.
 - e. Manufacturer's serial number.
 - f. Arrangement and class.
 - g. Sheave make, size in inches, and bore.
 - h. Sheave dimensions, center-to-center, and amount of adjustments in inches.
 - 2. Motor Data:
 - a. Make and frame type and size.

- b. Horsepower and rpm.
- c. Volts, phase, and hertz.
- d. Full-load amperage and service factor.
- e. Sheave make, size in inches, and bore.
- f. Sheave dimensions, center-to-center, and amount of adjustments in inches.
- g. Number of belts, make, and size.

3. Test Data (Indicated and Actual Values):

- a. Total airflow rate in cfm.
- b. Total system static pressure in inches wg.
- c. Fan rpm.
- d. Discharge static pressure in inches wg.
- e. Suction static pressure in inches wg.

K. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:

1. Report Data:

- a. System and air-handling unit number.
- b. Location and zone.
- c. Traverse air temperature in deg F.
- d. Duct static pressure in inches wg.
- e. Duct size in inches.
- f. Duct area in sq. ft..
- g. Indicated airflow rate in cfm.
- h. Indicated velocity in fpm.
- i. Actual airflow rate in cfm.
- j. Actual average velocity in fpm.
- k. Barometric pressure in psig.

L. Air-Terminal-Device Reports:

1. Unit Data:

- a. System and air-handling unit identification.
- b. Location and zone.
- c. Test apparatus used.
- d. Area served.
- e. Air-terminal-device make.
- f. Air-terminal-device number from system diagram.
- g. Air-terminal-device type and model number.
- h. Air-terminal-device size.
- i. Air-terminal-device effective area in sq. ft..

2. Test Data (Indicated and Actual Values):

- a. Airflow rate in cfm.
- b. Air velocity in fpm.
- c. Preliminary airflow rate as needed in cfm.
- d. Preliminary velocity as needed in fpm.
- e. Final airflow rate in cfm.
- f. Final velocity in fpm.

M. System-Coil Reports: For reheat coils and water coils of terminal units, include the following:

1. Unit Data:

- a. System and air-handling unit identification.
- b. Location and zone.
- c. Room or riser served.
- d. Coil make and size.
- e. Flowmeter type.

2. Test Data (Indicated and Actual Values):

- a. Airflow rate in cfm.
- b. Entering-water temperature in deg F.
- c. Leaving-water temperature in deg F.
- d. Water pressure drop in feet of head or psig.
- e. Entering-air temperature in deg F.
- f. Leaving-air temperature in deg F.

N. Compressor and Condenser Reports: Utilize chiller data display for some of the information below. Indicate which items are not available on the display panel and rely on data provided by manufacturer instead. For refrigerant side of unitary systems, stand-alone refrigerant compressors, air-cooled condensing units, or water-cooled condensing units, include the following:

1. Unit Data:

- a. Unit identification.
- b. Location.
- c. Unit make and model number.
- d. Compressor make.
- e. Compressor model and serial numbers.
- f. Refrigerant weight in lb.
- g. Low ambient temperature cutoff in deg F.

2. Test Data (Indicated and Actual Values):

- a. Inlet-duct static pressure in inches wg.
- b. Outlet-duct static pressure in inches wg.
- c. Entering-air, dry-bulb temperature in deg F.
- d. Leaving-air, dry-bulb temperature in deg F.
- e. Condenser entering-water temperature in deg F.
- f. Condenser leaving-water temperature in deg F.
- g. Condenser-water temperature differential in deg F.
- h. Condenser entering-water pressure in feet of head or psig.
- i. Condenser leaving-water pressure in feet of head or psig.
- j. Condenser-water pressure differential in feet of head or psig.
- k. Low-pressure-cutout set point in psig.
- l. High-pressure-cutout set point in psig.
- m. Suction pressure in psig.
- n. Suction temperature in deg F.
- o. Condenser refrigerant pressure in psig.
- p. Condenser refrigerant temperature in deg F.
- q. Oil pressure in psig.
- r. Oil temperature in deg F.

- s. Voltage at each connection.
 - t. Amperage for each phase.
 - u. Kilowatt input.
 - v. Crankcase heater kilowatt.
 - w. Number of fans.
 - x. Condenser fan rpm.
 - y. Condenser fan motor make, frame size, rpm, and horsepower.
 - z. Condenser fan motor voltage at each connection.
 - aa. Condenser fan motor amperage for each phase.
- O. Heat-Exchanger/Converter Test Reports: For steam and hot-water heat exchangers, include the following:
- 1. Unit Data:
 - a. Unit identification.
 - b. Location.
 - c. Service.
 - d. Make and type.
 - e. Model and serial numbers.
 - f. Ratings.
 - 2. Steam Test Data (Indicated and Actual Values):
 - a. Inlet pressure in psig.
 - 3. Primary Water Test Data (Indicated and Actual Values):
 - a. Entering-water temperature in deg F.
 - b. Leaving-water temperature in deg F.
 - c. Entering-water pressure in feet of head or psig.
 - d. Water pressure differential in feet of head or psig.
 - e. Water flow rate in gpm.
 - 4. Secondary Water Test Data (Indicated and Actual Values):
 - a. Entering-water temperature in deg F.
 - b. Leaving-water temperature in deg F.
 - c. Entering-water pressure in feet of head or psig.
 - d. Water pressure differential in feet of head or psig.
 - e. Water flow rate in gpm.
- P. Pump Test Reports:
- 1. Unit Data:
 - a. Unit identification.
 - b. Location.
 - c. Service.
 - d. Make and size.
 - e. Model and serial numbers.
 - f. Water flow rate in gpm.
 - g. Water pressure differential in feet of head or psig.
 - h. Required net positive suction head in feet of head or psig.
 - i. Pump rpm.

- j. Impeller diameter in inches.
- k. Motor make and frame size.
- l. Motor horsepower and rpm.
- m. Voltage at each connection.
- n. Amperage for each phase.
- o. Full-load amperage and service factor.
- p. Seal type.

2. Test Data (Indicated and Actual Values):

- a. Static head in feet of head or psig.
- b. Pump shutoff pressure in feet of head or psig.
- c. Actual impeller size in inches.
- d. Full-open flow rate in gpm.
- e. Full-open pressure in feet of head or psig.
- f. Final discharge pressure in feet of head or psig.
- g. Final suction pressure in feet of head or psig.
- h. Final total pressure in feet of head or psig.
- i. Final water flow rate in gpm.
- j. Voltage at each connection.
- k. Amperage for each phase.
- l. Impeller size.

Q. Boiler Test Reports:

1. Unit Data:

- a. Unit identification.
- b. Location.
- c. Service.
- d. Make and type.
- e. Model and serial numbers.
- f. Fuel type and input in Btuh.
- g. Number of passes.
- h. Ignition type.
- i. Burner-control types.
- j. Voltage at each connection.
- k. Amperage for each phase.

2. Test Data (Indicated and Actual Values):

- a. Operating pressure in psig.
- b. Operating temperature in deg F.
- c. Entering-water temperature in deg F.
- d. Leaving-water temperature in deg F.
- e. Number of safety valves and sizes in NPS.
- f. Safety valve settings in psig.
- g. High-limit setting in psig.
- h. Operating-control setting.
- i. High-fire set point.
- j. Low-fire set point.
- k. Voltage at each connection.
- l. Amperage for each phase.
- m. Draft fan voltage at each connection.
- n. Draft fan amperage for each phase.
- o. Manifold pressure in psig.

R. Instrument Calibration Reports:

1. Report Data:

- a. Instrument type and make.
- b. Serial number.
- c. Application.
- d. Dates of use.
- e. Dates of calibration.

3.13 INSPECTIONS

A. Initial Inspection:

- 1. After testing and balancing are complete, operate each system and randomly check measurements to verify that the system is operating according to the final test and balance readings documented in the Final Report.
- 2. Randomly check the following for each system:
 - a. Measure airflow of at least 10 percent of air outlets.
 - b. Measure water flow of at least 5 percent of terminals.
 - c. Measure room temperature at each thermostat/temperature sensor. Compare the reading to the set point.
 - d. Measure sound levels at two locations.
 - e. Measure space pressure of at least 10 percent of locations.
 - f. Verify that balancing devices are marked with final balance position.
 - g. Note deviations to the Contract Documents in the Final Report.

B. Final Inspection:

- 1. After initial inspection is complete and evidence by random checks verifies that testing and balancing are complete and accurately documented in the final report, request that a final inspection be made by Owner.
- 2. TAB firm test and balance engineer shall conduct the inspection in the presence of Owner.
- 3. Owner shall randomly select measurements documented in the final report to be rechecked. The rechecking shall be limited to either 10 percent of the total measurements recorded, or the extent of measurements that can be accomplished in a normal 8-hour business day.
- 4. If the rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."
- 5. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.
- 6. TAB firm shall recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes and resubmit the final report.
- 7. Request a second final inspection. If the second final inspection also fails, Owner shall contract the services of another TAB firm to complete the testing and balancing in accordance with the Contract Documents and deduct the cost of the services from the final payment.

3.14 ADDITIONAL TESTS

- A. Within 90 days of completing TAB, perform additional testing and balancing to verify that balanced conditions are being maintained throughout and to correct unusual conditions.
- B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional testing, inspecting, and adjusting during near-peak summer and winter conditions.

SECTION 230700

HVAC INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Insulation Materials:
 - a. Calcium silicate.
 - b. Cellular glass.
 - c. Fiberglass.
 - d. Flexible elastomeric.
 - e. Mineral or glass fiber.
 - f. Phenolic.
 - g. Polyolefin.
2. Fire-rated insulation systems.
3. Factory-applied jackets.
4. Field-applied cloths.
5. Field-applied jackets.
6. Adhesives.
7. Mastics.
8. Lagging adhesives.
9. Sealants.
10. Tapes.
11. Securements.

B. Related Sections:

1. Division 21 Section "Fire-Suppression Systems Insulation."
2. Division 22 Section "Plumbing Insulation."
3. Division 23 Section "Metal Ducts" for duct liners.
4. Division 23 Section "Hangers and Supports for HVAC Piping and Equipment" for installation locations of pipe saddles at pipe hangers.
5. Division 33 Section "Underground Hydronic Energy Distribution" for loose-fill pipe insulation in underground piping outside the building.
6. Division 33 Section "Underground Steam and Condensate Distribution Piping" for loose-fill pipe insulation in underground piping outside the building.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, thickness, and jackets (both factory and field applied, if any).
- B. Calculations: For insulation submitted outside of the conductivity range per the "Minimum Pipe Insulation Thickness" Table for the application listed, submit thickness calculations.

C. Shop Drawings:

1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
2. Detail attachment and covering of heat tracing inside insulation.
3. Detail insulation application at pipe expansion joints for each type of insulation.
4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
5. Detail removable insulation at piping specialties, equipment connections, and access panels.
6. Detail application of field-applied jackets.
7. Detail application at linkages of control devices.
8. Detail field application for each equipment type.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- C. Field quality-control reports.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the United States Department of Labor, Employment and Training Registered Apprenticeship Program.
- B. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing and inspecting agency.
 1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
 2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.6 COORDINATION

- A. Coordinate size and location of supports, hangers, and insulation shields specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."

- B. Coordinate clearance requirements with piping Installer for piping insulation application, duct Installer for duct insulation application, and equipment Installer for equipment insulation application. Before preparing piping and ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.7 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Fiberglass
 - 1. Johns-Manville.
 - 2. K-Flex.
 - 3. Knauf Fiberglass.
 - 4. Manson (Certain Teed).
 - 5. Owens-Corning.
 - 6. Pittsburg-Corning.
- B. Flexible Elastomeric
 - 1. Aeroflex / Aerocel EPDM
 - 2. Armacell / Armaflex
 - 3. RBX Industries / Rubatex
- C. Phenolic
 - 1. Polyguard Products
 - 2. Resolco / Insul-Phen
- D. Polyisocyanurate
 - 1. Dow / Trymer
- E. Polyolefin
 - 1. Nomaco/ IMCOA Imcolock

2.2 INSULATION MATERIALS

- A. Comply with requirements in Part 3 schedule articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Calcium Silicate:
 - 1. Preformed Pipe Sections: Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.
 - 2. Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.
 - 3. Prefabricated Fitting Covers: Comply with ASTM C 450 and ASTM C 585 for dimensions used in preforming insulation to cover valves, elbows, tees, and flanges.
- G. Cellular Glass: Inorganic, incombustible, cellular or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 - 1. Block Insulation: ASTM C 552, Type I.
 - 2. Special-Shaped Insulation: ASTM C 552, Type III.
 - 3. Board Insulation: ASTM C 552, Type IV.
 - 4. Preformed Pipe Insulation without Jacket: Comply with ASTM C 552, Type II, Class 1.
 - 5. Preformed Pipe Insulation with Factory-Applied ASJ-SSL: Comply with ASTM C 552, Type II, Class 2.
 - 6. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
- H. Fiberglass
 - 1. Flexible glass fiber; ASTM C553 and ASTM C1290; commercial grade; 'k' value of 0.25 at 75 degrees F; 1.5 lb/cu ft minimum density; 0.002 inch foil scrim kraft facing for air ducts.
 - 2. Rigid glass fiber; ASTM C612, Class 1; 'k' value of 0.23 at 75 degrees F; 3.0 lb/cu ft minimum density.
 - 3. Duct liner, flexible glass fiber; ASTM C1071; Type II, 'k' value of 0.23 at 75 degrees F; 3.0 lb/cu ft minimum density; coating air side to be black, unless otherwise indicated, and rated for 4,000 feet per minute air velocity. The airstream surface must be protected with a durable polyacrylate copolymer emulsion, or approved equal, specifically formulated to:
 - a. Not support the growth of fungus or bacteria, when tested in accordance with the test method for fungi resistance in ASTM D 5590 with "0" growth rating.
 - b. Act as a fungicidal protective coating: water based, VOC < 50 g/l. Fungicidal coating must be EPA registered for use in HVAC duct systems.

- I. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials with a built-in vapor barrier. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
- J. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
- K. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
- L. Mineral Wool: ASTM C 547; preformed, high temperature insulation; 'k' value of 0.35 at 300 degrees F.
- M. Phenolic:
 - 1. Preformed pipe insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type III, Grade 1.
 - 2. Block insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type II, Grade 1.
 - 3. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
 - 4. Factory-Applied Jacket: FSJ for all applications unless otherwise indicated.
- N. Polyolefin: Unicellular, polyethylene thermal plastic insulation. Comply with ASTM C 534 or ASTM C 1427, Type I, Grade 1 for tubular materials and Type II, Grade 1 for sheet materials.

2.3 FIRE-RATED INSULATION SYSTEMS

- A. Fire-Rated Blanket: High-temperature, flexible, blanket insulation with FSK jacket that is tested and certified to provide a 2-hour fire rating by a NRTL acceptable to authority having jurisdiction.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; FlameChek.
 - b. Johns Manville; Firetemp Wrap.
 - c. 3M; Fire Barrier Wrap Products.
 - d. Unifrax Corporation; FyreWrap.

2.4 THERMAL-HANGER SHIELD INSERTS

- A. Description: 100-psig-minimum, compressive-strength insulation insert encased in sheet metal shield.
- B. Available Manufacturers:
 - 1. Carpenter & Paterson, Inc.
 - 2. ERICO/Michigan Hanger Co.
 - 3. PHS Industries, Inc.
 - 4. Pipe Shields, Inc.
 - 5. Rilco Manufacturing Company, Inc.
 - 6. Value Engineered Products, Inc.

- C. Insulation-Insert Material for Cold Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate or ASTM C 552, Type II cellular glass with vapor barrier.
- D. Insulation-Insert Material for Hot Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate or ASTM C 552, Type II cellular glass.
- E. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
- F. For Clevis or Band Hangers: Insert and shield shall cover lower 360 degrees of pipe.
- G. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

2.5 ADHESIVES

- A. Products: Subject to compliance with requirements, insulation manufacturer shall provide insulation adhesive and jacket manufacturer shall provide jacket adhesive.
- B. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.
- C. Calcium Silicate Adhesive: Fibrous, sodium-silicate-based adhesive with a service temperature range of 50 to 800 deg F.
- D. Cellular-Glass and Phenolic Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F.
- E. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.
- F. ASJ Adhesive, and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
- G. PVC Jacket Adhesive: Compatible with PVC jacket.

2.6 MASTICS

- A. Products: Subject to compliance with requirements, insulation manufacturer shall provide mastics.
- B. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-C-19565C, Type II.
- C. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.
 - 1. Water-Vapor Permeance: ASTM E 96, Procedure B, 0.013 perm at 43-mil dry film thickness.
 - 2. Service Temperature Range: Minus 20 to plus 360 deg F.
 - 3. Solids Content: ASTM D 1644, 59 percent by volume and 71 percent by weight.
 - 4. Color: White.
- D. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.

1. Water-Vapor Permeance: ASTM F 1249, 3 perms at 0.0625-inch dry film thickness.
2. Service Temperature Range: Minus 20 to plus 200 deg F.
3. Solids Content: 63 percent by volume and 73 percent by weight.
4. Color: White.

2.7 LAGGING ADHESIVES

- A. Products: Subject to compliance with requirements, insulation manufacturer shall provide lagging adhesives
- B. Description: Comply with MIL-A-3316C Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.
 1. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over duct, equipment, and pipe insulation.
 2. Service Temperature Range: Minus 50 to plus 360 deg F.
 3. Color: White.

2.8 SEALANTS

- A. Products: Subject to compliance with requirements, insulation manufacturer shall provide sealants
- B. Joint Sealants for Cellular-Glass, and Phenolic Products:
 1. Materials shall be compatible with insulation materials, jackets, and substrates.
 2. Permanently flexible, elastomeric sealant.
 3. Service Temperature Range: Minus 100 to plus 300 deg F.
 4. Color: White or gray.
- C. FSK and Metal Jacket Flashing Sealants:
 1. Materials shall be compatible with insulation materials, jackets, and substrates.
 2. Fire- and water-resistant, flexible, elastomeric sealant.
 3. Service Temperature Range: Minus 40 to plus 250 deg F.
 4. Color: Aluminum.
- D. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
 1. Materials shall be compatible with insulation materials, jackets, and substrates.
 2. Fire- and water-resistant, flexible, elastomeric sealant.
 3. Service Temperature Range: Minus 40 to plus 250 deg F.
 4. Color: White.

2.9 INSULATING CEMENT

- A. ASTM C 195; hydraulic setting mineral fiber thermal insulating cement with dry density of no more than 38 lb/ft³ thermal conductivity of 0.96 at 400°F mean temperature, and service temperature to 1200°F.
- B. Acceptable manufacturers: RAMCO or approved equal.

2.10 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
 4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
 5. PVDC Jackets
 - a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - b. PVDC Jacket for Indoor Applications: 4-mil-thick, white PVDC biaxially oriented barrier film with a permeance at 0.02 perms when tested according to ASTM E 96 and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E 84.
 - c. for Outdoor Applications: 6-mil-thick, white PVDC biaxially oriented barrier film with a permeance at 0.01 perms when tested according to ASTM E 96 and with a flame-spread index of 5 and a smoke-developed index of 25 when tested according to ASTM E 84.
 - d. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.
 6. Vinyl Jacket: White vinyl with a permeance of 1.3 perms when tested according to ASTM E 96, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.11 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd..
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Alpha Associates, Inc.; Alpha-Maritex 84215 and 84217/9485RW, Luben 59.

2.12 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
- B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Johns Manville; Zeston.
 - b. P.I.C. Plastics, Inc.; FG Series.
 - c. Proto PVC Corporation; LoSmoke.
 - d. Speedline Corporation; SmokeSafe.
2. Adhesive: As recommended by jacket material manufacturer.
3. Color: Color-code jackets based on system. Color as selected by Architect.
4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
 - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, and mechanical joints.
5. Factory-fabricated tank heads and tank side panels.

C. Metal Jacket:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Products, Division of ITW; Metal Jacketing Systems.
 - b. PABCO Metals Corporation; Surefit.
 - c. RPR Products, Inc.; Insul-Mate.
2. Aluminum Jacket: Comply with ASTM B 209, Alloy 3003, 3005, 3105 or 5005, Temper H-14.
 - a. Factory cut and rolled to size.
 - b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
3. Stainless-Steel Jacket: ASTM A 167 or ASTM A 240/A 240M.
 - a. Factory cut and rolled to size.
 - b. Material, finish, and thickness are indicated in field-applied jacket schedules.
 - c. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.

- 5) End caps.
- 6) Beveled collars.
- 7) Valve covers.
- 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

D. PVDC Jackets:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Dow Chemical Company (The), Saran 540 Vapor Retarder Film.
2. PVDC Jacket for Indoor Applications: 4-mil-thick, white PVDC biaxially oriented barrier film with a permeance at 0.02 perms when tested according to ASTM E 96 and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E 84.
3. PVDC Jacket for Outdoor Applications: 6-mil-thick, white PVDC biaxially oriented barrier film with a permeance at 0.01 perms when tested according to ASTM E 96 and with a flame-spread index of 5 and a smoke-developed index of 25 when tested according to ASTM E 84.
4. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.

2.13 TAPES

- A. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 1. Avery Dennison Corporation, Specialty Tapes Division.
 2. Compac Corp.
 3. Ideal Tape Co., Inc., an American Bilrite Company.
 4. Venture Tape.
 5. Dow Chemical Company (The).
- B. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
 1. Width: 3 inches.
 2. Thickness: 11.5 mils.
 3. Adhesion: 90 ounces force/inch in width.
 4. Elongation: 2 percent.
 5. Tensile Strength: 40 lbf/inch in width.
 6. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- C. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
 1. Width: 3 inches.
 2. Thickness: 6.5 mils.
 3. Adhesion: 90 ounces force/inch in width.
 4. Elongation: 2 percent.
 5. Tensile Strength: 40 lbf/inch in width.
 6. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

- D. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive. Suitable for indoor and outdoor applications.
 - 1. Width: 2 inches.
 - 2. Thickness: 6 mils.
 - 3. Adhesion: 64 ounces force/inch in width.
 - 4. Elongation: 500 percent.
 - 5. Tensile Strength: 18 lbf/inch in width.
- E. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
 - 1. Width: 2 inches.
 - 2. Thickness: 3.7 mils.
 - 3. Adhesion: 100 ounces force/inch in width.
 - 4. Elongation: 5 percent.
 - 5. Tensile Strength: 34 lbf/inch in width.
- F. PVDC Tape for Indoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.
 - 1. Width: 3 inches.
 - 2. Film Thickness: 4 mils.
 - 3. Adhesive Thickness: 1.5 mils.
 - 4. Elongation at Break: 145 percent.
 - 5. Tensile Strength: 55 lbf/inch in width.
- G. PVDC Tape for Outdoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.
 - 1. Width: 3 inches.
 - 2. Film Thickness: 6 mils.
 - 3. Adhesive Thickness: 1.5 mils.
 - 4. Elongation at Break: 145 percent.
 - 5. Tensile Strength: 55 lbf/inch in width.

2.14 SECUREMENTS

- A. Bands:
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Products; Bands.
 - b. PABCO Metals Corporation; Bands.
 - c. RPR Products, Inc.; Bands.
 - 2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316; 0.015 inch thick, 3/4 inch wide with wing or closed seal.
 - 3. Aluminum: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 3/4 inch wide with wing or closed seal.
- B. Insulation Pins and Hangers:
 - a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

- 1) AGM Industries, Inc.
 - 2) GEMCO.
 - 3) Midwest Fasteners, Inc.
 - 4) Nelson Stud Welding.
2. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, minimum 0.106-inch-diameter shank, length to suit depth of insulation indicated.
 3. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, minimum 0.106-inch-diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
 4. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
 - a. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
 - b. Spindle: Match ductwork material, fully annealed, 0.106-inch-diameter shank, length to suit depth of insulation indicated.
 - c. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
 5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
 - a. Baseplate: Galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
 - b. Spindle: Match ductwork material, fully annealed, 0.106-inch-diameter shank, length to suit depth of insulation indicated.
 - c. Adhesive-backed base with a peel-off protective cover.
 6. Insulation-Retaining Washers: Self-locking washers 0.016-inch-thick, Match pin material, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
 - a. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.

2.15 PIPE INSULATION HANGER SHIELDS

- A. Where hangers are placed outside the jackets of pipe insulation, provide shields or equivalent by Elcen Metal Products Company.
- B. Insulation and shields shall consist of a 360 degree insert of high-density, 100 psi, waterproof calcium silicate, encased in a 360 degree galvanized sheet steel shield. Insert shall be same thickness as adjoining pipe insulation, and shall extend 1-inch beyond sheet metal shield in each direction. Shield lengths and minimum sheet metal gauges shall be as directed below:

<u>PIPE SIZE</u>	<u>SHIELD LENGTH</u>	<u>MINIMUM GAUGE</u>
1/2" to 8"	12"	16
10" & Larger	22"	16

- C. Insulation and shields for Phenolic type insulation shall consist of a 360 degree insert of high-density (minimum 5 lbs/cu.ft.) phenolic insulation by the same manufacturer, encased in a 360 degree galvanized sheet steel shield. Insert shall be same thickness as adjoining pipe insulation, and shall extend 1-inch beyond sheet metal shield in each direction. Shield length and gauge per above table.
- D. Shields shall be Model A1000 – A9000, except for pipe roller applications and where pipe hanger spacing exceeds 10 feet, then provide Model CSX-CW.
- E. At the Contractor's option, shop-fabricated galvanized metal shields may be provided based on approved shop drawings. Length and gauge of sheet metal shall be as specified above.

2.16 PREMANUFACTURED COVERS

- A. Preformed manufactured PVC fitting covers with rigid one piece (half-shell) preformed rigid insulation.

PART 3 - EXECUTION

3.1 GENERAL

- A. Materials shall be applied by a qualified insulation applicator/workman skilled in this trade. Insulation shall be installed in accordance with the manufacturers written instructions and in accordance with recognized industry standards. Mechanical fasteners shall be used whenever possible to assure permanent construction. Unsightly work shall be cause for rejection.
- B. Prior to installation of any insulation materials to ferrous piping systems, the piping surfaces shall be thoroughly cleaned of all mill scale, grease and dirt and passed pressure testing.
- C. Non-compressible insulation material shall be installed at hanger supports on cold piping to prevent damage to insulation and vapor barrier. All wet duct and pipe insulation shall be replaced.
- D. Insulation of cold surfaces shall be vapor-sealed to prevent condensation.
- E. Minimum thickness of insulation shall be as scheduled unless alternate thicknesses can be shown to meet energy performance and approved by the Engineer.
- F. Where piping system insulation is specified, cover valves, strainers, unions, flanges, and fittings with pre-manufactured valve and fitting covers.
- G. Install pipe insulation hanger shields.
- H. Extend piping insulation without interruption through walls, floors and similar piping penetrations, there shall be no exceptions.
- I. Duct insulation shall terminate at fire/smoke damper sleeves. A separate strip of insulation shall be provided around the sleeve and sealed at the wall.
- J. Miscellaneous Applications
 - 1. Refrigerant suction lines within air cooled condensing units, heat pumps and chillers.

- K. Unless indicated otherwise, insulate pipe and equipment that operates:
 - 1. 10 degrees or lower than ambient space temperature.
 - 2. 10 degrees or higher than ambient space temperature.
- L. All steam valves and regulators at and below an elevation of 7' - 0" A.F.F. shall be insulated with removable asbestos free insulation jackets with Velcro fasteners to allow easy installation and removal.

3.2 APPLICATION TYPES

A. Equipment

- E1: Cut insulation to fit contour of equipment, and secure by means of bands, stick-clips, weld-pins and lugs or adhesives as required for each individual piece of equipment. Provide vapor barrier and finish as required for each specific application. Provide new cold surfaces of pumps with accessible boxes that easily separate coincidental with parting line of evaporator heads and pump casings. Resulting insulation joints shall be covered with a self-sealing, vapor-barrier tape. Seal all laps and penetrations in vapor barrier jacket with an approved vapor barrier mastic.

B. Piping

- P1: Butt insulation together and securely tape. Install factory-furnished laps at the butt joints. Neatly bevel and finish insulation where it terminates. Seal with double tape self-sealing adhesives.
- P2: Butt insulation together and securely tape. Install factory-furnished laps at the butt joints. Neatly bevel and finish insulation where it terminates. Seal all laps and penetrations in vapor barrier jacket with an approved vapor barrier mastic.
- P3: Same as P2, except install insulation over heat trace tape. Finish with metal jacket.

C. Ductwork

- D1: Apply fiberglass board insulation to ducts with mechanical fasteners such as stick-clips or weld-pins (with tape and mastic) spaced as required to install full pieces of board insulation. Space on 12" centers (maximum) on the bottom of each duct and plenum. Cover joints and seams in vapor barrier facings with 3" wide matching tape, or with vapor-barrier mastic reinforced with 3" glass mesh reinforcement. Provide an additional layer of insulation board where duct-standing seams exceed the insulation thickness. Seal all laps and penetrations in vapor barrier jacket with an approved vapor barrier mastic.
- D2: Wrap flexible fiberglass insulation around ducts and secure. Additionally, ducts 24 inches wide and larger shall secure insulation with stick clips on 18" centers. Lap insulation a minimum of four (4) inches and seal with an approved vapor barrier mastic. Reinforce lap with a three (3) inch wide band of either glass mesh reinforcement or foil/vapor-barrier tape. Seal raw glass to duct where insulation terminates. Seal all laps and penetrations in vapor barrier jacket with an approved vapor barrier mastic.

3.3 INSULATION SCHEDULE KEYS

Insulation Types Key					
	Type	Maximum K Factor @ 75°F	Temp. Limit °F	Density Lb. Per Cubic Foot	Federal Spec. Compliance
1.	Calcium Silicate	0.38	1200	14	HH-I-523C
2.	Fiberglass (Rigid)	0.23	450	3	ASTM C 547 Type 1
3.	Fiberglass Flexible Duct Wrap	0.25	250	1.5	
4.	Foamed Glass (Cellular)	0.36	850	9	HH-I-1751/3A
5.	Foamed Plastic (Flexible)	0.25	220	5	HH-I-573
6.	High Temperature Fiberglass	0.23	850	3	HH-1-558B
7.	Insulating Cement	0.7	1700		SS-C-160
8.	Phenolic	0.13	250	2.5	ASTM C 1126
9.	Flexible Elastomeric	0.27	220		ASTM C 177 or C518
10.	Polyolefin	0.25	200	2	ASTM C 177 or C518

Finishes Key	
F1.	8-ounce glass cloth
F2.	Insulation cement
F3.	0.016 aluminum, plain, up through 12" pipe size; 0.016 aluminum, corrugated, for pipe sizes 14" and larger
F4.	15-mil PVC
F5.	Foil/reinforced/kraft jacket (vapor barrier)
F6.	1/4-inch weatherproof mastic with glass mesh reinforcement
F7.	1/16" vapor barrier mastic (0.05 perm rating) with glass mesh reinforcement
F8.	White all-service jacket (vapor barrier) with self-sealing lap, or taped joints
F9.	Two coats vinyl lacquer type white paint
F10.	Canvas jacketing of 6 oz. Minimum, 100% cotton woven fabric with 25/50 flame/smoke rating and equal to Fattal's Thermocanvas Recovery Jacket.

3.4 DUCT AND PLENUM INSULATION

A. Outside Air Ducts and Plenums in Concealed or Exposed Locations

1. Minimum R-value: 6.
2. Insulation Materials:
 - a. Rigid Fiberglass.
 - b. Cellular Glass
 - c. Phenolic
3. Application Type: D1.
4. Indoor Finish: F8.
5. Outdoor Finish: F1 and F2.

B. Supply Air Ducts and Plenums in Concealed Locations

1. Minimum R-value: 6.
2. Insulation Materials: Fiberglass Flexible Duct Wrap.

3. Application Type: D2.
4. Indoor Finish: F5.
5. Outdoor Finish: F1 and F2.

C. Supply Air Ducts and Plenums in Exposed Locations

1. Minimum R-value: 6.
2. Insulation Materials:
 - a. Rigid Fiberglass.
 - b. Cellular Glass
 - c. Phenolic
3. Application Type: D1.
4. Indoor Finish: F8.
5. Outdoor Finish: F1 and F2.

D. Relief, Return, Exhaust Ducts, and Plenums, and Air Devices in Concealed Locations Under an Exposed Roof.

1. Minimum R-value: 6.
2. Insulation Materials: Fiberglass Flexible Duct Wrap.
3. Application Type: D2.
4. Indoor Finish: F5.
5. Outdoor Finish: F1 and F2.

E. Relief, Return, Exhaust Ducts, and Plenums, and Air Devices in Exposed Locations Under an Exposed Roof.

1. Minimum R-value: 6.
2. Insulation Materials:
 - a. Rigid Fiberglass.
 - b. Cellular Glass
 - c. Phenolic
3. Application Type: D1.
4. Indoor Finish: F8.
5. Outdoor Finish: F1 and F2.

F. Ducts Installed on Roof and Exposed

- 1. Minimum R-value: 6.**
- 2. Insulation Materials:**
 - a. Rigid Fiberglass.**
 - b. Cellular Glass**
 - c. Phenolic**
- 3. Application Type: D1.**
- 4. Outdoor Finish: F3.**

G. Additional Duct Installations

1. Where Noted on the Plans, Relief Air Ducts, Recirculated Air Ducts, Mixed Air Ducts and Return Air Duct shall be Internally Lined.
2. Items Not Insulated:
 - a. Fibrous-glass ducts.
 - b. Metal ducts with duct liner of sufficient thickness to comply with energy code and ASHRAE/IESNA 90.1.
 - c. Factory-insulated flexible ducts.
 - d. Factory-insulated plenums and casings.
 - e. Flexible connectors.
 - f. Vibration-control devices.
 - g. Factory-insulated access panels and doors.
3. Where duct is exposed outdoors, protect the ductwork with one of the following:
 - a. F9 with color as chosen by Architect.
 - b. F3 where duct is externally insulated.

3.5 EQUIPMENT INSULATION

A. Equipment above ambient temperature, excluding factory insulated assemblies.

1. Equipment includes, unless otherwise indicated:
 - a. Hot Water:
 - 1) Water-to-Water Heat Exchangers.
 - 2) Expansion tanks.
 - 3) Air Separators.
 - 4) Pumps.
 - 5) Laundry Exhaust Assemblies.
 - 6) Humidifiers.
 - b. Steam:
 - 1) Blowdown Heat Recovery Unit.
 - 2) Blowdown Separator Flash Tanks.
 - 3) Boiler Breeching.
 - 4) Dearator.
 - 5) Flash Tanks.
 - 6) Steam Condensate Pumps.
 - 7) Steam-to-water Heat Exchanger.
 - 8) Steam Surge Tank.
 - c. Exhaust services:
 - 1) Medical gas equipment
2. Insulation Materials:
 - a. Laundry exhaust and humidifiers: High Temperature Fiberglass.
 - b. All others: Rigid Fiberglass.
3. Application Types:
 - a. Laundry exhaust and humidifiers: D1.

- b. All others: E1.
 - 4. Indoor Finish:
 - a. Laundry exhaust: F6 and F3.
 - b. Humidifiers: F10.
 - c. All others: F2 and F1.
 - 5. Outdoor Finish:
 - a. Laundry exhaust: F6 and F3.
 - b. Humidifiers: no application.
 - c. All others: F8 and F3.
- B. Equipment Below Ambient Temperature, excluding factory insulated assemblies.
- 1. Equipment includes, unless otherwise indicated:
 - a. Chilled and Condenser Water:
 - 1) Water-to-Water Heat Exchangers.
 - 2) Expansion tanks.
 - 3) Air Separators.
 - 4) Pumps.
 - 5) Chillers.
 - 2. Insulation Materials:
 - a. Chillers and pumps:
 - 1) Rigid Insulation.
 - 2) Foam Glass.
 - 3) Foam Plastic.
 - b. All others: Rigid Fiberglass.
 - 3. Application Type: E1.
 - 4. Indoor Finish:
 - a. Chillers and pumps (to be used with Insulation Material above, respectively):
 - 1) F2 and F1.
 - 2) F2 and F3.
 - 3) F9.
 - b. All others: F2 and F1.
 - 5. Outdoor Finish:
 - a. Chillers and pumps (to be used with Insulation Material above, respectively):
 - 1) F3.
 - b. All others: F8 and F3.

- C. Equipment insulation thicknesses and performance shall be based on Minimum Pipe Insulation Thickness schedule.

3.6 PIPING INSULATION

- A. Minimum insulation thicknesses are scheduled below.
- B. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- C. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following unless there is a potential for personnel injury.
 - 1. Drainage piping located in crawl spaces.
 - 2. Underground piping.
- D. Fitting and Valve Covers:
 - 1. Fitting covers shall be of preformed PVC for indoor service and metal for outdoor service.
 - 2. Insulation material shall be rigid and of the same or greater material type and thickness, density and conductivity as the adjoining pipe. Blanket inserts will not be allowed.
 - 3. Fittings on fiberglass pipe insulation shall be mitered insulation up to 2" diameter and molded fittings for 2½" and larger.
 - 4. Insulation on steam control valves, pressure reducing valves, calibrated balance valves and triple duty valves shall be provided with a manufactured removable insulation cover. Insulated covers shall be heavy canvas type, filled with insulating material and leather laces or straps to secure cover around valve or fitting.
- E. Chilled Water, Cooling Condensate, and Refrigerant Piping Indoors, Concealed or Exposed.
 - 1. Insulation Materials:
 - a. Cellular Glass, with mitered section fittings only.
 - b. Phenolic.
 - 2. Application Type: P2.
 - 3. Finish:
 - a. In equipment rooms: F8.
 - b. For Foam Glass only:
 - 1) No finish required for concealed installations above ceilings and within shafts.
 - 2) Only field applied ASJ shall be used.
- F. Cryogen piping, Indoor or Outdoor, Concealed or Exposed.
 - 1. Insulation Material: Flexible Elastomeric.
 - 2. Application Type: P2.
 - 3. Finish:
 - a. Indoor: F8.
 - b. Outdoor: F3.

G. Hot Water, Steam, and Steam Condensate, Indoors, Concealed or Exposed.

1. Insulation Material: Rigid Fiberglass.
2. Application Type: P2.
3. Finish: F8.

H. Chilled Water, Heating Hot Water, Cooling Condensate, Domestic Water, and Refrigerant Piping Outdoors, Concealed or Exposed. Note that piping in the airstream of AHUs is considered "outdoors" for this application.

1. Insulation Material: Cellular Glass, with mitered section fittings only and field applied ASJ.
2. Application Type: P2.
3. Finish: F8 and F3.
4. Provide heat trace under insulation for hydronic services subject to freezing.

I. Engine Generators

1. Between engine generator and muffler:
 - a. Insulation material: Calcium silicate.
 - b. Application type: P1.
 - c. Finish: F3.
2. Engine generator muffler:
 - a. Insulation material: Calcium silicate.
 - b. Application type: E1.
 - c. Finish: F3.

MINIMUM PIPE INSULATION THICKNESS							
FLUID TEMP. (°F)	Insulation Conductivity		Nominal Pipe or Tube Size (in.)				
	Conductivity Btu*in./(h*ft²*°F)	Mean Rating Temp. °F	<1	1 to <1-½"	1-½ to <4	4 to <8	≥8
Heating Systems (Steam, Steam Condensate, and Hot Water)							
>350 (Includes HPS)	0.32-0.34	250	2.5	3.0	3.0	4.0	4.0
251-350 (Includes HPR, BF)	0.29-0.32	200	1.5	2.5	3.0	3.0	3.0
201-250 (Includes LPS, LPR)	0.23	150	1.5	1.5	3.0	3.0	3.0
141-200 (Includes HS, HR)	0.23	125	1.5	1.5	2.0	2.0	2.0
105-140	0.23	100	1.5	1.5	2.0	2.0	2.0
Cooling Systems (Chilled Water, Brine, and Refrigerant)							
≥40	0.36	100	1.5	1.5	1.5	2.0	2.0
<40	0.36	100	1.5	1.5	1.5	2.0	2.0

Notes:

1. The above table is applicable to insulations in the conductivity ranges stated only. For insulation outside these conductivity ranges, the minimum thickness (T) shall be determined by the following calculation and the calculation submitted for acceptance:

$$T = r \{ (1 + t/r)^{K/k} - 1 \}$$

T = Thickness

r = Actual outside radius of pipe (in.)

t = Insulation thickness per the above table

K = Conductivity of alternate material

k = Upper value of the Conductivity Range per the above table

END OF SECTION

SECTION 230900

INSTRUMENTATION AND CONTROL FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes control equipment for HVAC systems and components, including control components for terminal heating and cooling units not supplied with factory-wired controls.
- B. Related Sections include the following:
 - 1. Division 23 Section "Meters and Gages for HVAC Piping" for measuring equipment that relates to this Section.
 - 2. Division 23 Section "Modular Central Station AHUs" for additional requirements.

1.2 DEFINITIONS

- A. Analog: A continuously varying signal value, such as current, flow, pressure, or temperature.
- B. BACnet Specific Definitions:
 - 1. BACnet: Building Automation Control Network Protocol, ASHRAE 135. A communications protocol allowing devices to communicate data over and services over a network.
 - 2. BACnet Interoperability Building Blocks (BIBBs): BIBB defines a small portion of BACnet functionality that is needed to perform a particular task. BIBBs are combined to build the BACnet functional requirements for a device.
 - 3. BACnet/IP: Defines and allows using a reserved UDP socket to transmit BACnet messages over IP networks. A BACnet/IP network is a collection of one or more IP subnetworks that share the same BACnet network number.
 - 4. BACnet Testing Laboratories (BTL): Organization responsible for testing products for compliance with ASHRAE 135, operated under direction of BACnet International.
 - 5. PICS (Protocol Implementation Conformance Statement): Written document that identifies the particular options specified by BACnet that are implemented in a device.
- C. Binary: Two-state signal where a high signal level represents "ON" or "OPEN" condition and a low signal level represents "OFF" or "CLOSED" condition. "Digital" is sometimes used interchangeably with "Binary" to indicate a two-state signal.
- D. Controller: Generic term for any standalone, microprocessor-based, digital controller residing on a network, used for local or global control. Three types of controllers are indicated: Network Controller, Programmable Application Controller, and Application-Specific Controller.
- E. Control System Integrator: An entity that assists in expansion of existing enterprise system and support of additional operator interfaces to I/O being added to existing enterprise system.
- F. DDC: Direct digital control.

- G. EPO: Emergency power off. An emergency push-button used to de-energize connected power equipment. EPOs are typically installed at room egresses and have a guard to prevent accidental activation.
- H. Gateway: Bidirectional protocol translator that connects control systems that use different communication protocols.
- I. I/O: System through which information is received and transmitted. I/O refers to analog input (AI), binary input (BI), analog output (AO) and binary output (BO). Analog signals are continuous and represent control influences such as flow, level, moisture, pressure, and temperature. Binary signals convert electronic signals to digital pulses (values) and generally represent two-position operating and alarm status. "Digital," (DI and (DO), is sometimes used interchangeably with "Binary," (BI) and (BO), respectively.
- J. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- K. MS/TP: Master-slave/token-passing, IEE 8802-3. Datalink protocol LAN option that uses twisted-pair wire for low-speed communication.
- L. MTBF: Mean time between failures.
- M. Network Controller: Digital controller, which supports a family of programmable application controllers and application-specific controllers, that communicate on peer-to-peer network for transmission of global data.
- N. Network Repeater: Device that receives data packet from one network and rebroadcasts it to another network. No routing information is added to protocol.
- O. PC: Personal computer.
- P. Peer to Peer: Networking architecture that treats all network stations as equal partners.
- Q. PID: Proportional plus integral plus derivative.
- R. RTD: Resistance temperature detector.
- S. UPS: Uninterruptible power supply.
- T. USB: Universal Serial Bus.

1.3 SYSTEM PERFORMANCE

- A. Comply with the following performance requirements:
 - 1. Graphic Display: Display graphic with minimum 20 dynamic points with current data within 10 seconds.
 - 2. Graphic Refresh: Update graphic with minimum 20 dynamic points with current data within 8 seconds.
 - 3. Object Command: Reaction time of less than two seconds between operator command of a binary object and device reaction.
 - 4. Object Scan: Transmit change of state and change of analog values to control units or workstation within six seconds.

5. Alarm Response Time: Annunciate alarm at workstation within 45 seconds. Multiple workstations must receive alarms within five seconds of each other.
6. Program Execution Frequency: Run capability of applications as often as five seconds, but selected consistent with mechanical process under control.
7. Performance: Programmable controllers shall execute DDC PID control loops, and scan and update process values and outputs at least once per second.
8. Reporting Accuracy and Stability of Control: Report values and maintain measured variables within tolerances as follows:
 - a. Water Temperature: Plus or minus 1 deg F.
 - b. Water Flow: Plus or minus 5 percent of full scale.
 - c. Water Pressure: Plus or minus 2 percent of full scale.
 - d. Space Temperature: Plus or minus 1 deg F.
 - e. Ducted Air Temperature: Plus or minus 1 deg F.
 - f. Outside Air Temperature: Plus or minus 2 deg F.
 - g. Dew Point Temperature: Plus or minus 3 deg F.
 - h. Temperature Differential: Plus or minus 0.25 deg F.
 - i. Relative Humidity: Plus or minus 5 percent.
 - j. Airflow (Pressurized Spaces): Plus or minus 3 percent of full scale.
 - k. Airflow (Measuring Stations): Plus or minus 5 percent of full scale.
 - l. Airflow (Terminal): Plus or minus 10 percent of full scale.
 - m. Air Pressure (Space): Plus or minus 0.01-inch wg.
 - n. Air Pressure (Ducts): Plus or minus 0.1-inch wg.
 - o. Carbon Monoxide: Plus or minus 5 percent of reading.
 - p. Carbon Dioxide: Plus or minus 50 ppm.
 - q. Electrical: Plus or minus 5 percent of reading.

1.4 ACTION SUBMITTALS

A. Multiple Submissions:

1. If multiple submissions are required to execute work within schedule, first submit a coordinated schedule clearly defining intent of multiple submissions. Include a proposed date of each submission with a detailed description of submittal content to be included in each submission.
2. Clearly identify each submittal requirement indicated and in which submission the information will be provided.
3. Include an updated schedule in each subsequent submission with changes highlighted to easily track the changes made to previous submitted schedule.

B. Product Data: Include manufacturer's technical literature for each control device. Indicate dimensions, capacities, performance characteristics, electrical characteristics, finishes for materials, and installation and startup instructions for each type of product indicated.

1. DDC System Hardware: Bill of materials of equipment indicating quantity, manufacturer, and model number. Include technical data for operator workstation equipment, interface equipment, control units, transducers/transmitters, sensors, actuators, valves, relays/switches, control panels, and operator interface equipment.
2. Control System Software: Include technical data for operating system software, operator interface, color graphics, and other third-party applications.
3. Controlled Systems: Instrumentation list with element name, type of device, manufacturer, model number, and product data. Include written description of sequence of operation including schematic diagram.

C. LEED Submittals:

1. Include supporting data showing energy, flow, gas, moisture, motion, pressure, and temperature instruments, where and if used in Project; and associated application for monitoring and control to satisfy requirements of Project LEED credits.
 - a. Indicate applicable locations and area coverage, control set points, description of control operation and other required information to satisfy submission requirements for award of LEED credit.
 2. Organize and identify standalone, supporting data for each LEED credit.
- D. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
1. Bill of materials of equipment indicating quantity, manufacturer, and model number.
 2. Schematic flow diagrams showing fans, pumps, coils, dampers, valves, and control devices.
 3. Wiring Diagrams: Power, signal, and control wiring.
 4. Details of control panel faces, including controls, instruments, and labeling.
 5. Written description of sequence of operation.
 6. Schedule of dampers including size, leakage, and flow characteristics.
 7. Schedule of valves including flow characteristics.
 8. DDC System Hardware:
 - a. Wiring diagrams for control units with termination numbers.
 - b. Schematic diagrams and floor plans for field sensors and control hardware.
 - c. Schematic diagrams for control, communication, and power wiring, showing trunk data conductors and wiring between operator workstation and control unit locations.
 9. Control System Software: List of color graphics indicating monitored systems, data (connected and calculated) point addresses, output schedule, and operator notations.
 10. Controlled Systems:
 - a. Schematic diagrams of each controlled system with control points labeled and control elements graphically shown, with wiring.
 - b. Scaled drawings showing mounting, routing, and wiring of elements including bases and special construction.
 - c. Written description of sequence of operation including schematic diagram.
 - d. Points list.
- E. Software and Firmware Operational Documentation: Include the following:
1. Software operating and upgrade manuals.
 2. Program Software Backup: On a magnetic media or compact disc, complete with data files.
 3. Device address list.
 4. Printout of software application and graphic screens.
 5. Software license required by and installed for DDC workstations and control systems.
- F. Software Upgrade Kit: For Owner to use in modifying software to suit future systems revisions or monitoring and control revisions.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and manufacturer.
- B. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For DDC system to include in emergency, operation and maintenance manuals.
 - 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Project Record Drawings of as-built versions of submittal Shop Drawings provided in electronic PDF format.
 - b. Testing and commissioning reports and checklists of completed final versions of reports, checklists, and trend logs.
 - c. As-built versions of submittal Product Data.
 - d. Names, addresses, e-mail addresses and 24-hour telephone numbers of Installer and service representatives for DDC system and products.
 - e. Operator's manual with procedures for operating control systems including logging on and off, handling alarms, producing point reports, trending data, overriding computer control and changing set points and variables.
 - f. Programming manuals with description of programming language and syntax, of statements for algorithms and calculations used, of point database creation and modification, of program creation and modification, and of editor use.
 - g. Engineering, installation, and maintenance manuals that explain how to:
 - 1) Design and install new points, panels, and other hardware.
 - 2) Perform preventive maintenance and calibration.
 - 3) Debug hardware problems.
 - 4) Repair or replace hardware.
 - h. Documentation of all programs created using custom programming language including set points, tuning parameters, and object database.
 - i. Backup copy of graphic files, programs, and database on electronic media such as DVDs.
 - j. List of recommended spare parts with part numbers and suppliers.
 - k. Complete original-issue documentation, installation, and maintenance information for furnished third-party hardware including computer equipment and sensors.
 - l. Complete original-issue copies of furnished software, including operating systems, custom programming language, operator workstation software, and graphics software.
 - m. Licenses, guarantees, and warranty documents.
 - n. Recommended preventive maintenance procedures for system components, including schedule of tasks such as inspection, cleaning, and calibration; time between tasks; and task descriptions.
 - o. Owner training materials.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Automatic control system manufacturer's authorized representative who is trained and approved for installation of system components required for this Project.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Factory-Mounted Components: Where control devices specified in this Section are indicated to be factory mounted on equipment, arrange for shipping of control devices to equipment manufacturer.
- B. System Software: Update to latest version of software at Project completion.

1.9 COORDINATION

- A. Coordinate location of thermostats, humidistats, and other exposed control sensors with plans and room details before installation.
- B. Coordinate equipment with Division 28 Section "Access Control" to achieve compatibility with equipment that interfaces with that system.
- C. Coordinate equipment with Division 26 Section "Network Lighting Controls" to achieve compatibility with equipment that interfaces with that system.
- D. Coordinate equipment with Division 28 Section "Fire Detection and Alarm" to achieve compatibility with equipment that interfaces with that system.
- E. Coordinate supply of conditioned electrical branch circuits for control units and operator workstation.
- F. Coordinate equipment with Division 26 Section "Electrical Power Monitoring and Control" to achieve compatibility of communication interfaces.
- G. Coordinate equipment with Division 26 Section "Panelboards" to achieve compatibility with starter coils and annunciation devices.
- H. Coordinate equipment with Division 26 Section "Motor-Control Centers" to achieve compatibility with motor starters and annunciation devices.
- I. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03 Section "Cast-in-Place Concrete."

1.10 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Replacement Materials: One replacement diaphragm or relay mechanism for each unique valve motor, controller, and thermostat.
2. Maintenance Materials: One thermostat adjusting key(s) per floor or 50,000 sqft of total conditioned space, whichever is greater.
3. Maintenance Materials: One pneumatic thermostat test kit.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Andover.

2.2 GENERAL REQUIREMENTS

- A. Provide labor, materials, equipment, tools and services, and perform operations required for, and reasonably incidental to, the provision, installation and extension of the existing building automation and Control System (FMS) including all related systems and accessories.
- B. Control system shall consist of sensors, indicators, actuators, final control elements, interface equipment, other apparatus, accessories, and software connected to distributed controllers operating in multiuser, multitasking environment on token-passing network and programmed to control mechanical systems.
- C. System points lists included in the Documents are intended to show the desired alarm, monitoring and control points. Add any control points necessary and as required to accomplish the sequence of operations.
- D. The FMS/DDC shall use BACnet/IP protocol capable of communicating over an Ethernet system. It shall be capable of residing on the corporate enterprise WAN/LAN by having an assigned IP address.
- E. All controllers, whether local field installed or packaged with equipment, shall utilize the BACnet MSTP protocol or include an interpreter to communicate the same to the FMS network.
- F. Provide a UPS with minimum 15 minutes backup for:
 1. All building controllers where the loss of memory or program content would result in the event of power loss.
 2. Supply and return AHU damper actuators.
 3. All smoke control components.
- G. For AHUs, each individual operating state shall have an individual PID control loop for that state.
- H. Controls color graphic displays. Match existing functionality and the following:
 1. Color graphic floor plan displays, and system schematics for each piece of mechanical equipment (including air handling units, variable air volume boxes, fan coils, unit ventilators, cabinet heaters, exhaust fans, fin tube radiation, chilled water systems, hot water boiler systems, and so forth) shall be provided, as specified in the point lists of the Documents, in order to optimize system performance analysis, speed alarm recognition, and simplify user interaction. Configure the color graphics and plot all associated

- control/monitoring points on the screen. Copies of all color graphics screens shall be provided as color printouts to the engineer for approval.
2. System Selection/Penetration: The operator interface shall allow users to access the various system schematics and floor plans via a graphical penetration scheme, menu selection, or test-based commands. Floor plans shall display room numbers and each zone shall be color-coded. The operator shall be able to point and click on a room or zone of rooms (in the case of an air handler that serves more than one zone). The room or zone will display an animated flow diagram of the mechanical equipment that serves that zone, with all control and monitoring points associated with that piece of equipment, including setpoints. Setpoints shall be overridden or modified from this screen.
 3. Dynamic Animated Data Displays: Dynamic temperature values, humidity values, flow values, and status indication shall be shown in their actual respective locations, and shall automatically update to represent current conditions without operator intervention. Damper and valve positions, air and water flow shall be animated and shall represent actual, current conditions.
 4. System Performance Analysis Screens: System performance analysis screens shall be provided for the major mechanical systems (such as air handlers, chillers, boilers, and so forth.). For each of these systems, the screen shall be split into quadrants, simultaneously displaying the following data:
 - a. Quadrant 1. – Dynamic animated flow diagrams.
 - b. Quadrant 2. – All analog values associated with the mechanical system shall be graphed on an X-Y axis graph. Five-minute samples for the last twenty-four hour period shall plotted. Scaling shall be automatic.
 - c. Quadrant 3. – Text sequence of operations from engineering as-built submittals.
 - d. Quadrant 4. – Space temperature summaries from each zone being served by mechanical system.
 5. Windowing: The windowing environment of the PC Operator Workstation shall allow the user to simultaneously view several graphics at the same time to analyze total building operation, or to allow the display of a graphic associated with an alarm to be viewed without interrupting Work in progress.
 6. Alarm Annunciation: Any point in a state of alarm shall change the color of its symbol to red until it is no longer in alarm.
 7. AHU Summary Graphic Screen: An AHU summary graphic screen shall be provided for economizer and non economizer AHU's as follows:
 - a. AHU's without economizer cycles shall include a summary graphic screen including the following information:
 - 1) Air Handling Unit
 - a) AHU number
 - b) Supply air temperature
 - c) Supply air temperature setpoint
 - d) Supply air cfm setpoint
 - e) Total terminal box airflow
 - f) Chilled water valve position in %
 - g) Return air temperature
 - h) Return air humidity in %
 - i) Outside air temperature
 - j) Outside air humidity
 - 2) Chilled Water Secondary System
 - a) Chilled water supply temperature

- b) Chilled water return temperature
 - c) Chilled water flow in gpm
 - d) Building load in tons
 - e) Chilled water system differential pressure
 - f) Chilled water system differential pressure setpoint
 - g) Each chilled water pump speed in %
 - 3) Chillers
 - a) Each chillers chilled water supply temperature.
- b. AHU's with economizer cycles shall include a summary graphic screen including the following information:
 - 1) Air Handling Unit
 - a) AHU number
 - b) Supply air temperature
 - c) Supply air temperature setpoint
 - d) Return air temperature
 - e) Outside air temperature
 - f) Outside air humidity
 - g) Mixed air temperature
 - 2) Outside Air
 - a) Outside air cfm setpoint
 - b) Outside air cfm measured
 - c) Return fan speed %
 - d) Supply Fan speed %
 - e) Supply static pressure setpoint
 - f) Supply static pressure actual
 - 3) Dampers
 - a) Economizer damper open position %
- I. Systems integration/FMS specific requirements
 - 1. Open Systems Integration: VFD Integrator Interface
 - a. The FMS shall include appropriate hardware equipment and software to allow two-way data communications between the FMS and the VFD manufacturer's control panel.
 - b. Coordinate with the VFD manufacturer to provide a functional data communications connection.
 - c. All data supported by the VFD communication protocol shall be mapped into the supervisory DDC controller's database and shall be displayed on data screens at the Operator Workstation and shall be transparent to the operator.
 - d. Furnish a BACnet communications interface as required by the VFD manufacturer.
 - e. Provide all communications and power wiring and gateway panel installation for the DDC system. The VFD manufacturer shall provide all hardware for connection of the manufacturer's processor.
 - f. Provide all hardware and software required for the VFD manufacturer's gateway interface.

2. Open Systems Integration: Boiler Integrator Interface

- a. The FMS shall include appropriate hardware equipment and software to allow two-way data communications between the FMS and the boiler manufacturer's Master Boiler Controller Control Panel.
- b. Coordinate with the boiler manufacturer to provide a functional data communications connection.
- c. Furnish BACnet communications interface.
- d. Provide all communications and power wiring and gateway panel installation for the DDC system. The boiler manufacturer shall provide all hardware for connection of the manufacturer's processor.
- e. Provide all hardware and software required for the boiler manufacturer's gateway interface.

J. Alarm management

1. Alarm management shall be provided to monitor, buffer, and direct alarm reports to operator devices and memory files. Each DDC panel shall perform distributed, independent alarm analysis and filtering to minimize operator interruptions due to non-critical alarms, to minimize network traffic, and to prevent alarms from being lost. At no time shall the DDC panel's ability to report alarms be affected by either operator activity at a PC Workstation or local I/O device, or communications with other panels on the network.
2. Point Change Report Description: All alarm or point change reports shall include the point's English language description, and the time and date of occurrence.
3. Prioritization:
 - a. Set up all system analog points with high and low alarm limits. All digital system points shall be associated with a status feedback point and all exceptions shall be reported as alarms. The user shall be able to define the specific system reaction for each point. Alarms shall be prioritized and filtered to minimize nuisance reporting and to speed operator response to critical alarms.
 - b. The user shall also be able to define under which conditions point changes need to be acknowledged by an operator, and/or sent to follow-up files for retrieval and analysis at a later date.
4. Critical and Non-Critical Alarm Routing:
 - a. Critical alarms shall be defined as chiller, boiler, generator, critical space temperature or humidity, and kilowatt demand approaching threshold. Critical alarms shall be displayed at the workstation, printed at the alarm printer, and alpha paged to the on-duty maintenance person over the Owners alphanumeric paging system. Alpha pages shall provide sufficient information to identify the equipment and the point in alarm and the time and date of occurrence.
 - b. All other alarms shall be considered non-critical and shall be displayed and acknowledged before being sent to the alarm log.
5. Report Routing: Alarm reports, messages, and files will be directed to a user-defined list of operator devices, or PCs used for archiving alarm information. Alarms shall also be automatically directed to a default device in the event a primary device is found to be off-line.
6. Alarm Messages:
 - a. In addition to the point's descriptor and the time and date, the user shall be able to print, display, or store a 65-character alarm message to more fully describe the alarm condition or direct operator response.

- b. Each stand-alone DDC panel shall be capable of storing a minimum library of 250 Alarm Messages. Each message may be assignable to any number of points in the panel.
- 7. Auto-Dial Alarm Management: In Dial-up applications, only critical alarms shall initiate a call to a remote operator device. In all other cases, call activity shall be minimized by time-stamping and saving reports until an operator scheduled time, a manual request is made, or until the buffer space is full. The alarm buffer must store a minimum of 50 alarms.

2.3 DDC EQUIPMENT

- A. Control Units: Modular, comprising processor board with programmable, nonvolatile, random-access memory; local operator access and display panel; integral interface equipment; and backup power source.
 - 1. Units monitor or control each I/O point; process information; execute commands from other control units, devices, and operator stations; and download from or upload to operator workstation or diagnostic terminal unit.
 - 2. Stand-alone mode control functions operate regardless of network status. Functions include the following:
 - a. Global communications.
 - b. Discrete/digital, analog, and pulse I/O.
 - c. Monitoring, controlling, or addressing data points.
 - d. Software applications, scheduling, and alarm processing.
 - e. Testing and developing control algorithms without disrupting field hardware and controlled environment.
 - 3. Standard Application Programs:
 - a. Electric Control Programs: Demand limiting, duty cycling, automatic time scheduling, start/stop time optimization, night setback/setup, on-off control with differential sequencing, staggered start, antishort cycling, PID control, DDC with fine tuning, and trend logging.
 - b. HVAC Control Programs: Optimal run time, supply-air reset, and enthalpy switchover.
 - c. Chiller Control Programs: Control function of condenser-water reset, chilled-water reset, and equipment sequencing.
 - d. Programming Application Features: Include trend point; alarm processing and messaging; weekly, monthly, and annual scheduling; energy calculations; run-time totalization; and security access.
 - e. Remote communications.
 - f. Maintenance management.
 - g. Units of Measure: Inch-pound and SI (metric).
 - 4. Local operator interface provides for download from or upload to operator workstation or diagnostic terminal unit.
- B. Local Control Units: Modular, comprising processor board with electronically programmable, nonvolatile, read-only memory; and backup power source.
 - 1. Units monitor or control each I/O point, process information, and download from or upload to operator workstation or diagnostic terminal unit.

2. Stand-alone mode control functions operate regardless of network status. Functions include the following:
 - a. Global communications.
 - b. Discrete/digital, analog, and pulse I/O.
 - c. Monitoring, controlling, or addressing data points.
 3. Local operator interface provides for download from or upload to operator workstation or diagnostic terminal unit.
- C. I/O Interface: Hardwired inputs and outputs may tie into system through controllers. Protect points so that shorting will cause no damage to controllers.
1. Binary Inputs: Allow monitoring of on-off signals without external power.
 2. Pulse Accumulation Inputs: Accept up to 10 pulses per second.
 3. Analog Inputs: Allow monitoring of low-voltage (0- to 10-V dc), current (4 to 20 mA), or resistance signals.
 4. Binary Outputs: Provide on-off or pulsed low-voltage signal, selectable for normally open or normally closed operation with three-position (on-off-auto) override switches and status lights.
 5. Analog Outputs: Provide modulating signal, either low voltage (0- to 10-V dc) or current (4 to 20 mA) with status lights, two-position (auto-manual) switch, and manually adjustable potentiometer.
 6. Tri-State Outputs: Provide two coordinated binary outputs for control of three-point, floating-type electronic actuators.
 7. Universal I/Os: Provide software selectable binary or analog outputs.
- D. Power Supplies: Transformers with Class 2 current-limiting type or overcurrent protection; limit connected loads to 80 percent of rated capacity. DC power supply shall match output current and voltage requirements and be full-wave rectifier type with the following:
1. Output ripple of 5.0 mV maximum peak to peak.
 2. Combined 1 percent line and load regulation with 100-mic. second response time for 50 percent load changes.
 3. Built-in overvoltage and overcurrent protection and be able to withstand 150 percent overload for at least 3 seconds without failure.
- E. Power Line Filtering: Internal or external transient voltage and surge suppression for workstations or controllers with the following:
1. Minimum dielectric strength of 1000 V.
 2. Maximum response time of 10 nanoseconds.
 3. Minimum transverse-mode noise attenuation of 65 dB.
 4. Minimum common-mode noise attenuation of 150 dB at 40 to 100 Hz.

2.4 UNITARY CONTROLLERS

- A. Unitized, capable of stand-alone operation with sufficient memory to support its operating system, database, and programming requirements, and with sufficient I/O capacity for the application.
1. Configuration: Local keypad and display; diagnostic LEDs for power, communication, and processor; wiring termination to terminal strip or card connected with ribbon cable; memory with bios; and 72-hour battery backup.

2. Operating System: Manage I/O communication to allow distributed controllers to share real and virtual object information and allow central monitoring and alarms. Perform scheduling with real-time clock. Perform automatic system diagnostics; monitor system and report failures.
3. Enclosures:
 - a. For Conditioned Space: Dustproof rated for operation at 32 to 120 deg F.
 - b. For Outdoor and Non-conditioned Space: Waterproof rated for operation at -10 to 150 deg F.

2.5 ALARM PANELS

- A. Unitized cabinet with suitable brackets for wall or floor mounting. Fabricate of 0.06-inch-thick, furniture-quality steel or extruded-aluminum alloy, totally enclosed, with hinged doors and keyed lock and with manufacturer's standard shop-painted finish. Provide common keying for all panels.
- B. Indicating light for each alarm point, single horn, acknowledge switch, and test switch, mounted on hinged cover.
 1. Alarm Condition: Indicating light flashes and horn sounds.
 2. Acknowledge Switch: Horn is silent and indicating light is steady.
 3. Second Alarm: Horn sounds and indicating light is steady.
 4. Alarm Condition Cleared: System is reset and indicating light is extinguished.
 5. Contacts in alarm panel allow remote monitoring by independent alarm company.

2.6 ANALOG CONTROLLERS

- A. Step Controllers: 6- or 10-stage type, with heavy-duty switching rated to handle loads and operated by electric motor.
- B. Electric, Outdoor-Reset Controllers: Remote-bulb or bimetal rod-and-tube type, proportioning action with adjustable throttling range, adjustable set point, scale range minus 10 to plus 70 deg F, and single- or double-pole contacts.
- C. Electronic Controllers: Wheatstone-bridge-amplifier type, in steel enclosure with provision for remote-resistance readjustment. Identify adjustments on controllers, including proportional band and authority.
 1. Single controllers can be integral with control motor if provided with accessible control readjustment potentiometer.
- D. Fan-Speed Controllers: Solid-state model providing field-adjustable proportional control of motor speed from maximum to minimum of 55 percent and on-off action below minimum fan speed. Controller shall briefly apply full voltage, when motor is started, to rapidly bring motor up to minimum speed. Equip with filtered circuit to eliminate radio interference.
- E. Receiver Controllers: Single- or multiple-input models with control-point adjustment, direct or reverse acting with mechanical set-point adjustment with locking device, proportional band adjustment, authority adjustment, and proportional control mode.
 1. Remote-control-point adjustment shall be plus or minus 20 percent of sensor span, input signal of 3 to 13 psig.

2. Proportional band shall extend from 2 to 20 percent for 5 psig.
3. Authority shall be 20 to 200 percent.
4. Air-supply pressure of 18 psig, input signal of 3 to 15 psig, and output signal of zero to supply pressure.
5. Gauges: 1-1/2 inches in diameter, 2.5 percent wide-scale accuracy, and range to match transmitter input or output pressure.

2.7 INPUT DEVICES

- A. General Requirements: Installation, testing, and calibration of all sensors, transmitters, and other input devices shall be provided to meet the system requirements.

- B. Temperature Sensors

1. General Requirements:

- a. Sensors and transmitters shall be provided, as outlined in the input/output summary and sequence of operations.
- b. The temperature sensor shall be of the resistance type, and shall be either two-wire 1000 ohm nickel RTD, or two-wire 1000 ohm platinum RTD.
- c. The following point types (and the accuracy of each) are required, and their associated accuracy values include errors associated with the sensor, lead wire, and A to D conversion:

- 1) 0.5 deg F:

- a) Chilled Water.
- b) Room Temperature.
- c) Duct Temperature.

- 2) 0.75 deg F: All others

2. Room Temperature Sensors

- a. Room sensors shall be constructed for either surface or wallbox mounting.
- b. Room sensors shall have the following options:

- 1) Setpoint reset slide switch providing a +5 degree (adjustable) range.
- 2) Individual heating/cooling setpoint slide switches.

3. Room Temperature Sensors with Integral Display:

- a. Room sensors shall be constructed for either surface or wallbox mounting.
- b. Room sensors shall have an integral LCD display and four button keypad with the following capabilities:

- 1) Display room temperature.
- 2) Display and adjust room comfort setpoint.
- 3) Display and adjust fan operation status.
- 4) Timed override request push button with LED status for activation of after-hours operation.
- 5) Display controller mode.
- 6) Password selectable adjustment of setpoint and override modes.

4. Thermowells:

- a. When thermowells are required, the sensor and well shall be supplied as a complete assembly, including wellhead and Greenfield fitting.
- b. Thermowells shall be pressure rated and constructed in accordance with the system working pressure.
- c. Thermowells and sensors shall be mounted in a threadolet or 1/2" NPT saddle and allow easy access to the sensor for repair or replacement.
- d. Thermowells shall be constructed of 316 stainless steel.

5. Outside Air Sensors:

- a. Outside air sensors shall be designed to withstand the environmental conditions to which they will be exposed. They shall also be provided with a solar shield.
- b. Sensors shall be shielded by a perforated plate that surrounds the sensor element.
- c. Temperature transmitters shall be of NEMA 3R construction and rated for ambient temperatures.

6. Duct Mount Sensors:

- a. Duct mount sensors shall mount in an electrical box through a hole in the duct, and be positioned so as to be easily accessible for repair or replacement.
- b. Duct sensors shall be insertion type and constructed as a complete assembly, including lock nut and mounting plate.
- c. For outdoor air duct applications, a weatherproof mounting box with weatherproof cover and gasket shall be used.

7. Averaging Sensors:

- a. Similar to JCI TE6300.
- b. For ductwork greater in any dimension than 48 inches, inside air handling units, and/or where air temperature stratification exists, an averaging sensor with multiple sensing points shall be used.
- c. A 20 foot averaging continuous sensor shall be serpentine across the cross section with minimum 1 foot of length for every square foot of cross sectional area. Capillary supports at the sides of the duct shall be provided to support the sensing string.

C. Current Sensing Relays

1. Current sensor shall induce power from the monitored load and shall have an adjustable operating range from 2.5 - 135 A.
2. Visual indicators (LED's) shall indicate output status and sensor power.
3. Adjustable trip set point to +/- 1%.
4. Current sensor output shall be normally open, solid state, 0.1A @ 30 VAC/DC.

D. Humidity Sensors:

1. The sensor shall be a solid state type, relative humidity sensor of the Bulk Polymer Design. The sensor element shall resist service contamination.
2. The humidity transmitter shall be equipped with non-interactive span and zero adjustments, a 2-wire isolated loop powered, 4-20 mA, 0-100% linear proportional output.
3. The humidity transmitter shall meet the following overall accuracy, including lead loss and Analog to Digital conversion.

- a. Indoor locations and sensors mounted in air handling units or ducts; +/- 3%.

- b. Outdoor locations: Humidity Sensor shall be HyCal +/- 2 %.
 - 4. Outside air relative humidity sensors shall include a rain proof, perforated cover. The transmitter shall be include in a NEMA 3R enclosure with sealtite fittings and stainless steel bushings.
 - 5. A single point humidity calibrator shall be provided, if required, for field calibration. Transmitters shall be shipped factory pre-calibrated.
 - 6. Duct type sensing probes shall be constructed of 304 stainless steel, and shall be equipped with a neoprene grommet, bushings, and a mounting bracket.
- E. Differential Pressure Transmitters:
- 1. Air and Water Pressure Transmitter Requirements:
 - a. Pressure transmitters shall be constructed to withstand 100% pressure over-range without damage, and to hold calibrated accuracy when subject to a momentary 40% over-range input.
 - b. Differential pressure transducers shall be piped to permit equalizing pressure prior to disconnecting.
 - c. Differential pressure sensors used to control equipment such as fans and pumps, shall be connected directly to the same controller that controls the equipment to insure the continued proper operation of the controlled equipment without dependence on the control network.
- F. Flow measuring devices:
- 1. Air Flow Measuring:
 - a. General:
 - 1) Airflow measuring sensors shall be installed at fan inlet whenever possible and shall be capable of continuously measuring the air handling capacity (air volume) of the respective centrifugal, plug, or vane-axial fan(s).
 - b. Manufacturers:
 - 1) Paragon Controls Incorporated (PCI), MicroTrans EQ.
 - c. Fan Inlet Piezometer Rings
 - 1) Factory tap fan inlet with sensor ports.
 - 2) Accuracy: +/-3% of Full Scale.
 - d. Duct mounted:
 - 1) Manufacturers:
 - a) Ebtron.
 - 2) Description: Thermal dispersion type. Units shall be provided complete with differential pressure transducers, temperature compensation, square root extraction. Unit shall perform all internal calculations to output to the FMS the CFM readings.
 - 3) Location: Provide straight duct before and after device according to the sensor manufacturer's recommendations. Provide access door in ductwork adjacent to sensors.

- 4) Accuracy: Sensor accuracy shall be $\pm 2\%$ of the airflow reading over the entire range of airflow measured.

e. Transmitter / Transducer

- 1) Each sensor shall be provided complete with transmitter.
- 2) Manufacturers:
 - a) Paragon.
- 3) Full Scale Accuracy:
 - a) Accuracy: $\pm 0.25\%$ of Full Scale.
 - b) Terminal Point Non-linearity: $\pm 0.2\%$.
 - c) Hysteresis: $\pm 0.2\%$.
 - d) Non-repeatability: $\pm 0.3\%$.
 - e) Temperature Effect: $\pm 0.15\%$ Full Scale / $^{\circ}\text{F}$.
- 4) The transmitter-controller shall be capable of receiving flow signals (total and static pressure) from an airflow station or probe array and produce an output linear and scaled for air volume, velocity, differential pressure, etc. The internal P, I, three-mode controller shall be capable of controlling at a user selectable internal or external setpoint, and output a 0-5VDC, 0-10VDC, or 4-20mA DC control signal.
- 5) The transmitter-controller shall contain an integral multi-line digital display for use during the configuration and calibration process, and to display one transmitter output plus controller setpoint during normal operating mode. All transmitter configuration, parameter setting, zero and span calibration, plus display formatting and scaling will be performed digitally in the on-board microprocessor via input pushbuttons.
- 6) The transmitter-controller will be available in multiple natural spans covering the range of 0.05" w.c. to 10.0" w.c. The transmitter-controller shall be furnished with a transducer automatic zeroing circuit, and be capable of maintaining linear output signals on applications requiring 10 to 1 velocity or pressure turndown.
- 7) The transmitter-controller shall be capable of having its operating span electronically selected without having to perform recalibration involving an external pressure source. The transmitter-controller will provide the means of managing a system for automatic high pressure purge of the airflow station or probe array, with user selectable purge frequency and duration, while maintaining the last transmitter output during the purge cycle. Using a second transmitter as an input, the internal microprocessor can perform a summed flow, flow differential, low signal select, high signal select or percent deviation calculation, with the result being displayed and provided as an analog output signal.

2. Water Flow Measuring:

a. General:

- 1) Sensors shall operate in line pressures up to 400 psi and liquid temperatures up to 220°F .
- 2) A certificate of calibration shall be provided with each flow meter.
- 3) Each flow meter shall be covered by the manufacturer's two-year warranty.

- b. Turbine:
 - 1) Manufacturer:
 - a) Onicon, F-1100 or F-1200 Series.
 - 2) Accuracy:
 - a) Less than 2 ft/sec: $\pm 0.02\%$.
 - b) 2 to 30 ft/sec: $\pm 1\%$.
 - 3) Provide complete sensor assembly with all installation hardware necessary to enable insertion and removal of the meter without system shutdown.
 - 4) Materials of construction for wetted metal components shall be 316 SS.
 - 5) Each flow meter shall be individually wet-calibrated against a primary volumetric standard that is accurate to within 0.1%.
 - 6) Output signals shall be completely isolated and shall consist of the following:
 - a) (1) analog output; 4-20mA, 0-10V, or 0-5V jumper selectable
 - b) (1) scalable dry contact output for totalization
 - c) (1) high resolution frequency output for use with peripheral devices such as an ONICON display module or Btu meter.
- c. Transmitter / Transducer
 - 1) Each sensor shall be provided complete with transmitter.
 - 2) Water meter: The analog transmitter shall be Data Industrial Model 310-00, or equivalent.
 - 3) The analog flow transmitter shall be a loop powered device capable of transmitting a linear 4 - 20 mA signal proportional to frequency. The unit shall be microprocessor controlled with no switches or potentiometers to set.
 - 4) The transmitter shall meet ISA Class L, H and U non-isolated requirements. All circuitry shall be encapsulated in a low profile epoxy body to meet MIL spec M.1- 146058C type AR, for humidity, moisture and fungus resistance. Operating range shall be 35°F to 150°F.
 - 5) All programming, including flow sensor selection, pipe size, flow range setting, response time and filtering shall be set digitally via a computer using Windows-based software with programming kit (disk and cable). The transmitter shall be easily programmed in the field using a standard computer.
 - 6) The transmitter shall have a ground lug to maximize EMI protection when necessary. The transmitter shall be mounted directly near the insertion flow sensor on a DIN Rail, as a panel mount or in a weather proof or NEMA 4X enclosure.

G. Power Monitoring Devices:

- 1. Current Measurement (Amps):
 - a. Current measurement shall be by a combination current transformer and a current transducer. The current transformer shall be sized to reduce the full amperage of the monitored circuit to a maximum 5 Amp signal, which will be converted to a 4-20 mA DDC compatible signal for use by the Facility Management System.
 - b. Current Transformer – A split core current transformer shall be provided to monitor motor amps.

- 1) Operating frequency – 50 - 400 Hz.
- 2) Insulation – 0.6 Kv class 10Kv BIL.
- 3) UL recognized.
- 4) Five amp secondary.
- 5) Select current ration as appropriate for application.

c. Current Transducer – A current to voltage or current to mA transducer shall be provided. The current transducer shall include:

- 1) 6X input over amp rating for AC inrushes of up to 120 amps.
- 2) Manufactured to UL 1244.
- 3) Accuracy: +.5%, Ripple +1%.
- 4) Minimum load resistance 30kOhm.
- 5) Input 0-20 Amps.
- 6) Output 4-20 mA.
- 7) Transducer shall be powered by a 24VDC regulated power supply (24 VDC +5%).

H. Smoke Detectors:

1. Ionization type air duct detectors shall be furnished as specified elsewhere in Division 26 for installation under Division 23. All wiring for air duct detectors shall be as specified in Division 28 - Fire Alarm System.

I. Status and Safety Switches:

1. General Requirements:

- a. Switches shall be provided to monitor equipment status, safety conditions, and generate alarms at the FMS when a failure or abnormal condition occurs. Safety switches shall be provided with two sets of contacts and shall be interlock wired to shut down respective equipment.

2. Current Sensing Switches:

- a. The current sensing switch shall be self-powered with solid state circuitry and a dry contact output. It shall consist of a current transformer, a solid state current sensing circuit, adjustable trip point, solid state switch, SPDT relay, and an LED indicating the on or off status. A conductor of the load shall be passed through the window of the device. It shall accept over-current up to twice its trip point range.
- b. Current sensing switches shall be used for run status for fans, pumps, and other miscellaneous motor loads.
- c. Current sensing switches shall be calibrated to show a positive run status only when the motor is operating under load. A motor running with a broken belt or coupling shall indicate a negative run status.

3. Air Filter Status Switches:

- a. Differential pressure switches used to monitor air filter status shall be of the automatic reset type with SPDT contacts rated for 2 amps at 120VAC.
- b. A complete installation kit shall be provided, including: static pressure tops, tubing, fittings, and air filters.
- c. Provide appropriate scale range and differential adjustment for intended service.

4. Air Flow Switches:

- a. Differential pressure flow switches shall be bellows actuated mercury switches or snap acting micro-switches with appropriate scale range and differential adjustment for intended service.
- 5. Air Pressure Safety Switches:
 - a. Air pressure safety switches shall be of the manual reset type with SPDT contacts rated for 2 amps at 120VAC.
 - b. Pressure range shall be adjustable with appropriate scale range and differential adjustment for intended service.
- 6. Water Flow Switches: Equal to the Johnson Controls P74.
- 7. Low Temperature Limit Switches: Equal to Johnson Controls A70.
 - a. The low temperature limit switch shall be of the manual reset type with Double Pole/Single Throw snap acting contacts rated for 16 amps at 120VAC.
 - b. The sensing element shall be one foot long for each square foot of coil area and be a minimum of 15 feet in length and shall react to the coldest 18-inch section. Element shall be mounted horizontally across duct in accordance with manufacturers recommended installation procedures.
 - c. For large duct areas where the sensing element does not provide full coverage of the air stream, additional switches shall be provided as required to provide full protection of the air stream.

J. EPO Switches

- 1. General Description: All products listed shall meet the following requirements:
 - a. Operators shall be heavy duty type and comply with UL Type 13/NEMA Type 13 and UL Type 6/NEMA Type 6.
 - b. Contact blocks shall be rated 10 amperes continuous.
- 2. EPO Design:
 - a. Mushroom type: Flush mounted, two position, maintained push - maintained pull mushroom head type push button operator with 2.25 inch diameter mushroom top, red, with one normally open and one normally closed (1NO - 1NC) contact. Provide with aluminum extended mushroom guard.

2.8 OUTPUT DEVICES

A. Actuators:

- 1. General Requirements:
 - a. Damper and valve actuators shall be electronic, as specified in the System Description section.
- 2. Electronic Damper Actuators:
 - a. Electronic damper actuators shall be direct shaft mount as manufactured by Belimo.
 - b. Modulating and two-position actuators shall be provided as required by the sequence of operations. Damper sections shall be sized based on actuator

manufacturer's recommendations for face velocity, differential pressure and damper type. The actuator mounting arrangement and spring return feature shall permit normally open or normally closed positions of the dampers, as required. All actuators (except terminal units) shall be furnished with mechanical spring return unless otherwise specified in the sequences of operations. All actuators shall have external adjustable stops to limit the travel in either direction, or a gear release to allow manual positioning.

- c. Modulating actuators shall accept 24 VAC or VDC power supply, consume no more than 15 VA, and be UL listed. The control signal shall be 2-10 VDC or 4-20 mA, proportional control.
- d. Two-position or open/closed actuators shall accept 24 or 120 VAC power supply and be UL listed. Isolation, smoke, exhaust fan, and other dampers, as specified in the sequence of operations, shall be furnished with adjustable end switches to indicate open/closed position or be hard wired to start/stop associated fan. Two-position actuators, as specified in sequences of operations as "quick acting," shall move full stroke within 20 seconds. All smoke damper actuators shall be quick acting.

3. Electronic Valve Actuators:

- a. Electronic valve actuators shall be manufactured by the valve manufacturer or Belimo Air Controls. Each actuator shall have current limiting circuitry incorporated in its design to prevent damage to the actuator.
- b. Modulating and two-position actuators shall be provided as required by the sequence of operations. Actuators shall provide the minimum torque required for proper valve close off against the system pressure for the required application. The valve actuator shall be sized based on valve manufacturer's recommendations for flow and pressure differential. All actuators shall fail in the last position unless specified with mechanical spring return in the sequence of operations. The spring return feature shall permit normally open or normally closed positions of the valves, as required. All direct shaft mount rotational actuators shall have external adjustable stops to limit the travel in either direction.
- c. Modulating Actuators shall accept 24 VAC or VDC and 120 VAC power supply and be UL listed. The control signal shall be 2-10 VDC or 4-20 mA, proportional control.
- d. Two-position or open/closed actuators shall accept 24 or 120 VAC power supply and be UL listed. Butterfly isolation and other valves, as specified in the sequence of operations, shall be furnished with adjustable end switches to indicate open/closed position or be hard wired to start/stop the associated pump or chiller.

B. Control Dampers:

- 1. Furnish all automatic dampers that are not furnished with air handling units. Coordinate exact damper requirements with the air handling unit manufacturer. All automatic dampers shall be sized for the application or as specifically indicated on the Drawings.
- 2. All dampers used for throttling airflow shall be of the opposed blade type arranged for normally open or normally closed operation, as required. The damper is to be sized so that, when wide open, the pressure drop is a sufficient amount of its close-off pressure drop to shift the characteristic curve to near linear.
- 3. All dampers used for two-position, open/close control shall be parallel blade type arranged for normally open or closed operation, as required.
- 4. All dampers used for smoke control applications shall be UL 555 listed.
- 5. Damper frames and blades shall be constructed of either galvanized steel or aluminum. Maximum blade length in any section shall be 48". Damper blades shall be 16-gauge minimum and shall not exceed six (6) inches in width. Damper frames shall be 16-gauge minimum hat channel type with corner bracing. Additional stiffening or bracing shall be

provided for any section exceeding 48" in height. All damper bearings shall be made of stainless steel or oil-impregnated bronze. Dampers shall be tight closing, low leakage type, with synthetic elastomeric seals on the blade edges and flexible stainless steel side seals. Dampers of 48"x48" size shall not leak in excess of 8.5 cfm per square foot when closed against 4" w.g. static pressure when tested in accordance with AMCA Std. 500.

6. Airfoil blade dampers of double skin construction with linkage out of the air stream shall be used whenever the damper face velocity exceeds 1500 FPM or system pressure exceeds 2.5" w.g., but no more than 4000 FPM or 6" w.g.
7. One piece rolled blade dampers with exposed or concealed linkage may be used with face velocities of 1500 FPM or below.
8. Multiple section dampers may be jack-shafted to allow mounting of piston pneumatic actuators and direct connect electronic actuators. Each end of the jackshaft shall receive at least one actuator to reduce jackshaft twist.

C. Control Relays:

1. Control Pilot Relays:

- a. Control pilot relays shall be of a modular plug-in design with retaining springs or clips.
- b. Mounting bases shall be snap-mount.
- c. DPDT, 3PDT, or 4PDT relays shall be provided, as appropriate for application.
- d. Contacts shall be rated for 10 amps at 120VAC.
- e. Relays shall have an optional indicator light and check button.

D. Control Valves:

1. All automatic control valves shall be fully proportioning and provide near linear heat transfer control. The valves shall be quiet in operation and fail-safe open, closed, or in their last position. All valves shall operate in sequence with another valve when required by the sequence of operations. All control valves shall be sized by the control manufacturer, and shall be guaranteed to meet the heating and cooling loads, as specified. All control valves shall be suitable for the system flow conditions and close against the differential pressures involved. Body pressure rating and connection type (sweat, screwed, or flanged) shall conform to the pipe schedule elsewhere in this Section.
2. Chilled water control valves shall be modulating plug, ball, and/or butterfly, as required by the specific application. Modulating water valves shall be sized per manufacturer's recommendations for the given application. In general, valves (2 or 3-way) serving variable flow air handling unit coils shall be sized for a pressure drop equal to the actual coil pressure drop, but no more than 5 PSI. Valves (3-way) serving constant flow air handling unit coils with secondary circuit pumps shall be sized for a pressure drop equal to 25% the actual coil pressure drop, but no more than 2 PSI. Mixing valves (3-way) serving secondary water circuits shall be sized for a pressure drop of no more than 5 PSI. Valves for terminal reheat coils shall be sized for a 2 PSIG pressure drop, but no more than a 5 PSI drop.
3. Modulating plug water valves of the single-seat type with equal percentage flow characteristics shall be used for all hot and chilled water applications, except those described hereinafter. The valve discs shall be composition type. Valve stems shall be stainless steel.
4. Ball valves shall be acceptable for water terminal reheat coils, radiant panels, unit heaters, package air conditioning units, and fan coil units.
5. Butterfly valves shall be acceptable for modulating large flow applications greater than modulating plug valves, and for all two-position, open/close applications. In-line and/or three-way butterfly valves shall be heavy-duty pattern with a body rating comparable to the pipe rating, replaceable lining suitable for temperature of system, and a stainless

steel vane. Valves for modulating service shall be sized and travel limited to 50 degrees of full open. Valves for isolation service shall be the same as the pipe. Valves in the closed position shall be bubble-tight.

6. Control valves for ball valves shall not use pulse of tri-mode controllers or actuators. Controllers installed shall be capable of being spanned for the two stem travel ranges of 0-20% open and 85-100% open.

E. Electronic Signal Isolation Transducers:

1. A signal isolation transducer shall be provided whenever an analog output signal from the Facility Management System is to be connected to an external control system as an input (such as a chiller control panel), or is to receive as an input signal from a remote system.
2. The signal isolation transducer shall provide ground plane isolation between systems.
3. Signals shall provide optical isolation between systems.

F. Motor starters: an integral HAND/OFF/AUTO switch shall override the controlled device pilot relay.

1. A status input to the Facility Management System shall indicate whenever the switch is not in the automatic position.
2. A Status LED shall illuminate whenever the output is ON.
3. An Override LED shall illuminate whenever the HAND/OFF/AUTO switch is in either the HAND or OFF position.
4. Contacts shall be rated for a minimum of 1 amp at 24 VAC.

G. Variable frequency motor controllers: an integral HAND/AUTO pushbutton shall override the controlled device pilot relay.

1. A status input to the Facility Management System shall indicate whenever the controller is in the hand or bypass position.
2. A Status LED shall illuminate whenever the output is ON.
3. An Override LED shall illuminate whenever the HAND/AUTO pushbutton is in either the HAND or OFF position.
4. Contacts shall be rated for a minimum of 1 amp at 24 VAC.

2.9 CONTROL CABLE

- A. Electronic and fiber-optic cables for control wiring are specified in Division 27 Section "Communications Horizontal Cabling."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that conditioned power supply is available to control units and operator workstation.

3.2 INSTALLATION

- A. Install software in control units and operator workstation(s). Implement all features of programs to specified requirements and as appropriate to sequence of operation.

1. Connect and configure equipment and software to achieve sequence of operation
- B. Verify location of thermostats, humidistats, and other exposed control sensors with Drawings and architectural room details before installation. Install devices 48 inches above the floor.
- C. Install manual reset switches, such as high and low static resets, no higher than 6'-0" above nearest adjacent finished floor.
- D. Install averaging elements in ducts, plenums, and coil faces in crossing or zigzag pattern. Provide one linear foot of sensor per square foot of coil in a pattern that will create an even distribution of sensor over the entire cross sectional area of duct or air handling unit.
- E. Install freezestats to provide one linear foot of sensor per square foot of coil.
- F. Install temperature sensor on the leaving side of all cooling and heating coils in AHUs.
- G. Install outdoor air temperature sensors on a north facing wall and away from direct sunlight as well as 20 feet (minimum) from exhaust or relief air fans.
- H. Install outdoor air humidity sensors on a north facing wall and away from direct sunlight as well as 20 feet (minimum) from exhaust or relief air fans. Do not install within 20 feet of cooling tower discharge, steam vents, or downstream of similar services in the direction of typical wind patterns.
- I. Install temperature and flow meters to calculate building BTUH use for the following systems:
 1. Chilled Water.
 2. Heating Water.
- J. Flow Station Locations:
 1. Air side
 - a. Provide piezometer ring type at fan inlet for all fans located in AHUs and as indicated on drawings.
 - b. Fans external to AHU are to be piezometer type.
 - c. Fans external to AHU to be thermal dispersion type installed at the fan inlet.
 - d. Duct mounted flow stations shall be thermal dispersion type.
 2. Water side
 - a. Water flow stations shall be turbine type.
 - b. Flow meters shall be installed in the following locations as a minimum:
 - 1) chilled water loops
 - 2) heating water loops
 - c. Adequate straight pipe shall be installed before (10 pipe diameters) and after (5 pipe diameters) device according to the manufacturer's recommendations.
- K. Install pressure monitors across walls dividing a spaces with monitored pressure requirements, including the following applications:
 1. Soiled.
 2. Decontamination.

- L. Coordinate EPO switch location and type with Division 26. Install EPOs as follows:
 - 1. Mushroom:
 - a. Boilers
- M. Install automatic dampers according to Division 23 Section "Air Duct Accessories."
- N. Install damper motors on outside of duct in warm areas, not in locations exposed to outdoor temperatures.
- O. Install labels and nameplates to identify control components according to Division 23 Section "Identification for HVAC Piping and Equipment."
- P. Install hydronic instrument wells, valves, and other accessories according to Division 23 Section "Hydronic Piping."
- Q. Install steam and condensate instrument wells, valves, and other accessories according to Division 23 Section "Steam and Condensate Heating Piping."
- R. Install refrigerant instrument wells, valves, and other accessories according to Division 23 Section "Refrigerant Piping."
- S. Install duct volume-control dampers according to Division 23 Sections specifying air ducts.
- T. Install electronic and fiber-optic cables according to Division 27 Section "Communications Horizontal Cabling."
- U. Unit Heaters: Unit heaters shall each be provided with a low voltage electric wall-mounted room thermostat, which shall cause the heater to be cycled "on" or "off" as required to satisfy the thermostat setting. Control circuit voltage shall not exceed 120 volts to ground.

3.3 EQUIPMENT STATUS MONITORS

- A. Current sensing relays are to be installed across motors and must be sensitive enough to detect and alarm when driven equipment, such as a fan motor is operating without a belt or a pump motor is operating without flow.
- B. Where a current sensing relay is not sensitive as described above, provide differential pressure transducers/switches to monitor equipment status.

3.4 ELECTRICAL WIRING AND CONNECTION INSTALLATION

- A. Install raceways, boxes, and cabinets according to Division 26 Section "Raceway and Boxes for Electrical Systems."
- B. Install building wire and cable according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- C. Install signal and communication cable according to Division 27 Section "Communications Horizontal Cabling."
 - 1. Conceal cable, except in mechanical rooms and areas where other conduit and piping are exposed.

2. Install exposed cable in raceway.
 3. Install concealed cable bundled, labeled for service, and well supported to prevent contact with other systems.
 4. Bundle and harness multiconductor instrument cable in place of single cables where several cables follow a common path.
 5. Fasten flexible conductors, bridging cabinets and doors, along hinge side; protect against abrasion. Tie and support conductors.
 6. Install wire and cable with sufficient slack and flexible connections to allow for vibration of piping and equipment.
- D. Connect manual-reset limit controls independent of manual-control switch positions. Automatic duct heater resets may be connected in interlock circuit of power controllers.
- E. Connect hand-off-auto selector switches or hand/auto push buttons to override automatic interlock controls when switch or pushbutton is in hand position.

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.
- B. Perform the following field tests and inspections and prepare test reports:
1. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation. Remove and replace malfunctioning units and retest.
 2. Test and adjust controls and safeties.
 3. Test calibration of electronic controllers by disconnecting input sensors and stimulating operation with compatible signal generator.
 4. Test each point through its full operating range to verify that safety and operating control set points are as required.
 5. Test each control loop to verify stable mode of operation and compliance with sequence of operation. Adjust PID actions.
 6. Test each system for compliance with sequence of operation.
 7. Test software and hardware interlocks.
- C. DDC Verification:
1. Verify that instruments are installed before calibration, testing, and loop or leak checks.
 2. Check instruments for proper location and accessibility.
 3. Check instrument installation for direction of flow, elevation, orientation, insertion depth, and other applicable considerations.
 4. Check instrument tubing for proper fittings, slope, material, and support.
 5. Check installation of air supply for each instrument.
 6. Check flow instruments. Inspect tag number and line and bore size, and verify that inlet side is identified and that meters are installed correctly.
 7. Check pressure instruments, piping slope, installation of valve manifold, and self-contained pressure regulators.
 8. Check temperature instruments and material and length of sensing elements.
 9. Check control valves. Verify that they are in correct direction.
 10. Check DDC system as follows:
 - a. Verify that DDC controller power supply is from emergency power supply, if applicable.

- b. Verify that wires at control panels are tagged with their service designation and approved tagging system.
 - c. Verify that spare I/O capacity has been provided.
 - d. Verify that DDC controllers are protected from power supply surges.
- D. Replace damaged or malfunctioning controls and equipment and repeat testing procedures.

3.6 ADJUSTING

A. Calibrating and Adjusting:

1. Calibrate instruments.
2. Make three-point calibration test for both linearity and accuracy for each analog instrument.
3. Calibrate equipment and procedures using manufacturer's written recommendations and instruction manuals. Use test equipment with accuracy at least double that of instrument being calibrated.
4. Control System Inputs and Outputs:
 - a. Check analog inputs at 0, 50, and 100 percent of span.
 - b. Check analog outputs using milliampere meter at 0, 50, and 100 percent output.
 - c. Check digital inputs using jumper wire, including:
 - 1) Status indicators for fans shall be tested to indicate an alarm upon belt loss or dead-head pump condition. Adjust current sensing relays appropriately.
 - 2) Status indicators for preheat circulating pumps shall be tested to indicate an alarm upon dead-head condition. Adjust current sensing relay appropriately.
 - d. Check digital outputs using ohmmeter to test for contact making or breaking.
 - e. Check resistance temperature inputs at 0, 50, and 100 percent of span using a precision-resistant source.
5. Flow:
 - a. Set differential pressure flow transmitters for 0 and 100 percent values with 3-point calibration accomplished at 50, 90, and 100 percent of span.
 - b. Manually operate flow switches to verify that they make or break contact.
6. Pressure:
 - a. Calibrate pressure transmitters at 0, 50, and 100 percent of span.
 - b. Calibrate pressure switches to make or break contacts, with adjustable differential set at minimum.
7. Temperature:
 - a. Calibrate resistance temperature transmitters at 0, 50, and 100 percent of span using a precision-resistance source.
 - b. Calibrate temperature switches to make or break contacts.
8. Stroke and adjust control valves and dampers without positioners, following the manufacturer's recommended procedure, so that valve or damper is 100 percent open and closed.

9. Stroke and adjust control valves and dampers with positioners, following manufacturer's recommended procedure, so that valve and damper is 0, 50, and 100 percent closed.
 10. Provide diagnostic and test instruments for calibration and adjustment of system.
 11. Provide written description of procedures and equipment for calibrating each type of instrument. Submit procedures review and approval before initiating startup procedures.
- B. Adjust initial temperature and humidity set points.
- C. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide for visits to Project during other than normal occupancy hours for this purpose.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain HVAC instrumentation and controls. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

SECTION 231123

FACILITY NATURAL-GAS PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Pipes, tubes, and fittings.
2. Piping specialties.
3. Piping and tubing joining materials.
4. Valves.
5. Pressure regulators.

B. Related Sections include the following:

1. Division 23 Section "Common Work Results" for escutcheons and grout.
2. Division 23 Section "Hangers and Supports" for hangers.

1.2 PERFORMANCE REQUIREMENTS

A. Minimum Operating-Pressure Ratings:

1. Piping and Valves: 100 psig minimum unless otherwise indicated.
2. Service Regulators: 100 psig minimum unless otherwise indicated.
3. Minimum Operating Pressure of Service Meter: 5 psig.

B. Natural-Gas System Pressures within Buildings: Two pressure ranges. Primary pressure is more than 2 psig but not more than 5 psig, and is reduced to secondary pressure of more than 0.5 psig but not more than 2 psig.

C. Delegated Design: Design restraints and anchors for natural-gas piping and equipment, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

1.3 SUBMITTALS

A. Product Data: For each type of the following:

1. Piping specialties.
2. Valves. Include pressure rating, capacity, settings, and electrical connection data of selected models.
3. Pressure regulators. Indicate pressure ratings and capacities.
4. Dielectric fittings.
5. Escutcheons.

B. Shop Drawings: For facility natural-gas piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple

pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

1. Shop Drawing Scale: 1/8 inch per foot.

- C. Coordination Drawings: Plans and details, drawn to scale, on which natural-gas piping is shown and coordinated with other installations, using input from installers of the items involved.
- D. Site Survey: Plans, drawn to scale, on which natural-gas piping is shown and coordinated with other services and utilities.
- E. Welding certificates.
- F. Field quality-control reports.
- G. Operation and Maintenance Data: For motorized gas valves, pressure regulators and service meters to include in emergency, operation, and maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.5 PROJECT CONDITIONS

- A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.
- B. Interruption of Existing Natural-Gas Service: Do not interrupt natural-gas service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide purging and startup of natural-gas supply according to requirements indicated:
 - 1. Notify Construction Manager and Owner no fewer than ten days in advance of proposed interruption of natural-gas service.
 - 2. Do not proceed with interruption of natural-gas service without Owner's written permission.

1.6 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate requirements for access panels and doors for valves installed concealed behind finished surfaces. Comply with requirements in Division 08 Section "Access Doors and Frames."

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
 2. Wrought-Steel Welding Fittings: ASTM A 234/A 234M for butt welding and socket welding.
 3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
 4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
 - a. Material Group: 1.1.
 - b. End Connections: Threaded or butt welding to match pipe.
 - c. Lapped Face: Not permitted underground.
 - d. Gasket Materials: ASME B16.20, metallic, flat, asbestos free, aluminum o-rings, and spiral-wound metal gaskets.
 - e. Bolts and Nuts: ASME B18.2.1, carbon steel aboveground and stainless steel underground.
 5. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.
 - a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.
 6. Mechanical Couplings:
 - a. Available Manufacturers:
 - 1) Dresser Piping Specialties; Division of Dresser, Inc.
 - 2) Smith-Blair, Inc.
 - b. Stainless-steel flanges and tube with epoxy finish.
 - c. Buna-nitrile seals.
 - d. Stainless-steel bolts, washers, and nuts.
 - e. Coupling shall be capable of joining PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
 - f. Steel body couplings installed underground on plastic pipe shall be factory equipped with anode.
- B. PE Pipe: ASTM D 2513, SDR 11.
1. PE Fittings: ASTM D 2683, socket-fusion type or ASTM D 3261, butt-fusion type with dimensions matching PE pipe.
 2. PE Transition Fittings: Factory-fabricated fittings with PE pipe complying with ASTM D 2513, SDR 11; and steel pipe complying with ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
 3. Anodeless Service-Line Risers: Factory fabricated and leak tested.
 - a. Underground Portion: PE pipe complying with ASTM D 2513, SDR 11 inlet.

- b. Casing: Steel pipe complying with ASTM A 53/A 53M, Schedule 40, black steel, Type E or S, Grade B, with corrosion-protective coating covering. Vent casing aboveground.
 - c. Aboveground Portion: PE transition fitting.
 - d. Outlet shall be threaded or flanged or suitable for welded connection.
 - e. Tracer wire connection.
 - f. Ultraviolet shield.
 - g. Stake supports with factory finish to match steel pipe casing or carrier pipe.
- 4. Transition Service-Line Risers: Factory fabricated and leak tested.
 - a. Underground Portion: PE pipe complying with ASTM D 2513, SDR 11 inlet connected to steel pipe complying with ASTM A 53/A 53M, Schedule 40, Type E or S, Grade B, with corrosion-protective coating for aboveground outlet.
 - b. Outlet shall be threaded or flanged or suitable for welded connection.
 - c. Bridging sleeve over mechanical coupling.
 - d. Factory-connected anode.
 - e. Tracer wire connection.
 - f. Ultraviolet shield.
 - g. Stake supports with factory finish to match steel pipe casing or carrier pipe.
- 5. Plastic Mechanical Couplings, NPS 1-1/2 and Smaller: Capable of joining PE pipe to PE pipe.
 - a. Available Manufacturers:
 - 1) Lyall, R. W. & Company, Inc.
 - 2) Mueller Co.; Gas Products Div.
 - 3) Perfection Corporation; a subsidiary of American Meter Company.
 - b. PE body with molded-in, stainless-steel support ring.
 - c. Buna-nitrile seals.
 - d. Acetal collets.
 - e. Electro-zinc-plated steel stiffener.
- 6. Plastic Mechanical Couplings, NPS 2 and Larger: Capable of joining PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
 - a. Available Manufacturers:
 - 1) Lyall, R. W. & Company, Inc.
 - 2) Mueller Co.; Gas Products Div.
 - 3) Perfection Corporation; a subsidiary of American Meter Company.
 - b. Fiber-reinforced plastic body.
 - c. PE body tube.
 - d. Buna-nitrile seals.
 - e. Acetal collets.
 - f. Stainless-steel bolts, nuts, and washers.
- 7. Steel Mechanical Couplings: Capable of joining plain-end PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
 - a. Available Manufacturers:

- 1) Dresser Piping Specialties; Division of Dresser, Inc.
- 2) Smith-Blair, Inc.

- b. Stainless-steel flanges and tube with epoxy finish.
- c. Buna-nitrile seals.
- d. Stainless-steel bolts, washers, and nuts.
- e. Factory-installed anode for steel-body couplings installed underground.

2.2 PIPING SPECIALTIES

A. Y-Pattern Strainers:

1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
3. Strainer Screen: 60-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

B. Basket Strainers:

1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
3. Strainer Screen: 60-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

C. T-Pattern Strainers:

1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
2. End Connections: Grooved ends.
3. Strainer Screen: 60-mesh startup strainer, and perforated stainless-steel basket with 57 percent free area.
4. CWP Rating: 750 psig.

D. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

2.3 JOINING MATERIALS

A. Joint Compound and Tape: Suitable for natural gas.

B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

C. Brazing Filler Metals: Alloy with melting point greater than 1000 deg F complying with AWS A5.8/A5.8M. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.

2.4 MANUAL GAS SHUTOFF VALVES

- A. General Requirements for Metallic Valves, NPS 2 and Smaller: Comply with ASME B16.33.
 - 1. CWP Rating: 100 psig.
 - 2. Threaded Ends: Comply with ASME B1.20.1.
 - 3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.
 - 4. Tamperproof Feature: Locking feature for valves indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Article.
 - 5. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction for valves 1 inch and smaller.
 - 6. Service Mark: Valves 1-1/4 inches to NPS 2 shall have initials "WOG" permanently marked on valve body.
- B. General Requirements for Metallic Valves, NPS 2-1/2 and Larger: Comply with ASME B16.38.
 - 1. CWP Rating: 100 psig.
 - 2. Flanged Ends: Comply with ASME B16.5 for steel flanges.
 - 3. Tamperproof Feature: Locking feature for valves indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Article.
 - 4. Service Mark: Initials "WOG" shall be permanently marked on valve body.
- C. One-Piece, Bronze Ball Valve with Bronze Trim: MSS SP-110.
 - 1. Available Manufacturers:
 - a. BrassCraft Manufacturing Company; a Masco company.
 - b. Conbraco Industries, Inc.; Apollo Div.
 - c. Lyall, R. W. & Company, Inc.
 - d. McDonald, A. Y. Mfg. Co.
 - e. Perfection Corporation; a subsidiary of American Meter Company.
 - 2. Body: Bronze, complying with ASTM B 584.
 - 3. Ball: Chrome-plated brass.
 - 4. Stem: Bronze; blowout proof.
 - 5. Seats: Reinforced TFE; blowout proof.
 - 6. Packing: Separate packnut with adjustable-stem packing threaded ends.
 - 7. Ends: Threaded, flared, or socket as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Article.
 - 8. CWP Rating: 600 psig.
 - 9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 - 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- D. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: MSS SP-110.
 - 1. Available Manufacturers:
 - a. BrassCraft Manufacturing Company; a Masco company.
 - b. Conbraco Industries, Inc.; Apollo Div.
 - c. Lyall, R. W. & Company, Inc.
 - d. McDonald, A. Y. Mfg. Co.
 - e. Perfection Corporation; a subsidiary of American Meter Company.
 - 2. Body: Bronze, complying with ASTM B 584.

3. Ball: Chrome-plated bronze.
4. Stem: Bronze; blowout proof.
5. Seats: Reinforced TFE; blowout proof.
6. Packing: Threaded-body packnut design with adjustable-stem packing.
7. Ends: Threaded, flared, or socket as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Article.
8. CWP Rating: 600 psig.
9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

E. Bronze Plug Valves: MSS SP-78.

1. Available Manufacturers:
 - a. Lee Brass Company.
 - b. McDonald, A. Y. Mfg. Co.
2. Body: Bronze, complying with ASTM B 584.
3. Plug: Bronze.
4. Ends: Threaded, socket, or flanged as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Article.
5. Operator: Square head or lug type with tamperproof feature where indicated.
6. Pressure Class: 125 psig.
7. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
8. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

F. Cast-Iron, Nonlubricated Plug Valves: MSS SP-78.

1. Available Manufacturers:
 - a. McDonald, A. Y. Mfg. Co.
 - b. Mueller Co.; Gas Products Div.
 - c. Xomox Corporation; a Crane company.
2. Body: Cast iron, complying with ASTM A 126, Class B.
3. Plug: Bronze or nickel-plated cast iron.
4. Seat: Coated with thermoplastic.
5. Stem Seal: Compatible with natural gas.
6. Ends: Threaded or flanged as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Article.
7. Operator: Square head or lug type with tamperproof feature where indicated.
8. Pressure Class: 125 psig.
9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

G. Cast-Iron, Lubricated Plug Valves: MSS SP-78.

1. Available Manufacturers:
 - a. Flowserve.
 - b. Homestead Valve; a division of Olson Technologies, Inc.
 - c. McDonald, A. Y. Mfg. Co.

- d. Milliken Valve Company.
 - e. Mueller Co.; Gas Products Div.
 - f. R&M Energy Systems, A Unit of Robbins & Myers, Inc.
2. Body: Cast iron, complying with ASTM A 126, Class B.
 3. Plug: Bronze or nickel-plated cast iron.
 4. Seat: Coated with thermoplastic.
 5. Stem Seal: Compatible with natural gas.
 6. Ends: Threaded or flanged as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Article.
 7. Operator: Square head or lug type with tamperproof feature where indicated.
 8. Pressure Class: 125 psig.
 9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- H. PE Ball Valves: Comply with ASME B16.40.
1. Available Manufacturers:
 - a. Kerotest Manufacturing Corp.
 - b. Lyall, R. W. & Company, Inc.
 - c. Perfection Corporation; a subsidiary of American Meter Company.
 2. Body: PE.
 3. Ball: PE.
 4. Stem: Acetal.
 5. Seats and Seals: Nitrile.
 6. Ends: Plain or fusible to match piping.
 7. CWP Rating: 80 psig.
 8. Operating Temperature: Minus 20 to plus 140 deg F.
 9. Operator: Nut or flat head for key operation.
 10. Include plastic valve extension.
 11. Include tamperproof locking feature for valves where indicated on Drawings.
- I. Valve Boxes:
1. Cast-iron, two-section box.
 2. Top section with cover with "GAS" lettering.
 3. Bottom section with base to fit over valve and barrel a minimum of 5 inches in diameter.
 4. Adjustable cast-iron extensions of length required for depth of bury.
 5. Include tee-handle, steel operating wrench with socket end fitting valve nut or flat head, and with stem of length required to operate valve.

2.5 MOTORIZED GAS VALVES

- A. Automatic Gas Valves: Comply with ANSI Z21.21.
1. Available Manufacturers:
 - a. ASCO Power Technologies, LP; Division of Emerson.
 - b. Dungs, Karl, Inc.
 - c. Eaton Corporation; Controls Div.
 - d. Eclipse Combustion, Inc.

- e. Honeywell International Inc.
 - f. Johnson Controls.
 - 2. Body: Brass or aluminum.
 - 3. Seats and Disc: Nitrile rubber.
 - 4. Springs and Valve Trim: Stainless steel.
 - 5. Normally closed.
 - 6. Visual position indicator.
 - 7. Electrical operator for actuation by appliance automatic shutoff device.
- B. Electrically Operated Valves: Comply with UL 429.
- 1. Available Manufacturers:
 - a. ASCO Power Technologies, LP; Division of Emerson.
 - b. Dungs, Karl, Inc.
 - c. Eclipse Combustion, Inc.
 - d. Goyen Valve Corp.; Tyco Environmental Systems.
 - e. Magnatrol Valve Corporation.
 - f. Parker Hannifin Corporation; Climate & Industrial Controls Group; Skinner Valve Div.
 - g. Watts Regulator Co.; Division of Watts Water Technologies, Inc.
 - 2. Pilot operated.
 - 3. Body: Brass or aluminum.
 - 4. Seats and Disc: Nitrile rubber.
 - 5. Springs and Valve Trim: Stainless steel.
 - 6. 120-V ac, 60 Hz, Class B, continuous-duty molded coil, and replaceable.
 - 7. NEMA ICS 6, Type 4, coil enclosure.
 - 8. Normally closed.
 - 9. Visual position indicator.

2.6 PRESSURE REGULATORS

- A. General Requirements:
- 1. Single stage and suitable for natural gas.
 - 2. Steel jacket and corrosion-resistant components.
 - 3. Elevation compensator.
 - 4. End Connections: Threaded for regulators NPS 2 and smaller; flanged for regulators NPS 2-1/2 and larger.
- B. Service Pressure Regulators: Comply with ANSI Z21.80.
- 1. Available Manufacturers:
 - a. Actaris.
 - b. American Meter Company.
 - c. Fisher Control Valves and Regulators; Division of Emerson Process Management.
 - d. Invensys.
 - e. Richards Industries; Jordan Valve Div.
 - 2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
 - 3. Springs: Zinc-plated steel; interchangeable.
 - 4. Diaphragm Plate: Zinc-plated steel.

5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: 100 psig.

C. Line Pressure Regulators: Comply with ANSI Z21.80.

1. Available Manufacturers:
 - a. Actaris.
 - b. American Meter Company.
 - c. Eclipse Combustion, Inc.
 - d. Fisher Control Valves and Regulators; Division of Emerson Process Management.
 - e. Invensys.
 - f. Maxitrol Company.
 - g. Richards Industries; Jordan Valve Div.
2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: **[2 psig] [5 psig]**.

D. Appliance Pressure Regulators: Comply with ANSI Z21.18.

1. Available Manufacturers:
 - a. Canadian Meter Company Inc.
 - b. Eaton Corporation; Controls Div.
 - c. Harper Wyman Co.
 - d. Maxitrol Company.
 - e. SCP, Inc.
2. Body and Diaphragm Case: Die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber.
6. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
7. Factory-Applied Finish: Minimum three-layer polyester and polyurethane paint finish.

8. Regulator may include vent limiting device, instead of vent connection, if approved by authorities having jurisdiction.
9. Maximum Inlet Pressure: [1 psig] [2 psig] [5 psig].

2.7 DIELECTRIC FITTINGS

A. Dielectric Unions:

1. Available Manufacturers:
 - a. Capitol Manufacturing Company.
 - b. Central Plastics Company.
 - c. Hart Industries International, Inc.
 - d. McDonald, A. Y. Mfg. Co.
 - e. Watts Regulator Co.; Division of Watts Water Technologies, Inc.
 - f. Wilkins; Zurn Plumbing Products Group.
2. Minimum Operating-Pressure Rating: 100 psig.
3. Combination fitting of copper alloy and ferrous materials.
4. Insulating materials suitable for natural gas.
5. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.

B. Dielectric Flanges:

1. Available Manufacturers:
 - a. Capitol Manufacturing Company.
 - b. Central Plastics Company.
 - c. Watts Regulator Co.; Division of Watts Water Technologies, Inc.
 - d. Wilkins; Zurn Plumbing Products Group.
2. Minimum Operating-Pressure Rating: 100 psig.
3. Combination fitting of copper alloy and ferrous materials.
4. Insulating materials suitable for natural gas.
5. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.

C. Dielectric-Flange Kits:

1. Available Manufacturers:
 - a. Advance Products & Systems, Inc.
 - b. Calpico Inc.
 - c. Central Plastics Company.
 - d. Pipeline Seal and Insulator, Inc.
2. Minimum Operating-Pressure Rating: 100 psig.
3. Companion-flange assembly for field assembly.
4. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or PE bolt sleeves, phenolic washers, and steel backing washers.
5. Insulating materials suitable for natural gas.
6. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.

2.8 SLEEVES

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

2.9 LABELING AND IDENTIFYING

- A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches wide and 4 mils thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored yellow.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for natural-gas piping system to verify actual locations of piping connections before equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. For renovations and additions close equipment shutoff valves before turning off natural gas to premises or piping section.
- B. Inspect natural-gas piping according to NFPA 54 and all applicable codes to determine that natural-gas utilization devices are turned off in piping section affected.
- C. Comply with NFPA 54 and all applicable code requirements for prevention of accidental ignition.

3.3 OUTDOOR PIPING INSTALLATION

- A. Comply with NFPA 54 and all applicable codes for installation and purging of natural-gas piping.
- B. Install underground, natural-gas piping buried at least 36 inches below finished grade. Comply with requirements in Division 31 Section "Earth Moving" for excavating, trenching, and backfilling.
 - 1. If natural-gas piping is installed less than 36 inches below finished grade, install it in containment conduit.
- C. Install underground, PE, natural-gas piping according to ASTM D 2774.
- D. Steel Piping with Protective Coating:
 - 1. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.

2. Replace pipe having damaged PE coating with new pipe.
- E. Install fittings for changes in direction and branch connections.
- F. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 1. Install steel pipe for sleeves smaller than 6 inches in diameter.
 2. Install cast-iron "wall pipes" for sleeves 6 inches and larger in diameter.
- G. Install pressure gage upstream and downstream from each service regulator. Pressure gages are specified in Division 23 Section "Meters and Gages for HVAC Piping."

3.4 INDOOR PIPING INSTALLATION

- A. Comply with NFPA 54 and all applicable codes for installation and purging of natural-gas piping.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- D. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- G. Locate valves for easy access.
- H. Install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and branch connections.
- K. Install escutcheons, after Architect's final approval of finish, for penetrations of walls, ceilings, and floors according to the following:
 1. New piping penetrations shall be one-piece escutcheons.
 2. Existing piping penetrations shall be two-piece escutcheons.
 3. All sleeved penetrations shall be deep-drawn to allow flush installation between escutcheon and finished surface.
- L. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping."

- M. Verify final equipment locations for roughing-in.
- N. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.
- O. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.
 - 1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.
- P. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.
- Q. Conceal pipe installations in pipe spaces, utility spaces, above ceilings, in floor channels unless indicated to be exposed to view.
- R. Concealed Location Installations: Except as specified below, install concealed natural-gas piping and piping installed under the building in containment conduit constructed of steel pipe with welded joints as described in Part 2. Install a vent pipe from containment conduit to outdoors and terminate with weatherproof vent cap.
 - 1. Above Accessible Ceilings: Natural-gas piping, fittings, valves, and regulators may be installed in accessible spaces without containment conduit.
 - 2. In Floor Channels: Install natural-gas piping in floor channels. Channels must have cover and be open to space above cover for ventilation.
 - 3. Prohibited Locations:
 - a. Do not install natural-gas piping in or through circulating air ducts, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
 - b. Do not install natural-gas piping in solid walls or partitions.
- S. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- T. Connect branch piping from top or side of horizontal piping.
- U. Install unions in pipes NPS 2 and smaller, adjacent to each valve, at final connection to each piece of equipment. Unions are not required at flanged connections.
- V. Do not use natural-gas piping as grounding electrode.
- W. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.
- X. Install pressure gage upstream and downstream from each line regulator. Pressure gages are specified in Division 23Section "Meters and Gages for HVAC Piping."

3.5 VALVE INSTALLATION

- A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing, aluminum, or copper connector.
- B. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.
- C. Install earthquake valves aboveground outside buildings according to listing.
- D. Install anode for metallic valves in underground PE piping.

3.6 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints:
 - 1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
 - 2. Cut threads full and clean using sharp dies.
 - 3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
 - 4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
 - 5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints:
 - 1. Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators.
 - 2. Bevel plain ends of steel pipe.
 - 3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.
- E. Flanged Joints: Install gasket material, size, type, and thickness appropriate for natural-gas service. Install gasket concentrically positioned.
- F. Flared Joints: Cut tubing with roll cutting tool. Flare tube end with tool to result in flare dimensions complying with SAE J513. Tighten finger tight, then use wrench. Do not overtighten.
- G. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
 - 1. Plain-End Pipe and Fittings: Use butt fusion.
 - 2. Plain-End Pipe and Socket Fittings: Use socket fusion.

3.7 CONNECTIONS

- A. Install piping adjacent to appliances to allow service and maintenance of appliances.

- B. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.
- C. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.

3.8 LABELING AND IDENTIFYING

- A. Comply with requirements in Division 23 Section "Identification for HVAC Piping and Equipment" for piping and valve identification.
- B. Install detectable warning tape directly above gas piping, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs.

3.9 PAINTING

- A. Comply with requirements in Division 09 painting Sections for painting interior and exterior natural-gas piping.

3.10 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
 - 1. Test, inspect, and purge natural gas according to NFPA 54 and all applicable codes and authorities having jurisdiction.
- C. Natural-gas piping will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.11 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain earthquake valves.

3.12 OUTDOOR PIPING SCHEDULE

- A. Underground natural-gas piping shall be one of the following:
 - 1. PE pipe and fittings joined by heat fusion, or mechanical couplings; service-line risers with tracer wire terminated in an accessible location.
 - 2. Steel pipe with wrought-steel fittings and welded joints, or mechanical couplings. Coat pipe and fittings with protective coating for steel piping.
- B. Aboveground natural-gas piping shall be one of the following:
 - 1. Steel pipe with malleable-iron fittings and threaded joints.

2. Steel pipe with wrought-steel fittings and welded joints.
- C. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.

3.13 INDOOR PIPING SCHEDULE

- A. Aboveground, branch piping NPS 2 and smaller shall be the following:
 1. Steel pipe with malleable-iron fittings and threaded joints.
- B. Aboveground, distribution piping NPS 2-1/2 and larger shall be one of the following:
 1. Steel pipe with wrought-steel fittings and welded joints.
- C. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
- D. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.

3.14 ABOVEGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

- A. Valves for pipe sizes NPS 2 and smaller at service meter shall be one of the following:
 1. One-piece, bronze ball valve with bronze trim.
 2. Two-piece, full-port, bronze ball valves with bronze trim.
 3. Bronze plug valve.
- B. Valves for pipe sizes NPS 2-1/2 and larger at service meter shall be one of the following:
 1. Two-piece, full-port, bronze ball valves with bronze trim.
 2. Bronze plug valve.
 3. Cast-iron, nonlubricated plug valve.
- C. Distribution piping valves for pipe sizes NPS 2 and smaller shall be one of the following:
 1. One-piece, bronze ball valve with bronze trim.
 2. Two-piece, full-port, bronze ball valves with bronze trim.
 3. Bronze plug valve.
- D. Distribution piping valves for pipe sizes NPS 2-1/2 and larger shall be one of the following:
 1. Two-piece, full-port, bronze ball valves with bronze trim.
 2. Bronze plug valve.
 3. Cast-iron, nonlubricated or lubricated plug valve.
- E. Valves in branch piping for single appliance shall be one of the following:
 1. One-piece, bronze ball valve with bronze trim.
 2. Two-piece, full-port, bronze ball valves with bronze trim.
 3. Bronze plug valve.

END OF SECTION

SECTION 232113

HYDRONIC PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes pipe and fitting materials, and joining methods for the following:

1. Hot-water heating piping.
2. Chilled-water piping.
3. Makeup-water piping.
4. Condensate-drain piping.
5. Blowdown-drain piping.
6. Air-vent piping.
7. Safety-valve-inlet and -outlet piping.
8. Pre-insulated piping systems.

B. Related Sections include the following:

1. Division 23 Section "Expansion Fittings and Loops for HVAC Piping" for expansion fittings.
2. Division 23 Section "General-Duty Valves for HVAC Piping" for valves and accessories for piping.
3. Division 23 Section "Heat Tracing for HVAC Piping" for heat tracing system requirements and applications.
4. Division 23 Section "HVAC Insulation" for pipe saddles at pipe hangers.
5. Division 23 Section "HVAC Water Treatment" for water-treatment chemicals, equipment, and controls.
6. Division 23 Section "Hydronic Pumps" for pumps, motors, and accessories for hydronic piping.
7. Division 23 Section "Steam and Condensate Heating Piping".
8. Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment" for seismic and wind restraint requirements.

1.2 PERFORMANCE REQUIREMENTS

A. Hydronic piping components and installation shall be capable of withstanding 150 psig at the corresponding temperature as the minimum working pressure and temperature, unless otherwise indicated:

1. Hot-Water Heating Piping: 200 deg F.
2. Chilled-Water Piping: 200 deg F.
3. Makeup-Water Piping: 200 deg F.
4. Condensate-Drain Piping: 200 deg F.
5. Blowdown-Drain Piping: 200 deg F.
6. Air-Vent Piping: 200 deg F.
7. Safety-Valve-Inlet and -Outlet Piping: Equal to the pressure of the piping system to which it is attached.
8. Pre-insulated Piping Systems: Same as the piping system to which it is attached.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of the following:
 - 1. Valves. Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.
 - 2. Air control devices.
 - 3. Hydronic specialties.
- B. Shop Drawings: Detail, at 1/4 scale, the piping layout, fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to the building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

1.4 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Qualification Data: For Installer.
- C. Field quality-control test reports.
- D. Operation and Maintenance Data: For air control devices, hydronic specialties, and special-duty valves to include in emergency, operation, and maintenance manuals.
- E. All underground distribution systems shall be designed in strict conformance to the latest edition of ANSI B31.1 or local requirements, whichever is more stringent, and sealed by a Registered Professional Engineer in good standing with state and local authorities. The system shall be designed to compensate for stresses and movement of the service pipe.

1.5 QUALITY ASSURANCE

- A. All piping shall be American manufactured, unless otherwise indicated.
- B. Installer Qualifications:
- C. Steel Support Welding: Qualify processes and operators according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- D. Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
 - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
- E. ASME Compliance: Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 01.

1.6 EXTRA MATERIALS

- A. Differential Pressure Meter: For each type of balancing valve and automatic flow control valve, include flowmeter, probes, hoses, flow charts, and carrying case.

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

- A. Drawn-Temper Copper Tubing: ASTM B 88, Type L.
- B. Annealed-Temper Copper Tubing: ASTM B 88, Type K.
- C. DWV Copper Tubing: ASTM B 306, Type DWV.
- D. Wrought-Copper Fittings: ASME B16.22.
 - 1. Grooved-End Copper Fittings: ASTM B 75, copper tube or ASTM B 584, bronze casting.
 - 2. Grooved-End-Tube Couplings: Rigid pattern, unless otherwise indicated; gasketed fitting. Ductile-iron housing with keys matching pipe and fitting grooves, EPDM gasket rated for minimum 230 deg F for use with housing, and steel bolts and nuts.
- E. Wrought-Copper Unions: ASME B16.22.

2.2 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel with plain ends; type, grade, and wall thickness as indicated in Part 3 "Piping Applications" Article.
- B. Cast-Iron Threaded Fittings: ASME B16.4; Classes 125 and 250 as indicated in Part 3 "Piping Applications" Article.
- C. Malleable-Iron Threaded Fittings: ASME B16.3, Classes 150 and 300 as indicated in Part 3 "Piping Applications" Article.
- D. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300 as indicated in Part 3 "Piping Applications" Article.
- E. Cast-Iron Pipe Flanges and Flanged Fittings: ASME B16.1, Classes 25, 125, and 250; raised ground face, and bolt holes spot faced as indicated in Part 3 "Piping Applications" Article.
- F. Wrought-Steel Fittings: ASTM A 234/A 234M, wall thickness to match adjoining pipe.
- G. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
 - 1. Material Group: 1.1.
 - 2. End Connections: Butt welding.
 - 3. Facings: Raised face.
- H. Grooved Mechanical-Joint Fittings and Couplings:

1. Manufacturers:
 - a. Anvil International, Inc.
 - b. Grinnell, Inc.
 - c. Victaulic Company of America.
 2. Joint Fittings: ASTM A 536, Grade 65-45-12 ductile iron; ASTM A 47/A 47M, Grade 32510 malleable iron; ASTM A 53/A 53M, Type F, E, or S, Grade B fabricated steel; or ASTM A 106, Grade B steel fittings with grooves or shoulders constructed to accept grooved-end couplings; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings.
 3. Couplings: Ductile- or malleable-iron housing and synthetic rubber gasket of central cavity pressure-responsive design; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings.
- I. Steel Pipe Nipples: ASTM A 733, made of same materials and wall thicknesses as pipe in which they are installed.

2.3 PRE-INSULATED PIPE AND FITTINGS

A. Pipe And Insulation Materials:

1. Manufacturers:
 - a. Perma-Pipe. (Basis-of-design: Terra-Gard)
 - b. Thermacore.
2. Internal service pipe shall be A53/A106 seamless carbon steel pipe. Pipe thickness / schedule shall be as described for fluid service.
3. The system design shall be in strict conformance with ANSI B31.1, latest edition.
4. End seals, gland seals and anchors shall be designed and factory fabricated to prevent the ingress of moisture into the system.
5. Outer conduit shall be smooth wall, welded steel:
 - a. For sizes up to 26 NPS, 10 ga.
 - b. For sizes 28 NPS to 36 NPS, 6 ga.
 - c. For sizes 38 NPS to 42 NPS, 4 ga.
6. Insulated service pipe shall be supported minimum 10 ft on center. From outer conduit. Supports shall not directly contact service pipe.
7. Internal service pipe shall be insulated per Division 23 "HVAC Insulation".
8. All pre-insulated sections shall have a factory applied PVC outer covering 60mils minimum thickness. All fittings, bellows, and anchors of the insulated piping system shall be prefabricated to job dimensions.
9. Provide x-ray inspection of the entire length to ensure there are no insulation voids.

B. Accessories:

1. Leak detection: Provide complete system including sensors, control panel, and interface with FMS to continuously monitor and locate moisture intrusion within the casing.

2.4 JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
- B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- C. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- D. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze or steel.
- E. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- F. Gasket Material: Thickness, material, and type suitable for fluid to be handled and working temperatures and pressures.

2.5 DIELECTRIC FITTINGS

- A. Description: Combination fitting of copper-alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
- B. Insulating Material: Suitable for system fluid, pressure, and temperature.
- C. Dielectric Unions:
 - 1. Manufacturers:
 - a. Capitol Manufacturing Company.
 - b. Central Plastics Company.
 - c. Hart Industries International, Inc.
 - d. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - e. Zurn Plumbing Products Group; AquaSpec Commercial Products Division.
 - 2. Factory-fabricated union assembly, for 250-psig minimum working pressure at 180 deg F.
- D. Dielectric Flanges:
 - 1. Manufacturers:
 - a. Capitol Manufacturing Company.
 - b. Central Plastics Company.
 - c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Factory-fabricated companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.
- E. Dielectric-Flange Kits:
1. Manufacturers:
 - a. Advance Products & Systems, Inc.
 - b. Calpico, Inc.
 - c. Central Plastics Company.
 - d. Pipeline Seal and Insulator, Inc.
 2. Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
 3. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.
- F. Dielectric Couplings:
1. Manufacturers:
 - a. Calpico, Inc.
 - b. Lochinvar Corporation.
 2. Galvanized-steel coupling with inert and noncorrosive thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.
- G. Dielectric Nipples:
1. Manufacturers:
 - a. Grinnell Mechanical Products.
 - b. Perfection Corporation; a subsidiary of American Meter Company.
 - c. Precision Plumbing Products, Inc.
 - d. Sioux Chief Manufacturing Company, Inc.
 - e. Victaulic Company of America.
 2. Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

- A. Hot-water heating piping, aboveground, NPS 4 and smaller, shall be any of the following:
1. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered or brazed joints.
 2. Standard weight steel pipe; Class 125, cast-iron fittings; cast-iron flanges and flange fittings; and threaded joints.
- B. Hot-water heating piping, aboveground, NPS 5 and larger, shall be any of the following:

1. Standard weight steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
 2. Standard weight steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.
- C. Chilled-water piping, aboveground, NPS 4 and smaller, shall be any of the following:
1. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered or brazed joints.
 2. Standard weight steel pipe; Class 125, cast-iron fittings; cast-iron flanges and flange fittings; and threaded joints.
- D. Chilled-water piping, aboveground, NPS 5 and larger, shall be any of the following:
1. Standard weight steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
 2. Standard weight steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.
- E. Chilled-water piping installed belowground shall be any of the following:
- F. Makeup-water piping installed aboveground shall be any of the following:
1. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered or brazed joints.
- G. Makeup-Water Piping Installed Belowground: Type K, annealed-temper copper tubing, wrought-copper fittings, and soldered joints. Use the fewest possible joints.
- H. Condensate-Drain Piping: Type DWV, drawn-temper copper tubing, wrought-copper fittings, and soldered joints.
- I. Blowdown-Drain Piping: Same materials and joining methods as for piping specified for the service in which blowdown drain is installed.
- J. Air-Vent Piping:
1. Inlet: Same as service where installed according to the piping manufacturer's written instructions.
 2. Outlet: Type L, annealed-temper copper tubing with soldered or flared joints.
- K. Safety-Valve-Inlet and -Outlet Piping for Hot-Water Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed according to the piping manufacturer's written instructions.

3.2 PIPING INSTALLATIONS

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Cut pipe to measurements established at site and work into place with forcing or springing.

- C. Piping shall be installed by skilled mechanics using designated basic materials plus any required supplementary materials.
- D. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- G. Install piping to permit valve servicing.
- H. Install piping at indicated slopes.
- I. Install piping straight and true, free of sags and bends.
- J. Install fittings for changes in direction and branch connections.
- K. Install piping to allow application of insulation.
- L. Select system components with pressure rating equal to or greater than system operating pressure.
- M. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.
- N. Install drains, consisting of a tee fitting, NPS 3/4 ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
- O. Reduce pipe sizes using eccentric reducer fitting installed with level side up.
- P. Install branch connections to mains using mechanically formed tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.
- Q. Install unions in piping, NPS 2 and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.
- R. Install flanges in piping, NPS 2-1/2 and larger, at final connections of equipment and elsewhere as indicated.
- S. Identify piping as specified in Division 23 Section "Identification for HVAC Piping and Equipment."
- T. Welder shall stamp each weld in order to identify the individual who completed the work.

3.3 PIPE GRADING

- A. General: Grade each system in accordance with good established practice to avoid air pockets, to relieve liquids and vent gases. Grade uniformly between indicated elevations or at indicated slope. Slopes shown on plans shall take precedence over any listed herein.

- B. Steam and Condensate Return Lines: Grade to insure steam delivery to and discharge of condensate from utilizing devices. Minimally grade steam and condensate return lines down 1" in 40 feet when graded down in the direction of flow. Grade steam lines down 1" in 20 feet when back graded. Do not back grade steam piping without permission of Architect. Where horizontal mains change size, keep the bottom of the coupled pipes on the same level using eccentric couplings. Grade steam relief and vent lines back to receiver or other device installed to eliminate tapping float trap. Terminate an atmospheric vent piping in a cast iron exhaust head as detailed.
- C. Heating and Chilled Water Circulating Lines: Lay on an even slope; grade to drain at a valve at the circulating pump whenever possible; where other low points are unavoidable, provide service drains. Where horizontal mains change size, keep the tops of the coupled pipes on the same level using eccentric couplings.
- D. Equipment Drains: Each line from a relief valve, air vent valve, separator or a boiler, drip pan elbow, exhaust head, heat exchanger, compression tank, receiver, pump base, air conditioning unit pan, air washer overflow and drain, evaporator pan, and similar drain shall grade down to a point of open sight discharge and/or as indicated on the drawings.

3.4 HANGERS AND SUPPORTS

- A. Piping support must account for expansion and contraction, vibration, dead load of piping and its contents, and seismic-bracing requirements.
- B. Hanger, support, and anchor devices are specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
- C. Seismic restraints are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."

3.5 PIPE JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.
- B. Use manufacturer's recommended methods and follow all applicable codes for joining each piping system.
- C. Make square cuts on all pipes using proper tools and alignment devices. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- D. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- E. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
 - 1. Use solder joint fittings in copper tubing lines.
 - 2. Do not anneal copper tubing and fittings.
 - 3. Tubing shall be cut square, and burrs shall be removed. Insides of fittings and outsides of tubing shall be well cleaned with steel wool, steel brushes, and/or emery cloth before assembly.

4. Installation shall be made by skilled mechanics in accordance with the material manufacturer's recommendations.
 5. Mitering of joints for elbows and notching of straight runs for tees will not be permitted.
 6. All joints shall be made with solid string or wire solder. Fluxes shall be non-corrosive pastes of the proper type. Solder shall be lead free. No cored solder will be permitted.
- F. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
- G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- H. Welded Joints: Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
1. All joints shall be fusion welded by a metallic arc or gas welding process. Pipe ends shall be beveled $37\frac{1}{2}^\circ$. All welding operations shall conform to the latest recommendations of the American Welding Society or to the applicable provisions of the Code for Pressure Piping, ANSI B31.1, latest edition, amended to date.
 2. Weld rods shall be of the proper type for each application to match the line materials.
 3. If the Engineer so requests, the Contractor shall have each of his welders prepare test coupons which shall be tested in an approved independent testing laboratory and any defects found shall be cause for dismissal of the welder from the project. All cost of such tests shall be borne by the Contractor.
 4. Branch takeoffs not larger than $\frac{2}{3}$ of the main may be made using shaped nipples, weldolets, or threadolets to match branch line fabrication methods.
- I. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- J. Copper Fittings
1. Use wrought copper solder joint type in all patterns and sizes available. Use long radius copper elbows wherever available and space will permit.
- K. Welding Fittings
1. All fittings in welded lines shall be factory-fabricated welding fittings of the same material and the same weight or Schedule as the piping attached.
 2. All elbow tees, caps and special fittings including connections into headers shall be standard butt welding fittings, conforming to ANSI B16.9, with the following exception: Branch take-offs from lines $2\frac{1}{2}"$ and larger and where the size of the takeoff does not exceed $\frac{2}{3}$ of the normal diameter of the mains to which connected, may be made with shaped nipples or with Bonney Weldolets or Threadolets as required by the class of fabrication.
 3. Mitering of pipe to form elbows, notching of straight runs to form tees, or any similar construction will not be permitted.
- L. Flanges

1. At connections to flanged valves and equipment outlets in steel piping systems using welding neck, slip on welding flanges, screwed steel, or cast iron companion flanges.
 - a. It will be permissible to use cast iron flanged fittings at connections to equipment items.
2. In grooved end piping systems use matching flanged adapter nipples.
3. In copper lines use brass flanges.
4. Connecting flanges shall have matching flat or raised faces. Faces shall be free of imperfections that would prevent proper seating.
5. Tighten bolts uniformly all around to prevent any stress.

M. Gaskets

1. Manufactured from proper materials as with performance and materials described in Division 23 "Common Work Results for HVAC", unless otherwise indicated. Full-faced type for flat-faced flanges and ring type for raised-faced flanges.
 - a. Water Lines: Red rubber sheeting.
 - b. Steam and Condensate Return Lines: Non-asbestos sheeting.
 - c. Dielectric Flanges: As provided with the flanges.
 - d. Other Lines: As recommended for the duty.

N. Securing Underground Lines

1. Install pipe clamps and braces using poured in place concrete blocks, or other anchors and supports required to ensure stability of all underground lines to prevent joint separation either during tests or thereafter when lines are in service.
 - a. Pipe Braces and nuts installed in the ground shall be fabricated of stainless steel to resist corrosion.

- O. Grooved Joints: Assemble joints with coupling and gasket, lubricant, and bolts. Cut or roll grooves in ends of pipe based on pipe and coupling manufacturer's written instructions for pipe wall thickness. Use grooved-end fittings and rigid, grooved-end-pipe couplings.

3.6 TERMINAL EQUIPMENT CONNECTIONS

- A. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.
- B. Install control valves in accessible locations close to connected equipment.
- C. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.
- D. Install ports for pressure gages and thermometers at coil inlet and outlet connections according to Division 23 Section "Meters and Gages for HVAC Piping."
- E. For hydronic connections less than NPS 2-1/2", provide one of the following, but not both:
 1. Flexible connectors.

3.7 FIELD QUALITY CONTROL

A. Prepare hydronic piping according to ASME B31.9 and as follows:

1. Leave joints, including welds, uninsulated and exposed for examination during test.
2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
3. Flush hydronic piping systems with clean water; then remove and clean or replace strainer screens.
4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
5. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.

B. Perform the following tests on hydronic piping:

1. Procedures in subparagraphs below are paraphrased from ASME B31.9.
2. Test piping prior to backfilling, concealing, insulating or painting; isolate pressure sensitive equipment from tests.
 - a. Test portions as required by construction schedule. When previously tested sections are expanded, retest at connections.
 - b. Test new portions as required by construction schedule; test new connections into existing lines.
3. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Air may be substituted as a testing medium instead of water. Refrigerant lines shall be leak tested with air unless otherwise indicated.
4. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
5. Isolate expansion tanks and determine that hydronic system is full of water.
6. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times "SE" value in Appendix A in ASME B31.9, "Building Services Piping."
7. After hydrostatic test pressure has been applied for at least 4 hours, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components and repeat hydrostatic test until there are no leaks.
8. Prepare written report of testing. All test results shall be submitted to the Owner and Architect. Provide all tests required by acceptable codes.
9. Furnish all compressed air, vacuum and water pumps; tanks of compressed air, nitrogen, carbon dioxide, refrigerant, gauges, plugs, seals, etc., as required to obtain, maintain and measure pressures during tests.
10. Pressure test all systems per governing codes, to a minimum of 1.5 times the working pressure, or the following table, whichever is greater:

Piping System	Test Pressure (psig)
High Pressure Steam (above 15 psig)	200
Low Pressure Steam (15 psig and less)	100
Gravity Steam Condensate Returns	100
Pumped Steam Condensate Return	200
Heating, Chilled, and Condenser Water	150
Refrigerant	450

11. Prepare written report of testing.
- C. Perform the following before operating the system:
1. Open manual valves fully.
 2. Inspect pumps for proper rotation.
 3. Set makeup pressure-reducing valves for required system pressure.
 4. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
 5. Set temperature controls so all coils are calling for full flow.
 6. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
 7. Verify lubrication of motors and bearings.
- D. Perform the following prior to operating the heat trace system:
1. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
 2. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
 3. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - a. Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
 - b. Test cables for electrical continuity and insulation integrity before energizing.
 - c. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.
 4. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounted cables.
 5. Cables will be considered defective if they do not pass tests and inspections.
 6. Prepare test and inspection reports.

3.8 REPAIRS

- A. Effect repairs as recommended by the manufacturer of the pipe and fittings materials; replace any defective materials. When procedures involve additional work on a joint and they fail, remake the joint. Repair operations shall include:
1. Screwed Joints: Additionally tighten.
 2. Caulked Joints: Additionally caulk.
 3. Welded Joints: Chip out old weld metal and re-weld.
 4. Compression Joints: Re-clean; replace seal, compression rings, couplings, etc.
 5. Mechanical Joints: Re-clean; additionally tighten.
 6. Soldered or Brazed Joints: Remake joint, no additional soldering or brazing allowed.

3.9 CLEANING

- A. Clean all new piping systems and components prior to putting into service.
- B. Hydronic Service Procedure:
 - 1. Cleaning water lines are to be cleaned by placing one 2" connection each end of new run of supply and return pipe and piping with circulating pump to move chemicals through pipe for period of 2 days. Then dump & drain after approval by City of Wichita Falls. Should City not approve dumping, then it shall be the responsibility of the mechanical contractor to arrange disposal of chemical as well as two refills for flushing.
 - 2. Cleaning of CHS and CHR shall be done using solvent or chemical compound acceptable to the City of Wichita Falls and shall contain no phosphates in any form, (Organic Citrus based cleaners have in the past been acceptable). The final cleaning shall meet the latest City of Wichita Falls Water Quality Sample requirements.
 - 3. Refill cleaned system with fresh water to which adequate amounts of suitable chemicals have been added.
- C. Steam and Condensate Return System: Clean all fittings and pipes before installation. After installation, blow out all steam lines with steam and repeat as necessary to insure all foreign particles are removed.
- D. Blow off all strainers.
- E. Waste and Drain Lines: Swab out lines; flush with fresh water.
- F. Repetition: Repeat the above procedures until all parts of each piping system are thoroughly cleaned of all foreign materials.

END OF SECTION

SECTION 232116

HYDRONIC PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes special-duty valves and specialties for the following:
 - 1. Hot-water heating piping.
 - 2. Chilled-water piping.
 - 3. Makeup-water piping.
 - 4. Condensate-drain piping.
 - 5. Blowdown-drain piping.
 - 6. Air-vent piping.
 - 7. Safety-valve-inlet and -outlet piping.
- B. Related Sections include the following:
 - 1. Division 23 Section "Expansion Fittings and Loops for HVAC Piping" for expansion fittings.
 - 2. Division 23 Section "General-Duty Valves for HVAC Piping" for valves and accessories for piping.
 - 3. Division 23 Section "Heat Tracing for HVAC Piping" for heat tracing system requirements and applications.
 - 4. Division 23 Section "HVAC Insulation" for pipe saddles at pipe hangers.
 - 5. Division 23 Section "HVAC Water Treatment" for water-treatment chemicals, equipment, and controls.
 - 6. Division 23 Section "Steam and Condensate Piping".
 - 7. Division 23 Section "Steam and Condensate Specialties".
 - 8. Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment" for seismic and wind restraint requirements.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of the following:
 - 1. Valves: Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.
 - 2. Air-control devices.
 - 3. Hydronic specialties.
- B. Shop Drawings: Detail, at 1/4 scale, the piping layout, fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to the building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air-control devices, hydronic specialties, and special-duty valves to include in emergency, operation, and maintenance manuals.

1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. Differential Pressure Meter: For each type of balancing valve and automatic flow control valve, include flowmeter, probes, hoses, flow charts, and carrying case.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Pipe Welding: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
 - a. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Hydronic piping components and installation shall be capable of withstanding 150 psig minimum working pressure at the temperature listed below, unless otherwise indicated:
 - 1. Hot-Water Heating Piping: 200 deg F.
 - 2. Chilled-Water Piping: 200 deg F.
 - 3. Makeup-Water Piping: 200 deg F.
 - 4. Condensate-Drain Piping: 200 deg F.
 - 5. Blowdown-Drain Piping: 200 deg F.
 - 6. Air-Vent Piping: 200 deg F.
 - 7. Safety-Valve-Inlet and -Outlet Piping: Equal to the pressure of the piping system to which it is attached.
 - 8. Pre-insulated Piping Systems: Same as the piping system to which it is attached.

2.2 VALVES

- A. Gate, Globe, Check, Ball, and Butterfly Valves: Comply with requirements specified in Division 23 Section "General-Duty Valves for HVAC Piping."
- B. Automatic Temperature-Control Valves, Actuators, and Sensors: Comply with requirements specified in Division 23 Section "Instrumentation and Control for HVAC."
- C. Bronze, Calibrated-Orifice, Balancing Valves:
 - 1. Manufacturers:
 - a. Armstrong Pumps, Inc.

- b. Bell & Gossett Domestic Pump; a division of ITT Industries.
 - c. Flow Design Inc.
 - d. Griswold Controls.
 - e. Taco.
 - 2. Body: Bronze, ball or plug type with calibrated orifice or venturi.
 - 3. Ball: Brass or stainless steel.
 - 4. Plug: Resin.
 - 5. Seat: PTFE.
 - 6. End Connections: Threaded or socket.
 - 7. Pressure Gage Connections: Integral seals for portable differential pressure meter.
 - 8. Handle Style: Lever, with memory stop to retain set position.
 - 9. CWP Rating: Minimum 125 psig.
 - 10. Maximum Operating Temperature: 250 deg F.
- D. Cast-Iron or Steel, Calibrated-Orifice, Balancing Valves:
- 1. Manufacturers:
 - a. Armstrong Pumps, Inc.
 - b. Bell & Gossett Domestic Pump; a division of ITT Industries.
 - c. Flow Design Inc.
 - d. Grinnell Mechanical Products.
 - e. Griswold Controls.
 - f. Taco.
 - g. Tour & Andersson; available through Victaulic Company of America.
 - 2. Body: Cast-iron or steel body, ball, plug, or globe pattern with calibrated orifice or venturi.
 - 3. Ball: Brass or stainless steel.
 - 4. Stem Seals: EPDM O-rings.
 - 5. Seat: PTFE.
 - 6. End Connections: Flanged or grooved.
 - 7. meter.
 - 8. Handle Style: Lever, with memory stop to retain set position.
 - 9. CWP Rating: Minimum 125 psig.
 - 10. Maximum Operating Temperature: 250 deg F.
- E. Diaphragm-Operated, Pressure-Reducing Valves:
- 1. Manufacturers:
 - a. Amtrol, Inc.
 - b. Armstrong Pumps, Inc.
 - c. Bell & Gossett Domestic Pump; a division of ITT Industries.
 - d. Conbraco Industries, Inc.
 - e. Spence Engineering Company, Inc.
 - f. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - 2. Body: Bronze or brass.
 - 3. Seat: Brass.
 - 4. Stem Seals: EPDM O-rings.
 - 5. Diaphragm: EPT.
 - 6. Low inlet-pressure check valve.
 - 7. Inlet Strainer: Stainless steel, removable without system shutdown.

8. Valve Seat and Stem: Noncorrosive.
9. Valve Size, Capacity, and Operating Pressure: Selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.

F. Diaphragm-Operated Safety Valves: ASME labeled.

1. Manufacturers:
 - a. Amtrol, Inc.
 - b. Armstrong Pumps, Inc.
 - c. Bell & Gossett Domestic Pump; a division of ITT Industries.
 - d. Conbraco Industries, Inc.
 - e. Spence Engineering Company, Inc.
 - f. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
2. Body: Bronze or brass.
3. Seat: Brass.
4. Stem Seals: EPDM O-rings.
5. Diaphragm: EPT.
6. Wetted, Internal Work Parts: Brass and rubber.
7. Inlet Strainer: Stainless steel, removable without system shutdown.
8. Valve Seat and Stem: Noncorrosive.
9. Valve Size, Capacity, and Operating Pressure: Comply with ASME Boiler and Pressure Vessel Code: Section IV, and selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.

G. Automatic Flow-Control Valves:

1. Manufacturers:
 - a. Flow Design Inc.
 - b. Griswold Controls.
 - c. Nexus.
 - d. NuTech.
2. Body: Brass or ferrous metal.
3. Piston and Spring Assembly: Stainless steel, tamper proof, self cleaning, and removable.
4. Combination Assemblies: Include bronze or brass-alloy ball valve.
5. Identification Tag: Marked with zone identification, valve number, and flow rate.
6. Size: Same as pipe in which installed.
7. Performance: Maintain constant flow, plus or minus 5 percent over system pressure fluctuations.
8. Minimum CWP Rating: 175 psig.
9. Minimum Operating Temperature: 200 deg F.

2.3 AIR-CONTROL DEVICES

A. Manufacturers:

1. Amtrol, Inc.
2. Armstrong Pumps, Inc.
3. Bell & Gossett Domestic Pump; a division of ITT Industries.
4. Taco.
5. Spirotherm.

B. Manual Air Vents:

1. Body: Bronze.
2. Internal Parts: Nonferrous.
3. Operator: Screwdriver or thumbscrew.
4. Inlet Connection: NPS 1/2 (DN 15).
5. Discharge Connection: NPS 1/8.
6. Minimum Simultaneous Operating Point: 150 psig at 225 deg F.

C. Automatic Air Vents:

1. Body: Bronze or cast iron.
2. Internal Parts: Nonferrous.
3. Operator: Noncorrosive metal float.
4. Inlet Connection: NPS 1/2 (DN 15).
5. Discharge Connection: NPS 1/4 (DN 8).
6. Minimum Simultaneous Operating Point: 150 psig at 240 deg F.

D. Expansion Tanks, Bladder Type:

1. Tank: Welded steel, rated for 125-psig (860-kPa) working pressure and 375 deg F (191 deg C) maximum operating temperature. Factory test after taps are fabricated and supports installed and are labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
2. Bladder: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.
3. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.
4. Bladder shall be sized for full acceptance without failure of the membrane.

E. Tangential-Type Air Separators:

1. Tank: Welded steel; ASME constructed and labeled for 125-psig (860-kPa) minimum working pressure and 375 deg F (191 deg C) maximum operating temperature.
2. Air Collector Tube: Perforated stainless steel, constructed to direct released air into expansion tank.
3. Tangential Inlet and Outlet Connections: Threaded for NPS 2 (DN 50) and smaller; flanged connections for NPS 2-1/2 (DN 65) and larger.
4. Blowdown Connection: Threaded.
5. Size: Match system flow capacity, unless otherwise indicated.

F. In-Line Air Separators:

1. Tank: One-piece cast iron with an integral weir constructed to decelerate system flow to maximize air separation.
2. Minimum Simultaneous Operating Point: 175 psig at 300 deg F.

G. Air Purgers:

1. Body: Cast iron with internal baffles that slow the water velocity to separate the air from solution and divert it to the vent for quick removal.
2. Minimum Simultaneous Operating Point: 150 psig at 250 deg F.

2.4 HYDRONIC PIPING SPECIALTIES

- A. Strainer Perforations: All strainers shall be stainless steel and sized based on the service and installed pipe size as indicated by the table below, unless indicated otherwise.

SERVICE DUTY	PIPE SIZE (NPS)	STRAINER PERFORATION SIZE (in)
Chilled and Hot Water	1/4" to 2"	0.033
	2-1/2" to 4"	0.057
	6" and Larger	0.125"
Condenser Water	1/4" to 2"	0.020
	2-1/2" to 4"	0.045
	6" and Larger	0.100

- B. Y-Pattern Strainers:

1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger. Grooved connections are also acceptable.
3. CWP Rating: 125 psig (860 kPa).

- C. Basket Strainers:

1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger. Grooved connections are also acceptable.
3. CWP Rating: 125 psig.

- D. T-Pattern Strainers:

1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
2. End Connections: Grooved ends.
3. CWP Rating: 750 psig.

- E. Stainless-Steel Bellow, Flexible Connectors:

1. Body: Stainless-steel bellows with woven, flexible, bronze, wire-reinforcing protective jacket.
2. End Connections: Threaded or flanged to match equipment connected.
3. Performance: Capable of 3/4-inch (20-mm) misalignment.
4. CWP Rating: 150 psig (1035 kPa).
5. Maximum Operating Temperature: 250 deg F (121 deg C).

- F. Spherical, Rubber, Flexible Connectors:

1. Body: Fiber-reinforced rubber body.

2. End Connections: Steel flanges drilled to align with Classes 150 and 300 steel flanges.
3. Performance: Capable of misalignment.
4. CWP Rating: 150 psig (1035 kPa).
5. Maximum Operating Temperature: 250 deg F (121 deg C).

PART 3 - EXECUTION

3.1 VALVE APPLICATIONS

- A. Install valves according to Division 23 Section "General-Duty Valves for HVAC Piping."
- B. Install shutoff-duty valves at each branch connection to supply mains and at supply connection to each piece of equipment.
- C. Install calibrated-orifice, balancing valves at each branch connection to return main.
- D. Install check valves at each pump discharge and elsewhere as required to control flow direction.
- E. Install safety valves at hot-water generators and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install drip-pan elbow on safety-valve outlet and pipe without valves to the outdoors; pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.
- F. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.
- G. All valves shall be installed with stems in vertical position, unless otherwise indicated. If not possible, stems may be installed 45° off vertical position where allowed by manufacturer.
- H. Install unions in piping, NPS 2 and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.
- I. Install flanges in piping, NPS 2-1/2 and larger, at final connections of equipment and elsewhere as indicated.
- J. Install strainers on inlet side of each control valve, pressure-reducing valve, solenoid valve, in-line pump, and elsewhere as indicated. Install NPS 3/4 nipple and ball valve in blowdown connection of strainers NPS 2 and larger. Match size of strainer blowoff connection for strainers smaller than NPS 2.

3.2 HYDRONIC SPECIALTIES INSTALLATION

- A. Select system components with pressure rating equal to or greater than system operating pressure.
- B. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.
- C. Install automatic air vents at high points of system piping in mechanical equipment rooms only. Install manual vents at heat-transfer coils and elsewhere as required for air venting.
- D. Install piping from boiler air outlet, air separator, or air purger to expansion tank with a 2 percent upward slope toward tank.

- E. Install air separators on chilled and heating water systems.
- F. Install tangential air separator for system on suction side of pump header prior to first pump. Install blowdown piping with gate or full-port ball valve; extend full size to nearest floor drain.
- G. Install expansion tanks above the air separator. Install tank fitting in tank bottom and charge tank. Use manual vent for initial fill to establish proper water level in tank.
 - 1. Install tank fittings that are shipped loose.
 - 2. Support tank from floor or structure above with sufficient strength to carry weight of tank, piping connections, fittings, plus tank full of water. Do not overload building components and structural members.
- H. Install expansion tanks on the floor or suspended as indicated. Vent and purge air from hydronic system, and ensure that tank is properly charged with air to suit system Project requirements.

END OF SECTION

SECTION 232123

HYDRONIC PUMPS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Close-coupled, in-line centrifugal pumps.
 - 2. Close-coupled, end-suction centrifugal pumps.
 - 3. Separately coupled, base-mounted, end-suction centrifugal pumps.
 - 4. Automatic condensate pump units.

1.2 DEFINITIONS

- A. Buna-N: Nitrile rubber.
- B. EPT: Ethylene propylene terpolymer.
- C. OPD: Open Drip-proof
- D. TEFC: Totally Enclosed Fan Cooled

1.3 ACTION SUBMITTALS

- A. Product Data: Include certified performance curves and rated capacities, operating characteristics, furnished specialties, final impeller dimensions, and accessories for each type of product indicated. Indicate pump's operating point on curves.
- B. Shop Drawings: Show pump layout and connections. Include setting drawings with templates for installing foundation and anchor bolts and other anchorages.
 - 1. Wiring Diagrams: Power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Show fan room layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.
- B. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS.

- A. Operation and Maintenance Data: For pumps to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Source Limitations: Obtain hydronic pumps through one source from a single manufacturer.
- B. Product Options: Drawings indicate size, profiles, and dimensional requirements of hydronic pumps and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Manufacturer's Preparation for Shipping: Clean flanges and exposed machined metal surfaces and treat with anticorrosion compound after assembly and testing. Protect flanges, pipe openings, and nozzles with wooden flange covers or with screwed-in plugs.
- B. Store pumps in dry location.
- C. Retain protective covers for flanges and protective coatings during storage.
- D. Protect bearings and couplings against damage from sand, grit, and other foreign matter.
- E. Comply with pump manufacturer's written rigging instructions.

1.8 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.9 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Mechanical Seals: One mechanical seal for each pump.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Little Giant Pump Co.; Subsidiary of Tecumseh Products Co.
- B. PACO Pumps.
- C. Taco, Inc. Basis of Design.

2.2 GENERAL HYDRONIC PUMP REQUIREMENTS

- A. Provide hydronic pumps of the type, rotational speed and arrangement indicated and scheduled; each rated to deliver the capacity indicated in the tabulation on the Drawings against the head of the system in which it operates.
- B. Provide each centrifugal pump with an impeller whose diameter is 90% or less of the maximum impeller which the manufacturer shows in his published curves for that pump. Pump selection shall be such that variation of plus or minus 15% of head estimated can be accomplished by "trimming" impellers by the manufacturer.
- C. Impellers shall only be trimmed by manufacturer or an authorized manufacturer's representative.
- D. Efficiencies for the pumps selected for submittal shall be equal to or greater than the efficiency of the scheduled pumps at the scheduled design conditions.
- E. Provide each pump with a constant speed or variable speed (as scheduled), premium efficiency, with minimum efficiencies as listed in Division 23 Common Motor Requirements for HVAC Equipment, ODP motor, unless noted to be a TEFC, wound for operation on the current characteristics indicated in the tabulation on the Drawings. Size each motor with relation to the pump impeller so that the required brake horsepower will not exceed the rated motor horsepower at any point on the pump curve.
- F. Provide pump rated for a continuous water temperature of 225 deg F (107 deg C), unless otherwise indicated.
- G. Provide pump rated for 125 psig (860 kPa) or 250 psig (1720 kPa) as required by its service, unless otherwise indicated. Provide class 125 or 250 flanges to match pump rated service pressure.
- H. Match rating of overcurrent protective device serving the pump assembly. Provide equipment with the available short-circuit current as indicated on the Drawings. Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.

2.3 CLOSE-COUPLED, IN-LINE CENTRIFUGAL PUMPS

- A. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, close-coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally or vertically.
- B. Pump Construction:
 - 1. Casing: Radially split, cast iron, with replaceable bronze wear rings, threaded gage tappings at inlet and outlet, and threaded companion-flange or union end connections, unless otherwise indicated.
 - 2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. Trim impeller to match specified performance.
 - 3. Pump Shaft: Stainless steel.
 - 4. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N bellows and gasket. Include water slinger on shaft between motor and seal.
 - 5. Pump Bearings: Permanently lubricated ball bearings.

- C. Motor: Single speed, with permanently lubricated or grease-lubricated ball bearings, unless otherwise indicated; and rigidly mounted to pump casing. Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."

2.4 CLOSE-COUPLED, END-SUCTION CENTRIFUGAL PUMPS

- A. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, close-coupled, end-suction pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally.
- B. Pump Construction:
 - 1. Casing: Radially split, cast iron, with replaceable bronze wear rings, drain plug at bottom and air vent at top of volute, threaded gage tappings at inlet and outlet, and threaded companion-flange or flanged connections.
 - 2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. Trim impeller to match specified performance.
 - 3. Pump Shaft: Stainless steel.
 - 4. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N bellows and gasket. Include water slinger on shaft between motor and seal.
 - 5. Pump Bearings: Permanently lubricated ball bearings.
 - 6. Motor: Single speed, with permanently lubricated or grease-lubricated ball bearings, unless otherwise indicated; rigidly mounted to pump casing with integral pump support. Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."

2.5 SEPARATELY COUPLED, BASE-MOUNTED, END-SUCTION CENTRIFUGAL PUMPS

- A. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, separately coupled, end-suction pump as defined in HI 1.1-1.2 and HI 1.3; designed for base mounting, with pump and motor shafts horizontal.
- B. Pump Construction:
 - 1. Casing: Radially split, cast iron, with replaceable bronze wear rings, threaded gage tappings at inlet and outlet, drain plug at bottom and air vent at top of volute, and threaded companion-flange or flanged connections unless otherwise indicated.
 - 2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. Trim impeller to match specified performance.
 - 3. Pump Shaft: Stainless steel.
 - 4. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N bellows and gasket.
 - 5. Pump Bearings: Grease-lubricated ball bearings contained in cast-iron housing with grease fittings.
- C. Shaft Coupling: Molded rubber insert and interlocking spider capable of absorbing vibration. Couplings shall be drop-out type to allow disassembly and removal without removing pump shaft or motor for single speed or an EPDM coupling sleeve for variable-speed applications.
- D. Coupling Guard: Dual rated; ANSI B15.1, Section 8; OSHA 1910.219 approved; steel; removable; attached to mounting frame.

- E. Mounting Frame: Welded-steel frame and cross members, factory fabricated from ASTM A 36/A 36M channels and angles. Fabricate to mount pump casing, coupling guard, and motor.
- F. Motor: Single speed, with permanently lubricated or grease-lubricated ball bearings, unless otherwise indicated; secured to mounting frame, with adjustable alignment. Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."

2.6 AUTOMATIC CONDENSATE PUMP UNITS

- A. Description: Packaged units with corrosion-resistant pump, plastic tank with cover, and automatic controls. Include factory- or field-installed check valve and a 72-inch-minimum, electrical power cord with plug.

2.7 PUMP SPECIALTY FITTINGS

- A. Suction Diffuser: Angle pattern, 150-psig (1034-kPa) pressure rating, ductile-iron body and end cap, pump-inlet fitting; with bronze startup and bronze or stainless-steel permanent strainers; bronze or stainless-steel straightening vanes; drain plug; and factory-fabricated support. Unit shall be drilled and tapped for gauge connections.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine equipment foundations and anchor-bolt locations for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before pump installation.
- C. Examine foundations and inertia bases for suitable conditions where pumps are to be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CONCRETE BASES

- A. Install concrete bases of dimensions indicated for pumps and controllers. Refer to Division 23 Section "Common Work Results for HVAC."
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around full perimeter of base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- B. Cast-in-place concrete materials and placement requirements are specified in Division 03.

3.3 PUMP INSTALLATION

- A. Comply with HI 1.4.
- B. Pump impellers shall be trimmed when 15% out of scheduled duty.
- C. Install pumps with access for periodic maintenance including removal of motors, impellers, couplings, and accessories.
- D. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.
- E. Install continuous-thread hanger rods and spring hangers of sufficient size to support pump weight. Vibration isolation devices are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment." Fabricate brackets or supports as required. Hanger and support materials are specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
- F. Set base-mounted pumps on concrete foundation with anchor-bolt inserts cast into bases. Disconnect coupling before setting. Do not reconnect couplings until alignment procedure is complete.
 - 1. Support pump baseplate on rectangular metal blocks and shims, or on metal wedges with small taper, at points near foundation bolts to provide a gap of 3/4 to 1-1/2 inches between pump base and foundation for grouting.
 - 2. Adjust metal supports or wedges until pump and driver shafts are level. Check coupling faces and suction and discharge flanges of pump to verify that they are level and plumb.
- G. Automatic Condensate Pump Units: Install units for collecting condensate and extend to open drain.

3.4 ALIGNMENT

- A. Align pump and motor shafts and piping connections after setting on foundation, grout has been set and foundation bolts have been tightened, and piping connections have been made.
- B. Comply with pump and coupling manufacturers' written instructions.
- C. Adjust pump and motor shafts for angular and offset alignment by methods specified in HI 1.1-1.5, "Centrifugal Pumps for Nomenclature, Definitions, Application and Operation."
- D. After alignment is correct, tighten foundation bolts evenly but not too firmly. Completely fill baseplate with nonshrink, nonmetallic grout while metal blocks and shims or wedges are in place. After grout has cured, fully tighten foundation bolts.

3.5 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to machine to allow service and maintenance.
- C. Connect piping to pumps. Install valves that are same size as piping connected to pumps.

- D. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.
- E. Install check valve and throttling or triple-duty valve on discharge side of pumps as indicated on drawings. For VFD pumps, a balancing or combination valve is not required.
- F. Install Y-type strainer or suction diffuser and shutoff valve on suction side of pumps as indicated on drawings.
- G. Install flexible connectors on suction and discharge sides of base-mounted pumps between pump casing and valves. Piping disassembly shall not be required to service pump.
- H. Install pressure gages on pump suction and discharge, at integral pressure-gage tapping, or install single gage with multiple input selector valve.
- I. Install suction diffusers for end suction pumps, except condenser water service.
- J. Install check valve and gate or ball valve on each condensate pump unit discharge.
- K. Install electrical connections for power, controls, and devices.
- L. Install each VFD scheduled according to Division 26 Section "Variable Frequency Motor Controllers"
- M. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- N. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.6 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Check piping connections for tightness.
 - 3. Clean strainers on suction piping.
 - 4. Perform the following startup checks for each pump before starting:
 - a. Verify bearing lubrication.
 - b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
 - c. Verify that pump is rotating in the correct direction.
 - 5. Prime pump by opening suction valves and closing drains, and prepare pump for operation.
 - 6. Start motor.
 - 7. Open discharge valve slowly.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain hydronic pumps. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

SECTION 232213

STEAM AND CONDENSATE HEATING PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following for LP and HP steam and condensate piping:
 - 1. Pipe and fittings.
- B. Related Sections include the following:
 - 1. Division 23 Section "Steam Condensate Pumps" for pumps and accessories for steam piping.
 - 2. Division 23 Section "General-Duty Valves for HVAC Piping" for valves and accessories for piping.
 - 3. Division 23 Section "Expansion Fittings and Loops for HVAC Piping" for expansion fittings.
 - 4. Division 23 Section "Hydronic Piping" for near atmospheric pressure condensate piping.
 - 5. Division 23 Section "HVAC Insulation" for insulation and pipe saddles at pipe hangers.
 - 6. Division 23 Section "Steam and Condensate Piping Specialties" for steam valves, flash tanks, traps, and other accessories.
 - 7. Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment" for seismic and wind restraint requirements.

1.2 DEFINITIONS

- A. FMS: Facility Management System.
- B. HP Systems: High-pressure piping operating at more than 15 psig as required by ASME B31.1.
- C. LP Systems: Low-pressure piping operating at 15 psig or less as required by ASME B31.9.

1.3 ACTION SUBMITTALS

- A. Product Data. Include data on pipe materials, pipe fittings, and applications.
- B. Shop Drawings: Detail, 1/4 inch equals 1 foot scale, flash tank assemblies and fabrication of pipe anchors, hangers, pipe, multiple pipes, alignment guides, and expansion joints and loops and their attachment to the building structure. Detail locations of anchors, alignment guides, and expansion joints and loops.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Welding certificates.

- C. Field quality-control test reports.

1.5 QUALITY ASSURANCE

- A. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code - Steel."
- B. Pipe Welding: Qualify procedures and operators according to the following:
 - 1. ASME Compliance:
 - a. Comply with ASME B31.1, "Power Piping" for HP systems for materials, products, and installation.
 - b. Comply with ASME B31.9, "Building Services Piping" for LP systems for materials, products, and installation.
 - c. Safety valves and pressure vessels shall bear the appropriate ASME label.
 - d. Fabricate and stamp flash tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
- C. All underground distribution systems shall be designed in strict conformance to the latest edition of ANSI B31.1 or local requirements, whichever is more stringent, and sealed by a Registered Professional Engineer in good standing with state and local authorities. The system shall be designed to compensate for stresses and movement of the service pipe.

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

- A. Drawn-Temper Copper Tubing: ASTM B 88, Type L.
- B. Annealed-Temper Copper Tubing: ASTM B 88, Type K.
- C. Wrought-Copper Fittings and Unions: ASME B16.22.

2.2 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel, plain ends, Type, Grade, and Schedule as indicated in Part 3 piping applications articles.
- B. Cast-Iron Threaded Fittings: ASME B16.4; Classes 125, 150, and 300 as indicated in Part 3 piping applications articles.
- C. Malleable-Iron Threaded Fittings: ASME B16.3; Classes 150 and 300 as indicated in Part 3 piping applications articles.
- D. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300 as indicated in Part 3 piping applications articles.

- E. Cast-Iron Threaded Flanges and Flanged Fittings: ASME B16.1, Classes 125 and 250 as indicated in Part 3 piping applications articles; raised ground face, and bolt holes spot faced.
- F. Wrought-Steel Fittings: ASTM A 234/A 234M, wall thickness to match adjoining pipe.
- G. Wrought-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
 - 1. Material Group: 1.1.
 - 2. End Connections: Butt welding.
 - 3. Facings: Raised face.
- H. Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M, black steel of same Type, Grade, and Schedule as pipe in which installed.
- I. Stainless-Steel Bellows, Flexible Connectors:
 - 1. Body: Stainless-steel bellows with woven, flexible, bronze, wire-reinforced, protective jacket.
 - 2. End Connections: Threaded or flanged to match equipment connected.
 - 3. Performance: Capable of 3/4-inch misalignment.
 - 4. CWP Rating: 150-psig.
 - 5. Maximum Operating Temperature: 250 deg F.

2.3 JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
- B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- C. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- D. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze or steel.
- E. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- F. Welding Materials: Comply with Section II, Part C, of ASME Boiler and Pressure Vessel Code for welding materials appropriate for wall thickness and for chemical analysis of pipe being welded.

2.4 DIELECTRIC FITTINGS

- A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
- B. Insulating Material: Suitable for system fluid, pressure, and temperature.
- C. Dielectric Unions:
 - 1. Available Manufacturers:
 - a. Capitol Manufacturing Company.
 - b. Hart Industries, International Inc.
 - c. Watts Water Technologies, Inc.
 - d. Zurn Plumbing Products Group.
 - 2. Factory-fabricated union assembly, for 250-psig minimum working pressure at 180 deg F.
- D. Dielectric Flanges:
 - 1. Available Manufacturers:
 - a. Capitol Manufacturing Company.
 - b. Watts Water Technologies, Inc..
 - 2. Factory-fabricated companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.
- E. Dielectric-Flange Kits:
 - 1. Available Manufacturers:
 - a. Advance Products & Systems, Inc.
 - b. Calpico, Inc.
 - c. Pipeline Seal and Insulator, Inc.
 - 2. Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
 - 3. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure as required to suit system pressures.

PART 3 - EXECUTION

3.1 LP STEAM PIPING APPLICATIONS

- A. LP Steam Piping, aboveground, NPS 2 and Smaller: Standard weight, Type S, Grade B, steel pipe; Class 125 cast-iron fittings; and threaded joints.
- B. LP Steam Piping, aboveground, NPS 2-1/2 and Larger: Standard weight, Type E, Grade B, steel pipe; Class 150 wrought-steel fittings, flanges, and flange fittings; and welded and flanged joints.

- C. LP Steam Piping, aboveground, NPS 14 and larger: Standard weight, Type E, Grade B, steel pipe; Class 150 wrought-steel fittings, flanges, and flange fittings; and welded and flanged joints.

3.2 CONDENSATE PIPING APPLICATIONS

- A. Condensate piping, aboveground, NPS 2 and smaller, shall be the following: Extra-strong, Type S, Grade B, steel pipe; Class 125 cast-iron fittings; and threaded joints.
- B. Condensate piping, aboveground, NPS 2-1/2 and larger, shall be the following: Extra-strong, Type E, Grade B, steel pipe; Class 150 wrought-steel fittings, flanges, and flange fittings; and welded and flanged joints.
- C. Condensate Piping, belowground: Pre-insulated piping system with service pipe as described above.

3.3 ANCILLARY PIPING APPLICATIONS

- A. Blowdown-Drain Piping: Same materials and joining methods as for piping specified for the service in which blowdown drain is installed.
- B. Air-Vent Piping:
 - 1. Inlet: Same as service where installed.
 - 2. Outlet: Type K annealed-temper copper tubing with soldered or flared joints.
- C. Vacuum-Breaker Piping: Outlet, same as service where installed.
- D. Safety-Valve-Inlet and -Outlet Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed.

3.4 VALVE APPLICATIONS

- A. Install shutoff duty valves at branch connections to steam supply mains, at steam supply connections to equipment, and at the outlet of steam traps.
- B. Install safety valves on pressure-reducing stations and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install safety-valve discharge piping, without valves, to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.

3.5 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Use indicated piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping free of sags and bends.
- G. Install fittings for changes in direction and branch connections.
- H. Install piping to allow application of insulation.
- I. Select system components with pressure rating equal to or greater than system operating pressure.
- J. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.
- K. Install drains, consisting of a tee fitting, NPS 3/4 full port-ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
- L. Install steam supply piping at a minimum uniform grade of 0.2 percent downward in direction of steam flow.
- M. Install condensate return piping at a minimum uniform grade of 0.4 percent downward in direction of condensate flow.
- N. Reduce pipe sizes using eccentric reducer fitting installed with level side down.
- O. Install branch connections to mains using tee fittings in main pipe, with the branch connected to top of main pipe.
- P. Install valves according to Division 23 Section "General-Duty Valves for HVAC Piping."
- Q. Install expansion loops, expansion joints, anchors, and pipe alignment guides as specified in Division 23 Section "Expansion Fittings and Loops for HVAC Piping."
- R. Identify piping as specified in Division 23 Section "Identification for HVAC Piping and Equipment."
- S. Install drip legs at low points and natural drainage points such as ends of mains, bottoms of risers, and ahead of pressure regulators, and control valves.
 - 1. On straight runs with no natural drainage points, install drip legs at intervals not exceeding 100 feet.
 - 2. Size drip legs same size as main. In steam mains NPS 6 and larger, drip leg size can be reduced, but to no less than NPS 4.

3.6 HANGERS AND SUPPORTS

- A. Install hangers and supports according to Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
- B. Seismic restraints are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."

3.7 PIPE JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.
- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube ends. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
- F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.8 TERMINAL EQUIPMENT CONNECTIONS

- A. Size for supply and return piping connections shall be the same as or larger than equipment connections.
- B. Install traps and control valves in accessible locations close to connected equipment.
- C. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.
- D. Install vacuum breakers downstream from control valve, close to coil inlet connection.
- E. Install a drip leg at coil outlet.

3.9 FIELD QUALITY CONTROL

- A. Prepare steam and condensate piping according to ASME B31.1, "Power Piping" and ASME B31.9, "Building Services Piping," and as follows:
 - 1. Leave joints, including welds, uninsulated and exposed for examination during test.
 - 2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
 - 3. Flush system with clean water. Clean strainers.
 - 4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
- B. Perform the following tests on steam and condensate piping:
 - 1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
 - 2. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength.
 - 3. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
- C. Prepare written report of testing.

END OF SECTION

SECTION 232216

STEAM AND CONDENSATE PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes the following piping specialties for low (LP) pressure steam and condensate piping:
 - 1. Strainers.
 - 2. Safety valves.
 - 3. Thermostatic air vents and vacuum breakers.

1.2 DEFINITIONS

- A. FMS: Facility Management System.
- B. HP Systems: High-pressure piping operating at more than 15 psig as required by ASME B31.1.
- C. LP Systems: Low-pressure piping operating at 15 psig or less as required by ASME B31.9.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of the following, noting the service for each:
 - 1. Air vent and vacuum breaker.
- B. Shop Drawings: Detail, 1/4 inch equals 1 foot scale, flash tank assemblies and fabrication of pipe anchors, hangers, pipe, multiple pipes, alignment guides, and expansion joints and loops and their attachment to the building structure. Detail locations of anchors, alignment guides, and expansion joints and loops.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For valves, safety valves, pressure-reducing valves, steam traps, air vents, vacuum breakers, and meters to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Pipe Welding: Qualify procedures and operators according to the following:
 - 1. ASME Compliance:
 - a. Comply with ASME B31.1, "Power Piping" for HP systems for materials, products, and installation.

- b. Comply with ASME B31.9, "Building Services Piping" for LP systems for materials, products, and installation.
 - c. Safety valves and pressure vessels shall bear the appropriate ASME label.
 - d. Fabricate and stamp flash tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Components and installation shall be capable of withstanding the following minimum working pressures and temperatures unless otherwise indicated:
- 1. LP Steam and Condensate Piping: 15.0 psig or less.
 - 2. Makeup-Water Piping: Identical to domestic water piping.
 - 3. Blowdown-Drain Piping: Equal to pressure of the piping system to which it is attached.
 - 4. Air-Vent and Vacuum-Breaker Piping: Equal to pressure of the piping system to which it is attached.
 - 5. Safety-Valve-Inlet and -Outlet Piping: Equal to pressure of the piping system to which it is attached.

2.2 VALVES

- A. Gate, Globe, Check, Ball, and Butterfly Valves: Comply with requirements specified in Division 23 Section "General-Duty Valves for HVAC Piping."
- B. Stop-Check Valves:
- 1. Manufacturers:
 - a. A.Y. McDonald Mfg. Co.
 - b. Crane; Crane Energy Flow Solutions.
 - c. Jenkins Valves.
 - d. Lunkenheimer Valves.
 - 2. Body and Bonnet: Malleable iron.
 - 3. End Connections: Flanged.
 - 4. Disc: Cylindrical with removable liner and machined seat.
 - 5. Stem: Brass alloy.
 - 6. Operator: Outside screw and yoke with cast-iron handwheel.
 - 7. Packing: Polytetrafluoroethylene-impregnated packing with two-piece packing gland assembly.
 - 8. Pressure Class: 250.

2.3 STRAINERS

- A. Strainer Perforations: All strainer baskets shall be stainless steel and sized based on the service and installed pipe size as indicated by the table below, unless indicated otherwise.

B. SERVICE DUTY	C. PIPE SIZE (NPS)	D. STRAINER PERFORATION SIZE (in)
E. STEAM	F. 1/4" TO 2"	G. 0.020
	H. 2-1/2" TO 4"	I. 0.031
	J. 6" AND GREATER	K. 0.250

L. Y-Pattern Strainers:

1. Body: ASTM A 126, Class B cast iron, with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for strainers NPS 2 and smaller; flanged ends for strainers NPS 2-1/2 and larger.
3. Tapped blowoff plug.
4. CWP Rating: 250-psig working steam pressure.

M. Basket Strainers:

1. Body: ASTM A 126, Class B cast iron, with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for strainers NPS 2 and smaller; flanged ends for strainers NPS 2-1/2 and larger.
3. CWP Rating: 250-psig working steam pressure.

2.4 SAFETY VALVES

A. Bronze or Brass Safety Valves, NPS 2-1/2 inches and smaller: ASME labeled.

1. Manufacturers:
 - a. Armstrong International, Inc.
 - b. Kunkle Valve.
 - c. Spirax Sarco, Inc.
 - d. Watts; a Watts Water Technologies company.
2. Disc Material: Forged copper alloy.
3. End Connections: Threaded inlet and outlet.
4. Spring: Fully enclosed steel spring with adjustable pressure range and positive shutoff, factory set and sealed.
5. Pressure Class: 250.
6. Drip-Pan Elbow: Cast iron and having threaded inlet and outlet with threads complying with ASME B1.20.1.
7. Size and Capacity: As required for equipment according to ASME Boiler and Pressure Vessel Code.

B. Cast-Iron Safety Valves, NPS 1-1/2 inches through NPS 6 inches: ASME labeled.

1. Manufacturers:
 - a. Armstrong International, Inc.

- b. Kunkle Valve.
 - c. Spirax Sarco, Inc.
 - d. Watts; a Watts Water Technologies company.
2. Disc Material: Forged copper alloy with bronze nozzle.
 3. End Connections: Raised-face flanged inlet and threaded or flanged outlet connections.
 4. Spring: Fully enclosed cadmium-plated steel spring with adjustable pressure range and positive shutoff, factory set and sealed.
 5. Pressure Class: 250.
 6. Drip-Pan Elbow: Cast iron and having threaded inlet, outlet, and drain, with threads complying with ASME B1.20.1.
 7. Exhaust Head: Cast iron and having threaded inlet and drain, with threads complying with ASME B1.20.1.
 8. Size and Capacity: As required for equipment according to ASME Boiler and Pressure Vessel Code.

2.5 THERMOSTATIC AIR VENTS AND VACUUM BREAKERS

A. Thermostatic Air Vents:

1. Available Manufacturers:
 - a. Armstrong International, Inc.
 - b. Dunham-Bush, Inc.
 - c. Hoffman Specialty; Division of ITT Industries.
 - d. Spirax Sarco, Inc.
 - e. Sterling.
2. Body: Cast iron, bronze, or stainless steel.
3. End Connections: Threaded.
4. Float, Valve, and Seat: Stainless steel.
5. Thermostatic Element: Phosphor bronze bellows in a stainless-steel cage.
6. Pressure Rating: 1.5x the system to which it is attached.
7. Maximum Temperature Rating: 1.5x the system to which it is attached.

B. Vacuum Breakers:

1. Available Manufacturers:
 - a. Armstrong International, Inc.
 - b. Dunham-Bush, Inc.
 - c. Hoffman Specialty; Division of ITT Industries.
 - d. Johnson Corporation (The).
 - e. Spirax Sarco, Inc.
2. Body: Cast iron, bronze, or stainless steel.
3. End Connections: Threaded.
4. Sealing Ball, Retainer, Spring, and Screen: Stainless steel.
5. O-Ring Seal: EPR.
6. Pressure Rating: 1.5x the system to which it is attached.
7. Maximum Temperature Rating: 1.5x the system to which it is attached.

2.6 FLEXIBLE CONNECTORS

A. Stainless-Steel Bellows, Flexible Connectors:

1. Manufacturers:
 - a. Duraflex, Inc.
 - b. Flexicraft Industries.
 - c. Hyspan Precision Products, Inc.
 - d. Mason Industries, Inc.
 - e. Metraflex Company (The).
2. Body: Stainless-steel bellows with woven, flexible, bronze, wire-reinforced, protective jacket.
3. End Connections: Threaded or flanged to match equipment connected.
4. Performance: Capable of 3/4-inch misalignment.
5. Pressure Rating: 1.5x the system to which it is attached.
6. Maximum Temperature Rating: 1.5x the system to which it is attached.

PART 3 - EXECUTION

3.1 VALVE APPLICATIONS

- A. Install shutoff duty valves at branch connections to steam supply mains, at steam supply connections to equipment, and at the outlet of steam traps.
- B. Install safety valves on pressure-reducing stations and elsewhere as required by ASME Boiler and Pressure Vessel Code.
- C. Install safety-valve discharge piping, without valves, to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.

3.2 PIPING INSTALLATION

- A. Select system components with pressure rating equal to or greater than system operating pressure.
- B. Install piping to permit valve servicing.
- C. Install drains, consisting of a tee fitting, NPS 3/4 full port-ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
- D. Install valves according to Division 23 Section "General-Duty Valves for HVAC Piping."
- E. Install unions in piping, NPS 2 and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.
- F. Install flanges in piping, NPS 2-1/2 and larger, at final connections of equipment and elsewhere as indicated.

- G. Install shutoff valve immediately upstream of each dielectric fitting.
- H. Install strainers on supply side of control valves, pressure-reducing valves, traps, and elsewhere as indicated. Install NPS 3/4 nipple and full port ball valve in blowdown connection of strainers NPS 2 and larger. Match size of strainer blowoff connection for strainers smaller than NPS 2.

3.3 SAFETY VALVE INSTALLATION

- A. Install safety valves according to ASME B31.1, "Power Piping" or ASME B31.9, "Building Services Piping," based on the service installed.
- B. Pipe safety-valve discharge without valves to atmosphere outside the building.
- C. Install drip-pan elbow fitting adjacent to safety valve and pipe drain connection to nearest floor drain.
- D. Install exhaust head with drain to waste, on vents equal to or larger than NPS 2-1/2.

3.4 HANGERS AND SUPPORTS

- A. Install hangers and supports according to Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
- B. Seismic restraints are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."

3.5 TERMINAL EQUIPMENT CONNECTIONS

- A. Size for supply and return piping connections shall be the same as or larger than equipment connections.
- B. Install traps and control valves in accessible locations close to connected equipment.
- C. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.
- D. Install vacuum breakers downstream from control valve, close to coil inlet connection.
- E. Install a drip leg at coil outlet.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 232300
REFRIGERANT PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Refrigerant pipes and fittings.
2. Refrigerant piping valves and specialties.
3. Refrigerants.

B. Related Sections:

1. Division 23 Section "Common Work Results" for description of concrete bases used as vibration isolation.
2. Division 23 Section "Hangers and Supports for HVAC Piping and Equipment" for installation locations of pipe saddles at pipe hangers.
3. Division 23 Section "Expansion Fittings and Loops for HVAC Piping" for expansion fittings.
4. Division 23 Section "HVAC Insulation" for pipe saddles at pipe hangers.
5. Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment" for seismic and wind restraint requirements.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of valve, refrigerant piping, and piping specialty.

1. Include pressure drop, based on manufacturer's test data, for the following:

- a. Thermostatic expansion valves.
- b. Solenoid valves.
- c. Hot-gas bypass valves.
- d. Filter dryers.
- e. Strainers.
- f. Pressure-regulating valves.

B. Shop Drawings:

1. Delegated-Design Submittal: As a 1/8 inch equals 1 foot scale drawing, show:
 - a. Layout of refrigerant piping and specialties, including pipe, tube, and fitting sizes, as well as slopes of horizontal runs.
 - b. Valve arrangements and locations.
 - c. Oil traps.
 - d. Double risers.
 - e. Wall and floor penetrations.
 - f. Equipment connection details.

2. Indicate elevation difference between compressor and evaporator, refrigerant flows, and other information to ensure proper operation and compliance with warranties of connected equipment.
3. Show interface and spatial relationships between piping and equipment.

1.3 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For refrigerant valves and piping specialties to include in maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to 2010 ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
- B. Comply with ASHRAE 15, "Safety Code for Refrigeration Systems."
- C. Comply with ASME B31.5, "Refrigeration Piping and Heat Transfer Components."

1.6 PRODUCT STORAGE AND HANDLING

- A. Store piping with end caps in place to ensure that piping interior and exterior are clean when installed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Line Test Pressure for Refrigerant R-134a:
 1. Suction Lines for Air-Conditioning Applications: 115 psig.
 2. Suction Lines for Heat-Pump Applications: 225 psig.
 3. Hot-Gas and Liquid Lines: 225 psig.
- B. Line Test Pressure for Refrigerant R-407C:
 1. Suction Lines for Air-Conditioning Applications: 230 psig.
 2. Suction Lines for Heat-Pump Applications: 380 psig.
 3. Hot-Gas and Liquid Lines: 380 psig.
- C. Line Test Pressure for Refrigerant R-410A:
 1. Suction Lines for Air-Conditioning Applications: 300 psig.

2. Suction Lines for Heat-Pump Applications: 535 psig.
3. Hot-Gas and Liquid Lines: 535 psig.

2.2 COPPER TUBE AND FITTINGS

- A. Copper Tube:
 1. ASTM B 88, Type K or L
 2. ASTM B 280, Type ACR.
- B. Wrought-Copper Fittings: ASME B16.22.
- C. Wrought-Copper Unions: ASME B16.22.
- D. Solder Filler Metals: ASTM B 32. Use 95-5 tin antimony or alloy HB solder to join copper socket fittings on copper pipe.
- E. Brazing Filler Metals: AWS A5.8/A5.8M.
- F. Flexible Connectors:
 1. Body: Tin-bronze bellows with woven, flexible, tinned-bronze-wire-reinforced protective jacket.
 2. End Connections: Socket ends.
 3. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch-long assembly.
 4. Working Pressure Rating: Factory test at minimum 500 psig.
 5. Maximum Operating Temperature: 250 deg F.

2.3 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel with plain ends; type, grade, and wall thickness as selected in piping application articles.
- B. Wrought-Steel Fittings: ASTM A 234/A 234M, for welded joints.
- C. Steel Flanges and Flanged Fittings: ASME B16.5, steel, including bolts, nuts, and gaskets, bevel-welded end connection, and raised face.
- D. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- E. Flanged Unions:
 1. Body: Forged-steel flanges for NPS 1 to NPS 1-1/2 and ductile iron for NPS 2 to NPS 3. Apply rust-resistant finish at factory.
 2. Gasket: Fiber asbestos free.
 3. Fasteners: Four plated-steel bolts, with silicon bronze nuts. Apply rust-resistant finish at factory.
 4. End Connections: Brass tailpiece adapters for solder-end connections to copper tubing.
 5. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch-long assembly.
 6. Pressure Rating: Factory test at minimum 400 psig.

7. Maximum Operating Temperature: 330 deg F.

F. Flexible Connectors:

1. Body: Stainless-steel bellows with woven, flexible, stainless-steel-wire-reinforced protective jacket.
2. End Connections:
 - a. NPS 2 and Smaller: With threaded-end connections.
 - b. NPS 2-1/2 and Larger: With flanged-end connections.
3. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch-long assembly.
4. Pressure Rating: Factory test at minimum 500 psig.
5. Maximum Operating Temperature: 250 deg F.

2.4 VALVES AND SPECIALTIES

A. Diaphragm Packless Valves:

1. Body and Bonnet: Forged brass or cast bronze; globe design with straight-through or angle pattern.
2. Diaphragm: Phosphor bronze and stainless steel with stainless-steel spring.
3. Operator: Rising stem and hand wheel.
4. Seat: Nylon.
5. End Connections: Socket, union, or flanged.
6. Working Pressure Rating: 500 psig.
7. Maximum Operating Temperature: 275 deg F.

B. Packed-Angle Valves:

1. Body and Bonnet: Forged brass or cast bronze.
2. Packing: Molded stem, back seating, and replaceable under pressure.
3. Operator: Rising stem.
4. Seat: Nonrotating, self-aligning polytetrafluoroethylene.
5. Seal Cap: Forged-brass or valox hex cap.
6. End Connections: Socket, union, threaded, or flanged.
7. Working Pressure Rating: 500 psig.
8. Maximum Operating Temperature: 275 deg F.

C. Check Valves:

1. Body: Ductile iron, forged brass, or cast bronze; globe pattern.
2. Bonnet: Bolted ductile iron, forged brass, or cast bronze; or brass hex plug.
3. Piston: Removable polytetrafluoroethylene seat.
4. Closing Spring: Stainless steel.
5. End Connections: Socket, union, threaded, or flanged.
6. Maximum Opening Pressure: 0.50 psig.
7. Working Pressure Rating: 500 psig.
8. Maximum Operating Temperature: 275 deg F.

D. Service Valves:

1. Body: Forged brass with brass cap including key end to remove core.

2. Core: Removable ball-type check valve with stainless-steel spring.
 3. Seat: Polytetrafluoroethylene.
 4. End Connections: Copper spring.
 5. Working Pressure Rating: 500 psig.
- E. Solenoid Valves: Comply with AHRI 760 and UL 429; listed and labeled by a National Recognized Testing Laboratory (NRTL).
1. Manufacturers:
 - a. Danfoss Inc.
 2. Emerson Climate Technologies.
 3. Paul Mueller Company.
 4. Body and Bonnet: Plated steel.
 5. Solenoid Tube, Plunger, Closing Spring, and Seat Orifice: Stainless steel.
 6. Seat: Polytetrafluoroethylene.
 7. End Connections: Threaded.
 8. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with 1/2-inch conduit adapter, and 24, 115, or 208-V ac coil.
 9. Working Pressure Rating: 400 psig.
 10. Maximum Operating Temperature: 240 deg F.
- F. Safety Relief Valves: Comply with 2010 ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.
1. Body and Bonnet: Ductile iron and steel, with neoprene O-ring seal.
 2. Piston, Closing Spring, and Seat Insert: Stainless steel.
 3. Seat: Polytetrafluoroethylene.
 4. End Connections: Threaded.
 5. Working Pressure Rating: 400 psig.
 6. Maximum Operating Temperature: 240 deg F.
- G. Thermostatic Expansion Valves: Comply with AHRI 750.
1. Body, Bonnet, and Seal Cap: Forged brass or steel.
 2. Diaphragm, Piston, Closing Spring, and Seat Insert: Stainless steel.
 3. Packing and Gaskets: Non-asbestos.
 4. Capillary and Bulb: Copper tubing filled with refrigerant charge.
 5. Suction Temperature: 40 deg F.
 6. Superheat: Nonadjustable.
 7. Reverse-flow option (for heat-pump applications).
 8. End Connections: Socket, flare, or threaded union.
 9. Working Pressure Rating: 450 psig.
- H. Hot-Gas Bypass Valves: Comply with UL 429; listed and labeled by an NRTL.
1. Body, Bonnet, and Seal Cap: Ductile iron or steel.
 2. Diaphragm, Piston, Closing Spring, and Seat Insert: Stainless steel.
 3. Packing and Gaskets: Non-asbestos.
 4. Solenoid Tube, Plunger, Closing Spring, and Seat Orifice: Stainless steel.
 5. Seat: Polytetrafluoroethylene.
 6. Equalizer: Internal.
 7. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with 1/2-inch conduit adapter and 24, 115, or 208-V ac coil.

8. End Connections: Socket.
9. Throttling Range: Maximum 5 psig.
10. Working Pressure Rating: 500 psig.
11. Maximum Operating Temperature: 240 deg F.

I. Straight-Type Strainers:

1. Body: Welded steel with corrosion-resistant coating.
2. Screen: 100-mesh stainless steel.
3. End Connections: Socket or flare.
4. Working Pressure Rating: 500 psig.
5. Maximum Operating Temperature: 275 deg F.

J. Angle-Type Strainers:

1. Body: Forged brass or cast bronze.
2. Drain Plug: Brass hex plug.
3. Screen: 100-mesh monel.
4. End Connections: Socket or flare.
5. Working Pressure Rating: 500 psig.
6. Maximum Operating Temperature: 275 deg F.

K. Moisture/Liquid Indicators:

1. Body: Forged brass.
2. Window: Replaceable, clear, fused glass window with indicating element protected by filter screen.
3. Indicator: Color coded to show moisture content in parts per million (ppm).
4. Minimum Moisture Indicator Sensitivity: Indicate moisture above 60 ppm.
5. End Connections: Socket or flare.
6. Working Pressure Rating: 500 psig.
7. Maximum Operating Temperature: 240 deg F.

L. Replaceable-Core Filter Dryers: Comply with AHRI 730.

1. Body and Cover: Painted-steel shell with ductile-iron cover, stainless-steel screws, and neoprene gaskets.
2. Filter Media: 10 micron, pleated with integral end rings; stainless-steel support.
3. Desiccant Media: Activated alumina or charcoal.
4. Designed for reverse flow (for heat-pump applications).
5. End Connections: Socket.
6. Access Ports: NPS 1/4 connections at entering and leaving sides for pressure differential measurement.
7. Maximum Pressure Loss: 2 psig.
8. Working Pressure Rating: 500 psig.
9. Maximum Operating Temperature: 240 deg F.

M. Permanent Filter Dryers: Comply with AHRI 730.

1. Body and Cover: Painted-steel shell.
2. Filter Media: 10 micron, pleated with integral end rings; stainless-steel support.
3. Desiccant Media: Activated alumina or charcoal.
4. Designed for reverse flow (for heat-pump applications).
5. End Connections: Socket.

6. Access Ports: NPS 1/4 connections at entering and leaving sides for pressure differential measurement.
7. Maximum Pressure Loss: 2 psig.
8. Working Pressure Rating: 500 psig.
9. Maximum Operating Temperature: 240 deg F.

N. Mufflers:

1. Body: Welded steel with corrosion-resistant coating.
2. End Connections: Socket or flare.
3. Working Pressure Rating: 500 psig.
4. Maximum Operating Temperature: 275 deg F.

O. Receivers: Comply with AHRI 495.

1. Comply with 2010 ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.
2. Comply with UL 207; listed and labeled by an NRTL.
3. Body: Welded steel with corrosion-resistant coating.
4. Tappings: Inlet, outlet, liquid level indicator, and safety relief valve.
5. End Connections: Socket or threaded.
6. Working Pressure Rating: 500 psig.
7. Maximum Operating Temperature: 275 deg F.

P. Liquid Accumulators: Comply with AHRI 495.

1. Body: Welded steel with corrosion-resistant coating.
2. End Connections: Socket or threaded.
3. Working Pressure Rating: 500 psig.
4. Maximum Operating Temperature: 275 deg F.

2.5 REFRIGERANTS

- A. ASHRAE 34, R-134a: Tetrafluoroethane.
- B. ASHRAE 34, R-407C: Difluoromethane / Pentafluoroethane / 1,1,1,2-Tetrafluoroethane.
- C. ASHRAE 34, R-410A: Pentafluoroethane/Difluoromethane.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS FOR REFRIGERANT

- A. Unless otherwise required by the manufacturer or applicable codes, provide the following for all applications including suction, hot gas, and safety piping:
 1. Aboveground Locations:
 - a. Sizes up to NPS 3/4: ACR, soldered with wrought copper fittings.
 - b. Sizes greater than NPS 3/4 to NPS 4: Type K, brazed with wrought copper fittings.
 - c. Sizes above NPS 4: Schedule 40, black-steel and wrought-steel fittings with welded joints.

2. Belowground Locations

- a. Sizes up to NPS 4: Type K, brazed with wrought copper fittings.
- b. Sizes above NPS 4: Schedule 40, black-steel and wrought-steel fittings with welded joints.

3. Safety-Relief-Valve Discharge Piping: Schedule 40, black-steel and wrought-steel fittings with welded joints.

3.2 VALVE AND SPECIALTY APPLICATIONS

- A. Install diaphragm packless valves in suction and discharge lines of compressor.
- B. Install service valves for gage taps at inlet and outlet of hot-gas bypass valves and strainers if they are not an integral part of valves and strainers.
- C. Install a check valve at the compressor discharge and a liquid accumulator at the compressor suction connection.
- D. Except as otherwise indicated, install diaphragm packless valves on inlet and outlet side of filter dryers.
- E. Install a full-size, three-valve bypass around filter dryers.
- F. Install solenoid valves upstream from each expansion valve and hot-gas bypass valve. Install solenoid valves in horizontal lines with coil at top.
- G. Install thermostatic expansion valves as close as possible to distributors on evaporators.
 - 1. Install valve so diaphragm case is warmer than bulb.
 - 2. Secure bulb to clean, straight, horizontal section of suction line using two bulb straps. Do not mount bulb in a trap or at bottom of the line.
 - 3. If external equalizer lines are required, make connection where it will reflect suction-line pressure at bulb location.
- H. Install safety relief valves where required by 2010 ASME Boiler and Pressure Vessel Code. Pipe safety-relief-valve discharge line to outside according to ASHRAE 15.
- I. Install moisture/liquid indicators in liquid line at the inlet of the thermostatic expansion valve or at the inlet of the evaporator coil capillary tube.
- J. Install strainers upstream from and adjacent to the following unless they are furnished as an integral assembly for the device being protected:
 - 1. Solenoid valves.
 - 2. Thermostatic expansion valves.
 - 3. Hot-gas bypass valves.
 - 4. Compressor.
- K. Install filter dryers in liquid line between compressor and thermostatic expansion valve, and in the suction line at the compressor.
- L. Install receivers sized to accommodate pump-down charge.

- M. Install flexible connectors at compressors.

3.3 PIPING INSTALLATION

- A. Install refrigerant piping according to ASHRAE 15.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping adjacent to machines to allow service and maintenance.
- F. Install piping free of sags and bends.
- G. Install fittings for changes in direction and branch connections.
- H. Select system components with pressure rating equal to or greater than system operating pressure.
- I. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.
- J. Arrange piping to allow inspection and service of refrigeration equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors or panels where valves or equipment requiring maintenance is concealed behind finished surfaces.
- K. Install refrigerant piping in protective conduit where installed belowground.
- L. Install refrigerant piping in rigid or flexible conduit in locations where exposed to mechanical injury.
- M. Slope refrigerant piping as follows:
 - 1. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
 - 2. Install horizontal suction lines with a uniform slope downward to compressor.
 - 3. Install traps and double risers to entrain oil in vertical runs.
 - 4. Liquid lines may be installed level.
- N. When brazing or soldering, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, and packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion-valve bulb.
- O. Before installation of steel refrigerant piping, clean pipe and fittings using the following procedures:
 - 1. Shot blast the interior of piping.

2. Remove coarse particles of dirt and dust by drawing a clean, lintless cloth through tubing by means of a wire or electrician's tape.
 3. Draw a clean, lintless cloth saturated with trichloroethylene through the tube or pipe. Continue this procedure until cloth is not discolored by dirt.
 4. Draw a clean, lintless cloth, saturated with compressor oil, squeezed dry, through the tube or pipe to remove remaining lint. Inspect tube or pipe visually for remaining dirt and lint.
 5. Finally, draw a clean, dry, lintless cloth through the tube or pipe.
 6. Safety-relief-valve discharge piping is not required to be cleaned but is required to be open to allow unrestricted flow.
- P. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation.
- Q. Identify refrigerant piping and valves according to Division 23Section, "Identification for HVAC Piping and Equipment."
- R. Install sleeve seals for piping penetrations of concrete exterior walls and slabs, interior walls, ceilings, and floors. Comply with requirements for sleeve seals specified in Division 23Section "Common Work Results."
- S. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 23Section "Common Work Results."

3.4 PIPE JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Fill pipe and fittings with an inert gas (nitrogen or carbon dioxide), during brazing or welding, to prevent scale formation.
- D. Soldered Joints: Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook."
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Chapter "Pipe and Tube."
1. Use Type BCuP (copper-phosphorus) alloy for joining copper socket fittings with copper pipe.
 2. Use Type BAg (cadmium-free silver) alloy for joining copper with bronze or steel.
- F. Threaded Joints: Thread steel pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and to restore full ID. Join pipe fittings and valves as follows:
1. Apply appropriate tape or thread compound to external pipe threads unless dry-seal threading is specified.
 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Steel pipe can be threaded, but threaded joints must be seal brazed or seal welded.

- H. Welded Joints: Construct joints according to AWS D10.12M/D10.12.
- I. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.5 HANGERS AND SUPPORTS

- A. Comply with requirements for pipe hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Install the following pipe attachments:
 - 1. Adjustable steel clevis hangers for individual horizontal runs less than 20 feet long.
 - 2. Roller hangers and spring hangers for individual horizontal runs 20 feet or longer.
 - 3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet or longer, supported on a trapeze.
 - 4. Spring hangers to support vertical runs.
 - 5. Copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
- C. Support multifloor vertical runs at least at each floor.

3.6 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 - 1. Comply with ASME B31.5, Chapter VI.
 - 2. Test refrigerant piping, specialties, and receivers. Isolate compressor, condenser, evaporator, and safety devices from test pressure if they are not rated above the test pressure.
 - 3. Test high- and low-pressure side piping of each system separately at not less than the pressures indicated in "Performance Requirements" Article.
 - a. Fill system with nitrogen to the required test pressure.
 - b. System shall maintain test pressure at the manifold gage throughout duration of test.
 - c. Test joints and fittings with electronic leak detector or by brushing a small amount of soap and glycerin solution over joints.
 - d. Remake leaking joints using new materials, and retest until satisfactory results are achieved.
- B. Prepare test and inspection reports.

3.7 SYSTEM CHARGING

- A. Charge system using the following procedures:
 - 1. Install core in filter dryers after leak test but before evacuation.
 - 2. Evacuate entire refrigerant system with a vacuum pump to 500 micrometers. If vacuum holds for 12 hours, system is ready for charging.
 - 3. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig.
 - 4. Charge system with a new filter-dryer core in charging line.

3.8 ADJUSTING

- A. Adjust thermostatic expansion valve to obtain proper evaporator superheat.
- B. Adjust high- and low-pressure switch settings to avoid short cycling in response to fluctuating suction pressure.
- C. Adjust set-point temperature of air-conditioning or chilled-water controllers to the system design temperature.
- D. Perform the following adjustments before operating the refrigeration system, according to manufacturer's written instructions:
 - 1. Open shutoff valves in condenser water circuit.
 - 2. Verify that compressor oil level is correct.
 - 3. Open compressor suction and discharge valves.
 - 4. Open refrigerant valves except bypass valves that are used for other purposes.
 - 5. Check open compressor-motor alignment and verify lubrication for motors and bearings.
- E. Replace core of replaceable filter dryer after system has been adjusted and after design flow rates and pressures are established.

END OF SECTION

SECTION 233113

METAL DUCTS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes metal ducts for supply, return, outside, and exhaust air-distribution systems in pressure classes from minus 2- to plus 10-inch wg. Metal ducts include the following:
 - 1. Rectangular ducts and fittings.
 - 2. Single-wall, round, and flat-oval spiral-seam ducts and formed fittings.
 - 3. Double-wall, round, and flat-oval spiral-seam ducts and formed fittings.
 - 4. Duct liner.
- B. Related Sections include the following:
 - 1. Division 23 Section "Nonmetal Ducts" for fibrous-glass ducts, thermoset FRP ducts, thermoplastic ducts, PVC ducts, and concrete ducts.
 - 2. Division 23 Section "HVAC Casings" for factory- and field-fabricated casings for mechanical equipment.
 - 3. Division 23 Section "Air Duct Accessories" for dampers, sound-control devices, duct-mounting access doors and panels, turning vanes, and flexible ducts.
 - 4. Division 23 Section "Breechings, Chimneys, and Stacks".
 - 5. Division 23 Section "Hangers and Supports for HVAC Piping and Equipment".
 - 6. Division 23 Section "Air Duct Accessories" for fire and smoke
 - 7. Division 07 Section "Penetration Firestopping" for firestopping materials and installation methods.

1.2 DEFINITIONS

- A. FRP: Fiberglass-reinforced plastic.
- B. NUSIG: National Uniform Seismic Installation Guidelines.

1.3 SYSTEM DESCRIPTION

- A. Duct system design, as indicated, has been used to select size and type of air-moving and -distribution equipment and other air system components. Changes to layout or configuration of duct system must be specifically approved in writing by Architect. Accompany requests for layout modifications with calculations showing that proposed layout will provide original design results without increasing system total pressure.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of the following products:

1. Liners and adhesives.
2. Sealants and gaskets.
3. Seismic-restraint devices.

B. Shop Drawings: CAD-generated and drawn to same scale as contract drawings, minimum 1/8 inch equals 1 foot scale. Show fabrication and installation details for metal ducts.

1. Shop drawings required for all areas of the building
2. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
3. Duct sizes shown on the drawings are net free area and indicate design intent. When obstructions occur within the duct from motorized actuators, damper frames, duct liner, etc., the duct size shall be increased to preserve free area design intent. Duct layout indicating the following:
 - a. Sizes and pressure classes.
 - b. Elevations of top and bottom of ducts.
 - c. Dimensions of main duct runs from building grid lines.
 - d. Fittings.
 - e. Duct accessories, including access doors and panels.
 - f. Notes indicating deviations from design intent for detailed review by Engineer.
4. Equipment installation based on equipment being used on Project.
5. Submit the following with the initial shop drawing package:
 - a. Reinforcement and spacing.
 - b. Seam and joint construction.
 - c. Penetrations through fire-rated and other partitions.
 - d. Hangers and supports, including methods for duct and building attachment, vibration isolation, and seismic restraints.
 - e. Dampers
 - 1) Locations of fire-smoke dampers.
 - 2) Locations of motorized control dampers.
 - 3) Indication of location, size, and quantity of damper actuators in the air stream.
 - 4) Location of damper actuator access for maintenance and inspection.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings are required for all areas and shall remain on site. Coordinate with all trades.
- B. Welding certificates.
- C. Field quality-control test reports.

1.6 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code--Steel," for hangers and supports, AWS D1.2, "Structural Welding Code--Aluminum," for aluminum supporting members and AWS D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.

B. NFPA Compliance:

1. NFPA 90A, "Installation of Air Conditioning and Ventilating Systems."
2. NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."
3. NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations."

1.7 DELIVERY, STORAGE, AND HANDLING

- A. After fabrication and before the ductwork is installed it shall be "wiped clean" and "heat-shrink wrapped" or some other method of wrap for maintaining a clean ductwork system during delivery to and storage at the jobsite.
- B. Deliver ducts with all openings protected and sealed. Maintain covered openings through shipping, storage, and handling to prevent entrance of dirt, debris, and moisture.
- C. The area provided for duct storage at the jobsite shall be clean, dry and exposure to dust minimized.

PART 2 - PRODUCTS

2.1 SHEET METAL MATERIALS

- A. Comply with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods, unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Lock-forming quality; complying with ASTM A 653/A 653M and having G90 coating designation; ducts shall have mill-phosphatized finish for surfaces exposed to view and minimum 26 gage thickness.
- C. Stainless Steel: ASTM A 480/A 480M, Type 304, and having a No. 2D finish for concealed ducts and for exposed ducts.
- D. Aluminum Sheets: ASTM B 209, alloy 3003, temper H14; with mill finish for concealed ducts and standard, 1-side bright finish for exposed ducts.
- E. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts.
- F. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.2 DUCT LINER

- A. Fibrous-Glass Liner: Comply with NFPA 90A or NFPA 90B and with NAIMA AH124.
 1. Manufacturers:
 - a. CertainTeed Corp.; Insulation Group.
 - b. Johns Manville International, Inc.

- c. Knauf Fiber Glass GmbH.
 - d. Owens Corning.
 - 2. One inch thick, 1½ pound maximum density, Johns-Manville Permacote Linacoustic or equivalent, glass fiber duct liner having a minimum effective "K" value of 0.24 at 75°F, a roughness (e) factor of 0.0008 feet and sound absorption coefficients as published for that material. The duct liner shall conform to the requirements of ASTM C 1071, with an NRC not less than 0.65 as tested per ASTM C423 using a Type 'A' mounting and a thermal conductivity no higher than 0.25 at 75°F mean temperature. The material and coatings shall comply with the flame spread, fuel contributed and smoke developed ratings of NFPA 90A as tested in accordance with UL-723 and shall meet Life Safety Standards as established by NFPA 90A and 90B. The coating shall contain an EPA Registered immobilized anti-microbial agent and shall be rated to avoid erosion at 5000 fpm velocity (and tested at 12,500 fpm velocity). All edges shall be treated with factory-applied edge coating.
- B. Flexible Elastomeric Duct Liner: Comply with NFPA 90A or NFPA 90B.
- 1. Manufacturers:
 - a. Armstrong World Industries, Inc.
 - b. K-flex.
 - 2. Materials: Unicellular polyethylene thermal plastic, preformed sheet insulation complying with ASTM C 534, Type II, except for density.
 - a. Thickness: 1 inch.
 - b. Thermal Conductivity (k-Value): 0.24 at 75 deg F mean temperature.
 - c. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM C 411.
 - d. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.
 - 3. Liner shall be utilized in supply, exhaust, and return ducts as indicated.

2.3 DUCT FIRE WRAP

- A. Fire wrap: An assembly providing at least a 2-hour fire rating for sheet metal ducts.
- B. Manufacturers:
 - 1. Pabco.
 - 2. Unifrax: FyreWrap.
- C. Quality Assurance: Comply with NFPA 96 and U.L. standards.
- D. Where permitted by local codes, the products above may be a substitute for a 2-hour fire rated gypsum board covering.

2.4 SEALANT MATERIALS

- A. Joint and Seam Sealants, General: The term "sealant" is not limited to materials of adhesive or mastic nature but includes tapes and combinations of open-weave fabric strips and mastics.

- B. Joint and Seam Tape: 2 inches wide; glass-fiber-reinforced fabric.
- C. Tape Sealing System: Woven-fiber tape impregnated with gypsum mineral compound and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.
- D. Water-Based Joint and Seam Sealant: Flexible, adhesive sealant, resistant to UV light when cured, UL 723 listed, and complying with NFPA requirements for Class 1 ducts.
- E. Solvent-Based Joint and Seam Sealant: One-part, nonsag, solvent-release-curing, polymerized butyl sealant formulated with a minimum of 75 percent solids.
- F. Flanged Joint Mastic: One-part, acid-curing, silicone, elastomeric joint sealant complying with ASTM C 920, Type S, Grade NS, Class 25, Use O.
- G. Flange Gaskets: Butyl rubber or EPDM polymer with polyisobutylene plasticizer.

2.5 HANGERS AND SUPPORTS

- A. Building Attachments: Concrete inserts, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
- B. Hanger Materials: Galvanized sheet steel or threaded steel rod.
 - 1. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" for steel sheet width and thickness and for steel rod diameters.
 - 2. Galvanized-steel straps attached to aluminum ducts shall have contact surfaces painted with zinc-chromate primer.
- C. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- D. Trapeze and Riser Supports: Steel shapes complying with ASTM A 36/A 36M.
 - 1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
 - 2. Supports for Stainless-Steel Ducts: Stainless-steel support materials.
 - 3. Supports for Aluminum Ducts: Aluminum support materials unless materials are electrolytically separated from ducts.

2.6 RECTANGULAR DUCT FABRICATION

- A. Fabricate ducts, elbows, transitions, offsets, branch connections, and other construction according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" and complying with requirements for metal thickness, reinforcing types and intervals, tie-rod applications, and joint types and intervals.
 - 1. Lengths: Fabricate rectangular ducts in lengths appropriate to reinforcement and rigidity class required for pressure class.
 - 2. Deflection: Duct systems shall not exceed deflection limits according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible."
- B. Transverse Joints: Prefabricated slide-on joints and components constructed using manufacturer's guidelines for material thickness, reinforcement size and spacing, and joint reinforcement.

1. Manufacturers:
 - a. Ductmate Industries, Inc.
 - b. Nexus Inc.
 - c. Ward Industries, Inc.
- C. Formed-On Flanges: Construct according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible," Figure 1-4, using corner, bolt, metal cleat, and gasket details.
 1. Manufacturers:
 - a. Ductmate Industries, Inc.
 - b. Lockformer.
 2. Duct Size: Maximum 30 inches wide and up to 2-inch wg pressure class.
 3. Longitudinal Seams: Pittsburgh lock sealed with noncuring polymer sealant.
- D. Cross Breaking or Cross Beading: Cross break or cross bead duct sides 19 inches and larger and 0.0359 inch thick or less, with more than 10 sq. ft. of nonbraced panel area unless ducts are lined.

2.7 ROUND AND FLAT-OVAL DUCT AND FITTING FABRICATION

- A. Diameter as applied to flat-oval ducts in this Article is the diameter of a round duct with a circumference equal to the perimeter of a given size of flat-oval duct.
- B. Round, Spiral Lock-Seam Ducts: Fabricate supply ducts of galvanized steel according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible."
 1. Manufacturers:
 - a. McGill AirFlow Corporation.
 - b. SEMCO Incorporated.
 - c. Spiral Pipe of Texas
 - d. Lewis & Lambert
 - e. Gowco, Inc.
 - f. Spiramir
- C. Flat-Oval, Spiral Lock-Seam Ducts: Fabricate supply ducts according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible."
 1. Manufacturers:
 - a. McGill AirFlow Corporation.
 - b. SEMCO Incorporated.
 - c. Spiral Pipe of Texas
 - d. Lewis & Lambert
 - e. Gowco, Inc.
 - f. Spiramir
- D. Duct Joints:
 1. Ducts up to 20 Inches in Diameter: Interior, center-beaded slip coupling, sealed before and after fastening, attached with sheet metal screws.

2. Ducts 21 to 72 Inches in Diameter: Three-piece, gasketed, flanged joint consisting of two internal flanges with sealant and one external closure band with gasket.
3. Ducts Larger Than 72 Inches in Diameter: Companion angle flanged joints per SMACNA "HVAC Duct Construction Standards--Metal and Flexible," Figure 3-2.
4. Flat-Oval Ducts: Prefabricated connection system consisting of two flanges and one synthetic rubber gasket.
 - a. Manufacturers:
 - 1) Ductmate Industries, Inc.
 - 2) McGill AirFlow Corporation.
 - 3) SEMCO Incorporated.
- E. 90-Degree Tees and Laterals and Conical Tees: Fabricate to comply with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible," with metal thicknesses specified for longitudinal-seam straight ducts.
- F. Diverging-Flow Fittings: Fabricate to comply with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible," with reduced entrance to branch taps and with no excess material projecting from fitting onto branch tap entrance.
- G. Fabricate elbows using die-formed, pleated, or mitered construction. Bend radius of die-formed, gored, and pleated elbows shall be 1-1/2 times duct diameter. Unless elbow construction type is indicated, fabricate elbows as follows:
 1. Mitered-Elbow Radius and Number of Pieces: Welded construction complying with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible," unless otherwise indicated.
 2. Round Mitered Elbows: Welded construction with the following metal thickness for pressure classes from minus 2- to plus 2-inch wg:
 - a. Ducts 3 to 36 Inches in Diameter: 0.034 inch.
 - b. Ducts 37 to 50 Inches in Diameter: 0.040 inch.
 - c. Ducts 52 to 60 Inches in Diameter: 0.052 inch.
 - d. Ducts 62 to 84 Inches in Diameter: 0.064 inch.
 3. Round Mitered Elbows: Welded construction with the following metal thickness for pressure classes from 2- to 10-inch wg:
 - a. Ducts 3 to 26 Inches in Diameter: 0.034 inch.
 - b. Ducts 27 to 50 Inches in Diameter: 0.040 inch.
 - c. Ducts 52 to 60 Inches in Diameter: 0.052 inch.
 - d. Ducts 62 to 84 Inches in Diameter: 0.064 inch.
 4. Round Elbows 8 Inches and Less in Diameter: Fabricate die-formed elbows for 45- and 90-degree elbows and pleated elbows for 30, 45, 60, and 90 degrees only.
 5. Round Elbows Larger Than 9 Inches in Diameter: Fabricate pleated elbows for 30, 45, 60, and 90 degrees unless space restrictions require mitered elbows.
 6. Die-Formed Elbows for Sizes through 8 Inches in Diameter and All Pressures 0.040 inch thick with 2-piece welded construction.
 7. Pleated Elbows for Sizes through 14 Inches in Diameter and Pressures through 10-Inch wg: 0.022 inch.
- H. PVC-Coated Elbows and Fittings: Fabricate elbows and fittings as follows:

1. Round Elbows 4 to 8 Inches in Diameter: Two piece, die stamped, with longitudinal seams spot welded, bonded, and painted with PVC aerosol spray.
2. Round Elbows 9 to 26 Inches in Diameter: Standing-seam construction.
3. Round Elbows 28 to 60 Inches in Diameter: Standard welded construction.
4. Other Fittings: Welded joints.
5. Couplings: Slip-joint construction with a minimum 2-inch insertion length.

2.8 DOUBLE-WALL DUCT AND FITTING FABRICATION

A. Manufacturers:

1. McGill AirFlow Corporation.
2. SEMCO Incorporated.

B. Ducts: Fabricate double-wall (insulated) ducts with an outer shell and an inner duct. Dimensions indicated are for inner ducts.

1. Outer Shell: Base metal thickness on outer-shell dimensions. Fabricate outer-shell lengths 2 inches longer than inner duct and insulation and in metal thickness specified for single-wall duct.
2. Insulation: 1-inch-thick fibrous glass, unless otherwise indicated. Terminate insulation where double-wall duct connects to single-wall duct or uninsulated components, and reduce outer shell diameter to inner duct diameter.
 - a. Thermal Conductivity (k-Value): 0.26 at 75 deg F mean temperature.
3. Solid Inner Ducts: Use the following sheet metal thicknesses and seam construction:
 - a. Ducts 3 to 8 Inches in Diameter: 0.019 inch with standard spiral-seam construction.
 - b. Ducts 9 to 42 Inches in Diameter: 0.019 inch with single-rib spiral-seam construction.
 - c. Ducts 44 to 60 Inches in Diameter: 0.022 inch with single-rib spiral-seam construction.
 - d. Ducts 62 to 88 Inches in Diameter: 0.034 inch with standard spiral-seam construction.
4. Perforated Inner Ducts: Fabricate with 0.028-inch-0.7-mm- thick sheet metal having 3/32-inch-diameter perforations, with overall open area of 23 percent.
5. Maintain concentricity of inner duct to outer shell by mechanical means. Prevent dislocation of insulation by mechanical means.

C. Fittings: Fabricate double-wall (insulated) fittings with an outer shell and an inner duct.

1. Solid Inner Ducts: Use the following sheet metal thicknesses:
 - a. Ducts 3 to 34 Inches in Diameter: 0.028 inch.
 - b. Ducts 35 to 58 Inches in Diameter: 0.034 inch.
 - c. Ducts 60 to 88 Inches in Diameter: 0.040 inch.
2. Perforated Inner Ducts: Fabricate with 0.028-inch-thick sheet metal having 3/32-inch-diameter perforations, with overall open area of 23 percent.

PART 3 - EXECUTION

3.1 DUCT APPLICATIONS

- A. Static-Pressure Classes: Unless otherwise indicated, construct ducts according to the following:
 - 1. Primary Supply Ducts (before Air Terminal Units): 3-inch wg
 - 2. Secondary Supply Ducts (after Air Terminal Units): 2-inch wg.
 - 3. Return Ducts (Negative Pressure): 2-inch wg.
 - 4. Exhaust Ducts (Negative Pressure): 3-inch wg.
 - 5. All other ducts: 2.5 inch wg (750 Pa), positive or negative based on service.
- B. All ducts shall be galvanized steel except as follows, unless otherwise indicated:
 - 1. Range Hood Exhaust Ducts: Comply with NFPA 96.
 - a. Concealed: Carbon-steel sheet.
 - b. Exposed: Type 304, stainless steel with finish to match kitchen equipment and range hood.
 - c. Fully weld all seams and joints.
 - 2. Wet Exhaust Service Ducts:
 - a. Construction:
 - 1) Type 304, stainless steel with finish to match kitchen equipment and range hood. Fully weld all seams and joints.
 - 2) Aluminum, soldered with seams and laps arranged on top of duct.

3.2 DUCT INSTALLATION

- A. Construct and install ducts according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible," unless otherwise indicated.
- B. Install ducts with fewest possible joints.
- C. Install fabricated fittings for changes in directions, size, and shape and for connections.
- D. Install couplings tight to duct wall surface with a minimum of projections into duct. Secure couplings with sheet metal screws.
- E. Install ducts, unless otherwise indicated, vertically and horizontally and parallel and perpendicular to building lines; avoid diagonal runs.
- F. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
- G. Install ducts with a clearance of 1 inch, plus allowance for insulation thickness.
- H. Install duct liner in exhaust and return ducts from equipment inlet connection to 25'-0"upstream of inlet, minimum.

- I. Provide break away flange for all stainless steel ductwork at fire/smoke damper interfaces. Install stainless steel drain pans extending beyond in all directions with automatic condensate pumps and piping to nearest code approved drain at break away.
- J. Conceal ducts from view in finished spaces. Do not encase horizontal runs in solid partitions unless specifically indicated.
- K. Coordinate layout with suspended ceiling, fire- and smoke-control dampers, lighting layouts, and similar finished work.
- L. Seal all joints and seams. Apply sealant to male end connectors before insertion, and afterward to cover entire joint and sheet metal screws.
- M. Electrical Equipment Spaces: Route ducts to avoid passing through transformer vaults and electrical equipment spaces and enclosures.
- N. Non-Fire-Rated Partition Penetrations: Where ducts pass through interior partitions and exterior walls and are exposed to view, conceal spaces between construction openings and ducts or duct insulation with sheet metal flanges of same metal thickness as ducts. Overlap openings on 4 sides by at least 1-1/2 inches.
- O. Fire-Rated Partition Penetrations: Where ducts pass through interior partitions and exterior walls, install appropriately rated fire dampers, sleeves, and firestopping sealant.
- P. Install ducts with hangers and braces designed to withstand, without damage to equipment, seismic force required by applicable building codes. Refer to SMACNA's "Seismic Restraint Manual: Guidelines for Mechanical Systems.", unless otherwise indicated.
- Q. Protect duct interiors from the elements and foreign materials until building is enclosed. Follow SMACNA's "Duct Cleanliness for New Construction."
- R. Paint interiors of metal ducts that do not have duct liner, for 24 inches upstream of registers and grilles. Apply one coat of flat, black, latex finish coat over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Division 09 painting Sections. Painting not required for ducts serving mechanical, electrical and data rooms.
- S. Provide concrete pipe curb in floors of mechanical equipment areas or other wet areas 4 inches above finished floor level.
- T. Provide temperature range for duct mounted thermometer dials: Minus 40 to plus 110 deg F, with 2-degree scale divisions.

3.3 INSTALLATION OF LINER IN RECTANGULAR DUCTS

- A. Adhere a single layer of indicated thickness of duct liner with complete adhesive coverage at liner contact surface area. Attaining indicated thickness with multiple layers of duct liner is prohibited.
- B. Apply adhesive to transverse edges of liner facing upstream that do not receive metal nosing.
- C. Butt transverse joints without gaps and coat joint with adhesive.
- D. Fold and compress liner in corners of rectangular ducts or cut and fit to ensure butted-edge overlapping.

- E. Do not apply liner with longitudinal joints in rectangular ducts, except at corners of ducts, unless duct size and standard liner product dimensions make longitudinal joints necessary.
- F. Apply adhesive coating on longitudinal seams in ducts with air velocity of 2500 fpm.
- G. Secure liner with mechanical fasteners 4 inches from corners and at intervals not exceeding 12 inches transversely; at 3 inches from transverse joints and at intervals not exceeding 18 inches longitudinally.
- H. Secure transversely oriented liner edges facing the airstream with metal nosings that have either channel or "Z" profiles or are integrally formed from duct wall. Fabricate edge facings at the following locations:
 - 1. Fan discharges.
 - 2. Intervals of lined duct preceding unlined duct.
 - 3. Upstream edges of transverse joints in ducts where air velocities are greater than 2500 fpm (12.7 m/s) or where indicated.
- I. Secure insulation between perforated sheet metal inner duct of same thickness as specified for outer shell. Use mechanical fasteners that maintain inner duct at uniform distance from outer shell without compressing insulation.
- J. Terminate inner ducts with buildouts attached to fire-damper sleeves, dampers, turning vane assemblies, or other devices. Fabricated buildouts (metal hat sections) or other buildout means are optional; when used, secure buildouts to duct walls with bolts, screws, rivets, or welds.

3.4 SPECIAL INSTALLATION REQUIREMENTS FOR SPECIAL EXHAUST APPLICATIONS

- A. Wet Exhaust Ducts:
 - 1. Exhaust ductwork shall be all welded construction suitable for a negative or positive pressure of 2" w.c. All seams and joints shall be watertight.
 - a. Concealed duct: 24 gage all welded aluminum or 18 gage stainless steel, minimum.
 - b. Exposed duct: 18 stainless steel gage with a #4 finish. All seams ground and polished.
 - 2. Ductwork shall be sloped toward the dishwasher connections at 1/8" per linear foot, minimum.
 - 3. Locations required:
 - a. Central sterile washing equipment.
 - b. Sterilizer exhaust services.

3.5 SEAM AND JOINT SEALING

- A. Seal duct seams and joints according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" for ducts, per Seal Class 'A'.
- B. Seal ducts before external insulation is applied.

3.6 HANGING AND SUPPORTING

- A. Support horizontal ducts within 24 inches of each elbow and within 48 inches of each branch intersection.
- B. Support vertical ducts at maximum intervals of 16 feet and at each floor.
- C. Install upper attachments to structures with an allowable load not exceeding one-fourth of failure (proof-test) load.
- D. Install concrete inserts before placing concrete.
- E. Support Ducts per SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" for ducts.
- F. Do not use powder-actuated concrete fasteners

3.7 CONNECTIONS

- A. Make connections to equipment with flexible connectors according to Division 23 Section "Air Duct Accessories."
- B. Comply with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.8 FIELD QUALITY CONTROL

- A. The leak testing shall be observed by the General Contractor's representative and the Owner's representative. Provide 48 hours notification of such tests.
- B. All ducts shall be tested. Submit a written report. The contractor is required to maintain on-site a set of ductwork prints that are shaded in different colors to show the duct section isolated for each test. Also the Contractor shall indicate on the print the date each section of duct was tested and the final percent leakage rate measured for each test section.
- C. If any duct section fails the leakage test, the contractor shall repair the leakage and re-perform the leakage test.
- D. The duct systems shall be pressure tested for leaks at their specified pressure ratings and shall be within the maximum allowed by the following:
 - 1. Primary Air (medium pressure ducts) Systems – 3% leakage.
 - 2. Other Systems – 2% leakage.
- E. The leakage test shall be performed using a kit as furnished by United McGill Corp. or approved equal and shall include the following components:
 - 1. Blower
 - 2. Two manometers or U-tubes
 - 3. Calibrated orifice tube
- F. The leakage test procedure is as follows:

1. Carefully seal off all openings (except one for connecting the test equipment) to the duct run-out section to be tested.
2. Connect the downstream end of the orifice tube to the duct system using a piece of flexible tubing.
3. Connect one manometer to the static taps on the tube to read orifice differential pressure. Connect the other manometer to a 5/16" tap in the duct at least one foot from the blower connection to read test static pressure.
4. Attach the blower to the orifice tube and block off the inlet to prevent over pressurizing a tight system.
5. Start the blower and slowly open the inlet until the desired test static pressure is reached. Let the blower run for at least one minute to insure a steady state.
6. At this point, the air flowing through the orifice tube is going into the duct system and is equal to the amount leaking out. This leakage rate can be read from the calibration chart on the orifice tube. This measured cfm is used to determine the leakage percent.
7. If the duct system is too large and the allowable leakage is greater than the capacity of the blower, the system shall be tested in several sections and the results added together.

3.9 DUCT CLEANLINESS AND DUCT CLEANING

1. DUCT CLEANLINESS

- a. It is the intent to provide an installation of a ductwork system that appears to be visibly clean.
- b. A visual inspection of porous and non-porous ductwork components must be monitored by the Contractor to ensure that the system is visibly clean. The system has excessive dust or debris when an accumulation of particles can be observed in the ductwork. An interior surface is considered visibly clean when it is free from non-adhered substances and debris.
- c. Cleanliness verification shall be performed after the ductwork system has been "wiped clean" and prior to the application of any piece of equipment or component being used in operation.
- d. If air handling units are operated without the pre-filters and the final filters in place, the ductwork shall be replaced or vacuumed per Article B "Cleaning New Systems" below.

2. Condition of new ductwork shall include the following measures:

- a. Any internal exposed mastic sealant to be removed.
- b. The light coating of oil on machine formed sheet metal ductwork is to be removed.
- c. The discoloration marks from the plasma cutting process must be removed.
- d. Before installation of the individual duct sections they are to be visually inspected for dust and/or debris, and wiped clean, if necessary.
- e. After the ductwork has been installed, the cleanliness procedure shall be to temporarily cover the open ends of the ductwork to prevent dust and debris of finding its way to the system.
- f. If vacuuming is required to adequately clean the ductwork, the vacuum cleaner must be HEPA filtered and capable of achieving a minimum of 40 inches of water gage. The vacuum should be fitted with a 2.5" round nylon brush attached to a 1.5" diameter vacuum hose.

3. Conditions of existing ductwork and equipment within the systems that serve the renovated areas shall be visually inspected for dust and debris.

- a. If dust and/or debris is observed within the existing system, it shall be cleaned to remove all visual dust and debris. This process may include the addition of access doors to facilitate the "wiping" and/or "vacuuming" of the ductwork systems.
- b. The system cleanliness procedures shall be adhered to during the construction process of the renovations.
- c. New ductwork required for additions within the existing renovated area shall follow the procedures addressed above for the new ductwork.
- d. If vacuuming is required to adequately clean the ductwork, the vacuum cleaner must be HEPA filtered and capable of achieving a minimum of 40 inches of water gage. The vacuum should be fitted with a 2.5" round nylon brush attached to a 1.5" diameter vacuum hose.

B. CLEANING NEW SYSTEMS

- 1. Mark position of dampers and air-directional mechanical devices before cleaning, and perform cleaning before air balancing.
- 2. Use service openings, as required, for physical and mechanical entry and for inspection.
 - a. Create other openings to comply with duct standards.
 - b. Disconnect flexible ducts as needed for cleaning and inspection.
 - c. Remove and reinstall ceiling sections to gain access during the cleaning process.
- 3. Vent vacuuming system to the outside. Include HEPA filtration to contain debris removed from HVAC systems, and locate exhaust down wind and away from air intakes and other points of entry into building.
- 4. Clean the following metal duct systems by removing surface contaminants and deposits:
 - a. Air outlets and inlets (registers, grilles, and diffusers).
 - b. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
 - c. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
 - d. Coils and related components.
 - e. Return-air ducts, dampers, and actuators except in ceiling plenums and mechanical equipment rooms.
 - f. Supply-air ducts, dampers, actuators, and turning vanes.
- 5. Mechanical Cleaning Methodology:
 - a. Clean metal duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
 - b. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
 - c. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts, duct liner, or duct accessories.
 - d. Do not permit fibrous-glass duct liner to get wet. Remove and replace wet duct liner.
 - e. Clean coils and coil drain pans according to NADCA 1992. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
- 6. Cleanliness Verification:

- a. Visually inspect metal ducts for contaminants.
- b. Where contaminants are discovered, re-clean and reinspect ducts.

C. CLEANING EXISTING SYSTEMS

1. Use service openings, as required, for physical and mechanical entry and for inspection.
 - a. Use existing service openings where possible.
 - b. Create other openings to comply with duct standards.
 - c. Disconnect flexible ducts as needed for cleaning and inspection.
 - d. Reseal rigid fiberglass duct systems according to NAIMA recommended practices.
 - e. Remove and reinstall ceiling sections to gain access during the cleaning process.
2. Mark position of dampers and air-directional mechanical devices before cleaning, and restore to their marked position on completion.
3. Particulate Collection and Odor Control:
 - a. When venting vacuuming system inside the building, use HEPA filtration with 99.97 percent collection efficiency for 0.3-micron size (or larger) particles.
 - b. When venting vacuuming system to the outside, use filtration to contain debris removed from HVAC system, and locate exhaust down wind and away from air intakes and other points of entry into building.
4. Clean the following metal duct systems by removing surface contaminants and deposits:
 - a. Air outlets and inlets (registers, grilles, and diffusers).
 - b. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
 - c. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
 - d. Coils and related components.
 - e. Return-air ducts, dampers, and actuators except in ceiling plenums and mechanical equipment rooms.
 - f. Supply-air ducts, dampers, actuators, and turning vanes.
 - g. Dedicated exhaust and ventilation components and makeup air systems.
5. Mechanical Cleaning Methodology:
 - a. Clean metal duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
 - b. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
 - c. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts, duct liner, or duct accessories.
 - d. Clean fibrous-glass duct liner with HEPA vacuuming equipment; do not permit duct liner to get wet. Replace fibrous-glass duct liner that is damaged, deteriorated, or delaminated or that has friable material, mold, or fungus growth.
 - e. Clean coils and coil drain pans according to NADCA 1992. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
 - f. Provide operative drainage system for washdown procedures.

- g. Biocidal Agents and Coatings: Apply biocidal agents if fungus is present. Apply biocidal agents according to manufacturer's written instructions after removal of surface deposits and debris.
- 6. Cleanliness Verification:
 - a. Verify cleanliness after mechanical cleaning and before application of treatment, including biocidal agents and protective coatings.
 - b. Visually inspect metal ducts for contaminants.
 - c. Where contaminants are discovered, re-clean and reinspect ducts.
- 7. Gravimetric Analysis: At discretion and expense of Owner, sections of metal duct system, chosen randomly by Owner, may be tested for cleanliness according to NADCA vacuum test gravimetric analysis.
 - a. If analysis determines that levels of debris are equal to or lower than suitable levels, system shall have passed cleanliness verification.
 - b. If analysis determines that levels of debris exceed suitable levels, system cleanliness verification will have failed and metal duct system shall be re-cleaned and re-verified.
- 8. Verification of Coil Cleaning: Cleaning must restore coil pressure drop to within 10 percent of pressure drop measured when coil was first installed. If original pressure drop is not known, coil will be considered clean only if it is free of foreign matter and chemical residue, based on thorough visual inspection.

END OF SECTION

SECTION 233300

AIR DUCT ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Backdraft dampers.
2. Volume dampers.
3. Motorized control dampers.
4. Fire dampers.
5. Ceiling fire dampers.
6. Smoke dampers.
7. Combination fire and smoke dampers.
8. Duct silencers.
9. Electric Duct Heaters.
10. Turning vanes.
11. Duct-mounting access doors.
12. Flexible connectors.
13. Flexible ducts.
14. Duct accessory hardware.

B. Related Sections include the following:

1. Division 23 Section "Instrumentation and Control for HVAC" for electric and pneumatic damper actuators.
2. Division 23 Section "Metal Ducts" for duct construction and fittings.
3. Division 28 Section "Fire Detection and Alarm" for duct-mounting fire and smoke detectors.

1.2 DEFINITIONS

- A. Low Leakage: Class 1A as defined by AMCA Standard 511, equating to less than 3cfm/ft² of damper area, at differential pressure of 1-inch wg less than 8cfm/ft² of damper area, at differential pressure of 4-inch wg when damper is being held by torque of 50 in. x lbf; when tested according to AMCA 500D.

1.3 ACTION SUBMITTALS

A. Product Data: For the following:

1. Backdraft dampers.
2. Volume dampers.
3. Motorized control dampers.
4. Fire dampers.
5. Ceiling fire dampers.
6. Smoke dampers.

7. Combination fire and smoke dampers.
8. Duct silencers.
9. Turning vanes.
10. Duct-mounting access doors.
11. Flexible connectors.
12. Flexible ducts.

- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Special fittings.
2. Manual-volume damper installations.
3. Motorized-control damper installations.
4. Fire-damper, smoke-damper, and combination fire- and smoke-damper installations, including sleeves and duct-mounting access doors.
5. Identify duct velocity and pressure class of duct system dampers are installed in.
6. Wiring Diagrams: Power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale and coordinating penetrations and ceiling-mounting items. Show ceiling-mounting access panels and access doors required for access to duct accessories.

1.5 QUALITY ASSURANCE

- A. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."

1.6 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Fusible Links: Furnish quantity equal to 10 percent, rounding up, for each type of amount installed with a minimum of one.

PART 2 - PRODUCTS

2.1 SHEET METAL MATERIALS

- A. Comply with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods, unless otherwise indicated.
- B. Galvanized Sheet Steel: Lock-forming quality; complying with ASTM A 653/A 653M and having G90 coating designation; ducts shall have mill-phosphatized finish for surfaces exposed to view.
- C. Stainless Steel: ASTM A 480/A 480M.

- D. Aluminum Sheets: ASTM B 209, alloy 3003, temper H14; with mill finish for concealed ducts and standard, 1-side bright finish for exposed ducts.
- E. Extruded Aluminum: ASTM B 221, alloy 6063, temper T6.
- F. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.
- G. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.2 BACKDRAFT DAMPERS

- A. Manufacturers:
 - 1. Air Balance, Inc.
 - 2. American Warming and Ventilating.
 - 3. Duro Dyne Corp.
 - 4. Greenheck.
 - 5. Loren Cook.
 - 6. Penn Ventilation Company, Inc.
 - 7. Pottoroff.
 - 8. Prefco Products, Inc.
 - 9. Ruskin Company.
 - 10. Vent Products Company, Inc.
- B. Description: Multiple or single-blade, parallel action gravity balanced, with center-pivoted blades of maximum 6-inch width, with sealed edges, assembled in rattle-free manner with 90-degree stop, steel ball bearings, and axles; adjustment device to permit setting for varying differential static pressure.
- C. Frame: Extruded aluminum, with welded corners and mounting flange.
- D. Blades: 0.050-inch-thick aluminum sheet.
- E. Blade Seals: Neoprene.
- F. Blade Axles: Nonferrous.
- G. Tie Bars and Brackets: Aluminum.
- H. Return Spring: Adjustable tension.

2.3 VOLUME DAMPERS

- A. Manufacturers:
 - 1. Air Balance, Inc.
 - 2. American Warming and Ventilating.
 - 3. Flexmaster U.S.A., Inc.
 - 4. McGill AirFlow Corporation.
 - 5. METALAIRE, Inc.
 - 6. Nailor Industries Inc.

7. National Controlled Air.
 8. Penn Ventilation Company, Inc.
 9. Pottoroff.
 10. Ruskin Company.
 11. Vent Products Company, Inc.
 12. Young Regulator Company.
- B. General Description: Factory fabricated, with required hardware and accessories. Stiffen damper blades for stability. Include locking device to hold single-blade dampers in a fixed position without vibration. Close duct penetrations for damper components to seal duct consistent with pressure class.
1. Pressure Classes of 3-Inch wg or Higher: End bearings or other seals for ducts with axles full length of damper blades and bearings at both ends of operating shaft.
 2. Dampers integral to building envelope shall be AMCA 511 Class 1 rated, minimum.
- C. Duct Dampers.
1. Standard Volume:
 - a. Multiple- or single-blade, parallel- or opposed-blade design, AMCA 511 Class 2 rated, with linkage outside airstream, and suitable for horizontal or vertical applications. Blade and frame materials shall match.
 - b. Steel:
 - 1) Frames: Hat-shaped, galvanized sheet steel channels, with mitered and welded corners; frames with flanges where indicated for attaching to walls and flangeless frames where indicated for installing in ducts.
 - 2) Roll-Formed Blades: Galvanized sheet steel.
 - c. Aluminum
 - 1) Frames: Hat-shaped, aluminum sheet channels; frames with flanges where indicated for attaching to walls; and flangeless frames where indicated for installing in ducts.
 - 2) Roll-Formed Blades: 0.10-inch-thick aluminum sheet.
 - 3) Extruded-Aluminum Blades: 0.050-inch-thick extruded aluminum.
 - d. Blade Axles: Galvanized steel.
 - e. Bearings: Oil-impregnated bronze, molded synthetic, or stainless-steel sleeve.
 - f. Tie Bars and Brackets: Galvanized Steel.
 2. Low-Leakage Volume:
 - a. Multiple-blade, parallel- or opposed-blade design as indicated, AMCA 511 Class 1A rated, with linkage outside airstream, and suitable for horizontal or vertical applications. Blade and frame materials shall match.
 - b. Steel:
 - 1) Frames: Hat, U-, or angle-shaped, galvanized sheet steel channels, with mitered and welded corners; frames with flanges where indicated for attaching to walls and flangeless frames where indicated for installing in ducts.
 - 2) Roll-Formed Blades: 0.064-inch-thick, galvanized sheet steel.

c. Aluminum:

- 1) Frames: Hat, U-, or angle-shaped, aluminum sheet channels; frames with flanges where indicated for attaching to walls and flangeless frames where indicated for installing in ducts.
- 2) Roll-Formed Blades: 0.10-inch-thick aluminum sheet.
- 3) Extruded Blades: 0.050-inch-thick extruded aluminum.

d. Blade Axles: Galvanized steel.

e. Bearings: Oil-impregnated bronze or stainless-steel sleeve thrust or ball.

f. Blade Seals: Vinyl or Neoprene.

g. Jamb Seals: Cambered aluminum.

h. Tie Bars and Brackets: Galvanized steel.

3. Remote Mounted:

- a. Rack-and-pinion controller fabricated from minimum 14 gage galvanized steel with graduations for positive locking control.
- b. Control cable shall be .054" stainless steel in 1/16" flexible galvanized casing.

D. Duct Tap-Offs

1. Duct tap offs from rectangular or round duct are round, conical connector, with spin-in or twist-in collar, and integral damper. Include bead from using mechanical strap.
2. Side taps, consisting of an eccentric wedge pointing into the flow narrowing to a round duct are also acceptable.
3. Construction materials and pressure class shall identical to the attached duct system.

E. Jackshaft: Pipe matching linkage material rotating within pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.

1. Length and Number of Mountings: Appropriate to connect linkage of each damper in multiple-damper assembly.

F. Damper Hardware: Zinc-plated, die-cast core with dial and handle made of 3/32-inch-thick zinc-plated steel, and a 3/4-inch hexagon locking nut. Include center hole to suit damper operating-rod size. Include elevated platform for insulated duct mounting.

2.4 MOTORIZED CONTROL DAMPERS

A. Manufacturers:

1. Air Balance, Inc.
2. American Warming and Ventilating.
3. Duro Dyne Corp.
4. Greenheck.
5. McGill AirFlow Corporation.
6. METALAIR, Inc.
7. Nailor Industries Inc.
8. National Controlled Air.
9. Pottoroff.
10. Penn Ventilation Company, Inc.
11. Ruskin Company.
12. Vent Products Company, Inc.

- B. General Description: Class 1A, AMCA 511, parallel or opposed-blade airfoil design; galvanized-steel frames with holes for duct mounting; galvanized-steel damper blades with maximum blade width of 8 inches.
 - 1. Secure blades to 1/2-inch-diameter, zinc-plated axles using zinc-plated hardware, with nylon blade bearings, blade-linkage hardware of zinc-plated steel and brass, ends sealed against spring-stainless-steel blade bearings, and thrust bearings at each end of every blade.
 - 2. Operating Temperature Range: From minus 40 to plus 200 deg F.
 - 3. Provide parallel- or opposed-blade design with inflatable seal blade edging, or replaceable rubber seals, rated for low leakage.

2.5 FIRE DAMPERS

- A. Manufacturers:
 - 1. Air Balance, Inc.
 - 2. Greenheck.
 - 3. McGill AirFlow Corporation.
 - 4. METALAIR, Inc.
 - 5. Nailor Industries Inc.
 - 6. National Controlled Air.
 - 7. Penn Ventilation Company, Inc.
 - 8. Pottoroff.
 - 9. Prefco Products, Inc.
 - 10. Ruskin Company.
 - 11. Vent Products Company, Inc.
 - 12. Ward Industries, Inc.
- B. Fire dampers shall be labeled according to UL 555, Class 1.
- C. Fire Rating: 1-1/2 and 3 hours.
 - 1. Type 304, stainless-steel dampers are also available for corrosive atmospheres.
- D. Frame: fabricated with roll-formed galvanized steel; with mitered and interlocking corners.
 - 1. Provide multiple-blade type for dynamic applications.
- E. Mounting Sleeve: Factory- or field-installed, galvanized sheet steel.
 - 1. Exceptions: Omit sleeve where damper frame width permits direct attachment of perimeter mounting angles on each side of wall or floor, and thickness of damper frame complies with sleeve requirements.
- F. Blades: Roll-formed, interlocking, galvanized sheet steel. In place of interlocking blades, use full-length, galvanized-steel blade connectors.
- G. Resets:
 - 1. Fusible Links: Replaceable, 165 deg F (74 deg C) rated.

2.6 CEILING FIRE DAMPERS

A. Manufacturers:

1. Air Balance, Inc.
2. Greenheck.
3. McGill AirFlow Corporation.
4. METALAIR, Inc.
5. Nailor Industries Inc.
6. National Controlled Air.
7. Penn Ventilation Company, Inc.
8. Pottoroff.
9. Prefco Products, Inc.
10. Ruskin Company.
11. Vent Products Company, Inc.
12. Ward Industries, Inc.

B. General Description: Labeled according to UL 555C, Class 1; comply with construction details for tested floor- and roof-ceiling assemblies as indicated in UL's "Fire Resistance Directory."

C. Frame: Galvanized sheet steel, round or rectangular, style to suit ceiling construction.

D. Blades: Galvanized sheet steel with refractory insulation.

E. Resets:

1. Fusible Links: Replaceable, 165 deg F (74 deg C) rated.

2.7 SMOKE AND COMBINATION FIRE / SMOKE DAMPERS

A. Manufacturers:

1. Air Balance, Inc.
2. Greenheck.
3. Nailor Industries Inc.
4. National Controlled Air.
5. Penn Ventilation Company, Inc.
6. Pottoroff.
7. Ruskin Company.

B. General Description: Labeled according to UL 555S, Class 1. Combination fire and smoke dampers shall be labeled according to UL 555 for 1-1/2-hour rating.

C. Resets:

1. Automatic.

D. Frame and Blades: 0.064-inch-thick, galvanized sheet steel.

E. Mounting Sleeve: Factory-installed galvanized sheet steel; length to suit wall or floor application.

F. Damper Motors: Modulating and two-position action.

1. Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
2. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
3. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of 150 in. x lbf and breakaway torque rating of 150 in. x lbf.
4. Outdoor Motors and Motors in Outside-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at 10 degrees lower than ASHRAE 99.6% Heating DB.
5. Nonspring-Return Motors: For dampers larger than 25 sq. ft., size motor for running torque rating of 150 in. x lbf and breakaway torque rating of 300 in. x lbf.
6. Electrical Connection: 115 V, single phase, 60 Hz.

2.8 DUCT SILENCERS

A. Manufacturers:

1. Dynasonics.
2. I.A.C.
3. Industrial Noise Control, Inc.
4. McGill AirFlow Corporation.
5. Ruskin Company.
6. SEMCO.
7. Vibro-Acoustics.

B. General Description: Factory-fabricated and -tested, round or rectangular silencers with performance characteristics and physical requirements as indicated. Gage and material of casing shall be no less than the requirements of the system served.

C. Fire Performance: Adhesives, sealants, packing materials, and accessory materials shall have fire ratings not exceeding 25 for flame-spread index and 50 for smoke-developed index when tested according to ASTM E 84.

D. Rectangular Units: Fabricate casings with solid galvanized sheet metal for outer casing and ASTM A 653/A 653M, G90, perforated galvanized sheet metal for inner casing.

E. Round Units:

1. Outer Casings:

- a. ASTM A 653/A 653M, G90, galvanized sheet steel.

2. Interior Casing, Partitions, and Baffles:

- a. ASTM A 653/A 653M, G90, galvanized sheet steel.
- b. At least 0.034 inch thick and designed for minimum aerodynamic losses.

F. Sheet Metal Perforations: 1/8-inch diameter for inner casing and baffle sheet metal.

G. Fill Material: Inert, moisture proof, and vermin-proof material, packed under not less than 5 percent compression.

1. Erosion Barrier:
 - a. Polymer or Tedlar bag enclosing fill and heat-sealed before assembly.
 - b. Mylar layer attached with adhesive between fill and airstream.
- H. Fabricate silencers to form rigid units that will not pulsate, vibrate, rattle, or otherwise react to system pressure variations.
 1. Do not use nuts, bolts, or sheet metal screws for unit assemblies.
 2. Lock form and seal or continuously weld joints.
 3. Suspended Units: Factory-installed suspension hooks or lugs attached to frame in quantities and spaced to prevent deflection or distortion.
 4. Reinforcement: Cross or trapeze angles for rigid suspension.
- I. Source Quality Control:
 1. Acoustic Performance: Test according to ASTM E 477.
 2. Record acoustic ratings, including dynamic insertion loss and self-noise power levels with an airflow of at least 2000-fpm face velocity.
 3. Leak Test: Test units for airtightness at 200 percent of associated fan static pressure or 6-inch wg static pressure, whichever is greater.

2.9 ELECTRIC DUCT HEATERS

- A. Manufacturers
 1. Bel Thermal Units
 2. Chromalox
 3. Indeeco
 4. Nailor
 5. Warren Products
- B. Description: Slip-in-type, open-coil design with integral control box factory wired and installed. Include the following features:
 1. Primary and secondary over-temperature protection.
 2. Nickel chrome 80/20 heating elements.
 3. Airflow switch.
 4. Noninterlocking disconnect switch.
 5. Fuses (for coils more than 48 A).
 6. Mercury contactors.
 7. Pneumatic-electric switches and relays.
 8. Magnetic contactor for each step of control (for three-phase coils).

2.10 TURNING VANES

- A. Fabricate to comply with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" for vanes and vane runners. Vane runners shall automatically align vanes.
- B. Manufactured Turning Vanes: Fabricate 1-1/2-inch-wide, double-vane, curved blades of galvanized sheet steel set 3/4 inch o.c.; support with bars perpendicular to blades set 2 inches o.c.; and set into vane runners suitable for duct mounting.

1. Manufacturers:

- a. Ductmate Industries, Inc.
- b. Duro Dyne Corp.
- c. Dynasonics.
- d. I.A.C.
- e. METALAIRE, Inc.
- f. SEMCO.
- g. Ward Industries, Inc.

C. Acoustic Turning Vanes: Fabricate airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill, with Mylar or Tedlar wrap around fill.

D. Acoustic Elbows: Fabricate airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill, with Mylar or Tedlar wrap around fill.

2.11 DUCT-MOUNTING ACCESS DOORS

A. General Description: Fabricate doors airtight and suitable for duct pressure class.

B. Door: Double wall, duct mounting, and rectangular; fabricated of galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class. Include vision panel where indicated. Include 1-by-1-inch butt or piano hinge and cam latches.

1. Manufacturers:

- a. American Warming and Ventilating.
- b. Ductmate Industries, Inc.
- c. Flexmaster U.S.A., Inc.
- d. Greenheck.
- e. McGill AirFlow Corporation.
- f. Nailor Industries Inc.

2. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.

3. Provide number of hinges and locks as follows:

- a. Less Than 12 Inches Square: Secure with two sash locks.
- b. Up to 18 Inches Square: Two hinges and two sash locks.
- c. Up to 24 by 48 Inches: Three hinges and two compression latches with outside and inside handles.
- d. Sizes 24 by 48 Inches and Larger: One additional hinge.

C. Door: Double wall, duct mounting, and round; fabricated of galvanized sheet metal with insulation fill and 1-inch thickness. Include cam latches.

1. Manufacturers:

- a. Ductmate Industries, Inc.
- b. Flexmaster U.S.A., Inc.

2. Frame: Galvanized sheet steel, with spin-in notched frame.

- D. Pressure Relief Access Door: Single or double wall and duct mounting; fabricated of galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class. Include vision panel where indicated, latches, and retaining chain.
 - 1. Manufacturers:
 - a. American Warming and Ventilating.
 - b. Ductmate Industries, Inc.
 - c. Greenheck.
 - d. KEES, Inc.
 - e. McGill AirFlow Corporation.
 - f. Nexus PDQ.
 - 2. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.
- E. Seal around frame attachment to duct and door to frame with neoprene or foam rubber.
- F. Insulation: 1-inch-thick, fibrous-glass or polystyrene-foam board.

2.12 FLEXIBLE CONNECTORS

- A. Manufacturers:
 - 1. Ductmate Industries, Inc.
 - 2. Duro Dyne Corp.
 - 3. Ventfabrics, Inc.
 - 4. Ward Industries, Inc.
- B. General Description: Flame-retardant or noncombustible fabrics, coatings, and adhesives complying with NFPA 90A & 90B.
- C. Metal-Edged Connectors: Factory fabricated with a fabric strip 5-3/4 inches wide attached to two strips of 2-3/4-inch-wide, 0.028-inch-thick, galvanized sheet steel or 0.032-inch-thick aluminum sheets. Select metal compatible with ducts.
- D. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.
 - 1. Minimum Weight: 26 oz./sq. yd..
 - 2. Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
 - 3. Service Temperature: Minus 40 to plus 200 deg F.
- E. Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.
 - 1. Minimum Weight: 24 oz./sq. yd..
 - 2. Tensile Strength: 530 lbf/inch in the warp and 440 lbf/inch in the filling.
 - 3. Service Temperature: Minus 50 to plus 250 deg F.
- F. High-Temperature System, Flexible Connectors: Glass fabric coated with silicone rubber.
 - 1. Minimum Weight: 16 oz./sq. yd..
 - 2. Tensile Strength: 285 lbf/inch in the warp and 185 lbf/inch in the filling.
 - 3. Service Temperature: Minus 67 to plus 500 deg F.

- G. High-Corrosive-Environment System, Flexible Connectors: Glass fabric with chemical-resistant coating.
1. Minimum Weight: 14 oz./sq. yd..
 2. Tensile Strength: 450 lbf/inch in the warp and 340 lbf/inch in the filling.
 3. Service Temperature: Minus 67 to plus 500 deg F.

2.13 FLEXIBLE DUCTS

- A. Manufacturers:
1. Flexmaster U.S.A., Inc.
 2. McGill AirFlow Corporation.
 3. Thermaflex.
 4. Wiremold.
- B. Noninsulated Flexible Ducts: UL 181, Class 1, black polymer film supported by helically wound, spring-steel wire.
1. Pressure Rating: 4-inch wg positive and 0.5-inch wg negative.
 2. Minimum Air Velocity Rating: 4000 fpm.
 3. Temperature Range: Minus 20 to plus 175 deg F.
- C. Insulated Flexible Ducts: UL 181, Class 1, black polymer film supported by helically wound, spring-steel wire; fibrous-glass insulation with a minimum value of R-6; polyethylene or aluminized vapor barrier film.
1. Pressure Rating: 4-inch wg positive and 0.5-inch wg negative.
 2. Minimum Air Velocity Rating: 4000 fpm.
 3. Temperature Range: Minus 20 to plus 175 deg F.
- D. Metal Lined Insulated Flexible Ducts: UL 181, Class 1, Triple locked aluminum inner core; fibrous glass insulation with a minimum value of R-6.
1. Pressure Rating: 6-inch wg (1500 Pa) positive and 2-inch wg (500 Pa) negative.
 2. Minimum Air Velocity Rating: 4000 fpm.
 3. Temperature Range: Minus 20 to plus 250 deg F
- Insulated Fabric Ducts: UL 181, Class 1, with Chlorinated Polyethylene (CPE) inner core supported by helical wound galvanized steel; fibrous-glass insulation with a minimum R-6 value.
4. Pressure Rating: 6-inch wg (1500 Pa) positive and 2-inch wg (500 Pa) negative.
 5. Minimum Air Velocity Rating: 4000 fpm.
 6. Temperature Range: Minus 20 to plus 250 deg F
- Flexible Duct Clamps: Stainless-steel band with cadmium-plated hex screw to tighten band with a worm-gear action or Nylon strap, in sizes 3 through 18 inches to suit duct size.

2.14 DUCT ACCESSORY HARDWARE

- A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct insulation thickness.
- B. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

PART 3 - EXECUTION

3.1 APPLICATION AND INSTALLATION

- A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" for metal ducts.
- B. Where damper actuators are located in the air stream, increase duct free area to maintain design intent.
- C. Provide duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.
- D. Install backdraft dampers on exhaust fans or exhaust ducts nearest to outside and where indicated.
- E. Install volume dampers in ducts with liner; avoid damage to and erosion of duct liner.
- F. Provide balancing dampers at points on supply, return, and exhaust systems where branches lead from larger ducts as required for air balancing. Install at a minimum of two duct widths from branch takeoff.
- G. Install duct test holes where indicated and required for testing and balancing purposes.
- H. Install remote dampers a minimum of 5 feet, or two duct diameters, whichever is greater, before air device.
- I. Remote dampers shall include controller box as approved by architect.
- J. Provide test holes at fan inlets and outlets and elsewhere as indicated.
- K. Install fire and smoke dampers, with reset operators or fusible links, according to manufacturer's UL-approved written instructions.
- L. Install duct silencers rigidly to ducts.
- M. Install duct heaters square to duct and perpendicular to air travel. Provide disconnecting means at heater.
- N. Connect duct discharge temperature sensor downstream of duct heater.
- O. Connect controlling thermostat or control cable to duct heater.
- P. Install turning vanes in all square elbows, except for combustion air, dryer vent, and grease duct services, unless otherwise indicated.
- Q. Install flexible connectors immediately adjacent to equipment in ducts associated with fans and motorized equipment supported by vibration isolators.
- R. For fans developing static pressures of 5-inch wg and higher, cover flexible connectors with loaded vinyl sheet held in place with metal straps.
- S. Connect terminal units to supply ducts.

- T. Connect diffusers or light troffer boots to low pressure ducts with maximum 60-inch lengths of flexible duct clamped or strapped in place.
- U. Do not use flexible ducts to change directions.
- V. Connect flexible ducts to metal ducts with draw bands.
- W. Flexible duct may only be installed above hard ceilings with direct access to all both ends of the flexible duct runs. Flexible duct shall not be installed more than 24" inside a hard ceiling edge or transition.

3.2 END SWITCH APPLICATIONS

- A. Install an end switches for each damper:
 - 1. Motorized control damper.
- B. Connect each motorized control damper to the FMS.
- C. Connect each fire and fire/smoke damper to the fire alarm system

3.3 FIRE AND FIRE/SMOKE DAMPER APPLICATIONS

- 1. Unless otherwise indicated, provide dampers according to the following criteria:
 - a. Type-A dampers
 - 1) Pressure: up to 2 inches wg.
 - 2) Velocity: up to 1500 ft/min.
 - 3) Duct dimensions: greater than 14 inches, square.
 - b. Type-B dampers
 - 1) Pressure: up to 8 inches wg.
 - 2) Velocity: up to 3500 ft/min
 - c. Type-C dampers
 - 1) Pressure: greater than 8 inches wg.
 - 2) Velocity: greater than 3500 ft/min.
- 2. Where dampers are required at sidewall grilles, damper shall be Frame Style G for flush installation of air device.
- 3. Damper sleeves may be omitted where not required by the manufacturer's listed assembly, code, or these documents.

3.4 DUCT ACCESS DOOR APPLICATIONS

- A. Install duct access doors to allow for inspecting, adjusting, and maintaining accessories and terminal units as follows:
 - 1. On both sides of duct coils.

2. Downstream from volume dampers, motorized dampers, and equipment.
3. Adjacent to fire or smoke dampers, providing access to reset or reinstall fusible links.
4. To interior of ducts for cleaning; before and after each change in direction, at maximum 50-foot spacing.
5. On sides of ducts where adequate clearance is available.

B. Install the following sizes for duct-mounting, rectangular access doors:

1. One-Hand or Inspection Access: 8 by 8 inches.
2. Two-Hand Access: 12 by 12 inches.
3. Head and Hand Access: 18 by 18 inches.
4. Head and Shoulders Access: 24 by 18 inches.
5. Body Access: 30 by 24 inches.
6. Body Plus Ladder Access: 30 by 24 inches.

C. Install the following sizes for duct-mounting, round access doors:

1. One-Hand or Inspection Access: 8 inches in diameter.
2. Two-Hand Access: 10 inches in diameter.
3. Head and Hand Access: 12 inches in diameter.
4. Head and Shoulders Access: 18 inches in diameter.
5. Body Access: 24 inches in diameter.

D. Label access doors according to Division 23 Section "Identification for HVAC Piping and Equipment."

3.5 ADJUSTING

- A. Adjust duct accessories for proper settings.
- B. Adjust fire and smoke dampers for proper action.
- C. Final positioning of manual-volume dampers is specified in Division 23 Section "Testing, Adjusting, and Balancing for HVAC."

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 233400

HVAC FANS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Airfoil centrifugal fans.
2. Backward-inclined centrifugal fans.
3. Centrifugal roof ventilators.
4. Forward-curved centrifugal fans.
5. In-line centrifugal fans.
6. Mixed-flow fans.
7. Propeller fans.
8. Utility set fans.

B. Related Sections include the following:

1. Division 03 Sections "Cast-in-Place Concrete" and "Miscellaneous Cast-in-Place Concrete".
2. Division 07 Section "Roof Accessories" for roof curbs, equipment supports, and roof penetrations.
3. Division 23 Section "Air Duct Accessories" for flexible connectors, dampers, etc. are specified in.
4. Division 23 Section "Common Motor Requirements for HVAC" for fan motors.
5. Division 23 Section "Hangers and Supports for HVAC Piping and Equipment".
6. Division 23 Section "Identification for HVAC Piping and Equipment" for fan label requirements.
7. Division 23 Section "Instrumentation and Controls for HVAC".
8. Division 23 Section "Variable Frequency Drives".
9. Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment" for seismic and wind restraint requirements.

1.2 PERFORMANCE REQUIREMENTS

- A. Project Altitude: Base fan performance ratings on actual Project site elevations above sea level.
- B. Operating Limits: Classify according to AMCA 99.

1.3 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, furnished specialties, and accessories for each type of product indicated and include the following:
1. Fan schedule, by equipment mark, with capacity selections indicating required accessories.

2. Certified fan performance curves with system operating conditions indicated.
 3. Certified fan sound-power ratings.
 4. Motor ratings and electrical characteristics, plus motor and electrical accessories.
 5. Material thickness and finishes, including color charts.
 6. Dampers, including housings, linkages, and operators.
 7. Fan speed controllers, including, but not limited to, variable speed drives.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
1. Wiring Diagrams: Power, signal, and control wiring.
 2. Short-circuit current rating of equipment assembly. Rating must match the rating of the overcurrent protective device serving the assembly.
 3. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
 4. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.

1.4 SIMULTANEOUS ACTION SUBMITTALS

- A. HVAC Fan Product Data submittal shall be made in conjunction with action submittals required under Division 26 Section "Overcurrent Protective Device Coordination Study."

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Show fan room layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.
- B. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: Data to include in emergency, operation, and maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. AMCA Compliance: Products shall comply with performance requirements and shall be licensed to use the AMCA-Certified Ratings Seal.
- C. NEMA Compliance: Motors and electrical accessories shall comply with NEMA standards.
- D. UL Standard: Power ventilators shall comply with UL 705.

- E. Fans shall not exceed 85% of class rating at the selection point.
- F. Sound-Power Level Ratings:
 - 1. Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data."
 - 2. Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans."
 - 3. Label fans with the AMCA-Certified Ratings Seal.
 - 4. Raw sound discharge for fans shall not exceed 95 dB in the 63, 125, and 250 Hz bands.
- G. Fan Performance Ratings: Establish flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests and ratings according to AMCA 210, "Laboratory Methods of Testing Fans for Rating."

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations, with protective crating and covering.
- B. Disassemble and reassemble units, as required for moving to final locations, according to manufacturer's written instructions.
- C. Lift and support units with manufacturer's designated lifting or supporting points.

1.9 COORDINATION

- A. Coordinate size and location of structural-steel support members.
- B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases.
- C. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

1.10 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Belts: One set(s) for each belt-driven unit.

1.11 LABELS

- A. All fans shall have a firmly affixed metal nameplate recording the design air capacity, static pressure, and brake horsepower.

PART 2 - PRODUCTS

2.1 AIRFOIL CENTRIFUGAL FANS

A. Manufacturers:

1. Acme Engineering & Mfg. Corp.
2. Chicago Blower Corporation.
3. Greenheck.
4. Loren Cook Company.
5. New York Blower Company (The).
6. Twin City Fan & Blower.

B. Description: Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor, drive assembly, and support structure.

C. Housings: Formed panels to make curved-scroll housings with shaped cutoff, with doors or panels to allow access to internal parts and components.

1. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
2. Air-tight all welded housing construction.
3. Spun inlet cone with flange.
4. Outlet flange.

D. Airfoil Wheels:

1. Wheels shall be statically and dynamically balanced to grade G6.3 per ANSI S2.19.
2. Single-width-single-inlet and double-width-double-inlet construction with curved inlet flange.
3. Heavy backplate.
4. Hollow die-formed, airfoil-shaped blades continuously welded at tip flange and backplate.
5. Cast-iron or cast-steel hub riveted to backplate and fastened to shaft with set screws

E. Shafts: Statically and dynamically balanced and selected for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.

1. Turned, ground, and polished hot-rolled steel with keyway. Ship with protective coating of lubricating oil.
2. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

F. Bearings:

1. Bearing Types:

- a. Prelubricated and Sealed Shaft Bearings: Self-aligning, pillow-block-type ball bearings.
- b. Grease-Lubricated Shaft Bearings: Self-aligning, pillow-block-type, tapered roller bearings with double-locking collars and two-piece, cast-iron housing.
- c. Grease-Lubricated Shaft Bearings: Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing.

2. Bearing Rating Life:

- a. Ball-Bearings: ABMA 9, L10 at 200,000.
- b. Roller-Bearings: ABMA 11, L10 at 200,000.

G. Belt Drives: Factory mounted, with final alignment and belt adjustment made after installation.

- 1. Service Factor Based on Fan Motor Size: 1.5.
- 2. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
- 3. Motor Pulleys:
 - a. For motors through 10 hp, use adjustable pitch. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
 - b. For motors larger than 10 hp and for all motors with a VFD, use fixed pitch.
- 4. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
- 5. Belt Guards: Fabricate to comply with OSHA and SMACNA requirements of diamond-mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
- 6. Motor Mount: Adjustable for belt tensioning.

H. Accessories:

- 1. Scroll Access Doors: Shaped to conform to scroll, with quick-opening latches and gaskets.
- 2. Cleanout Door: Quick-opening, latch-type gasketed door allowing access to fan scroll, of same material as housing.
- 3. Scroll Drain Connection: NPS 1 steel pipe coupling welded to low point of fan scroll.
- 4. Companion Flanges: Rolled flanges for duct connections of same material as housing.
- 5. Inlet Screens: Grid screen of same material as housing.
- 6. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.
- 7. Spark-Resistant Construction: AMCA 99.
- 8. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.
- 9. Weather Cover: Enameled-steel sheet with ventilation slots, bolted to housing.

I. Motors: Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."

2.2 BACKWARD-INCLINED CENTRIFUGAL FANS

A. Manufacturers:

- 1. Acme Engineering & Mfg. Corp.
- 2. Barry Blower Div.; Penn Ventilation Companies, Inc.
- 3. Chicago Blower Corporation.
- 4. Greenheck.
- 5. Loren Cook Company.
- 6. New York Blower Company (The).
- 7. Twin City Fan & Blower.

- B. Description: Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor, drive assembly, and support structure.
- C. Housings: Formed panels to make curved-scroll housings with shaped cutoff; with doors or panels to allow access to internal parts and components.
 - 1. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
 - 2. Air-tight all welded housing construction.
 - 3. Spun inlet cone with flange.
 - 4. Outlet flange.
- D. Backward-Inclined Wheels:
 - 1. Wheels shall be statically and dynamically balanced to grade G6.3 per ANSI S2.19.
 - 2. Single-width-single-inlet and double-width-double-inlet construction with curved inlet flange.
 - 3. Backplate.
 - 4. Backward-inclined blades welded or riveted to flange and backplate.
 - 5. Cast-iron or cast-steel hub riveted to backplate and fastened to shaft with set screws.
- E. Shafts: Statically and dynamically balanced and selected for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.
 - 1. Turned, ground, and polished hot-rolled steel with keyway. Ship with a protective coating of lubricating oil.
 - 2. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.
- F. Bearings:
 - 1. Bearing Types:
 - a. Prelubricated and Sealed Shaft Bearings: Self-aligning, pillow-block-type ball bearings.
 - b. Grease-Lubricated Shaft Bearings: Self-aligning, pillow-block-type, tapered roller bearings with double-locking collars and two-piece, cast-iron housing.
 - c. Grease-Lubricated Shaft Bearings: Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing.
 - 2. Bearing Rating Life:
 - a. Ball-Bearings: ABMA 9, L10 at 200,000.
 - b. Roller-Bearings: ABMA 11, L10 at 200,000.
- G. Belt Drives: Factory mounted, with final alignment and belt adjustment made after installation.
 - 1. Service Factor Based on Fan Motor Size: 1.5.
 - 2. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
 - 3. Motor Pulleys:
 - a. For motors through 10 hp, use adjustable pitch. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.

- b. For motors larger than 10 hp and for all motors with a VFD, use fixed pitch.
 - 4. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
 - 5. Belt Guards: Fabricate to comply with OSHA and SMACNA requirements of diamond-mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
 - 6. Motor Mount: Adjustable for belt tensioning.
- H. Accessories:
- 1. Scroll Access Doors: Shaped to conform to scroll, with quick-opening latches and gaskets.
 - 2. Cleanout Door: Quick-opening, latch-type gasketed door allowing access to fan scroll, of same material as housing.
 - 3. Scroll Drain Connection: NPS 1 steel pipe coupling welded to low point of fan scroll.
 - 4. Companion Flanges: Rolled flanges for duct connections of same material as housing.
 - 5. Inlet Screens: Grid screen of same material as housing.
 - 6. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.
 - 7. Spark-Resistant Construction: AMCA 99.
 - 8. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.
 - 9. Weather Cover: Enameled-steel sheet with ventilation slots, bolted to housing.
- I. Motors: Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."

2.3 CENTRIFUGAL ROOF VENTILATORS

- A. Manufacturers:
- 1. Acme Engineering & Mfg. Corp.
 - 2. Carnes Company HVAC.
 - 3. FloAire.
 - 4. Greenheck.
 - 5. Loren Cook Company.
 - 6. Penn Ventilation.
 - 7. Twin City Fan & Blower.
- B. Description: Direct- or belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, curb base, and accessories.
- C. Housing: Removable, spun-aluminum, dome top and outlet baffle; square, one-piece, aluminum base with venturi inlet cone.
- 1. Upblast Units: Provide spun-aluminum discharge baffle to direct discharge air upward, with rain and snow drains.
 - 2. Hinged Subbase: Galvanized-steel hinged arrangement permitting service and maintenance.
- D. Fan Wheels:
- 1. Wheels shall be statically and dynamically balanced to grade G6.3 per ANSI S2.19.
 - 2. Aluminum hub and wheel with backward-inclined blades.

- E. Belt-Driven Drive Assembly: Resiliently mounted to housing, with the following features:
1. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
 2. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
 3. Pulleys: Cast-iron, adjustable-pitch motor pulley.
 4. Fan and motor isolated from exhaust airstream.
- F. Accessories:
1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
 2. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.
 3. Bird Screens: Removable, 1/2-inch mesh, aluminum or brass wire.
 4. Motorized Dampers: Parallel-blade dampers mounted in curb base with electric actuator; wired to close when fan stops.
- G. Roof Curbs:
1. Factory fabricated; galvanized steel; mitered and welded corners; 1-1/2-inch-thick, rigid, fiberglass insulation adhered to inside walls; and 1-1/2-inch wood nailer. Size as required to suit roof opening and fan base.
 2. Configuration: Self-flashing without a cant strip, with mounting flange.
 3. Overall Height: Coordinate curb height with roofing system for minimum clearances above finished roof deck as follows:
 - a. Supply intake: 36 inches.
 - b. General exhaust discharge: 12 inches.
 4. Pitch Mounting: Manufacture curb for roof slope.
 5. Metal Liner: Galvanized steel.
 6. Mounting Pedestal: Galvanized steel with removable access panel.

2.4 FORWARD-CURVED CENTRIFUGAL FANS

- A. Manufacturers:
1. Acme Engineering & Mfg. Corp.
 2. Chicago Blower Corporation.
 3. Greenheck.
 4. Loren Cook Company.
 5. New York Blower Company (The).
 6. Twin City Fan & Blower.
- B. Description: Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor, drive assembly, and support structure.
- C. Housings: Formed panels to make curved-scroll housings with shaped cutoff; with doors or panels to allow access to internal parts and components.
1. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
 2. Air-tight all welded housing construction.
 3. Spun inlet cone with flange.

4. Outlet flange.
- D. Forward-Curved Wheels:
1. Wheels shall be statically and dynamically balanced to grade G6.3 per ANSI S2.19.
 2. Baked-enamel or galvanized steel construction with inlet flange.
 3. Backplate.
 4. Shallow blades with inlet and tip curved forward in direction of airflow, mechanically secured to flange and backplate.
 5. Cast-steel hub swaged to backplate and fastened to shaft with set screws.
- E. Shafts: Statically and dynamically balanced and selected for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.
1. Turned, ground, and polished hot-rolled steel with keyway. Ship with protective coating of lubricating oil.
 2. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.
- F. Bearings:
1. Bearing Types:
 - a. Prelubricated and Sealed Shaft Bearings: Self-aligning, pillow-block-type ball bearings.
 - b. Grease-Lubricated Shaft Bearings: Self-aligning, pillow-block-type, tapered roller bearings with double-locking collars and two-piece, cast-iron housing.
 - c. Grease-Lubricated Shaft Bearings: Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing.
 2. Bearing Rating Life:
 - a. Ball-Bearings: ABMA 9, L10 at 200,000.
 - b. Roller-Bearings: ABMA 11, L10 at 200,000.
- G. Belt Drives: Factory mounted, with final alignment and belt adjustment made after installation.
1. Service Factor Based on Fan Motor Size: 1.5.
 2. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
 3. Motor Pulleys:
 - a. For motors through 10 hp, use adjustable pitch. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
 - b. For motors larger than 10 hp and for all motors with a VFD, use fixed pitch.
 4. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
 5. Belt Guards: Fabricate to comply with OSHA and SMACNA requirements of diamond-mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
 6. Motor Mount: Adjustable for belt tensioning.
- H. Accessories:

1. Scroll Access Doors: Shaped to conform to scroll, with quick-opening latches and gaskets.
 2. Cleanout Door: Quick-opening, latch-type gasketed door allowing access to fan scroll, of same material as housing.
 3. Scroll Drain Connection: NPS 1 steel pipe coupling welded to low point of fan scroll.
 4. Companion Flanges: Rolled flanges for duct connections of same material as housing.
 5. Inlet Screens: Grid screen of same material as housing.
 6. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.
 7. Spark-Resistant Construction: AMCA 99.
 8. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.
 9. Weather Cover: Enameled-steel sheet with ventilation slots, bolted to housing.
- I. Motors: Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."

2.5 IN-LINE CENTRIFUGAL FANS

- A. Manufacturers:
1. Acme Engineering & Mfg. Corp.
 2. Carnes Company HVAC.
 3. Greenheck.
 4. Loren Cook Company.
 5. Penn Ventilation.
 6. Twin City Fan & Blower.
- B. Description: In-line, direct-driven centrifugal fans consisting of housing, wheel, outlet guide vanes, fan shaft, bearings, motor and disconnect switch, drive assembly, mounting brackets, and accessories.
- C. Housing: Split, spun aluminum with aluminum straightening vanes, inlet and outlet flanges, and support bracket adaptable to floor, side wall, or ceiling mounting.
- D. Direct-Driven Units: Motor mounted in airstream, factory wired to disconnect switch located on outside of fan housing.
- E. Belt-Driven Units: Motor mounted on adjustable base, with adjustable sheaves, enclosure around belts within fan housing, and lubricating tubes from fan bearings extended to outside of fan housing.
- F. Fan Wheels: Aluminum, airfoil blades welded to aluminum hub.
- G. Accessories:
1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
 2. Volume-Control Damper: Manually operated with quadrant lock, located in fan outlet.
 3. Companion Flanges: For inlet and outlet duct connections.
 4. Fan Guards: 1/2- by 1-inch mesh of galvanized steel in removable frame. Provide guard for inlet or outlet for units not connected to ductwork.
 5. Motor and Drive Cover (Belt Guard): Epoxy-coated steel.

2.6 MIXED-FLOW FANS

- A. Manufacturers:
 - 1. Loren Cook Company.
 - 2. Greenheck.
 - 3. Twin City Fan & Blower.
- B. Description: Fan wheel and housing, straightening vane section, factory-mounted motor with belt drive, and accessories.
- C. Housings: Galvanized steel.
 - 1. Inlet and Outlet Connections: Outer mounting frame and companion flanges.
 - 2. Guide Vane Section: Integral guide vanes downstream from fan wheel designed to straighten airflow.
 - 3. Mixed-Flow Outlet Connection: One flanged discharge(s) perpendicular to fan inlet.
- D. Wheel Assemblies: Cast aluminum with airfoil-shaped blades mounted on cast-iron wheel plate keyed to shaft with solid-steel key.
- E. Drives: Factory mounted, with final alignment and belt adjustment made after installation.
 - 1. Service Factor Based on Fan Motor Size: 1.5.
 - 2. Fan Shaft: Turned, ground, and polished steel designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.
 - 3. Fan Pulleys: Cast iron with split, tapered bushing; dynamically balanced at factory.
 - 4. Motor Pulleys:
 - a. For motors through 10 hp, use adjustable pitch. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
 - b. For motors larger than 10 hp and for all motors with a VFD, use fixed pitch.
 - 5. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
 - 6. Motor Mount: Adjustable base.
 - 7. Shaft Bearings: Radial, self-aligning ball or roller bearings.
 - a. Ball-Bearing Rating Life: ABMA 9, L10 at 200,000.
 - b. Roller-Bearing Rating Life: ABMA 11, L10 at 200,000.
 - c. Extend lubrication lines to outside of casing and terminate with grease fittings.
- F. Accessories:
 - 1. Mounting Clips: Clips welded to fan housing, of same material as housing.
 - 2. Inlet and Outlet Screens: Wire-mesh screen on fans not connected to ductwork of same material as housing.
 - 3. Motor Cover: Cover with side vents to dissipate motor heat, of same material as housing.
 - 4. Inlet Bell: Curved inlet for when fan is not attached to duct, of same material as housing.
 - 5. Outlet Cones: Round-to-round transition of same material as housing.
 - 6. Stack Cap: Vertical discharge assembly with backdraft dampers, of same material as housing.
- G. Motors: Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."

H. Factory Finishes:

1. Sheet Metal Parts: Prime coat before final assembly.
2. Exterior Surfaces: Baked-enamel finish coat after assembly.
3. Retain coatings for special protection applications. Review manufacturer's data for specific trade names and literature.
4. Coatings: Powder-baked enamel.
 - a. Apply to finished housings.
 - b. Apply to fan wheels.

2.7 PROPELLER FANS

A. Manufacturers:

1. Acme Engineering & Mfg. Corp.
2. Carnes Company HVAC.
3. Chicago Blower Corporation.
4. Greenheck.
5. Loren Cook Company.
6. New York Blower Company (The).
7. Penn Ventilation.
8. Twin City Fan & Blower.

B. Description: Direct- or belt-driven propeller fans consisting of fan blades, hub, housing, orifice ring, motor, drive assembly, and accessories.

C. Housing: Galvanized-steel sheet with flanged edges and integral orifice ring with baked-enamel finish coat applied after assembly.

D. Fan Wheels:

1. Steel: Formed-steel blades riveted to heavy-gage steel spider bolted to cast-iron hub.
2. Aluminum: Replaceable, cast or extruded, airfoil blades fastened to cast-aluminum hub; factory set pitch angle of blades.

E. Belt-Driven Drive Assembly: Resiliently mounted to housing, statically and dynamically balanced and selected for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.

1. Service Factor Based on Fan Motor Size: 1.4.
2. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
3. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
 - a. Ball-Bearing Rating Life: ABMA 9, L10 at 200,000.
4. Pulleys: Cast iron with split, tapered bushing; dynamically balanced at factory.
5. Motor Pulleys:
 - a. For motors through 10 hp, use adjustable pitch. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
 - b. For motors larger than 10 hp and for all motors with a VFD, use fixed pitch.
6. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.

7. Belt Guards: Fabricate of steel for motors mounted on outside of fan cabinet.

F. Accessories:

1. Motorized Shutters: Aluminum blades in aluminum frame; interlocked blades with nylon bearings.
2. Motor-Side Back Guard: Galvanized steel, complying with OSHA specifications, removable for maintenance.
3. Wall Sleeve: Galvanized steel to match fan and accessory size.
4. Weathershield Hood: Galvanized steel to match fan and accessory size.
5. Weathershield Front Guard: Galvanized steel with expanded metal screen.
6. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
7. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.

2.8 UTILITY SET FANS

A. Manufacturers:

1. Barry Blower.
2. Greenheck.
3. Loren Cook Company.
4. New York Blower Company (The).
5. Penn Ventilation.
6. Twin City Fan & Blower.

- B. Description: Direct or belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, and accessories.

- C. Housing: Fabricated of steel with side sheets fastened with a deep lock seam or welded to scroll sheets.

1. Housing Discharge Arrangement: Adjustable to eight standard positions.

- D. Fan Wheels: Single-width, single inlet; welded to cast-iron or cast-steel hub and spun-steel inlet cone, with hub keyed to shaft.

1. Blade Materials: Steel or Aluminum.
2. Blade Type: Backward inclined, forward curved, airfoil.
3. Spark-Resistant Construction: AMCA 99, Type B.

E. Fan Shaft:

1. Turned, ground, and polished steel; keyed to wheel hub.
2. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

- F. Shaft Bearings: Prelubricated and sealed, self-aligning, pillow-block-type ball bearings with ABMA 9 L10 at 200,000.

- G. Belt Drives: Factory mounted, with final alignment and belt adjustment made after installation.

1. Service Factor Based on Fan Motor Size: 1.5.
 2. Motor Pulleys:
 - a. For motors through 10 hp, use adjustable pitch. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
 - b. For motors larger than 10 hp and for all motors with a VFD, use fixed pitch.
 3. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
 4. Belt Guards: Fabricate of steel for motors mounted on outside of fan cabinet.
- H. Accessories:
1. Inlet and Outlet: Flanged.
 2. Companion Flanges: Rolled flanges for duct connections of same material as housing.
 3. Access Door: Gasketed door in scroll with latch-type handles.
 4. Inlet Screens: Removable wire mesh.
 5. Drain Connections: NPS 3/4 threaded coupling drain connection installed at lowest point of housing.
 6. Weather Hoods: Weather resistant with stamped vents over motor and drive compartment.
- I. Coatings: Powder-baked enamel.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install fans level and plumb.
- B. Equipment shall be supported as described in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment".
- C. Secure roof mounted fans to roof curbs with cadmium-plated hardware.
- D. Install units with clearances for service and maintenance.

3.2 CONNECTIONS

- A. Coordinate duct installations and specialty arrangements with schematics on Drawings and with requirements specified in duct systems.
- B. Duct installation and connection requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors.
- C. Install ducts adjacent to fans to allow service and maintenance.
- D. For fans with scroll drains, install line-sized piping from drain connection, with trap with seal equal to 1.5 times specified static pressure, to nearest floor drain.
- E. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

- F. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 - 1. Verify that shipping, blocking, and bracing are removed.
 - 2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
 - 3. Verify that cleaning and adjusting are complete.
 - 4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
 - 5. Adjust belt tension.
 - 6. Adjust damper linkages for proper damper operation.
 - 7. Verify lubrication for bearings and other moving parts.
 - 8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
 - 9. Disable automatic temperature-control operators, energize motor and confirm proper motor rotation and unit operation, adjust fan to indicated rpm, and measure and record motor voltage and amperage.
 - 10. Replace fan and motor pulleys as required to achieve design airflow.
 - 11. Shut unit down and reconnect automatic temperature-control operators.
 - 12. Remove and replace malfunctioning units and retest as specified above.
- B. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain fans. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 233600

AIR TERMINAL UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Dual-duct air terminal units.
2. Fan-powered air terminal units.
3. Shutoff single-duct air terminal units.
4. Air valves.

B. Related Sections include the following:

1. Division 23 Section "Hydronic Piping".
2. Division 23 Section "General-Duty Valves for HVAC Piping" for valves and accessories for piping.
3. Division 23 Section "Instrumentation and Control for HVAC".

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated, include rated capacities, furnished specialties, sound-power ratings, and accessories.

B. LEED Submittals:

1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
2. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.

C. Shop Drawings: Detail equipment assemblies and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.

1. Include a schedule showing unique model designation, room location, model number, size, and accessories furnished.
2. Wiring Diagrams: Power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Ceiling suspension assembly members.
2. Size and location of initial access modules for acoustic tile.
3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.

- B. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air terminal units to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data" include the following:
 - 1. Instructions for resetting minimum and maximum air volumes.
 - 2. Instructions for adjusting software set points.

1.5 QUALITY ASSURANCE

- A. Product Options: Drawings indicate size, profiles, and dimensional requirements of air terminal units and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. NFPA Compliance: Install air terminal units according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."
- D. Identification: Label each air terminal unit with plan number, nominal airflow, maximum and minimum factory-set airflows, coil type, and ARI certification seal.
- E. Verification of Performance: Rate air terminal units according to ARI 880.

1.6 COORDINATION

- A. Coordinate layout and installation of air terminal units and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers:
 - 1. Enviro-tec.
 - 2. Kreuger.
 - 3. METALLAIRE, Inc.; Metal Industries Inc.
 - 4. Nailor Industries.
 - 5. Phoenix Corporation.
 - 6. Price Industries.
 - 7. Titus.

2.2 GENERAL

- A. Provide factory mounted Andover controls package.
- B. Terminal units shall not exceed NC 26 at 3" w.g. per AHRI 880.
- C. Terminals with hydronic reheat shall implement two PID loops, one with the zone temperature as the input and the second one with the box DAT as input.

2.3 UNIT CONTROLS

- A. Factory-Mounted and -Wired Controls: Electrical components including, differential pressure sensor and air flow sensing tubes, shall be mounted in NEMA 250, Type 1 control box with removable cover, mounted on side of unit and sealed from airflow. Incorporate single-point electrical connection to power source.
 - 1. Control Transformer: Factory mounted for 24 VAC control voltage on electric and electronic control units with terminal strip in control box for field wiring of thermostat and power source. Units with fans shall also require fan start/stop relay.
 - 2. Wiring Terminations: Fan and controls to terminal strip, and terminal lugs shall match quantities, sizes, and materials of branch-circuit conductors. Enclose terminal lugs in terminal box that is sized according to NFPA 70.
 - 3. Primary air Belimo damper actuator and Andover's pressure independent primary air controller.
 - 4. Airflow sensing tubes:
 - a. Sensing tubes of the multipoint, automatic averaging type shall be included in each unit inlet.
 - b. Dual-duct units shall have airflow sensing tubes at the unit outlet.
 - c. Airflow sensing tubes are to include 'tees' utilized as balancing taps for field adjustment of the maximum (and minimum) primary CFM, without having to remove tubes from controller.
 - d. The balancing taps shall be used in conjunction with a flow chart on each terminal unit to permit readjustment of the primary air. Field readjustment shall be by means of adjustment screws.
 - 5. A schematic drawing shall be affixed to each box indicating proper hookups for electronic thermostats.
- B. DDC Controls: Bidirectional damper operators and microprocessor-based controller and room sensor shall be compatible with temperature controls specified in Division 23 Section "Instrumentation and Control for HVAC" and shall have the following features:
 - 1. Damper Actuators: 24 V, powered open.
 - 2. Velocity Sensors: Multipoint array with velocity sensors in all air inlets and air outlet and integral to unit.
 - 3. Terminal Unit Controller: Pressure independent, variable-air or constant-volume controller with electronic airflow transducers factory calibrated to minimum and maximum air volumes, and having the following features:
 - a. Proportional, plus integral control of room temperature.
 - b. Time-proportional reheat-coil control.
 - c. Occupied and unoccupied operating mode.
 - d. Remote reset of airflow or temperature set points.

- e. Adjusting and monitoring with portable terminal.
- f. Communication with temperature-control system specified in Division 23Section "Instrumentation and Control for HVAC."

2.4 HEATING COILS

- A. Hot-Water: Copper tube, mechanically expanded into aluminum-plate fins; leak tested underwater to 200 psig; and factory installed.
 - 1. Minimum two-row coils with tube thickness not less than 0.016".
 - 2. Coil performance shall be based on ARI 410.
- B. Where indicated, boxes shall be provided with a hot water heating coil and modulating control valve.
- C. Heating coils shall be removable without removing the terminal unit.

2.5 SHUTOFF SINGLE-DUCT AIR TERMINAL UNITS

- A. Configuration: Variable-volume damper assembly inside unit casing with control components located inside a protective metal shroud.
- B. Casing: 0.034-inch steel.
 - a. Casing Lining:
 - b. Thermal insulation equivalent in performance to 1-inch-thick, coated, fibrous-glass duct liner complying with ASTM C 1071; secured with adhesive. Cover liner with one of the following nonporous sheets:
 - 1) Foil.
 - 2) Tedlar.
 - c. Adhesive attached, 3/4-inch-thick, polyurethane foam insulation.
 - d. All linings and adhesives shall comply with the following standards:
 - 1) ASTM E 84 for Flame and Smoke, 25/50.
 - 2) ASTM C 665 for Fungi Resistance.
 - 3) UL 181 for Air Erosion and Mold Growth and Humidity.
 - 4) UL 723 for Flame and Smoke, 25/50.
- 2. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
- 3. Air Outlet: S-slip and drive connections.
- 4. Access: Removable panels for access to dampers and other parts requiring service, adjustment, or maintenance; with airtight gasket.
- C. Regulator Assembly: Extruded-aluminum or galvanized-steel components; key damper blades onto shaft with nylon-fitted pivot points located inside unit casing.
 - 1. Automatic Flow-Control Assembly: Combined spring rates shall be matched for each volume-regulator size with machined dashpot for stable operation.
 - 2. Factory-calibrated and field-adjustable assembly with shaft extension for connection to externally mounted control actuator.

- D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.
 - 1. Maximum Damper Leakage: ARI 880 rated, 3 percent of nominal airflow at 6-inch wg inlet static pressure.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install air terminal units level and plumb.
- B. Maintain sufficient clearance for normal service and maintenance to all portions, including coil connections.
 - 1. Provide at least 24" clear in front of terminal unit control panel access.
 - 2. Provide at least NEC clearances in front of terminal unit disconnects.

3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to air terminal units to allow service and maintenance.
- C. Hot-Water Piping: In addition to requirements in Division 23 Section "Hydronic Piping," connect heating coils to supply with shutoff valve, strainer, control valve, and union or flange; and to return with balancing valve and union or flange.
- D. Connect ducts to air terminal units according to Division 23 Section "Metal Ducts".
- E. Ground units with electric heating coils according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- F. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- G. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
- H. Install 24VAC transformer for all terminal unit controls.
- I. Install discharge air temperature sensor at each terminal unit.

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including connections. Report results in writing.
- B. Perform the following field tests and inspections and prepare test reports:

1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
2. Leak Test: After installation, fill water coils and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Remove and replace malfunctioning units and retest as specified above.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain air terminal units. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

SECTION 233713

DIFFUSERS, REGISTERS, AND GRILLES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes ceiling- and wall-mounted diffusers, registers, and grilles.
- B. Related Sections include the following:
 - 1. Division 08 Section "Louvers and Vents" for fixed and adjustable louvers and wall vents, whether or not they are connected to ducts.
 - 2. Division 23 Section "Air Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to diffusers, registers, and grilles.
 - 3. Division 23 Section "Particulate Air Filtration" for HEPA media applied in HEPA filter grilles.

1.2 ACTION SUBMITTALS

- A. Product Data: For each product indicated, include the following:
 - 1. Data Sheet: Indicate drawing designation, model number, size, materials of construction, finish, and mounting details; and performance data including throw and drop, accessories, static-pressure drop, and noise ratings.
 - 2. Diffuser, Register, and Grille Schedule: Indicate Drawing designation, model number, size, and accessories furnished.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Kreuger.
- B. MetalAire, Inc.; Metal Industries Inc.
- C. Nailor.
- D. Price Industries.
- E. Titus.

2.2 CAPACITIES AND CHARACTERISTICS

- A. Provide Grilles, Registers, and Diffusers with capacities and characteristics as indicated in the drawings.

- B. Maximum NC shall be 25 at CFM indicated, including neck damper.
- C. Coordinate frame style with drawings.
- D. Finish: Baked enamel, color selected by Architect.
- E. Ceiling mounted critical environment grilles, registers, and diffusers shall have an independent hanger or chain to structure.
- F. Insulate the top of the following supply air diffusers directly under an exposed roof.

2.3 SOURCE QUALITY CONTROL

- A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
- C. Deliver and store clean and shrink wrapped. Touch up any paint damage.

3.2 INSTALLATION

- A. Install diffusers, registers, and grilles level and plumb.
- B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practicable. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.
- C. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.
- D. Install insulation blankets on the back-pan of all air devices directly under an exposed roof. Refer to Division 23 "HVAC Insulation".
- E. At each ceiling and sidewall take-off from a duct, install an adjustable volume extractor with appropriate operator. Refer to Division 23 "Air Duct Accessories".

3.3 ADJUSTING

- A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 234000

HVAC AIR CLEANING DEVICES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes factory-fabricated air-filter devices and media used to remove particulate matter from air for HVAC applications.
- B. Related Sections include the following:
 - 1. Division 23 Section "Metal Ductwork" for duct materials and pressure classes.
- C. References and Standards
 - 1. AMCA 99 – Standards Handbook.
 - 2. ANST/UL-900 - Test Performance of Air Filter Units.
 - 3. ANSI/UL 586 - Test Performance of High Efficiency Particulate, Air Filter Units.
 - 4. ANSI/AWS D9.1-1990 – Specifications for Welding Sheet Metal.
 - 5. ASHRAE 52.2 - Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size.
 - 6. "Biosafety in Microbiological and Biomedical Laboratories," by the U.S. Department of Health and Human Services. 4th Edition, Centers of Disease Control (CDC). DHHS Publication No. (CDC) 93-8395.
 - 7. DOE-STD-3020-97, SPECIFICATION FOR HEPA FILTERS USED BY DOE CONTRACTORS, January 1997
 - 8. IEST-RP-CC001.3 - HEPA and ULPA Filters -, The Institute of Environmental Science and Technology, Rolling Meadows, IL.
 - 9. IEST-RP-CC034.1 - HEPA and ULPA Filter Leak Tests - The Institute of Environmental Science and Technology, Rolling Meadows, IL.
 - 10. NIH Design Policy and Guidelines. Spring 2003.
 - 11. NSF/ANSI 49, Class II (laminar flow) biosafety cabinetry, NSF International Standard/American National Standard, 2004
 - 12. SMACNA - HVAC Duct Construction Standards - Metal and Flexible.

1.2 DEFINITIONS

- A. DOP: Dioctyl phthalate or bis-(2-ethylhexyl) phthalate.
- B. HEPA: High-efficiency particulate air.
- C. ULPA: Ultra low penetration air.

1.3 ACTION SUBMITTALS

- A. Product Data: Include dimensions; operating characteristics; required clearances and access; rated flow capacity, including initial and final pressure drop at rated airflow; efficiency and test

method; fire classification; furnished specialties; frame construction and materials; and accessories for each model indicated.

- B. Shop Drawings: Include plans, elevations, sections, and details to illustrate component assemblies and attachments.
 - 1. Show filter rack assembly, dimensions, materials, and methods of assembly of components.
 - 2. Include setting drawings, templates, and requirements for installing anchor bolts and anchorages.
 - 3. Wiring Diagrams: Power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Operation and Maintenance Data: For each type of filter and rack to include in emergency, operation, and maintenance manuals.
- B. Manufacturer's Letter:
 - 1. Manufacturer shall provide a letter of compliance along with cost proposal stating that the manufacturer complies with all requirements of specifications and drawings.
 - 2. For HEPA filter housing seals, manufacturer shall also provide written assurance that sealant is compatible with all decontamination materials including VHP.
- C. When specified performance characteristics are not published in the manufacturer's literature, the submittal data shall include certified documentation of performance by an approved independent test laboratory.
- D. For HEPA filter housings, all welding procedures, welders and welder operators shall be qualified in accordance with ASME Boiler and Pressure Vessel Code, Section IX. All production welds shall be visually inspected per standard procedure per ANSI/AWS D9.1-1990, "Specifications for Welding Sheet Metal" and shall be recorded with a certified weld inspection and report.

1.5 QUALITY ASSURANCE

- A. Product Options: Drawings indicate size, profiles, and dimensional requirements of air filters and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."
- B. Comply with ARI 850.
- C. Comply with ASHRAE 52.1 and ASHRAE 52.2 for method of testing and rating air-filter units.
- D. Comply with NFPA 90A and NFPA 90B.
- E. Manufacturer: All manufacturers shall specialize in the production of components specified herein for not less than three years documented experience and shall also issue a complete catalog with all data for the total product as described in "Submittals" above.

1.6 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Provide one complete set of filters for each filter bank. If system includes prefilters, provide only prefilters.
 - 2. Provide one complete set of filters for each section of each unit to be installed when the project is turned over to the Owner.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS

- A. Configuration: Fabricate with fan(s), coils, etc. plus accessories, including:
 - 1. Filters.
 - 2. Filter Housings and Frames.
 - 3. Filter Gauges.
- B. Fabrication: Conform to AMCA 99 and ARI 430.
- C. All air filters shall be listed as Class 1 in accordance with Underwriters' Laboratories, Inc., Building Materials Director requirements, except ultrahigh efficiency filters (HEPA) shall be manufactured of materials that are so listed by UL.

2.2 FILTERS

- A. Type "A": Permanent Washable.
 - 1. Manufacturers:
 - a. AAF International
 - b. Camfil Type 44
 - c. Air-Maza P-5
 - 2. Description: Viscous coated, high velocity filters.
 - 3. Frame: Cardboard.
 - 4. Thickness: 2".
 - 5. Initial Resistance: Initial clean resistance to air flow shall not exceed 0.10" w.g.
 - 6. Maximum Face Velocity: The net velocity shall not exceed 500 FPM.
 - 7. Installation: Filters shall be installed in side access or front access frames, as shown on the drawings. Filters in front access frames shall be furnished with lift handles.
- B. Type "B": Sectional, Renewable Media.
 - 1. Manufacturers:
 - a. American Air Filter RENU
 - b. Camfill D/C 22
 - 2. Description: Adhesive coated glass fiber media pads enclosed in sectional frames.

3. Frame: 16 gauge galvanized steel with mechanism for changing filter media.
4. Thickness: 2".
5. Initial Resistance: Initial clean resistance to air flow shall not exceed 0.10" w.g.
6. Maximum Face Velocity: The net velocity shall not exceed 350 FPM.
7. Installation: Filters shall be installed in side access or front access frames, as shown on the drawings. Filters in front access frames shall be furnished with lift handles.

C. Type "C": Replaceable, Dry.

1. Manufacturers:
 - a. Camfill 30/30.
 - b. American Air Filter.
 - c. Air Guard.
 - d. Flanders.
2. Description: Pleated, disposable, nonwoven, lofted cotton media. The media shall be cemented to the inside of the frame to prevent air bypass.
3. Frame: Galvanized steel frame with 96% free support grid and contour stabilizers. The support grid and frame shall be continuously bonded to the leaving air face of the media.
4. Performance: MERV 8 (30%).
5. Thickness: 2".
6. Initial Resistance: Initial clean resistance to air flow shall not exceed 0.30" w.g.
7. Maximum Face Velocity: The net velocity shall not exceed 500 FPM.
8. Installation: Filters shall be installed in side access or front access frames, as shown on the drawings. Filters in front access frames shall be furnished with lift handles.
9. Capacity: a 24" x 24" size shall be certified for a dust holding capacity of not less than 200 grams of ASHRAE Test Dust at 500 FPM and a final resistance of 1.0" w.g.

D. Type "D": Replaceable, Dry.

1. Manufacturers:
 - a. AmAir 1100.
 - b. Flanders 62RM11.
 - c. Camfill AP Eleven.
2. Description: High density, microfine glass fiber media laminated to a nonwoven synthetic backing. The media shall be cemented to the inside of the frame to prevent air bypass.
3. Frame: Galvanized beverage board frame with 96% free support grid and contour stabilizers. The support grid and frame shall be continuously bonded to the leaving air face of the media.
4. Performance: MERV 11 (65%).
5. Thickness: 4" – 12".
6. Initial Resistance: Initial clean resistance to air flow shall not exceed 0.35" w.g.
7. Maximum Face Velocity: The net velocity shall not exceed 500 FPM.
8. Installation: Filters shall be installed in side access or front access frames, as shown on the drawings. Filters in front access frames shall be furnished with lift handles.
9. Capacity: a 24" x 24" x 12" size shall be certified for the dust holding capacity above to a final resistance of 1.0" w.g.

E. Type "E": Replaceable, Dry.

1. Manufacturers:

- a. Camfill Aeropac or N/S Model III.
 - b. American Air Filter.
 - c. Flanders.
- 2. Description: High density, microfine glass fiber media laminated to a nonwoven synthetic backing. The media shall be cemented to the inside of the frame to prevent air bypass.
 - 3. Frame: Galvanized beverage board frame with 96% free support grid and contour stabilizers. The support grid and frame shall be continuously bonded to the leaving air face of the media.
 - 4. Performance: MERV 14 (90%).
 - 5. Thickness: 12".
 - 6. Initial Resistance: Initial clean resistance to air flow shall not exceed 1.0" w.g.
 - 7. Maximum Face Velocity: The net velocity shall not exceed 500 FPM.
 - 8. Installation: Filters shall be installed in side access or front access frames, as shown on the drawings. Filters in front access frames shall be furnished with lift handles.
 - 9. Capacity: a 24" x 24" x 12" size shall be certified for the dust holding capacity above to a final resistance of 1.75" w.g.

2.3 FILTER HOUSINGS AND FRAMES

A. Side Access Housings

- 1. All housings shall:
 - a. Be fabricated of not less than an all welded 16 gauge galvanized steel and be equipped with standing flanges and hinged access doors at both ends.
 - b. Receive filters of any manufacturer without alteration to filter, including 2" deep panel type prefilters, or housing.
 - c. Incorporate a permanent provision for sealing the filters against leakage around the entire perimeter of each filter, eliminating the need to purchase replacement filters with factory applied gasket strips. Replaceable woven pile seals shall be an integral component of the downstream flange of each extrusion so that the seals are compressed by the pressure drop across the filters, preventing bypass of unfiltered air.
 - d. Not exceed 36 inches in direction of air flow.
 - e. Be constructed and rated for use at listed air handling unit static pressures.
- 2. Doors are to be fitted with positive sealing, heavy duty multiple latches and with sponge neoprene gaskets.
- 3. Provide housings with static pressure taps.

B. Face Access Housings

- 1. All housings shall:
 - a. Be fabricated of not less than 16 gauge galvanized steel with holes prepunched for convenient assembly into banks.
 - b. Be a minimum of 2-5/8" deep for maximum structural strength and resistance to racking.
 - c. Be fitted with polyurethane foam gaskets, held in place by long lasting adhesive, and with a minimum of four heavy duty spring type fasteners.
- 2. Fasteners shall attach to the frames without requiring tools and shall be capable of withstanding 25 pounds of pressure without deflection.

3. All joints in the field assembled banks of frames shall be thoroughly caulked to prevent bypass of unfiltered air between frames and surrounding ductwork or plenum chambers.

2.4 FILTER GAUGES

- A. Manufacturers:
 1. Airguard Industries, Inc.
 2. Dwyer Instruments, Inc.
- B. Description: Diaphragm type with dial and pointer in metal case, vent valves, black figures on white background, and front recalibration adjustment.
 1. Diameter: 4-1/2 inches.
 2. Range: The range of the scale shall start at 0 and end no greater than 1" w.g. (250 Pa) above the filter manufacturer's recommended final resistance for the type of filter to which the gauge is being applied.
- C. Accessories: Each gauge shall be provided with an adjustable signal flag, two static pressure tips with compression fittings, two three-way vent valves with compression fittings, two lengths of aluminum tubing, and a mounting plate with screws.
- D. For HEPA filter banks, the following shall also apply:
 1. Factory mounted photohelic gauge by Dwyer, 3003 SGT or engineer approved equal.
 2. Gauge shall have zero adjustment capability.
 3. In lieu of aluminum, provide stainless steel tubing, fittings, mounting brackets, identification labels.
 4. Identification labels shall be stitch welded to mounting bracket.
 5. Each gauge assembly shall be complete with stainless steel inline HEPA filters, tee fitting, gauge decontamination port, and 2-way stainless steel plug valves.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install filter frames according to manufacturer's written instructions.
- B. Position each filter unit with clearance for normal service and maintenance. Anchor filter holding frames to substrate.
- C. Install filters in position to prevent passage of unfiltered air.
- D. Install filter gauge for each filter bank.
- E. An integral transmitter shall read differential pressure across each filter bank and report to the FMS.
- F. Install filter gauge static-pressure tips upstream and downstream from filters to measure pressure drop through filter. Mount filter gauges on outside of filter housing or filter plenum in an accessible position. Adjust and level inclined gauges.

- G. Coordinate filter installations with duct and air-handling unit installations.
- H. Electrical wiring and connections are specified in Division 26 Sections.
- I. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- J. Do not operate units for any purpose, temporary or permanent, until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

3.2 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components, filter and filter-frame installation, and electrical wiring, and to assist in field testing. Report results in writing.
- B. HEPA Filters:
 - 1. All HEPA filter housing requires that the filters can be quantitatively leak tested.
 - 2. The injection port and sampling ports shall be of sufficient size for insertion of the output line from the aerosol generator or photometer probe used by the owner or its authorized testing agency.
 - 3. Total leak test or efficiency test and scan leak tests shall be performed.
 - 4. The scan test apparatus must be qualified to be capable of traversing the entire filter sealing gasket and the perimeter of the filter support/duct housing structure in addition to the filter. Each test system is qualified only once prior to conducting periodic leak tests. The total leak test is prescribed in ASME N510-1989, Section 10, and the scan leak test is prescribed in IEST-RP-CC034.1.
 - 5. Access to Inject Challenge Aerosol: Access is required to permit the injection of challenge aerosol upstream of the filter. The aerosol can be injected at a device served by the filter system or via a port installed in the ductwork upstream of the features that accomplish the tasks listed in the following Sections.
 - 6. Mixing Devices Upstream of the Filter: The challenge aerosol should be mixed thoroughly using installed devices that are designed to induce turbulence, or by adding a device to create mixing by inducing turbulence, such as a Stairmand disk.
 - 7. Qualification to Ensure Uniform Downstream Concentration for Total Leak Test: Thorough mixing is required for any leaking aerosol downstream from the filter. Turbulence shall be induced using engineered system in the downstream airflow that produces mixing. An engineered turbulence induction and sampling manifold system which collects samples at multiple points downstream of all portions of the filter after mixing for concurrent measurement of the average concentration is allowed.
 - 8. Scan Test to Measure All Leaks:
 - a. Scanning one inch from the downstream ("clean") face of the filter is allowed provided that an engineered system shall be installed in the filter system at the time the system is built.
 - b. The scan test apparatus must be qualified by demonstrating it can measure leaks along the entire filter sealing gasket and the perimeter of the filter support/duct housing structure as well as leaks in the filter itself.
 - c. The scanning system shall consist of one or more funnel shaped collectors attached to an apparatus that can traverse over the duct section at one inch from the face of the HEPA filter in an overlapping fashion as prescribed in IEST-RPCC034.1. 6.0 Acceptance Criteria for In-Place Leakage Tests.

- d. The scan leak test measuring instrument shall be discrete particle measuring type with the ability to record and integrate individual leak test.
- e. Engineer and Owner shall review and approve any proposed alternative.

3.3 CLEANING

- A. After completing system installation and testing, adjusting, and balancing air-handling and air-distribution systems, clean filter housings and install new filter media.

END OF SECTION

SECTION 235100

BREECHINGS, CHIMNEYS, AND STACKS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Listed double-wall vents.

B. Related Sections include the following:

1. Division 23 Section "HVAC Fans" for induced-draft and mechanical fans and for motorized and barometric dampers.
2. Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment" for seismic and wind restraint requirements.

1.2 ACTION SUBMITTALS

A. Product Data: For the following:

1. Type B and BW vents.
2. Type L vents.
3. Special gas vents.
4. Building-heating-appliance chimneys.
5. Guy wires and connectors.

B. Shop Drawings: For vents, breechings, chimneys, and stacks. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, methods of field assembly, components, hangers and seismic restraints, and location and size of each field connection.
2. For installed products indicated to comply with design loads, include calculations required for selecting seismic restraints and structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.3 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Warranty: Special warranty specified in this Section.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain listed system components through one source from a single manufacturer.

- B. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code--Steel," for hangers and supports and AWS D9.1/D9.1M, "Sheet Metal Welding Code," for shop and field welding of joints and seams in vents, breechings, and stacks.
- C. Certified Sizing Calculations: Manufacturer shall certify venting system sizing calculations.

1.5 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."

1.6 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of venting system that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, structural failures caused by expansion and contraction.
 - 1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- 1. American Metal Products; MASCO Corporation.
- 2. Ampco.
- 3. Hart & Cooley, Inc.
- 4. Metal-Fab, Inc.
- 5. Selkirk Inc.; Selkirk Metalbestos and Air Mate.

2.2 LISTED TYPE B AND BW VENTS

- A. Description: Double-wall metal vents tested according to UL 441 and rated for 480 deg F continuously for Type B, or 550 deg F continuously for Type BW; with neutral or negative flue pressure complying with NFPA 211.
- B. Construction: Inner shell and outer jacket separated by at least a 1/4-inch airspace.
- C. Inner Shell: ASTM B 209, Type 3105 aluminum.
- D. Outer Jacket: Aluminized steel.

2.3 LISTED TYPE L VENTS

- A. Description: Double-wall metal vents tested according to UL 641 and rated for 570 deg F continuously, or 1700 deg F for 10 minutes; with neutral or negative flue pressure complying with NFPA 211.
- B. Construction: Inner shell and outer jacket separated by at least a 2-inch airspace filled with high-temperature, ceramic-fiber or mineral-wool insulation.
- C. Inner Shell: ASTM A 666, Type 304 stainless steel.
- D. Outer Jacket: Stainless steel.
- E. Accessories: Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar materials and designs as vent-pipe straight sections; all listed for same assembly.
 - 1. Termination: Stack cap designed to exclude 90 percent of rainfall.

2.4 LISTED SPECIAL GAS VENTS

- A. Description: Double-wall metal vents tested according to UL 1738 and rated for 480 deg F continuously, with positive or negative flue pressure complying with NFPA 211.
- B. Construction: Inner shell and outer jacket separated by at least a 1/2-inch airspace.
- C. Inner Shell: ASTM A 959, Type 29-4C stainless steel.
- D. Outer Jacket: Stainless steel.

2.5 LISTED BUILDING-HEATING-APPLIANCE FLUES AND CHIMNEYS

- A. Description: Double-wall metal vents tested according to UL 103 and UL 959 and rated for 1400 deg F continuously, or 1800 deg F for 10 minutes; with positive or negative flue pressure complying with NFPA 211.
- B. Construction: Inner shell and outer jacket separated by at least a 2-inch annular space filled with high-temperature, ceramic-fiber insulation.
- C. Inner Shell: ASTM A 666, Type 304 stainless steel.

2.6 ACCESSORIES

- A. General: Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar materials and designs as vent-pipe straight sections; all listed for same assembly.
- B. Termination: Round chimney top designed to exclude minimum 98 percent of rainfall.

2.7 GUYING AND BRACING MATERIALS

- A. Cable: Galvanized, stranded wires of the following thickness:
 - 1. Minimum Size: 1/4 inch in diameter.
 - 2. For ID Sizes 4 to 15 Inches: 5/16 inch.
 - 3. For ID Sizes 18 to 24 Inches: 3/8 inch.
 - 4. For ID Sizes 27 to 30 Inches: 7/16 inch.
 - 5. For ID Sizes 33 to 36 Inches: 1/2 inch.
 - 6. For ID Sizes 39 to 48 Inches: 9/16 inch.
 - 7. For ID Sizes 51 to 60 Inches: 5/8 inch.
- B. Pipe: Galvanized steel, NPS 1-1/4.
- C. Angle Iron: Galvanized steel, 2 by 2 by 0.25 inch.
- D. Delegated Design: Size and locate the guying and bracing system with the materials above in compliance with Division 23 "Vibration Isolation and Seismic Controls for HVAC" and with the approval of a registered structural engineer in good standing.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of work.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATION

- A. Listed Type B and BW Vents: Vents for certified gas appliances.
- B. Listed Type L Vent: Vents for low-heat appliances.
- C. Listed Special Gas Vent: Condensing gas appliances.
- D. Listed Building-Heating-Appliance Flues and Chimneys:
 - 1. Engine generators: from muffler discharge to final point of exhaust termination
- E. Schedule 40 Steel Pipe:
 - 1. Engine generators
 - a. From muffler discharge to final point of exhaust termination.
 - b. From engine generator to muffler.

3.3 INSTALLATION OF LISTED VENTS AND CHIMNEYS

- A. Locate to comply with minimum clearances from combustibles and minimum termination heights according to product listing or NFPA 211, whichever is most stringent.

- B. Seal between sections of positive-pressure vents and grease exhaust ducts according to manufacturer's written installation instructions, using sealants recommended by manufacturer.
- C. Support vents at intervals recommended by manufacturer to support weight of vents and all accessories, without exceeding appliance loading.
- D. Slope breechings down in direction of appliance, with condensate drain connection at lowest point piped to nearest drain.
- E. For condensing appliances, lap joints in direction of condensate flow.

3.4 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.
- B. Clean breechings internally, during and after installation, to remove dust and debris. Clean external surfaces to remove welding slag and mill film. Grind welds smooth and apply touchup finish to match factory or shop finish.
- C. Provide temporary closures at ends of breechings, chimneys, and stacks that are not completed or connected to equipment.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 235216
CONDENSING BOILERS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes packaged, factory-fabricated and -assembled, gas-fired, condensing boilers, trim, and accessories for generating hot water.

1.2 ACTION SUBMITTALS

- A. Product Data: Include performance data, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings: For boilers, boiler trim, and accessories. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Design calculations and vibration isolation base details, signed and sealed by a qualified professional engineer.
 - a. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
 - b. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails and equipment mounting frames.
 - 2. Wiring Diagrams: Power, signal, and control wiring.
 - 3. Short-circuit current rating of equipment assembly.

1.3 INFORMATIONAL SUBMITTALS

- A. Source quality-control test reports.
- B. Field quality-control test reports.
- C. Operation and Maintenance Data: For boilers to include in emergency, operation, and maintenance manuals.
- D. Warranty: Special warranty specified in this Section.
- E. Other Informational Submittals:
 - 1. ASME Stamp Certification and Report: Submit "A," "S," or "PP" stamp certificate of authorization, as required by authorities having jurisdiction, and document hydrostatic testing of piping external to boiler.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For boilers to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. ASME Compliance: Fabricate and label boilers to comply with ASME Boiler and Pressure Vessel Code.
- C. ASHRAE/IESNA 90.1 Compliance: Boilers shall have minimum efficiency according to "Gas and Oil Fired Boilers - Minimum Efficiency Requirements."
- D. DOE Compliance: Minimum efficiency shall comply with 10 CFR 430, Subpart B, Appendix N, "Uniform Test Method for Measuring the Energy Consumption of Furnaces and Boilers."
- E. UL Compliance: Test boilers for compliance with UL 795, "Commercial-Industrial Gas Heating Equipment." Boilers shall be listed and labeled by a testing agency acceptable to authorities having jurisdiction.

1.6 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.7 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of boilers that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period for Pulse-Combustion Boilers:
 - a. Leakage and Materials: 10 years from date of Substantial Completion.
 - b. Heat Exchanger Damaged by Thermal Stress and Corrosion: Prorated for five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers:
 - 1. Cleaver Brooks.
 - 2. Fulton Boiler Works, Inc.
 - 3. Lochinvar Corporation.

2.2 MANUFACTURED UNITS

- A. Description: Factory-fabricated, -assembled, and -tested, condensing boiler with heat exchanger sealed pressure tight, built on a steel base; including insulated jacket; flue-gas vent; combustion-air intake connections; water supply, return, and condensate drain connections; and controls.
- B. Heat Exchanger:
 - 1. Type 316L, stainless-steel primary and secondary combustion chamber.
 - 2. Finned-copper primary and stainless-steel secondary heat exchangers.
- C. Pressure Vessel: Carbon steel with welded heads and tube connections.
- D. Burner: Natural gas, self-aspirating and self-venting after initial start.
- E. Blower: Centrifugal fan to operate during each burner firing sequence. Blower shall also prepurge and postpurge the combustion chamber as required by design.
 - 1. Motors: Comply with requirements specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."
 - a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- F. Gas Train: Combination gas valve with manual shutoff and pressure regulator.
- G. Ignition: Spark or carbide hot surface source with 100 percent main-valve shutoff with electronic flame supervision.
- H. Casing:
 - 1. Jacket: Sheet metal, with snap-in or interlocking closures.
 - 2. Control Compartment Enclosure: NEMA 250, Type 1A.
 - 3. Finish: Baked-enamel or powder-coated protective finish.
 - 4. Insulation: Minimum 2-inch-thick, mineral-fiber insulation surrounding the heat exchanger.
 - 5. Combustion-Air Connection: Inlet duct collar and sheet metal closure over burner compartment.
 - 6. Mounting base to secure boiler to concrete base.
 - a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to boiler pressure vessel, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment" when mounting base is anchored to building structure.
- I. Circulator Pump: Manufacturer provided circulation pump with cast-iron body and stainless-steel impeller sized for minimum flow required in heat exchanger.
- J. Condensate Trap: Cast-iron body with stainless-steel internal parts.

2.3 TRIM

A. Hot Water

1. Include devices sized to comply with ANSI B31.9, "Building Services Piping."
2. Aquastat Controllers: Operating, firing rate, and high limit.
3. Safety Relief Valve: ASME rated.
4. Pressure and Temperature Gage: Minimum 3-1/2-inch-diameter, combination water-pressure and -temperature gage. Gages shall have operating-pressure and -temperature ranges so normal operating range is about 50 percent of full range.
5. Boiler Air Vent: Automatic.
6. Drain Valve: Minimum NPS 3/4 hose-end gate valve.
7. Circulation Pump: Non-overloading, in-line pump with split-capacitor motor having thermal-overload protection and lubricated bearings; designed to operate at specified boiler pressures and temperatures.

2.4 CONTROLS

A. Refer to Division 23 Section "Instrumentation and Control for HVAC."

B. Boiler operating controls shall include the following devices and features:

1. Control transformer.
2. Set-Point Adjust: Set points shall be adjustable.
3. Operating Pressure Control: Factory wired and mounted to cycle burner.
4. Low-Water Cutoff and Pump Control: Cycle feedwater pump(s) for makeup water control.
5. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate to maintain a constant water temperature. Maintain set point plus or minus 2 percent.
 - a. Include automatic, alternating-firing sequence for multiple boilers to ensure maximum system efficiency throughout the load range and to provide equal runtime for boilers.
 - b. Include manufacturer's firing sequence for selection of multiple boilers.

C. Burner Operating Controls: To maintain safe operating conditions, burner safety controls limit burner operation.

1. High Cutoff: Manual reset stops burner if operating conditions rise above maximum boiler design temperature.
2. Low-Water Cutoff Switch: Electronic probe shall prevent burner operation on low water. Cutoff switch shall be manual-reset type.
3. Blocked Inlet Safety Switch: Manual-reset pressure switch field mounted on boiler combustion-air inlet.
4. Audible Alarm: Factory mounted on control panel with silence switch; shall sound alarm for above conditions.

D. Facility Management System Interface: Factory install hardware and software to enable building management system to monitor, control, and display boiler status and alarms.

1. Hardwired Points:

- a. Monitoring: On/off status, common trouble alarm.

- b. Control: On/off operation, hot water supply temperature set-point adjustment.
- 2. A communication interface with building management system shall enable building management system operator to remotely control and monitor the boiler from an operator workstation.

2.5 ELECTRICAL POWER

- A. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in Division 26 Sections.
- B. Single-Point Field Power Connection: Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to boiler.
 - 1. House in NEMA 250, Type 1 for indoor enclosures.
 - 2. Wiring shall be numbered and color-coded to match wiring diagram.
 - 3. Install factory wiring outside of an enclosure in a metal raceway.
 - 4. Field power interface shall be to fused disconnect switch.
 - 5. Provide branch power circuit to each motor and to controls with a circuit breaker.
 - 6. Provide each motor with overcurrent protection.
- C. Ratings
 - 1. Short-Circuit Current: Match rating of overcurrent protective device serving motor controllers.
 - 2. Available Short-Circuit Current: As indicated on the Drawings.

2.6 VENTING KITS

- A. Kit: Complete system, ASTM A 959, Type 29-4C stainless steel, pipe, vent terminal, thimble, indoor plate, vent adapter, condensate trap and dilution tank, and sealant.
- B. Combustion-Air Intake: Complete system, stainless steel, pipe, vent terminal with screen, inlet air coupling, and sealant.

2.7 SOURCE QUALITY CONTROL

- A. Burner and Hydrostatic Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency; perform hydrostatic test.
- B. Test and inspect factory-assembled boilers, before shipping, according to ASME Boiler and Pressure Vessel Code.
- C. Allow Owner access to source quality-control testing of boilers. Notify Architect 14 days in advance of testing.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Before boiler installation, examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting boiler performance, maintenance, and operations.
 - 1. Final boiler locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Examine mechanical spaces for suitable conditions where boilers will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 BOILER INSTALLATION

- A. Install boilers level on 6" tall concrete base. Concrete materials and installation requirements are specified in Division 03.
- B. Vibration Isolation: Vibration isolation devices and installation requirements are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
- C. Install gas-fired boilers according to NFPA 54.
- D. Assemble and install boiler trim.
- E. Install electrical devices furnished with boiler but not specified to be factory mounted.
- F. Install control wiring to field-mounted electrical devices.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to boiler to allow service and maintenance.
- C. Install piping from equipment drain connection to nearest floor drain. Piping shall be at least full size of connection. Provide an isolation valve if required.
- D. Connect piping to boilers, except safety relief valve connections, with flexible connectors of materials suitable for service. Flexible connectors and their installation are specified in Division 23 Section "Common Work Results for HVAC."
- E. Connect gas piping to boiler gas-train inlet with union. Piping shall be at least full size of gas train connection. Provide a reducer if required.
- F. Connect hot-water piping to supply- and return-boiler tapings with shutoff valve and union or flange at each connection.
- G. Install piping from safety relief valves to nearest floor drain.

- H. Install piping from safety valves to drip-pan elbow and to nearest floor drain.
- I. Boiler Venting:
 - 1. Install flue venting kit and combustion-air intake.
 - 2. Connect full size to boiler connections. Comply with requirements in Division 23 Section "Breechings, Chimneys, and Stacks."
- J. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- K. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
 - 1. Perform installation and startup checks according to manufacturer's written instructions.
 - 2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - a. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level and water temperature.
 - b. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- C. Remove and replace malfunctioning units and retest as specified above.
- D. Occupancy Adjustments: Provide on-site assistance in adjusting system to suit actual occupied conditions for 12 months of Substantial Completion.
- E. Performance Tests:
 - 1. Engage a factory-authorized service representative to inspect component assemblies and equipment installations, including connections, and to conduct performance testing.
 - 2. Boilers shall comply with performance requirements indicated, as determined by field performance tests. Adjust, modify, or replace equipment to comply.
 - 3. Perform field performance tests to determine capacity and efficiency of boilers.
 - a. Test for full capacity.
 - b. Test for boiler efficiency at low fire 20, 40, 60, 80, 100, 80, 60, 40, and 20 percent of full capacity. Determine efficiency at each test point.
 - 4. Repeat tests until results comply with requirements indicated.
 - 5. Provide analysis equipment required to determine performance.

6. Provide temporary equipment and system modifications necessary to dissipate the heat produced during tests if building systems are not adequate.
7. Notify Architect in advance of test dates.
8. Document test results in a report and submit to Architect.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain boilers. Video training sessions. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

SECTION 235700

HEAT EXCHANGERS FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes shell-and-tube and plate heat exchangers.
- B. Related sections include the following:
 - 1. Division 23 Section "General-Duty Valves for HVAC Piping" for valves and accessories for piping.
 - 2. Division 23 Section "HVAC Insulation".
 - 3. Division 23 Section "Hydronic Piping".
 - 4. Division 23 Section "Instrumentation and Controls for HVAC".
 - 5. Division 23 Section "Steam and Condensate Heating Piping".

1.2 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings: Signed and sealed by a qualified professional engineer. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Design Calculations: Calculate requirements for selecting seismic restraints and for designing bases.
 - 2. Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Equipment room, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 - 1. Tube-removal space.
 - 2. Structural members to which heat exchangers will be attached.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For heat exchangers to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Product Options: Drawings indicate size, profiles, performance, and dimensional requirements of heat exchangers and are based on the specific equipment indicated. Refer to Division 01 Section "Product Requirements."
- B. ASME Compliance: Fabricate and label heat exchangers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.
- C. Registration: Fabricate and label shell-and-tube heat exchangers to comply with the Tubular Exchanger Manufacturers Association's standards.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Alfa Laval Thermal, Inc.
- B. Armstrong Pumps, Inc.
- C. ITT Industries; Bell & Gossett.
- D. Mueller, Paul Company.
- E. Taco, Inc.

2.2 GASKETED PLATE HEAT EXCHANGERS

- A. Configuration: Freestanding assembly consisting of frame support, top and bottom carrying and guide bars, fixed and movable end plates, tie rods, individually removable plates, and one-piece gaskets. Provide heat exchanger rated for domestic water service and compliant with NSF 61.
- B. Frame:
 - 1. Capacity to accommodate 50 percent additional plates.
 - 2. Painted carbon steel with provisions for anchoring to support.
 - 3. Frame shall allow up to 15% thermal expansion with no loss of performance.
- C. End-Plate Material: Painted carbon steel.
- D. Tie Rods and Nuts: Steel or stainless steel.
- E. Plate Material: 0.024 inch thick before stamping; Type 304 stainless steel.
- F. Gasket Material: Nitrile rubber or EPDM.
- G. Piping Connections:
 - 1. End plate with welded carbon-steel nozzles. Threaded pipe connection for NPS 2 and smaller; carbon-steel flanged pipe connection for larger sizes.
- H. Enclose plates in a solid aluminum or stainless-steel removable shroud.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas for compliance with requirements for installation tolerances and for structural rigidity, strength, anchors, and other conditions affecting performance of heat exchangers.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 HEAT-EXCHANGER INSTALLATION

- A. Install shell-and-tube heat exchangers on saddle supports.
- B. Install plate-and-frame heat exchangers on concrete base. Concrete base is specified in Division 23 Section "Common Work Results for HVAC," and concrete materials and installation requirements are specified in Division 03.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Maintain manufacturer's recommended clearances for service and maintenance. Install piping connections to allow service and maintenance of heat exchangers.
- C. Install shutoff valves at heat-exchanger inlet and outlet connections.
- D. Install relief valves on heat-exchanger heated-fluid connection and install pipe from relief valves, full size of valve connection, to floor drain.
- E. Install vacuum breaker at heat-exchanger steam inlet connection.
- F. Install hose end valve to drain shell.

3.4 FIELD QUALITY CONTROL

- A. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.5 CLEANING

- A. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.

3.6 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain heat exchangers. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

SECTION 237313

MODULAR INDOOR CENTRAL-STATION AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes constant and variable volume, modular air-handling units with coils for indoor installations.
- B. Related Sections include the following:
 - 1. Division 23 Section "Hydronic Pumps" for in pan condensate pumps.
 - 2. Division 23 Section "Hydronic Piping" for accessories and piping requirements at hydronic coils integral to units.
 - 3. Division 23 Section, "Instrumentation and Control for HVAC" for type, arrangement, and sequences for modular AHUs.
 - 4. Division 23 Section "HVAC Air Filtration" for filter performances.
 - 5. Division 23 Section "Steam and Condensate Piping" for accessories and piping requirements at steam coils to units.
 - 6. Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment" for seismic and wind restraint requirements.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of modular indoor air-handling unit indicated. Include the following:
 - 1. Certified fan-performance curves with system operating conditions indicated.
 - 2. Certified fan-sound power ratings.
 - 3. Certified coil-performance ratings with system operating conditions indicated.
 - 4. Motor ratings, electrical characteristics, and motor and fan accessories.
 - 5. Material gages and finishes.
 - 6. Filters with performance characteristics.
 - 7. Dampers, including housings, linkages, and operators.
- B. Shop Drawings: Signed and sealed by a qualified professional engineer.
 - 1. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
 - 2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.
 - 3. Wiring Diagrams: Power, signal, and control wiring.
 - 4. Short-circuit current rating of equipment assembly.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit with Shop Drawings. Show mechanical-room layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each unit to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Source Limitations: Obtain modular indoor air-handling units through one source from a single manufacturer.
- B. Product Options: Drawings indicate size, profiles, and dimensional requirements of modular indoor air-handling units and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. NFPA Compliance: Modular indoor air-handling units and components shall be designed, fabricated, and installed in compliance with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems."
- E. NEMA Compliance: Motors and electrical accessories shall comply with NEMA standards.
- F. ARI Certification: Modular indoor air-handling units and their components shall be factory tested according to ARI 430, "Central-Station Air-Handling Units," and shall be listed and labeled by ARI.
- G. Comply with NFPA 70.

1.6 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- B. Coordinate size and location of structural-steel support members.

1.7 WARRANTY

- 1. In conjunction with and supporting Factory warranty OEM shall furnish complete factory authorized service and maintenance of equipment for 1 year from Date of Substantial Completion by factory trained technicians.
- 2. OEM shall provide quarterly, annual, and bi-annual maintenance in compliance with or exceeding ASHRAE Standard 180-2008.

3. Complete Warranty: Provide one a five year warranty to include both parts and labor. Warranty shall cover the entire unit and factory accessories, including the following:

1. Coils
2. Dampers and damper actuators
3. Fans
4. Motors
5. Motor starters
6. VFDs
7. Control panel and components

1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Filters: A minimum of one set for each modular indoor air-handling unit.
2. Fan Belts: One set for each modular indoor air-handling unit fan.
3. Gaskets: Two sets for each access door size.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Climate Craft.
- B. JCI / YORK, a Johnson Controls company. Basis of Design.
- C. Temtrol.

2.2 MANUFACTURED UNITS

- A. Modular indoor air-handling units shall be factory assembled and consist of fans, motor and drive assembly, coils, damper, plenums, filters, condensate pans, mixing dampers, control devices, and other accessories, sections, or components as shown in the Contract Documents.
- B. Provide protection for all openings and components during equipment transport. Externally mounted components shall be protected during all phases of transport from exposure, including moisture and ambient temperatures outside of any component's operating range. Externally mounted components include, but are not limited to, VFD's, actuators, sensors, and weather hoods.

2.3 CABINET

- A. Unit leakage not to exceed 1% of design CFM at 8" maximum w.g. operation. Leakage to be calculated by totaling all leakage either into or out of the unit.
- B. Materials: Formed and reinforced double-wall insulated panels, fabricated to allow removal for access to internal parts and components, with joints between sections sealed.

1. Outside Casing: Galvanized steel, 0.0635 inch thick.
 2. Inside Casing: Galvanized steel, 0.0276 inch thick.
 3. Floor Plate: Galvanized steel, 0.1382 inch thick.
- C. Cabinet Insulation: Comply with NFPA 90A or NFPA 90B.
1. Materials: ASTM C 1071 with coated surface exposed to airstream to prevent erosion of glass fibers.
 2. Thermal performance: units shall have a minimum effective insulating value of R-12.
 3. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50, when tested according to ASTM C 411.
 4. Liner Adhesive: Comply with NFPA 90A or NFPA 90B and ASTM C 916.
 5. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
 6. Location and Application: Factory applied with adhesive and mechanical fasteners to the internal surface of section panels downstream from and including the cooling coil section.
 7. Location and Application: Encased between outside and inside casing.
- D. Access Panels and Doors: Same materials and finishes as cabinet, complete with hinges, latches, handles, and gaskets. Inspection and access panels and doors shall be sized and located to allow periodic maintenance and inspections. Provide access panels and doors in the following locations:
1. Fan Section: Inspection and access doors.
 2. Access Section: Doors.
 3. Coil Section: Inspection panel.
 4. Damper Section: Inspection and access doors.
 5. Filter Section: Inspection and access doors to allow periodic removal and installation of filters.
- E. Condensate Drain Pans: Formed sections of stainless-steel sheet complying with requirements in ASHRAE 62 for all cooling coils. Fabricate pans with slopes in two planes to collect condensate from coils (including coil piping connections and return bends) and humidifiers when units are operating at maximum catalogued face velocity across cooling coil.
1. Double-Wall Construction: Fill space between walls with foam insulation and seal moisture tight.
 2. Units with stacked coils shall have an intermediate drain pan or drain trough to collect condensate from top coil. Drain intermediate pan to main pan via copper downspout.
- F. Condensate Pump: Fractional horsepower, non-ferrous impeller, close or direct coupled pump for installation in drain pan complete with floats or sensors to detect water level and cycle pump accordingly. Each drain pan shall have a minimum of one pump, unless otherwise indicated.
- G. Unit Paint
1. External surfaces of unit casings shall be prepared and painted resulting in a minimum 1.5 mil thick coating when dry.
 2. Paint shall be able to withstand a salt spray test in accordance with ASTM B117 for a minimum of 500 consecutive hours.
 3. Paint shall be AHU Manufacturer's standard color, unless otherwise indicated.

4. For units requiring a color other than the AHU Manufacturer's standard color, the Architect shall provide a quantity of four 2" x 2" paint samples to the AHU Manufacturer at the time of submittal approval.

2.4 FAN SECTION

- A. Fan-Section Construction: Belt or direct-drive fans consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, and support structure and equipped with formed-steel channel base for integral mounting of fan, motor, and casing panels. Mount fan with vibration isolation.
- B. Centrifugal Fan Housings: Formed- and reinforced-steel panels to make curved scroll housings with shaped cutoff, spun-metal inlet bell, and access doors or panels to allow entry to internal parts and components.
 1. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
 2. Performance Class: AMCA 99-2408, Class II or III.
 3. Horizontal Flanged Split Housing: Bolted construction.
 4. Plug Fans: With steel cabinet. Fabricate without fan scroll and volute housing.
- C. Fan Assemblies: Statically and dynamically balanced and designed for continuous operation at maximum rated fan speed and motor horsepower.
- D. Backward-Inclined Fan Wheels: Steel construction with curved inlet flange, backplate, and backward-inclined blades welded or riveted to flange and backplate; cast-iron or cast-steel hub riveted to backplate and fastened to shaft with set screws.
- E. Forward-Curved Fan Wheels: Black-enamel or galvanized-steel construction with inlet flange, backplate, and shallow blades with inlet and tip curved forward in direction of airflow and mechanically secured to flange and backplate; cast-steel hub swaged to backplate and fastened to shaft with set screws.
- F. Airfoil-Fan Wheels: Steel construction with smooth-curved inlet flange, heavy backplate, and hollow die-formed airfoil-shaped blades continuously welded at tip flange and backplate; cast-iron or cast-steel hub riveted to backplate and fastened to shaft with set screws.
- G. Coatings: Hot-dip galvanized.
- H. Shafts: Statically and dynamically balanced and designed for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.
 1. Turned, ground, and polished hot-rolled steel with keyway. Ship with a protective coating of lubricating oil.
 2. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.
- I. Bearings:
 1. Bearing Types:
 - a. Prelubricated and Sealed Shaft Bearings: Self-aligning, pillow-block-type ball bearings.

- b. Grease-Lubricated Shaft Bearings: Self-aligning, pillow-block-type, tapered roller bearings with double-locking collars and two-piece, cast-iron housing.
 - c. Grease-Lubricated Shaft Bearings: Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing.
- 2. Bearing Rating Life:
 - a. Ball-Bearings: ABMA 9, L10 at 200,000.
 - b. Roller-Bearings: ABMA 11, L10 at 200,000.
- J. Belt Drives: Factory mounted, with final alignment and belt adjustment made after installation.
 - 1. Service Factor Based on Fan Motor Size: 1.5.
 - 2. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
 - 3. Motor Pulleys:
 - a. For motors through 10 hp, use adjustable pitch. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
 - b. For motors larger than 10 hp and for all motors with a VFD, use fixed pitch.
 - 4. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
 - 5. Belt Guards: Fabricate to comply with OSHA and SMACNA requirements of diamond-mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
 - 6. Motor Mount: Adjustable for belt tensioning.
- K. Vibration Control: Install fans on open-spring vibration isolators having a minimum of 1-inch static deflection and side snubbers.
- L. Fan-Section Source Quality Control:
 - 1. Sound Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Fans shall bear AMCA-certified sound ratings seal.
 - 2. Factory test fan performance for flow rate, pressure, power, air density, rotation speed, and efficiency. Establish ratings according to AMCA 210, "Laboratory Methods of Testing Fans for Rating."
 - 3. Fans integral to units shall not exceed 85% of class rating at the selection point.
- M. Fan Arrays: For fan sections where 2 or more fans serve a single air stream or unit section, each individual fan shall comply with all parts of this section and the following.
 - 1. Each fan shall be independently driven.
 - 2. All fans shall be factory wired to a single enclosure.
 - 3. For VAV services, the factory supplied enclosure shall:
 - a. Include two VFD's, each sized for 50% of the array for controlling and monitoring fan speed.
 - b. Fans shall either modulate speed, or stage individual fans on/off to achieve balanced airflow through the fan array and meet scheduled performance.
 - c. Provide contacts in a common terminal strip to monitor all fans. Fan status shall be indicated by an LED in the controls enclosure. A common alarm shall signal the FMS when any fan fails.

4. In the event of the failure of any single fan the remaining fans shall be able to supply to design CFM and ESP as scheduled.
5. Provide motorized or manual damper to isolate each individual fan from array upon fan or motor failure. Isolation damper shall prevent bypass air through the fan array.

2.5 MOTORS

- A. General: Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
- B. Noise Rating: Quiet.
- C. Provide grounding ring on motor shaft.
- D. Provide VFDs for all fan motors.

2.6 COILS

- A. Coil Sections: Common or individual, insulated. Design and construct to facilitate removal and replacement of coil for maintenance and to ensure full airflow through coils. For multizone units, provide air deflectors and air baffles to balance airflow across coils.
- B. Hydronic Coils: Cleanable coil fabricated according to ARI 410.
 1. Piping Connections: Threaded, on same end.
 2. Tubes: Copper.
 3. Fins: Aluminum with fin spacing as scheduled.
 - a. Minimum spacing: 8 fins per inch.
 - b. Maximum spacing: 12 fins per inch.
 - c. Maximum fin length of 120".
 - d. Provide intermediate tube supports for coils over 44" long, with an additional support every multiple of 42" thereafter.
 4. Fin and Tube Joint: Mechanical bond.
 5. Headers: Seamless copper tube with brazed joints, prime coated.
 6. Frames: Minimum thickness 0.0625 inch.
 - a. Heating Coils: Galvanized-steel channel.
 - b. Cooling Coils: Stainless steel channel.
 7. Drain pans: Provide
 8. Ratings: Design tested and rated according to ASHRAE 33 and ARI 410.
 - a. Working-Pressure Ratings: 200 psig, 325 deg F.
 9. Source Quality Control: Test to 300 psig and to 200 psig underwater.

2.7 DAMPERS

- A. General: Leakage rate, according to AMCA 500, "Laboratory Methods for Testing Dampers for Rating," shall not exceed 2 percent of air quantity at 2000-fpm face velocity through damper and 4-inch wg pressure differential.
- B. Damper Operators: Electric and complying with Division 23 Section "Instrumentation and Control for HVAC."
- C. Low-Leakage, Outside-Air Dampers: Double-skin, airfoil-blade galvanized-steel dampers with compressible jamb seals and extruded-vinyl blade edge seals, in opposed or parallel-blade arrangement as indicated in the Contract Documents with steel operating rods rotating in a stainless-steel sleeve or sintered bronze or nylon bearings mounted in a single galvanized-steel frame, and with operating rods connected with a common linkage. Leakage rate shall not exceed 5 cfm/sq. ft. at 1-inch wg and 9 cfm/sq. ft. at 4-inch wg.

2.8 FILTER SECTION

- A. Filter Section: Provide filter holding frames arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or the face.
- B. Filtration: Provide as scheduled. Refer to Division 23, "HVAC Air Filtration," for filtration system performance.
- C. Quality Assurance: Comply with NFPA 90A or 90B as required.

2.9 ELECTRICAL

- A. The electrical connections for all electrical components in each unit shall be wired by the AHU manufacturer to the exterior of the unit for field connection.
- B. Provide disconnect at each motor internal to the unit.
- C. Marine Lights
 - 1. Marine lights shall be provided throughout AHUs, but no less than one per section with an access door.
 - 2. Lights shall be compact fluorescent type to minimize amperage draw and shall produce lumens equivalent to a minimum 64 W, instant-start bulb.
 - 3. Lights shall be constructed of safety glass and shall be suitable for wet locations.
- D. Marine Light Switches
 - 1. All lights on a unit shall be wired in the factory to a single on-off switch with an integral timer adjustable for up to forty five minutes.
 - 2. Lighting circuit(s) shall be wired by the AHU Manufacturer to a common junction box separate from the VFD or starter so the lights can remain on when the main disconnect to the unit is on or off.
- E. Convenience Outlet
 - 1. Manufacturer shall provide at least one duplex 120-V convenience outlet per fan section.

2. Outlets shall be wired by AHU Manufacturer to a common junction box separate from VFD or starter so the outlet can remain on when the main disconnect to the unit is on or off.

F. Ratings

1. Short-Circuit Current: Match rating of overcurrent protective device serving the equipment assembly.
2. Available Short-Circuit Current: As indicated on the Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in of steam, hydronic, and condensate drainage piping systems and electrical services to verify actual locations of connections before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Concrete Bases: Install floor mounting units on 6-inch-high concrete bases. See Division 23 Section "Common Work Results for HVAC" for concrete base materials and fabrication requirements.
- B. Install modular indoor air-handling units with the following vibration and seismic-control devices. Vibration and seismic-control devices are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
 1. Units with Internally Isolated Fans: Set units on 1/2" neoprene pads, 40 durometer, on concrete bases. Secure units to anchor bolts concrete bases.
 2. Floor-Mounted Units without Internally Isolated Fans: Support on concrete bases using housed-spring isolators. Secure units to anchor bolts installed in concrete bases.
 3. Suspended Units: Suspend units from structural-steel support frame using threaded steel rods and spring hangers.
- C. Arrange installation of units to provide access space around modular indoor air-handling units for service and maintenance.
- D. Install temperature sensor on the leaving side of all cooling and heating coils in AHUs.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to machine to allow service and maintenance.

- C. Connect VFDs to associated fan motors. Comply with Division 23 and 26 for installation requirements.
- D. Connect piping to air-handling units mounted on vibration isolators with flexible connectors.
- E. Install condensate pump in drain pan and route condensate discharge to indirect waste.
 - 1. Install condensate trap of adequate depth to seal against the pressure of fan section. Install cleanouts in piping at changes of direction.
 - 2. Install condensate piping at appropriate slope to gravity drain.
- F. Connect condensate drain pans using minimum NPS 1-1/4, Type M copper tubing. Extend to nearest equipment or floor drain. Install condensate trap of adequate depth to seal against the pressure of fan section and connect to drain pan. Install cleanouts at changes in direction of condensate piping.
- G. Duct installation and connection requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of ducts and duct accessories. For units without internally isolated fans, make final duct connections with flexible connections. Internally isolated fan units do not require flexible connections.
- H. Electrical: Comply with applicable requirements in Division 26 Sections for power wiring, switches, and motor controls.
- I. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- J. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
- K. Connect all control points indicated in the Contract Documents to the FMS.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including piping and electrical connections. Report results in writing.
 - 1. Leak Test: After installation, fill water and steam coils with water and test coils and connections for leaks. Repair leaks and retest until no leaks exist.
 - 2. Charge refrigerant coils with refrigerant and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new units, and retest.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.

- B. Final Checks before Startup: Perform the following:
1. Verify that shipping, blocking, and bracing are removed.
 2. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
 3. Perform cleaning and adjusting specified in this Section.
 4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify free fan wheel rotation and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
 5. Lubricate bearings, pulleys, belts, and other moving parts with factory-recommended lubricants.
 6. Set outside- and return-air mixing dampers to minimum outside-air setting.
 7. Comb coil fins for parallel orientation.
 8. Install clean filters.
 9. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.
- C. Starting procedures for modular indoor air-handling units include the following:
1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace fan and motor pulleys as required to achieve design conditions.
 2. Measure and record motor electrical values for voltage and amperage.
 3. Manually operate dampers from fully closed to fully open position and record fan performance.
 4. Adjust damper linkages for proper damper operation.
- D. Refer to Division 23 Section "Testing, Adjusting, and Balancing for HVAC" for modular indoor air-handling system testing, adjusting, and balancing.

3.6 CLEANING

- A. Clean modular indoor air-handling units internally, on completion of installation, according to manufacturer's written instructions. Clean fan interiors to remove foreign material and construction dirt and dust. Vacuum clean fan wheels, cabinets, and coils entering air face.
- B. After completing system installation and testing, adjusting, and balancing modular indoor air-handling and air-distribution systems, clean filter housings and install new filters.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain modular indoor air-handling units. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 238126

SPLIT-SYSTEM AIR-CONDITIONERS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes split-system air-conditioning and heat pump units consisting of separate evaporator-fan and compressor-condenser components.
- B. Related Sections include the following:
 - 1. Division 23 Section "Hydronic Piping" for condensate piping.
 - 2. Division 23 Section "Instrumentation and Control for HVAC" for controls components.
 - 3. Division 23 Section "Common Motor Requirements for HVAC" for all motors.
 - 4. Division 23 Section "Vibration Isolation" for seismic criteria and restraint performance.

1.2 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, furnished specialties, and accessories for each type of product indicated. Include performance data in terms of capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Short-circuit current rating of equipment assembly.

1.3 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For split-system air-conditioning units to include in emergency, operation, and maintenance manuals.
- B. Warranty: Special warranty specified in this Section.

1.5 QUALITY ASSURANCE

- A. Product Options: Drawings indicate size, profiles, and dimensional requirements of split-system units and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Energy-Efficiency Ratio: Equal to or greater than prescribed by ASHRAE 90.1, "Energy Efficient Design of New Buildings except Low-Rise Residential Buildings."
- D. Coefficient of Performance: Equal to or greater than prescribed by ASHRAE 90.1, "Energy Efficient Design of New Buildings except Low-Rise Residential Buildings."
- E. Units shall be designed to operate with HCFC-free refrigerants.

1.6 COORDINATION

- A. Coordinate size and location of concrete bases for units. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork are specified in Division 03 Section "Cast-in-Place Concrete."
- B. Coordinate size, location, and connection details with roof curbs, equipment supports, and roof penetrations specified in Division 07 Section "Roof Accessories."

1.7 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of split-system air-conditioning units that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Five years from date of Substantial Completion.

1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Filters: One set of filters for each unit.
 - 2. Fan Belts: One set of belts for each unit.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Carrier Air Conditioning; Div. of Carrier Corporation.
- B. Daikin.
- C. Lennox Industries Inc.
- D. Trane Company (The).
- E. York International Corp.

2.2 CONCEALED EVAPORATOR-FAN COMPONENTS

- A. Chassis: Galvanized steel with flanged edges, removable panels for servicing, and insulation on back of panel.
 - 1. Insulation: Foil faced, glass-fiber duct liner.
 - 2. Drain Pans: Stainless steel, with connection for drain; insulated.
- B. Coils:
 - 1. Refrigerant: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with thermal-expansion valve.
 - 2. Hydronic: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch; leak tested to 300 psig underwater; and having a two-position control valve.
 - 3. Electric: Helical, nickel-chrome, resistance-wire heating elements with refractory ceramic support bushings; automatic-reset thermal cutout; built-in magnetic contactors; manual-reset thermal cutout; airflow proving device; and one-time fuses in terminal box for overcurrent protection.
- C. Fan: Forward-curved, double-width wheel of galvanized steel; belt or directly connected to motor.
- D. Fan Motors: Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
 - 1. Special Motor Features: Multitapped, multispeed with internal thermal protection and permanent lubrication.
- E. Filtration: Provide as scheduled. Refer to Division 23, "HVAC Air Filtration," for filtration system performance.
- F. Wiring Terminations: Connect motor to chassis wiring with plug connection.
- G. Electrical Ratings
 - 1. Short-Circuit Current: Match rating of overcurrent protective device serving the equipment assembly.
 - 2. Available Short-Circuit Current: As indicated on the Drawings.

2.3 FLOOR-MOUNTING, EVAPORATOR-FAN COMPONENTS

- A. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect.
 - 1. Discharge Grille: Steel with surface-mounted frame or welded steel bars forming a linear grille and welded into supporting panel.
 - 2. Insulation: Foil faced, glass-fiber, duct liner.
 - 3. Drain Pans: Stainless steel, with connection for drain; insulated.
- B. Coils:
 - 1. Refrigerant: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with thermal-expansion valve.

2. Hydronic: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch; leak tested to 300 psig underwater; and having a two-position control valve.
 3. Electric: Helical, nickel-chrome, resistance-wire heating elements with refractory ceramic support bushings; automatic-reset thermal cutout; built-in magnetic contactors; manual-reset thermal cutout; airflow proving device; and one-time fuses in terminal box for overcurrent protection.
- C. Fan: Belt or direct drive, centrifugal.
- D. Fan Motors: Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
1. Special Motor Features: Multitapped, multispeed with internal thermal protection and permanent lubrication.
- E. Filtration: Provide as scheduled. Refer to Division 23, "HVAC Air Filtration," for filtration system performance.
- F. Electrical Ratings
1. Short-Circuit Current: Match rating of overcurrent protective device serving the equipment assembly.
 2. Available Short-Circuit Current: As indicated on the Drawings.

2.4 WALL-MOUNTING, EVAPORATOR-FAN COMPONENTS

- A. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect, and discharge drain pans with drain connection.
- B. Coils:
1. Refrigerant: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with thermal-expansion valve.
 2. Hydronic: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch; leak tested to 300 psig underwater; and having a two-position control valve.
 3. Electric: Helical, nickel-chrome, resistance-wire heating elements with refractory ceramic support bushings; automatic-reset thermal cutout; built-in magnetic contactors; manual-reset thermal cutout; airflow proving device; and one-time fuses in terminal box for overcurrent protection.
- C. Fan: Belt or direct drive, centrifugal fan.
- D. Fan Motors: Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
1. Special Motor Features: Multitapped, multispeed with internal thermal protection and permanent lubrication.
- E. Filtration: Provide as scheduled. Refer to Division 23, "HVAC Air Filtration," for filtration system performance.
- F. Electrical Ratings

1. Short-Circuit Current: Match rating of overcurrent protective device serving the equipment assembly.
2. Available Short-Circuit Current: As indicated on the Drawings.

2.5 AIR-COOLED, COMPRESSOR-CONDENSER COMPONENTS

- A. Casing: Steel, with baked enamel finish, with removable panels for access to controls and coils, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
- B. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
 1. Compressor Type: Reciprocating or scroll.
 2. Variable speed compressor motor with manual-reset high-pressure switch and automatic-reset low-pressure switch.
 3. Refrigerant Charge: R-407C or R-410A.
- C. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with liquid subcooler.
- D. Heat Pump Components: Reversing valve and low-temperature air cut-off thermostat.
- E. Fan: Aluminum-propeller type, directly connected to motor.
- F. Motor: Permanently lubricated, with integral thermal-overload protection.
- G. Low Ambient Kit: Permits operation down to 0 deg F (-18 deg C).
- H. Mounting Base: Polyethylene.
- I. Electrical Ratings
 1. Short-Circuit Current: Match rating of overcurrent protective device serving the equipment assembly.
 2. Available Short-Circuit Current: As indicated on the Drawings.

2.6 ACCESSORIES

- A. Control equipment and sequence of operation are specified in Division 23 Sections "Instrumentation and Control for HVAC" and "Sequence of Operations for HVAC Controls."
- B. Thermostat: Low voltage with subbase to control compressor and evaporator fan.
- C. Automatic-reset timer to prevent rapid cycling of compressor.
- D. Provide in-pan condensate pump complete with piping, floats, controls, FMS alarm contacts, etc.
 1. Condensate piping to be ASTM B 306, Type DWV copper with wrought copper fittings conforming to ASME B16.22 and soldered.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install units level and plumb.
- B. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.
- C. Install compressor-condenser components on 4-inch-thick, reinforced concrete base; 4 inches larger on each side than unit. Concrete, reinforcement, and formwork are specified in Division 03 Section "Cast-in-Place Concrete." Coordinate anchor installation with concrete base.
- D. Install roof-mounting compressor-condenser components on equipment supports. Anchor units to supports with removable, cadmium-plated fasteners.
- E. Install seismic restraints per site requirements as defined by Architect and/or Structural Engineer.
- F. Refer to Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
- G. Install in-pan condensate pump and route discharge to nearest code approved location. Discharge to drain shall be open sight and with an air gap.

3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
 - 1. Water Coil Connections: Comply with requirements in Division 23 Section "Hydronic Piping." Connect to supply and return coil with shutoff-duty valve and union or flange on the supply connection and with throttling-duty valve and union or flange on the return connection.
 - 2. Condensate Pump Connections: Comply with requirements in Division 23 Section "Hydronic Piping." Comply with disconnect requirements for power in Division 26.
- B. Install piping adjacent to unit to allow service and maintenance.
- C. Duct Connections: Duct installation requirements are specified in Division 23 Section "Metal Ducts." Drawings indicate the general arrangement of ducts. Connect supply and return ducts to split-system air-conditioning units with flexible duct connectors. Flexible duct connectors are specified in Division 23 Section "Air Duct Accessories."
- D. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- E. Electrical Connections: Comply with requirements in Division 26 Sections for power wiring, switches, and motor controls.

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.
- B. Perform the following field tests and inspections and prepare test reports:
 - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Remove and replace malfunctioning units and retest as specified above.

3.4 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain units. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 238219

FAN COIL UNITS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes fan-coil units and accessories.
- B. Related Sections include the following:
 - 1. Division 23 Section "General-Duty Valves for HVAC Piping" for valves and accessories for piping.
 - 2. Division 23 Section "Expansion Fittings and Loops for HVAC Piping" for expansion fittings.
 - 3. Division 23 Section "HVAC Insulation" for pipe saddles at pipe hangers.
 - 4. Division 23 Section "Hangers and Supports for HVAC Piping and Equipment".
 - 5. Division 23 Section "Hydronic Piping" for chilled water, heating water, and condensate piping.
 - 6. Division 23 Section "Instrumentation and Control for HVAC".
 - 7. Division 23 Section "Metal Ducts".
 - 8. Division 23 Section "Packaged Compressor and Condenser Units" for split systems.

1.2 DEFINITIONS

- A. FMS: Facility management system.

1.3 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Wiring Diagrams: Power, signal, and control wiring.
 - 2. Short-circuit current rating of equipment assembly.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 - 1. Ceiling suspension components.
 - 2. Structural members to which fan-coil units will be attached.
 - 3. Method of attaching hangers to building structure.

4. Size and location of initial access modules for acoustical tile.
5. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
6. Perimeter moldings for exposed or partially exposed cabinets.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fan-coil units to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 1. Maintenance schedules and repair part lists for motors, coils, integral controls, and filters.
- B. Warranty: Special warranty specified in this Section.

1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.7 COORDINATION

- A. Coordinate layout and installation of fan-coil units and suspension system components with other construction that penetrates or is supported by ceilings, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.
- B. Coordinate size and location of wall sleeves or roof openings for outdoor-air intake.

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of units that fail in materials or workmanship within specified warranty period.
 1. Warranty Period: Five years from date of Substantial Completion.

1.9 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fan-Coil-Unit Filters: Furnish one spare filter for each filter installed.
 - 2. Fan Belts: Furnish one spare fan belt for each unit installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Carrier Corporation.
- B. Daikin.
- C. Engineered Air Ltd.
- D. Environmental Technologies, Inc.
- E. Trane.
- F. YORK International Corporation.

2.2 FAN-COIL UNITS

- A. Description: Factory-packaged and -tested units rated according to ARI 440, ASHRAE 33, and UL 1995.
- B. Coil Section Insulation: 1-inch thick, foil-covered, closed-cell foam or matte-finish, closed-cell foam complying with ASTM C 1071 and attached with adhesive complying with ASTM C 916.
 - 1. Fire-Hazard Classification: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84.
- C. Main and Auxiliary Drain Pans: Insulated stainless steel or insulated galvanized steel with plastic liner formed to slope from all directions to the drain connection as required by ASHRAE 62. Drain pans shall be removable.
- D. Condensate Pump: Fractional horsepower, non-ferrous impeller, close or direct coupled pump for installation in drain pan complete with floats or sensors to detect water level and cycle pump accordingly. Each drain pan shall have a minimum of one pump, unless otherwise indicated.
 - 1. Condensate piping to be ASTM B 306, Type DWV copper with wrought copper fittings conforming to ASME B16.22 and soldered.
- E. Chassis: Galvanized steel where exposed to moisture. Floor-mounting units shall have leveling screws.
- F. Cabinet: Steel with baked-enamel finish in manufacturer's standard paint, unless otherwise indicated by Architect.

1. For non-ducted and exposed units:
 - a. Vertical Unit Front Panels: Removable, steel, with steel or cast-aluminum discharge grille and channel-formed edges, cam fasteners, and insulation on back of panel.
 - b. Horizontal Unit Bottom Panels: Fastened to unit with cam fasteners and hinge and attached with safety chain; with steel or cast-aluminum discharge grilles.
 - c. Stack Unit Discharge and Return Grille: Aluminum double-deflection discharge grille, and louvered- or panel-type return grille; color as selected by Architect from manufacturer's standard colors. Return grille shall provide maintenance access to fan-coil unit.
 - d. Steel recessing flanges for recessing fan-coil units into ceiling or wall.
 2. For ducted and partially exposed units:
 - a. Vertical Unit Front Panels: Removable, steel, with steel or cast-aluminum discharge grille and channel-formed edges, cam fasteners, and insulation on back of panel.
 - b. Horizontal Unit Bottom Panels: Fastened to unit with cam fasteners and hinge and attached with safety chain; with steel or cast-aluminum discharge grilles.
 - c. Steel recessing flanges for recessing fan-coil units into ceiling or wall.
 - d. Insulated sheet metal plenums with flex connections where the following services connect to the unit:
 - 1) Supply air.
 - 2) Return air.
 - 3) Outside air.
 - 4) Relief air.
 - 5) Bypass air.
- G. Filtration: Provide as scheduled. Refer to Division 23, "HVAC Air Filtration," for filtration system performance.
- H. Coils:
1. Hydronic: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch, rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain valve.
- I. Fan and Motor Board: Removable.
1. Fan:
 - a. Belt-Driven: Double width, forward curved, centrifugal; with permanently lubricated, single-speed motor installed on an adjustable fan base resiliently mounted in the cabinet. Aluminum or painted-steel wheels, and painted-steel or galvanized-steel fan scrolls.
 - b. Direct-Driven: Double width, forward curved, centrifugal; with permanently lubricated, multispeed motor resiliently mounted in the fan inlet. Aluminum or painted-steel wheels, and painted-steel or galvanized-steel fan scrolls.
 2. Motor: Permanently lubricated, multispeed; resiliently mounted on motor board. Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
 3. Wiring Termination: Connect motor to chassis wiring with plug connection.

- J. Factory, Hydronic Piping Package: ASTM B 88, Type L copper tube with wrought-copper fittings and brazed joints. Label piping to indicate service, inlet, and outlet.
 - 1. Automatic Flow-Control Valve: Brass or ferrous-metal body; 300-psig working pressure at 250 deg F, with removable, corrosion-resistant, tamperproof, self-cleaning piston spring; factory set to maintain constant indicated flow with plus or minus 10 percent over differential pressure range of 2 to 80 psig.
 - 2. Y-Pattern Hydronic Strainers: Cast-iron body (ASTM A 126, Class B); 125-psig working pressure; with threaded connections, bolted cover, perforated stainless-steel basket, and bottom drain connection. Include minimum NPS 1/2 hose-end, full-port, ball-type blowdown valve in drain connection.
 - 3. Wrought-Copper Unions: ASME B16.22.
 - 4. Risers: ASTM B 88, Type L copper pipe with hose and ball valve for system flushing.
- K. Control devices are specified in Division 23 Sections "Instrumentation and Control for HVAC".
- L. Electrical Connection: Factory wire motors and controls for a single electrical connection.
- M. Electrical Ratings
 - 1. Short-Circuit Current: Match rating of overcurrent protective device serving the equipment assembly.
 - 2. Available Short-Circuit Current: As indicated on the Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive fan-coil units for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in for piping and electrical connections to verify actual locations before fan-coil-unit installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install fan-coil units level and plumb.
- B. Install fan-coil units to comply with NFPA 90A.
- C. Suspend horizontal, suspended fan-coil units from structure with hangers. Vibration isolators are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
- D. Verify installation locations of thermostats and other exposed control sensors with Architect.
- E. Do not operate fan coil units without filters installed.
- F. Install new filters in each fan-coil unit within two weeks after Substantial Completion.

- G. Maintain maintenance and all NEC clearances.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties. Specific connection requirements are as follows:
 - 1. Install piping adjacent to machine to allow service and maintenance.
 - 2. Connect piping to fan-coil-unit factory hydronic piping package. Install piping package if shipped loose.
 - 3. Install condensate pump in drain pan and route condensate discharge to indirect waste.
 - a. Install condensate trap of adequate depth to seal against the pressure of fan. Install cleanouts in piping at changes of direction.
 - b. Install condensate piping at appropriate slope to gravity drain.
- B. Connect supply and return ducts to fan-coil units with flexible duct connectors specified in Division 23 Section "Air Duct Accessories." Comply with safety requirements in UL 1995 for duct connections.
- C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.
- B. Perform the following field tests and inspections and prepare test reports:
 - 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
 - 3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
- C. Remove and replace malfunctioning units and retest as specified above.

3.5 ADJUSTING

- A. Adjust initial temperature set points.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain fan-coil units. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 238239

UNIT HEATERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Wall and ceiling heaters with propeller fans and electric-resistance heating coils.

1.2 DEFINITIONS

- A. FMS: Facility management system.
- B. CWP: Cold working pressure.
- C. PTFE: Polytetrafluoroethylene plastic.
- D. TFE: Tetrafluoroethylene plastic.

1.3 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each product indicated.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Plans, elevations, sections, and details.
 - 2. Location and size of each field connection.
 - 3. Details of anchorages and attachments to structure and to supported equipment. Equipment schedules to include rated capacities, operating characteristics, furnished specialties, and accessories.
 - 4. Location and arrangement of piping valves and specialties.
 - 5. Location and arrangement of integral controls.
 - 6. Wiring Diagrams: Power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 - 1. Suspended ceiling components.
 - 2. Structural members to which unit heaters will be attached.
 - 3. Method of attaching hangers to building structure.
 - 4. Size and location of initial access modules for acoustical tile.

5. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 6. Perimeter moldings for exposed or partially exposed cabinets.
 7. Final mullion height for baseboard installation.
- B. Samples for Initial Selection: Finish colors for units with factory-applied color finishes for Architect's approval.
- C. Manufacturer Seismic Qualification Certification: Submit certification that cabinet unit heaters, accessories, and components will withstand seismic forces defined in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
1. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 2. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- D. Field quality-control test reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For cabinet unit heaters to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.7 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Cabinet Unit Heater Filters: Furnish one spare filter(s) for each filter installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Airtherm; a Mestek Company.

- B. Carrier Corporation.
- C. Chromalox, Inc.
- D. Dunham-Bush, Inc.
- E. Indeeco.
- F. Markel Products.
- G. Marley Engineered Products divisions: Berko Electric Heating, Marley Electric Heating, QMark Electric Heating.
- H. Trane.

2.2 WALL AND CEILING HEATERS

- A. Description: An assembly including chassis, electric heating coil, fan, motor, and controls. Comply with UL 2021.
- B. Casing:
 - 1. Front Panel: Stamped-steel louver or extruded-aluminum bar grille, with removable panels fastened with tamperproof fasteners.
 - 2. Finish: Baked enamel over baked-on primer with manufacturer's color selected by Architect, applied to factory-assembled and -tested wall and ceiling heaters before shipping.
- C. Surface-Mounting Cabinet Enclosure: Steel with finish to match cabinet.
- D. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and hum, embedded in magnesium oxide refractory and sealed in corrosion-resistant metallic sheath. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware, and limit controls for high temperature protection. Provide integral circuit breaker for overcurrent protection.
- E. Fan: Aluminum propeller directly connected to motor.
 - 1. Motor: Permanently lubricated, multispeed. Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
- F. Controls: Unit-mounted thermostat. Low-voltage relay with transformer kit.
- G. Electrical Connection: Factory wire motors and controls for a single field connection with disconnect switch.

2.3 BASEBOARD HEATERS

- A. Description: An assembly including chassis, electric heating coil, and controls. Comply with UL 2021.
- B. Casing:

1. Description: Floor mounted unit completely enclosed with front intake near floor and top discharge even with adjacent mullion.
 2. Front Panel: Extruded-aluminum bar grille, with removable panels fastened with tamperproof fasteners.
 3. Finish: Clear anodized.
- C. Coils
1. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and hum, embedded in magnesium oxide refractory and sealed in corrosion-resistant metallic sheath. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware, and limit controls for high temperature protection. Provide integral circuit breaker for overcurrent protection.
 2. Hydronic: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch, rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain valve.
- D. Controls: Control set point to be enabled / disabled and temperature reset from DDC system to local remote thermostat and relayed to each group of baseboard heaters on a common facing or zone. Provide transformer relay to control electric heat coils in series through a common signal. Provide low-voltage relay with transformer kit.
- E. Electrical Connection: Factory wire controls for minimum field connections with disconnect switch.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in for electrical connections to verify actual locations before unit heater installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install cabinet unit heaters to comply with NFPA 90A.
- B. Install propeller unit heaters level and plumb.
- C. Coordinate baseboard unit floor support heights with architectural mullion. Architect to provide break metal accessories so that baseboard heater appears integral to floor mullion.
- D. Suspend unit heaters from structure with all-thread hanger rods and elastomeric hangers. Hanger rods and attachments to structure are specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment." Vibration hangers are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."

- E. For units with filter sections, install new filters in each fan-coil unit within two weeks of Substantial Completion.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to machine to allow service and maintenance.
- C. Connect piping to cabinet unit heater's factory, hot-water piping package. Install the piping package if shipped loose.
- D. Connect supply and return ducts to cabinet unit heaters with flexible duct connectors specified in Division 23 Section "Air Duct Accessories."
- E. Comply with safety requirements in UL 1995.
- F. Unless otherwise indicated, install union and gate or ball valve on supply-water connection and union and calibrated balancing valve on return-water connection of unit heater. Hydronic specialties are specified in Division 23 Section "Hydronic Piping."
- G. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- H. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.
- B. Perform the following field tests and inspections and prepare test reports:
 - 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
 - 3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
- C. Remove and replace malfunctioning units and retest as specified above.

3.5 ADJUSTING

- A. Adjust initial temperature set points.
- B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain cabinet unit heaters. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

SECTION 238413

HUMIDIFIERS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following humidifiers:
 - 1. Self-contained.
- B. Related Sections include the following:
 - 1. Division 23 Section "HVAC Insulation".

1.2 DEFINITION

- A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

1.3 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings: Detail fabrication and installation of humidifiers. Include piping details, including the piping of safety relief valves, plans, elevations, sections, details of components, manifolds, and attachments to other work.
 - 1. Wiring Diagrams: Power, signal, and control wiring.
 - 2. Short-circuit current rating of equipment assembly.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Detail humidifiers and adjacent equipment. Show support locations, type of support, weight on each support, required clearances, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 - 1. Structural members to which humidifiers will be attached.
 - 2. Size and location of initial access modules for acoustical tile.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For humidifiers to include in operation and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with ARI 640, "Commercial and Industrial Humidifiers."

1.7 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Supply one replacement electrode cylinder with each self-contained humidifier.

1.8 COORDINATION

- A. Coordinate location and installation of humidifiers with manifolds in ducts and air-handling units or occupied space. Revise locations and elevations to suit field conditions and to ensure proper humidifier operation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Armstrong International, Inc.
- B. DRI-STEEM Humidifier Company.
- C. Nortec Industries Inc.
- D. Pure Humidifier Company.
- E. Spirax Sarco.

2.2 SELF-CONTAINED HUMIDIFIERS

- A. Electric Source
 - 1. Electric-Resistance Heater Container: Cleanable, ASTM A 666, Type 316 stainless steel. Comply with UL 499.
 - 2. Electrode Cylinder: Replaceable plastic assembly. Comply with UL 499.
 - 3. Electrical Ratings
 - a. Short-Circuit Current: Match rating of overcurrent protective device serving the equipment assembly.
 - b. Available Short-Circuit Current: As indicated on the Drawings.
- B. Manifold: ASTM A 666, Type 316 stainless-steel tube extending across entire width of duct or plenum and equipped with mounting brackets on ends.

- C. Cabinet: Sheet metal enclosure for housing heater cylinder, electrical wiring, components, controls, and control panel. Enclosure shall include baked-enamel finish, hinged or removable access door, and threaded outlet in bottom of cabinet for drain piping.
- D. Control Panel:
 - 1. Factory-wired disconnect switch.
 - 2. Electronic display.
 - 3. Programmable keyboard.
 - 4. Set-point adjustment.
 - 5. Warning signal indicating end of replaceable cylinder life.
 - 6. Low-voltage, control circuit.
 - 7. Diagnostic, maintenance, alarm, and status features.
 - 8. High-water sensor or float to prevent overfilling.
- E. Controls:
 - 1. Microprocessor-based control system for modulating or cycling control, and start/stop and status monitoring for interface to central HVAC instrumentation and controls.
 - 2. Solenoid-fill and automatic drain valves to maintain water level and temper hot drain water.
 - 3. Field-adjustable timer to control drain cycle for flush duration and interval.
 - 4. Controls shall drain tanks if no demand for humidification for more than 72 hours.
 - 5. Conductivity or Float-type level controls.
- F. Accessories:
 - 1. Humidistat: Wall or Return-duct-mounting, solid-state, electronic-sensor controller capable of full modulation or cycling control as indicated in drawings.
 - 2. Duct-mounting, high-limit humidistat.
 - 3. Airflow switch for preventing humidifier operation without airflow.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine ducts, air-handling units, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before humidifier installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install humidifiers with required clearance for service and maintenance.
- B. Seal humidifier manifold duct or plenum penetrations with flange.
- C. Install humidifier manifolds in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."

- D. Install stainless-steel drain pan under each manifold mounted in duct.
 - 1. Construct drain pans to comply with ASHRAE 62.
 - 2. Connect to condensate trap and drainage piping.
 - 3. Extend drain pan upstream and downstream from manifold a minimum of 24 inches or as recommended by manufacturer.
 - 4. Install condensate pump in drain pan to discharge cooled effluent to indirect waste.
- E. Install manifold supply piping pitched to drain condensate back to humidifier.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
 - 1. Install piping adjacent to humidifiers to allow service and maintenance.
 - 2. Install shutoff valve, strainer, backflow preventer, and union in humidifier makeup line.
 - 3. Install a drain cooler to reduce the temperature of all effluent discharged to the sanitary system below 140°F.
- B. Install electrical devices and piping specialties furnished by manufacturer but not factory mounted.
- C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- B. Tests and Inspections:
 - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Remove and replace malfunctioning units and retest as specified above.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain humidifiers. Refer to Division 01 Section "Demonstration and Training."

003132	Geotechnical Data	Sept. 1, 2017
	Geotechnical Report	
	Geotechnical Report Addendum	
007000	Uniform General and Supplementary Conditions	2010
007400	Architect's Special Conditions	Sept. 1, 2017
008900	Finish Selection Summary	Sept. 1, 2017

DIVISION 01 - GENERAL REQUIREMENTS

011000	Summary	Sept. 1, 2017
012100	Allowances	Sept. 1, 2017
012200	Unit Prices	Sept. 1, 2017
022300	Alternates	Sept. 1, 2017
012500	Substitution Procedures	Sept. 1, 2017
012500.13	Substitution Request Form	Sept. 1, 2017
012600	Contract Modification Procedures	Sept. 1, 2017
012900	Payment Procedures	Sept. 1, 2017
013100	Project Management and Coordination	Sept. 1, 2017
013200	Construction Progress Documentation	Sept. 1, 2017
013233	Photographic Documentation	Sept. 1, 2017
013300	Submittal Procedures	Sept. 1, 2017
014000	Quality Requirements	Sept. 1, 2017
014200	References	Sept. 1, 2017
015000	Temporary Facilities and Controls	Sept. 1, 2017
015300	Mold Prevention Measures	Sept. 1, 2017
015534	Tree and Plant Protection, Removal, and Pruning	Sept. 1, 2017
016000	Product Requirements	Sept. 1, 2017
017300	Execution	Sept. 1, 2017
017700	Closeout Procedures	Sept. 1, 2017
017823	Operation and Maintenance Data	Sept. 1, 2017
017839	Project Record Documents	Sept. 1, 2017
017900	Demonstration and Training	Sept. 1, 2017

DIVISION 03 - CONCRETE

030540	Concrete Pigments (Integral Color)	Sept. 1, 2017
033000	Cast-in-Place Concrete	Sept. 1, 2017
033300	Architectural Concrete	Sept. 1, 2017
033500	Concrete Floor Finishing	Sept. 1, 2017
033536	Clear Concrete Sealer	Sept. 1, 2017

DIVISION 04 - MASONRY

042000	Unit Masonry	Sept. 1, 2017
047200	Cast Stone Masonry	Sept. 1, 2017

DIVISION 05 - METALS

051200	Structural Steel	Sept. 1, 2017
051213	Architecturally Exposed Structural Steel Framing	Sept. 1, 2017
053100	Steel Deck	Sept. 1, 2017
054000	Cold-Formed Metal Framing	Sept. 1, 2017

SECTION 260500

COMMON WORK RESULTS FOR ELECTRICAL

PART 1 - GENERAL

1.1 SUMMARY

- A. The requirements contained in this Section apply to all Sections of this Division.
- B. Section Includes:
 - 1. Common terminology and requirements used throughout this Division.
 - 2. Requirements for Acceptance Testing Agency.
 - 3. Requirements for Professional Engineers responsible for Delegated Design.
 - 4. Electrical equipment coordination and installation.
 - 5. Sleeves for raceways and cables.
 - 6. Sleeve seals.
 - 7. Grout.
 - 8. Common electrical installation requirements.

1.2 DEFINITIONS

- A. AHJ: Authorities Having Jurisdiction.
- B. ANSI GRAY: Where this Section and other Sections of this Division use the term "ANSI GRAY" it shall mean the manufacturer's standard ANSI Gray.
- C. Bound Material: Bound refers to materials permanently bound, as by stitching or glue, or materials securely fastened in their covers by multiple fasteners that penetrate all papers. Ring binders, spiral binders, brads and screw posts are acceptable fasteners. Loose papers clipped together or stapled at one corner are not acceptable.
- D. Business Day: Where this Section and other Sections of this Division use the term "Business Day" it shall mean Monday thru Friday, excluding Holidays recognized by Federal, State and Local government.
- E. EPDM: Ethylene-propylene-diene terpolymer rubber.
- F. FMS: Facility management system.
- G. NETA ATS: Acceptance Testing Specification, as published by InterNational Electrical Testing Association.
- H. NBR: Acrylonitrile-butadiene rubber.
- I. NIST: National Institute of Science and Technology.
- J. RS-232: A TIA standard for asynchronous serial data communications between terminal devices.
- K. RS-485: A TIA standard for multipoint communications using two twisted-pairs.

- L. TCP/IP: Transport control protocol/Internet protocol incorporated into Microsoft Windows.

1.3 PERFORMANCE REQUIREMENTS

- A. The Drawings diagrammatically show the sizes and locations of various equipment and devices, and the sizes of the major interconnecting wires, without showing exact details as to elevations, offsets, control wiring and other installation requirements. Carefully layout the Work at the site to conform to the architectural and structural conditions, to avoid obstructions and to permit proper grading of pipe associated with other portions of the Work. In cooperation with other trades, determine the exact location of equipment and devices and connections thereto by reference to the submittals and rough-in drawings, and by measurements at the site. Make minor relocations necessitated by the conditions at the site, or directed by the Owner, without additional cost to the Owner.

1.4 SUBMITTAL PROCEDURES

- A. Common Requirements for Product Data: Where this Section and other Sections of this Division require Product Data to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures". In addition to the requirements of Division 01 comply with the following:
 - 1. Submit hardcopy of Product Data in the quantity as required under Division 01 Section "Submittal Procedures". Hardcopies of product data submittals shall be bound materials as defined above. Separate products under distinct subheadings that correspond to paragraphs in specification text. Divide sections in binder with labeled divider tabs.
 - 2. In addition to hardcopies required by Division 01, submit one copy of product data in electronic format. All files shall be in Portable Document Format (.pdf).
 - 3. Product Data shall not consist of manufacturer's catalogs or cut sheets that contain no indication of the exact item offered. The submission on individual items shall designate the exact item offered.
- B. Common Requirements for Shop Drawings: Where this Section and other Sections of this Division require Shop Drawings to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures". In addition to the requirements of Division 01 comply with the following:
 - 1. Prepare Shop Drawings using computerized drafting software compatible with AutoDesk's AutoCAD®.
 - 2. Submit hardcopy of Shop Drawings in the quantity as required under Division 01 Section "Submittal Procedures". Hardcopies of Shop Drawings shall have each sheet clearly labeled with a unique sheet identification number.
 - 3. In addition to hardcopies required by Division 01, submit one copy of Shop Drawings in electronic format. Files shall include both AutoCAD® compatible source files and files printed to Portable Document Format (.pdf).
 - 4. Shop Drawings shall be of appropriate scale but shall not be smaller than a scale of 1/4-inch equals one foot.
- C. Common Requirements for Coordination Drawings: Where this Section and other Sections of this Division require Coordination Drawings to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures" and Division 01 Section "Project Management and Coordination". In addition to the requirements of Division 01 comply with the following:
 - 1. Prepare Coordination Drawings using computerized drafting software compatible with AutoDesk's AutoCAD®. Drawings files must be composite with multiple distinctive layers for each of the various trades.

2. Submit hardcopy of Coordination Drawings in the quantity as required under Division 01. Hardcopies of Coordination Drawings shall have each sheet clearly labeled with a unique sheet identification number.
 3. In addition to hardcopies required by Division 01, submit one copy of Shop Drawings in electronic format. Files shall include both AutoCAD® compatible source files and files printed to Portable Document Format (.pdf).
 4. Coordination Drawings shall be of appropriate scale but shall not be smaller than a scale of 1/4-inch equals one foot.
- D. Common Requirements for Specification Compliance Certification: Where this Section and other Sections of this Division require Specification Compliance Certification to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures" for "Other Informational Submittals". In addition to the requirements of Division 01 comply with the following:
1. Prepare a line-by-line Specification Compliance Certification by marking up a copy of the Contract Document specification section in the left margin. Accompany the markup with a written report explaining all items that are not marked with "Compliance". Submit line-by-line markup, written report of deviations and alternates and a cover letter certified by Manufacturer or Installer that prepared the Specification Compliance Certification. Use the following key for preparing the line-by-line markup.
 - a. "C" for Compliance: By noting the term "compliance" or "C" in the margin, it shall be understood that the manufacturer is in full compliance with the item specified and will provide exactly the same with no deviations.
 - b. "D" for Deviation: By noting the term "deviation" or "D" in the margin, it shall be understood that the manufacturer prefers to provide a different component in lieu of that specified.
 - c. "A" for Alternate: By noting the term "alternate" or "A" in the margin, it shall be understood that the manufacturer proposes to provide the same operating function but prefers to do it in a different manner.
 - d. "N/A" for Not Applicable: By noting the term "not applicable" or "N/A" in the margin, it shall be understood that the specified item is not applicable to the project.
- E. Common Requirements For Qualification Data:
1. Professional Engineer Qualifications: Where this Section and other Sections of this Division require a Professional Engineer to be responsible for Delegated Design requirements; Submit Qualification data for Professional Engineer including, but not limited to, proof of registration in the Project location.
 2. Independent Testing and Inspecting Agency Certification: Where this Section and other Sections of this Division require an Independent Testing and Inspecting agency to be responsible for Acceptance Testing and Field Quality Control requirements; Submit certification documentation for such agency that demonstrates compliance with the Quality Assurance paragraph of this Section.

1.5 ACTION SUBMITTALS

- A. Product Data: Submit product data for each of the following.
1. Sleeves.
 2. Sleeve seals.
 3. Grout.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Prepare drawings showing dimensioned layout for the following:

1. Penetration and Structural Opening: Floor plans showing sleeves and formed structural penetrations. Show sleeve and formed penetration layouts and relationships between structural components and other adjacent building elements, including but not limited to pre-tensioning and post-tensioning members where used.
2. Reflected Ceiling Plans: ceiling plans, sections, and other necessary details showing dimensioned layouts for equipment located in or on the ceiling plane. Base dimensions on exact dimensioned data obtained from product submittals for products to be included in the Work. Differentiate between field measurements and assumed dimensions. Include the following items coordinated with each other, based on input from installers of the items involved:
 - a. Suspended ceiling components.
 - b. Structural members to which suspension systems for luminaires will be attached.
 - c. Perimeter moldings, decorative ceiling elements, and Architectural features.
 - d. Luminaires.
 - e. HVAC Diffusers, Registers and Grilles.
 - f. Speakers.
 - g. Sprinklers.
 - h. Fire Alarm initiating devices, including but not limited to the following:
 - 1) Smoke detectors.
 - 2) Heat detectors.
 - 3) Flame detectors.
 - i. Fire Alarm notification appliances.
 - j. Occupancy sensors.
 - k. Access panels.
 - l. Security cameras and occupancy detectors.
 - m. Wireless Access Points.
 - n. Location of structural supports for seismic bracing.
3. Electrical Equipment Layouts: Floor plans, elevations, and other necessary details showing dimensioned layouts for spaces containing electrical equipment. Base electrical equipment dimensions on exact dimensioned data obtained from product submittals for products to be included in the Work. Differentiate between field measurements and assumed dimensions. Include the following items coordinated with each other, based on input from installers of the items involved:
 - a. Electrical equipment layout and relationships between components and adjacent structural and mechanical elements.
 - b. Indication of required working clearances and required area above and around electrical equipment where pipes and ducts are prohibited.
 - c. Location of Conduit entry into electrical equipment.
 - d. Location of luminaires, sprinkler piping and heads, ducts, and diffusers.
 - e. Electrical equipment support locations, type of support, and weight on each support.
 - f. Location of structural supports for structure-supported raceways.
 - g. For floor mounted equipment: concrete base dimension, outline of equipment, and required clearances.
 - h. Location of structural supports for seismic bracing.

1.7 QUALITY ASSURANCE

- A. Common Requirements for Independent Testing and Inspecting Agency Qualifications: Where this Section and other Sections of this Division call for an Independent Testing and Inspecting Agency (Testing Agency); the Testing Agency shall comply with the following requirements:
 1. Have the experience and capability to conduct the testing indicated,

2. Be a member company of the InterNational Electrical Testing Association (NETA) or a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction and the Engineer-of-Record.
 3. Meet the Requirements of NETA ATS 3.0 including, but not limited to, the following:
 - a. Be an independent, third party entity which can function as an unbiased testing authority, professionally independent of the manufacturers, suppliers, and installers of equipment or systems being evaluated.
 - b. Be regularly engaged in the testing of seismic support of electrical equipment devices, installations, and systems.
 - c. Use technicians who are regularly employed for testing services.
 - d. Have a "Full Membership" classification issued by the InterNational Electrical Testing Association meets the above criteria.
 4. Testing Agency's Field Personnel: Technicians performing specified electrical tests and inspections shall meet the Requirements of NETA ATS 3.0 including, but not limited to, the following:
 - a. Technicians performing specified electrical tests and inspections shall be trained and experienced concerning the apparatus and systems being evaluated. These individuals shall be capable of conducting the tests in a safe manner and with complete knowledge of the hazards involved. They must evaluate the test data and make a judgment on the serviceability of the specific equipment.
 - b. Technicians shall be certified in accordance with ANSI/NETA ETT-2000, Standard for Certification of Electrical Testing Personnel. Each on-site crew leader shall hold a current certification, Level III or higher, in electrical testing.
- B. Common Requirements for Material Quality: Materials, equipment and devices shall be new and of the quality specified, and shall be free from defects at the time of installation. Materials, equipment and devices damaged in shipment or otherwise damaged or found defective prior to acceptance by the Owner shall be replaced with new materials, equipment or devices identical with those damaged, unless approved otherwise by the Owner in writing.
- C. Common Requirements for Code Compliance: In case where differences occur between building codes, state laws, local ordinances, industry standards, utility company regulations and the Contract Documents, the most stringent shall govern. Perform the following:
1. Promptly notify the Architect in writing of any such difference.
 2. Obtain approval from Architect before proceeding with the Work.
 3. Should the Contractor perform any work that knowingly does not comply with local codes, laws and ordinances, industry standards, or other governing regulations; the Work shall be corrected at no cost to the Owner.
- D. Common Requirements for Compliance with AHJ Instructions: In cases where the Authority Having Jurisdiction requires deviations from the requirements of the Contract Documents, perform the following:
1. Promptly notify the Architect in writing of any such difference.
 2. Obtain approval from Architect before proceeding with the Work.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
1. Wherever a UL standard has been established for a particular type of material, equipment or device, each item of such material, equipment or device provided shall meet the requirements of the UL standard.

1.8 PRODUCT SUBSTITUTIONS

- A. Comply with provisions of Division 01 Section "Product Requirements".
 - 1. If item of equipment or device offered as Substitution differs in dimension or configuration from that indicated in the Contract Documents, provide, as part of the substitution submittal, a drawing that shows that the equipment or devices proposed for Substitution can be installed in the space available without interfering with other trades or with access requirements for operations and maintenance in the completed project. Drawings shall be of appropriate scale but shall not be smaller than a scale of 1/4-inch equals one foot.
 - 2. Where substitute equipment or devices requires different arrangement or connections from that indicated in the Contract Documents, install the equipment or devices to operate properly and in accordance with the requirements of the Contract Documents. Make incidental changes necessary in piping, ductwork or wiring which results from the inclusion of the substitute equipment or device without any additional cost to the Owner. Pay all additional costs incurred by other trades in connection with changes required by the inclusion of the substituted equipment or device in the Work.

1.9 PROJECT CONDITIONS

- A. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
 - 1. Notify Architect, Construction Manager, and Owner no fewer than five business days in advance of proposed interruption of electrical service.
 - 2. Do not proceed with interruption of electrical service without Owner's written permission.
- B. Schedule of Work in Existing Facilities:
 - 1. The building will continue in use throughout the construction period, carry out the Work in such a manner as to minimize disturbance to the occupants.
 - 2. The schedule contemplates working in designated areas in the existing building while other adjacent areas are still being occupied. Carry out the Work in such a manner as to minimize disturbance to those occupied areas.
 - 3. Should the Work in the designated areas affect any services to the areas that are to remain in use, new permanent or temporary services or a combination of both shall be installed as required to enable those occupied areas to function properly and without interruption.
 - 4. Perform no work in the existing building which would interfere with its use during normal hours of occupancy, including but not limited to operations which would cause objectionable noise or service interruptions, unless special permission is granted by the Owner.
- C. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving large equipment into place. Where any piece of equipment is too large for ingress through normal building openings it shall be placed in its containing space before the enclosing structure is completed.
- D. Temporary Power: Where temporary power is required during the construction period, comply with ANSI/NECA 200 "Recommend Practice for Installing and Maintaining Temporary Power at Construction Sites."

1.10 COORDINATION

- A. In describing various materials, equipment and devices, in general each item may be described singularly, even though there may be a multiplicity of identical items. Also, where the description is general in nature, the exact sizes, duties, space arrangements, horsepower and other requirements must be obtained by reference to other portions of Contract Documents.
- B. Space allocations for materials, equipment and devices have been made on the basis of present and known future requirements and the dimensions of items of equipment or devices of a particular manufacturer. Verify that all materials, equipment and devices proposed for use on this Project are within the constraints of the allocated space.
- C. Coordinate arrangement, mounting, and support of electrical equipment:
 - 1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
 - 2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
 - 3. To allow right of way for piping, ductwork and conduit installed at required slope.
 - 4. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
- D. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
- E. Utility Service Coordination:
 - 1. Electrical Service: Coordinate the location of the electrical service entrance with the electric utility company and with other trades. Provide materials and equipment required to connect the electrical service.
- F. Coordinate location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Division 08 Section "Access Doors and Frames."
- G. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."
- H. For roof-mounted equipment: Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."

PART 2 - PRODUCTS

2.1 SLEEVES FOR RACEWAYS AND CABLES

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- C. Sleeves for Rectangular Openings: Galvanized sheet steel.
 - 1. Minimum Metal Thickness:
 - a. For sleeve cross-section rectangle perimeter less than 50 inches and no side more than 16 inches, thickness shall be 0.052 inch.

- b. For sleeve cross-section rectangle perimeter equal to, or more than, 50 inches and 1 or more sides equal to, or more than, 16 inches, thickness shall be 0.138 inch.

2.2 SLEEVE SEALS

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Advance Products & Systems, Inc.
 - b. Calpico, Inc.
 - c. Metraflex Co.
 - d. Pipeline Seal and Insulator, Inc.
 - 2. Sealing Elements: EPDM or NBR interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.
 - 3. Pressure Plates: Carbon steel. Include two for each sealing element.
 - 4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.3 GROUT

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. The Drawings do not indicate existing installations other than to identify modifications or extensions thereto. Visit the site and ascertain the existing conditions. Review construction details of the existing portion of the building during the site inspection. Include all work required to remove or modify portions of the existing installation in order to accommodate the new Work. Failure to comply with this will not be considered grounds for additional payment in connection with removing or modifying any part of the existing installation or installing any new or temporary work.

3.2 TEMPORARY WORKING ACCESS

- A. Remove existing wire, conduit, equipment, fixtures, and other items as required to provide access for Work in existing facilities.
- B. Reinstall and refinish items removed, or otherwise damaged, to match existing adjacent conditions upon completion of the Work.

3.3 SALVAGE, DEMOLITION AND RELOCATION

- A. Modify, remove, salvage, or relocate materials, equipment and devices as indicated or required by the installation of new Work.

- B. Salvage and Demolition: Working jointly with the Owner's Representative, establish and mark salvage and demolition items before commencing work; report items scheduled for relocation, reinstallation or reuse, which are found to be in damaged condition; await further instructions from the Owner before commencing Work.
1. Demolition material shall be removed from the site and disposed of in a legal manner.
 2. Salvaged equipment and devices shall be the property of the Owner, unless otherwise indicated. Store salvaged items in locations as directed by Owner.
 3. For devices and equipment marked for demolition, remove all conduit and wiring back to the point of origination, unless otherwise indicated.
 4. Where existing walls are demolished, remove all existing electrical devices, their associated conduit and wiring back to the point of origination.
 5. Where entire circuits are removed, turn the circuit breaker off and label as "spare".
 6. Maintain service to all "existing to remain" devices and equipment that may be interrupted during demolition.
 7. Upon completion of demolition, ensure that remaining devices that may have been interrupted during demolition are energized.
- C. Relocations: Make minor relocations necessitated by the conditions at the site or as directed by the Owner's Representative, without additional cost to the Owner.
1. Remove items which are to be relocated in reverse order to original assembly or placement.
 2. Protect items until relocation is complete.
 3. Clean, Repair and restore to good functional condition, equipment, materials and items scheduled for relocation. Provide new fittings and appurtenances required to complete the relocations and to restore to good operating order.
- D. Substitution of New materials for Relocation: New materials of similar design and quality may be substituted for materials and items indicated to be relocated upon approval of Owner and Architect. Comply with Division 01 for Substitution Procedures.

3.4 COMMON REQUIREMENTS FOR ELECTRICAL INSTALLATION

- A. All materials, equipment and devices shall be installed in accordance with the recommendations of their manufacturer.
- B. Comply with NECA 1 - Standard Practices for Good Workmanship in Electrical Construction, as published by the National Electrical Contractors Association.
- C. Use licensed technicians skilled in their respective trades for installation of the Work.
- D. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items, unless otherwise indicated.
- E. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.
- F. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a manner as to facilitate future disconnecting with minimum interference with other items in the vicinity.
- G. Right of Way: Give to piping systems installed at a required slope.

- H. Access Panels: Provide wall and ceiling access panels for unrestricted access to all concealed electrical equipment items and devices installed behind furrings, chases or non-removable suspended ceilings. Access Panel materials and installation requirements are specified in Division 08 Section "Access Doors and Frames."
- I. Installation Inspections and Certifications
 - 1. Obtain timely inspections of the installation by Authorities Having Jurisdiction. Remedy any deficiencies to the satisfaction of the inspecting official.
 - 2. Upon final completion of the Work, obtain certificates of acceptance from the Authorities Having Jurisdiction. Deliver the certificates to the Owner.

3.5 SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Electrical penetrations occur when raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.
- B. Concrete Slabs and Walls: Install sleeves where cable or conduit penetrations occur. Install sleeves during erection of slabs and walls.
 - 1. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
 - 2. Exception: Slab-on-grade construction shall not require sleeves or curbed formed openings when conduits or pipes that penetrate the slab-on-grade are installed and properly supported prior to the pouring of the slab.
- C. Masonry Walls: Install sleeves where cable or conduit penetrations occur. Install sleeves during erection of walls.
 - 1. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- E. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."
- F. Non Fire-Rated Assemblies: Install sleeves where cable penetrations occur. Install sleeves during erection of walls.
 - 1. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- G. Cut sleeves to length for mounting flush with both surfaces of walls.
- H. Extend sleeves installed in floors a minimum of 2 inches above finished floor level.
- I. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable, unless otherwise indicated or **unless seismic criteria requires different clearance**.
- J. Seal space outside of sleeves with grout for penetrations of concrete and masonry
 - 1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.
 - 2. Apply approved joint compound for gypsum board assemblies where masonry or concrete wall is faced on interior side with gypsum board.

- K. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Division 07 Section "Joint Sealants."
- L. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping."
- M. Roof-Penetration Sleeves: Seal penetration of individual conduits and cables with flashing units applied in coordination with roofing work. Provide flashing unit as specified in Division 07 Section "Sheet Metal Flashing and Trim".
- N. Aboveground, Exterior-Wall Penetrations: Seal penetrations using cast-iron pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- O. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch annular clear space between raceway or cable and sleeve for installing mechanical sleeve seals.

3.6 OPTION TO RELOCATE DEVICES

- A. The location of power, wall switches and other similar devices along with their associated connections may be relocated at the Owner's option, at no additional cost to the Owner, to a point within 10 feet of their present location provided the Contractor is notified prior to rough-in or installation.

3.7 SLEEVE-SEAL INSTALLATION

- A. Install to seal exterior wall penetrations.
- B. Use type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.8 UTILITIES

- A. The location and voltage of electrical lines included within the Work are indicated in the Contract Documents in accordance with information furnished by the Owner. Existing utility lines not indicated in Contract Documents but encountered during construction shall be protected, relocated or capped as directed by the Owner.
- B. Prior to excavation, examine the site and verify the location and elevation of all utilities and their relation to the Work. Identify and label all underground utilities occurring within the bounds of the area to be excavated. Contact the known utilities and engage a certified locator service to assist in this effort.
- C. Prior to excavation, contact the known utilities and inform them of excavation work plan. Proceed with excavation only after receiving approval from Utilities.
- D. Assist the Owner in arranging for the removal of existing utility lines within the scope of this Project that are labeled to be abandoned or removed with the respective Utility.

- E. All precautions shall be exercised to prevent damage to existing lines, but should work become necessary, it must be authorized prior to execution except in an emergency situation.
- F. Should damage result to any utility through the Contractor's negligence or failure to comply with the above directives, the Contractor shall bear the sole responsibility to correct such damage and shall be responsible for all expenses incurred in the expeditious repair or replacement of such damaged Utilities.
- G. Repair of damaged utilities shall be to a condition equal to or better than the adjacent undamaged portion of such utility and to the complete satisfaction of the Owner and respective Utility.

3.9 CONNECTIONS

- A. Phase Rotation: Prior to installing any connections or energizing any equipment, perform Phase Rotation verification test at the following:
 - 1. Utility Transformers
 - 2. Engine Generators
 - 3. Motors
 - 4. Connections to existing electrical equipment.
- B. Mechanical Controls: Provide 120VAC power connections as required to components of Mechanical Control system. Coordinated quantity of circuits, connection requirements and locations between trades and with provisions of Divisions 21, 22, and 23 sections.
- C. HVAC Terminal Boxes: Where the Drawings indicate a 120VAC circuit in a general area and labeled for terminal boxes (VAV, etc.), the intent is for this circuit to be extended and connected to the terminal box in that general area. Coordinate connection requirements and locations between trades and with provisions of Division 23 Sections and Drawings.
- D. Smoke Dampers: Where the Drawings indicate a 120VAC circuit in a general area and labeled for dampers, the intent is for this circuit to be extended and connected to the Smoke and Fire/Smoke dampers in that general area in coordination with the smoke control sequence. Coordinated connection requirements and locations between trades and with provisions of Division 23 Sections and Drawings.
- E. Security and Access Control: Where the Drawings indicate a 120VAC circuit in a general area labeled for security or access control use, the intent is for this circuit to be extended and connected to the security or access control device in that general area in coordination with other trades. Coordinated connection requirements and locations between trades and with Owner's Security vendor prior to installation.
- F. Motors and Motor Connections: Motors for driven equipment are specified in Divisions 21, 22, and 23. Provide connections as follows, unless otherwise indicated:
 - 1. Equipment provided with factory installed disconnecting means: Upon installation of motor and associated equipment, Provide the electrical installation in accordance with approved wiring diagrams and manufacturer's written instructions.
 - 2. Equipment furnished with factory disconnecting means: Upon installation of motor and associated equipment, Install factory furnished disconnecting means and provide the electrical installation in accordance with approved wiring diagrams and manufacturer's written instructions.
 - 3. Equipment not furnished with factory installed disconnecting means: Provide disconnect switch required in accordance with NFPA 70 or as indicated on the

Drawings. Provide the electrical installation in accordance with approved wiring diagrams and manufacturer's written instructions.

- G. Owner Furnished Equipment: Power Connections and Control wiring required for Owner Furnished Equipment may not be shown on the Drawings. This wiring shall be provided. Coordinated connection requirements and locations with Owner.
 - 1. Request all rough-in documentation required for proper installation of the electrical work in ample time to permit preparation of the installation drawings.

3.10 FIRESTOPPING

- A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electrical installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."
- B. Apply putty pads to boxes located in fire-rated wall assemblies in which a horizontal distance of greater than 24" between boxes is not maintained. Putty pad materials and installation requirements are specified in Division 09 Section "Gypsum Board Assemblies."

3.11 SEALANT

- A. Apply sealant to penetrations of all floor and wall assemblies to maintain pressure differentials required by AIA for all pressure sensitive rooms. Sealant materials and installation requirements are specified in Division 07 Section "Joint Sealants" and Division 09 Section "Gypsum Board Assemblies."

3.12 FIELD QUALITY CONTROL

- A. Conduct tests as part of the Work of this Division. Include the services of qualified personnel as well as all equipment, apparatus, and services required.
- B. Conduct tests under conditions free from short circuits and from grounds.
- C. Insure insulation resistance prior to test is within the requirements of the latest edition of the NFPA 70.
- D. Prior to execution of testing, notify Architect of proposed test procedures and forms.
- E. Testing requirements are listed under individual sections of this Division. Sections requiring testing include, but are not limited to the following:
 - 1. Wire and cable insulation, in accordance with Division 26 Sections Medium-Voltage Cables" and "Low-Voltage Electrical Power Conductions and Cables."
 - 2. Grounding system continuity, in accordance with Division 26 Section "Grounding and Bonding for Electrical Systems."
 - 3. Monitoring operational and system continuity, in accordance with Division 26 Section "Electrical Power Monitoring and Control."
 - 4. Lighting controls and system diagnostic, in accordance with Division 26 Section "Network Lighting Controls."
 - 5. NETA tests for transformers, in accordance with Division 26 Section "Low-Voltage Transformers."
 - 6. NETA tests and startup for switchboards, in accordance with Division 26 Section "Switchboards."
 - 7. NETA tests and startup for panelboards, in accordance with Division 26 Section "Panelboards."

8. NETA tests and startup for enclosed controllers, in accordance with Division 26 Section "Enclosed Controllers."
9. NFPA 110 acceptance tests and startup for generators, in accordance with Division 26 Section "Engine Generators."
10. Tests and startup uninterruptible power systems, in accordance with Division 26 Section "Static Uninterruptible Power Supply."
11. Tests and startup for transfer switches, in accordance with Division 26 Section "Transfer Switches."
12. NETA tests for surge protection devices, in accordance with Division 26 Section "SPD for Low-Voltage Electrical Power Circuits."
13. NETA thermographic survey on all electrical system equipment.

END OF SECTION

SECTION 260513

MEDIUM-VOLTAGE CABLES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes cables and related splices, terminations, and accessories for medium-voltage (2001 to 35,000 V) electrical distribution systems.
- B. Related Sections include the following:
 - 1. Division 26 Section "Low-Voltage Electrical Power Conductors And Cables" for single-conductor and multiconductor cables, cable splices, and terminations for electrical distribution systems 600 V and less.

1.2 DEFINITIONS

- A. Jacket: A continuous nonmetallic outer covering for conductors or cables.
- B. NETA ATS: Acceptance Testing Specification.
- C. Sheath: A continuous metallic covering for conductors or cables.

1.3 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Product Data: For each type of product indicated. Provide data for conductors and cables including, but not be limited to, the following:
 - 1. Complete physical properties of the conductors and cables.
 - 2. Ampacity for use intended.
 - 3. Allowable stresses and requirements for installations, including bend radii, linear stress, and other pertinent data.
 - 4. Splicing and termination kit materials.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electrical". Include the following:
 - 1. Cable routing plans, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 - a. Cable lengths use in fault calculations.
 - b. Proposed cable pull points.
 - c. Structural members in the paths of conduit groups with common supports.
 - d. HVAC and plumbing items and architectural features in the paths of conduit groups. Denote where systems share common supports.
 - e. Proposed splice locations.

- B. Product Certificates: For each type of splicing and termination kit, signed by product manufacturer.
 - C. Qualification Data: For Installer; Include manufacturer's certificate of training listing the following:
 - 1. Installer's name.
 - 2. Date and duration of last training class attended.
 - 3. Years of work experience slicing medium voltage cables.
 - D. Material Certificates: For each cable and accessory type, signed by manufacturers.
 - E. Source quality-control test reports.
 - F. Field quality-control test reports.
- 1.5 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For medium-voltage cables, to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation And Maintenance Data," include the following:
 - 1. Manufacturer's routine maintenance requirements for cables, terminations and all installed components.
- 1.6 QUALITY ASSURANCE
- A. Source Limitations: Obtain cables and accessories through one source from a single manufacturer.
 - B. Installer: Engage a cable splicer, trained and certified by splice material manufacturer, to install, splice, and terminate medium-voltage cable.
 - 1. Installer experience in slicing medium voltage cables: minimum of five years.
 - C. Testing Agency Qualifications: For independent agency as defined in Division 26 Section "Common Work Results for Electrical".
- 1.7 PROJECT CONDITIONS
- A. Interruption of Existing Electric Service: Comply with requirements defined in Division 26 Section "Common Work Results for Electrical".

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Cables:
 - a. Aetna Insulated Wire, Inc.; a Berkshire Hathaway company.
 - b. General Cable Technologies Corporation.
 - c. Kerite; a Marmon Wire & Cable/Berkshire Hathaway company.
 - d. Okonite Company (The).
 - e. Prysmian Cables & Systems.
 - f. Southwire Company.
 - 2. Cable Splicing and Terminating Products and Accessories:
 - a. Adalet; a Scott Fetzer company.

- b. DSG-Canusa; a Shawcor company.
- c. Engineered Products Company.
- d. G&W Electric Company.
- e. MP Husky.
- f. RTE Components; Cooper Power Systems, Inc.
- g. Thomas & Betts Corporation.
- h. Thomas & Betts Corporation/Elastimold.
- i. 3M; Electrical Markets Division.
- j. Tyco Electronics; Raychem Products.

2.2 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with IEEE C2 and NFPA 70.

2.3 CABLES

- A. Cable Type: MV105; Ethylene-propylene rubber Insulation.
- B. Comply with UL 1072 and AEIC CS 8.
- C. Comply with ICEA S-93-639, and ICEA S-97-682
- D. Conductor: Copper
- E. Conductor Stranding: Compact round, concentric lay, Class B.
- F. Strand Filling: Conductor interstices are filled with impermeable compound.
 - 1. Voltage Rating: 15 kV.
 - 2. Insulation Thickness: 133 percent insulation level.
- G. Shielding: Uncoated copper tape shield helically applied over semiconducting insulation shield with minimum 12.5% overlap
- H. Cable Jacket:
 - 1. Sunlight-resistant PVC
 - 2. No Lead Sunlight-resistant PVC
 - 3. Chlorosulfonated polyethylene, CPE.

2.4 SPLICE KITS

- A. Connectors and Splice Kits: Comply with IEEE 404; type as recommended by cable or splicing kit manufacturer for the application.
- B. Splicing Products: As recommended, in writing, by splicing kit manufacturer for specific sizes, ratings, and configurations of cable conductors. Include all components required for complete splice, with detailed instructions.
 - 1. Combination tape and cold-shrink-rubber sleeve kit with re-jacketing by cast-epoxy-resin encasement or other waterproof, abrasion-resistant material.
 - 2. Heat-shrink splicing kit of uniform, cross-section, polymeric construction with outer heat-shrink jacket.
 - 3. Premolded, cold-shrink-rubber, in-line splicing kit.

4. Premolded EPDM splicing body kit with cable joint sealed by interference fit of mating parts and cable.

2.5 SOLID TERMINATIONS

- A. Shielded-Cable Terminations: Comply with the following classes of IEEE 48. Insulation class is equivalent to that of cable. Include shield ground strap for shielded cable terminations. Provide mastic seal at the ground strap and lug end of termination. Grease seals and hand taped terminations are not acceptable.
 1. Class 1 Terminations: Modular type, furnished as a kit, with stress-relief tube; multiple, molded-silicone rubber, insulator modules; shield ground strap; and compression-type connector.
 2. Class 1 Terminations: Heat-shrink type with heat-shrink inner stress control and outer nontracking tubes; multiple, molded, nontracking skirt modules; and compression-type connector.
 3. Class 1 Terminations: Modular type, furnished as a kit, with stress-relief shield terminator; multiple-wet-process, porcelain, insulator modules; shield ground strap; and compression-type connector.
 4. Class 1 Terminations, Indoors: Kit with stress-relief tube, nontracking insulator tube, shield ground strap, compression-type connector, and end seal.

2.6 SEPARABLE INSULATED CONNECTORS

- A. Description: Modular system, complying with IEEE 386, with disconnecting, single-pole, cable terminators and with matching, stationary, plug-in, dead-front terminals designed for cable voltage and for sealing against moisture.
- B. Terminations at Distribution Points: Modular type, consisting of terminators installed on cables and modular, dead-front, terminal junctions for interconnecting cables.
- C. Load-Break Cable Terminators: Elbow-type units with 200-A load make/break and continuous-current rating; coordinated with insulation diameter, conductor size, and material of cable being terminated. Include test point on terminator body that is capacitance coupled.
- D. Dead-Break Cable Terminators: Elbow-type unit with 600-A continuous-current rating; designed for de-energized disconnecting and connecting; coordinated with insulation diameter, conductor size, and material of cable being terminated. Include test point on terminator body that is capacitance coupled.
- E. Dead-Front Terminal Junctions: Modular bracket-mounted groups of dead-front stationary terminals that mate and match with above cable terminators. Two-, three-, or four-terminal units as indicated, with fully rated, insulated, watertight conductor connection between terminals and complete with grounding lug, manufacturer's standard accessory stands, stainless-steel mounting brackets, and attaching hardware.
 1. Protective Cap: Insulating, electrostatic-shielding, water-sealing cap with drain wire.
 2. Portable Feed-Through Accessory: Two-terminal, dead-front junction arranged for removable mounting on accessory stand of stationary terminal junction.
 3. Grounding Kit: Jumpered elbows, portable feed-through accessory units, protective caps, test rods suitable for concurrently grounding three phases of feeders, and carrying case.
 4. Standoff Insulator: Portable, single dead-front terminal for removable mounting on accessory stand of stationary terminal junction. Insulators suitable for fully insulated isolation of energized cable-elbow terminator.

- F. Test-Point Fault Indicators: Applicable current-trip ratings and arranged for installation in test points of load-break separable connectors, and complete with self-resetting indicators capable of being installed with shotgun hot stick and tested with test tool.
- G. Tool Set: Shotgun hot stick with energized terminal indicator, fault-indicator test tool, and carrying case.

2.7 ARC-PROOFING MATERIALS

- A. Tape for First Course on Metal Objects: 10-mil-thick, corrosion-protective, moisture-resistant, PVC pipe-wrapping tape.
- B. Arc-Proofing Tape: Fireproof tape, flexible, conformable, intumescent to 0.3 inch thick, compatible with cable jacket.
- C. Glass-Cloth Tape: Pressure-sensitive adhesive type, 1 inch wide.

2.8 SOURCE QUALITY CONTROL

- A. Test and inspect cables according to ICEA S-97-682 before shipping.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Engage a factory-authorized service representative to conduct an on-site course for proper installation methods and application of splices and terminations.

3.2 INSTALLATION

- A. Install cables according to IEEE 576.
- B. Comply with NECA/NEMA 600 "Standard for Installing and Maintaining Medium-Voltage Cable" as published by the National Electrical Contractors Association.
- C. Pull Conductors: Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
 - 1. Before cable is pulled into conduit, thoroughly swab the conduit to remove all foreign material and to permit the cable to be pulled into a clean, dry conduit.
 - 2. Form each cable carefully in cabinets, equipment, pull boxes, and manholes.
 - 3. Make bends in cables larger than the minimum radii required by the NFPA 70 and in the cable manufacturer's published data.
 - 4. Where necessary, use manufacturer-approved pulling compound or lubricant that will not deteriorate conductor or insulation.
 - 5. Use pulling means, including fish tape, cable, rope, and basket-weave cable grips that will not damage cables and raceways. Do not use rope hitches for pulling attachment to cable.
 - 6. Use pull-in guides, cable feeders, and draw-in protectors as required to protect cables during installation.
 - 7. Do not pull cables with ends unsealed. Seal cable ends with rubber tape.
- D. Install exposed cables parallel and perpendicular to surfaces of exposed structural members and follow surface contours where possible.

- E. Support cables according to Division 26 Section "Hangers and Supports for Electrical Systems."
- F. In manholes, handholes, pull boxes, junction boxes, and cable vaults, train cables around walls by the longest route from entry to exit and support cables at intervals adequate to prevent sag.
- G. Install sufficient cable length to remove cable ends under pulling grips. Remove length of conductor damaged during pulling.
- H. Cable Splices:
 - 1. Route cable to minimize cable splices.
 - 2. Obtain engineers approval of cable route and splice locations prior to installation.
- I. Install terminations at ends of conductors and seal multiconductor cable ends with standard kits. Maintain seal during construction to avoid entrance of moisture
- J. Terminations at Medium Voltage Switchgear:
 - 1. Properly torque bolted connections prior to the application of termination protection materials.
 - 2. Protect all terminations to insulated bus or bushing connections.
- K. Install separable insulated-connector components as follows:
 - 1. Protective Cap: At each terminal junction, with one on each terminal to which no feeder is indicated to be connected.
 - 2. Portable Feed-Through Accessory: Three.
 - 3. Standoff Insulator: Three.
- L. Arc Proofing: Unless otherwise indicated, arc proof medium-voltage cable where cables from different circuits are located within shared manholes or switchgear compartments where cables are not protected by conduit, direct burial, or termination materials. In addition to arc-proofing tape manufacturer's written instructions, apply arc proofing as follows:
 - 1. Clean cable sheath.
 - 2. Wrap metallic cable components with 10-mil pipe-wrapping tape.
 - 3. Smooth surface contours with electrical insulation putty.
 - 4. Apply arc-proofing tape in one half-lapped layer with coated side toward cable.
 - 5. Band arc-proofing tape with 1-inch-wide bands of half-lapped, adhesive, glass-cloth tape 2 inches o.c.
- M. Seal around cables passing through fire-rated elements according to Division 07 Section "Penetration Firestopping."
- N. Ground shields of shielded cable at terminations, splices, and separable insulated connectors. Ground metal bodies of terminators, splices, cable and separable insulated-connector fittings, and hardware.
- O. Identify cables according to Division 26 Section "Identification for Electrical Systems." Identify phase and circuit number of each conductor at each splice, termination, pull point, and junction box. Arrange identification so that it is unnecessary to move the cable or conductor to read the identification.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified independent testing and inspecting agency as defined in Division 26 Section "Common Work Results for Electrical" to perform the following field tests and inspections and prepare certified test reports:
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters.
 - 2. After installing medium-voltage cables and before electrical circuitry has been energized, test for compliance with requirements.
- B. Medium-voltage cables will be considered defective if they do not pass tests and inspections.
- C. Correct Deficiencies, Retest and Report:
 - 1. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace conductors, units, and devices as required to bring system into compliance.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. Prepare a written report, certified by testing agency, to record the following:
 - a. Procedures used.
 - b. Results that comply with requirements, identifying conductor, units, and devices checked.
 - c. Results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
 - d. Observations and test results after remedial action.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 260519

LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Building wires and cables rated 600 V and less.
 - 2. Connectors, splices, and terminations rated 600 V and less.
 - 3. Sleeves and sleeve seals for cables.
- B. Related Sections include the following:
 - 1. Division 26 Section "Medium-Voltage Cables" for single-conductor and multiconductor cables, cable splices, and terminations for electrical distribution systems with 601 to 35,000 V.

1.2 DEFINITIONS

- A. EPDM: Ethylene-propylene-diene terpolymer rubber.
- B. NBR: Acrylonitrile-butadiene rubber.
- C. VFC: Variable frequency controller.

1.3 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Product Data: For each type of product indicated. Provide data for conductors and cables including, but not be limited to, the following:
 - 1. Complete physical properties of the conductors and cables.
 - 2. Ampacity for use intended.
 - 3. Allowable stresses and requirements for installations, including bend radii, linear stress, and other pertinent data.
 - 4. Types of connectors for terminations.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electrical". Include the following:
 - 1. Cable lengths for use in fault calculations.
 - 2. Feeder cable routing plans, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 - a. Structural members in the paths of conduit groups with common supports.
 - b. HVAC, plumbing items, and architectural features in the paths of conduit groups. Denote where systems share common supports.

B. Qualification Data: For testing agency.

C. Field quality-control test reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For conductors and cables, to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation And Maintenance Data," include the following:

1. Manufacturer's routine maintenance requirements for cables, terminations and all installed components.

1.6 QUALITY ASSURANCE

A. Testing Agency Qualifications: For independent agency as defined in Division 26 Section "Common Work Results for Electrical".

1.7 COORDINATION

A. Set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

PART 2 - PRODUCTS

2.1 CONDUCTORS AND CABLES

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Alcan Products Corporation; Alcan Cable Division.
2. Alpha Wire.
3. Belden Inc.
4. Encore Wire Corporation.
5. General Cable Technologies Corporation.
6. Southwire Incorporated.

B. Aluminum and Copper Conductors: Comply with NEMA WC 70/ICEA S-95-658.

C. XHHW Conductors: Comply with NEMA WC 70.

D. Aluminum Conductors: XHHW-2

1. Comply with NEMA WC 70.
2. AA-8000 series electrical grade aluminum alloy conductor material in compliance with NFPA 70, Chapter 3.
3. Compact stranded conductors.

E. Shielded Variable Frequency Drive Cable: Shielded Conductor and signal cable with symmetric bare grounds and overall shield to block EMI and RFI interference.

1. Conductor Material: stranded tinned copper
2. Shield: Foil tape and tinned copper braid shield
3. Comply with 2000V UL 1277 Type TC-ER per 2005 NEC Article 336
4. Rated for 90°C wet/dry
5. Suitable for Class I & II; Division 2 hazardous locations
6. Comply with UL 1685 vertical tray flame test

7. Comply with IEEE 1202 vertical tray flame test at 70,000 BTU/hour
 8. Comply with CSA FT4
 9. Comply with Oil & Sunlight resistant
 10. RoHS compliant and CE approved.
- F. Conductor Insulation: Comply with NEMA WC 70/IECA S-95-658 for Types THHN-THWN, XHHW, XHHW-2 and SO, as indicated.
- G. Multiconductor Cables: Comply with NEMA WC 70/IECA S-95-658; Exterior sheath color coded to differentiate cable voltages and quantity of phase conductors.
1. Health Care Facilities armored cable, Type AC-HCF; Comply with UL 4 and UL 1479; with green grounding conductor(s) in addition to Armor/Bond Wire ground combination; with exterior sheath colored green.
 2. Health Care Facilities Metal-clad cable, Type MC^{AP}-HCF; Comply with UL 1569 and UL 1063; with green grounding conductor(s) in addition to full size aluminum ground wire/sheath combination that is listed for sheath to act as second ground path; with exterior sheath colored green.
 3. Armored cable, Type AC; comply with UL 4 and UL 1479. with green grounding conductor(s) in addition to Armor/Bond Wire ground combination. Listed for use in Environmental Air space according to NPFA 70 Article 300.
 4. Metal-clad cable, Type MC; comply with UL 1569 and UL 1479; with green grounding conductor(s). Listed for use in Environmental Air space according to NPFA 70 Article 300.
 5. Mineral-insulated, metal-sheathed cable, Type MI; with green grounding conductor(s). Listed for use in Environmental Air space according to NPFA 70 Article 300.
 6. Nonmetallic-sheathed cable, Type NM; with green grounding conductor(s).
 7. Type SO; with green grounding conductor(s).

2.2 CONNECTORS AND SPLICES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. AFC Cable Systems, Inc.
 2. Gardner Bender.
 3. Hubbell Power Systems, Inc.
 4. Ideal Industries, Inc.
 5. IlSCO; a branch of Barden Corporation.
 6. NSI Industries LLC.
 7. O-Z/Gedney; a brand of the EGS Electrical Group.
 8. 3M; Electrical Markets Division.
 9. Tyco Electronics.
 10. WAGO Corporation.
- B. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.

2.3 MISCELLANEOUS PRODUCTS

- A. Cable Ties: Fungus-inert, self-extinguishing, 1-piece, self-locking, Type 6/6 nylon cable ties.
1. Minimum Width: 3/16 inch.
 2. Tensile Strength: 50 lb, minimum.
 3. Temperature Range: Minus 40 to plus 185 deg F.

4. Color: Black, except where used for color-coding. Refer to Division 26 Section "Identification for Electrical Systems" for color-coding requirements.

2.4 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with NFPA 70.

PART 3 - EXECUTION

3.1 CONDUCTOR MATERIAL APPLICATIONS

- A. Feeders: Copper for all feeders, aluminum for feeders where indicated on Drawings. Solid or stranded for No. 10 AWG and smaller; stranded for No. 8 AWG and larger. Stranded for wire.
- B. Branch Circuits: Copper. Solid or stranded for No. 10 AWG and smaller; stranded for No. 8 AWG and large.
- C. Provide conductors with minimum temperature ratings of 75 degrees C. For high temperature applications, provide conductors with temperature ratings in accordance with the NFPA 70 for the ambient condition.

3.2 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

- A. Service Entrance:
 1. Copper: Type THHN-THWN, single conductors in raceway.
 2. Aluminum: Type XHHW-2, single conductors in raceway, where indicated on Drawings.
- B. Exposed Feeders:
 1. Copper: Type THHN-THWN, single conductors in raceway.
 2. Aluminum: Type XHHW-2, single conductors in raceway, where indicated on Drawings.
- C. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspace:
 1. Copper: Type THHN-THWN, single conductors in raceway.
 2. Aluminum: Type XHHW-2, single conductors in raceway, where indicated on Drawings.
- D. Feeders below Slabs-on-Grade, and Underground:
 1. Copper: Type THHN-THWN, single conductors in raceway.
 2. Aluminum: Type XHHW-2, single conductors in raceway, where indicated on Drawings.
- E. Feeders Installed below Raised Flooring:
 1. Copper: Type THHN-THWN, single conductors in raceway
 2. Aluminum: Type XHHW-2, single conductors in raceway, where indicated on Drawings.

- F. Exposed Branch Circuits, Including in Crawlspace: Type THHN-THWN, single conductors in raceway.
- G. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN-THWN, single conductors in raceway and Type AC in limited locations where indicated Type AC-HCF and Type MCAP-HCF in limited locations where indicated Type MC in limited locations where indicated.
 - 1. Type AC Type AC-HCF and Type MC^{AP}-HCF and Type MC is are acceptable for the following applications.
 - a. Install cables for lighting fixture whips and for branch circuits concealed in walls and partitions only.
 - 1) Do not install the cable in the vertical web of metal studs.
 - 2) Route cable horizontally using pre-fabricated openings in web of metal stud.
 - 3) Use only single-circuit cable (i.e. two wire plus ground). For devices in the same wall connected to different circuits, install separate single circuit cable for each circuit.
 - 4) Locate junction box and convert to single conductors in rigid raceway within 24-inches from the point the cable exits the wall.
 - 5) Locate junction box and convert to single conductors in rigid raceway within the same room as where the cable enters/exits the wall.
 - a) For branch power circuits limit length of AC-HCF and MC^{AP}-HCF to 30' from the junction box to the wiring device located in the wall. If the circuit continues outside the wall, the circuit must immediately transition to conduit.
 - b) For branch lighting circuits limit length of AC-HCF and MC^{AP}-HCF to 30' from the junction box to the first fixture and from that point only those fixtures above the enclosed space/room shall be served by the HCF circuit.
 - 2. Type AC Type AC-HCF and Type MC^{AP}-HCF and Type MC is are not acceptable for the following applications; instead provide single conductors in rigid raceway.
 - a. Homeruns to Panelboard.
 - b. Branch circuits serving Essential Electrical System (Emergency & Standby) loads; including Life Safety branch, Critical branch and equipment emergency system.
 - c. Branch circuits serving HVAC, elevator/escalator, medical and kitchen equipment loads.
 - d. Within mechanical, electrical or telecommunication equipment rooms.
 - e. Exposed Branch Circuits within areas that do not have a ceiling (i.e. open to structure).
 - f. Wet Locations.
- H. Branch Circuits below Slabs-on-Grade, and Underground in limited locations where indicated: Type THHN-THWN, single conductors in raceway.
- I. Branch Circuits Installed below Raised Flooring: Type THHN-THWN, single conductors in raceway.
- J. Connections to Luminaires on Normal System: Type THHN-THWN, single conductors in raceway as specified in Division 26 Section Raceways and Boxes for Electrical Systems Armored Cable, Type AC-HCF, maximum of 144 inches (3660 mm) Armored Cable, Type AC, maximum of 144 inches (3660 mm).
- K. Connections to Luminaires on Essential/Emergency System: Type THHN-THWN, single conductors in raceway as specified in Division 26 Section Raceways and Boxes for

Electrical Systems Armored Cable, Type AC-HCF, maximum of 144 inches (3660 mm)
Armored Cable, Type AC, maximum of 144 inches (3660 mm).

- L. Cord Drops and Portable Appliance Connections: Type SO, hard service cord with stainless-steel, wire-mesh, strain relief device at terminations to suit application.
- M. Class 1 Control Circuits: Type THHN-THWN, in raceway.
- N. Class 2 and 3 Control Circuits; Concealed in Ceilings, Walls or Partitions: Power-limited cable or Type THHN-THWN, in raceway.
- O. Class 2 and 3 Control Circuits; Exposed: Type THHN-THWN, in raceway.

3.3 INSTALLATION OF CONDUCTORS AND CABLES

- A. Run feeders in continuous lengths, without joints or splices. Where continuous runs are impractical; obtain Engineer's approval for splice locations and application.
- B. Make joints in branch circuits only where circuits divide.
- C. Do not use gutters of panelboards as raceways, junction boxes, or pull boxes for conductors not terminating in said panelboards.
- D. Run conduits for emergency power conductors separate from all other wiring.
- E. Make splices and terminations in cables with kits and instructions provided by the kit manufacturer. Each splice shall equal the integrity of the cable electrically and environmentally.
- F. Bundling Conductors: Bundle conductors in switchboards, panelboards, cabinets, and the like, using nylon ties made for the purpose. Bundle conductors larger than No. 10 in individual circuits. Smaller conductors may be bundled in larger groups.
- G. Install all conductors in raceways, unless otherwise indicated.
- H. Sizes:
 - 1. Provide conductors no smaller than No. 12 AWG, except for signal or control circuits.
 - 2. Provide No. 10 AWG conductors for home runs on 120-volt, 20-ampere branch circuits, where the conductor length exceeds 100 lineal feet from panelboard to the first device.
 - 3. Provide No. 10 AWG conductors for home runs on 277-volt, 20-ampere branch circuits, where the conductor length exceeds 200 lineal feet from panelboard to the first device.
 - 4. Provide neutral conductors of the same size as the phase conductor(s) for individual branch circuit homeruns.
 - 5. Run dedicated neutral conductor with each branch circuit. Sharing of neutral conductors in multi-circuit homeruns is not acceptable.
 - a. Sharing of neutrals would necessitate the use of multiple-pole or tied branch circuit breakers to allow simultaneous disconnecting of current carrying conductors in order to comply with NFPA 70 requirements and therefore is unacceptable.
 - 6. Grouping of Multi-Circuit homeruns: grouping of multiple circuits into shared conduit homeruns is acceptable where they comply with the quantities and sizes listed in Table "A" below and where homeruns meet the following conditions:

- a. Where conductors are THWN/THHN installed in dry location.
- b. Where raceways are installed in ambient conditions less than 30-Deg C (86-Deg F).
- c. Consider neutral conductors as a current carrying conductor in branch circuits which serve receptacles or electronic ballasted luminaries.

TABLE A

Number of Current Carrying Conductors in single raceway	Conductor Size for 20Ampere Single Pole Circuit	Conduit Size based on EMT
2 to 3	#12 AWG (THHN 75-Deg) or #12 AWG (THHN 90-Deg)	3/4" EMT
4 to 6	#12 AWG (THHN 75-Deg) or #12 AWG (THHN 90-Deg)	3/4" EMT
7 to 9	#10 AWG (THHN 75-Deg) or #12 AWG (THHN 90-Deg)	1" EMT 3/4" EMT
10 to 20	#10 AWG (THHN 90-Deg)	1.25" EMT

Notes:

1. Conductor and conduit sizes in table above are based on total conductor lengths under 100 lineal feet for 120-volt (200 lineal feet for 277-volt) from panelboard to the first device, 20-ampere branch circuits. Increase conductor and conduit size in accordance with NFPA 70 for longer lengths.

- I. Terminations of multiple branch circuit conductors on a single circuit breaker is not acceptable.
 - J. Conceal cables in finished walls, ceilings, and floors unless otherwise indicated.
 - K. Complete raceway installation between conductor and cable termination points according to Division 16 26 Section "Raceways and Boxes for Electrical Systems" prior to pulling conductors and cables.
 - L. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours.
 - M. Support cables according to Division 26 Section "Hangers and Supports for Electrical Systems."
 - N. Feeders and Branch circuits concealed in concrete are prohibited.
- 3.4 WIRE PULLING
- A. Pull no conductors into conduits until all Work of a nature which may cause injury to conductors is completed.
 - B. Follow manufacturers' recommendations for regulating temperature conditions of conductors prior to installation.
 - C. Exercise care in handling and installing cables to avoid damage. Carefully form cables in equipment pull boxes. Form bends in cables larger than the minimum radii shown in the cable manufacturer's published data for minimum bends such that bends will not reduce the cable life.

- D. Provide suitable installation equipment to prevent abrasion and cutting of conductors by raceways during the pulling of conductors. Use ropes of polyethylene, nylon or other suitable non-metallic material to pull in feeders. Metallic ropes are prohibited.
- E. Attach pulling lines to conductors by means of insulated woven basket grips or by pulling eyes attached directly to conductors. Do not use rope hitches, or bare steel basket grips. All conductors to be installed in a single conduit shall be pulled in simultaneously.
- F. Before any wire is pulled into any conduit, thoroughly swab the conduit to remove all foreign material and to permit the wire itself to be pulled into a clean, dry conduit.
- G. Use manufacturer-approved pulling compound or lubricant where necessary, of non-conducting type. Compounds used must not deteriorate the conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
- H. Do not use cable pulling lubricants on conductors of ungrounded circuits which are electrically monitored by ground detector system, since such lubricant may increase the capacities to ground of these conductors.

3.5 CONNECTIONS

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
- B. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.
 - 1. Use oxide inhibitor in each splice and tap conductor.
- C. Wiring at Outlets: Install conductor at each device, with at least 6 inches (150 mm) of slack.
- D. Wiring at lighting control locations: Install a neutral conductor at each switch location controlling line-to-neutral lighting loads.
- E. Connectors: Make splices and connections in conductors using approved connectors.
 - 1. Provide lugs and connectors of proper size to match conductor size.
 - 2. Stranded Conductors: Solder-less, bolted pressure or compression connectors.
 - 3. Solid Conductors: Bolted pressure or spring connectors.
 - 4. Motor Lead Pigtails: Crimp lugs with through-bolt fasteners between lugs. Furnish proper sized dies and tools to apply connectors.
 - 5. Lighting Fixture Taps: Electrical spring connectors as specified for solid conductors.
 - 6. Ground Connections: Ground connection materials and installation requirements are specified in Division 26 Section "Grounding and Bonding for Electrical Systems."
- F. Provide temperature ratings of connectors and splices to match wire rating.
- G. Connections for Aluminum Conductors using Mechanical Screw Type Connectors:
 - 1. Connectors shall be dual rated (AL7CU or AL9CU) and Listed by UL for use with aluminum and copper conductors and sized to accept aluminum conductors of the ampacity specified.
 - 2. Using a suitable stripping tool, to avoid damage to the conductor, remove insulation from the required length of the conductor.
 - 3. Clean the conductor surface using a wire brush and apply a Listed joint compound.

4. Tighten the connection per the connector manufacturer's recommendation.
 5. Wipe off any excess joint compound.
- H. Connections for Aluminum Conductors using Mechanical Compression Type Connectors:
1. Connectors shall be dual rated (AL7CU or AL9CU) and Listed by UL for use with aluminum and copper conductors and sized to accept aluminum conductors of the ampacity specified.
 2. The lugs shall be marked with wire size, die index, number and location of crimps and shall be suitably color coded. Lug barrel shall be factory prefilled with a joint compound Listed by UL.
 3. Using a suitable stripping tool, to avoid damage to the conductor, remove insulation from the required length of the conductor.
 4. Clean the conductor surface using a wire brush.
 5. Crimp the connection per the connector manufacturer's recommendation.
 6. Wipe off any excess joint compound.
- I. Termination of Aluminum Conductor to Aluminum Bus:
1. Prepare a mechanical connection conforming to F or G above.
 2. Hardware:
 - a. Bolts: Anodized aluminum alloy 2024-T4 and conforming to ANSI B18.2.1 and to ASTM B211 or B221 chemical and mechanical property limits.
 - b. Nuts: Aluminum alloys 6061-T6 or 6262-T9 and conforming to ANSI B18.2.2.
 - c. Washers: Flat aluminum alloy 2024-T4, Type "A" plain, standard wide series conforming to ANSI B27.2.
 - d. Lubricate and tighten the hardware as per the manufacturer's recommendations.
- J. Termination of Aluminum Conductor to Copper Bus:
1. Prepare a mechanical connection conforming to F or G above.
 2. Hardware:
 - a. Bolts: Plated or galvanized medium carbon steel; heat treated, quenched and tempered equal to ASTM A-325 or SAE grade 5.
 - b. Nuts: Heavy semi-finished hexagon, conforming to ANSI B18.2.2, threads to be unified coarse series (UNC), class 2B.
 - c. Washers: Steel; Type A plain standard wide series conforming to ANSI B27.2.
 - d. Belleville conical spring washers: hardened steel, cadmium plated or silicone bronze.
 - e. Lubricate and tighten the hardware as per the manufacturer's recommendations.
- K. Termination of Aluminum Conductor to Equipment Not Equipped for Termination of Aluminum Conductor:
1. Prepare compression connection using an adapter Listed by UL for the purpose or by pigtailing a short length of suitable size of copper conductor to the aluminum conductor with a compression connector Listed by UL.
 2. Provide an insulating cover over adapter body or the compression connector.
 3. Terminate the adapter or the pigtail on to the equipment per manufacturer's recommendation.]IDENTIFICATION
- A. Identify and color-code conductors and cables according to Division 26 Section "Identification for Electrical Systems."
- B. Identify each spare conductor at each end with identity number and location of other end of conductor, and identify as spare conductor.

3.7 SLEEVE AND SLEEVE SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Apply Sleeve and Sleeve Seal where raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies. Sleeve and Sleeve Seal materials and installation requirements are specified in Division 26 Section "Common Work Results for Electrical."

3.8 FIRESTOPPING

- A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly according to Division 07 Section "Penetration Firestopping."

3.9 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
1. Test insulation resistance for each feeder, and branch circuit.
 2. Test continuity of each circuit.
- B. Testing Agency: Engage a qualified independent testing and inspecting agency as defined in Division 26 Section "Common Work Results for Electrical" to perform the following field tests and inspections and prepare certified test reports:
1. After installing conductors and cables and before electrical circuitry has been energized, test service entrance conductors, and conductors of No. 2 AWG and larger for compliance with requirements.
 2. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
- C. Perform insulation-resistance test on each conductor with respect to ground and adjacent conductors. Applied potential shall be 1000 volts dc for one minute.
- D. Perform continuity test to insure correct cable connection.
- E. Test Values
- a. Bolt-torque levels shall be in accordance with Table 1.1 thru Table 1.4, unless otherwise specified by the manufacturer.

Table 1.1 - Bolt Torque for Bus Connection using Cadmium or Zinc Plated Heat-Treated Steel

Grade	SAE 1 & 2	SAE 5	SAE 7	SAE 8
Minimum Tensile (P.S.I.)	64K	105K	133K	150K
Bolt Diameter (Inches)	Torque (Foot Pounds)			
1/4	4.0	5.6	8.0	8.4
5/16	7.2	11.2	15.2	17.6

5/8	60.0
3/4	90.0

³ Bolts, cap screws, nuts, flat washers, locknuts: 18-8 alloy. Belleville washers: 302 alloy.

- b. Minimum insulation-resistance values shall be not less than 50 megohms.
 - c. Investigate deviations between adjacent phases.
 2. Infrared Scanning: Perform Thermographic Survey in accordance with NETA ATS, Section 9.0.
 - a. Initial Infrared Scanning: Within 60 Days after Substantial Completion, perform an infrared scan of each termination of or splice in cables and conductors No. 3 AWG and larger. Open or remove doors and covers so connections are accessible to portable scanner.
 - b. Instruments, Equipment:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 - c. Record of Infrared Scanning: Prepare a certified report that identifies splices checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.
- F. Cables will be considered defective if they do not pass tests and inspections.
- G. Correct Deficiencies, Retest and Report:
1. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace conductors, units, and devices as required to bring system into compliance.
 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 3. Prepare a written report, certified by testing agency, to record the following:
 - a. Procedures used.

- b. Results that comply with requirements, identifying conductor, units, and devices checked.
- c. Results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
- d. Observations and test results after remedial action.

END OF SECTION

SECTION 260526

GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. NFPA 70 and IEEE C2 include basic grounding requirements for electrical safety. This Section supplements the minimum safety requirements of the Code with requirements for additional grounding and with optional grounding methods and materials for both power and electronic systems.
- B. This Section includes methods and materials for grounding and bonding systems and equipment, plus the following special applications:
 - 1. Underground distribution grounding.
 - 2. Common ground bonding with lightning protection system.
- C. Related Sections include the following:
 - 1. Division 26 Section "Lightning Protection for Structures" for common ground bonding with lightning protection system.
 - 2. Division 27 Section "Grounding and Bonding for Communications Systems" for common ground bonding of Communications Systems including grounding bus.

1.2 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Product Data: For each type of product indicated.

1.3 INFORMATIONAL SUBMITTALS

- A. Other Informational Submittals: Plans showing dimensioned as-built locations of grounding features specified in Part 3 "Field Quality Control" Article, including the following:
 - 1. Test wells.
 - 2. Ground rods.
 - 3. Ground rings.
 - 4. Grounding arrangements and connections for separately derived systems.
 - 5. Grounding for sensitive electronic equipment.
- B. Qualification Data: For testing agency and testing agency's field supervisor.
- C. Field quality-control test reports.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For grounding, to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation And Maintenance Data," include the following:

1. Manufacturer's routine maintenance requirements for cables, terminations and all installed components.
2. Instructions for periodic testing and inspection of grounding features at grounding connections for separately derived systems and, test wells and ground rings based on NETA MTS.
 - a. Tests shall be to determine if ground resistance or impedance values remain within specified maximums, and instructions shall recommend corrective action if they do not.
 - b. Include recommended testing intervals.

1.5 QUALITY ASSURANCE

- A. Testing Agency Qualifications: For independent agency as defined in Division 26 Section "Common Work Results for Electrical".
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with UL 467 for grounding and bonding materials and equipment.
- D. Comply with NFPA 70.
- E. Comply with NFPA 99.
- F. Comply with IEEE C2.
- G. Comply with ANSI-J-STD-607-A.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Burndy; Part of Hubbell Electrical Systems.
 2. Dossert; AFL Telecommunications LLC.
 3. ERICO International Corporation.
 4. Fushi Copperweld Inc.
 5. Galvan Industries, Inc.; Electrical Products Division, LLC.
 6. Harger Lightning and Grounding.
 7. ILSCO.
 8. O-Z/Gedney; an EGS Electrical Group brand; an Emerson Industrial Automation business.
 9. Robbins Lightning, Inc.
 10. Siemens Power Transmission & Distribution, Inc.

2.2 CONDUCTORS

- A. Insulated Conductors: Tinned-Copper wire or cable insulated for 600 V unless otherwise required by applicable Code or authorities having jurisdiction.
- B. Bare Copper Conductors:
 1. Solid Conductors: ASTM B 3.
 2. Stranded Conductors: ASTM B 8.

3. Tinned Conductors: ASTM B 33.
4. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 inch in diameter.
5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
6. Bonding Jumper: Copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.
7. Tinned Bonding Jumper: Tinned-copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches (41 mm) wide and 1/16 inch (1.6 mm) thick.
8. Main Bonding Jumper: stranded copper conductors sized as indicated on Drawings.
9. Grounding Electrode Conductor: stranded copper conductors sized as indicated on Drawings.
10. Common Grounding Electrode Conductor: stranded copper conductors sized as indicated on Drawings.

2.3 CONNECTORS

- A. Listed and labeled by a nationally recognized testing laboratory acceptable to authorities having jurisdiction for applications in which used, and for specific types, sizes, and combinations of conductors and other items connected.
- B. Bolted Connectors for Conductors and Pipes: Copper or copper alloy, bolted pressure-type, long barrel with at least two bolts.
 1. Pipe Connectors: Clamp type, sized for pipe.
- C. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.
- D. Bus-Bar Connectors: Mechanical type, cast silicon bronze, solderless exothermic-type wire terminals, and long-barrel, two-bolt connection to ground bus bar.

2.4 GROUNDING BUSBARS

- A. Grounding Bus: Predrilled rectangular bars of annealed copper, 1/4 by 4 inches (6.3 by 100 mm in cross section, 20 inches (500 mm) in length, with 9/32-inch (7.14-mm) holes spaced 1-1/8 inches (28 mm) apart. Stand-off insulators for mounting shall comply with UL 891 for use in switchboards, 600 V and shall be Lexan or PVC, impulse tested at 5000 V, unless otherwise indicated.

2.5 GROUNDING ELECTRODES

- A. Ground Rods: Copper-clad steel; 5/8 inch (16 mm) diameter by 120 inches (3000 mm), unless otherwise indicated.

PART 3 - EXECUTION

3.1 APPLICATIONS

- A. Conductors: Insulated stranded for all wire, unless otherwise indicated.
- B. Underground Grounding Conductors: Install bare copper conductor, No. 3/0 AWG minimum.
 1. Bury at least 30 inches below grade.
- C. Isolated Grounding Conductors: Green-colored insulation with continuous yellow stripe. On feeders with isolated ground, identify grounding conductor where visible to normal

inspection, with alternating bands of green and yellow tape, with at least three bands of green and two bands of yellow.

- D. Grounding Bus: Install in electrical equipment rooms, in rooms housing service equipment, and elsewhere as indicated.
 - 1. Install bus horizontally, on insulated spacers 2 inch minimum, from wall 12 inches above finished floor or 6 feet above transformer, unless otherwise indicated.
 - 2. Clean and apply anti-oxidant to the contact area prior to conductor connection.
- E. Conductor Terminations and Connections:
 - 1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
 - 2. Underground Connections: Welded connectors, except at test wells and as otherwise indicated.
 - 3. Connections to Ground Rods at Test Wells: Bolted connectors.
 - 4. Connections to Structural Steel: Welded connectors.

3.2 GROUNDING AT THE SERVICE

- A. Equipment grounding conductors and grounding electrode conductors shall be connected to the ground bus. Install a main bonding jumper between the neutral and ground buses.

3.3 GROUNDING SEPARATELY DERIVED SYSTEMS

- A. Generator: Install grounding electrode(s) at the generator location as indicated on the Drawings. The electrode shall be connected to the frame of the generator.
- B. Dry-Type Transformers: Install an insulated grounding conductor from the common point of connection of the transformer secondary neutral point and the transformer enclosure to the following:
 - 1. The nearest grounding electrode per NFPA 70, including but not limited to building steel where available.
 - 2. The grounding bus of the common electrode grounding system, located in the electrical equipment room.

3.4 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

- A. Comply with IEEE C2 grounding requirements.
- B. Grounding Manholes and Handholes: Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inches will extend above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inches above to 6 inches below concrete. Seal floor opening with waterproof, nonshrink grout.
- C. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields as recommended by manufacturer of splicing and termination kits.
- D. Pad-Mounted Transformers and Switches: Install two ground rods and ground ring around the pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated

with substations by connecting them to underground cable and grounding electrodes. Install tinned-copper conductor not less than No. 2 AWG for ground ring and for taps to equipment grounding terminals. Bury ground ring not less than 6 inches from the edge of foundation.

3.5 EQUIPMENT GROUNDING

- A. Install insulated equipment grounding conductors with all feeders and branch circuits.
 - 1. Bond to each device, box, and luminaire, unless otherwise indicated.
 - 2. Conduction insulation of the same rating as the phase conductors, for all feeders and branch circuits. Install the grounding conductors in the raceway with related phase and neutral conductors.
 - 3. Where parallel conductors in separate raceways occur, provide a grounding conductor in each raceway that meets requirements of NFPA 70.
- B. Enclosures: Install an insulated grounding conductor from grounding bushings to the frame of the enclosure, ground bus, and equipment grounding strap where each occurs. Install grounding bushings on all raceways connecting electrical enclosures constructed of separate enclosure panels, which are not integrally welded together.
- C. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including but not limited to air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.
- D. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install a separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.
- E. Isolated Grounding Receptacle Circuits: Install an insulated equipment grounding conductor connected to the receptacle grounding terminal. Isolate conductor from raceway. Terminate at grounding conductor terminal on isolated ground bus of equipment of the applicable derived system or service, unless otherwise indicated.
- F. Isolated Equipment Enclosure Circuits: For designated equipment supplied by a branch circuit or feeder, isolate equipment enclosure from supply circuit raceway with a nonmetallic raceway fitting listed for the purpose. Install fitting where raceway enters enclosure, and install a separate insulated equipment grounding conductor. Isolate conductor from raceway. Terminate at grounding conductor terminal on isolated ground bus of equipment of the applicable derived system or service, unless otherwise indicated.

3.6 INSTALLATION

- A. Provide permanent service neutral and equipment grounding in accordance with NFPA 70 and subject to the following additional requirements.
- B. Comply with mounting and support requirements specified in Division 26 Section "Hangers and Supports for Electrical Systems."
- C. Connect the service neutral and equipment ground to a common point within the metallic enclosure containing the main service disconnecting means. Equipment grounds and the identified neutral of the wiring system shall not be interconnected beyond this point in the interior wiring system. From the common point of connection of the service neutral and the equipment ground, run in non-magnetic conduit a grounding electrode conductor without

joint or splice to the grounding electrode system and connect it with an approved bolted pressure clamp.

- D. Common Ground Bonding with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor, and install in conduit.
- E. Ground Rods: Drive rods until tops are 12 inches below finished floor or final grade, unless otherwise indicated.
 - 1. Interconnect ground rods with grounding electrode conductor a minimum of 30-inches below grade unless otherwise indicated. Make connections without exposing steel or damaging coating, if any.
 - 2. For grounding electrode system, install at least three rods spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes, and connect to the service grounding electrode conductor.
- F. Test Wells: Ground rod driven through drilled hole in bottom of handhole. Handholes are specified in Division 26 Section "Underground Ducts and Raceways for Electrical Systems," and shall be at least 12 inches deep, with cover.
 - 1. Test Wells: Install at least one test well for each service, unless otherwise indicated. Install at the ground rod electrically closest to service entrance. Set top of test well flush with finished grade or floor.
- G. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance, except where routed through short lengths of conduit.
 - 1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
 - 2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install so vibration is not transmitted to rigidly mounted equipment.
 - 3. Use exothermic-welded connectors for outdoor locations, but if a disconnect-type connection is required, use a bolted clamp.
 - 4. Where expansion joints or telescoping joints occur, provide bonding jumpers.
- H. Grounding and Bonding for Piping:
 - 1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes, using a bolted clamp connector or by bolting a lug-type connector to a pipe flange, using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
 - 2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
 - 3. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.
- I. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install tinned bonding jumper to bond across flexible duct connections to achieve continuity.
- J. Grounding for Steel Building Structure: Install a driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 feet apart.

- K. Ground Ring: Install a grounding conductor, electrically connected to each building structure ground rod and to each lightning protection down lead, extending around the perimeter of building.
 - 1. Install copper conductor not less than No. 2/0 AWG for ground ring and for taps to building steel.
 - 2. Bury ground ring not less than 24 inches from building foundation.
- L. Concrete-Encased Grounding Electrode (Ufer Ground): Fabricate according to NFPA 70, using a minimum of 20 feet of bare copper conductor not smaller than No. 4 AWG.
 - 1. If concrete foundation is less than 20 feet long, coil excess conductor within base of foundation.
 - 2. Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor below grade and connect to building grounding grid or to grounding electrode external to concrete.

3.7 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components as specified in Division 26 Section "Identification for Electrical Systems."

3.8 CONNECTIONS

- A. Ground Connections: Provide ground clamps or connectors of a suitable type for ground applications.
- B. Ground Bars: Irreversible bolted connector.

3.9 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified independent testing and inspecting agency as defined in Division 26 Section "Common Work Results for Electrical" to perform the following field tests and inspections and prepare certified test reports:
 - 1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
 - 2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.
 - 3. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal, at ground test wells, and at individual ground rods. Make tests at ground rods before any conductors are connected.
 - a. Measure ground resistance not less than two full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
 - b. Perform tests by fall-of-potential method according to IEEE 81.
 - 4. Prepare dimensioned drawings locating each test well, ground rod and ground rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location, and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.
- B. Grounding system will be considered defective if it does not pass tests and inspections.

- C. Prepare test and inspection reports.
- D. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Architect promptly and include recommendations to reduce ground resistance.
 - 1. Report measured ground resistances that exceed the following values:
 - a. Power and Lighting Equipment or System with Capacity 500 kVA and Less: 10 ohms.
 - b. Power and Lighting Equipment or System with Capacity 500 to 1000 kVA: 5 ohms.
 - c. Power and Lighting Equipment or System with Capacity More Than 1000 kVA: 3 ohms.
 - d. Power Distribution Units or Panelboards Serving Electronic Equipment: 3 ohm(s).
 - e. Substations and Pad-Mounted Equipment: 5 ohms.
 - f. Manhole Grounds: 10 ohms.
- E. Correct Deficiencies, Retest and Report:
 - 1. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace conductors, units, and rods as required to bring system into compliance.
 - 2. Prepare a written report, certified by testing agency, to record the following:
 - a. Procedures used.
 - b. Results that comply with requirements, identifying components checked.
 - c. Results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
 - d. Observations and test results after remedial action.

END OF SECTION

SECTION 260529

HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Hangers and supports for electrical equipment and systems.
 - 2. Construction requirements for concrete bases.
- B. **Related Sections include the following:**
 - 1. **Division 26 Section "Vibration And Seismic Controls For Electrical Systems" for products and installation requirements necessary for compliance with seismic criteria.**

1.2 DEFINITIONS

- A. EMT: Electrical metallic tubing.
- B. FMC: Flexible metal conduit.
- C. IMC: Intermediate metal conduit.
- D. RAC: Rigid aluminum conduit.
- E. RMC: Rigid metal conduit.
- F. RNC: Rigid nonmetallic conduit.
- G. RSC: Rigid Steel conduit.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design supports for multiple raceways, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
 - 1. Design supports for multiple raceways capable of supporting combined weight of supported systems and its contents.
 - 2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

1.4 Rated Strength: Adequate in tension, shear, and pullout force to resist maximum loads calculated or imposed for this Project, with a minimum structural safety factor of five times the applied force.

1.5 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.

- B. Product Data: For the following:
 - 1. Steel slotted support systems.
 - 2. Nonmetallic slotted support systems.
 - C. Shop Drawings: Signed and sealed by a qualified professional engineer. Show fabrication and installation details and include calculations for the following:
 - 1. Trapeze hangers. Include Product Data for components.
 - 2. Steel slotted channel systems. Include Product Data for components.
 - 3. Nonmetallic slotted channel systems. Include Product Data for components.
 - 4. Equipment supports.
 - 5. Concrete Based for Equipment.
- 1.6 INFORMATIONAL SUBMITTALS
- A. Welding certificates.
- 1.7 QUALITY ASSURANCE
- A. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - B. Comply with NFPA 70.
- 1.8 COORDINATION
- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
 - B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."

PART 2 - PRODUCTS

- 2.1 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS
- A. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly.
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Allied Tube & Conduit.
 - b. Cooper B-Line, Inc.
 - c. ERICO International Corporation.
 - d. GS Metals Corp.
 - e. Thomas & Betts Corporation.
 - f. Unistrut; Atkore International.
 - g. Wesanco, Inc.
 - 2. Channel Dimensions: Selected for applicable load criteria.
 - B. Raceway and Cable Supports: As described in NECA 1 and NECA 101.
 - C. Conduit and Cable Support Devices: Steel hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.

- D. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.
- E. Device Box Mounting Brackets and Stabilizer: Factory-fabricated sheet steel brackets for support of device boxes adjacent to or between studs.
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Cooper B-Line, Inc.
 - b. ERICO International Corporation.
- F. Through-Stud Cable and Raceway Support Clips: Factory-fabricated spring steel clip for cables or raceways where run horizontally through metal studs.
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Cooper B-Line, Inc.
 - b. ERICO International Corporation.
- G. Roof-mounted Raceway Support Blocking: Factory-fabricated support blocking for use under roof-mounted raceways. Wedge-shaped blocking constructed of 100% recycled UV-resistant Rubber with integral galvanized steel strut to accept raceway support clips.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Cooper B-Line C-Port series components or a comparable product by one of the following:
 - a. Cooper B-Line, Inc.
 - b. ERICO International Corporation.
- H. Tee Bar Grid Box Hanger: Factory-fabricated metal electrical box hanger for supporting boxes at locations between ceiling system t-grid components. Height adjustable for various electrical box depths. Attached to ceiling tee bar with screws or integral clamp for stability. Includes tab for independent support wire attachment.
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Cooper B-Line, Inc.
 - b. ERICO International Corporation.
- I. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
- J. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:
 - 1. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated or stainless steel, for use in hardened portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.
 - a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) Cooper B-Line, Inc.
 - 2) Empire Tool and Manufacturing Co., Inc.
 - 3) Hilti, Inc.
 - 4) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.

- 5) MKT Fastening, LLC.
2. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.
3. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.
4. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.
5. Toggle Bolts: All-steel springhead type.
6. Hanger Rods: Solid, threaded steel.

2.2 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

- A. Description: Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.
- B. Materials: Comply with requirements in Division 05 Section "Metal Fabrications" for steel shapes and plates.

PART 3 - EXECUTION

3.1 APPLICATION

- A. Comply with NFPA 70, NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except where requirements of this Section are more stringent.
- B. Maximum Horizontal and Vertical Support Spacing for Raceway(s): Space supports for EMT, IMC, and RMC as required by NFPA 70.
- C. Minimum Hanger Rod Size for Raceway Supports: Minimum rod size shall be 1/4 inch (6 mm) in diameter.
- D. Single Raceways or Cables:
 1. For Raceways 1-1/4-inch (32mm) and smaller: Install adjustable steel band hanger suspended on threaded rod.
 2. For Raceways larger than 1-1/4-inch (30mm): Install trapeze-type supports fabricated with steel slotted support system suspended on threaded rods. Size trapeze members, including the suspension rods, based on the support required for the size, and loaded weight of the conduits.
 - a. Secure raceway or cable to support with two-bolt conduit clamps or single-bolt conduit clamps using spring friction action for retention in support channel.
- E. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted support system suspended on threaded rods, where multiple raceways are run vertically or horizontally at the same elevations. Size trapeze members, including the suspension rods, based on the support required for the number, size, and loaded weight of the conduits. Space them as required for the smallest conduit to be supported. Size so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.
 1. Secure raceways and cables to these supports with two-bolt conduit clamps or single-bolt conduit clamps using spring friction action for retention in support channel.
- F. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch (38-mm) and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.

3.2 SUPPORT INSTALLATION

- A. Comply with NFPA 70, NECA 1 and NECA 101 for installation requirements except where requirements of this Article are more stringent.
- B. Fasten junction, pull and devices boxes securely to the building construction, independent of raceway system.
- C. Install Device Box Mounting Brackets supported between two studs where boxes are not located adjacent to stud or where multiple boxes are located between studs.
- D. Install Device Box Stabilizer where single box is located adjacent to stud. Device Box shall not be supported by a single stud, but shall be positively attached to a support device between studs.
- E. Install Through-Stud Cable and Raceway Support Clips where cables or raceways run horizontally through metal studs.
- F. Install Tee Bar Grid Box Hanger supported between two ceiling grid tee bars where devices boxes are located flush in recessed suspended ceilings.
 - 1. Install at least one independent support rod from box hanger to structure.
- G. Install Roof-mounted Raceway Support Blocking where raceways run on across roofing.
 - 1. Coordinate installation of roof supports with items specified in Division 07 Section "Roof Accessories." Provide products compatible with rooftop materials included in the Work.
- H. Provide minimum of two lock nuts per threaded support rod except where lock nut tightens against a threaded socket, one locknut may be used.
- I. Support raceways at a distance above suspended ceilings to permit removal of ceiling panels and luminaires.
- J. Locate raceways so as not to hinder access to mechanical equipment.
- K. Do not secure conductors, raceways, or supports to suspended ceiling hanger rods or wires.
- L. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.
- M. Mounting and Anchorage of Surface-Mounted or Recessed-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:
 - 1. To Wood: Fasten with lag screws or through bolts.
 - 2. To New Concrete: Bolt to concrete inserts. Where support anchors are required, establish their type and locate in concrete construction before concrete is poured, if possible. Fit each hanger rod with a nut at its upper end, and set nut in a universal concrete insert in the form. Where supported weight exceeds holding strength of a single insert, pass rods through top slot of inserts and interlock with reinforcing steel. Also, where particularly heavy loads are to be supported, suspend hanger rod or rods from a structural angle spanning two or more inserts and securely bolted thereto to distribute the weight.

3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
4. To Existing Concrete: Expansion anchor fasteners.
5. To Steel: Beam clamps (MSS Type 19, 21, 23, 25, or 27) complying with MSS SP-69 or Spring-tension clamps.
6. To Light Steel: Sheet metal screws.
7. For Surface-Mounted Items on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to structure **by means that meet seismic-restraint strength and anchorage requirements**. Attachment to gypsum wall board is not acceptable as sole support means; slotted-channel rack solidly attached to structure or light-gauge metal framing at both ends is required.
8. For Recessed-Mounted Items in Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices to intermediate light-gauge metal framing members on each side of device or provide slotted-channel racks within hollow wall attached to **structure by means that meet seismic-restraint strength and anchorage requirements**. Attachment to gypsum wall board is not acceptable as sole support means.

N. Do not support any items (equipment, piping, conduit, etc.) exceeding 2 inches in diameter from the bottom of slabs. Where intermediate supports are required between structural members, use slotted steel channels support systems attached to beams or joists in order to avoid attachment to slabs.

O. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars. Verify reinforcing locations with Structural Engineer. X-Ray existing concrete structures as required.

3.3 INSTALLATION OF FABRICATED METAL SUPPORTS

- A. Comply with installation requirements in Division 05 Section "Metal Fabrications" for site-fabricated metal supports.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
- C. Field Welding: Comply with AWS D1.1/D1.1M.

3.4 CONCRETE BASES

- A. Construct concrete bases of dimensions indicated but not less than 3 inches larger in all directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.
- B. Use 3000-psi, 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Division 03 Section "Cast-in-Place Concrete."
- C. Anchor equipment to concrete base.
 1. **Design each fastener and support to carry load indicated by seismic requirements and according to seismic-restraint details. Refer to Division 26 Section "Vibration and Seismic Controls for Electrical Systems" for seismic-restraint requirements.**

2. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 3. Install anchor bolts to elevations required for proper attachment to supported equipment.
 4. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
- D. All floor mounted equipment shall be provided with concrete base, unless otherwise indicated.
- 3.5 PAINTING
- A. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 260533

RACEWAYS AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes:
 - 1. Metal conduits, tubing, and fittings.
 - 2. Metal wireways and auxiliary gutters.
 - 3. Surface raceways.
 - 4. Boxes, enclosures, and cabinets.
- B. Provide raceways and boxes for all the other systems, as specified in other Sections of Divisions 26, 27 and 28.
- C. Related Sections include the following:
 - 1. Division 26 Section "Underground Ducts and Raceways for Electrical Systems" for exterior ductbanks, manholes, and underground utility construction.

1.2 DEFINITIONS

- A. EMT: Electrical metallic tubing.
- B. ENT: Electrical non-metallic tubing.
- C. EPC: Electrical Plastic Conduit
- D. EPDM: Ethylene-propylene-diene terpolymer rubber.
- E. FMC: Flexible metal conduit.
- F. IMC: Intermediate metal conduit.
- G. LFMC: Liquidtight flexible metal conduit.
- H. LFNC: Liquidtight flexible nonmetallic conduit.
- I. NBR: Acrylonitrile-butadiene rubber.
- J. RAC: Rigid aluminum conduit.
- K. RMC: Rigid metal conduit.
- L. RSC: Rigid Steel conduit.

1.3 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.

- B. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.
- C. Shop Drawings: For the following raceway components. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Custom enclosures and cabinets.
 - 2. Seismic-Restraint Details: Signed and sealed by a qualified professional engineer, licensed in the state where Project is located, who is responsible for their preparation.
 - a. Design Calculations: Calculate requirements for selecting seismic restraints.
 - b. Detail fabrication, including anchorages and attachments to structure and to supported cable trays.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electrical". Include the following:
 - 1. Raceway routing plans, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 - a. Proposed cable pull points.
 - b. Structural members in the paths of conduit groups with common supports.
 - c. HVAC, plumbing items, and architectural features in the paths of conduit groups. Denote where systems share common supports.
 - d. Purposed splice locations.
- B. Qualification Data: For professional engineer.
- C. Seismic Qualification Certificates: For enclosures, cabinets, and conduit racks and their mounting provisions, including those for internal components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
 - 4. Detailed description of conduit support devices and interconnections on which the certification is based and their installation requirements.
- D. Source quality-control reports.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store raceway components indoors to prevent water or other foreign materials from staining or adhering to components. Unpack and dry wet materials before storage.

PART 2 - PRODUCTS

2.1 METAL CONDUITS, TUBING, AND FITTINGS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. AFC Cable Systems, Inc.
 - 2. Allied Tube & Conduit.
 - 3. Anamet Electrical, Inc.

4. Electri-Flex Company.
 5. FSR Inc.
 6. O-Z/Gedney; an EGS Electrical Group brand; an Emerson Industrial Automation business.
 7. Patriot Aluminum Products, LLC.
 8. Picoma Industries.
 9. Republic Conduit.
 10. Robroy Industries.
 11. Southwire Company.
 12. Thomas & Betts Corporation.
 13. Western Tube and Conduit Corporation.
 14. Wheatland Tube Company.
- B. Listing and Labeling: Metal conduits, tubing, and fittings shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. RSC: Comply with ANSI C80.1, UL 6, and NEMA FB 2.10; Galvanized rigid steel, each length with a coupling on one end and thread protector on opposite end.
- D. IMC: Comply with ANSI C80.6, UL 1242, and NEMA FB 2.10.
- E. Fittings for RSC and IMC: Provide factory made threaded couplings of same material as the conduit.
1. Molded thermoplastic insulating bushing at all boxes and cabinets, with locknuts inside and outside box or cabinet. In wet locations, provide watertight hubs for conduit entry into enclosures.
 2. Thermoplastic insulated grounding bushing on all conduits where grounding bushings are required, with locknuts inside and outside the enclosure. In wet locations provide watertight hubs for conduit entry into enclosures.
 3. Expansion joints: O-Z/Gedney or acceptable submission, with internal ground and external bonding jumper.
 - a. Expansion fitting: Type AX.
 - b. End type expansion fitting: Type EXE.
 - c. Deflection fitting: Type DX.
 - d. Pull box fitting: Type EXPB.
 - e. Combination expansion/deflection fitting: Type AXDX.
- F. Conduit fittings for Hazardous (Classified) Locations: Comply with UL 886.
- G. EMT: ANSI C80.3 and UL 797.
- H. Fittings for EMT:
1. Steel, set-screw couplings.
 2. Steel, set-screw insulated throat box connectors with molded thermoplastic insulating bushing at all boxes and cabinets, with locknuts inside box or cabinet.
 3. Steel, set-screw insulated throat box connectors with thermoplastic insulated grounding bushing on all tubing where grounding bushings are required.
 4. Expansion joints: O-Z/Gedney, type TX or acceptable submission, with internal ground and external bonding jumper.
 5. Insulated throat material for fittings to be of a color that is easily distinguishable; clear thermoplastic throats are not acceptable.
- I. FMC: Comply with UL 1; Zinc-coated steel.

- J. LFMC: Comply with UL 360; Flexible steel conduit with flame retardant PVC jacket and copper grounding strand.
- K. Fittings for FMC and LFMC: Comply with NEMA FB 1 and UL 514B.
 - a. Adapters at connections between flexible and rigid conduit.
 - b. Thermoplastic insulated throat, steel connectors at box or cabinet terminations.
 - c. Insulated throat material for fittings to be of a color that is easily distinguishable; clear thermoplastic throats are not acceptable.
- L. Fittings for Conduit (Including all Types and Flexible and Liquidtight), EMT, and Cable: NEMA FB 1; listed for type and size raceway with which used, and for application and environment in which installed.
- M. Wire Support Bushings: Provide for vertical runs as required by the NFPA 70. Select for the conductor size involved.
 - 1. For conductors NO. 8 AWG and smaller provide galvanized, non-insulating type.
 - 2. For conductors No. 6 AWG and larger provide O-Z/Gedney, Type SR, insulating type.
- N. Joint Compound for RSC or IMC: Listed for use in cable connector assemblies, and compounded for use to lubricate and protect threaded raceway joints from corrosion and enhance their conductivity.

2.2 METAL WIREWAYS AND AUXILIARY GUTTERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Cooper B-Line, Inc.; a division of Cooper Industries.
 - 2. Hoffman; a brand of Pentair Equipment Protection.
 - 3. Mono-Systems, Inc.
 - 4. Square D.
- B. Description: Sheet metal, complying with UL 870 and NEMA 250, type and sized according to NFPA 70 as required.
 - 1. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with UL 870.
- D. Fittings and Accessories:
 - 1. Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
 - 2. Construct wireways with/without knockouts, as required.
 - 3. Provide spring nuts or guards on all screws installed toward the inside to prevent wire insulation damage.
- E. Wireway Covers:
 - 1. Hinged type unless access restrictions require screw-cover type.
 - 2. Flanged-and-gasketed as required for NEMA type.
 - 3. Construct cover to close without the use of parts other than the standard lengths, fittings, and connectors.

4. Provide provisions for the cover to be sealed in the closed position with a sealing wire.

F. Finish: Manufacturer's standard enamel finish.

2.3 SURFACE RACEWAYS

- A. Listing and Labeling: Surface raceways and tele-power poles shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Surface Metal Raceways: Galvanized steel with snap-on covers, complying with UL 5. Prime coating, ready for field painting.
 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Hubbell Incorporated; Wiring Device-Kellems.
 - b. MonoSystems, Inc.
 - c. Panduit Corp.
 - d. Wiremold / Legrand.
- C. Surface Nonmetallic Raceways: Two- or three-piece construction, complying with UL 5A and manufactured of rigid PVC with texture and color selected by Architect from [manufacturer's standard] [custom] colors. Product shall comply with UL 94 V-0 requirements for self-extinguishing characteristics.
 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Hubbell Incorporated; Wiring Device-Kellems.
 - b. MonoSystems, Inc.
 - c. Panduit Corp.
 - d. Wiremold / Legrand.
- D. Surface raceways used together with couplings, clips, bushings, straps, connectors, connection covers, elbows, boxes, extension boxes, fixture boxes, extension adapters, blank covers and all other required fittings; size to accommodate the conductors to be installed therein in each case.
- E. Tele-Power Poles:
 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. MonoSystems, Inc.
 - b. Panduit Corp.
 - c. Wiremold / Legrand.
 2. Material: Propose to Owner option available with galvanized steel with ivory baked-enamel finish and Aluminum with clear anodized finish.
 3. Fittings and Accessories: Dividers, end caps, covers, cutouts, wiring harnesses, devices, mounting materials, and other fittings shall match and mate with tele-power pole as required for complete system.

2.4 BOXES, ENCLOSURES, AND CABINETS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Adalet.
 2. Cooper Technologies Company.
 3. EGS/Appleton Electric.
 4. Erickson Electrical Equipment Company.
 5. FSR Inc.
 6. Hoffman; a brand of Pentair Equipment Protection.
 7. Hubbell Incorporated.
 8. Kraloy.
 9. Milbank Manufacturing Co.
 10. MonoSystems, Inc.
 11. Oldcastle Enclosure Solutions.
 12. O-Z/Gedney; an EGS Electrical Group brand; an Emerson Industrial Automation business.
 13. RACO; Hubbell.
 14. Robroy Industries.
 15. Spring City Electrical Manufacturing Company.
 16. Thomas & Betts Corporation.
 17. Wiremold / Legrand.
- B. General Requirements for Boxes, Enclosures, and Cabinets: Boxes, enclosures, and cabinets installed in wet locations shall be listed for use in wet locations.
- C. Sheet Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.
- D. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, ferrous alloy, Type FD, with gasketed cover.
- E. Metal Floor Boxes:
1. Material: Cast or sheet metal.
 2. Type: Fully adjustable or semi-adjustable.
 3. Shape: Rectangular or as indicated.
 4. Listing and Labeling: Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- F. Nonmetallic Floor Boxes: Nonadjustable, round.
1. Listing and Labeling: Nonmetallic floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- G. Luminaire Outlet Boxes: Nonadjustable, designed for attachment of luminaire weighing 50 lb. Outlet boxes designed for attachment of luminaires weighing more than 50 lb shall be listed and marked for the maximum allowable weight.
- H. Paddle Fan Outlet Boxes: Nonadjustable, designed for attachment of paddle fan weighing 70 lb.
1. Listing and Labeling: Paddle fan outlet boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- I. Sheet Metal Pull and Junction Boxes: Comply with NEMA OS 1.
 - 1. Construct boxes from code gauge sheet steel no lighter than 14 gauge with overlapped riveted or welded corners and with edges turned to receive trim.
 - 2. Construct covers from same gauge as box with screw fasteners. Sectionalize boxes over 864 square inches.
- J. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, galvanized, cast iron with gasketed cover.
- K. Box extensions used to accommodate new building finishes shall be of same material as recessed box.
- L. Gangable boxes are allowed.
- M. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, Type 1, with continuous-hinge cover with flush latch, unless otherwise indicated.
 - 1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
 - 2. Nonmetallic Enclosures: Plastic, finished inside with radio-frequency-resistant paint.
- N. Cabinets:
 - 1. Comply with NEMA 250, Type 1, galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
 - 2. Hinged door in front cover with flush latch and concealed hinge.
 - 3. Key latch to match panelboards.
 - 4. Metal barriers to separate wiring of different systems and voltage.
 - 5. Accessory feet where required for freestanding equipment.
 - 6. Nonmetallic cabinets shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

PART 3 - EXECUTION

3.1 RACEWAY APPLICATION

- A. Outdoors: Apply raceway products as specified below, unless otherwise indicated:
 - 1. Above Ground: RSC, or IMC.
 - 2. Within Crawl Spaces: RSC, or IMC.
 - 3. Emergency Feeders: RSC
 - 4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
 - 5. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R, unless otherwise indicated.
- B. Comply with the following indoor applications, unless otherwise indicated:
 - 1. Exposed, Not Subject to Physical Damage: EMT, IMC for feeders.
 - a. Below 6'-0" AFF; IMC.
 - 2. Exposed and Subject to Physical Damage: RSC, or IMC. Includes, but is not limited to, raceways in the following locations:
 - a. Mechanical rooms.
 - 3. Conductors over 600 volts: RSC, or IMC.
 - 4. Concealed in Ceilings and Interior Walls and Partitions: EMT.
 - 5. Concealed within Masonry Walls: RSC, or IMC.
 - 6. Concealed under Raised Floors: EMT or LFMC.

7. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
 8. Flexible Connection to Luminaires on Normal System: FMC, maximum of 72 inches (1830 mm).
 9. Connection to Luminaires on Essential/Emergency System: RSC, IMC, or EMT.
 10. Flexible Connection to Luminaires on Emergency System: FMC, maximum of 72 inches (1830 mm).
 11. Damp or Wet Locations: RSC, or IMC.
 12. Elevator Pits: RSC, IMC, or LFMC.
 13. Emergency feeders and branch circuits: EMT, IMC for feeders.
- C. Minimum Raceway Size:
1. Individual Branch Circuits: 1/2-inch(16-mm).
 2. For feeder circuits and multiple branch circuits: 3/4-inch
- D. Provide minimum 1/2"-inch(16-mm) conduit for controls circuiting.
- E. Magnetic Resonance Imaging (MRI) Environments: Provide aluminum raceways within RF shielding.
- F. Use the shortest path possible to the intended load or receptacle for raceways of ungrounded circuits which are electrically monitored by ground detector system; this is intended to minimize leakage current to ground. In ceiling space, utilize paths that deviate from that perpendicular to structure where these paths will not interfere with other overhead systems.
- G. Junction and Pull Boxes: Sheet steel boxes, unless otherwise indicated.
1. Provide boxes no smaller than 4 inches square and 2-1/8 inches deep.
 2. Size all junction and pull boxes in accordance with the NFPA 70, unless project conditions dictate use of larger boxes.
 3. Boxes in Hazardous Areas: Cast metal boxes with appropriate sealing fittings.
- H. Outlet and Device Boxes: Sheet steel boxes, unless otherwise indicated.
1. For Lighting Fixture Outlets: 4 inch square with raised fixture ring.
 2. For Wall Switches, Receptacles, and Communication Use: 4 inch square, one-piece. Use boxes with plaster rings in all plastered walls where wall thickness permits. Use boxes 1-1/2 inch deep only in locations where deep boxes cannot be accommodated by construction.
 3. Boxes in Hazardous Areas: Cast metal boxes with appropriate sealing fittings.
- I. Boxes Used Outdoors or in Damp/Wet Locations: Cast metal boxes with gasketed covers and threaded hubs.

3.2 INSTALLATION

- A. Comply with NECA 1 and NECA 101 for installation requirements applicable to products specified in Part 2 except where requirements on Drawings or in this Article are stricter. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies and number of floors.
- B. Store conduit in dry locations during construction. Swab conduits out prior to pulling conductors.

- C. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel, unless intumescent putty pads are installed according to Division 07 Section "Penetration Firestopping."
- D. Locate boxes so that cover or plate will not span different building finishes.
- E. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.
- F. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.
- G. Set metal floor boxes level and flush with finished floor surface.
- H. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.
- I. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surfaces to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.
- J. Recessed Boxes in Fire-Rated Partitions: For boxes located on opposite sides of same partition do not install boxes back-to-back; separate boxes with a minimum of 24 inch separation, unless otherwise indicated in the installation requirements specified in Division 07 Section "Penetration Firestopping."
- K. Recessed Boxes in partitions around Acoustically-Sensitive Spaces: For boxes located on opposite sides of same partition do not install boxes back-to-back; separate boxes with a minimum of 24 inch separation. Acoustically-Sensitive Spaces include, but are not limited to, the following:
 - 1. Conference Rooms, Meeting rooms and similar spaces.
 - 2. Classrooms, Training Rooms and similar spaces.
 - 3. Interview Rooms, Consultation Rooms and similar spaces.
 - 4. Auditoriums, Lecture Rooms, and similar spaces.
 - 5. Ballrooms, Private Dining, and similar spaces.
 - 6. Other spaces specifically listed in the Project Acoustic Consultants' recommendation reports or specifications.
- L. On concealed conduit systems where boxes are not otherwise accessible, set boxes flush with finished surfaces for access, and provide overlapping covers.
- M. Provide boxes where shown and where necessary for the installation and pulling of cables and wires.
- N. Install covers on junction boxes and conduit bodies after wiring and connections are completed.
- O. Install raceways perpendicular or parallel to building surfaces with boxes set plumb and square. In areas where there are no suspended ceilings, run all conduits parallel and perpendicular to building surface planes.
- P. Install conduits to prevent excessive strain or damage to conductors.
- Q. Run conductors over 48 Volts in raceway, unless otherwise indicated.

- R. Where raceways are installed running parallel with flues, steam pipes, hot-water pipes, and other objects operating at high temperatures, maintain a minimum of 6 inches (150 mm) between raceway and pipe insulation or jacket.
- S. Where raceways cross hot water and steam piping, maintain a minimum of 1-inch (25.4-mm) between raceway and pipe insulation or jacket. Install horizontal raceway runs above water and steam piping.
- T. Complete raceway installation before starting conductor installation.
- U. Support raceways and boxes as specified in Division 26 Section "Hangers and Supports for Electrical Systems."
- V. Conceal conduit within finished walls, ceilings, and raised floors, unless otherwise indicated.
- W. Arrange stub-ups so curved portions of bends are not visible above the finished slab.
 - 1. Change from ENT to RSC, or IMC before rising above the floor.
- X. No feeders or branch circuits are to be installed in any slab, unless otherwise indicated.
- Y. No branch circuits are to be installed below slab-on-grade, unless otherwise indicated. Exception: On-grade floor boxes, route raceway minimum of 6 inches below slab-on-grade.
- Z. Do not install aluminum conduits in contact with concrete.
- AA. Install no more than the equivalent of three 90-degree bends and a maximum of 150 feet between pull points in any conduit run except for communications conduits, for which fewer bends are allowed. Support within 12 inches of changes in direction.
- BB. Join RSC and IMC with threaded couplings. Ream conduits after threading and keep each end closed.
- CC. Join EMT with the specified type of couplings. At EMT terminations, provide insulated throat, box connectors and locknuts.
- DD. Provide insulating bushing at conduit box terminations. Provide bonding clamps where grounding bushings are required.
- EE. Secure rigid conduits at cabinets and boxes with galvanized locknuts, both inside and outside.
- FF. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.
- GG. Coat field-cut threads on PVC-coated raceway with a corrosion-preventing conductive compound prior to assembly.
- HH. Surface Raceways:
 - 1. Install surface raceway with a minimum 2-inch radius control at bend points.
 - 2. Secure surface raceway with screws or other anchor-type devices at intervals not exceeding 48 inches and with no less than two supports per straight raceway section. Support surface raceway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.

- II. Install raceways to avoid moisture traps. Install raceway sealing fittings at suitable, approved, and accessible locations and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points:
1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
 2. Where an underground service raceway enters a building or structure.
 3. In damp or wet locations.
 4. Where otherwise required by NFPA 70.
- JJ. Install raceways and cables as to not hinder access to ceiling space through access hatches. Maintain 36" minimum clearance and required clearance to equipment above ceiling access hatches.
- KK. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors, including conductors smaller than No. 4 AWG.
- LL. Expansion-Joint Fittings:
1. Install in each run of aboveground RNC that is located where environmental temperature change may exceed 30 deg F and that has straight-run length that exceeds 25 feet. Install in each run of aboveground RMC and EMT conduit that is located where environmental temperature change may exceed 100 deg F and that has straight-run length that exceeds 100 feet.
 2. Install type and quantity of fittings that accommodate temperature change listed for each of the following locations:
 - a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F temperature change.
 - b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F temperature change.
 - c. Indoor Spaces Connected with Outdoors without Physical Separation: 125 deg F temperature change.
 - d. Attics: 135 deg F temperature change.
 3. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F of temperature change for metal conduits.
 4. Install expansion fittings at all locations where conduits cross building or structure expansion joints.
 5. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.
- MM. Flexible Conduit Connections: Comply with NEMA RV 3.
1. Use minimum of 12 inches (305 mm) and a maximum of 72 inches (1830 mm) at final connections to equipment subject to vibration, noise transmission, or movement; and for transformers and motors.
 2. Use LFMC in damp or wet locations including mechanical equipment rooms, at motor or equipment locations at or near pumps, and when installed outdoors.
- NN. Where raceways do not terminate in a box or cabinet, install thermoplastic insulating bushings on end of raceway to protect future cabling from physical damage.
- OO. Install raceways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus 1/4 turn more.

- PP. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to assure a continuous ground path.
- QQ. Cut conduit perpendicular to the length. For conduits 2-inch trade size and larger, use roll cutter or a guide to make cut straight and perpendicular to the length.
- RR. Install pull wires free of splices in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull wire. Coil and identify each end of each line with plastic tag bearing complete information as to the purpose of the raceway and the location of its other end.

3.3 SLEEVE AND SLEEVE SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Apply Sleeve and Sleeve Seal where raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies. Sleeve and Sleeve Seal materials and installation requirements are specified in Division 26 Section "Common Work Results for Electrical."

3.4 FIRESTOPPING

- A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."

3.5 PROTECTION

- A. Provide final protection and maintain conditions that ensure coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.
 - 1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
 - 2. Repair damage to PVC or paint finishes with matching touchup coating recommended by manufacturer.

3.6 CONNECTIONS

- A. Ground raceways and boxes according to Division 26 Section "Grounding and Bonding for Electrical Systems."

3.7 IDENTIFICATION

- A. Identify raceways and boxes as specified in Division 26 Section "Identification for Electrical Systems".

3.8 SEGREGATION OF WIRING SYSTEMS

- A. Segregation of wiring systems shall not be compromised by the use of common pullboxes, wireways, cabinets or any other type of enclosure.
- B. The raceway system for each feeder shall be a separate system completely fault isolated from all other raceway systems.
- C. The raceway system for the branch circuits of each panelboard shall be a separate system completely fault isolated from all other raceway systems.

- D. In systems operating at more than 300 volts between phase conductors, and where different phase conductors are to be run to a common device or outlet box, provide code gauge barrier equal to box gauge between conductors so that two different phase wires will not be in the same compartment.

3.9 CLEANING

- A. On completion of raceway installation but before any cable is installed, perform the following:
 - 1. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of ducts. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.
- B. On completion of box, enclosure, and cabinet installation but before any cable or wiring devices are installed, inspect interior of boxes and perform the following:
 - 1. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

SECTION 260533.13

PATHWAYS FOR SPECIAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes pathways for special systems as fully designed and defined by special systems, designers, engineers, and/or contractors as follows:
 - 1. Raceways, fittings, boxes, enclosures, and cabinets for special systems wiring.
 - 2. Non-continuous Angle Bracket Cable Supports (J-Hooks) for special systems wiring.
 - 3. Adjustable Cable Support Straps for special systems wiring.
 - 4. Steel or as defined by data-comm drawings, Aluminum cable trays and accessories for special systems wiring.
- B. Related Sections include the following:
 - 1. Division 26 Section "Underground Ducts and Raceways for Electrical Systems" for exterior ductbanks, manholes, and underground utility construction and for product requirements for common products referenced by this Section.
 - 2. Division 26 Section "Raceways and Boxes for Electrical Systems" for raceways, fittings, boxes, enclosures, and cabinets for electrical wiring and for product requirements for common products referenced by this Section.

1.2 DEFINITIONS

- A. EMT: Electrical metallic tubing.
- B. EPC: Electrical Plastic Conduit
- C. EPDM: Ethylene-propylene-diene terpolymer rubber.
- D. FMC: Flexible metal conduit.
- E. IMC: Intermediate metal conduit.
- F. LFMC: Liquidtight flexible metal conduit.
- G. LFNC: Liquidtight flexible nonmetallic conduit.
- H. NBR: Acrylonitrile-butadiene rubber.
- I. RAC: Rigid aluminum conduit.
- J. RMC: Rigid metal conduit.
- K. RSC: Rigid Steel conduit.
- L. Special Systems:

1.3 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Product Data: Include data indicating dimensions and finishes for each of the following:
 - 1. Conduit, tubing, surface raceways, wireways and fittings.
 - 2. Angle Brackets (J-Hooks), Wide-Base Cable Supports, and Adjustable Cable Support Straps.
 - 3. Cable trays.
- C. Shop Drawings: For each type of the following.
 - 1. Cable Tray: Show fabrication and installation details of cable tray, including plans, elevations, and sections of components and attachments to other construction elements. Designate components and accessories, including clamps, brackets, hanger rods, splice-plate connectors, expansion-joint assemblies, straight lengths, and fittings.
 - 2. Seismic-Restraint Details: Signed and sealed by a qualified professional engineer, licensed in the state where Project is located, who is responsible for their preparation.
 - a. Design Calculations: Calculate requirements for selecting seismic restraints.
 - b. Detail fabrication, including anchorages and attachments to structure and to supported cable trays.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electrical". Include the following:
 - 1. Pathway routing plans, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 - a. Proposed path for raceways, including sizes and location of cable pull points.
 - b. Structural members in the paths of raceways, cabling support brackets and cable trays.
 - c. HVAC, plumbing items, and architectural features in the paths of raceways, cabling support brackets and cable trays. Denote where systems share common supports.
 - d. Vertical and horizontal offsets and transitions in pathway route.
 - e. Clearances for access above and to side of cabling support brackets and pathways.
 - f. Vertical elevation of cabling support brackets and cable trays above the floor or bottom of ceiling structure.

- B. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For pathway components to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Source Limitations: Obtain pathway components through one source from a single manufacturer.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NFPA 70.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store pathway components indoors to prevent water or other foreign materials from staining or adhering to components. Unpack and dry wet materials before storage.
 - 1. Cable tray shall be loosely stacked, elevated off the floor, and ventilated to prevent staining during storage.
 - 2. ~~[Steel cable tray, or Aluminum cable tray]~~ as defined on data Comm drawings. ~~[Stainless steel cable tray]~~ ~~[Fiberglass cable tray]~~ shall be stored to prevent water or other foreign materials from staining or adhering to cable tray.
 - 3. Steel, cable tray shall be stored in a well-ventilated, dry location.

PART 2 - PRODUCTS

2.1 METAL CONDUIT, TUBING, AND FITTINGS

- A. Refer to and comply with product specifications included in Division 26 Section "Raceways and Boxes for Electrical Systems" for conduit, tubing, and associated fittings and accessories.

2.2 NONMETALLIC CONDUIT, TUBING, AND FITTINGS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. AFC Cable Systems, Inc.
 - 2. Anamet Electrical, Inc.
 - 3. Arnco Corporation.
 - 4. CANTEX Inc.
 - 5. CertainTeed Corporation.
 - 6. Condux International, Inc.
 - 7. Electri-Flex Company
 - 8. Kraloy
 - 9. Lamson & Sessions.
 - 10. Niedax Inc.
 - 11. RACO; Hubbell.
 - 12. Thomas & Betts Corporation.
- B. Listing and Labeling: Nonmetallic conduits, tubing, and fittings shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. ENT: Comply with NEMA TC 13 and UL 1653.
- D. RNC: Comply with NEMA TC 2 and UL 651, type EPC-40-PVC or type EPC-80-PVC as indicated.
- E. Fittings for ENT and RNC: Comply with NEMA TC 3; match to conduit or tubing type and material.

- F. LFNC: Comply with UL 1660.
- G. Fittings for LFNC: Comply with UL 514B.
- H. Solvent cements and adhesive primers shall have a VOC content of 510 and 550 g/L or less, respectively, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- I. Solvent cements and adhesive primers shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.3 BOXES, ENCLOSURES, AND CABINETS

- A. Refer to and comply with product specifications included in Division 26 Section "Raceways and Boxes for Electrical Systems" for boxes, enclosures, cabinets, covers, and associated fittings and accessories.

2.4 METAL WIREWAYS

- A. Refer to and comply with product specifications included in Division 26 Section "Raceways and Boxes for Electrical Systems" for wireways, covers and associated fittings and accessories.

2.5 NONMETALLIC WIREWAYS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Allied Moulded Products, Inc.
 - 2. Hoffman; a brand of Pentair Equipment Protection.
 - 3. Lamson & Sessions.
 - 4. Niedax Inc.
- B. Listing and Labeling: Nonmetallic wireways shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Description: PVC plastic, extruded and fabricated to size and shape indicated, with snap-on cover and mechanically coupled connections with plastic fasteners.
- D. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
- E. Solvent cements and adhesive primers shall have a VOC content of 510 and 550 g/L or less, respectively, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- F. Solvent cements and adhesive primers shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.6 SURFACE RACEWAYS

- A. Refer to and comply with product specifications included in Division 26 Section "Raceways and Boxes for Electrical Systems" for surface raceways, covers and associated fittings and accessories.

2.7 OPTICAL FIBER/COMMUNICATIONS CABLE RACEWAY AND FITTINGS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Arnco Corporation.
 - 2. Endot Industries Inc.
 - 3. IPEX Inc.
 - 4. Lamson & Sessions; Carlon Electrical Products.
- B. Description: Comply with UL 2024; flexible type, approved for plenum riser and general-use installation, as required.

2.8 CABLE TRAYS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Chalfant Manufacturing Company.
 - 2. Chatsworth Products, Inc.
 - 3. Cooper B-Line, Inc.
 - 4. Cope, T. J., Inc.; a subsidiary of Allied Tube & Conduit.
 - 5. GS Metals Corp.; GLOBETRAY Products.
 - 6. MONO-SYSTEMS, Inc.
 - 7. MPHusky.
 - 8. PW Industries.
- B. Materials and Finishes: Cable Trays, Fittings, and Accessories:
 - 1. Steel: complying with NEMA VE 1.
 - a. [Factory-standard primer, ready for field painting; with cadmium-plated hardware according to ASTM B 766.]
 - b. [Mill galvanized before fabrication, complying with ASTM A 653/A 653M, G90 coating; with hardware [galvanized according to ASTM B 633]; [cadmium plated according to ASTM B 766].]
 - c. [Electrogalvanized before fabrication, complying with ASTM B 633; with hardware galvanized according to ASTM B 633.]
 - d. [Hot-dip galvanized after fabrication, complying with ASTM A 123/A 123M, Class B2; with [chromium-zinc, ASTM F 1136.]; [Type 316 stainless-steel] hardware.]
 - e. [PVC coating applied in a fluidized bed or by electrostatic spray; with [chromium-zinc, ASTM F 1136]; [Type 316 stainless-steel] hardware.]
 - f. [Epoxy-resin paint over paint manufacturer's recommended primer and corrosion-inhibiting treatment; with [cadmium-plated hardware according to ASTM B 766]; [Type 316 stainless-steel hardware].]
 - 2. Aluminum: complying with NEMA VE 1, Aluminum Association's Alloy 6063-T6 for rails, rungs, and cable trays, and Alloy 5052-H32 or Alloy 6061-T6 for fabricated parts; with [chromium-zinc, ASTM F 1136.]; [Type 316 stainless-steel] splice-plate fasteners, bolts, and screws]

- C. Sizes and Configurations: Refer to the Cable Tray Schedule on Drawings for specific requirements for types, materials, sizes, and configurations.
 - 1. Center-hanger supports may be used only when specifically indicated.
- D. Cable Tray Accessories:
 - 1. Fittings: Tees, crosses, risers, elbows, and other fittings as indicated, of same materials and finishes as cable tray.
 - 2. Covers: Louvered type of same materials and finishes as cable tray.
 - 3. Barrier Strips: Same materials and finishes as cable tray.

Cable tray supports and connectors, including bonding jumpers, as recommended by cable tray manufacturer.
- E. Description:
 - 1. Configuration: Wires are formed into a standard 2-by-4-inch wire mesh pattern with intersecting wires welded together. Mesh sections must have at least one bottom longitudinal wire along entire length of section.
 - 2. Materials: High-strength-steel longitudinal wires with no bends.
 - 3. Safety Provisions: Wire ends along wire-basket sides (flanges) rounded during manufacturing to maintain integrity of cables and installer safety.
 - 4. Sizes:
 - a. Straight sections shall be furnished in standard 118-inch lengths.
 - b. Wire-Basket Depth: 1-inch usable loading depth by wide, unless otherwise noted on the drawings.
 - c. Wire-Basket Depth: 2-inch usable loading depth by required width as defined on Data Comm drawings wide.
 - d. Wire-Basket Depth: 4-inch usable loading depth by required width as defined on Data Comm drawings wide.
 - 5. Connector Assemblies: Bolt welded to plate shaped to fit around adjoining tray wires and mating plate. Mechanically joins adjacent tray wires to splice sections together or to create horizontal fittings.
 - 6. Connector Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
 - 7. Hardware and Fasteners: ASTM F 593 and ASTM F 594 stainless steel, Type 316 Steel, zinc plated according to ASTM B 633.

2.9 WIRE-BASKET CABLE TRAYS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Chalfant Manufacturing Company.
 - 2. Chatsworth Products, Inc.
 - 3. Cooper B-Line, Inc.
 - 4. Cope, T. J., Inc.; a subsidiary of Allied Tube & Conduit.
 - 5. GS Metals Corp.; GLOBETRAYS Products.
 - 6. MONO-SYSTEMS, Inc.
 - 7. MPHusky.
 - 8. PW Industries.
- B. Description:
 - 1. Configuration: Wires are formed into a standard 2-by-4-inch wire mesh pattern with intersecting wires welded together. Mesh sections must have at least one bottom longitudinal wire along entire length of section.
 - 2. Materials: High-strength-steel longitudinal wires with no bends.
 - 3. Safety Provisions: Wire ends along wire-basket sides (flanges) rounded during manufacturing to maintain integrity of cables and installer safety.

4. Sizes:
 - a. Straight sections shall be furnished in standard 118-inch lengths.
 - b. Wire-Basket Depth: 1-inch usable loading depth by required width as defined on Data Comm drawings wide.
 - c. Wire-Basket Depth: 2-inch usable loading depth by required width as defined on Data Comm drawings wide.
 - d. Wire-Basket Depth: 4-inch usable loading depth by required width as defined on Data Comm drawings wide.
5. Connector Assemblies: Bolt welded to plate shaped to fit around adjoining tray wires and mating plate. Mechanically joins adjacent tray wires to splice sections together or to create horizontal fittings.
6. Connector Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
7. Hardware and Fasteners: ASTM F 593 and ASTM F 594 stainless steel, Type 316 Steel, zinc plated according to ASTM B 633.

2.10 NON-CONTINUOUS ANGLE BRACKET CABLE SUPPORTS (J-HOOKS)

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Chatsworth Products, Inc.
 2. ERICO International Corporation.
 3. Panduit.
- B. Sizes and Configurations: Refer to the Drawings for specific requirements for types, sizes, and configurations.
- C. Individual Non-continuous Angle Bracket Cable Supports: Angle Bracket, Fittings, and Accessories:
 1. Bearing Surface Width: sufficient width to comply with required bend radii of high-performance cables.
 2. Edges: flared, to prevent damage while installing cables.
 3. Cable Retainer Strap: Supports sized 1 5/16" and larger, provide a cable retainer strap for containment of cables within the hanger. The cable retainer strap shall be removable and reusable and be suitable for use in air handling spaces.
 4. Materials and Finishes: Electro-galvanized or G60 finish and shall be rated for indoor use in non-corrosive environments.
 5. Connectors: Manufacturer recommended specialty fasteners including beam clamps, flange clips, C and Z purlin clips and treaded rod suspension accessories.
- D. Multi-tiered Non-continuous Angle Bracket Cable Supports: Angle Bracket, Fittings, and Accessories:
 1. Bearing Surface Width: sufficient width to comply with required bend radii of high-performance cables.
 2. Edges: flared, to prevent damage while installing cables.
 3. Cable Retainer Strap: Supports sized 1 5/16" and larger, provide a cable retainer strap for containment of cables within the hanger. The cable retainer strap shall be removable and reusable and be suitable for use in air handling spaces.
 4. Materials and Finishes: Electro-galvanized or G60 finish and shall be rated for indoor use in non-corrosive environments.
 5. Connectors: Manufacturer recommended specialty fasteners including beam clamps, flange clips, C and Z purlin clips and treaded rod suspension accessories.
 6. Bracket Assembly: Steel angled hanger bracket holding up to six individual non-continuous cable supports. Multi-tiered non-continuous angle bracket cable support

assemblies shall be used where separate cabling compartments are required. Factory-assembled or field-assembled from pre-packaged kits.

2.11 NON-CONTINUOUS ADJUSTABLE CABLE SUPPORT STRAPS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Chatsworth Products, Inc.
 - 2. ERICO International Corporation.
 - 3. Panduit.
- B. Sizes and Configurations: Refer to the Drawings for specific requirements for types, sizes, and configurations.
- C. Individual Non-continuous Adjustable Cable Support Straps: Straps, Fittings, and Accessories:
 - 1. Strap Capacity: Sling length can be adjusted to hold up to 425 4-pair UTP; Rated to support Category 5 and higher cable, or optical fiber cable. Static load limit of 100 lbs.
 - 2. Materials and Finishes: Constructed from steel and woven laminate; rated for indoor use in non-corrosive environments. Suitable for use in air handling spaces.
 - 3. Connectors: Manufacturer recommended specialty fasteners including beam clamps, flange clips, C and Z purlin clips and treaded rod suspension accessories.

2.12 WARNING SIGNS

- A. Lettering: 1-1/2-inch-high, black letters on yellow background with legend "WARNING! NOT TO BE USED AS WALKWAY, LADDER, OR SUPPORT FOR LADDERS OR PERSONNEL."
- B. Materials and fastening are specified in Division 26 Section "Identification for Electrical Systems."

PART 3 - EXECUTION

3.1 APPLICATION

- A. Pathways for Optical Fiber or Communications Cable. Comply with the following indoor applications, unless otherwise indicated:
 - 1. Exposed and Subject to Physical Damage: RSC. Includes, but is not limited to, raceways in the following locations:
 - a. Loading dock.
 - b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
 - c. Mechanical rooms.
 - 2. Concealed within Masonry Walls: RSC, or IMC.
 - 3. Damp or Wet Locations: RSC.
 - 4. Risers in Vertical Shafts: Riser-type, optical fiber/communications cable raceway.
 - 5. Concealed in wall or partition cavities: [Plenum-type, optical fiber/communications cable raceway][EMT][to the nearest accessible ceiling area].
 - 6. Concealed ceiling spaces: [Plenum-type, optical fiber/communications cable raceway] [EMT] [Plenum-type cable in Cable Tray] [Plenum-type cable suspended on J-hooks].

7. Exposed ceiling spaces (i.e. open structure): [Plenum-type, optical fiber/communications cable raceway] [EMT] [Plenum-type cable in Cable Tray] [Plenum-type cable suspended on J-hooks].
8. Spaces Used for Environmental Air: [Plenum-type, optical fiber/communications cable raceway] [EMT] [Plenum-type cable in Cable Tray] [Plenum-type cable suspended on J-hooks].
9. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4, stainless steel in damp or wet locations.

- B. Minimum Raceway Size:
 1. Optical Fiber or Communications Cable: 3/4-inch(21-mm)
 2. Controls Cable: 3/4-inch

3.2 INSTALLATION

- A. Comply with NECA 1 and NECA 101 for installation requirements applicable to products specified in Part 2 except where requirements on Drawings or in this Article are stricter. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies and number of floors.
- B. Comply with ANSI/EIA/TIA Standards 568 & 569,
- C. Comply with NFPA 70.
- D. Follow manufacturer's recommendations for allowable fill capacity for each size non-continuous cable support.
- E. Comply with installation requirements for raceways and boxes in Refer to Division 26 Section "Raceways and Boxes for Electrical Systems" for products.
- F. Where raceways do not terminate in a box or cabinet, install thermoplastic insulating bushings on end of raceway to protect future cabling from physical damage.
- G. Install a blank cover plate on all outlet boxes.
- H. Install pull wires free of splices in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull wire. Coil and identify each end of each line with plastic tag bearing complete information as to the purpose of the raceway and the location of its other end.
- I. Install fire-rated plywood backboards as indicated in locations where special systems equipment is located. Backboards shall be mounted six (6") inches AFF and extend upward a full eight (8'-0") feet.
- J. Raceways for Optical Fiber and Communications Cable: Install raceways, metallic and nonmetallic, rigid and flexible, as follows:
 1. Install raceways in maximum lengths of 75 feet between pull boxes.
 2. Install with a maximum of two 90-degree bends or equivalent for each length of raceway unless Drawings show stricter requirements. Separate lengths with pull or junction boxes or terminations at distribution frames or cabinets where necessary to comply with these requirements.
- K. Install individual raceways from special systems outlets boxes as follows, unless otherwise indicated:

1. Cables Concealed in wall or partition cavities to Concealed ceiling spaces: Route raceway in wall cavity to above nearest accessible ceiling. Extend raceway horizontally to within 12-inches of the cable pathway backbone.
2. Cables Concealed in wall or partition cavities to Exposed ceiling spaces: Route raceway in wall cavity to ceiling space and then turn horizontal and continue to the nearest cable pathway backbone or in conduit directly back to the termination room/closet for the special system.

3.3 OWNER FURNISHED SPECIAL SYSTEMS

- A. Coordinate pathways, raceways and box requirements and details of special system installation with shop drawings produced by the Owner's selected vendor.
- B. Vendor Furnished Boxes: Receive boxes from Owner's selected vendor and install in accordance with vendor shop drawings.
- C. Contractor Furnished Boxes for Owner Furnished Special Systems: Refer to shop drawings produced by Owner's selected vendor and provide pathways, raceways and boxes in accordance with vendor shop drawings.

3.4 CABLE TRAY INSTALLATION

- A. Comply with NECA 1 for installation requirements applicable to products specified in Part 2 except where requirements on Drawings or in this Article are stricter.
- B. Comply with ANSI/ EIA/TIA Standards 568 & 569,
- C. Comply with NFPA 70.
- D. Follow manufacturer's recommendations for allowable fill capacity for each size non-continuous cable support.
- E. Comply with recommendations in NEMA VE 2. Install as a complete system, including all necessary fasteners, hold-down clips, splice-plate support systems, barrier strips, hinged horizontal and vertical splice plates, elbows, reducers, tees, and crosses.
- F. Remove burrs and sharp edges from cable trays.
- G. Fasten cable tray supports to building structure **and install seismic restraints.**
 1. Design each fastener and support to carry load indicated by seismic requirements **and to comply with seismic-restraint details according to Division 16 26 Section "Vibration and Seismic Controls for Electrical Systems."**
 2. Place supports so that spans do not exceed maximum spans on schedules.
 3. Construct supports from channel members, threaded rods, and other appurtenances furnished by cable tray manufacturer. Arrange supports in trapeze or wall-bracket form as required by application.
 4. Support bus assembly to prevent twisting from eccentric loading.
 5. Manufacture center-hung support, designed for 60 percent versus 40 percent eccentric loading condition, with a safety factor of 3.
 6. Locate and install supports according to NEMA.
- A. Support wire-basket cable trays with center support hangers trapeze hangers or wall brackets, as required by the Data Comm installation.

- B. Support center support hangers trapeze hangers for wire-basket trays with 1/4-inch or 3/8-inch diameter rods as required by the Data Comm installation.
- C. Make connections to equipment with flanged fittings fastened to cable tray and to equipment. Support cable tray independent of fittings. Do not carry weight of cable tray on equipment enclosure.
- D. Install expansion connectors where cable tray crosses building expansion joint and in cable tray runs that exceed dimensions recommended in NEMA FG 1 or NEMA VE 1, as required. Space connectors and set gaps according to applicable standard.
- E. Make changes in direction and elevation using standard fittings.
- F. Make cable tray connections using standard fittings.
- G. Seal penetrations through fire and smoke barriers according to Division 07 Section "Penetration Firestopping."
- H. Sleeves for Future Cables: Install capped sleeves for future cables through firestop-sealed cable tray penetrations of fire and smoke barriers.
- I. Workspace: Install cable trays with enough space to permit access for installing cables.
- J. Install barriers to separate cables of different systems, such as power, communications, and data processing; or of different insulation levels, such as 600, 5000, and 15 000 V.
- K. Install covers after installation of cable is completed as required by the Data Comm drawings.
- L. After installation of cable trays is completed, install warning signs in visible locations on or near cable trays.

3.5 CABLE INSTALLATION

- A. Install cables only when pathway installation has been completed and inspected.
- B. Fasten cables on horizontal runs with cable clamps or cable ties as recommended by NEMA VE 2. Tighten clamps only enough to secure the cable, without indenting the cable jacket. Install cable ties with a tool that includes an automatic pressure-limiting device.
- C. On vertical runs, fasten cables to tray every 18 inches. Install intermediate supports when cable weight exceeds the load-carrying capacity of the tray rungs.

3.6 SLEEVE AND SLEEVE SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Apply Sleeve and Sleeve Seal where raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies. Sleeve and Sleeve Seal materials and installation requirements are specified in Division 26 Section "Common Work Results for Electrical."

3.7 FIRESTOPPING

- A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."

3.8 PROTECTION

- A. Protect installed pathways.
 - 1. Repair damage to galvanized finishes with zinc-rich paint recommended by cable tray manufacturer.
 - 2. Repair damage to PVC or paint finishes with matching touchup coating recommended by cable tray manufacturer.
 - 3. Install temporary protection for cables in pathways to protect exposed cables from falling objects or debris during construction. Temporary protection for cables and pathways can be constructed of wood or metal materials until the risk of damage is over.

3.9 CONNECTIONS

- A. Ground cable trays according to manufacturer's written instructions assume #6 AWG copper insulated for the length of the tray, unless otherwise noted by the manufacturer.
- B. Install an insulated equipment grounding conductor with cable tray, in addition to those required by NFPA 70.
- C. Ground raceways and boxes according to Division 26 Section "Grounding and Bonding for Electrical Systems."

3.10 IDENTIFICATION

- A. Identify raceways and boxes as specified in Division 26 Section "Identification for Electrical Systems".

3.11 FIELD QUALITY CONTROL

- A. After installing pathway components and after electrical circuitry has been energized, survey for compliance with requirements. Perform the following field quality-control survey:
 - 1. Visually inspect cable insulation for damage. Correct sharp corners, protuberances in pathway components, vibration, and thermal expansion and contraction conditions, which may cause or have caused damage.
 - 2. Verify that the number, size, and voltage of cables in pathways do not exceed that permitted by NFPA 70. Verify that communication or data-processing circuits are separated from power circuits by barriers.
 - 3. Verify that there is no intrusion of such items as pipe, hangers, or other equipment that could damage cables.
 - 4. Remove deposits of dust, industrial process materials, trash of any description, and any blockage of pathway ventilation.
 - 5. Check for missing or damaged bolts, bolt heads, or nuts. When found, replace with specified hardware.
 - 6. Visually inspect each cable tray joint and each ground connection for mechanical continuity. Check bolted connections between sections for corrosion. Clean and retorque in suspect areas.
 - 7. Perform visual and mechanical checks for adequacy of cable tray grounding; verify that all takeoff raceways are bonded to cable tray.

- B. Report results in writing.

3.12 CLEANING

- A. On completion of raceway installation but before any cable is installed, perform the following:
 - 1. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of ducts. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.
- B. On completion of box, enclosure, and cabinet installation but before any cable or wiring devices are installed, inspect interior of boxes and perform the following:
 - 1. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

SECTION 260539

UNDERFLOOR RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Flat-top, single- or multichannel, underfloor raceways.
 - 2. Flush, flat-top underfloor raceways.
 - 3. Cellular metal underfloor raceways.
 - 4. Trench-type underfloor raceways.
 - 5. Supports, raceway fittings, and hardware.
 - 6. Junction boxes.
 - 7. Service fittings.

1.2 DEFINITIONS

- A. Activation: Nomenclature used by some manufacturers for a service fitting.
- B. Flush Outlet: Underfloor raceway outlet installed so the top of the fixed portions of the receptacles, jacks, and connector assemblies is located approximately at the surface of the floor or floor covering, and with the bodies of connected plugs exposed above the surface of the floor.
- C. Flush Underfloor Raceway: Rectangular cross-section, flat-top raceway installed with the top of the raceway flush with the surface of the concrete in which it is embedded.
- D. Header Raceway: Rectangular cross-section, single-channel or multichannel, underfloor raceway arranged as feeder raceway to bring wires and cables to service raceways from panelboards and communication terminal components.
- E. Recessed Outlet: Underfloor raceway outlet installed with the top of the fixed portion of the connector assemblies located below the surface of the floor or floor covering and arranged to receive plug connectors with the bodies of the plugs concealed below the floor level.
- F. Service Raceway: Underfloor distribution raceway providing direct connection to service fittings using preset or afterset inserts.
- G. Trench Header: Trench-type raceway arranged as feeder raceway to bring wires and cables to service raceways from panelboards and communication terminal equipment.
- H. Underfloor Raceway: A conduit, duct, or cell assembly, or trench located within the floor material or with its top at the floor surface.

1.3 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.

- B. Product Data: For each type of product.
 - 1. Include finishes, construction details, material descriptions, dimensions, and profiles for underfloor raceway components, fittings, and accessories.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- C. Shop Drawings: For underfloor raceways.
 - 1. Include floor plans, assembly drawings, sections, and details.
 - 2. Detail fabrication and assembly of underfloor raceways.
 - a. Identify components and accessories such as expansion-joint assemblies, straight raceway lengths, preset and afterset inserts, and service fittings.
 - b. Detail preparation and installation methods and instructions.
 - c. Provide dimensions locating raceway header and distribution elements. Include spacing between preset inserts and between preset inserts and ends of duct runs, walls, columns, junction boxes, and header duct connections.
 - d. Provide raceway fill charts for each duct size provided for each conductor size the duct is identified to accept. Provide separate charts for power and communication conductors and cables.
 - e. Show connections between raceway elements and relationships between components and adjacent structural and architectural elements including slab reinforcement, floor finish work, permanent partitions, expansion joints, architectural module lines, and pretensioning or post-tensioning components.
 - f. Indicate height of preset inserts, junction boxes, and raceways coordinated with depth of concrete slab and floor fill.
 - g. Indicate thickening of slabs where required for adequate encasement of raceway components.
 - h. Document coordination of exposed components with floor-covering materials to ensure that fittings and trim are suitable for indicated floor-covering material.
 - i. Revise locations from those indicated in the Contract Documents as required to suit field conditions and to ensure a functioning layout. Identify proposed deviations from the Contract Documents.
 - j. Show details of connections and terminations of underfloor raceways at conduit entry points.
 - k. Show details of connections and terminations of underfloor raceways at panelboards and communication terminal equipment in equipment rooms, wire closets, and similar spaces.
- D. Samples: For typical underfloor raceway products, in specified finish, including the following:
 - 1. Service fittings and flush and recessed outlet and junction-box covers.
 - 2. A section of each service raceway configuration with specified preset insert and service fitting installed.
 - 3. A junction box of each size and type for use with underfloor raceway.
 - 4. A section of each header raceway configuration, complete with provisions for connection with service raceway.
 - 5. A section of trench-type raceway, complete with cover and required trim.
 - 6. A junction box of each size and type, complete with cover and trim.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control test reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For underfloor raceways, to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Division 01 Section "Operation And Maintenance Data," include the following:
 - a. Manufacturer's written instructions for locating preset inserts and for installing afterset inserts.
- B. Project Record Documents: Submit final as-built Drawings, indicating dimensioned locations for all ducts, junction boxes, and preset inserts. Typical spacing designation shall be accepted only for preset insert spacing along a continuous length of duct.

1.6 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 3. Service Fittings: Furnish <three> of each type of service fitting indicated for each 100 feet of distribution raceway or active-floor-cell length.
 - 4. Outlet Blanking Covers: Furnish quantity equal to one for every ten of each type of floor opening installed for outlets. Furnish at least one of each type.
- B. Furnish one electronic instrument and other tools, as recommended by underfloor raceway manufacturer for detecting, locating, and uncovering preset inserts in metal raceway under floor covering and up to 3/8 inch of concrete fill.

1.7 QUALITY ASSURANCE

- A. Source Limitations: Obtain underfloor raceway components for each system through single source from single manufacturer.
- B. Comply with UL 884.
- C. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 FLAT-TOP, STEEL UNDERFLOOR RACEWAYS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. MonoSystems Inc.
 - 2. Square D; Schneider Electric.
 - 3. Thomas & Betts Corporation; A member of the ABB Group.
 - 4. Walker Systems, Inc.
- B. Description:
 - 1. Material: One-piece, continuous weld, minimum 0.0598-inch-thick steel, with corrosion-resistant galvanized coating inside and out after welding.
 - 2. Cross-Section Shape: Rectangular, with rounded corners.

1. Number of Longitudinal Channels: Two Three or Four, separated by steel wall(s).
 2. Number of Levels: One or Two as required.
 3. Minimum Bending Radius for Communication Cables: Combination of raceways, fittings, inserts, junction boxes, service fittings, and mounting and connection arrangements for wiring devices and jacks shall provide a 2-inch-minimum bending radius for communication cables.
- C. Service Raceways: Fitted with preset inserts.
1. Nominal Multichannel Underfloor Raceway Dimensions, unless otherwise indicated:
 - a. Depth: 1-3/8 inches.
 - b. Overall Width: 6 inches 10 inches 15 inches
 - c. Power Service Raceway:
 - 1) Width: 3-1/2 inches 4-3/8 inches .
 - d. Communication Service Raceway:
 - 1) Width: 3-1/2 inches 4 inches 6-1/2 inches.
 - 2) Number of Single-Channel Raceways per Run: One Two Three Four Five unless otherwise indicated.
 2. Preset Inserts: Rectangular Round.
 - a. Spacing: 24 inches 12 inches o.c.
 - b. Size: Rectangular dimensions as required to accommodate mounting and connection of flush- and surface-mounted, single- and multiple-outlet service fittings or to connect to wiring extensions for feeding wall outlets for powercommunicationspower and communications.
 - c. Size: 2 inches in diameter.
 - d. Equip each insert with a disposable cover and select insert height so cover is 1/8 inch below surface of concrete.
 - e. Arrange insert for optional attachment of flush-, surface-, or wiring- extension service fitting to replace disposable cover. Arrange brackets, mountings, barriers, and floor access covers to support, isolate, and provide access to flush or surface outlet-mounting connector, jack, and receptacle devices.
- D. Header Raceways: Single-Multichannel, without preset inserts (blank raceway).
1. Nominal Raceway Dimensions, unless otherwise indicated:
 - a. Depth: Same as service raceways 2-1/2 inches 2-3/4 inches 3 inches 3-1/2 inches.
 - b. Power Header Raceway Width: 3-1/2 inches 4-3/8 inches .
 - c. Communication Header Raceway Width: 3-1/2 inches 4 inches 6-1/2 inches.
 2. Arrangement: In same plane as Below service raceways.
 3. Connections: Arranged to connect with service raceways at single two-level junction boxes.

2.3 FLUSH, FLAT-TOP UNDERFLOOR RACEWAYS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Walker Systems, Inc.
- B. Source Limitations: Obtain underfloor raceway components for each system through single source from single manufacturer.
- C. Description:
1. Material: Steel.
 2. Cross-Section Shape: Rectangular, single channel and multichannel, separated by steel wall(s).
 3. Listed and labeled for installation with top flush with concrete floor.

4. Number of Levels: One.
- D. Service Raceways: Fitted with preset inserts.
1. Number of Longitudinal Channels per Multichannel Raceway: Two Three.
 2. Number of Single-Channel Raceways per Run: One Two Three unless otherwise indicated.
 3. Nominal Channel Dimensions: 3 inches wide by 1-1/4 inches deep.
 4. Preset Inserts: Threaded opening with removable steel plug that is flush with top of raceway when screwed in place.
 - a. Spacing: 24 inches 12 inches o.c., full length of each service raceway.
 - b. Arrangement: Stagger insert locations on parallel raceways or channels to accommodate placement of adjacent service fittings.
 - c. Size: 1-5/8-inch diameter.
- E. Trench Duct Crossunder: Fitting attached to underside of trench duct.
1. Nominal Channel Dimensions: Same as service raceways.
 2. Arrangement: Offset by depth of trench duct.
 3. Connections: Arranged to connect trench duct to flush duct through factory-cut, grommeted openings.
- F. Header Raceways: Raceways same as service raceways except without preset inserts (blank raceway).
1. Nominal Channel Dimensions: Same as service raceways.
 2. Arrangement: In same plane as service raceways.
 3. Connections: Arranged to connect with service raceways at junction boxes.
- 2.4 CELLULAR METAL UNDERFLOOR RACEWAYS
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- B. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings <Insert manufacturer's name here> or a comparable product by one of the following:
- C. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings <Insert Base Bid manufacturer's name here> as base bid. Provide alternate pricing in accordance with Division 01 Section "Alternates" for a comparable product by one of the following:
1. ASC Profiles, Inc.
 2. Dennis Filges Company, Inc.
 3. Epic Metals Corporation.
 4. HH Robertson.
 5. Thomas & Betts Corporation
 6. United Steel Deck Inc.
 7. Walker Systems, Inc.
- D. Source Limitations: Obtain underfloor raceway components for each system through single source from single manufacturer.
- E. Description:
1. Material: Galvanized-steel sheet, ASTM A 653/A 653M, Structural Steel (SS), Grade 33 minimum, G60 G90 zinc coating.

2. Material: Galvanized- and shop-primed steel sheet, ASTM A 653/A 653M, Structural Steel (SS), Grade 33, G60 zinc coating; with underside surface cleaned, pretreated, and primed with manufacturer's standard gray white baked-on, rust-inhibitive primer.
 3. Number of Longitudinal Cells: Three, separated by steel walls.
 4. Nominal Dimensions of Cells:
 - a. Overall Depth: 1-1/4 inches unless otherwise indicated.
 - b. Cross-Sectional Area of Cells: Power cells: 5-1/2 sq. in.; communication system cells: 16 sq. in..
 5. Minimum Bending Radius for Communication Cables: Combination of raceways, fittings, inserts, junction boxes, service fittings, and mounting and connection arrangements for wiring devices and jacks shall provide a 2-inch-minimum bending radius for communication cables.
- F. Service Raceways: Fitted with preset inserts.
1. Preset Inserts: Rectangular-shaped metal housing assemblies arranged to provide electrical outlet access to each cell of each raceway designated for service raceway use. Inserts shall be provided throughout the entire length of each such raceway.
 - a. Spacing: 30 inches 24 inches 12 inches o.c.
 - b. Include housing and connecting provisions for a flush or recessed, single-, double-, or triple-system service fitting.
 - c. Include mounting and connecting provisions for a surface, single- or multiple-system service fitting.
 - d. Include connecting provisions for a wiring-extension service fitting to feed wall outlets.
 - e. Equip each insert with a disposable cover plate arranged for installation with top 1/8 inch below surface of concrete. Arrange insert to receive a flush-, recessed-, or wiring-extension service fitting to replace disposable top.
- G. Header Assembly: A junction box and raceway arrangement arranged to feed wires and cables to service raceways.
1. Three-compartment junction box connecting blank, multicell cellular flat-top, multichannel header raceway (no inserts) with cellular service raceways at right angles to header raceway.
 2. Cellular header raceway shall be made of the same material and have the same nominal dimensions as service raceways.
 3. Provide capability for service raceways to be run in both perpendicular directions at the intersection with header raceway.

2.5 TRENCH-TYPE UNDERFLOOR RACEWAYS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- B. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings <Insert manufacturer's name here> or a comparable product by one of the following:
- C. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings <Insert Base Bid manufacturer's name here> as base bid. Provide alternate pricing in accordance with Division 01 Section "Alternates" for a comparable product by one of the following:
1. Dennis Filges Company, Inc.
 2. HH Robertson.
 3. Square D.
 4. Thomas & Betts Corporation.

- 5. Walker Systems, Inc.
- D. Source Limitations: Obtain underfloor raceway components for each system through single source from single manufacturer.
- E. Trench: Steel, shop or factory welded and fabricated to indicated sizes. Include the following features:
 - 1. Slab Depth Adjustment: Minimum of minus 1/8 inch to plus 5/8 inch before and during concrete placement.
 - 2. Cover Supports: Height adjustable, with leveling screws to rigidly support cover assembly.
 - 3. Screed Strip: Extruded aluminum along both edges at proper elevation without requiring shim material.
 - 4. Trim Strip: Select to accommodate floor finish material.
 - 5. Partitions: Arranged to separate channels and isolate wiring of different systems.
 - 7. Manufacturer's standard corrosion-resistant finish, applied after fabrication.
- F. Cover Plates: Removable, steel plates, 1/4 inch thick, each weighing 60 lb or less with full gasket attached to side units. Fabricate intermediate supports to limit unsupported spans to 15 inches or less. Fabricate covers with appropriate depth recess to receive indicated floor finish.

2.6 SUPPORTS, RACEWAY FITTINGS, AND HARDWARE

- A. Source Limitations: Obtain underfloor raceway supports, fittings, and hardware components for each system through single source from single manufacturer.
- B. Supports, fittings, and hardware shall be compatible with raceway and outlet system and shall be listed for use with raceway systems and components delivered.
- C. Supports: Adjustable for height and arranged to maintain alignment and spacing of raceways during concrete placement. Include hold-down straps.
- D. Raceway Fittings: Couplings, expansion-joint sleeves, cross-under offsets, vertical and horizontal elbows, grounding screws, adapters, end caps, and other fittings suitable for use with basic components to form a complete installation.

2.7 JUNCTION BOXES

- A. Description: Manufacturer's standard enclosure for indicated type, quantity, arrangement, and configuration of raceways at each raceway junction, intersection, and access location. Include the following accessories and features:
 - 1. Mounting brackets.
 - 2. Escutcheons and holders to accommodate surrounding floor covering.
 - 3. Means for leveling and height adjustment more than 3/8 inch before and after concrete is placed.
 - 4. Boxes shall withstand a minimum 300-lb concentrated load. Internal supports shall be provided as needed to meet this requirement.
 - 5. All boxes shall provide 2-inch-minimum bend radius for data and communication cables.
 - 6. Raceway Openings: For underfloor raceways and conduits arranged to accommodate raceway layout.
 - 7. Covers shall have appropriate depth recess to receive specific floor finish material.
 - 8. Partitions to separate wiring of different systems.

2.8 SERVICE FITTINGS/ACTIVATIONS

- A. Exposed Parts Finish: Brass Brushed Aluminum.
- B. Flush, Single-System Service Fitting for Round Inserts: Include mounting and cover to support and provide access to single connector, jack, or receptacle device; mounted flush with floor within body of insert.
 - 1. Connector, Jack, and Receptacle Devices: Single modular type; complying with Division 26 Sections "Wiring Devices" and Division 27 "Communications Horizontal Cabling."
 - 2. Power Receptacle Outlet: Suitable for 20-A, 120-V device.
- C. Flush, Single- or Multiple-System Service Fitting for Rectangular Inserts: Include mounting, hinged cover, and trim to support and provide access to connector, jack, or receptacle devices mounted flush with floor within insert.
 - 1. Connector, Jack, and Receptacle Devices: Modular type; complying with Division 26 Sections "Wiring Devices" and Division 27 "Communications Horizontal Cabling."
 - 2. Power Receptacle Rating: 20 A, 120 V unless otherwise indicated.
- D. Recess-Mounted Service Fitting: Modular fittings compatible with preset inserts. Include device plates for indicated systems and provisions for receptacles, jacks, and connectors. Include hinged flush covers with recessed depth to match thickness of floor finish material. Provide for internally mounted receptacle- and communication-jack and connector assemblies complying with requirements in Division 26 Section "Wiring Devices" and Division 27 Section "Communications Horizontal Cabling."
 - 1. Duplex receptacle.
 - 2. Duplex telephone-data jacks.
 - 3. Double duplex receptacles.
 - 4. Duplex receptacle and duplex telephone-data jacks.
 - 5. Double duplex telephone-data jacks, Category 5 Category 5e Category 6.
 - 6. Fiber-optic cable connector.
- E. Surface-Mounted Service Fitting: Modular pedestal type, with locking attachment matched to insert floor opening.
 - 1. Power-outlet, double-faced, surface-mounted unit for duplex receptacle on both sides.
 - 2. Power-outlet, single-faced, surface-mounted unit for duplex receptacle on one side.
 - 3. Communication-outlet, double-faced, surface-mounted unit.
 - a. Include bushed openings on both sides; 1-inch minimum diameter; insulated with nonconducting material.
 - b. Include provisions for modular dual fiber-optic connector assembly on both sides.
 - c. Include provisions for modular dual jack-connector assembly, rated for Category 5 Category 5e Category 6, on both sides.
 - 4. Communication-outlet, single-faced, surface-mounted unit with bushed opening on one side; 1-inch minimum diameter; insulated with nonconducting material.
 - 5. Combination surface-mounted unit for duplex receptacle on one side and with communication cable connection provision on opposite side.
 - a. Communication Side: Include bushed opening; 1-inch minimum diameter; insulated with nonconducting material.
 - b. Communication Side: Include provisions for modular dual fiber-optic connector assembly.
 - c. Communication Side: Include provisions for modular dual jack-connector assembly, rated for Category 5 Category 5e Category 6.

- F. Flush-Mounted Service Fittings: Modular fittings compatible with preset inserts and shall include covers, provisions for receptacles jacks and connector assemblies and wiring extensions to wall-mounted outlets, and associated device plates for indicated systems. Include flush handhole covers, recessed to suit floor finish material. Internally mounted, modular, receptacle, jack and connector assemblies shall comply with requirements in Division 26 Sections "Wiring Devices" and Division 27 "Communications Horizontal Cabling."
1. Duplex convenience receptacle.
 2. Duplex telephone-data outlets.
 3. Double duplex convenience receptacles.
 4. Duplex convenience receptacle and duplex telephone-data outlets.
 5. Double duplex telephone-data outlets.
 6. Duplex communication jack, rated for Category 5Category 5eCategory 6.
 7. Duplex fiber-optic communication connector.
 8. Wiring-Extension Service Fittings: Arrangement of brackets and mountings to support, and provide access to wiring or cabling of a cell, and to connect the cable or raceway that extends the system to an individual wall outlet. Provide for connection of FMC ENT Type MC cable for power extensions, and FMC ENT optical fiber/communication cable raceway for communication system extensions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install raceways aligned and leveled and, unless otherwise indicated, parallel or perpendicular to floor supports.
- B. Maintain arrangement of conductor services throughout the raceway system.
- C. Install a concrete mud slab for support of cellular metal, flush duct, or trench duct raceway. Construct mud slab with wire mesh in the top 1 inch of concrete.
- D. Install a vapor barrier between the cellular metal raceway and a substrate in contact with earth, in accordance with Division 07.
- E. Arrange supports to attain proper elevation, alignment, and spacing of raceways. Fasten supports securely at ends and at intervals not to exceed 60 inches, to prevent movement during concrete pour.
- F. Level raceway components with finished slab and make adjustments in raceway component elevation to accommodate indicated floor finishes.
- A. Junction Boxes: Install tops level and flush with finished floor. Install blank closure plates or plugs to close unused junction-box openings. Grout boxes in place to prevent movement during construction. Place top covers in inverted position during construction to prevent damage to surface of cover. Reinstall covers in proper position prior to final acceptance of Work.

- B. Install preset inserts per manufacturer's instructions.
- C. Adjust supports to maintain a 1/8- to 3/8-inch finished concrete cover over preset inserts.
- D. Remove burrs, sharp edges, dents, and mechanical defects.
- E. Cap or plug boxes, insert- and service-fitting openings, and open ends of raceways.
- F. Install expansion fittings with suitable bonding jumper where raceways cross building expansion joints.
- G. Bond underfloor raceway components to create a continuous bonding path.
- H. Seal raceways, cells, junction boxes, and inserts to prevent water, concrete, or foreign matter from entering raceways before and during pouring slab or placing fill. Tape joints, or seal with compound, as recommended in writing by underfloor raceway manufacturer.
- I. Ground underfloor raceway components.
- J. Install a marker at the center of the last insert of each cell and channel of each straight run of metal underfloor service raceway to locate the insert and identify the system.
 - 1. Install markers at last inserts on both sides of permanent walls and at first inserts adjacent to each junction box.
 - 2. Install markers flush at screed line before pouring slab or placing fill. Extend marker with grommited screw when floor covering is placed. Do not extend through carpet.
 - 3. Use slotted-head screw to identify electrical power; use Phillips-head screw to identify conventional communications.
 - 4. Use another distinctive screw head to identify third system such as special-purpose wiring.
- K. Protect underfloor raceway system from damage. Do not use the installed duct system as working platforms or walkways. Do not allow equipment or heavy traffic over duct during construction period, without first installing ramps over the duct. Ramps shall be designed so that imposed loads are not transferred to the duct. Components of the system that are damaged during construction shall be replaced.
- L. Install concrete surrounding underfloor raceways according to Division 03 Section "Cast-in-Place Concrete."
- M. Afterset Inserts: Cut, hole saw, and drill slab and raceways to allow for installation at locations indicated on plans.
- N. Wiring shall comply with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables" and NFPA 70 requirements for wet locations.
 - 1. Install wiring from outlet insert toward junction boxes, then to termination at panel.
 - 2. Splices: All splices and taps shall be made in junction boxes. No splices or taps shall be made in raceways or outlet inserts.

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to perform the following field tests and inspections and prepare certified test reports:
- B. Perform the following field tests and inspections and prepare test reports with the assistance of a factory-authorized service representative:

1. Perform visual inspection of interior of each junction box or section of trench raceway to verify absence of dirt, dust, construction debris, and moisture. Replace damaged and malfunctioning components.
 2. Prior to and after concrete pour, perform point-to-point tests of ground continuity and resistance of ground path between the most remote accessible fitting on each branch of each underfloor raceway system and the main electrical distribution grounding system.
 - a. Determine cause and perform correction of any point-to-point resistance value that exceeds 0.05 ohms.
- C. Prepare test and inspection reports.
- 3.4 CLEANING
- A. Clean components according to manufacturer's written instructions.
- B. On completion of installation, inspect interior and exterior surfaces and perform the following:
1. Remove paint splatters and other spots.
 2. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
 3. Repair exposed surfaces to match original finish.
 4. Swab out underfloor raceways, inserts, and junction boxes after finish has been applied to floor slab, and remove foreign material, dirt, and moisture. Leave interiors clean and dry.

END OF SECTION

SECTION 260543

UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Direct-buried conduit, ducts, and duct accessories.
 - 2. Concrete-encased conduit, ducts, and duct accessories.
 - 3. Handholes and boxes.
 - 4. Manholes.
- B. Related Sections include the following:
 - 1. Division 26 Section "Raceways and Boxes for Electrical Systems" for raceways, fittings, boxes, enclosures, and cabinets for electrical wiring.

1.2 DEFINITION

- A. Duct: an underground raceway. This term may be used interchangeably with the term raceway.
- B. Duct Bank: two or more raceways grouped together, irrespective of duct material or encasement material.
- C. ENT: Electrical Non-Metallic Tubing
- D. EPC: Electrical Polyvinyl Chloride (PVC) Conduit
- E. RMC: Rigid metal conduit.
- F. RNC: Rigid nonmetallic conduit.
- G. RSC: Rigid Steel conduit.
- H. Trafficways: Locations where vehicular or pedestrian traffic is a normal course of events.

1.3 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Product Data: For the following:
 - 1. Duct-bank materials, including separators and miscellaneous components.
 - 2. Ducts and conduits and their accessories, including elbows, end bells, bends, fittings, and solvent cement.
 - 3. Accessories for manholes, handholes, boxes, and other utility structures.
 - 4. Warning tape.
 - 5. Warning planks.

- C. Shop Drawings for Precast or Factory-Fabricated Underground Utility Structures: Include plans and elevations with dimensions and weights. Include sections, details, attachments to other work, and accessories, including the following:
 - 1. Duct entry provisions, including locations and duct sizes.
 - 2. Reinforcement details.
 - 3. Frame and cover design and manhole frame support rings.
 - 4. Ladder or Step details.
 - 5. Grounding details.
 - 6. Dimensioned locations of cable rack inserts, pulling-in and lifting irons, and sumps.
 - 7. Joint details.
- D. Shop Drawings for Factory-Fabricated Handholes and Boxes Other Than Precast Concrete: Include dimensioned plans, sections, and elevations, and fabrication and installation details, including the following:
 - 1. Duct entry provisions, including locations and duct sizes.
 - 2. Cover design.
 - 3. Grounding details.
 - 4. Dimensioned locations of cable rack inserts, and pulling-in and lifting irons.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electrical". Include the following:
 - 1. Duct-Bank, Manhole, and Handhole plans, sections and elevation profiles; on which the following items are shown and coordinated with each other, passed on input from installers of the items involved:
 - a. Duct banks included in the Work. Denote duct routing including bends and locations of expansion fittings. Include system profiles and elevations.
 - b. Other utilities, underground structures, architectural features, and topographic elements in the paths of duct banks. Denote system profiles and elevations.
 - c. Precast or Factory-Fabricated Underground Utility Structures.
 - d. Factory-Fabricated Handholes and Boxes.
- B. Product Certificates: For concrete and steel used in precast concrete manholes and handholes, as required by ASTM C 858.
- C. Qualification Data: For professional engineer and testing agency responsible for testing nonconcrete handholes and boxes.
- D. Source quality-control test reports.
- E. Field quality-control test reports.

1.5 CLOSEOUT SUBMITTALS

- A. Accurately record actual routing of duct bank on Project record documents, and submit in accordance with Division 01.

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: For independent agency as defined in Division 26 Section "Common Work Results for Electrical" and according to ASTM E 329.
- B. Comply with NFPA 70.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver ducts to Project site with ends capped. Protect conduit from corrosion and entrance of debris by storing above grade with an appropriate covering. Store nonmetallic ducts with supports to prevent bending, warping, and deforming.
- B. Store precast concrete and other factory-fabricated underground utility structures at Project site as recommended by manufacturer to prevent physical damage. Arrange so identification markings are visible.
- C. Lift and support precast concrete units only at designated lifting or supporting points.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR DUCTS AND RACEWAYS

- A. Comply with ANSI C2.

2.2 METAL CONDUIT AND DUCTS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. AFC Cable Systems, Inc.
 - 2. Alflec Inc.
 - 3. Allied Tube & Conduit; a Tyco International Ltd. Co.
 - 4. Electri-Flex Co.
 - 5. O-Z Gedney; a unit of General Signal.
 - 6. Manhattan/CDT/Cole-Flex.
 - 7. Wheatland Tube Company.
- B. RSC: Comply with ANSI C80.1 and UL 6; Galvanized rigid steel, each length with a coupling on one end and thread protector on opposite end.
- C. Fittings for RSC: Comply with UL 514B. Provide factory made threaded couplings of same material as the conduit.
 - 1. Molded thermoplastic insulating bushing at all boxes and cabinets, with locknuts inside and outside box or cabinet. In wet locations, provide watertight hubs for conduit entry into enclosures.
 - 2. Thermoplastic insulated grounding bushing on all conduits where grounding bushings are required, with locknuts inside and outside the enclosure. In wet locations provide watertight hubs for conduit entry into enclosures.

2.3 NONMETALLIC CONDUIT AND DUCTS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. ARNCO Corp.
 - 2. Beck Manufacturing.
 - 3. CANTEX INC.
 - 4. CertainTeed Corporation.
 - 5. Condux International, Inc.
 - 6. ElecSys, Inc.
 - 7. Electri-Flex Company.

8. IPEX USA LLC.
9. Lamson & Sessions.
10. Manhattan CDT.
11. Spiraduct/AFC Cable Systems, Inc.

- B. ENT: Comply with NEMA TC 13.
- C. RNC: Comply with NEMA TC 2 and UL 651, type EPC-40-PVC or type EPC-80-PVC as indicated.
- D. Fittings for ENT and RNC: Comply with NEMA TC 3 and UL 651; match to conduit or tubing type and material.

2.4 DUCT ACCESSORIES

- A. Duct Separators: Factory-fabricated rigid PVC interlocking spacers, sized for type and sizes of ducts with which used, and selected to provide minimum duct spacings indicated while supporting ducts during concreting or backfilling.
- B. Corrosion Resistance Tape for RSC: 20 mil polyvinyl chloride (PVC) tape with a high-tack adhesive and pipe primer to provide a corrosion- and impact-resistant seal.
- C. Warning Tape: Underground-line warning tape specified in Division 26 Section "Identification for Electrical Systems."
- D. Warning Caps: Cast-in-Place Cap or multiple manufactured Planks.
 1. Cast-In-Place Cap: 6000-psi (41-MPa) minimum 3-inches (76 mm) thick concrete meeting the requirements of Division 03 "Cast-In-Place Concrete".
 - a. Color: Dye added to concrete during batching or powder dye applied to top prior to curing.
 - 1) ELECTRIC: Red for duct systems with power wires and cables.
 - 2) SIGNAL: Orange for communications, data, and telephone duct systems
 - b. Label top of encased duct bank with stenciled lettering 2-inch- (50-mm-) high letters at not less than 10-foot intervals, after curing. Label selected to suit system or as otherwise required.
 - 1) Legend: "ELECTRIC-LV" for duct systems with power wires and cables operating at 600 V and less.
 - 2) Legend: "ELECTRIC-HV" for duct systems with power wires and cables operating over 600 V.
 - 3) Legend: "SIGNAL" for communications, data, and telephone duct systems.
 2. Planks: Nominal 12 by 24 by 3 inches (300 by 600 by 75 mm) in size, manufactured from 6000-psi (41-MPa) concrete.
 - a. Color: Dye added to concrete during batching.
 - 1) ELECTRIC: Red for duct systems with power wires and cables.
 - 2) SIGNAL: Orange for communications, data, and telephone duct systems.
 - b. Label top of each plank with lettering 2-inch-high, 3/8-inch-deep letters. Label selected to suit system or as otherwise required.
 - 1) Legend: "ELECTRIC-LV" for duct systems with power wires and cables operating at 600 V and less.
 - 2) Legend: "ELECTRIC-HV" for duct systems with power wires and cables operating over 600 V.

- 3) Legend: "SIGNAL" for communications, data, and telephone duct systems.

2.5 PRECAST CONCRETE HANDHOLES AND BOXES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Christy Concrete Products.
 2. Elmhurst-Chicago Stone Co.
 3. Oldcastle Precast, Inc.
 4. Rinker Group, Ltd.
 5. Riverton Concrete Products.
 6. Utility Concrete Products, LLC.
 7. Utility Vault Co.
 8. Wausau Tile, Inc.
- B. Comply with ASTM C 858 for design and manufacturing processes.
- C. Description: Factory-fabricated, reinforced-concrete, monolithically poured walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have load rating consistent with that of handhole or box.
1. Frame and Cover: Weatherproof steel frame, with steel cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.
 2. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
 3. Cover Legend: Molded lettering, selected to suit system or as otherwise required.
 - a. Legend: "ELECTRIC-LV" for duct systems with power wires and cables operating at 600 V and less.
 - b. Legend: "ELECTRIC-HV" for duct systems with power wires and cables operating over 600 V.
 - c. Legend: "SIGNAL" for communications, data, and telephone duct systems.
 4. Configuration: Units shall be designed for flush burial and have integral closed bottom, unless otherwise indicated.
 5. Extensions and Slabs: Designed to mate with bottom of enclosure. Same material as enclosure.
 - a. Extension shall provide increased depth as required.
 - b. Slab: Same dimensions as bottom of enclosure, and arranged to provide closure.
 6. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at the installation location with the ground-water level at grade.
 7. Windows: Precast openings in walls, arranged to match dimensions and elevations of approaching ducts and duct banks plus an additional 12 inches vertically and horizontally to accommodate alignment variations.
 - a. Windows shall be located no less than 6 inches from interior surfaces of walls, floors, or frames and covers of handholes, but close enough to corners to facilitate racking of cables on walls.
 - b. Window opening shall have cast-in-place, welded-wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct banks.
 - c. Window openings shall be framed with at least two additional No. 3 steel reinforcing bars in concrete around each opening.
 8. Duct Entrances in Handhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
 - a. Type and size shall match fittings to duct or conduit to be terminated.

- b. Fittings shall align with elevations of approaching ducts and be located near interior corners of handholes to facilitate racking of cable.
- 9. Handholes 12 inches wide by 24 inches long and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.

2.6 HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

- A. General Requirements for Handholes and Boxes: Comply with SCTE 77. Comply with tier requirements in "Underground Enclosure Application" Article.
 - 1. Color: Gray for paved areas and Green for landscaped areas, unless otherwise indicated.
 - 2. Configuration: Units shall be designed for flush burial and have integral closed bottom, unless otherwise indicated.
 - 3. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.
 - 4. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
 - 5. Cover Legend: Molded lettering, selected to suit system or as otherwise required.
 - a. Legend: "ELECTRIC-LV" for duct systems with power wires and cables operating at 600 V and less.
 - b. Legend: "ELECTRIC-HV" for duct systems with power wires and cables operating over 600 V.
 - c. Legend: "SIGNAL" for communications, data, and telephone duct systems.
 - 6. Duct Entrance Provisions: Duct-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
 - 7. Handholes 12 inches wide by 24 inches long and larger shall have factory-installed inserts for cable racks and pulling-in irons.

2.7 PRECAST MANHOLES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Carder Concrete Products.
 - 2. Christy Concrete Products.
 - 3. Elmhurst-Chicago Stone Co.
 - 4. Oldcastle Precast Group.
 - 5. Rinker Group Ltd.
 - 6. Riverton Concrete Products.
 - 7. Utility Concrete Products, LLC.
 - 8. Utility Vault Co.
 - 9. Wausau Tile Inc.
- B. ANSI/ACI 301 - Specifications for Structural Concrete for Buildings.
- C. ANSI/ASTM A615 - Specifications for Deformed and Plain Billet Steel Bars for Concrete Reinforcement.
- D. AASHTO HS-20 - Standard Specification for Highway Bridges.
- E. Comply with ASTM C 858.
- F. Structural design loading: Comply with requirements in Part 3 "Underground Enclosure Application" Article

- G. Precast Manholes: One-piece units and units with interlocking mating sections, complete with accessories, hardware, and features.
 - 1. Windows: Precast openings in walls, arranged to match dimensions and elevations of approaching ducts and duct banks plus an additional 12 inches vertically and horizontally to accommodate alignment variations.
 - a. Windows shall be located no less than 6 inches from interior surfaces of walls, floors, or roofs of manholes, but close enough to corners to facilitate racking of cables on walls.
 - b. Window opening shall have cast-in-place, welded wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct banks.
 - c. Window openings shall be framed with at least two additional No. 3 steel reinforcing bars in concrete around each opening.
 - 2. Duct Entrances in Manhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
 - a. Type and size shall match fittings to duct or conduit to be terminated.
 - b. Fittings shall align with elevations of approaching ducts and be located near interior corners of manholes to facilitate racking of cable.
- H. Concrete Knockout Panels: 1-1/2 to 2 inches thick, for future conduit entrance and sleeve for ground rod.
- I. Ground Rod Sleeve: Provide a 3-inch PVC conduit sleeve in manhole floors 2 inches from the wall adjacent to, but not underneath, the ducts routed from the facility.
- J. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at the installation location with the ground-water level at grade.

2.8 CAST-IN-PLACE MANHOLES

- A. Description: Underground utility structures, constructed in place, complete with accessories, hardware, and features. Include concrete knockout panels for conduit entrance and sleeve for ground rod.
- B. Materials: Comply with ASTM C 858 and with Division 03 Section "Cast-in-Place Concrete."
- C. Structural Design Loading: As specified in Part 3 "Underground Enclosure Application" Article.

2.9 UTILITY STRUCTURE ACCESSORIES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Bilco Company (The).
 - 2. Campbell Foundry Company.
 - 3. Cander Concrete Products.
 - 4. Christy Concrete Products.
 - 5. East Jordan Iron Works, Inc.
 - 6. Elmhurst-Chicago Stone Co.
 - 7. McKinley Iron Works, Inc.
 - 8. Neenah Foundry.
 - 9. NewBasis.
 - 10. Oldcastle Precast, Inc.

11. Osburn Associates, Inc.
 12. Pennsylvania Insert Corporation.
 13. Quazite: Hubbell Power Systems, Inc.
 14. Rinker Group, Ltd.
 15. Riverton Concrete Products.
 16. Underground Devices, Inc.
 17. Utility Concrete Products, LLC.
 18. Utility Vault Co.
 19. Wausau Tile Inc.
- B. Manhole Frames, Covers, and Chimney Components: Comply with structural design loading specified for manhole.
1. Frame and Cover: Weatherproof, gray cast iron complying with ASTM A 48/A 48M, Class 30B or cast aluminum with milled cover-to-frame bearing surfaces; diameter, 29 inches (725 mm).
 - a. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
 - b. Special Covers: Recess in face of cover designed to accept finish material in paved areas.
 2. Cover Legend: Cast in. Selected to suit system.
 - a. Legend: "ELECTRIC-LV" for duct systems with power wires and cables for systems operating at 600 V and less.
 - b. Legend: "ELECTRIC-HV" for duct systems with medium-voltage cables.
 - c. Legend: "SIGNAL" for communications, data, and telephone duct systems.
 3. Manhole Chimney Components: Precast concrete rings with dimensions matched to those of roof opening.
 - a. Mortar for Chimney Ring and Frame and Cover Joints: Comply with ASTM C 270, Type M, except for quantities less than 2.0 cu. ft. where packaged mix complying with ASTM C 387, Type M, may be used.
- C. Pulling Eyes in Concrete Walls: Eyebolt with reinforcing-bar fastening insert, 2-inch-diameter eye, and 1-by-4-inch bolt.
1. Working Load Embedded in 6-Inch, 4000-psi Concrete: 13,000-lbf minimum tension.
- D. Pulling Eyes in Nonconcrete Walls: Eyebolt with reinforced fastening, 1-1/4-inch-diameter eye, rated 2500-lbf minimum tension.
- E. Pulling-In and Lifting Irons in Concrete Floors: 7/8-inch-diameter, hot-dip galvanized, bent steel rod; stress relieved after forming; and fastened to reinforcing rod. Exposed triangular opening.
1. Ultimate Yield Strength: 40,000-lbf shear and 60,000-lbf tension.
- F. Bolting Inserts for Concrete Utility Structure Cable Racks and Other Attachments: Flared, threaded inserts of noncorrosive, chemical-resistant, nonconductive thermoplastic material; 1/2-inch ID by 2-3/4 inches deep, flared to 1-1/4 inches minimum at base.
1. Tested Ultimate Pullout Strength: 12,000 lbf minimum.
- G. Ground Rod Sleeve: 3-inch, PVC conduit sleeve in manhole floors 2 inches from the wall adjacent to, but not underneath, the ducts routed from the facility.
- H. Expansion Anchors for Installation after Concrete Is Cast: Zinc-plated, carbon-steel-wedge type with stainless-steel expander clip with 1/2-inch bolt, 5300-lbf rated pullout strength, and minimum 6800-lbf rated shear strength.

- I. Cable Rack Assembly: Steel, hot-dip galvanized, except insulators.
 - 1. Stanchions: T-section or channel; 2-1/4-inch nominal size; punched with 14 holes on 1-1/2-inch centers for cable-arm attachment.
 - 2. Arms: 1-1/2 inches wide, lengths ranging from 3 inches with 450-lb minimum capacity to 18 inches with 250-lb minimum capacity. Arms shall have slots along full length for cable ties and be arranged for secure mounting in horizontal position at any vertical location on stanchions.
 - 3. Insulators: High-glaze, wet-process porcelain arranged for mounting on cable arms.
 - J. Duct-Sealing Compound: Nonhardening, safe for contact with human skin, not deleterious to cable insulation, and workable at temperatures as low as 35 deg F. Capable of withstanding temperature of 300 deg F without slump and adhering to clean surfaces of plastic ducts, metallic conduits, conduit coatings, concrete, masonry, lead, cable sheaths, cable jackets, insulation materials, and common metals. Capable of withstanding maximum hydrostatic pressures at the installation location with the ground-water level at grade.
 - K. Fixed Manhole Ladders: Arranged for attachment to roof or wall and floor of manhole. Ladder and mounting brackets and braces shall be fabricated from nonconductive, structural-grade, fiberglass-reinforced resin.
 - L. Cover Hooks: Heavy duty, designed for lifts 60 lbf and greater. Two required.
- 2.10 SOURCE QUALITY CONTROL
- A. Test and inspect precast concrete utility structures according to ASTM C 1037.
 - B. Nonconcrete Handhole and Pull-Box Prototype Test: Test prototypes of manholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.
 - 1. Strength tests of complete boxes and covers shall be by either an independent testing agency or the manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
 - 2. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Coordinate layout and installation of ducts, manholes, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field. Notify Architect if there is a conflict between areas of excavation and existing structures or archaeological sites to remain.
- B. Coordinate elevations of ducts and duct-bank entrances into manholes, handholes, and boxes with final locations and profiles of ducts and duct banks, as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations as required to suit field conditions and to ensure that duct runs drain to manholes and handholes, and as approved by Architect.
- C. Clear and grub vegetation to be removed, and protect vegetation to remain according to Division 31 Section "Site Clearing." Remove and stockpile topsoil for reapplication according to Division 31 Section "Site Clearing."

3.2 UNDERGROUND DUCT APPLICATION

- A. Ducts for Electrical Cables Over 600 V: RNC, NEMA Type EPC-40-PVC, in concrete-encased duct bank with warning tape, unless otherwise indicated. RSC, wrapped with corrosion resistance tape, in duct bank with warning tape. RNC, NEMA Type EPC-40-PVC, in direct-buried duct bank with warning tape.
- B. Ducts for Electrical Services 600 V and Less: Provide the following, unless otherwise indicated:
 - 1. Outside building footprint: RNC, NEMA Type EPC-40-PVC, in concrete-encased duct bank with warning tape. RSC, wrapped with corrosion resistance tape, in duct bank with warning tape. Outside building footprint: RNC, NEMA Type EPC-40-PVC, in direct-buried duct bank with warning tape.
 - 2. Under building slab: RNC, NEMA Type EPC-40-PVC, installed in direct-buried duct bank with warning tape, minimum 12 inches below slab.
- C. Ducts for Electrical Feeders 600 V and Less: Provide the following, unless otherwise indicated:
 - 1. Outside building footprint: RNC, NEMA Type EPC-40-PVC, in concrete-encased duct bank with warning tape. ~~Outside building footprint: RNC, NEMA Type EPC-40-PVC, in direct-buried duct bank with warning tape.~~
 - 2. Under building slab: RNC, NEMA Type EPC-40-PVC, installed in direct-buried duct bank with warning tape, minimum 12 inches below slab.
- D. Ducts for Electrical Branch Circuits 600 V and Less: Provide the following, unless otherwise indicated:
 - 1. Outside building footprint: RNC, NEMA Type EPC-40-PVC, in direct-buried duct bank with warning tape.
 - 2. Under building slab, where permitted: RNC, NEMA Type EPC-40-PVC, installed in direct-buried duct bank with warning tape, minimum 12 inches below slab.
 - a. No branch circuits are to be installed below slab-on-grade, unless otherwise indicated. Exception: On-grade floor boxes, route raceway minimum of 6 inches below slab-on-grade.
- E. Ducts for Emergency or Essential Electrical System Feeders 600 V and Less: Provide the following, unless otherwise indicated:
 - 1. Outside building footprint: RNC, NEMA Type EPC-80-PVC, in direct-buried with warning tape. RNC, NEMA Type EPC-40-PVC, in concrete-encased duct bank with warning tape. RSC, wrapped with corrosion resistance tape, in duct bank with warning tape.
 - 2. Under building slab: RNC, NEMA Type EPC-40-PVC, in concrete encased duct bank with warning tape. RNC, NEMA Type EPC-80-PVC, in direct-buried duct bank with warning tape, minimum 12 inches below slab. RSC, wrapped with corrosion resistance tape in direct-buried duct bank with warning tape, minimum 12 inches below slab.
- F. Ducts for Emergency or Essential Electrical System Branch Circuits 600 V and Less: Provide the following, unless otherwise indicated:
 - 1. Outside building footprint: RNC, NEMA Type EPC-80-PVC, in direct-buried with warning tape. Under building slab, where permitted: RSC, wrapped with corrosion resistance tape in direct-buried duct bank with warning tape, minimum 12 inches below slab.
 - a. No branch circuits are to be installed below slab-on-grade, unless otherwise indicated. Exception: On-grade floor boxes, route raceway minimum of 6 inches below slab-on-grade.

- G. Underground Ducts for Telephone, Communications, or Data Utility Service Cables: RNC, NEMA Type EPC-40-PVC, installed in direct-buried duct bank with warning caps and warning tape, unless otherwise indicated.
- H. Underground Ducts for Telephone, Communications, or Data Circuits: RNC, NEMA Type EPC-40-PVC, installed in direct-buried duct bank with warning tape, unless otherwise indicated.
- I. Underground Ducts Crossing or Routed Beneath Paved Paths, Walks, Driveways, and Roadways: RNC, NEMA Type EPC-40-PVC, in concrete-encased duct bank with warning tape.

3.3 UNDERGROUND ENCLOSURE APPLICATION

- A. Handholes and Boxes for 600 V and Less, Including Telephone, Communications, and Data Wiring:
 - 1. Units in Roadways and Other Deliberate Traffic Paths: Precast concrete. AASHTO HB 17, H-20 structural load rating.
 - 2. Units in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Nondeliberate Loading by Heavy Vehicles: Precast concrete, AASHTO HB 17, H-20 structural load rating.
 - 3. Units in Sidewalk and Similar Applications with a Safety Factor for Nondeliberate Loading by Vehicles: Polymer concrete units, SCTE 77, Tier 8 structural load rating.
 - 4. Units Subject to Light-Duty Pedestrian Traffic Only: Fiberglass-reinforced polyester resin, structurally tested according to SCTE 77 with 3000-lbf vertical loading.
- B. Manholes: Precast or cast-in-place concrete.
 - 1. Units Located in Roadways and Other Deliberate Traffic Paths by Heavy or Medium Vehicles: H-20 structural load rating according to AASHTO HB 17.
 - 2. Units Not Located in Deliberate Traffic Paths by Heavy or Medium Vehicles: H-10 load rating according to AASHTO HB 17.

3.4 EARTHWORK

- A. Excavation and Backfill: Comply with Division 31 Section "Earth Moving", but do not use heavy-duty, hydraulic-operated, compaction equipment.
- B. Restore surface features at areas disturbed by excavation and re-establish original grades, unless otherwise indicated. Replace removed sod immediately after backfilling is completed.
- C. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Division 32.
- D. Cut and patch existing pavement in the path of underground ducts and utility structures according to Division 01 Section "Cutting and Patching."
- E. Prepare excavation, base material installation, and compaction necessary for the specific ductbank arrangement.
- F. Verify that excavation, base material installation, and compaction is completed.
- G. Backfill trenches as specified in Division 31.

3.5 DUCT INSTALLATION

- A. Install ducts according to NEMA TCB 2.
- B. Slope: Pitch ducts a minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope ducts from a high point in runs between two manholes to drain in both directions.
- C. Curves and Bends:
 - 1. Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 48 inches (1200 mm, both horizontally and vertically, at other locations, unless otherwise indicated.
 - 2. Where RNC is provided, use RSC elbows with corrosion resistance tape and primer for all bends.
- D. Install conduits to locate top of ductbank at depths as indicated or as required to coordinate with other portions of the Work.
- E. Apply corrosion resistance tape and primer to direct-buried or concrete-encased RSC.
- F. Joints: Use solvent-cemented joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in same plane.
- G. Duct Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10 inches o.c. for 5-inch ducts, and vary proportionately for other duct sizes.
 - 1. Begin change from regular spacing to end-bell spacing 10 feet from the end bell without reducing duct line slope and without forming a trap in the line.
 - 2. Direct-Buried Duct Banks: Install an expansion and deflection fitting in each conduit in the area of disturbed earth adjacent to manhole or handhole. Install an expansion fitting near the center of all straight line direct-buried duct banks with calculated expansion of more than 3/4 inch.
 - 3. Grout end bells into structure walls from both sides to provide watertight entrances.
- H. Building Wall Penetrations: Make a transition from underground duct to rigid steel conduit at least 10 feet outside the building wall without reducing duct line slope away from the building, and without forming a trap in the line. Use fittings manufactured for duct-to-conduit transition. Install conduit penetrations of building walls as specified in Division 26 Section "Common Work Results for Electrical/Common Work Results for Communications/Common Work Results for Electronic Safety and Security."
- I. Stub-Ups: Use manufactured rigid steel conduit elbows and rigid steel conduit extensions for stub-ups at poles, equipment, and at building entrances through the floor. Install insulated bushings on terminations.
 - 1. Where RNC is permitted, convert to RSC prior to turning up into equipment.
 - 2. Extend conduit extensions installed in floors a minimum of 4 inches above finished floor level.
 - 3. Extend conduit extensions installed in equipment bases a minimum of 4 inches above finished base level.
 - 4. Stub-Ups to Outdoor Equipment: For equipment mounted on outdoor concrete bases, extend steel conduit below base horizontally a minimum of 60 inches from edge of base. Install insulated grounding bushings on terminations at equipment.

- J. Sealing: Provide temporary caps to protect installed conduit against entrance of dirt and moisture prior to cable installation. Provide temporary closure at terminations of ducts that have cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig hydrostatic pressure.
- K. Pulling Cord: Install 100-lbf-test nylon cord in ducts, including spares.
- L. Concrete-Encased Duct(s) and Duct Banks: Support ducts on duct separators.
 - 1. Excavate trench bottom to provide firm and uniform support for duct bank. Prepare trench bottoms as specified in Division 31 Section "Earth Moving" for pipes less than 6 inches in nominal diameter.
 - 2. Width: Excavate trench 12 inches wider than duct bank on each side.
 - 3. Depth: Install top of duct bank as follows, unless otherwise indicated.
 - a. Ducts for Electrical Cables Over 600 V: at least 24 inches below finished grade in areas not subject to deliberate traffic, and at least 24 inches below finished grade in deliberate traffic paths for vehicles.
 - b. Ducts for Electrical Conductors and Cables 600 V and less: at least 24 inches below finished grade in areas not subject to deliberate traffic, and at least 30 inches below finished grade in deliberate traffic paths for vehicles.
 - 4. Support duct(s) on duct separators coordinated with duct size, duct spacing, and outdoor temperature.
 - a. Provide Field-Fabricated duct separators for conduits less than 2 inches (50 mm).
 - b. Provide Pre-Manufactured duct separators for conduits 2 inches (50 mm) and larger.
 - c. Required duct separators may be omitted within 2 feet (600 mm) of stub-up location.
 - 5. Separator Installation: Space separators close enough to prevent sagging and deforming of ducts, with not less than 5 spacers per 20 feet of duct. Secure separators to earth and to ducts to prevent floating during concreting. Stagger separators approximately 6 inches between tiers. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
 - 6. Minimum Space between Ducts: 3 inches between ducts and exterior envelope wall, 2 inches between ducts for like services, and 4 inches between power and signal ducts.
 - 7. Elbows: Use manufactured rigid steel conduit elbows for stub-ups at poles and equipment, at building entrances through floor, and at changes of direction in duct run.
 - a. Stub Ups: Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches of concrete.
 - b. Stub-Ups to Equipment: For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches (1500 mm) from edge of base. Install insulated grounding bushings on terminations at equipment.
 - 8. Reinforcement: Reinforce concrete-encased duct banks where they cross disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.
 - 9. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
 - 10. Concrete Color: Dye added to concrete during batching or powder dye applied to top prior to curing.
 - a. ELECTRIC: Red for duct systems with power wires and cables.
 - b. SIGNAL: Orange for communications, data, and telephone duct systems.

11. Concrete Cover: Install a minimum of 3 inches of concrete cover at top and bottom, and a minimum of 2 inches on each side of duct bank, unless otherwise indicated.
 12. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.
 - a. Start at one end and finish at the other, allowing for expansion and contraction of ducts as their temperature changes during and after the pour. Use expansion fittings installed according to manufacturer's written recommendations, or use other specific measures to prevent expansion-contraction damage.
 - b. If more than one pour is necessary, terminate each pour in a vertical plane and install 3/4-inch reinforcing rod dowels extending 18 inches into concrete on both sides of joint near corners of envelope.
 - c. For Cast-In-Place manholes: Connect to manhole wall using dowels.
 13. Pouring Concrete: Comply with requirements in "Concrete Placement" Article in Division 3 Section "Cast-in-Place Concrete." Spade concrete carefully during pours to prevent voids under and between conduits and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto ducts. Use a plank to direct concrete down sides of bank assembly to trench bottom. Allow concrete to flow to center of bank and rise up in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-bank application.
 14. Comply with requirements in Division 31 Section "Earth Moving" for installation of backfill materials.
 - a. Place minimum 6 inches of engineered fill above concrete encasement of duct bank.
 15. Label top of encased duct bank with stenciled lettering 2-inch- (50-mm-) high letters at not less than 10-foot intervals, after curing. Label selected to suit system or as otherwise required.
 - a. Legend: "ELECTRIC-LV" for duct systems with power wires and cables operating at 600 V and less.
 - b. Legend: "ELECTRIC-HV" for duct systems with power wires and cables operating over 600 V.
 - c. Legend: "SIGNAL" for communications, data, and telephone duct systems.
- M. Direct-Buried Duct(s) and Duct Banks:
1. Excavate trench bottom to provide firm and uniform support for duct bank. Prepare trench bottoms as specified in Division 31 Section "Earth Moving" for pipes less than 6 inches in nominal diameter.
 2. Support duct(s) on duct separators coordinated with duct size, duct spacing, and outdoor temperature.
 - a. Provide Field-Fabricated duct separators for conduits less than 2 inches (50 mm).
 - b. Provide Pre-Manufactured duct separators for conduits 2 inches (50 mm) and larger.
 - c. Required duct separators may be omitted within 2 feet (600 mm) of stub-up location.
 3. Space separators close enough to prevent sagging and deforming of ducts, with not less than 5 spacers per 20 feet of duct. Secure separators to earth and to ducts to prevent displacement during backfill and yet permit linear duct movement due to expansion and contraction as temperature changes. Stagger spacers approximately 6 inches between tiers.
 4. Depth: Install top of duct bank at least 36 inches below finished grade, unless otherwise indicated.
 5. Set elevation of bottom of duct bank below frost line.

6. Minimum Space between Ducts: 3 inches between ducts for like services, and 6 inches between power and signal ducts.
 7. Elbows: Use manufactured rigid steel conduit elbows for stub-ups at poles and equipment, at building entrances through floor, and at changes of direction in duct run.
 - a. Stub Ups: Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches of concrete.
 - b. Stub-Ups to Equipment: For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches (1500 mm) from edge of base. Install insulated grounding bushings on terminations at equipment.
 8. After installing first tier of ducts, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand-place backfill to 4 inches over ducts and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction as specified in Division 31 Section "Earth Moving".
 - a. Place minimum 3 inches of sand as a bed for duct bank. Place sand to a minimum of 6 inches above top level of duct bank.
- N. Warning Caps: Install Cast-In-Place Caps or Manufactured Planks approximately 12 inches above direct-buried ducts and duct banks, where indicated.
1. Cast-In-Place Caps: Place to cover entire width of duct bank.
 2. Warning Planks: Place planks 24 inches o.c. Align planks along the width and along the centerline of duct bank. Provide an additional plank for each 12-inch increment of duct-bank width over a nominal 18 inches. Space additional planks 12 inches apart, horizontally.
- O. Warning Tape: Bury Warning Tape approximately 12 inches above ducts and duct banks, where indicated.
1. Align tape parallel to and within 3 inches of the centerline of duct bank.
 2. Provide an additional warning tape for each 12-inch increment of duct-bank width over a nominal 18 inches. Space additional tapes 12 inches apart, horizontally.

3.6 INSTALLATION OF CONCRETE MANHOLES, HANDHOLES, AND BOXES

- A. Cast-in-Place Manhole Installation:
1. Finish interior surfaces with a smooth-troweled finish.
 2. Windows for Future Duct Connections: Form and pour concrete knockout panels 1-1/2 to 2 inches thick. Repair all unused conduit knockouts and other openings in sides of manhole.
 3. Comply with requirements in Division 03 Section "Cast-in-Place Concrete" for cast-in-place concrete, formwork, and reinforcement.
- B. Precast Concrete Handhole and Manhole Installation:
1. Comply with ASTM C 891, unless otherwise indicated.
 2. Install units level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances.
 3. Unless otherwise indicated, support units on a minimum 6-inch (150-mm) level bed of crushed stone or gravel, graded from 1-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.
- C. Elevations:

1. Manhole Roof: Install with rooftop at least 15 inches below finished grade or as required to prevent floating of manhole.
 2. Manhole Frame: In paved areas and trafficways, set frames flush with finished grade. Set other manhole frames 1 inch above finished grade.
 3. Install handholes with bottom below the frost line.
 4. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1 inch above finished grade.
 5. Where indicated, cast handhole cover frame integrally with handhole structure.
- D. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions as indicated.
- E. Manhole Access: Circular opening in manhole roof; sized to match cover size.
1. Manholes with Fixed Ladders: Offset access opening from manhole centerlines to align with ladder.
 2. Install chimney, constructed of precast concrete collars and rings to support cast-iron frame and cover and to connect cover with manhole roof opening. Provide moisture-tight masonry joints and waterproof grouting for cast-iron frame to chimney.
- F. Waterproofing: Apply waterproofing to exterior surfaces of manholes after concrete has cured at least three days. Waterproofing materials and installation are specified in Division 07 Section "Elastomeric Sheet Waterproofing" or "Thermoplastic Sheet Waterproofing." After ducts have been connected and grouted, and before backfilling, waterproof joints and connections and touch up abrasions and scars. Waterproof exterior of manhole chimneys after mortar has cured at least three days.
- G. Dampproofing: Apply dampproofing to exterior surfaces of manholes and handholes after concrete has cured at least three days. Dampproofing materials and installation are specified in Division 07 Section "Bituminous Dampproofing." After ducts have been connected and grouted, and before backfilling, dampproof joints and connections and touch up abrasions and scars. Dampproof exterior of manhole chimneys after mortar has cured at least three days.
- H. Hardware: Install removable hardware, including pulling eyes, cable stanchions, and cable arms, and insulators, as required for installation and support of cables and conductors and as indicated.
- I. Fixed Manhole Ladders: Arrange to provide for safe entry with maximum clearance from cables and other items in manholes.
- J. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than 3-7/8 inches for manholes and 2 inches for handholes, for anchor bolts installed in the field. Use a minimum of two anchors for each cable stanchion.
- K. Warning Sign: Install "Confined Space Hazard" warning sign on the inside surface of each manhole cover.
- 3.7 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE
- A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of ducts, and seal joint between box and extension as recommended by the manufacturer.

- B. Unless otherwise indicated, support units on a minimum 4-inch (100-mm) level bed of crushed stone or gravel, graded from 1/2-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.
- C. Elevation: In paved areas and trafficways, set so cover surface will be flush with finished grade. Set covers of other handholes 1 inch above finished grade.
- D. Install handholes and boxes with bottom below the frost line.
- E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in the enclosure.
- F. Field-cut openings for ducts and conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.
- G. For enclosures installed in asphalt paving and other non-concrete surfaces and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour a concrete ring encircling, and in contact with, enclosure and with top surface screeded to top of box cover frame. Bottom of ring shall rest on compacted earth.
 - 1. Concrete: 3000 psi, 28-day strength, complying with Division 03 Section "Cast-in-Place Concrete," with a troweled finish.
 - 2. Dimensions: 10 inches wide by 12 inches deep.

3.8 GROUNDING

- A. Ground underground ducts and utility structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."

3.9 SLEEVE AND SLEEVE SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Apply Sleeve and Sleeve Seal where raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, exterior walls, sub-grade walls or fire-rated floor and wall assemblies. Sleeve and Sleeve Seal materials and installation requirements are specified in Division 26 Section "Common Work Results for Electrical."

3.10 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections and prepare test reports:
 - 1. Demonstrate capability and compliance with requirements on completion of installation of underground ducts and utility structures.
 - 2. Pull solid aluminum or wood test mandrel through duct to prove joint integrity and adequate bend radii, and test for out-of-round duct. Provide a 6-inch-(150-mm-) long mandrel equal to 80 percent fill of duct. If obstructions are indicated, remove obstructions and retest.
 - 3. Test manhole and handhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Correct deficiencies and retest as specified above to demonstrate compliance.

3.11 CLEANING

- A. On completion of installation but before any equipment or cable is installed, inspect interior and exterior surfaces and perform the following:
 - 1. Clean ducts prior to cleaning manhole or pull box.
 - 2. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of ducts. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.
 - 3. Remove all dirt and debris and pump out the manhole or pull box so that it is free of standing water. Manholes and pull boxes shall be dry prior to equipment or cable is installed.
 - 4. Clean internal surfaces of manholes, including sump and remove foreign material.
 - 5. Repaired of damages resulting from construction after initial installation.

END OF SECTION

SECTION 260548

VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Delegated Design requirements for system design.
 - 2. Requirements for Manufacturer Seismic Certification.
 - 3. Requirements for Manufacturer Special Seismic Certification.
 - 4. Isolation pads.
 - 5. Spring isolators.
 - 6. Restrained spring isolators.
 - 7. Channel support systems.
 - 8. Restraint cables.
 - 9. Hanger rod stiffeners.
 - 10. Anchorage bushings and washers.
- B. Related Sections include the following:
 - 1. Division 26 Section "Hangers and Supports for Electrical Systems" for commonly used electrical supports and installation requirements.

1.2 DEFINITIONS

- A. IBC: International Building Code.
- B. ICC-ES: ICC-Evaluation Service.
- C. Seismic Certification: Seismic certification refers to a manufacturer's certification for architectural, mechanical, and electrical components, supports, and attachments pursuant to ASCE/SEI 7-05 Section 13.2.1.2.
- D. Seismic Qualification: Same as Special Seismic Certification
- E. Special Seismic Certification: Seismic certification of mechanical and electrical equipment based on ASCE/SEI 7-05 Section 13.2.2. Special Seismic Certification is required for active mechanical and electrical equipment that must remain operable following the design earthquake.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design supports for vibration and seismic controls, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
 - 1. Do not use more than one pre-approved seismic-force resistance system on any single run of pipe, duct or conduit. Mixing of multiple pre-approved systems is not acceptable.
- B. Seismic-Restraint Loading: In preparation of Delegated Design, utilize seismic forces as described in ASCE 7-02 "Minimum Design Loads for Buildings and Other Structures" as

published by the American Society of Civil Engineers, unless requirements in this Section are more stringent. Refer to the structural engineers drawings for confirmation of the following criteria.

1. Site Class as Defined in the IBC.
 2. Assigned Seismic Use Group or Building Category as Defined in the IBC: III.
 - a. Component Importance Factor: Per ASCE 7-10 Section 13.1.3.
 - b. Component Response Modification Factor: Per ASCE Table 13.6-1.
 - c. Component Amplification Factor: Per ASCE Table 13.6-1.
 3. Design Spectral Response Acceleration at Short Periods (0.2 Second): 0.138g.
 4. Design Spectral Response Acceleration at 1.0-Second Period: 0.088g.
- C. Submittal Review Conference: At time of Delegated Design Shop Drawing submission, schedule a submittal review conference with the Architect and Structural Engineer-of-Record for the project. The purpose of this conference is to review attachment locations and insure supplementary framing that is needed to resist the loads, maintain stability or to meet other installation requirements of a pre-approved system have been accounted for in the Structural Engineer-of-Record's design.

1.4 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS
- B. General Submittal Requirements:
1. Submittals shall be reviewed by Architect and the Structural Engineer-of-Record prior to submitting them to authorities having jurisdiction.
- C. Contractor Statement of Responsibility:
1. Submit a written statement in accordance with IBC Chapter 17.
 2. Statement shall be submitted on company letterhead.
 3. In instances where trade sub-contractors are responsible for construction and implementation of seismic-force resisting systems, the representatives of these various trade sub-contractors shall sign the Contractor Statement of Responsibility.
- D. Product Data: For the following:
1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
 2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.
 - a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated by an evaluation service member of ICC-ES or an agency acceptable to authorities having jurisdiction.
 - b. Annotate to indicate application of each product submitted and compliance with requirements.
 3. Restrained-Isolation Devices: Include ratings for horizontal, vertical, and combined loads.
- E. Delegated-Design Submittal: For vibration isolation and seismic-restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation, seismic forces required to select vibration isolators and seismic restraints.

- a. Coordinate design calculations with wind-load calculations required for equipment mounted outdoors. Comply with requirements in other Division 26 Sections for equipment mounted outdoors.
2. Indicate materials and dimensions and identify hardware, including attachment and anchorage devices.
3. Field-fabricated supports.
4. Seismic-Restraint Details:
 - a. Design Analysis: To support selection and arrangement of seismic restraints. Include calculations of combined tensile and shear loads.
 - b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events. Indicate association with vibration isolation devices.
 - c. Preapproval and Evaluation Documentation: By an evaluation service member of ICC-ES or an agency acceptable to authorities having jurisdiction, showing maximum ratings of restraint items and the basis for approval (tests or calculations).

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Show coordination of seismic bracing for electrical components with other systems and equipment in the vicinity, including other supports and seismic restraints.
- B. Qualification Data: For professional engineer and testing agency.
- C. Common Requirements For Qualification Data:
 1. Manufacturer Seismic Qualification Certification: Where this Section and other Sections of this Division require products to meet seismic requirements; Submit certification that equipment, devices, accessories, and components will withstand seismic forces defined in this Section. Include the following:
 - a. Basis of Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 1) The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - 2) The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 - b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
 2. Manufacturer Special Seismic Certification: Where this Section and other Sections of this Division require products to meet seismic requirements; Submit certification that equipment, devices, accessories, and components will withstand seismic forces defined in this Section. Include the following:
 - a. Basis of Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 1) The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

- b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- D. Welding certificates.
- E. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For seismic-force restraint systems and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 - 1. Copy of the Delegated Design Shop Drawings, including AHJ approval stamp.
 - 2. Copy of the Delegated Design Submittal, including AHJ approval stamp.

1.7 QUALITY ASSURANCE

- A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
- B. Comply with seismic-restraint requirements in the IBC NFPA 5000 and CBC, unless requirements in this Section are more stringent.
- C. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- D. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage preapproval OPA number from OSHPD, preapproval by ICC-ES, or preapproval by another agency acceptable to authorities having jurisdiction, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are not available, submittals based on independent testing are preferred. Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a qualified professional engineer.
- E. Special Seismic Certification: Unless otherwise allowed by OSHPD, electrical components, supports, and attachments shall be certified pursuant to ASCE/SEI 7-05 Section 13.2.2. Items requiring certification are as follows, but not limited to:
 - 1. Emergency and standby power systems, including, but not limited to:
 - a. Generators.
 - b. Fuel tanks.
 - c. Automatic Transfer Switches.
 - 2. Switchboards.
 - 3. Transformers.
 - 4. UPS and associated batteries.
 - 5. Distribution panels including electrical panelboards.
 - 6. Control panels, including but not limited to:
 - a. Fire Alarm.
 - b. Auxiliary.
 - c. Remote Power Supplies.

- F. Rugged Equipment: Factory assembled, discrete components are considered rugged and deemed to comply with ASCE/SEI 7-05 Section 13.2.6, and do not require Special Seismic Certification. Items considered exempt are as follows:
1. Equipment and components weighing not more than 20 lbs. supported directly on structures (and not mounted on other equipment or components) with supports and attachments in accordance with Chapter 13, ASCE/SEI 7-05, as modified by Section 1614A, 2007 CBC.
- G. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1 VIBRATION ISOLATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Ace Mountings Co., Inc.
 2. Amber/Booth Company, Inc.
 3. California Dynamics Corporation.
 4. ISAT, International Seismic Application Technology.
 5. Isolation Technology, Inc.
 6. Kinetics Noise Control.
 7. Mason Industries.
 8. Vibration Eliminator Co., Inc.
 9. Vibration Isolation.
 10. Vibration Mountings & Controls, Inc.
- B. Isolation Pads: Arrange in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.
1. Resilient Material: Oil- and water-resistant pads of neoprene, rubber or hermetically sealed compressed fiberglass minimum 1/4 inch thick.
- C. Spring Isolators: Freestanding, laterally stable, open-spring isolators.
1. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 2. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 3. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 4. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 5. Baseplates: Factory drilled for bolting to structure and bonded to 1/4-inch-thick, rubber isolator pad attached to baseplate underside. Baseplates shall limit floor load to 500 psig.
 6. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.
- D. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic or limit-stop restraint.
1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to weight being removed; factory-drilled baseplate bonded to 1/4-inch- (6-mm-) thick, neoprene or rubber isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
 2. Restraint: Seismic or limit-stop as required for equipment and authorities having jurisdiction.

3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

2.2 SEISMIC-RESTRAINT DEVICES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Amber/Booth Company, Inc.
 2. California Dynamics Corporation.
 3. Cooper B-Line, Inc.; a division of Cooper Industries.
 4. ISAT, International Seismic Application Technology
 5. Hilti Inc.
 6. Loos & Co.; Seismic Earthquake Division.
 7. Mason Industries.
 8. TOLCO Incorporated; a brand of NIBCO INC.
 9. Unistrut; Tyco International, Ltd.
- B. General Requirements for Restraint Components: Rated strengths, features, and application requirements shall be as defined in reports by an evaluation service member of ICC-ES or an agency acceptable to authorities having jurisdiction.
 1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least 4 times the maximum seismic forces to which they will be subjected.
- C. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.
- D. Restraint Cables: ASTM A 603 galvanized -steel cables with end connections made of steel assemblies with thimbles, brackets, swivels, and bolts designed for restraining cable service; and with a minimum of two clamping bolts for cable engagement.
- E. Hanger Rod Stiffener: Steel tube or steel slotted-support-system sleeve with internally bolted connections or reinforcing steel angle clamped to hanger rod. Do not weld stiffeners to rods.
- F. Bushings for Floor-Mounted Equipment Anchor: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchors and studs.
- G. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices.
- H. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.
- I. Mechanical Anchor: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchors with strength required for anchor and as tested according to ASTM E 488. Minimum length of eight times diameter.

- J. Adhesive Anchor: Drilled-in and capsule anchor system containing polyvinyl or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

2.3 FACTORY FINISHES

- A. Finish: Manufacturer's standard paint applied to factory-assembled and -tested equipment before shipping.
 - 1. Powder coating on springs and housings.
 - 2. All hardware shall be galvanized. Hot-dip galvanize metal components for exterior use.
 - 3. Baked enamel or powder coat for metal components on isolators for interior use.
 - 4. Color-code or otherwise mark vibration isolation and seismic-control devices to indicate capacity range.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and equipment to receive vibration isolation and seismic-control devices for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

- A. Multiple Raceways or Cables: Secure raceways and cables to trapeze member with clamps approved for application by an evaluation service member of ICC-ES or an agency acceptable to authorities having jurisdiction.
- B. Hanger Rod Stiffeners: Install hanger rod stiffeners as required by delegate design calculations to prevent buckling of hanger rods due to seismic forces.
- C. Strength of Support and Seismic-Restraint Assemblies: Select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.
- D. Provide vibration isolation for floor-mounted and rack mounted transformers as follows:
 - 1. 45 kVA and below: provide nothing.
 - 2. 75 kVA to 150 kVA: provide isolation pad.
 - 3. 225 kVA and above: provide spring isolators.
- E. Provide spring isolators for suspended transformers.

3.3 SEISMIC-RESTRAINT DEVICE INSTALLATION

- A. Equipment and Hanger Restraints:
 - 1. Install restrained isolators as required by delegate design calculations.

2. Install resilient, bolt-isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2 mm).
 3. Install seismic-restraint devices using methods approved by an evaluation service member of ICC-ES or an agency acceptable to authorities having jurisdiction providing required submittals for component.
- B. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- C. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- D. Drilled-in Anchors:
1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
 3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
 4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
 5. Set anchors to manufacturer's recommended torque, using a torque wrench.
 6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.4 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

- A. Install flexible connections in runs of raceways, cables, wireways, cable trays, and busways where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where they terminate with connection to equipment that is anchored to a different structural element from the one supporting them as they approach equipment.

3.5 IDENTIFICATION

- A. Install brass identification tags at all seismic brace locations. Tags to include the following information:
1. Unique keyed identification number that corresponds to nomenclature used to mark location on shop drawings and calculations.
 2. Specific G-force the system at that location is designed to resist.
 3. Maximum brace reaction to the structure.
 4. For Individually suspended items: Maximum conduit size.
 5. For Trapeze or Multiple pipe hangers: Maximum pounds-per-lineal-foot.
 6. For Suspended Equipment: Maximum weight of equipment.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified independent testing and inspecting agency as defined in Division 26 Section "Common Work Results for Electrical" to perform the following field tests and inspections and prepare certified test reports:
- ~~B. [Manufacturer's Field Service: Engage a factory-authorized service representative to perform the following field tests and inspections and prepare certified test reports:]~~
- C. ~~[Perform the following field tests and inspections and prepare test reports:]~~
 - 1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
 - 2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless postconnection testing has been approved), and with at least seven days' advance notice.
 - 3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
 - 4. Test at least four of each type and size of installed anchors and fasteners selected by Architect.
 - 5. Test to 90 percent of rated proof load of device.
 - 6. Measure isolator restraint clearance.
 - 7. Measure isolator deflection.
 - 8. Verify snubber minimum clearances.
- D. Correct Deficiencies, Retest and Report:
 - 1. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace units and devices as required to bring system into compliance.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.
 - 4. Prepare a report, certified by testing agency, that identifies unit components and devices checked and describes results. Include notation of deficiencies detected, remedial action taken, and observations and test results after remedial action.

3.7 ADJUSTING

- A. Adjust isolators after isolated equipment is at operating weight.
- B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.
- C. Adjust active height of spring isolators.
- D. Adjust restraints to permit free movement of equipment within normal mode of operation.

3.8 ELECTRICAL VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE SCHEDULE

- A. Equipment: Provide equipment name and/ or description:
 - 1. Emergency Feeders and branch circuits.
 - 2. Normal Feeders and branch circuits
 - 3. Cable Trays
 - 4. Lights
 - 5. Dimming Panels

6. Medium-Voltage Transformers
7. Low-Voltage Transformers
8. Switchboards
9. Panelboards
10. Motor-Control Centers
11. Enclosed Bus Assemblies
12. Enclosed Switches And Circuit Breakers
13. Enclosed Controllers
14. Variable-Frequency Motor Controllers
15. Engine Generators
16. Static Uninterruptible Power Supply
17. Transfer Switches
18. SPD For Low-Voltage Electrical Power Circuits

B. Equipment: Provide equipment name and/ or description.

1. Equipment Location: (Insert room number).
2. Pads:
 - a. Material: Neoprene Rubber or Hermetically sealed compressed fiberglass.
 - b. Thickness: (Insert inches).
 - c. Durometer: (Insert number).
 - d. Number of Pads: (Insert number) thick.
3. Isolator Type: Insert generic name or designation used in Part 2.
4. Component Importance Factor: As determined per ASCE.
5. Component Response Modification Factor: As determined per ASCE.
6. Component Amplification Factor: As determined per ASCE.

C. Equipment: Provide equipment name and/ or description.

1. Emergency Feeders and branch circuits.
2. Normal Feeders and branch circuits
3. Cable Trays
4. Lights
5. Dimming Panels
6. Medium-Voltage Transformers
7. Low-Voltage Transformers
8. Switchboards
9. Panelboards
10. Motor-Control Centers
11. Enclosed Bus Assemblies
12. Enclosed Switches And Circuit Breakers
13. Enclosed Controllers
14. Variable-Frequency Motor Controllers
15. Engine Generators
16. Static Uninterruptible Power Supply
17. Transfer Switches
18. SPD For Low-Voltage Electrical Power Circuits

END OF SECTION

SECTION 260553

IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Identification for raceways.
 - 2. Identification for conductors and multi-conductor cables.
 - 3. Underground-line warning tape.
 - 4. Warning labels and signs.
 - 5. Instruction signs.
 - 6. Equipment identification labels.
 - 7. Miscellaneous identification products.
- B. Related Sections include the following:
 - 1. Division 26 Section "Wiring Devices" for engraved wall plates and wiring device identification requirements.

1.2 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Product Data: For each electrical identification product indicated.
- C. Samples: For each type of label and sign to illustrate size, colors, lettering style, mounting provisions, and graphic features of identification products.
- D. Identification Schedule: An index of nomenclature of electrical equipment and system components used in identification signs and labels.

1.3 QUALITY ASSURANCE

- A. Comply with ANSI A13.1[and IEEE C2].
- B. Comply with NFPA 70.
- C. Comply with 29 CFR 1910.144 and CFR 1910.145.
- D. Comply with ANSI Z535.4 for safety signs and labels.
- E. [Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.]

1.4 COORDINATION

- A. Coordinate identification names, abbreviations, colors, and other features with requirements in the Contract Documents, Shop Drawings, manufacturer's wiring diagrams,

and the Operation and Maintenance Manual, and with those required by codes, standards, and 29 CFR 1910.145. Use consistent designations throughout Project.

- B. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- C. Coordinate installation of identifying devices with location of access panels and doors.
- D. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 POWER AND CONTROL RACEWAY IDENTIFICATION MATERIALS

- A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway size.
- B. Color for Raceways Carrying Circuit at 600V or Less:
 - 1. Black letters on an orange field.
 - 2. Legend: Indicate voltage and system or service type, if applicable.
- C. Colors for Raceways Carrying Circuits at More Than 600 V:
 - 1. Black letters on an orange field.
 - 2. Legend: "DANGER CONCEALED HIGH VOLTAGE WIRING."
- D. Self-Adhesive Vinyl Labels for Raceways Carrying Circuits at 600V or Less: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

2.2 MULTI-CONDUCTOR CABLE IDENTIFICATION MATERIALS

- A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each cable size.
- B. Colors for Cables Carrying Circuits at 600 V and Less:
 - 1. Black letters on an orange field.
 - 2. Legend: Indicate voltage and system or service type.
- C. Colors for Cables Carrying Circuits at More Than 600 V:
 - 1. Black letters on an orange field.
 - 2. Legend: "DANGER HIGH VOLTAGE WIRING."
- D. Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound clear adhesive tape for securing ends of legend label.
- E. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; 2 inches wide; compounded for outdoor use.

2.3 CONDUCTOR IDENTIFICATION MATERIALS

- A. Color-Coding Conductor Tape: Colored, self-adhesive vinyl tape not less than 3 mils thick by 1 to 2 inches wide.

- B. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.
- C. Brass or Stainless Steel Wraparound Marker Labels: Cut from 0.014-inch-thick, with stamped, embossed, or scribed legend, and fitted with tabs and matching slots for permanently securing around wire or cable jacket or around groups of conductors.
- D. Metal Tags: Brass or Stainless Steel, 2 by 2 by 0.05 inch, with stamped legend, punched for use with self-locking nylon tie fastener.

2.4 UNDERGROUND-LINE WARNING TAPE

- A. Description: Permanent, bright-colored, continuous-printed, polyethylene tape.
 1. Not less than 6 inches wide by 4 mils thick.
 2. Compounded for permanent direct-burial service.
 3. Embedded continuous metallic strip or core.
 4. Printed legend shall indicate type of underground line.

2.5 WARNING LABELS AND SIGNS

- A. Comply with NFPA 70 and 29 CFR 1910.145.
- B. Self-Adhesive Warning Labels: Factory printed, multicolor, pressure-sensitive adhesive labels, configured for display on front cover, door, or other access to equipment, unless otherwise indicated.
- C. Baked-Enamel Warning Signs:
 1. Preprinted aluminum signs, punched or drilled for fasteners, with colors, legend, and size required for interior application.
 2. 1/4-inch grommets in corners for mounting.
 3. Nominal size, 7 by 10 inches.
- D. Metal-Backed, Butyrate Warning Signs:
 1. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs with 0.0396-inch galvanized-steel backing; and with colors, legend, and size required for exterior application.
 2. 1/4-inch grommets in corners for mounting.
 3. Nominal size, 10 by 14 inches.
- E. Warning label and sign shall include, but are not limited to, the following legends:
 1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
 2. Workspace Clearance Warning: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR ## INCHES." Verify work space required for specific project conditions with NFPA 70 and replace "##" in previous sentence with appropriate distance.
 3. Arc Flash Warning and Instructions: "WARNING – ARC FLASH AND SHOCK HAZARD. WEAR APPROPRIATE PPE. Determine appropriate protective clothing and personal protective equipment (PPE) for the task from NFPA 70E."
 4. Provide detailed labeling in accordance with requirements listed in Division 26 Section "Overcurrent Protective Device Coordination Study".

2.6 INSTRUCTION SIGNS

- A. Engraved, laminated acrylic or melamine plastic, minimum 1/16 inch thick for signs up to 20 sq. in. and 1/8 inch thick for larger sizes.
 - 1. Engraved legend with black letters on white face.
 - 2. Punched or drilled for mechanical fasteners.
 - 3. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.7 ONE-LINE DIAGRAM NAMEPLATE

- A. Preprinted engraved, laminated acrylic or melamine plastics sign. Nominal size, 12 by 12 inches 1/8 inch (3.2 mm) thick. Engraved legend with black letters on white face. Image on sign depicting equipment components in single-line diagram format, using symbols and letter designations consistent with final one-line bus diagram. Produce a concise visual presentation of principal equipment components and connections.

2.8 EQUIPMENT IDENTIFICATION LABELS

- A. Engraved, Laminated Acrylic or Melamine Label: Adhesive, Punched, or drilled for screw mounting. Minimum letter height shall be 3/8 inch. Lettering and Background colors as indicated below:
 - a. Power Circuits:
 - 1) Normal: Verify with Owner][White lettering on Black background].
 - 2) Emergency Legally Required Standby or Essential Electrical System prior to ATS Verify with Owner][Black lettering on Orange background].
 - 3) Emergency Optional Standby: Verify with Owner][White lettering on Blue background].
 - 4) Life Safety Branch: Verify with Owner][Black Lettering on Red background].
 - 5) Equipment Emergency System: Verify with Owner][Yellow lettering on Blue background].
 - 6) Non-Essential Emergency System: Verify with Owner][White lettering on Purple background].
 - 7) UPS: Verify with Owner][White lettering on Green background].
 - b. Fire Alarm System: White lettering on Red background.
 - c. Fire-Suppression Supervisory and Control System Verify with Owner][Yellow lettering on Red background].
 - d. Mechanical and Electrical Supervisory System: Verify with Owner][Green lettering on Blue background].
 - e. Control Wiring: Verify with Owner][Green lettering on Red background].

2.9 MISCELLANEOUS IDENTIFICATION PRODUCTS

- A. Conductor Color-Coding Key: Engraved, Laminated Acrylic, Melamine Label, or Decal-Style Label: Adhesive, Punched, or drilled for screw mounting. Minimum letter height shall be 3/8 inch. Key to describe the conductor color coding scheme used in building in accordance with NFPA 70.

2.10 CABLE TIES

- A. General-Purpose Cable Ties: Fungus inert, self extinguishing, one piece, self locking, Type 6/6 nylon.
 - 1. Minimum Width: 3/16 inch.
 - 2. Tensile Strength at 73 deg F, According to ASTM D 638: 12,000 psi.

3. Temperature Range: Minus 40 to plus 185 deg F.
 4. Color: Black except where used for color-coding.
- B. UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self extinguishing, one piece, self locking, Type 6/6 nylon.
1. Minimum Width: 3/16 inch.
 2. Tensile Strength at 73 deg F, According to ASTM D 638: 12,000 psi.
 3. Temperature Range: Minus 40 to plus 185 deg F.
 4. Color: Black.
- C. Plenum-Rated Cable Ties: Self extinguishing, UV stabilized, one piece, self locking.
1. Minimum Width: 3/16 inch.
 2. Tensile Strength at 73 deg F, According to ASTM D 638: 7000 psi.
 3. UL 94 Flame Rating: 94V-0.
 4. Temperature Range: Minus 50 to plus 284 deg F.
 5. Color: Black.
- D. Paint: Paint materials and application requirements are specified in Division 09 painting Sections.
1. Exterior Ferrous Metal:
 - a. Semigloss Alkyd-Enamel Finish: One finish coat(s) over a primer.
 - 1) Primer: Exterior ferrous-metal primer.
 - 2) Finish Coats: Exterior semigloss alkyd enamel.
 2. Exterior Zinc-Coated Metal (except Raceways):
 - a. Semigloss Alkyd-Enamel Finish: One finish coat(s) over a primer.
 - 1) Primer: Exterior zinc-coated metal primer.
 - 2) Finish Coats: Exterior semigloss alkyd enamel.
 3. Interior Ferrous Metal:
 - a. Semigloss Acrylic-Enamel Finish: One finish coat(s) over a primer.
 - 1) Primer: Interior ferrous-metal primer.
 - 2) Finish Coats: Interior semigloss acrylic enamel.
 4. Interior Zinc-Coated Metal (except Raceways):
 - a. Semigloss Acrylic-Enamel Finish: One finish coat(s) over a primer.
 - 1) Primer: Interior zinc-coated metal primer.
 - 2) Finish Coats: Interior semigloss acrylic enamel.
- E. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Verify identity of each item before installing identification products.
- B. Location: Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment.
- C. Apply identification devices to surfaces that require finish after completing finish work.
- D. Self-Adhesive Identification Products: Clean surfaces before application, using materials and methods recommended by manufacturer of identification device.
- E. Attach signs and plastic labels that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.

- F. Attach plastic raceway and cable labels that are not self-adhesive type with clear vinyl tape with adhesive appropriate to the location and substrate.
- G. System Identification Color Banding for Raceways and Cables: Each color band shall completely encircle cable or conduit. Place adjacent bands of two-color markings in contact, side by side. Locate bands at changes in direction, at penetrations of walls and floors, at 50-foot maximum intervals in straight runs, and at 25-foot maximum intervals in congested areas.
- H. Conductor Color-Coding Key: Install Instructional Label denoting the conductor color-coding scheme on all panelboards, distribution boards, switchboards, switchgear, motor-control center and similar equipment.
- I. Conductor Color-Coding for Identification, 600 V and Less: Use the colors listed below for ungrounded service, feeder, and branch-circuit conductors.
 - 1. Color shall be factory applied to conductors or for sizes larger than No. 8 AWG, if authorities having jurisdiction permit, field applied.
 - 2. Colors for Grounding Conductors:
 - a. Equipment Grounding Conductor: Green.
 - b. Isolated Equipment Grounding Conductor: Green with Yellow Stripe.
 - 3. Colors for 208/120-V Wye Systems:
 - a. Phase A: Black.
 - b. Phase B: Red.
 - c. Phase C: Blue.
 - d. Grounded Conductor (Neutral): White
 - 4. Colors for 208/120-V and 240/120-V Delta Systems:
 - a. Phase A: Black.
 - b. Phase B (High Leg): Orange.
 - c. Phase C: Blue.
 - d. Grounded Conductor (Neutral): White
 - 5. Colors for 480/277-V Wye Systems:
 - a. Phase A: Brown.
 - b. Phase B: [Purple or Orange]. (Verify in the field)
 - c. Phase C: Yellow.
 - d. Grounded Conductor (Neutral): Gray
 - 6. Colors for 480/277-V Delta Systems:
 - a. Phase A: Brown.
 - b. Phase B (High Leg): Orange.
 - c. Phase C: Yellow.
 - d. Grounded Conductor (Neutral): Gray
 - 7. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for a minimum distance of 6 inches from terminal points and in boxes where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding. Locate bands to avoid obscuring factory cable markings.
- J. Aluminum Wraparound Marker Labels and Metal Tags: Secure tight to surface of conductor or cable at a location with high visibility and accessibility.
- K. Cable Ties: For attaching tags. Use general-purpose type, except as listed below:
 - 1. Outdoors: UV-stabilized nylon.
 - 2. In Spaces Handling Environmental Air: Plenum rated.
- L. Underground-Line Warning Tape: During backfilling of trenches install continuous underground-line warning tape directly above line at 6 to 8 inches below finished grade.

Use multiple tapes where width of multiple lines installed in a common trench or concrete envelope exceeds 16 inches overall.

- M. Painted Identification: Prepare surface and apply paint according to Division 09 painting Sections.

3.2 IDENTIFICATION SCHEDULE

- A. Accessible Raceways More Than 600 V: Self-adhesive vinyl labels. Install labels at 10-foot maximum intervals.
- B. Accessible Raceways, 600 V or Less, for Service, Feeder, and Branch Circuits More Than 30A, and 120V to ground: Identify with self-adhesive vinyl label. Install labels at 10-foot (3-m) maximum intervals.
- C. Accessible Raceways and Cables of Auxiliary Systems: Identify the following systems with color-coded, self-adhesive vinyl tape applied in bands every 10 lineal feet:
 - 1. Fire Alarm System: Red.
 - 2. Fire-Suppression Supervisory and Control System: Red and yellow.
 - 3. Combined Fire Alarm and Security System: Red and blue.
 - 4. Security System: Blue and yellow.
 - 5. Mechanical and Electrical Supervisory System: Green and blue.
 - 6. Telecommunication System: Green and yellow.
 - 7. Control Wiring: Green and red.
- D. Power-Circuit Conductor Identification, 600V or Less: Identify source and circuit number of each ungrounded conductor or set of conductors. For single conductor cables, identify phase in addition to the above.
 - 1. For conductors in pull and junction boxes, device boxes, and within 6-inches (153 mm) of termination use pre-printed marker tape.
 - 2. For conductors in vaults, manholes, hand holes and pull and junction boxes located in damp or wet locations use brass or stainless steel wraparound marker labels.
- E. Power-Circuit Conductor Identification, More than 600 V: For conductors in vaults, pull and junction boxes, manholes, and handholes, use nonmetallic plastic tag holder with adhesive-backed phase tags, and a separate tag with the circuit designation.
- F. Conductors to Be Extended in the Future: Attach marker tape to conductors and list source and circuit number.
- G. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, signal, sound, intercommunications, voice, and data connections.
 - 1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.
 - 2. Use system of marker tape designations that is uniform and consistent with system used by manufacturer for factory-installed connections.
 - 3. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and Operation and Maintenance Manual.
- H. Locations of Underground Lines: Identify with underground-line warning tape for power, lighting, communication, and control wiring and optical fiber cable. Install underground-line warning tape for both direct-buried cables and cables in raceway.

- I. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Comply with 29 CFR 1910.145 and apply baked-enamel warning signs. Identify system voltage with black letters on an orange background. Apply to exterior of door, cover, or other access.
 1. Equipment with Multiple Power or Control Sources: Apply to door or cover of equipment including, but not limited to, the following:
 - a. Power transfer switches.
 - b. Main-Tie-Main Switchboards
 - c. Generator Paralleling Switchgear.
 - d. Controls with external control power connections.
 2. Equipment Requiring Workspace Clearance According to NFPA 70: Unless otherwise indicated, apply to door or cover of equipment but not on flush panelboards and similar equipment in finished spaces.
 3. Arc Flash Warning Labels: Apply label to door or cover at all access point of equipment including, but not limited to, the following:
 - a. Disconnect switches.
 - b. Electrical substations.
 - c. Electrical switchgear and switchboards.
 - d. Emergency system boxes and enclosures.
 - e. Enclosed circuit breakers.
 - f. Meter Sockets and assemblies.
 - g. Motor starters.
 - h. Motor-control centers.
 - i. Panelboards.
 - j. Power transfer equipment.(ATS)
 - k. Transformers.
 - l. Uninterruptible power supply equipment.

Available Fault Current Field Marking: Apply label to cover service equipment enclosure with the date in which the fault current was calculated and the available fault current as indicated on the drawings and verified by the OCPD coordination study. Table 1 below lists a typical example of label format, coordinate project specific requirements with Drawings.

Table 1 (Example Only)

MAX. AVAILABLE FAULT: XX,XXXA DATE: X/X/XX

- J. Junction Boxes and Pull Boxes: Identify voltage, source, and circuit number(s) on cover of pull and junction boxes with hand-written legible block lettering using black permanent marking pen.
- K. [Color Coding of Junction Boxes and Pull Boxes: Identify system on cover of pull and junction boxes using colored enamel spray paint. Where two colors are indicated identify each half of box with colors indicated.
 1. Power Circuits:
 - a. Normal Black.
 - b. Emergency Legally Required Standby or Essential Electrical System prior to ATS:[Verify with Owner][Black and Orange].
 - c. Emergency Optional Standby[Verify with Owner][Blue].
 - d. Life Safety Branch: Verify with Owner][Black and Red].
 - e. Critical Branch: Verify with Owner][Black and Yellow].
 - f. Equipment Emergency System: Verify with Owner][Yellow and Blue].
 - g. Non-Essential Emergency System: Verify with Owner][Purple].
 - h. UPS: Verify with Owner][Green].

2. Fire Alarm System Red.
 3. Fire-Suppression Supervisory and Control System: Verify with Owner][Red and yellow].
 4. Mechanical and Electrical Supervisory System: Verify with Owner][Green and blue].
 5. Control Wiring: Verify with Owner][Green and red].
- L. Instruction Signs:
1. Operating Instructions: Install instruction signs to facilitate proper operation and maintenance of electrical systems and items to which they connect. Install instruction signs with approved legend where instructions are needed for system or equipment operation.
 2. Emergency Operating Instructions: Install instruction signs with white legend on a red background with minimum 3/8-inch-high letters for emergency instructions at equipment used for power transfer, load shedding, Key Interlocked Breakers etc.
- M. Equipment Identification Labels: On each unit of equipment, install unique designation label that is consistent with wiring diagrams, schedules, and Operation and Maintenance Manual.
1. Labeling Instructions:
 - a. Indoor Equipment: Engraved, laminated acrylic or melamine label. Unless otherwise indicated, provide a single line of text with 1/2-inch-high letters on 1-1/2-inch-high label; where 3 lines of text or more are required, use label height as required to accommodate 3/8-inch-high letters.
 - b. Outdoor Equipment: Engraved, laminated acrylic or melamine label drilled and attached with corrosion-resistant screws.
 - c. Elevated Components: Increase sizes of labels and letters to those appropriate for viewing from the floor per ANSI A13.1.
 - d. Unless provided with self-adhesive means of attachment, fasten labels with appropriate mechanical fasteners that do not change the NEMA or NRTL rating of the enclosure.
 2. Distribution Equipment with Overcurrent Protective Devices to be labeled:
 - a. Provide for each of the following and any other similar equipment furnished under this Division identification as to its given name, voltage, origination of service, branch, and amps rated interrupting. Table 2 below lists typical examples of label format, coordinate project specific requirements with Drawings:
 - 1) Electrical switchboards.
 - 2) Panelboards.
 - 3) Enclosed switches.
 - 4) Enclosed circuit breakers.

3. Distribution Equipment without Overcurrent Protective Devices to be labeled:
 - a. Provide for each of the following and any other similar equipment furnished under this Division identification as to its given name, voltage, origination of service, and branch. Table 3 below lists typical examples of label format, coordinate project specific requirements with Drawings:
 - 1) Electrical cabinets, and enclosures.
 - 2) Enclosed Bus Assemblies.
 - 3) Transformers: Label that includes tag designation for the transformer, feed, and panelboards or equipment supplied by the secondary.
 - 4) Disconnect switches.
 - 5) Emergency system boxes and enclosures.
 - 6) Enclosed controllers.
 - 7) Variable-speed controllers.
 - 8) Push-button stations.
 - 9) Power transfer equipment (ATS) – Label both sources.
 - 10) Auxiliary Equipment (SPD, Capacitor Banks, etc.).
 - 11) Contactors.
 - 12) Fire-alarm control panel and annunciators.
 - 13) Uninterruptible power supply equipment.

4. Provide for each feeder overcurrent protective device in each switchgear, switchboard, distribution panelboard, motor control center, and any other similar equipment furnished under this Division, identification as to the specific load that it serves.
5. Provide for each 3 phase motor: brass phase rotation tags securely attached to the equipment.

END OF SECTION

SECTION 260573

OVERCURRENT PROTECTIVE DEVICE COORDINATION STUDY

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements for computer-based, fault-current and overcurrent protective device coordination studies and arc flash protection study. Protective devices shall be set based on Engineer's review of submitted results of the protective device coordination study.
 - 1. Coordination of series-rated devices is permitted where indicated on Drawings.
 - 2. Coordination of series-rated devices is not permitted.
 - 3. Delegated Design Requirements for Arc Flash Hazard Analysis.

1.2 PERFORMANCE REQUIREMENTS

- A. Overcurrent Protective Device Coordination: All overcurrent protective devices proposed for inclusion in the Work shall be selected to be selectively coordinated with the overcurrent protective devices installed on their supply side such that an overcurrent event (overload, short-circuit, or ground-fault) occurring at the lowest level in the system (branch circuit) cannot cause the feeder protective device supplying the branch circuit panelboard to open. This coordination shall be carried through each level of distribution for all branches of normal and emergency power to 0.10 seconds.
- B. Delegated Design for Arc Flash Hazard Analysis: Prepare computer-based, arc-flash study to determine the arc-flash hazard distance and the incident energy to which personnel could be exposed during work on or near electrical equipment.

1.3 DEFINITIONS

- A. One-Line Diagram: A diagram which shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.
- B. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion from the system.
- C. SCCR: Short-circuit current rating.
- D. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.

1.4 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Simultaneous Action Submittals: The following action submittals shall be made in conjunction with the approval process for system protective devices specified in other

Division 26 Sections. The release of electrical equipment submittals (panelboards, engine generators, switchgear, etc.) is dependent on the receipt of a complete and accurate overcurrent protective device coordination study. The Architect and Engineer require a full submittal review period as delineated in Division 01 Section "Submittal Procedures" to adequately review the OCPD study against the submitted electrical components prior to release of submittals for equipment procurement. The submittal schedule required by Division 01 requirements shall provide for this review time in the action submittal process. Delay claims arising due to Contractor's failure to coordinate simultaneous action submittals will not be considered by the Owner. The following submittals shall be in digital form:

1. Coordination-study input data, including completed computer program input data sheets. Provide editable electronic media including all SKM files and breaker TCC's.
2. Study and Equipment Evaluation Reports.
3. Coordination-Study Report; signed, dated, and sealed by a qualified professional engineer.
4. Arc-flash study input data, including completed computer program input data sheets.
5. Arc Flash Hazard Analysis Report; signed, dated, and sealed by a qualified professional engineer.

C. Product Data: For computer software program to be used for studies.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Coordination Study Specialist and Arc-Flash Hazard Analysis Specialist.
- B. Product Certificates: For coordination-study and fault-current-study computer software programs, certifying compliance with IEEE 399. For arc-flash hazard analysis software, certifying compliance with IEEE 1584 and NFPA 70E.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For the overcurrent protective devices to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation And Maintenance Data," include the following:
- a. The following parts from the Protective Device Coordination Study Report:
 - 1) One-line diagram.
 - 2) Protective device coordination study.
 - 3) Time-current coordination curves.
 - 4) Coordination setting schedules.
 - b. Power system data.
- B. Maintenance procedures according to requirements in NFPA 70E shall be provided in the equipment manuals.
- C. Operation and Maintenance Procedures: In addition to items specified in Division 01 Section "Operation and Maintenance Data," provide maintenance procedures for use by Owner's personnel that comply with requirements in NFPA 70E.

1.7 QUALITY ASSURANCE

- A. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Manual calculations are not acceptable.
- B. Coordination Study Software Developer Qualifications: An entity that owns and markets computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.
 - 1. The computer program shall be developed under the charge of a licensed professional engineer who holds IEEE Computer Society's Certified Software Development Professional certification.
- C. Delegated Design System Study Specialist Qualifications: Comprehensive engineering analysis by a qualified Professional Engineer or personnel trained and employed by the equipment manufacturer in required calculation methodology.
 - 1. Analysis to be performed by a Professional Engineer or personnel trained, employed, and supervised by a registered Professional Engineer.
 - 2. Registered professional engineer shall be a full-time employee of the electrical equipment manufacturer or a professional engineering firm.
 - 3. Report shall be signed and sealed by a Professional Engineer with current registration in the state of Texas.
- D. Comply with IEEE 242 for short-circuit currents and coordination time intervals.
- E. Comply with IEEE 399 for general study procedures.
- F. Comply with IEEE 1584 for performing Arc Flash Hazard Calculations.

PART 2 - PRODUCTS

2.1 OVERCURRENT PROTECTIVE DEVICES

- A. Basis-of-Design Product: The overcurrent protective device (OCPD) types indicated on the Drawings correspond to products produced by Square D; Schneider Electric. Subject to compliance with the requirements, produce Overcurrent Protective Device Coordination Study based on the exact equipment proposed for inclusion in the Work by the basis-of-design manufacturer, or a comparable product by one of the following acceptable manufacturers listed below.
 - 1. Cutler-Hammer, Inc.; Eaton Corporation.
 - 2. General Electric Co.; Electrical Distribution & Protection Div.
 - 3. Siemens Energy & Automation, Inc.

2.2 COMPUTER SOFTWARE DEVELOPERS

- A. Computer Software Developers: Subject to compliance with requirements, provide products by the following:
 - 1. SKM Systems Analysis, Inc.

2.3 COMPUTER SOFTWARE PROGRAM REQUIREMENTS

- A. Comply with IEEE 242 and IEEE 399 for fault-current and overcurrent protective device coordination studies.

- B. Comply with IEEE 1584 and NFPA 70E for arc-flash hazard analysis.
- C. Analytical features of fault-current-study computer software program shall include "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.
- D. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate coordination by computer-generated, time-current coordination plots.

2.4 SHORT-CIRCUIT STUDY REPORT CONTENTS

- A. Executive Summary
- B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of the computer printout.
- C. One-line diagram, showing the following:
 - 1. Protective device designations and ampere ratings.
 - 2. Cable size and lengths.
 - 3. Transformer kilovolt ampere (kVA) and voltage ratings.
 - 4. Motor and generator designations and kVA ratings.
 - 5. Switchgear, switchboard, motor-control center and panelboard designations.
- D. Short-Circuit Study Input Data: As described in "Power System Data" Article in the Evaluations.
- E. Short-Circuit Study Output:
 - 1. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
 - a. Voltage.
 - b. Calculated symmetrical fault-current magnitude and angle.
 - c. Fault-point X/R ratio.
 - d. No AC Decrement (NACD) ratio.
 - e. Equivalent impedance.
 - f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
 - g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.

2.5 PROTECTIVE DEVICE COORDINATION STUDY REPORT CONTENTS

- A. Executive summary.
- B. Study descriptions, purpose, basis and scope. Include case descriptions, definition of terms and guide for interpretation of the computer printout.
- C. One-line diagram, showing the following:
 - 1. Protective device designations and ampere ratings.
 - 2. Cable size and lengths.
 - 3. Transformer kilovolt ampere (kVA) and voltage ratings.
 - 4. Motor and generator designations and kVA ratings.

5. Switchgear, switchboard, motor-control center, and panelboard designations.
- D. Study Input Data: As described in "Power System Data" Article.
 - E. Short-Circuit Study Output: As specified in "Short-Circuit Study Output" Paragraph in "Short-Circuit Study Report Contents" Article above.
 - F. Protective Device Coordination Study:
 1. Report recommended settings of protective devices, ready to be applied in the field. Use manufacturer's data sheets for recording the recommended setting of overcurrent protective devices when available.
 - a. Phase and Ground Relays:
 - 1) Device tag.
 - 2) Relay current transformer ratio and tap, time dial, and instantaneous pickup value.
 - 3) Recommendations on improved relaying systems, if applicable.
 - b. Circuit Breakers:
 - 1) Adjustable pickups and time delays (long time, short time, ground).
 - 2) Adjustable time-current characteristic.
 - 3) Adjustable instantaneous pickup.
 - 4) Recommendations on improved trip systems, if applicable.
 - c. Fuses: Show current rating, voltage, and class.
 - G. Time-Current Coordination Curves: Determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:
 1. Device tag and title, one-line diagram with legend identifying the portion of the system covered.
 2. Terminate device characteristic curves at a point reflecting maximum symmetrical or asymmetrical fault current to which the device is exposed.
 3. Identify the device associated with each curve by manufacturer type, function, and, if applicable, tap, time delay, and instantaneous settings recommended.
 4. Plot the following listed characteristic curves, as applicable:
 - a. Power utility's overcurrent protective device.
 - b. Medium-voltage equipment overcurrent relays.
 - c. Medium- and low-voltage fuses including manufacturer's minimum melt, total clearing, tolerance, and damage bands.
 - d. Low-voltage equipment circuit-breaker trip devices, including manufacturer's tolerance bands.
 - e. Transformer full-load current, magnetizing inrush current, and ANSI through-fault protection curves.
 - f. Cables and conductors damage curves.
 - g. Ground-fault protective devices.
 - h. Motor-starting characteristics and motor damage points.
 - i. Generator short-circuit decrement curve and generator damage point.
 - j. The largest feeder circuit breaker in each motor-control center and panelboard.
5. ~~[Series rating on equipment allows the application of two series interrupting devices for a condition where the available fault current is greater than the interrupting rating]~~

~~of the downstream equipment. Both devices share in the interruption of the fault and selectivity is sacrificed at high fault levels. Maintain selectivity for tripping currents caused by overloads.]~~

6. Provide adequate time margins between device characteristics such that selective operation is achieved.
7. Comments and recommendations for system improvements.

2.6 ARC-FLASH STUDY REPORT CONTENT

- A. Executive summary.
- B. Study descriptions, purpose, basis and scope.
- C. One-line diagram, showing the following:
 1. Protective device designations and ampere ratings.
 2. Cable size and lengths.
 3. Transformer kilovolt ampere (kVA) and voltage ratings.
 4. Motor and generator designations and kVA ratings.
 5. Switchgear, switchboard, motor-control center and panelboard designations.
- D. Study Input Data: As described in "Power System Data" Article.
- E. Protective Device Coordination Study Report Contents: As specified in "Protective Device Coordination Study Report Contents" Article above.
- F. Arc-Flash Study Output:
 1. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
 - a. Voltage.
 - b. Calculated symmetrical fault-current magnitude and angle.
 - c. Fault-point X/R ratio.
 - d. No AC Decrement (NACD) ratio.
 - e. Equivalent impedance.
 - f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
 - g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.
- G. Incident Energy and Flash Protection Boundary Calculations:
 1. Arcing fault magnitude.
 2. Protective device clearing time.
 3. Duration of arc.
 4. Arc-flash boundary.
 5. Working distance.
 6. Incident energy.
 7. Hazard risk category.
 8. Recommendations for arc-flash energy reduction.
- H. Fault study input data, case descriptions, and fault-current calculations including a definition of terms and guide for interpretation of the computer printout.

- I. Equipment specific Arc Flash Warning Labels.

2.7 ARC-FLASH WARNING LABELS

- A. Comply with requirements in Division 26 Section "Identification for Electrical Systems." Produce a 3.5-by-5-inch thermal transfer label of high-adhesion polyester for each work location included in the analysis.
- B. The label shall have an orange header with the wording, "WARNING, ARC-FLASH HAZARD," and shall include the following information taken directly from the arc-flash hazard analysis:
 - 1. Flash Hazard Boundary
 - 2. Short Circuit Current Available
 - 3. Shock Hazard when Cover is Removed
 - 4. Limited Approach Boundary
 - 5. Restricted Approach Boundary
 - 6. Prohibited Approach Boundary
 - 7. PPE Requirements, including the following:
 - a. Hazard Risk Category
 - b. Required Minimum Arc Rating of PPE in cal/cm²
 - c. Clothing Description
 - 8. Engineering report number, revision number, and issue date.
- C. Labels shall be machine printed, with no field-applied markings.]

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance.
 - 1. Proceed with coordination study and arc-flash study only after relevant equipment submittals have been assembled, but prior to their submission to the Architect.
 - a. Coordination study shall accompany submission of relevant equipment submittals.
 - b. Overcurrent protective devices that have not been submitted and approved prior to arc-flash study may not be used in study.

3.2 POWER SYSTEM DATA

- A. Delegated Design System Analyst performing the short-circuit, protective device coordination study, and arc flash hazard analysis shall furnish the Contractor with a list of required data immediately after award of the contract. Contractor shall expedite collection of the data to ensure completion of the study and analysis as required.
- B. For new equipment, use characteristics submitted under the provisions of action submittals and information submittals for this Project.
- C. For existing equipment, whether or not relocated, obtain required electrical distribution system data by field investigation and surveys, conducted by qualified technicians and engineers.
 - 1. Comply with recommendations in IEEE 1584 and NFPA 70E as to the amount of detail that is required to be acquired in the field.

2. Field data gathering shall be under the direct supervision and control of the engineer in charge of performing the study, and shall be by the engineer or its representative who holds NETA ETT Level III certification or NICET Electrical Power Testing Level III certification.
- D. Source combination shall include present and future motors and generators indicated in the documents.
- E. If applicable, include fault contribution of existing motors in the study and analysis.
- F. Gather and tabulate the following input data to support coordination study:
1. Product Data for overcurrent protective devices specified in other Division 26 Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
 2. Service entrance- Fault duty of the electric utility at the primary point at which the new facility receives its primary service.
 3. Electrical Distribution System Diagram: In hard-copy and electronic-copy formats, showing the following:
 - a. Circuit breakers and fuses ratings and types.
 - b. Relays and associated power and current transformer ratings and ratios.
 - c. Transformer kilovolt amperes, primary and secondary voltages, connection type, impedance, X/R ratios, taps measured in per cent, and phase shift.
 - d. Generator short-circuit current contribution data, including short-circuit reactance, rated kilovolt amperes, size, rated voltage, and X/R ratio.
 - e. Cables: Indicate conduit material, sizes of conductors, conductor material, insulation, and length.
 - f. Busway ampacity, impedance, lengths, and conductor material.
 - g. Motor horsepower and code letter designation according to NEMA MG 1.
 - h. Low-voltage cable sizes, lengths, number, conductor material and conduit material (magnetic or nonmagnetic).
 - i. Medium-voltage cable sizes, lengths, conductor material, and cable construction and metallic shield performance parameters.
 4. Data sheets to supplement electrical distribution system diagram, cross-referenced with tag numbers on diagram, showing the following:
 - a. Special load considerations, including starting inrush currents and frequent starting and stopping.
 - b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
 - c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
 - d. Generator thermal-damage curve.
 - e. Ratings, types, and settings of utility company's overcurrent protective devices.
 - f. Special overcurrent protective device settings or types stipulated by utility company.
 - g. Time-current-characteristic curves of devices.
 - h. Manufacturer, frame size, interrupting rating in amperes rms symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
 - i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.

- j. Panelboards, switchboards, motor-control center ampacity, and interrupting rating in amperes rms symmetrical.

3.3 FAULT-CURRENT STUDY

- A. A short-circuit current ratings indicated in the Contract Documents are based on Fault-Current study prepared by the Engineer during design and are based on available information and anticipated feeder lengths. Calculate the maximum available short-circuit current in amperes rms symmetrical at circuit-breaker positions of the electrical power distribution system based on proposed feeder routing. The calculation shall be for a current immediately after initiation and for a three-phase bolted short circuit at each of the following:
 - 1. Electric Utility's supply termination point.
 - 1. Service Entrance Equipment. Switchgear and switchboard bus.
 - 2. Unit substation primary and secondary terminals.
 - 3. Medium-voltage controller.
 - 4. Motor-control center.
 - 5. Distribution panelboard.
 - 6. Branch circuit panelboard.
 - 7. Standby Generators and Transfer Switches.
 - 8. Enclosed Fused Switch.
 - 9. Enclosed Circuit Breaker.
 - 10. Enclosed Bus Assembly.
- B. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Include studies of system-switching configurations and alternate operations that could result in maximum fault conditions.
- C. Calculate momentary and interrupting duties on the basis of maximum available fault current.
- D. Calculate short-circuit currents according to IEEE 551.
- E. In addition to IEEE 551 short-circuit current calculations, calculate the short-circuit currents at the following:
 - 1. Motor Controllers: Rated greater than or equal to 2hp at 300V or more.
 - 2. Air-Conditioning and Refrigerating Equipment Controllers: Including, but not limited to, equipment supplied from a branch circuit protected at greater than 60A.
 - 3. Industrial Control Panels.
 - 4. Elevator Controllers.
- F. Calculations to verify interrupting ratings of overcurrent protective devices shall comply with IEEE 241 and IEEE 242.
 - 1. Transformers, as appropriate for transformers included in the Work:
 - a. ANSI C57.12.10.
 - b. ANSI C57.12.22.
 - c. ANSI C57.12.40.
 - d. IEEE C57.12.00.
 - e. IEEE C57.96.
 - 2. Medium-Voltage Circuit Breakers: IEEE C37.010.
 - 3. Low-Voltage Circuit Breakers: IEEE 1015 and IEEE C37.20.1.
 - 4. Low-Voltage Fuses: IEEE C37.46.
- G. Study Report:

1. Show calculated X/R ratios and equipment interrupting rating (1/2-cycle) fault currents on electrical distribution system diagram, including existing Service Entrance equipment.
2. Show interrupting (5-cycle) and time-delayed currents (6 cycles and above) on medium- and high-voltage breakers as needed to set relays and assess the sensitivity of overcurrent relays.

H. Equipment Evaluation Report:

1. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
2. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in the standards to 1/2-cycle symmetrical fault current.
3. Ensure that short-circuit withstand ratings are equal to or higher than the calculated 1/2-cycle symmetrical fault current for the following:
 - a. Electrical Distribution Equipment: Including, but not limited to, switchgear, switchboards, and panel boards.
 - b. Motor Controllers.
 - c. Air-Conditioning and Refrigerating Equipment Controllers.
 - d. Industrial Control Panels.
 - e. Elevator Controllers.
4. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
5. Notify Engineer, in writing, of any existing circuit protective devices improperly rated for the calculated available fault current.

3.4 COORDINATION STUDY

- A. Perform coordination study using approved computer software program. Prepare a written report using results of fault-current study. Comply with IEEE 399.
 1. Calculate the maximum and minimum 1/2-cycle short-circuit currents.
 2. Calculate the maximum and minimum interrupting duty (5 cycles to 2 seconds) short-circuit currents.
 3. Calculate the maximum and minimum ground-fault currents.
- B. Comply with IEEE 241 and IEEE 242 recommendations for fault currents and time intervals.
- C. Transformer Primary Overcurrent Protective Devices:
 1. Device shall not operate in response to the following:
 - a. Inrush current when first energized.
 - b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
 - c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.
 2. Device settings shall protect transformers according to IEEE C57.12.00, for fault currents.
- D. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and conductor melting curves in IEEE 242. Demonstrate that equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.

- E. Coordination-Study Report: Prepare a written report indicating the following results of coordination study:
1. Tabular Format of Settings Selected for Overcurrent Protective Devices:
 - a. Device tag.
 - b. Relay-current transformer ratios; and tap, time-dial, and instantaneous-pickup values.
 - c. Circuit-breaker sensor rating; and long-time, short-time, and instantaneous settings.
 - d. Fuse-current rating and type.
 - e. Ground-fault relay-pickup and time-delay settings.
 2. Coordination Curves: Prepared to determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate on log-log scale graphs, with no more than five devices indicated on any plot that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:
 - a. Electric Utility's overcurrent protective device.
 - b. Medium voltage equipment overcurrent relays.
 - c. Device tag.
 - d. Voltage and current ratio for curves.
 - e. Three-phase and single-phase damage points for each transformer.
 - f. No damage, melting, and clearing curves for fuses.
 - g. Cable damage curves.
 - h. Transformer inrush points.
 - i. Maximum fault-current cutoff point.
 - j. Motor starting characteristics, damage points and overload relay.
 - k. Thermal damage curve for motors larger than 100 HP.
 - l. Generator short-circuit decrement curve and damage point, and thermal damage curve.
- F. Completed data sheets for setting of overcurrent protective devices.
- G. Complete Schedule of breaker settings to summarize information contained on data sheets. Sample schedule has been included at the end of this section for preferred format.

3.5 ARC FLASH HAZARD ANALYSIS

- A. Comply with NFPA 70E and its Annex D for hazard analysis study.
- B. The flash protection boundary and the incident energy shall be calculated at all significant locations in the electrical distribution system where work could be performed on energized parts including, but not limited to, the following:
1. Disconnect switches.
 2. Electrical substations.
 3. Electrical switchgear and switchboards.
 4. Emergency system boxes and enclosures.
 5. Enclosed circuit breakers.
 6. Meter Sockets and assemblies.
 7. Motor starter.
 8. Motor-control centers.
 9. Panelboards.
 10. Power transfer equipment. (ATS)
 11. Transformers.

12. Uninterruptible power supply equipment.

- C. When appropriate, the short circuit calculations and the clearing times of the phase overcurrent devices will be retrieved from the short-circuit and coordination study model. Ground overcurrent protection relays should not be taken into consideration when determining the clearing time when performing incident energy calculations.
 - D. Calculate the arc-flash protection boundary and the corresponding incident energy calculations for multiple system scenarios to be compared and the greatest incident energy to be uniquely reported for each equipment location. Calculations to be performed to represent the maximum and minimum contributions of fault current magnitude for all normal and emergency operating conditions.
 - 1. The minimum calculation will assume that the utility contribution is at a minimum and will assume a minimum motor contribution (all motors off).
 - 2. The maximum calculation will assume a maximum contribution from the utility and will assume the maximum amount of motors to be operating. Calculations shall take into consideration the parallel operation of synchronous generators with the electric utility, where applicable.
 - E. Incident energy calculations shall consider the accumulation of energy over time when performing arc flash calculations on buses with multiple sources. Iterative calculations must take into account the changing current contributions, as the sources are interrupted or decremented with time. Fault contribution from motors and generators to be decremented as follows:
 - 1. Fault contribution from induction motors should not be considered beyond 3-5 cycles.
 - 2. Fault contribution from synchronous motors and generators should be decayed to match the actual decrement of each as closely as possible.
 - F. For each equipment location with a separately enclosed main device, calculations for incident energy and flash protection boundary shall include both the line and load side of the main breaker.
 - 1. When performing incident energy calculations on the line side of a main breaker, the line side and load side contributions must be included in the fault calculation.
 - G. Mis-coordination should be checked amongst all devices within the branch containing the immediate protective device to compute the incident energy for the corresponding location.
 - H. Arc Flash calculations shall be based on actual overcurrent protective device clearing time. Maximum clearing time will be capped at 2 seconds based on IEEE 1584 section B.1.2. Where it is not physically possible to move outside of the flash protection boundary in less than 2 seconds during an arc flash even, a maximum clearing time based on the specific location shall be utilized.
 - I. Complete Arc Flash report to be used for the preparation of Arc Flash Warning labels for electrical equipment. Refer to Division 26 Section "Identification for Electrical Systems" for requirements of Arc Flash Study and labels.]
- 3.6 Correct Deficiencies, Re-calculate and Report:
- A. After Engineer's initial review, correct unsatisfactory conditions and recalculate to demonstrate compliance; resubmit overcurrent protective devices as required to bring system into compliance.

- B. Revise and Resubmit report multiple times as necessary to demonstrate compliance with requirements.

3.7 APPLICATION OF WARNING LABELS

- A. Install arc-flash warning labels as specified in Division 26 Section "Identification for Electrical Systems". Install labels under the direct supervision and control of the Arc-Flash Hazard Study Specialist.

3.8 DEMONSTRATION

- A. Engage the Arc-Flash Hazard Study Specialist or a qualified manufacturer's representative to train Owner's management and maintenance personnel of the potential arc-flash hazards associated with working on energized equipment and the significance of the arc-flash warning labels, minimum of four (4) hours. Refer to Division 01 Section "Demonstration and Training."
 - 1. Training shall be certified for continuing education units (CEUs) by the International Association for Continuing Education Training (IACET) or equivalent.
 - 2. Include in Project Close-out Documents training notes, outlines, Power Point presentation of training session, and DVD of recorded training session. Also include attendance record of personnel attending the training session.

SECTION 260923

LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following categories of lighting control devices:
 - 1. Time switches.
 - 2. Photoelectric switches.
 - 3. Standalone daylight-harvesting switching controls.
 - 4. Indoor occupancy sensors.
 - 5. Lighting contactors.
 - 6. Emergency shunt relays.
 - 7. Within each category are various models and technologies available for use shall be selected based on the application indicated on the drawing.
- B. Related Sections include the following:
 - 1. Division 26 Section "Wiring Devices" for wall-box dimmers, manual light switches, and timer wall-switches.
 - 2. Division 26 Section "Network Lighting Controls" for low-voltage, manual and programmable lighting control systems.

1.2 DEFINITIONS

- A. LED: Light-emitting diode.
- B. PIR: Passive infrared.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: These specifications and the accompanying Drawings define the intent of the lighting control system to be provided. The switches, sensors, control stations and switching group designations shown on the Drawings define how lighting should be grouped for control. Provide the necessary quantity and type of distributed control products necessary to achieve the design intent. In addition to the system as specified herein and shown on the Drawings, provide all planning, design, calculations, equipment, devices, cabling, system programming and any other component or service required for a complete, fully operational and code compliant system.

1.4 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Product Data: For control modules, power distribution components, control network materials, manual switches and plates, and conductors and cables.
- C. Maintenance Data: Include instructions for replacing and maintaining coil and contacts.

- D. Delegated-Design Shop Drawings: Prepared by factory or authorized representative; based on devices proposed for inclusion in the Work. Include detail assemblies of standard components, custom assembled for specific application on this Project.
 - 1. Floor Plans: showing all control stations, control devices, input devices, cabling, power sources, and other necessary equipment and components.
 - 2. Control Station Legend: annotated to describe which stations shown in the Product Data are places at keyed locations.
 - 3. Scene Schedules: schedule for each unique room type with scene descriptions.
 - 4. System Riser: showing all components with their location labeled.
 - 5. Outline Drawings: Indicate dimensions, weights, arrangement of components, and clearance and access requirements.
 - 6. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.
 - 7. Wiring Diagrams: Power, signal, and control wiring. Coordinate nomenclature and presentation with a block diagram.
 - 8. Interconnection diagrams showing field-installed wiring.
 - 9. Dimensioned locations of occupancy and light-level sensors.
 - 10. Coverage patterns for occupancy and light-level sensors.
 - 11. Include diagrams for power, signal, and control wiring.
- E. Specification Compliance Certification: Submit a Specification Compliance Certification in accordance with Division 26 Section "Common Work Results for Electrical".
- F. Product Certificates: Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in other Sections.
 - 1. Show interconnecting signal and control wiring and interfacing devices that prove compatibility of inputs and outputs.
 - 2. For networked controls, list network protocols and provide statements from manufacturers that input and output devices meet interoperability requirements of the network protocol.

1.5 INFORMATIONAL SUBMITTALS

- A. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For lighting control device, to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation And Maintenance Data," include the following:
 - 1. Manufacturer's written instructions for adjusting devices after installation.

1.7 COORDINATION

- A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including but not limited to luminaires, HVAC equipment, smoke detectors, fire-suppression system, and partition assemblies.

PART 2 - PRODUCTS

2.1 TIME SWITCHES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Cooper Industries, Inc.
 2. Intermatic, Inc.
 3. Invensys Controls.
 4. Leviton Manufacturing Co., Inc.
 5. Lithonia Lighting; Acuity Brands Lighting, Inc.
 6. NSi Industries LLC; TORK Products.
 7. Square D.
 8. Tyco Electronics.
 9. Watt Stopper.
- B. Electronic Time Switches: Electronic, solid-state programmable units with alphanumeric display; complying with UL 917.
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Contact Configuration: SPST, DPST, or DPDT, as indicated.
 3. Contact Rating: 20-A ballast load, 120/277-V ac, and minimum of 30,000 switching cycles.
 4. Programs: number of channels as indicated on Drawings; each channel shall be individually programmable with 40 on-off operations per week, plus 4 seasonal schedules that modify the basic program, and an annual holiday schedule that overrides the weekly operation on holidays; unless otherwise indicated.
 5. Circuitry: Allow connection of a photoelectric relay as substitute for on-off function of a program on selected channels.
 6. Astronomic Time: For Selected channels.
 7. Automatic daylight savings time changeover.
 8. Battery Backup and non-volatile memory for schedules and time clock, meeting the requirements of ASHRAE 90.1.

2.2 DAYLIGHT-HARVESTING SWITCHING CONTROLS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Cooper Industries, Inc.
 2. Eaton Corporation
 3. Hubbell Building Automation, Inc.
 4. Leviton Manufacturing Co., Inc.
 5. Lithonia Lighting; Acuity Brands Lighting, Inc.
 6. Lutron Electronics Co., Inc.
 7. NSi Industries LLC; TORK Products.
 8. Sensor Switch, Inc.
 9. Tyco Electronics.
 10. Watt Stopper.
- B. Ceiling-Mounted or Switching Controls: Solid-state, light-level sensor unit, with separate power pack mounted on luminaire as appropriate, to detect changes in indoor lighting levels that are perceived by the eye.
- C. Electrical Components, Devices, and Accessories:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Operating Ambient Conditions: Dry interior conditions, 32 to 120 deg F.
3. Sensor Output: Contacts rated to operate the associated power pack, complying with UL 773A. Sensor is powered by the power pack.
4. Power Pack: Dry contacts rated for [20]-A ballast load at 120- and 277-V ac, ~~for [13]-A tungsten at 120-V ac~~, and for [1]hp at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.
5. General Space Sensors Light-Level Monitoring Range: 10 to 200 fc, with an adjustment for turn-on and turn-off levels within that range.
6. Atrium Space Sensors Light-Level Monitoring Range: 100 to 1000 fc, with an adjustment for turn-on and turn-off levels within that range.
7. Skylight Sensors Light-Level Monitoring Range: 1000 to 10,000 fc, with an adjustment for turn-on and turn-off levels within that range.
8. Time Delay: Adjustable from 5 to 300 seconds to prevent cycling.
9. Set-Point Adjustment: Equip with deadband adjustment of 25, 50, and 75 percent above the "on" set point, or provide with separate adjustable "on" and "off" set points.
10. Test Mode: User selectable, overriding programmed time delay to allow settings check.
11. Control Load Status: User selectable to confirm that load wiring is correct.
12. Indicator: Two digital displays to indicate the beginning of on-off cycles.

2.3 DAYLIGHT-HARVESTING DIMMING CONTROLS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Cooper Industries, Inc.
 2. Hubbell Building Automation, Inc.
 3. Leviton Manufacturing Co., Inc.
 4. Lithonia Lighting; Acuity Brands Lighting, Inc.
 5. Lutron Electronics Co., Inc.
 6. Watt Stopper.
- B. System Description: Sensing daylight and electrical lighting levels, the system adjusts the indoor electrical lighting levels. As daylight increases, the lights are dimmed.
 1. Lighting control set point is based on two lighting conditions:
 - a. When no daylight is present (target level).
 - b. When significant daylight is present.
 2. System programming is done with two hand-held, remote-control tools.
 - a. Initial setup tool.
 - b. Tool for occupants to adjust the target levels by increasing the set point up to 25 percent, or by minimizing the electric lighting level.
- C. Ceiling-Mounted Dimming Controls: Solid-state, light-level sensor unit, with separate controller unit, to detect changes in lighting levels that are perceived by the eye.
 1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Sensor Output: 0- to 10-V dc to operate electronic dimming ballasts. Sensor is powered by controller unit.
 3. Power Pack: Sensor has 24-V dc, Class 2 power source, as defined by NFPA 70.
 4. Light-Level Sensor Set-Point Adjustment Range: 20 to 60 fc.

2.4 INDOOR OCCUPANCY SENSORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Bryant Electric.
 2. Cooper Industries, Inc.
 3. Hubbell Building Automation, Inc.
 4. Leviton Manufacturing Co., Inc.
 5. Lightolier Controls.
 6. Lithonia Lighting; Acuity Brands Lighting, Inc.
 7. Lutron Electronics Co., Inc.
 8. NSi Industries LLC; TORK Products.
 9. RAB Lighting.
 10. Sensor Switch, Inc.
 11. Square D.
 12. Watt Stopper.
- B. General Requirements for Sensors: Wall- or ceiling-mounting, solid-state indoor occupancy sensors with a power pack.
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor shall be powered from the power pack.
 3. Power Pack: Dry contacts rated for 20-A ballast load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Power supply to sensor shall be 24-V ac/dc, 150-mA, Class 2 power source as defined by NFPA 70.
 4. Mounting:
 - a. Sensor: Suitable for mounting in any position on a standard outlet box.
 - b. Relay: Externally mounted through a 1/2-inch knockout in a standard electrical enclosure.
 - c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
 5. Indicator: Digital display, to show when motion is being detected during testing and normal operation of the sensor.
 6. Detector Coverage: Occupancy sensor system shall cover the entire room or space served. Manufacturer selected for inclusion in the Work shall produce Delegated Design Shop Drawings with device layout and adjust sensor types or quantities as required by their specific products to provide complete coverage. Additional costs will not be considered for adjustments or device additions to meet performance requirements.
 7. Automatic Light-Level Sensor: Adjustable from 2 to 200 fc; turn lights off when selected lighting level is present.
- C. PIR Type: Ceiling mounting; detect occupants in coverage area by their heat and movement.
1. Detector Sensitivity: Detect occurrences of 6-inch-minimum movement of any portion of a human body that presents a target of not less than 36 sq. in..
- D. Ultrasonic Type: Ceiling mounting; detect occupants in coverage area through pattern changes of reflected ultrasonic energy.
1. Comply with NEMA Standard LC 1-2007 "Test Procedures for Compatibility of Hearing Aids and Ultrasonic Lighting Control Devices".
 2. Detector Sensitivity: Detect a person of average size and weight moving not less than 12 inches in either a horizontal or a vertical manner at an approximate speed of 12 inches/s.

- E. Dual-Technology Type: Ceiling mounting; detect occupants in coverage area using PIR and ultra-sonic detection methods. Particular technology or combination of technologies that controls on-off functions shall be selectable in the field by operating controls on unit.
1. Comply with NEMA Standard LC 1-2007 "Test Procedures for Compatibility of Hearing Aids and Ultrasonic Lighting Control Devices".
 2. Sensitivity Adjustment: Separate for each sensing technology.
 3. Detector Sensitivity: Detect occurrences of 6-inch-minimum movement of any portion of a human body that presents a target of not less than 36 sq. in., and detect a person of average size and weight moving not less than 12 inches in either a horizontal or a vertical manner at an approximate speed of 12 inches/s.
- F. Operation:
1. Occupancy Mode – Auto On/Off, with Manual On/Off: Turn lights on when covered area is occupied and then off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 5 to 30 minutes. Depressing manual switch will override current state.
 - a. Manual override: Momentary contact low-voltage switch.
 2. Vacancy Mode - Manual On/Off Auto Off: Turn lights on/off when manual switch is depressed. When covered area is unoccupied, turn lights off automatically; with a time delay, adjustable over a minimum range of 5 to 30 minutes.
 - a. Manual override: Momentary contact low-voltage switch.
 3. Bi-Level Occupancy Mode - Bi-Level, Auto On/Off, Manual On/Off: Turn not more than 50% lights on when covered area is occupied. Turn remaining lights on with manual switch #2 is depressed. When covered area is unoccupied turn 100% lights off automatically; with a time delay, adjustable over a minimum range of 5 to 30 minutes. Depressing manual switch #1 or #2 will override current state for respective loads.
 - a. Manual override: Momentary contact low-voltage switch.
 4. Bi-Level Vacancy Mode - Bi-Level, Manual On/Off, Auto Off: Turn not more than 50% lights on/off when manual switch #1 is depressed. Turn remaining lights on/off with manual switch #2 is depressed. When covered area is unoccupied, turn 100% lights off automatically, with a time delay, adjustable over a minimum range of 5 to 30 minutes.
 - a. Manual override: Momentary contact low-voltage switch.

2.5 SWITCHBOX-MOUNTED OCCUPANCY SENSORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Bryant Electric.
 2. Cooper Industries, Inc.
 3. Hubbell Building Automation, Inc.
 4. Leviton Manufacturing Co., Inc.
 5. Lightolier Controls.
 6. Lithonia Lighting; Acuity Brands Lighting, Inc.
 7. Lutron Electronics Co., Inc.
 8. NSi Industries LLC.
 9. RAB Lighting.
 10. Sensor Switch, Inc.
 11. Square D.
 12. Watt Stopper.

- B. General Requirements for Sensors: Automatic-wall-switch occupancy sensor, suitable for mounting in a single gang switchbox.
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Operating Ambient Conditions: Dry interior conditions, 32 to 120 deg F.
 3. Switch Rating: Not less than 800-VA fluorescent at 120 V, 1200-VA fluorescent at 277 V, and 800-W incandescent.
 4. Connectors shall comply with UL 2459.
 5. Devices shall comply with the requirements in this Section.
- C. Wall-Switch Sensor:
1. Comply with NEMA Standard LC 1-2007 "Test Procedures for Compatibility of Hearing Aids and Ultrasonic Lighting Control Devices".
 2. Standard Range: 180-degree field of view, field adjustable from 180 to 40 degrees; with a minimum coverage area as required by application.
 3. Sensing Technology: Dual technology - PIR and ultrasonic.
 4. Switch Type: SP, field selectable automatic "on," or manual "on" automatic "off." Single circuit and dual circuit as required by Drawings.
 5. Voltage: Match the circuit voltage.
 6. Ambient-Light Override: Concealed, field-adjustable, light-level sensor from 10 to 150 fc. The switch prevents the lights from turning on when the light level is higher than the set point of the sensor.
 7. Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
 8. Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and helps eliminate false "off" switching.
- D. Finishes, including device color, wall plate and lettering: Comply with Division 26 Section "Wiring Devices."
- E. Wall Plates: Comply with wall plate requirements in Division 26 Section "Wiring Devices."

2.6 LIGHTING CONTACTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Allen-Bradley/Rockwell Automation.
 2. ASCO Power Technologies, LP; a business of Emerson Network Power.
 3. Eaton Corporation.
 4. General Electric Company.
 5. Square D.
- B. Description: Electrically operated and [mechanically held combination type with nonfused disconnect, unless otherwise indicated.] Standard coil clearing contacts are to be provided so that the contactor coils shall be normally [closed] as appropriate for the application [opened] unless otherwise indicated. Contactor to comply with NEMA ICS 2 "Industrial Control Devices, Controllers, and Assemblies", UL 508 "Standard for Industrial Control Equipment", NEMA ICS 6 "Enclosures for Industrial Controls and Systems" and NFPA 70 "National Electrical Code".
1. Current Rating for Switching: Listing or rating consistent with type of load served, including tungsten filament, inductive, and high-inrush ballast (ballast with 15 percent or less total harmonic distortion of normal load current).
 2. Contacts: Totally enclosed, double-break silver-cadmium-oxide power contacts. Contact inspection and replacement shall be possible without disturbing line or load wiring. All contacts shall have clearly visible N.O. and N.C. contact status indicators.
 3. Poles: As indicated on drawings.

4. Fault Current Withstand Rating: Equal to or exceeding the available fault current at the point of installation.
 5. Enclosure: Comply with NEMA 250 and ANSI/NEMA ICS 6, Type 1 or 3R, as required to meet conditions of installation.
 6. Provide with control and pilot devices as indicated on Drawings, matching the NEMA type specified for the enclosure.
 7. Wiring: Straight-through wiring with all terminals clearly marked.
 8. Accessories:
 - a. Selector Switch: HAND-OFF-AUTOMATIC
 - b. Auxiliary Contacts: Two, normally open and normally closed, field convertible.
- C. Interface with FMS System: Provide hardware interface to enable the FMS to monitor and control lighting contactors.
1. Monitoring: On-off status.
 2. Control: On-off operation.
- 2.7 EMERGENCY SHUNT RELAY
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Lighting Control and Design.
 2. Watt Stopper.
- B. Description: Normally closed, electrically held relay, arranged for wiring in parallel with manual or automatic switching contact as indicated; complying with UL 924.
1. Coil Rating: 120-V or 277-V, as indicated.
- 2.8 CONDUCTORS AND CABLES
- A. Power Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- B. Classes 2 and 3 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 18 AWG or larger if otherwise required by manufacturer. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- C. Class 1 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 18 AWG or larger if otherwise required by manufacturer. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

PART 3 - EXECUTION

3.1 SENSOR INSTALLATION

- A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression systems, and partition assemblies.
- B. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's written instructions.

- C. Switchbox-mounted sensors:
 - 1. Set field selectable sensors to manual "on" automatic "off" for all devices indicated to be Vacancy sensors on the Drawings. Set all other sensors to field selectable automatic "on".
 - 2. Comply with installation and connection requirements in Division 26 Section "Wiring Devices."

3.2 CONTACTOR INSTALLATION

- A. Mount electrically held lighting contactors with elastomeric isolator pads, to eliminate structure-borne vibration, unless contactors are installed in an enclosure with factory-installed vibration isolators.
- B. Install in accordance with manufacturer's instructions.

3.3 WIRING INSTALLATION

- A. Wiring Method: Comply with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size shall be 1/2 inch.
- B. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.
- C. Size conductors according to lighting control device manufacturer's written instructions, unless otherwise indicated.
- D. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.4 IDENTIFICATION

- A. Identify components and power and control wiring according to Division 26 Section "Identification for Electrical Systems."
 - 1. Identify controlled circuits in lighting contactors.
 - 2. Identify circuits or luminaires controlled by photoelectric and occupancy sensors at each sensor.
- B. Label time switches and contactors with a unique designation.
- C. Switchbox-mounted sensors: Comply with identification requirements in Division 26 Section "Wiring Devices."

3.5 FIELD QUALITY CONTROL

- A. [Perform the following field tests and inspections with the assistance of a factory-authorized service representative and prepare test reports:]
 - 1. Operational Test: After installing time switches and sensors, and after electrical circuitry has been energized, start units to confirm proper unit operation.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Lighting control devices will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.6 ADJUSTING

- A. Time-Schedule Adjustments: Times indicated in documents represent initial settings known at time of design documentation. Coordinate final program settings for time-of-day and holiday schedules with Owner prior to Substantial Completion. When requested within 3 months of date of Substantial Completion, provide on-site assistance in adjust schedules to suit Owner. Provide up to one visit to Project during other-than-normal occupancy hours for this purpose.
- B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting sensors to suit occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.
 - 1. Reset all adaptive technology and learning devices post-construction.
 - 2. For occupancy and motion sensors, verify operation at outer limits of detector range. Set time delay to suit Owner's operations.
 - 3. For daylighting controls, adjust set points and deadband controls to suit Owner's operations.

3.7 CLEANING

- A. Clean components according to manufacturer's written instructions.
- B. On completion of device box installation but before any wiring devices are installed, inspect interior of boxes and perform the following:
 - 1. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
- C. On completion of wall plate installation, inspect exterior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Replace cracked or damaged wall plates.
 - 3. Wipe down all wall plates with approve cleaning agent to remove fingerprints and dust.

3.8 DEMONSTRATION

- A. Coordinate demonstration of products specified in this Section with demonstration requirements for low-voltage, programmable lighting control system specified in Division 26 Section "Network Lighting Controls."
- B. Engage a factory-authorized service representative to train Owner's management and maintenance personnel to adjust, operate, and maintain lighting control devices. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

SECTION 260943

NETWORK LIGHTING CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes manually operable, PC-based, digital lighting controls with external signal source, relays, electrically operated circuit breakers, and control module.
- B. Building lighting control system can communicate with other building systems via bacnet ip communication protocol.
- C. The basis of design for the lighting control system is an nLIGHT digital network lighting control system. The system will automatic on/off control via time schedule for corridors, waiting rooms & elevator lobby during non-visitor hours and back to 100% based on time schedule with lighting override/scene selector control located at each reception and staff work station (refer to control schedule for more information). Provide system with all cat-5e cabling between devices per manufacturer recommendations.
- D. Back of house area will be controlled with stand alone occupancy sensors.

1.2 DEFINITIONS

- A. BACnet: A networking communication protocol that complies with ASHRAE 135.
- B. BIM: Building information modeling.
- C. DALI: Digital addressable lighting interface.
- D. FMS: Facility management system.
- E. LonWorks: A control network technology platform for designing and implementing interoperable control devices and networks.
- F. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling and power-limited circuits.
- G. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.
- H. PC: Personal computer; sometimes plural as "PCs."
- I. Power Line Carrier: Use of radio-frequency energy to transmit information over transmission lines whose primary purpose is the transmission of power.
- J. RS-485: A serial network protocol, similar to RS-232, complying with TIA/EIA-485-A.
- K. UTP: Unshielded twisted pair.

1.3 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control modules, power distribution components, manual switches and plates, and conductors and cables.
- C. Shop Drawings: Prepared by factory or authorized representative; based on devices proposed for inclusion in the Work. Include detail assemblies of standard components, custom assembled for specific application on this Project.
 - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Outline Drawings: Indicate dimensions, weights, arrangement of components, and clearance and access requirements.
 - 3. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.
 - 4. Wiring Diagrams: Power, signal, and control wiring. Coordinate nomenclature and presentation with a block diagram.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in other Sections.
 - 1. Show interconnecting signal and control wiring and interfacing devices that prove compatibility of inputs and outputs.
 - 2. For networked controls, list network protocols and provide statements from manufacturers that input and output devices meet interoperability requirements of the network protocol.
- B. Product Certificates: Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in other Sections.
 - 1. Show interconnecting signal and control wiring and interfacing devices that prove compatibility of inputs and outputs.
 - 2. For networked controls, list network protocols and provide statements from manufacturers that input and output devices meet interoperability requirements of the network protocol.
- C. Software and Firmware Operational Documentation:
 - 1. Software operating and upgrade manuals.
 - 2. Program Software Backup: On a magnetic media or compact disc, complete with data files.
 - 3. Device address list.
 - 4. Printout of software application and graphic screens.
- D. Field quality-control test reports.

- E. Software licenses and upgrades required by and installed for operation and programming of digital and analog devices.
- F. Warranty: Special warranty specified in this Section.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For lighting controls, to include in emergency, operation, and maintenance manuals. Provide items specified in Division 01 Section "Operation and Maintenance Data."

1.6 QUALITY ASSURANCE

- A. Source Limitations: Obtain lighting control module and power distribution components through one source from a single manufacturer.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70 and marked for intended use.
- C. Comply with 47 CFR, Subparts A and B, for Class A digital devices.
- D. Comply with NFPA 70.

1.7 COORDINATION

- A. Coordinate lighting control components to form an integrated interconnection of compatible components.
 - 1. Match components and interconnections for optimum performance of lighting control functions.
 - 2. Coordinate lighting controls with [FMS] or [HVAC controls] as appropriate. Design display graphics showing building areas controlled; include the status of lighting controls in each area.
 - 3. Coordinate lighting controls with that in Sections specifying distribution components that are monitored or controlled by power monitoring and control equipment.
- B. Coordinate lighting control components specified in this Section with components specified in Division 26 Section "Panelboards."

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of lighting controls that fail in materials or workmanship or from transient voltage surges within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Failure of software input/output to execute switching or dimming commands.
 - b. Failure of modular relays to operate under manual or software commands.
 - c. Damage of electronic components due to transient voltage surges.
 - 2. Warranty Period: Two years from date of Substantial Completion.
 - 3. Extended Warranty Period Failure Due to Transient Voltage Surges: Eight years.
 - 4. Extended Warranty Period for Electrically Held Relays: 10 years from date of Substantial Completion.

1.9 SOFTWARE SERVICE AGREEMENT

- A. Technical Support: Beginning with Substantial Completion, provide software support for two years.
- B. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system. Upgrade shall include new or revise licenses for use of the software.
 - 1. Provide 30-day notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment, if necessary.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Acuity Brands Lighting, Inc.
 - 2. Intelligent Lighting Controls.
 - 3. Leviton Mfg. Company Inc.
 - 4. Lighting Control & Design, Inc.
 - 5. Lightolier Controls; a Genlyte Company.
 - 6. Lithonia Lighting; Acuity Lighting Group, Inc.
 - 7. Lutron Electronics Company, Inc.
 - 8. Musco Lighting.
 - 9. NexLight; part of Northport Engineering Group.
 - 10. Square D; Schneider Electric.
 - 11. Touch-Plate, Inc.
 - 12. Triatek, Inc.
 - 13. Watt Stopper.

2.2 SYSTEM REQUIREMENTS

- A. Expandability: System shall be capable of increasing the number of control functions in the future by 25 percent of current capacity; to include equipment ratings, housing capacities, spare relays, terminals, number of conductors in control cables, and control software.
- B. Performance Requirements: Manual switches, an internal timing and control unit, and external sensors or other control signal sources send a signal to a PC-based network system control signal sources send a signal to a PC-based programmable-system control module that processes the signal according to its programming and routes an open or close command to one or more relays, electrically operated circuit breakers in the power-supply circuits, or routes variable commands to one or more dimmers, for groups of lighting fixtures or other loads.
- C. FMS Interface: Provide hardware and software to enable the FMS to monitor, control, display, and record data for use in processing reports.
 - 1. Hardwired Points:
 - a. Monitoring: On-off status, <Insert monitoring point>.
 - b. Control: On-off operation, <Insert control point>.
 - 2. [ASHRAE 135 (BACnet)] [LonTalk] [Modbus] [Industry-accepted, open-protocol], compatible with existing campus <Insert type of interface> communication interface with the FMS shall enable the FMS operator to remotely control and monitor lighting

from a FMS operator workstation. Control features and monitoring points displayed locally at lighting panel shall be available through the FMS.

2.3 CONTROL MODULE

- A. The network control module scheme shall use the most appropriate of the following based on the network lighting control diagram indicated on the drawings. Vendors shall propose a base module sufficient to satisfy the requirements indicated on the drawings and an alternate module clearly defined the alternate proposal.
- B. Control Module Description: Comply with UL 916 (CSA C22.2, No. 205); microprocessor-based, solid-state, 365-day timing and control unit. Output circuits shall be switched on or off by internally programmed time signals or by program-controlled analog or digital signals from external sources. Output circuits shall be pilot-duty relays compatible with power switching devices. An integral keypad shall provide local programming and control capability. A key-locked cover and a programmed security access code shall protect keypad use. An integral alphanumeric LCD or LED shall display menu-assisted programming and control.
- C. [Control Module Description: Comply with UL 916 (CSA C22.2, No. 205); microprocessor-based, solid-state, 365-day timing and control unit. Unit shall be networked for control of indicated number of output circuits. Output circuits shall be switched on or off by internally programmed time signals or by program-controlled analog or digital signals from external sources. Output circuits shall be pilot-duty relays compatible with power switching devices, all located in other enclosures. An integral keypad shall provide local programming and control capability. A key-locked cover and a programmed security access code shall protect keypad use. An integral alphanumeric LCD shall display manual-control and programming steps. Modules and their associated control panels shall include the following features:
1. [Multichannel output with ~~<Insert number>~~ number of channels defined by the drawing.]
 2. [Multiple inputs and multichannel output arranged for ~~<Insert number>~~ number of channels defined by the drawing.]
 3. [Multiple inputs for indicated occupancy sensors and hand-held programming device.]]
- D. [Control Module Description: Comply with UL 916 (CSA C22.2, No. 205); microprocessor-based, solid-state, 365-day timing and control unit. Control units shall be networked and capable of receiving inputs from indicated sensors and hand-held programmer. Output circuits shall be pilot-duty relays compatible with power switching devices. Output circuits shall include digital circuits arranged to transmit control commands to remote preset dimmers. Modules and their associated control panels shall include the following features:
1. [Multichannel output with ~~<Insert number>~~ number of channels defined by the drawing.]
 2. [Multiple inputs and multichannel output arranged for ~~<Insert number>~~ number of channels defined by the drawing.]
 3. [Multiple inputs for occupancy sensors, daylight sensors, and dimming systems with associated daylight sensors.]]
- E. [Control Module Description: Panelboard mounted; comply with UL 916 (CSA C22.2, No. 205); microprocessor based, solid-state, 365-day timing and control unit. Control units shall be networked and capable of receiving inputs from sensors and other sources. Panelboard shall use low-voltage-controlled, electrically operated, molded-case branch circuit breakers as prime power-circuit switching devices. Circuit breakers and a limited number of digital or analog, low-voltage control-circuit outputs shall be individually

controlled by control module. Line-voltage components and wiring shall be separated from low-voltage components and wiring by barriers. Control module shall be locally programmable. Panelboard shall also comply with Division 26 Section "Panelboards."

- F. [Control Module Description: Comply with UL 508 (CSA C22.2, No. 14); microprocessor-based, networked, control unit; mounted in preassembled, modular relay panel. Low-voltage-controlled, latching-type, single-pole lighting circuit relays shall be prime output circuit devices. Where indicated, a limited number of digital or analog, low-voltage control-circuit outputs shall be supported by control unit and circuit boards associated with relays. Control units shall be capable of receiving inputs from sensors and other sources. Line-voltage components and wiring shall be separated from low-voltage components and wiring by barriers. Control module shall be locally programmable.]

2.4 POWER DISTRIBUTION COMPONENTS

- A. Modular Relay Panel: Comply with UL 508 (CSA C22.2, No. 14) and UL 916 (CSA C22.2, No. 205); factory assembled with modular single-pole relays, power supplies, and accessory components required for specified performance.
1. Cabinet: Steel with hinged, locking door.
 - a. Barriers separate low-voltage and line-voltage components.
 - b. Directory: Mounted on back of door. Identifies each relay as to load groups controlled and each programmed pilot device if any.
 - c. Control Power Supply: Transformer and full-wave rectifier with filtered dc output.
 2. Single-Pole Relays: Mechanically held, unless otherwise indicated; split-coil, momentary-pulsed type.
 - a. Low-Voltage Leads: Plug connector to the connector strip in cabinet and pilot light power where indicated.
 - b. Rated Capacity (Mounted in Relay Panel): 20 A, 125-V ac for tungsten filaments; 20 A, 277-V ac for ballasts.
 - c. Endurance: 50,000 cycles at rated capacity.
 - d. Mounting: Provision for easy removal and installation in relay cabinet.
- B. Electrically Operated, Molded-Case Circuit-Breaker Panelboard: Comply with NEMA PB 1 and UL 50 (CSA C22.2, No. 94), UL 67 (CSA C22.2, No. 29), UL 489 (CSA C22.2, No. 65), and UL 916 (CSA C22.2, No. 205).
1. Cabinets: In addition to requirements specified below, comply with Division 26 Section "Panelboards."
 2. Electrically Operated, Molded-Case Circuit Breakers: Bolt-on type.
 - a. Switching Endurance Ratings: Certified by manufacturer or by a nationally recognized testing laboratory (NRTL) for at least 20,000 open and close operations under rated load at 0.8 power factor.
 - b. Minimum 30,000 open and close operations with load equal to circuit-breaker trip rating and consisting of 100 percent tungsten filament load.
 - c. Minimum 30,000 open and close operations with load equal to circuit-breaker trip rating and consisting of 100 percent fluorescent ballasts rated for 10 percent total harmonic distortion.
 - d. Listed and labeled as complying with UL SWD, HCAR, and HID ratings by a national recognized testing laboratory (NRTL) acceptable to authorities having jurisdiction.
- C. Line-Voltage Surge Suppression: Factory installed as an integral part of 120- and 277-V ac, solid-state control panels.

2.5 MANUAL SWITCHES AND PLATES

- A. Push-Button Switches: Modular, momentary-contact, low-voltage type.
 - 1. Match color specified in Division 26 Section "Wiring Devices."
 - 2. [Integral green [LED] pilot light to indicate when circuit is on.]
 - 3. [Internal white [LED] locator light to illuminate when circuit is off.]
- B. Manual, Maintained Contact, Full- or Low-Voltage Switch: Comply with Division 26 Section "Wiring Devices."
- C. Wall-Box Dimmers: Comply with Division 26 Section "Wiring Devices."
- D. Wall Plates: Single and multigang plates as specified in Division 26 Section "Wiring Devices."
- E. Legend: Engraved or permanently silk-screened on wall plate where indicated. Use designations indicated on Drawings.

2.6 FIELD-MOUNTED DIGITAL CONTROLS AND PLATES

- A. Connection Type: RS-485 protocol, category [5] or [5e] as required UTP cable, using RJ45 connectors. Power shall be from the control unit.
- B. Pushbutton Switches: Modular, solid-state, programmable, digital, momentary contact, designed to connect to a microprocessor based control unit as a manual control source.
 - 1. Mounting: Standard single-gang recessed switchbox, using device plates specified in Division 26 Section "Wiring Devices."
 - 2. Multi-Gang Mounting: One to six pushbuttons per gang.

2.7 CONDUCTORS AND CABLES

- A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG, complying with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- B. Classes 2 and 3 Control Cables: Stranded copper, complying with UL 83, multiconductor cable with copper conductors not smaller than No. [18] AWG, complying with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- C. Class 1 Control Cables: Stranded copper, complying with UL 83, multiconductor cable with copper conductors not smaller than No. [14] AWG, complying with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- D. Structured Network Digital and Multiplexed Signal Cables: Unshielded, twisted-pair cable with copper conductors, complying with TIA/EIA-568-B.2, Category [5e] or [6] as appropriate for horizontal copper cable and with Division 27 Section "Communications Horizontal Cabling."
- E. RS-485 Cables:
 - 1. Standard Cable: NFPA 70, Type CM[or CMG].
 - a. Paired, 2 pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors.
 - b. PVC insulation.
 - c. Unshielded.
 - d. PVC jacket.

- e. Flame Resistance: Comply with UL 1581.
- 2. Plenum-Rated Cable: NFPA 70, Type CMP.
 - a. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
 - b. Fluorinated ethylene propylene insulation.
 - c. Unshielded.
 - d. Fluorinated ethylene propylene jacket.
 - e. Flame Resistance: NFPA 262, Flame Test.

PART 3 - EXECUTION

3.1 WIRING INSTALLATION

- A. Comply with NECA 1.
- B. Comply with NECA 504, "Recommended Practice for the Installing Lighting Control Devices and Systems" as published by the National Electrical Contractors Association.
- C. Wiring Method: Comply with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- D. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points. Separate power-limited and non-power-limited conductors according to conductor manufacturer's written instructions
- E. Install field-mounting surge protective devices for lighting control devices in Category A locations that do not have integral line-voltage surge protection. Size conductors according to lighting control device manufacturer's written instructions, unless otherwise indicated.
- F. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.2 IDENTIFICATION

- A. Identify components and power and control wiring according to Division 26 Section "Identification for Electrical Systems."
 - 1. Identify controlled circuits in lighting contactors.
- B. Label time switches and contactors with a unique designation.

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections[, and assist in field testing]. Report results in writing.
- B. Perform the following field tests and inspections and prepare test reports:
 - 1. Test for circuit continuity.
 - 2. Verify that the control module features are operational.
 - 3. Check operation of local override controls.
 - 4. Test system diagnostics by simulating improper operation of several components selected by Architect.
- C. Lighting controls will be considered defective if they do not pass tests and inspections.

3.4 SOFTWARE INSTALLATION

- A. Install and program software with initial settings of adjustable values. Make backup copies of software and user-supplied values. Provide current licenses for software.

3.5 ADJUSTING

- A. Time-Schedule Adjustments: Times indicated in documents represent initial settings known at time of design documentation. Coordinate final program settings for time-of-day and holiday schedules with Owner prior to Substantial Completion. When requested within 3 months of date of Substantial Completion, provide on-site assistance in adjust schedules to suit Owner. Provide up to one visit to Project during other-than-normal occupancy hours for this purpose.
- B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting sensors and to assist Owner's personnel in making program changes to suit actual occupied conditions. Provide up to two visits to Project during other than normal occupancy hours for this purpose.

3.6 CLEANING

- A. Clean components according to manufacturer's written instructions.
- B. On completion of device box installation but before any wiring devices are installed, inspect interior of boxes and perform the following:
 - 1. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
- C. On completion of wall plate installation, inspect exterior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Replace cracked or damaged wall plates.
 - 3. Remove all temporary markings and labels.
 - 4. Wipe down all wall plates with approve cleaning agent to remove fingerprints and dust.

3.7 DEMONSTRATION

- A. Coordinate demonstration of products specified in this Section with demonstration requirements for devices specified in Division 26 Section "Lighting Control Devices."
- B. Engage a factory-authorized service representative to train Owner's management and maintenance personnel to adjust, operate, and maintain lighting controls and software training for PC-based control systems. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 262200

LOW-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following types of dry-type transformers rated 600 V and less, with capacities up to 1500 kVA:
 - 1. Distribution transformers.
- B. Related Sections include the following:
 - 1. Division 26 Section "Vibration and Seismic Controls for Electrical Systems" for products and installation requirements necessary for compliance with seismic criteria.

1.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design supports for stacked transformers, ~~[including comprehensive engineering analysis by a qualified professional engineer,]~~ using performance requirements and design criteria indicated.
 - 1. Design equipment supports for stacked transformers capable of supporting combined operating weight of supported equipment and connected systems and components.

1.3 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Product Data: Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer indicated.
 - 1. Include typical manufacturer's test data reports for each type and size transformer. Reports shall include but not be limited to the following data:
 - a. Maximum Efficiency in accordance with NEMA TP 1.
 - b. Efficiency at 50-percent and 100-percent load.
 - c. Percent voltage regulation at 80-percent and 100-percent power factor.
 - d. Losses in kVA at no load and full load conditions.
 - e. Percent X and Percent R values,
 - f. Maximum sound level of transformer in enclosure (in dBA).
 - g. Maximum 30-Deg hot spot and average temperature rise over a 40 degree C ambient.
- C. Delegated-Design Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Wiring Diagrams: Power, signal, and control wiring.
 - 2. Stacked Transformers Rack: show fabrication and installation details and include calculations for equipment supports.

- D. Coordination Drawings: Submit Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electrical" for each location where transformers are included in the Work. Include the following:
 - 1. Ground rod and grounding cable locations.

1.4 ACTION SUBMITTALS

- A. **Manufacturer Seismic Qualification Certification:** certification that transformers, supporting devices, accessories, and components will withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- B. Qualification Data: For testing agency.
- C. Source quality-control test reports.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For testing agency.
- B. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For transformers, to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation And Maintenance Data," include the following:
 - 1. Manufacturer's routine maintenance requirements for transformers and all installed components.

1.7 QUALITY ASSURANCE

- A. Testing Agency Qualifications: For independent agency as defined in Division 26 Section "Common Work Results for Electrical".
- B. Source Limitations: Obtain each transformer type through one source from a single manufacturer, unless otherwise indicated.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Prepare equipment for shipment.
 - 1. Provide suitable crating, blocking, and supports so equipment will withstand expected domestic shipping and handling shocks and vibration.
 - 2. Weatherproof equipment for shipment. Close connection openings to prevent entrance of foreign material during shipment and storage.
- B. Installation Pathway: Coordinate delivery of equipment to allow movement into designated space.
 - 1. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.
 - 2. Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving equipment into place.
- C. Temporary Heating: Apply temporary heat according to manufacturer's written instructions within the enclosure of each ventilated-type unit, throughout periods during which

equipment is not energized and when transformer is not in a space that is continuously under normal control of temperature and humidity.

- D. Store equipment indoors in clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- E. Handle equipment components according to manufacturer's written instructions. Use factory-installed lifting provisions.

1.9 COORDINATION

- A. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- B. Coordinate installation of structure-hanging supports with actual transformer provided.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Eaton Electrical Inc.; Cutler-Hammer Products.
 - 2. General Electric Company.
 - 3. Siemens Energy & Automation, Inc.
 - 4. Square D; Schneider Electric.

2.2 GENERAL TRANSFORMER REQUIREMENTS

- A. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Transformers Rated 15 kVA and Larger: Comply with NEMA TP 1 energy-efficiency levels as verified by testing according to NEMA TP 2.
- D. Comply with IEEE C57.12.91, "Test Code for Dry-Type Distribution and Power Transformers."
- E. Cores: High grade, grain-oriented, non-aging silicon steel with high magnetic permeability and low hysteresis and eddy current losses.
- F. Coils: Continuous windings without splices except for taps.
 - 1. Internal Coil Connections: Brazed or pressure type.
 - 2. Coil Material: Aluminum

2.3 DISTRIBUTION TRANSFORMERS

- A. Comply with NEMA ST 20, and list and label as complying with UL 1561.
- B. Energy Efficiency for Transformers Rated 15 kVA and Larger:

1. Complying with NEMA TP 1, Class 1 efficiency levels.
 2. Tested according to NEMA TP 2.
- C. Provide transformers that are constructed to withstand seismic forces specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- D. Cores: One leg per phase.
- E. Enclosure for Interior Transformers: Ventilated, NEMA 250, Type 2, unless otherwise indicated.
1. Core and coil shall be impregnated within resin compound, sealing out moisture and air.
- F. Enclosure for Exterior Transformers: Ventilated, NEMA 250, Type 3R, unless otherwise indicated.
1. Core and coil shall be impregnated within resin compound, sealing out moisture and air.
- G. Transformer Enclosure Finish: Comply with NEMA 250. The entire enclosure shall be finished utilizing a continuous process consisting of degreasing, cleaning and phosphatizing, followed by electrostatic deposition of a polymer polyester powder coating and baking cycle to provide uniform coating of all edges and surfaces.
1. Finish Color: ANSI Gray.
- H. Taps for Transformers Smaller Than 3 kVA: One 5 percent tap above normal full capacity.
- I. Taps for Transformers 7.5 to 14 kVA: Two 5 percent taps below normal full capacity.
- J. Taps for Transformers 15 kVA and Larger: Two 2.5 percent taps above and four 2.5 percent taps below normal full capacity.
- K. Insulation Class: Materials in accordance with NEMA ST20 220 deg C, UL-component-recognized insulation system with a maximum of 150 deg C rise above 40 deg C ambient temperature.
- L. K-Factor Rating: Transformers indicated to be K-factor rated shall comply with UL 1561 requirements for non-sinusoidal load current-handling capability to the degree defined by designated K-factor.
1. Construct K-rated transformers in accordance with requirements of Distribution Transformers listed above, unless otherwise indicated.
 2. Indicate value of K-factor on transformer nameplate.
 3. Taps for Transformers 15 kVA and Larger: Two 2.5 percent taps above and four 2.5 percent taps below normal full capacity.
 4. Neutral Terminal: Rated for 200-percent of secondary phase current.
 5. Electrostatic Shielding: Provide electrostatic shield as specified below.]
- M. Low-Sound-Level Requirements: Minimum of 3 dBA less than NEMA ST 20 standard sound levels when factory tested according to IEEE C57.12.91, unless otherwise indicated.
1. 9 kVA and below: 37 dBA
 2. 10 kVA to 50 kVA: 42 dBA
 3. 51 kVA to 150 kVA: 47 dBA
 4. 151 kVA to 300 kVA: 52 dBA
 5. 301 kVA to 500 kVA: 57 dBA
 6. 501 kVA to 700 kVA: 59 dBA
 7. 701 kVA to 1000 kVA: 61 dBA

2.4 SOURCE QUALITY CONTROL

- A. Test and inspect transformers according to IEEE C57.12.91.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.
- B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's written instructions.
- C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.
- D. Verify that ground connections are in place and requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATION

- A. Transformer Mounting
 - 1. 15 kVA or less: Floor mounted or suspended, as indicated.
 - 2. 30 kVA and 45kVA: floor mounted, rack mounted or suspended, as indicated.
 - 3. 75 kVA: Floor mounted or rack mounted, as indicated.
 - 4. Greater than 75 kVA: Floor mounted or rack mounted, unless otherwise indicated.

3.3 INSTALLATION

- A. Comply with NECA 409, "Recommended Practice for Installing and Maintaining Dry-Type Transformers" as published by the National Electrical Contractors Association.
- B. Install and anchor floor-mounted transformers level on concrete bases, 4-inch nominal thickness according to manufacturer's written instructions. Concrete base is specified in Division 26 Section "Hangers and Supports for Electrical Systems," and concrete materials and installation requirements are specified in Division 03. **Comply with seismic codes applicable to Project, and requirements in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."**
- C. Construct steel channel support system for rack-mounted or suspended transformers according to manufacturer's written instruction and requirements of Division 26 Section "Hangers and Supports for Electrical Systems." **Comply with seismic codes applicable to Project, and requirements in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."**
- D. Comply with vibration isolation for transformers per requirements in Division 26 Section "Vibration and Seismic Controls for Electrical Systems"

3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."
- B. Transformer Nameplates: Label each transformer with Engraved, laminated-plastic or metal nameplate for each transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Division 26 Section "Identification for Electrical Systems."

3.5 CONNECTIONS

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
 - 1. Ground transformer before it is energized.
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- C. Provide flexible metal conduit with a minimum 12" to a maximum 24" length for wiring connections to transformer enclosure.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified independent testing and inspecting agency as defined in Division 26 Section "Common Work Results for Electrical" to perform the following field tests and inspections and prepare certified test reports:
 - 1. Test mounting and anchorage devices according to requirements in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
 - 2. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, Section 7.2 for dry-type transformers. Certify compliance with test parameters.
 - 3. Infrared Scanning: Perform Thermographic Survey in accordance with NETA ATS, Section 9.0.
 - a. Initial Infrared Scanning: Within 60 Days after Substantial Completion, perform an infrared scan of each transformer's connections. Remove covers so connections are accessible to portable scanner.
 - b. Instruments, Equipment:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
- B. Correct Deficiencies and Report:
 - 1. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace transformers, conductors, units, and devices as required to bring system into compliance.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. Prepare a report, certified by testing agency, that identifies transformer, connection, conductors and devices checked and describes results. Include notation of deficiencies detected, remedial action taken, and observations and test results after remedial action.
- C. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.7 ADJUSTING

- A. Record transformer secondary voltage at each unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 10 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.
- B. Output Settings Report: Prepare a written report listing output voltages and tap settings.

3.8 CLEANING

- A. Clean components according to manufacturer's written instructions.
- B. On completion of installation, inspect interior and exterior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
 - 3. Repair exposed surfaces to match original finish.

3.9 PROTECTION

- A. Temporary Heating: Maintain a clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Apply temporary heating as required.
- B. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.

3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's management and maintenance personnel to adjust, operate, and maintain transformers. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 262413

SWITCHBOARDS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes service and distribution switchboards rated 600 V and less.
- B. Related Sections include the following:
 - 1. ~~[Division 26 Section "Electrical Power Monitoring and Control" for interfacing communication and metering requirements.]~~
 - 2. Division 26 Section "Overcurrent Protective Device Coordination Study" for short-circuit rating of devices and for setting of overcurrent protective devices.
 - 3. Division 16 26 Section "SPD for Low-Voltage Electrical Power Circuits" for internal surge protective devices.

1.2 DEFINITIONS

- A. DPM: Multifunction Digital-Metering Monitor
- B. EMI: Electromagnetic interference.
- C. GFCI: Ground-fault circuit interrupter.
- D. GFEP: Ground-fault equipment protection.
- E. RFI: Radio-frequency interference.
- F. RMS: Root mean square.
- G. SCADA: Supervisory Control And Data Acquisition.
- H. SPDT: Single pole, double throw.

1.3 PERFORMANCE REQUIREMENTS

- A. Overcurrent Protective Device Coordination: All overcurrent protective devices proposed for inclusion in the Work shall be selected to be selectively coordinated with the overcurrent protective devices installed on their supply side such that an overcurrent event (overload, short-circuit, or ground-fault) occurring at the lowest level in the system (branch circuit) cannot cause the feeder protective device supplying the branch circuit panelboard to open. This coordination shall be carried through each level of distribution for all branches of normal and emergency power. Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.

1.4 ACTION SUBMITTALS

- A. Specification Compliance Certification: Submit a Specification Compliance Certification in accordance with Division 26 Section "Common Work Results for Electrical".

- B. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- C. Simultaneous Action Submittals: Switchboard Product Data submittal shall be made in conjunction with action submittals required under Division 26 Section "Overcurrent Protective Device Coordination Study." The release of electrical equipment submittals (panelboards, engine generators, switchgear, etc.) is dependent on the receipt of a complete and accurate overcurrent protective device coordination study. The Architect and Engineer require a full submittal review period as delineated in Division 01 Section "Submittal Procedures" to adequately review the OCPD study against the submitted electrical components prior to release of submittals for equipment procurement. The submittal schedule required by Division 01 requirements shall provide for this review time in the action submittal process. Delay claims arising due to Contractor's failure to coordinate simultaneous action submittals will not be considered by the Owner.
- D. Product Data: For each type of switchboard, overcurrent protection device, accessory, and related component, include the following:
1. Manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
 2. Rated capacities, features, operating characteristics, furnished specialties, factory settings, accessories and time-current characteristic curves for individual relays and overcurrent protective devices.
 - a. Time-current curves for each type of overcurrent protection device. Include hardcopy of characteristic curve and TCC Number for use with Power Tools by SKM Systems Analysis, Inc. Indicate available setting points and selectable ranges for each type of adjustable overcurrent protection device.
 3. Hardcopy layout of each display screen in HMI and DPM.
 4. Power Monitoring Block Diagram: Show devices monitored and interconnections between components specified in this Section and devices furnished under Division 26 Section "Electrical Power Monitoring and Control". Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines. Illustrate coordination among related equipment and power monitoring and control.
- E. Shop Drawings: For each switchboard and related equipment, include the following:
1. Dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show method of field assembly and location and size of each field connection. Include the following:
 - a. Tabulation of installed devices with features and ratings.
 - b. Enclosure types and details.
 - c. Outline and general arrangement drawing showing dimensions, shipping sections, and weights of each assembled section.
 - d. Bus configuration with size and number of conductors in each bus run, including phase, neutral, and ground conductors of main and branch buses.
 - e. One-line diagram.
 - f. Horizontal and vertical bus current and voltage ratings.
 - g. Short-time and short-circuit current rating of equipment assembly.
 - h. Feeder entry locations and lug configuration.
 - i. Floor plan drawing showing locations for anchor bolts and leveling channels].
 - j. Nameplate legends.
 - k. ~~[One-Line Diagram Nameplate.]~~
 - l. ~~[Mimic-bus diagram.]~~
 - m. ~~[UL listing for series rating of installed devices.]~~

2. **Seismic Design Calculations:** Signed and sealed by a qualified professional engineer. Calculate requirements for selecting seismic restraints.
3. **Wiring Diagrams:** For each type of switchboard and related equipment, include the following:
 - a. Power, signal, and control wiring.
 - b. Three-line diagrams of current and future secondary circuits showing device terminal numbers and internal diagrams.
 - c. Schematic control diagrams.
 - d. Diagrams showing connections of component devices and equipment.
 - e. Schematic diagrams showing connections to remote devices.

1.5 INFORMATIONAL SUBMITTALS

- A. **Coordination Drawings:** Submit Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electrical" for each location where switchboards are included in the Work.
- B. **Manufacturer Seismic Qualification Certification:** certification that electrical equipment assemblies, overcurrent protective devices, accessories, and components will withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- C. **Switchboard Directories:** For installation on Switchboard.
- D. **Source quality-control test reports.**
 1. **Reports and Product Certificates:** For switchboard, signed by product manufacturer.
- E. **Field quality-control Test Method and Procedure:** List of procedures to be used during functional and operations sequence testing. Method of Procedure should include but not be limited to the following:
 1. Tabulation of Testing Equipment and PPE required for tests.
 2. Schedule of Shutdowns required.
 3. Manufacturer's Recommended Pre-Start Checklists for the following:
 - a. Overcurrent Protection Devices
 - b. Metering and Monitoring Equipment
 4. Step-by-Step Testing Operations and Criteria for tests listed in Part 3 Paragraph "Field quality-control".
- F. **Field quality-control test reports including the following:**
 1. Test results that comply with requirements.
 2. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

1.6 CLOSEOUT SUBMITTALS

- A. **Operation and Maintenance Data:** For electrical equipment, accessories and components to be included in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 1. Manufacturer's routine maintenance requirements for switchboard and all installed components.
 2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
 3. Time-current curves, including selectable ranges for each type of relay and overcurrent protective device. Include directory listing each adjustable breaker included in the Work and their final set points.

4. Manufacturer's sample system checklists and log sheets.
5. Manufacturer's written instructions for sequence of operation.

1.7 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Keys: Six spares for each type of switchboard cabinet lock.
 2. Touchup Paint: Three 0.5 pint containers of paint matching enclosure finish.
 3. Indicating Lights: one for every ten of each type and rating installed. Furnish at least one of each type.
 4. Spare Fuses for the following:
 - a. Potential Transformer Fuses: One for every ten of each type and rating installed. Furnish at least one of each type.
 - b. Control-Power Fuses: One for every ten of each type and rating installed. Furnish at least one of each type.

1.8 QUALITY ASSURANCE

- A. Testing Agency Qualifications: For independent agency as defined in Division 26 Section "Common Work Results for Electrical".
- B. Source Limitations: Obtain switchboard, overcurrent protective devices, components, and accessories through one source from a single manufacturer, unless otherwise indicated.
 1. Breaker Manufacturer: Manufacturer for breakers shall be the same as the manufacturer of other breakers proposed for other portions of the Work.
 2. Breaker Manufacturer for installation into existing switchboard: Manufacturer for breakers shall match the manufacturer of the existing equipment. For discontinued equipment, breaker shall be compatible and listed for installation within existing equipment.
- C. Product Options: Drawings indicate spatial allocation for switchboards, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum spatial allocation. Refer to Division 01 Section "Product Requirements."
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with IEEE C2.
- F. Comply with NFPA 70.
- G. Comply with NEMA PB 2, "Deadfront Distribution Switchboards."

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Prepare equipment for shipment.
 1. Provide suitable crating, blocking, and supports so equipment will withstand expected domestic shipping and handling shocks and vibration.
 2. Weatherproof equipment for shipment. Close connection openings to prevent entrance of foreign material during shipment and storage.

- B. Installation Pathway: Coordinate delivery of equipment to allow movement into designated space.
 - 1. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.
 - 2. Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving equipment into place.
- C. Store equipment indoors in clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- D. Handle equipment components according to manufacturer's written instructions. Use factory-installed lifting provisions.
- E. Handle switchboards according to NEMA PB 2.1 and NECA 400.

1.10 PROJECT CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation at indicated ampere ratings for the following conditions:
 - 1. Ambient Temperature for Circuit Breakers: Not less than 23 deg and not exceeding 104 deg F.
 - 2. Ambient Temperature for Fused Switches: Not less than minus 22 deg F and not exceeding 104 deg
 - 3. Altitude: Not exceeding 6600 feet (2000 m)

1.11 COORDINATION

- A. Coordinate layout and installation of switchboard and components with other construction that penetrates floors, ceilings or walls or are supported by them, including but not limited to conduit, piping, other electrical equipment, light fixtures, HVAC equipment, fire-suppression-system components and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels.
- B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Cutler-Hammer, Inc.; Eaton Corporation.
 - 2. General Electric Co.; Electrical Distribution & Protection Div.
 - 3. Siemens Energy & Automation, Inc.
 - 4. Square D; Schneider Electric.

2.2 RATINGS

- A. Suitable for application in 3-phase, 60-Hz, solidly grounded-neutral system, unless otherwise indicated.
- B. Nominal System Voltage: As indicated on the Drawings.

- C. Main-Bus: Amperage as indicated on the Drawings. Provide continuous rating across entire length of main-bus.
- D. Short-Time and Short-Circuit Current: Match rating of highest-rated overcurrent protective device in switchboard assembly.
 - 1. Available Short-Circuit Current: As indicated on the Drawings. Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.

2.3 MANUFACTURED UNIT FABRICATION

- A. Fabricate and test switchboards according to IEEE 344 to withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- B. Factory assembled and tested and complying with UL 891; including devices complying with UL 489.
- C. Mounting height of breakers shall be in accordance with NFPA 70 requirements. Fabrication of equipment shall take housekeeping pad dimension into account in determining height of top breaker in all sections. Refer to Division 26 Section "Hangers and Supports for Electrical Systems" for housekeeping pad specifications.
- D. Front-Connected, Front-Accessible Switchboard: Front and Rear aligned, with features as follows:
 - 1. Main Devices: Fixed, individually mounted.
 - 2. Feeder Devices: Panel-mounted
- E. Buses and Connections: Three phase, four wire, unless otherwise indicated.
 - 1. Phase- and Neutral-Bus Material: Hard-drawn copper of 98 percent conductivity, silver-plated, with copper feeder circuit-breaker line connections. ~~[Tin-plated, high-strength, electrical-grade aluminum alloy with tin-plated aluminum circuit-breaker line connections].~~
 - a. Lugs: Mechanical style one or two hole style to suit conditions, suitable for quantity and size of conductor. UL 486 B listed, dual rated and marked for use with copper- or aluminum conductors to suit project conditions.
 - 2. Ground Bus: 1/4-by-2-inch-hard-drawn copper of 98 percent conductivity, equipped with [mechanical connectors for feeder and branch-circuit ground conductors. For busway feeders, extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.
 - 3. Neutral Buses: 100 percent of the ampacity of phase buses, unless otherwise indicated, equipped with mechanical connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.
 - 4. Neutral Disconnect Link: where switchboard is used as the Service Disconnecting means, provide bolted, uninsulated copper bus, arranged to connect neutral bus to ground bus. Provide bussed link sized in accordance with NFPA 70.
 - 5. Vertical Section Bus Size: Comply with UL 891, including allowance for spare circuit breakers and spaces for future circuit breakers. Include bus to extend the full length of vertical sections.
 - 6. Provide bus bars connections between vertical sections and compartments. Cable connections are not permitted.
 - 7. Support and Brace Buses for indicated short-circuit currents.
 - 8. Main Phase Buses and Equipment Ground Buses: Uniform capacity for entire length of switchboard's main and distribution sections.
 - 9. Provide for future extensions from either end of main phase, neutral, and ground bus by means of predrilled bolt-holes and connecting links.

10. Load Terminals: Insulated, rigidly braced, silver-plated, copper runback bus extensions equipped with pressure connectors for outgoing circuit conductors. Provide load terminals for future circuit-breaker positions at full ampere rating of circuit-breaker position.
 11. Bus-Bar Insulation: Individual bus bars wrapped with factory-applied, flame-retardant tape or spray-applied, flame-retardant insulation.
 - a. Minimum insulation temperature rating: 105 deg C.
 - b. Sprayed Insulation Thickness: 3 mils, minimum.
 - c. Bolted Bus Joints: Insulate with secure joint covers that can easily be removed and reinstalled.
- F. Future Device Provisions: Equip compartments with unused space with mounting brackets, supports, bus connections, and necessary appurtenances at full rating of circuit-breaker compartment.
- G. Indoor Enclosure Fabrication: Steel, rated for environmental conditions at installed location.
1. Indoor Location Rating: NEMA 250, Type 1 ~~[Type 2]~~.
 2. Wet or Damp Indoor Location Rating: NEMA 250, Type 4.
 3. Finish: Factory-applied finish in manufacturer's standard ANSI Gray enamel over corrosion-resistant treatment or rust-inhibiting primer coat.
 4. Access: Removable, Front and Side Compartment Covers secured by captive bolts for access to interior of switchboard.
 - ~~5. Fungus Proofing: Permanent fungicidal treatment for switchboard interior, including instruments and instrument transformers.~~
 - ~~6. Space Heaters: Factory-installed electric space heaters of sufficient wattage in each vertical section to maintain enclosure temperature above expected dew point.~~
 - ~~a. Space Heater Control: Thermostats to maintain temperature of each section above expected dew point.~~
 - ~~b. Space Heater Power Source: Transformer, factory installed in switchboard.~~

2.4 OVERCURRENT PROTECTIVE DEVICES

- A. Series-rated devices are not permitted.
- B. Overcurrent Protection Device Type: Provide overcurrent device as follows, unless otherwise indicated.
1. Main OCPD: Molded-Case Electronic Trip-Unit Circuit Breakers
 2. Feeder OCPD rated less than 250 Amps Molded-Case Electronic Trip-Unit Circuit Breakers
 3. Feeder OCPD rated 250 Amps and greater: Molded-Case Electronic Trip-Unit Circuit Breakers
- C. Molded-Case Circuit Breaker Requirements: NEMA AB 3, with interrupting capacity rating to meet available fault current.
1. Electronic trip-unit circuit breakers: Full Function, Fully Rated, RMS sensing, field-replaceable rating plug, and the following field-adjustable settings:
 - a. Long- and short-time pickup levels.
 - b. Long- and short-time time adjustments.
 - c. Instantaneous trip.
 - d. Ground-fault pickup level, time delay, and I^2t response, where indicated.
 - e. Ground-fault indication alarm, where indicated.
 - f. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection and short-time trip function.

- D. Molded-Case Circuit-Breaker Features: Standard frame sizes, trip ratings, and number of poles. Provide the following features for all included in the Work.
 - 1. Lugs: Mechanical, suitable for number, size, trip ratings, and conductor material; UL 486 B listed, dual rated and marked for use with copper- or aluminum load-side conductors.
 - 2. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HACR for heating, air-conditioning, and refrigerating equipment.
 - 3. Padlocking Provisions: For installing at least three padlocks on each circuit breaker to secure its enclosure and prevent movement mechanism.
 - 4. ~~Communication Capability: Communication module with functions and features compatible with power monitoring and control system specified [in Instrumentation paragraph below] in Division 26 Section "Electrical Power Monitoring and Control."~~
- E. Circuit-Breaker Accessories: Standard frame sizes, trip ratings, and number of poles. Provide the following accessories where indicated:
 - 1. Ground-Fault Protection: where indicated, provide integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 - 2. Ground-Fault Alarm Indication Only: where ground-fault is indicated on Emergency/Essential Electrical System, provide integrally mounted relay and adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator alarm. Relay shall not trip OCPD on ground-fault.
 - 3. Key Interlock Kit: To prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
 - 4. Under-voltage Trip Devices: Adjustable time-delay and pickup voltage.
 - 5. Auxiliary Contacts: Contacts for remote trip indication and control. Provide two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
 - 6. Shunt Trip: Set to trip at 55 percent of rated voltage.

2.5 INSTRUMENTATION

- A. Instrument Transformers: NEMA EI 21.1, IEEE C57.13, and the following:
 - 1. Potential Transformers: Secondary voltage rating of 120 V and NEMA accuracy class of 0.3 with burdens of W, X, and Y.
 - 2. Current Transformers: Ratios with accuracy class and burden suitable for connected relays, meters, and instruments.
- B. Power Monitoring Performance Requirement: Provide monitoring functions and appearances necessary to provide all items listed below, unless otherwise indicated:
 - 1. Main: Monitor the following for main bus and display at the Power Monitor Display:
 - a. Voltage, phase to phase, phase to neutral, and three-phase averages of phase to phase and phase to neutral.
 - b. Frequency.
 - c. THD, current and voltage, per phase.
 - d. Current, per phase rms, three-phase average and neutral.
 - e. Real power, per phase and three-phase total.
 - f. Reactive power, per phase and three-phase total.
 - g. Apparent power, per phase and three-phase total.
 - h. Power factor, per phase and three-phase total.
 - i. Demand current, per phase and three-phase average.
 - j. Demand real power, three-phase total.
 - k. Demand apparent power, three-phase total.
 - l. Accumulated energy (MWh and MVARh).
 - m. Phase rotation.

- n. Unbalance: Current and voltage.
 - o. Harmonic Power: Per phase, three phase.
 - p. Harmonic Magnitudes and Angles for Current and Voltages: for each phase voltage and current through [31st] harmonic. Calculate for all three phases, current and voltage, and residual current. Current and voltage information for all phases shall be obtained simultaneously from same cycle. Reported as a percentage of the fundamental or as a percentage of rms values, as selected by user.
 - q. Waveform Capture:
 - 1) Capture and store steady-state waveforms of voltage and current channels; initiated manually. Each capture shall be for 3 cycles, 128 data points for each cycle, allowing resolution of harmonics to 31st harmonic of basic 60 Hz.
 - 2) Store captured waveforms in internal nonvolatile memory; available for PC display, archiving, and analysis.
2. Feeder: Monitor the following for each feeder and display at the Power Monitor Display and at additional Display located on the Feeder OCPD:
- a. THD, current, per phase.
 - b. Current, per phase rms, three-phase average and neutral.
 - c. Real power, per phase and three-phase total.
 - d. Reactive power, per phase and three-phase total.
 - e. Apparent power, per phase and three-phase total.
 - f. Demand current, per phase and three-phase average.
 - g. Demand real power, three-phase total.
 - h. Demand apparent power, three-phase total.
 - ~~i. Accumulated energy (MWh and MVARh).~~
 - ~~j. Harmonic Power: Per phase, three phase.~~
 - ~~k. Harmonic Magnitudes and Angles for Current and Voltages: for each phase voltage and current through [31st] harmonic. Calculate for all three phases, current and voltage, and residual current. Current and voltage information for all phases shall be obtained simultaneously from same cycle. Reported as a percentage of the fundamental or as a percentage of rms values, as selected by user.~~
 - ~~l. Waveform Capture:

 - 1) Capture and store steady-state waveforms of voltage and current channels; initiated manually. Each capture shall be for 3 cycles, 128 data points for each cycle, allowing resolution of harmonics to 31st harmonic of basic 60 Hz.
 - 2) Store captured waveforms in internal nonvolatile memory; available for PC display, archiving, and analysis.~~
- C. Power Monitor Requirements: Multifunction Digital-Metering and Monitoring; Integral Microprocessor-based unit suitable for three- or four-wire systems and with the following features:
- 1. Monitor Mounting and Display: Display and control unit flush or semiflush mounted in instrument compartment door.
 - a. Backlighted LCD to display metered data with touch-screen or touch-pad selecting device.
 - b. Display minimum of four values on one screen at same time.
 - 2. Reset: Allow reset of the following parameters at the display:
 - a. Peak demand current.
 - b. Peak demand power (kW) and peak demand apparent power (kVA).
 - c. Energy (MWh) and reactive energy (MVARh).
 - 3. Monitoring inputs for Main: Collected via Electronic-Trip Circuit Breaker trip unit located on Main OCPD

4. Monitoring inputs for Feeder: Collected via [Electronic-Trip Circuit Breaker trip unit located on each Feeder OCPD, and potential transformer located on main bus; rated to 600 V.
5. Current and Voltage Ratings:
 - a. Designed for use with current inputs from standard instrument current transformers with 5-A secondary and shall have a metering range of 0-10 A.
 - b. Withstand ratings shall be not less than 15 A, continuous; 50 A, lasting over 10 seconds, no more frequently than once per hour; 500 A, lasting 1 second, no more frequently than once per hour.
 - c. Designed for use with voltage inputs from standard instrument potential transformers with a 120-V secondary.
6. Accuracy:
 - a. Comply with ANSI C12.20, Class 0.5; and IEC 60687, Class 0.5 for revenue meters.
 - b. Accuracy from Light to Full Rating:
 - 1) Power: Accurate to 0.25 percent of reading, plus 0.025 percent of full scale.
 - 2) Voltage and Current: Accurate to 0.075 percent of reading, plus 0.025 percent of full scale.
 - 3) Power Factor: Plus or minus 0.002, from 0.5 leading to 0.5 lagging.
 - 4) Frequency: Plus or minus 0.01 Hz at 45 to 67 Hz.
7. Sampling:
 - a. Current and voltage shall be digitally sampled at a rate high enough to provide accuracy to 63rd harmonic of 60-Hz fundamental.
 - b. Power monitor shall provide continuous sampling at a rate of 128 samples per cycle on all voltage and current channels in the meter.
8. Onboard Data Logging:
 - a. Store logged data, alarms, waveforms, and events in a minimum of 800 KB of onboard nonvolatile memory.
 - b. Stored Data:
 - 1) Billing Log: User configurable; data shall be recorded every 15 minutes, identified by month, day, and 15-minute interval. Accumulate 24 months of monthly data, 32 days of daily data, and between 2 to 52 days of 15-minute interval data, depending on number of quantities selected.
 - 2) Custom Data Logs: Three user-defined log(s) holding up to 96 parameters. Date and time stamp each entry to the second and include the following user definitions:
 - a) Schedule interval.
 - b) Event definition.
 - c) Configured as "fill-and-hold" or "circular, first-in first-out."
 - 3) Alarm Log: Include time, date, event information, and coincident information for each defined alarm or event.
 - 4) Waveform Log: Store captured waveforms configured as "fill-and-hold" or "circular, first-in first-out."
 - c. Default values for all logs shall be initially set at factory, with logging to begin on device power up.
9. Minimum and Maximum Values: Record monthly minimum and maximum values, including date and time of record. For three-phase measurements, identify phase of recorded value. Record the following parameters:
 - a. Line-to-line voltage.
 - b. Line-to-neutral voltage.
 - c. Current per phase.
 - d. Line-to-line voltage unbalance.
 - e. Line-to-neutral voltage unbalance.

- f. Power factor.
- g. Displacement power factor.
- h. Total power.
- i. Total reactive power.
- j. Total apparent power.
- k. THD voltage L-L.
- l. THD voltage L-N.
- m. THD current.
- n. Frequency.
- 10. Alarms.
 - a. User Options:
 - 1) Define pickup, dropout, and delay.
 - 2) Assign one of four severity levels to make it easier for user to respond to the most important events first.
 - 3) Allow for combining up to four alarms using Boolean-type logic statements for outputting a single alarm.
 - b. Alarm Events: All alarm setpoint values shall be field adjustable;
 - 1) Over/undercurrent
 - 2) Over/undervoltage
 - 3) Current imbalance
 - 4) Phase loss, current.
 - 5) Phase loss, voltage.
 - 6) Voltage imbalance
 - 7) Over kW demand.
 - 8) Phase reversal.
 - 9) Digital input off/on.
 - 10) End of incremental energy interval.
 - 11) End of demand interval.

2.6 CONTROL POWER

- A. Control Power Supply: Control power transformer supplying control circuits through secondary disconnect devices. Include the following features:
 - 1. Dry-type transformers, in separate compartments. Transformer sized to operate all components requiring control power connection. For units larger than 3 kVA, including primary and secondary fuses.
 - 2. Control Power Fuses: Primary and secondary fuses with current-limiting and overload protection. Fuses are specified in Division 26 Section "Fuses."
- B. Control Wiring: Factory installed, complete with bundling, lacing, and protection; and complying with the following:
 - 1. Flexible conductors for No. 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
 - 2. Conductors sized according to NFPA 70 for duty required.

2.7 ACCESSORY COMPONENTS AND FEATURES

- A. ~~TCP/IP[and Modem Cards]~~: Provide TCP/IP[and modem cards] capable of connecting to owners IP network to communicate faults, alarms and send SMS messages.
- B. Connection to Data Link: A separate terminal block, factory wired to Form C dry contacts, for each alarm and status indication is reserved for connections for data-link transmission of indications to remote data terminals.

- C. Storage for Manual: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elements and surfaces where equipment will be installed for compliance with installation tolerances, required clearances, and other conditions affecting performance.
- B. Examine roughing-in of conduits to verify the following:
 - 1. Wiring entries comply with layout requirements.
 - 2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.
- C. Verify that ground connections are in place and that requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" have been met.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install switchboards and accessories according to NEMA PB 2.
- B. Comply with applicable portions of NECA 400, "Recommended Practice for the Installing and Maintaining Switchboards" as published by the National Electrical Contractors Association.
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from equipment and components once unit is secured in place.
- D. Install and anchor equipment level on concrete bases, 4-inch nominal thickness. Concrete base is specified in Division 26 Section "Hangers and Supports for Electrical Systems," and concrete materials and installation requirements are specified in Division 03.
- E. Install overcurrent protective devices, controllers, and instrumentation.
- F. Install filler plates in unused spaces.
- G. Arrange conductors in gutters into groups and bundle and wrap with wire ties.
- H. Close unused conduit opening or other unused holes in sides of box with proper mating blank-off plates.

3.3 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components and provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."
- B. Equipment Identification Nameplates: Label each switchboard assembly with engraved Equipment Identification Label as specified in Division 26 Section "Identification for Electrical Systems."

- C. Feeder OCPD Labels: Label each OCPD with nameplate that indicates the device it feeds using engraved Equipment Identification Label as specified in Division 26 Section "Identification for Electrical Systems."
- D. Switchboard Directory: Create a directory to indicate name/descriptions of installed circuit loads. Obtain approval before installing within clear plastic pocket on outside of switchboard assembly. Use a computer or typewriter to create directory; handwritten directories are not acceptable.
- E. Diagram and Instructions:
 - 1. Frame and mount the following items in clear acrylic plastic holder on the front of switchboard.
 - a. Operating Instructions: Printed basic instructions for switchboard, including control and key-interlock sequences and emergency procedures where applicable.
 - b. System Power Riser Diagrams provided in accordance with Part 2 of this Section. Fold large format drawings neatly and place with instructions.
 - 2. Storage for Maintenance Manual: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.

3.4 CONNECTIONS

- A. Tighten bus joints, electrical connectors, and terminals according to manufacturer's published torque-tightening values.
- B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- C. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- D. Wiring to Remote Components: Match type and number of cables and conductors to control and communication requirements of switchboard as recommended by manufacturer. Coordinate raceway sizes required by manufacturer and provide raceway as necessary to accommodate required wiring.
- E. Provide connection from TCP/IP card to Owner's IP network.
- F. Provide connection from terminal block to Facility Management System.

3.5 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
 - 1. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
 - 3. Assist in field testing of equipment including pre-testing and adjusting of equipment and components. Pre-Testing includes, but is not limited to, item provided on Manufacturers start-up check lists and NETA pre-testing requirements.
- B. Perform the following field tests and inspections and prepare test reports:
 - 1. Test mounting and anchorage devices according to requirements in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
 - 2. Inspect switchboard installation, including wiring, components, connections, and equipment. Test and adjust components and equipment.

3. Verify that electrical control wiring installation complies with manufacturer's submittal by means of point-to-point continuity testing. Verify that wiring installation complies with requirements in Division 26 Sections.
- C. Testing Agency: Engage a qualified independent testing and inspecting agency as defined in Division 26 Section "Common Work Results for Electrical" to perform the following field tests and inspections and prepare certified test reports:
1. After installing switchboard but before equipment is energized, verify that grounding system at switchboard tests to specified value or better.
 2. Perform each electrical test and visual and mechanical inspection stated in NETA ATS. Certify compliance with test parameters. Perform NETA tests and inspections for each of the following NETA categories:
 - a. Section 7.1 for Switchgear & Switchboard Assemblies
 - b. Section 7.3 for Cables
 - c. Section 7.6 for Circuit Breakers
 - d. Section 7.10 for Instrument Transformers
 - e. Section 7.11 for Metering and Instrumentation Devices
 - f. Section 7.13 for Grounding Systems
 - g. Section 7.14 for Ground-Fault Protection Systems; where applicable.
 3. Infrared Scanning: Perform Thermographic Survey in accordance with NETA ATS, Section 9.0.
 - a. Initial Infrared Scanning: Within 60 Days after Substantial Completion, perform an infrared scan of each switchboard. Open or remove doors and covers so connections are accessible to portable scanner.
 - b. Instruments, Equipment:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
- D. The testing agency, in conjunction with manufacturer's field service: Engage a factory-authorized service representative to perform the following field tests and inspections and prepare certified test reports:
1. Complete installation and startup checks according to manufacturer's written instructions.
- E. Correct Deficiencies, Retest and Report:
1. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace conductors, units, and devices as required to bring system into compliance.
 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 3. Prepare a report, certified by testing agency, that identifies switchboards, units, conductors and devices checked and describes results. Include notation of deficiencies detected, remedial action taken, and observations and test results after remedial action.
- F. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.6 ADJUSTING

- A. Set field-adjustable overcurrent protection device trip characteristics according to settings provided by Engineer-of-Record.
1. Settings will be provided by Engineer-of-Record after the submittal process and review of report required by Division 26 Section "Overcurrent Protective Device Coordination Study" are completed.

3.7 CLEANING

- A. Clean components according to manufacturer's written instructions.
- B. Prior to installation of front trim and cover plates inspect interior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
- C. On completion of front trim and cover installation, inspect exterior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Remove all temporary markings and labels.
 - 3. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
 - 4. Repair exposed surfaces to match original finish.

3.8 PROTECTION

- A. Temporary Heating: Maintain a clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Apply temporary heating as required.
- B. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's management and maintenance personnel to adjust, operate, and maintain switchboards, overcurrent protective devices, instrumentation, and accessories. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 262416

PANELBOARDS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes service and distribution panelboards rated 600 V and less, including the following:
 - 1. Distribution panelboards.
 - 2. Lighting and appliance branch-circuit panelboards.
- B. Related Sections include the following:
 - 1. Division 26 Section "Overcurrent Protective Device Coordination Study" for short-circuit rating of devices and for setting of overcurrent protective devices.
 - 2. Division 26 Section "SPD for Low-Voltage Electrical Power Circuits" for internal surge protective devices.

1.2 DEFINITIONS

- A. DPM: Multifunction Digital-Metering Monitor
- B. EMI: Electromagnetic interference.
- C. GFCI: Ground-fault circuit interrupter.
- D. GFEP: Ground-fault equipment protection.
- E. RFI: Radio-frequency interference.
- F. RMS: Root mean square.
- G. SPDT: Single pole, double throw.

1.3 PERFORMANCE REQUIREMENTS

- A. Overcurrent Protective Device Coordination: All overcurrent protective devices proposed for inclusion in the Work shall be selected to be selectively coordinated with the overcurrent protective devices installed on their supply side such that an overcurrent event (overload, short-circuit, or ground-fault) occurring at the lowest level in the system (branch circuit) cannot cause the feeder protective device supplying the branch circuit panelboard to open. This coordination shall be carried through each level of distribution for all branches of [normal and] emergency power. [Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.]

1.4 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.

- B. Simultaneous Action Submittals: Panelboard Product Data submittal shall be made in conjunction with action submittals required under Division 26 Section "Overcurrent Protective Device Coordination Study." The release of electrical equipment submittals (panelboards, engine generators, switchgear, etc.) is dependent on the receipt of a complete and accurate overcurrent protective device coordination study. The Architect and Engineer require a full submittal review period as delineated in Division 01 Section "Submittal Procedures" to adequately review the OCPD study against the submitted electrical components prior to release of submittals for equipment procurement. The submittal schedule required by Division 01 requirements shall provide for this review time in the action submittal process. Delay claims arising due to Contractor's failure to coordinate simultaneous action submittals will not be considered by the Owner.
- C. Product Data: For each type of panelboard, overcurrent protection device, accessory, and related component, include the following:
1. Manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
 2. Rated capacities, features, operating characteristics, furnished specialties, factory settings, accessories and time-current characteristic curves for individual relays and overcurrent protective devices.
 - a. Time-current curves for each type of overcurrent protection device. Include hardcopy of characteristic curve and TCC Number for use with Power Tools by SKM Systems Analysis, Inc. Indicate available setting points and selectable ranges for each type of adjustable overcurrent protection device.
 3. Power Monitoring Block Diagram: Show devices monitored and interconnections between components specified in this Section [and devices furnished under Division 26 Section "Electrical Power Monitoring and Control". Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines. Illustrate coordination among related equipment and power monitoring and control.
- D. Shop Drawings: For each panelboard and related equipment, include the following:
1. Dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show method of field assembly and location and size of each field connection. Include the following:
 - a. Tabulation of installed devices with features and ratings.
 - b. Enclosure types and details.
 - c. Outline and general arrangement drawing showing dimensions, shipping sections, and weights of each assembled section.
 - d. Bus configuration with size and number of conductors in each bus run, including phase, neutral, and ground conductors of main and branch buses.
 - e. One-line diagram.
 - f. Bus current and voltage ratings.
 - g. Short-time and short-circuit current rating of equipment assembly.
 - h. Feeder entry locations and lug configuration.
 - i. Elevation drawing showing locations for anchor bolts.
 - j. Nameplate legends.
 2. **Seismic Design Calculations:** Signed and sealed by a qualified professional engineer. Calculate requirements for selecting seismic restraints.
 3. Wiring Diagrams: For each type of panelboard and related equipment, include the following:
 - a. Power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electrical" for each location where panelboards are included in the Work.
- B. Manufacturer Seismic Qualification Certification: certification that electrical equipment assemblies, overcurrent protective devices, accessories, and components will withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- C. Panelboard Directories: For installation in panelboards.
- D. Field quality-control Test Method and Procedure: List of procedures to be used during functional and operations sequence testing. Method of Procedure should include but not be limited to the following:
 - 1. Tabulation of Testing Equipment and PPE required for tests.
 - 2. Schedule of Shutdowns required.
 - 3. Manufacturer's Recommended Pre-Start Checklists for the following:
 - a. Overcurrent Protection Devices
 - b. Metering and Monitoring Equipment
 - 4. Step-by-Step Testing Operations and Criteria for tests listed in Part 3 Paragraph "Field quality-control".
- E. Field quality-control test reports including the following:
 - 1. Test results that comply with requirements.
 - 2. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For electrical equipment, accessories and components to be included in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 - 1. Manufacturer's routine maintenance requirements for panelboard and all installed components.
 - 2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
 - 3. Time-current curves, including selectable ranges for each type of relay and overcurrent protective device. Include directory listing each adjustable breaker included in the Work and their final set points.
 - 4. Manufacturer's sample system checklists and log sheets.

1.7 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Keys: Six spares for each type of panelboard cabinet lock.
 - 2. Touchup Paint: Three 0.5 pint containers of paint matching enclosure finish.
 - 3. Indicating Lights: one for every ten of each type and rating installed. Furnish at least one of each type.
 - 4. Spare Fuses for the following:
 - a. Potential Transformer Fuses: One for every ten of each type and rating installed. Furnish at least one of each type.

- b. Control-Power Fuses: One for every ten of each type and rating installed. Furnish at least one of each type.
- 5. Molded-Case Circuit Breakers rated 100 amperes and less: 1 for every 100 of each type and rating installed. Furnish at least one of each type.]

1.8 QUALITY ASSURANCE

- A. Testing Agency Qualifications: For independent agency as defined in Division 26 Section "Common Work Results for Electrical".
- B. Source Limitations: Obtain panelboards, overcurrent protective devices, components, and accessories through one source from a single manufacturer, unless otherwise indicated.
 - 1. Breaker Manufacturer: Manufacturer for breakers shall be the same as the manufacturer of other breakers proposed for other portions of the Work.
 - 2. Breaker Manufacturer for installation into existing panelboard: Manufacturer for breakers shall match the manufacturer of the existing equipment. For discontinued equipment, breaker shall be compatible and listed for installation within existing equipment.
- C. Product Options: Drawings indicate spatial allocation for panelboards, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum spatial allocation. Refer to Division 01 Section "Product Requirements."
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with IEEE C2.
- F. Comply with NFPA 70.
- G. Comply with NEMA PB 1 "Panelboards".

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Prepare equipment for shipment.
 - 1. Provide suitable crating, blocking, and supports so equipment will withstand expected domestic shipping and handling shocks and vibration.
 - 2. Weatherproof equipment for shipment. Close connection openings to prevent entrance of foreign material during shipment and storage.
- B. Installation Pathway: Coordinate delivery of equipment to allow movement into designated space.
 - 1. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.
 - 2. Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving equipment into place.
- C. Store equipment indoors in clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- D. Handle equipment components according to manufacturer's written instructions. Use factory-installed lifting provisions.

- E. Handle panelboards according to NEMA PB 1.1 and NECA 407.

1.10 PROJECT CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation at indicated ampere ratings for the following conditions:
 - 1. Ambient Temperature for Circuit Breakers: Not less than [23 deg F and not exceeding] [104 deg F].
 - 2. [Ambient Temperature for Fused Switches: Not less than [minus 22 deg F and not exceeding] [104 deg F].
 - 3. Altitude: Not exceeding [6600 feet (2000 m)]

1.11 COORDINATION

- A. Coordinate layout and installation of panelboard and components with other construction that penetrates floors, ceilings or walls or are supported by them, including but not limited to conduit, piping, other electrical equipment, light fixtures, HVAC equipment, fire-suppression-system components and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Cutler-Hammer, Inc.; Eaton Corporation.
 - 2. General Electric Co.; Consumer and Industrial Div.
 - 3. Siemens Energy & Automation, Inc.
 - 4. Square D; Schneider Electric.

2.2 RATINGS

- A. Suitable for application in 3-phase, 60-Hz, solidly grounded-neutral system, unless otherwise indicated.
- B. Nominal System Voltage: As indicated on the Drawings.
- C. Main-Bus: Amperage as indicated on the Drawings. Provide continuous rating across entire length of main-bus.
- D. Short-Time and Short-Circuit Current: Match rating of highest-rated overcurrent protective device in panelboard assembly.
 - 1. Available Short-Circuit Current: As indicated on the Drawings. Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.

2.3 MANUFACTURED UNIT FABRICATION

- A. Fabricate and test panelboards according to IEEE 344 to withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- B. Mounting height of breakers shall be in accordance with NFPA 70 requirements. Fabrication of equipment shall take housekeeping pad dimension into account in

determining height of top breaker in all sections. Refer to Division 26 Section "Hangers and Supports for Electrical Systems" for housekeeping pad specifications.

- C. Enclosures: Flush- and surface-mounted cabinets, as indicated. NEMA PB 1.
 - 1. Rated for environmental conditions at installed location.
 - a. Indoor Locations: NEMA 250, Type 1.
 - b. Outdoor Locations: NEMA 250, Type 3R.
 - c. Kitchen Areas: NEMA 250, Type 4X, stainless steel.
 - d. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.
 - e. Hazardous Areas Indicated on Drawings: NEMA 250, Type 7C.
 - 2. Front Cover: Provide the following, unless otherwise indicated:
 - a. Hinged Front Cover: Door-in-Door construction with entire front trim hinged to box and with standard door within hinged trim cover to access device handles.
- D. Buses and Connections: Three phase, four wire, unless otherwise indicated.
 - 1. Phase- and Neutral-Bus Material: Tin-plated, high-strength, electrical-grade aluminum alloy with tin-plated aluminum circuit-breaker line connections].
 - a. Lugs: Mechanical styleone or two hole style to suit conditions, suitable for quantity and size of conductor. UL 486 B listed, dual rated and marked for use with copper- or aluminum conductors to suit project conditions.
 - 2. Ground Bus: Hard-drawn copper of 98 percent conductivity, Adequate for feeder and branch-circuit equipment ground conductors; bonded to box. Equipped with mechanical connectors for feeder and branch-circuit ground conductors.
 - 3. Neutral Buses: 100 percent of the ampacity of phase buses, unless otherwise indicated, equipped with mechanical connectors for outgoing circuit neutral cables.
 - 4. Bus Size: Comply with UL 489, including allowance for spare circuit breakers and spaces for future circuit breakers. Include bus to extend the full length of vertical sections.
 - 5. Support and Brace Buses for indicated short-circuit currents.
 - 6. Main Phase Buses and Equipment Ground Buses: Uniform capacity for entire length of panelboard section.
 - 7. Conductor Connectors: Suitable for use with conductor material; dual rated for use with copper- or aluminum conductors; marked AL7CU for 75 degrees C rated circuits.
 - 8. Feed-Through Lugs where indicated on Drawings: Mechanical type suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
 - 9. Isolated Equipment Ground Bus, where indicated on Drawings: Adequate for branch-circuit equipment ground conductors; insulated from box.
 - 10. Extra-Capacity Neutral Bus, where indicated on Drawings: Neutral bus rated 200 percent of phase bus and UL listed as suitable for nonlinear loads.
 - 11. Extra-Capacity Neutral Lugs: Where Extra-Capacity Neutral Bus is indicated on Drawings, provided lugs rated 200 percent of phase lugs mounted on extra-capacity neutral bus.
- E. Future Device Provision: Equip compartments with unused space with mounting brackets, bus connections, and necessary appurtenances required for future installation of devices. Provide bussing for full length of enclosure section.
- F. DISTRIBUTION PANELBOARDS
 - 1. Door Hardware: Secured with vault-type latch with tumbler lock; keyed alike. Omit for fused-switch panelboards.

2. Feeder Overcurrent Protection Device Type: Provide overcurrent device as follows, unless otherwise indicated: Circuit breaker.
 - a. Feeder OCPD rated less than [250] Amps: Adjustable Instantaneous-Trip; Bolt-on circuit breakers.
 - b. Feeder OCPD rated [250] Amps and greater: [Adjustable Instantaneous-Trip]; Bolt-on circuit breakers or plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.
- G. LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS
1. Door Hardware: Concealed hinges; secured with flush latch with tumbler lock; keyed alike.
 2. Main Overcurrent Protection Device Type: Provide overcurrent device as follows, unless otherwise indicated: Circuit breaker.
 - a. Main OCPD rated less than [250] Amps: Adjustable Instantaneous-Trip Circuit Breakers.
 - b. Main OCPD rated [250] Amps and greater: Adjustable Instantaneous-Trip Circuit Breakers.
 3. Branch Overcurrent Protection Device Type: Provide overcurrent device as follows, unless otherwise indicated: Circuit breaker.
 - a. Branch OCPD: Thermal-Magnetic; Bolt-on circuit breakers replaceable without disturbing adjacent units.

2.4 OVERCURRENT PROTECTIVE DEVICES

- A. Series-rated devices are not permitted.
- B. Molded-Case Circuit Breaker Requirements: UL 489, NEMA AB 3, with interrupting capacity rating to meet available fault current.
1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
 3. Electronic trip-unit circuit breakers: RMS sensing, field-replaceable rating plug, and the following field-adjustable settings:
 - a. Long- and short-time pickup levels.
 - b. Long- and short-time time adjustments.
 - c. Instantaneous trip.
 - d. Ground-fault pickup level, time delay, and I^2t response, where indicated.
 - e. Ground-fault indication alarm, where indicated.
 - f. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection and short-time trip function.
- C. Molded-Case Circuit-Breaker Features: Standard frame sizes, trip ratings, and number of poles. Provide the following features for all included in the Work:
1. Lugs: Mechanical style, suitable for number, size, trip ratings, and conductor material; UL 486 B listed, dual rated and marked for use with copper- or aluminum load-side conductors.
 2. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HACR for heating, air-conditioning, and refrigerating equipment.
 3. Lock-Out Tag Provisions: For installing at least three Lock-Out tags on each circuit breaker to secure the breaker and prevent movement mechanism.
- D. Circuit-Breaker Accessories: Standard frame sizes, trip ratings, and number of poles. Provide the following accessories where indicated:

1. Ground-Fault Protection: Provide integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
2. Shunt Trip: Set to trip at 55 percent of rated voltage, where indicated.
3. Communication Capability: Communication module with functions and features compatible with power monitoring and control system specified in Division 26 Section "Electrical Power Monitoring and Control."
4. Key Interlock Kit: where indicated, provide to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
5. [Under-voltage Trip Devices: Adjustable time-delay and pickup voltage.]
6. Auxiliary Switch: where indicated, provide two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
7. Remote trip indication and control.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elements and surfaces where equipment will be installed for compliance with installation tolerances, required clearances, and other conditions affecting performance.
- B. Examine roughing-in of conduits to verify the following:
 1. Wiring entries comply with layout requirements.
 2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.
- C. Verify that ground connections are in place and that requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" have been met.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install panelboards and accessories according to NEMA PB 1.1.
- B. Comply with NECA 407, "Recommended Practice for the Installing and Maintaining Panelboards" as published by the National Electrical Contractors Association.
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards and components once unit is secured in place.
- D. Comply with mounting and support requirements specified in Division 26 Section "Hangers and Supports for Electrical Systems."
- E. Comply with mounting and anchoring requirements specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- F. Mount top of trim 74 inches above finished floor, unless otherwise indicated.
- G. Mount plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish.
- H. Install overcurrent protective devices, controllers, and instrumentation.

- I. Install filler plates in unused spaces.
- J. Arrange conductors in gutters into groups and bundle and wrap with wire ties.
- K. For Recessed Panels: Stub four 1-inch empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in the future.
- L. Close unused conduit opening or other unused holes in sides of box with proper mating blank-off plates.
- M. Do not use gutters of panelboards as raceways for routing feeder conductors from bottom entrance to top-feed lugs or vice versa; an external gutter or conduit shall be used for this purpose.

3.3 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components and provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."
- B. Equipment Identification Nameplates: Label each panelboard with engraved Equipment Identification Label as specified in Division 26 Section "Identification for Electrical Systems."
- C. Distribution Panelboard Feeder OCPD Labels: Label each OCPD with nameplate that indicates the device it feeds using engraved Equipment Identification Label as specified in Division 26 Section "Identification for Electrical Systems."
- D. Panelboard Directory: Create a directory to indicate name/descriptions of installed circuit loads, including final room numbers. Obtain final room numbers from Owner or Signage and Graphics Package. Obtain approval before installing within clear plastic pocket inside panelboard cover. Use a computer or typewriter to create directory; handwritten directories are not acceptable.
- E. Diagram and Instructions:
 - 1. Frame and mount the following items in clear acrylic plastic holder on the front of panelboard.
 - a. Operating Instructions: Printed basic instructions for panelboard, including control and key-interlock sequences and emergency procedures where applicable.
 - 2. Storage for Maintenance Manual: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.

3.4 CONNECTIONS

- A. Tighten bus joints, electrical connectors, and terminals according to manufacturer's published torque-tightening values.
- B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- C. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
 - 1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
 - 3. Assist in field testing of equipment including pre-testing and adjusting of equipment and components.
- B. Perform the following field tests and inspections and prepare test reports:
 - 1. **Test mounting and anchorage devices according to requirements in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."**
 - 2. Inspect panelboard installation, including wiring, components, connections, and equipment. Test and adjust components and equipment.
 - 3. Verify that electrical control wiring installation complies with manufacturer's submittal by means of point-to-point continuity testing. Verify that wiring installation complies with requirements in Division 26 Sections.
- C. Testing Agency: Engage a qualified independent testing and inspecting agency as defined in Division 26 Section "Common Work Results for Electrical" to perform the following field tests and inspections and prepare certified test reports:
 - 1. After installing panelboard but before equipment is energized, verify that grounding system at panelboard tests to specified value or better.
 - 2. Perform each electrical test and visual and mechanical inspection stated in NETA ATS. Certify compliance with test parameters. Perform NETA tests and inspections for each of the following NETA categories:
 - a. Section 7.3 for Cables
 - b. Section 7.6 for Circuit Breakers
 - 3. Infrared Scanning: Perform Thermographic Survey in accordance with NETA ATS, Section 9.0.
 - a. Initial Infrared Scanning: Within 60 Days after Substantial Completion, perform an infrared scan of each panelboard. Open or remove doors and covers so connections are accessible to portable scanner.
 - b. Instruments, Equipment:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 - 4. Complete installation and startup checks according to manufacturer's written instructions.
- D. Correct Deficiencies, Retest and Report:
 - 1. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace conductors, units, and devices as required to bring system into compliance.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. Prepare a report, certified by testing agency, that identifies switchboards, units, conductors and devices checked and describes results. Include notation of deficiencies detected, remedial action taken, and observations and test results after remedial action.
- E. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.6 ADJUSTING

- A. Set field-adjustable overcurrent protection device trip characteristics according to settings provided by Engineer-of-Record.
 - 1. Settings will be provided by Engineer-of-Record after the submittal process and review of report required by Division 26 Section "Overcurrent Protective Device Coordination Study." are completed.

3.7 CLEANING

- A. Clean components according to manufacturer's written instructions.
- B. Prior to installation of front trim and cover plates inspect interior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
- C. On completion of front trim and cover installation, inspect exterior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Remove all temporary markings and labels.
 - 3. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
 - 4. Repair exposed surfaces to match original finish.

3.8 PROTECTION

- A. Temporary Heating: Maintain a clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Apply temporary heating as required.
- B. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's management and maintenance personnel to adjust, operate, and maintain panelboards, overcurrent protective devices, instrumentation, and accessories. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

SECTION 262716

ELECTRICAL CABINETS AND ENCLOSURES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Hinged-Cover Cabinets
2. Terminal Blocks

1.2 ACTION SUBMITTALS

A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.

B. Product Data: For each type of Cabinet and Enclosures: Include dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.

1. Enclosure types and details for types other than NEMA 250, Type 1.
2. Current and voltage ratings.

C. Shop Drawings: Provide outline Drawings showing dimensions. Include installation and mounting details.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Submit Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electrical" for each location where electrical cabinets and enclosures are included in the Work.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For electrical cabinets and enclosures, to include in emergency, operation, and maintenance manuals. Provide items specified in Division 01 Section "Operation and Maintenance Data."

1.5 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Keys: Six spares for each type of cabinet lock.

1.6 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

- B. Comply with NEMA ICS 4, "Terminal Blocks for Industrial Control Equipment and Systems."
- C. Comply with UL 50, "Electrical Cabinets and Boxes"
- D. Comply with NFPA 70.

1.7 COORDINATION

- A. Coordinate layout and installation of Cabinets and Enclosures and their components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, and encumbrances to workspace clearance requirements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Eaton Electrical Inc.; Cutler-Hammer Products.
 - 2. General Electric Company; Electrical Distribution & Control Division.
 - 3. Hoffman Enclosures, Inc.
 - 4. Siemens Energy & Automation, Inc.
 - 5. Square D; Schneider Electric.

2.2 CABINETS AND ENCLOSURES

- A. Enclosures: Surface-mounted or Free-standing steel cabinets with interior metal panel for mounting terminal blocks and electrical components. Rated for environmental conditions at installed location as follows, unless otherwise indicated:
 - a. Indoor Locations: NEMA 250, Type 1.
 - b. Outdoor Locations: NEMA 250, Type 3R.
 - c. Kitchen Areas: NEMA 250, Type 4X, stainless steel.
 - d. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.
- B. Hinged-Type Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover, held closed by flush latch operable by key.
- C. Interior Finish: Manufacturer's white enamel finish over corrosion-resistant treatment or primer coat.
- D. Exterior Finish: ANSI Gray enamel finish over corrosion-resistant treatment or primer coat.
- E. Interior Barriers: Provide metal barriers to separate compartments containing control wiring operating at less than 50 volts from wiring operating at or above 50 volts.
- F. Feet: Provide accessory feet for free standing equipment.

2.3 TERMINAL BLOCKS

- A. Terminal Blocks: ANSI/NEMA ICS 4.

- B. Power Terminals: Unit construction type with closed back and tubular pressure screw connectors, rated 600 volts.
- C. Signal and Control Terminals: Modular construction type, suitable for channel mounting, with tubular pressure screw connectors, rated 300 volts.
- D. Provide ground bus terminal block, with each connector bonded to enclosure.

PART 3 - EXECUTION

3.1 APPLICATION

- A. Cabinet and Enclosure Size: As required to accommodate components enclosed or as indicated on Drawings.
- B. Cover Type: Provide Hinged-Type covers on all cabinets, unless otherwise indicated.

3.2 INSTALLATION

- A. Install Cabinets and Enclosures and accessories according to NEMA PB 1.1.
- B. Comply with mounting and anchoring requirements specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- C. Mount top of trim a maximum of 74 inches above finished floor, unless otherwise indicated.
- D. Mount plumb and rigid without distortion of box. Mount recessed Cabinets and Enclosures with fronts uniformly flush with wall finish.
- E. Support Cabinets and Enclosures as specified in Division 26 Section "Hangers and Supports for Electrical Systems".

3.3 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."
- B. Cabinet Nameplates: Label each cabinet with engraved metal or laminated-plastic nameplate mounted with corrosion-resistant screws.

3.4 CONNECTIONS

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 - 1. Test mounting and anchorage devices according to requirements in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."

- B. Correct Deficiencies and Report:
 - 1. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace conductors, units, and devices as required to bring system into compliance.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. Prepare a report, certified by testing agency, that identifies enclosure, units, conductors and devices checked and describes results. Include notation of deficiencies detected, remedial action taken, and observations and test results after remedial action.

3.6 CLEANING

- A. Clean components according to manufacturer's written instructions.
- B. Prior to installation of front trim and cover plates inspect interior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
- C. On completion of front trim and cover installation, inspect exterior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Remove all temporary markings and labels.
 - 3. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
 - 4. Repair exposed surfaces to match original finish.

END OF SECTION

SECTION 262726

WIRING DEVICES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Receptacles, receptacles with integral GFCI, and associated device plates.
 - 2. Hospital-grade receptacles.
 - 3. Weather-resistant receptacles.
 - 4. Automatic plug load controlled receptacles.
 - 5. USB receptacles.
 - 6. Twist-locking receptacles.
 - 7. Pendant cord-connector devices.
 - 8. Cord and plug sets.
 - 9. Switches and wall-box dimmers.
 - 10. Solid-state fan speed controls.
 - 11. Digital time switches.
 - 12. EPO switches.
 - 13. ~~[Communications outlets.]~~
 - 14. Floor service outlets, poke-through assemblies, multioutlet assemblies, and service poles.
- B. Related Sections include the following:
 - 1. Division 26 Section "Lighting Control Devices" for switchbox-mounted occupancy sensors.

1.2 DEFINITIONS

- A. EPO: Emergency power off.
- B. EMI: Electromagnetic interference.
- C. GFCI: Ground-fault circuit interrupter.
- D. Pigtail: Short lead used to connect a device to a branch-circuit conductor.
- E. RFI: Radio-frequency interference.
- F. SPD: Surge Protective Device.
- G. UTP: Unshielded twisted pair.

1.3 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Receptacles for Owner-Furnished Equipment: Match plug configurations.
 - 2. Cord and Plug Sets: Match equipment requirements.

1.4 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Product Data: For each type of product indicated under PART 2 – PRODUCTS.
- C. Shop Drawings: List of legends and description of materials and process used for premarking wall plates.
- D. Samples: One for each type of device and wall plate specified, in each color specified.

1.5 INFORMATIONAL SUBMITTALS

- A. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For wiring devices, to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation And Maintenance Data," include the following:
 - 1. Manufacturer's routine maintenance requirements for wiring devices and all installed components.
 - 2. Manufacturers' packing label warnings and instruction manuals.

1.7 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type of wiring device and associated wall plate from single source from single manufacturer.
- B. Comply with NFPA 99
- C. Comply with NFPA 70

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers' Names: Shortened versions (shown in parentheses) of the following manufacturers' names are used in other Part 2 articles. Part numbers listed under products paragraphs in Part 2 articles of this section are included to list the manufacturers' product series and they do not designate the color of the device. Subject to compliance with requirements, provide products by one of the following:
 - 1. Hubbell Incorporated; Wiring Device-Kellems (Hubbell).
 - 2. Leviton Mfg. Company Inc. (Leviton).
 - 3. Pass & Seymour/Legrand; (Pass & Seymour).

2.2 GENERAL WIRING-DEVICE REQUIREMENTS

- A. Wiring Devices, Components, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with NFPA 70.

2.3 STRAIGHT BLADE RECEPTACLES

- A. Industrial-Grade, Convenience Receptacles, Standard Style, 125 V, 20 A:
1. Requirements:
 - a. Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, UL 498, and Federal Specification (FS) W-C-596.
 - b. Description: Industrial Specification Grade receptacles constructed of a high-impact resistant thermoplastic. Wide-body design; back and side-wired; Triple wipe, T-slot, one-piece copper alloy contact design; One-piece brass grounding strap; interlocked into the body in at least 4 points; green ground screw and automatic grounding system attached to the strap.
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; HBL5361 (simplex), HBL5362 (duplex).
 - b. Leviton; 5361 (simplex), 5362 (duplex).
 - c. Pass & Seymour; 5361 (simplex), 5362A (duplex).
- B. Industrial-Grade, Convenience Receptacles, Decorative Style, 125 V, 20 A:
1. Requirements:
 - a. Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, and UL 498.
 - b. Description: Industrial Specification Grade receptacles constructed of a high-impact resistant thermoplastic. Wide-body design; back and side-wired; Triple wipe, T-slot, one-piece copper alloy contact design; One-piece steel grounding strap; interlocked into the body in at least 4 points; green ground screw and automatic grounding system attached to the strap.
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; HBL2162 (duplex).
 - b. Leviton; 16351 (simplex), 16352 (duplex).
 - c. Pass & Seymour; 26361 (simplex), 26352 (duplex).
- C. Hospital-Grade, Convenience Receptacles, Standard Style, 125 V, 20 A:
1. Requirements:
 - a. Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, UL 498 Supplement SD, and Federal Specification (FS) W-C-596.
 - b. Description: Hospital Grade receptacles constructed of high-impact resistant thermoplastic. Wide-body design; back and side-wired; Triple wipe, T-slot, one-piece copper alloy contact design; One-piece nickel-plated brass wrap-around type grounding strap; interlocked into the body in at least 4 points; green ground screw and automatic grounding system attached to the strap; Green dot on the face to signify Hospital Grade.
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; HBL8310 (simplex), HBL8300 (duplex).
 - b. Leviton; 8310 (simplex), 8300 (duplex).
 - c. Pass & Seymour; 8301 (simplex), 8300 (duplex).
- D. Hospital-Grade, Convenience Receptacles, Decorative Style, 125 V, 20 A:
1. Requirements:
 - a. Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, and UL 498 Supplement SD.
 - b. Description: Hospital Grade receptacles constructed of high-impact resistant thermoplastic. Wide-body design; back and side-wired; Triple wipe, T-slot, one-piece copper alloy contact design; One-piece steel grounding strap; interlocked into the body in at least 4 points; green ground screw and automatic grounding system attached to the strap; Green dot on the face to signify Hospital Grade.
 2. Products: Subject to compliance with requirements, provide one of the following:

- a. Hubbell; HBL2182 (duplex).
- b. Leviton; 16362-HG (duplex).
- c. Pass & Seymour; 26362-HG (duplex).

2.4 GFCI RECEPTACLES

A. Commercial-Grade, GFCI Convenience Receptacles, 125 V, 20 A:

1. Requirements:
 - a. Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, UL 498, and UL 943, Class A, and Federal Specification (FS) W-C-596.
 - b. Feed-through type, nominal sensitivity to earth leakage of 4-6 milliamperes; Meeting 2006 CSA/UL requirements for End of Life Provision and Reverse Line-Load Miswire.
 - 1) Device shall either render itself incapable of delivering power or indicate by visual or audible means that the device can no longer provide ground fault protection.
 - 2) Device shall not allow current to pass through device when miswired.
 - c. Description: Commercial Specification Grade receptacle constructed of a high-impact resistant thermoplastic. Wide-body design; back and side-wired; Triple wiper, T-slot, one-piece copper alloy contact design; One-piece steel grounding strap; interlocked into the body in at least 4 points; green ground screw and automatic grounding system attached to the strap.
2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; GF20xLA.
 - b. Leviton; N7899.
 - c. Pass & Seymour; 2095.

B. Hospital-Grade, GFCI Convenience Receptacles, 125 V, 20 A:

1. Requirements:
 - a. Comply with NEMA WD 1, NEMA WD 6, UL 498 Supplement SD, UL 943, Class A, and Federal Specification (FS) W-C-596.
 - b. Feed-through type, nominal sensitivity to earth leakage of 4-6 milliamperes; Meeting 2006 CSA/UL requirements for End of Life Provision and Reverse Line-Load Miswire.
 - 1) Device shall either render itself incapable of delivering power or indicate by visual or audible means that the device can no longer provide ground fault protection.
 - 2) Device shall not allow current to pass through device when miswired.
 - c. Description: Hospital Grade straight blade receptacle constructed of high-impact resistant thermoplastic. Wide-body design; back and side-wired; Triple wiper, T-slot, one-piece copper alloy contact design; One-piece nickel-plated brass grounding strap, interlocked into the body in at least 4 points; green ground screw and automatic grounding system attached to the strap; Green dot on the face to signify Hospital Grade. LED indicator on face.
2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; GFR8300HxLA.
 - b. Leviton; N7899-HG.
 - c. Pass & Seymour; 2095-HG.

C. Faceless GFCI Convenience Receptacles, 125 V, 20 A:

1. Requirements:
 - a. Comply with NEMA WD 6, Class A, and UL 943.

- b. Feed-through type, nominal sensitivity to earth leakage of 4-6 milliamperes; Meeting 2006 CSA/UL requirements for End of Life Provision and Reverse Line-Load Miswire.
 - 1) Device shall either render itself incapable of delivering power or indicate by visual or audible means that the device can no longer provide ground fault protection.
 - 2) Device shall not allow current to pass through device when miswired.
 - c. Description: Blank face self test GFCI constructed of high-impact resistant thermo-plastic. Wide-body design; back and side-wired; double wipe, brass contact design; One-piece zinc-plated steel grounding strap; green ground screw and automatic grounding system attached to the strap; Green dot on the face to signify Hospital Grade. LED indicator on face.
2. Products: Subject to compliance with requirements, provide one of the following:
- a. Hubbell; GFSTBF20.
 - b. Leviton; X7590.
 - c. Pass & Seymour; 2085X.

2.5 AUTOMATIC PLUG LOAD CONTROLLED RECEPTACLES

- A. Industrial-Grade, Automatic Plug Load Controlled Convenience Receptacles, Standard Style, 125 V, 20 A:
- 1. Requirements:
 - a. Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, UL 498, and Federal Specification (FS) W-C-596.
 - b. Description: Industrial Specification Grade receptacles constructed of a high-impact resistant thermoplastic. Wide-body design; back and side-wired; Triple wipe, T-slot, one-piece copper alloy contact design; One-piece brass grounding strap; interlocked into the body in at least 4 points; green ground screw and automatic grounding system attached to the strap.
 - c. Face of receptacle to be imprinted with word "CONTROLLED" and the include symbol as required to meet NFPA 70.
 - 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; BR20C1X (half-controlled), BR20C2X (dual-controlled).
 - b. Leviton; 5362-1P (half-controlled), 5362-2P (dual-controlled).
 - c. Pass & Seymour; 5362CHX (half-controlled), 5362CDX (dual-controlled).
- B. Industrial-Grade, Automatic Plug Load Controlled Convenience Receptacles, Decorative Style, 125 V, 20 A:
- 1. Requirements:
 - a. Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, and UL 498.
 - b. Description: Industrial Specification Grade receptacles constructed of a high-impact resistant thermoplastic. Wide-body design; back and side-wired; Triple wipe, T-slot, one-piece copper alloy contact design; One-piece steel grounding strap; interlocked into the body in at least 4 points; green ground screw and automatic grounding system attached to the strap.
 - c. Face of receptacle to be imprinted with word "CONTROLLED" and the include symbol as required to meet NFPA 70.
 - 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; DR20C1X (half-controlled), DR20C2X (dual-controlled).
 - b. Leviton; 16352-1P (half-controlled), 16352-2P (dual-controlled).
 - c. Pass & Seymour; 26352CHX (half-controlled), 26252CDX (dual-controlled).

2.6 USB RECEPTACLES

- A. Hospital-Grade, USB, Tamper-Resistant Convenience Receptacles, Decorative Style 125 V, 20 A:
 - 1. Requirements:
 - a. Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, UL 498 AND 1310.
 - b. Description: Hospital Grade receptacle constructed of high-impact resistant thermoplastic with two USB 2.0 charging ports. Wide-body design; back and side-wired; Triple wipe, T-slot, one-piece copper alloy contact design; One-piece steel grounding strap, interlocked into the body in at least 4 points; green ground screw and automatic grounding system attached to the strap; Green dot on the face to signify Hospital Grade.
 - 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; USB8300.
 - b. Leviton; T5832-HG.

2.7 SPECIAL CONFIGURATION & TWIST-LOCKING RECEPTACLES

- A. General: NEMA and Non-NEMA configurations as indicated on Drawings.
 - 1. Requirements: Comply with NEMA WD 1, NEMA WD 6; and UL 498.
 - 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hubbell.
 - b. Leviton.
 - c. Pass & Seymour.
- B. Isolated-Ground, Single Convenience Receptacles, 125 V, 20 A:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Cooper Wiring Devices, Inc.; Division of Cooper Industries, Inc.
 - b. Hubbell Incorporated; Wiring Device-Kellems.
 - c. Leviton Manufacturing Co., Inc.
 - d. Pass & Seymour/Legrand (Pass & Seymour).
 - 2. Description:
 - a. Comply with NEMA WD 1, NEMA WD 6 Configuration as indicated on Drawings, and UL 498.
 - b. Equipment grounding contacts shall be connected only to the green grounding screw terminal of the device and with inherent electrical isolation from mounting strap. Isolation shall be integral to receptacle construction and not dependent on removable parts.

2.8 PENDANT CORD-CONNECTOR DEVICES

- A. General: Matching, locking-type plug and receptacle body connector in NEMA and Non-NEMA configurations as noted on drawings.
 - 1. Requirements:
 - a. Comply with NEMA WD 6 Configurations L5-20P and L5-20R, heavy-duty grade, and Federal Specification (FS) W-C-596.
 - b. Body: Nylon with screw-open cable-gripping jaws and provision for attaching external cable grip.
 - c. External Cable Grip: Woven wire-mesh type made of high-strength galvanized-steel wire strand, matched to cable diameter, and with attachment provision designed for corresponding connector.

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hubbell.
 - b. Leviton.
 - c. Pass & Seymour.

2.9 CORD AND PLUG SETS

- A. General: Match voltage and current ratings and number of conductors to requirements of equipment being connected.
 1. Requirements:
 - a. Cord: Rubber-insulated, stranded-copper conductors, with Type SOW-A jacket; with green-insulated grounding conductor and ampacity of at least 130 percent of the equipment rating.
 - b. Plug: Nylon body and integral cable-clamping jaws. Match cord and receptacle type for connection.
 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hubbell.
 - b. Leviton.
 - c. Pass & Seymour.

2.10 SWITCHES

- A. General Description: All products listed shall meet the following requirements:
 1. Comply with NEMA WD 1, UL 20; Rated UL-94, V2 or better. Manufacturer shall test all switches for proper operation prior to shipment, sample testing is not acceptable.
 2. Description: Constructed of high-impact arc-resistant thermoplastic; back and side-wired; heavy-gauge copper alloy one-piece arm and silver-cadmium oxide contacts with quiet-action mechanism; heavy-gauge zinc-plated steel-mounting strap with automatic grounding feature. Compatible with fluorescent, tungsten and resistive loads; with a motor load capacity of at least 80% of switch's current rating. Terminal screws shall be brass double-combination: Philips-head, slotted. Mounting screws shall be triple combination: Philips-head, slotted, Robertson.
- B. Toggle Switches, 120/277 V, 20 A:
 1. Requirements: Comply with Federal Specification (FS) W-S-896; Industrial Specification Grade toggle switch.
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; HBL1221 (single pole), HBL1222 (two pole), HBL1223 (three way), HBL1224 (four way).
 - b. Leviton; 1221-2 (single pole), 1222-2 (two pole), 1223-2 (three way), 1224-2 (four way).
 - c. Pass & Seymour; PS20AC1 (single pole), PS20AC2 (two pole), PS20AC3 (three way), PS20AC4 (four way).
- C. Decorative Rocker Switches, 120/277 V, 15 A:
 1. Requirements: Commercial Specification Grade rocker switch.
 2. Products: Subject to compliance with requirements, provide products from one of the following manufacturers:
 - a. Hubbell; DS120 (single pole), DS320 (three-way), DS420 (four-way).
 - b. Leviton; 5621-2 (single pole), 5623-2 (three-way), 5624-2 (four-way).
 - c. Pass & Seymour; 2621 (single pole), 2622 (two pole), 2623 (three-way), 2624 (four-way).

- D. Pilot Light Switches, 120/277 V, and Federal Specification (FS) W-C-596, 20 A:
1. Requirements: Industrial Specification Grade toggle switch; Single pole, with LED or NEON-lighted handle, illuminated when switch is "ON."
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; HBL1221PL (single pole), HBL1223PL (3-way) for 120/277V.
 - b. Leviton; 1221-PLC (single pole), 1223-PLC (3-way) for 120 V; 1221-7PLC (single pole), 1223-7PR (3-way) for 277 V.
 - c. Pass & Seymour; PS20AC1-RPL (single pole), PS20AC3-RPL (3-way) for 120 V; PS20AC1-RPL7 (single pole), PS20AC3-RPL7 (3-way) for 277 V.
- E. Illuminated Light Switches, 120/277 V, 20 A:
1. Requirements: Industrial Specification Grade toggle switch; Single pole, with LED or NEON-lighted handle, illuminated when switch is "OFF."
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; HBL1221IL (single pole); HBL1223IL (3-way) for 120/277V.
 - b. Leviton; 1221-LHC (single pole), 1223-LHC (3-way) for 120 V; 1221-7LC (single pole) 1223-7LC (3-way) for 277 V.
 - c. Pass & Seymour; PS20AC1-CSL (single pole); PS20AC3-CSL (3-way) for 120/277V.
- F. Key-Operated / Security Switches, 120/277 V, 20 A:
1. Requirements: Single pole, with factory-supplied key in lieu of switch handle. Corbin-style or Barrel lock and key, single-hump key not acceptable.
 2. Description: Single pole, with factory-supplied key in lieu of switch handle.
 3. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; HBL1221RKL.
 - b. Leviton; 1221-2KL.
 - c. Pass & Seymour; PS20AC1-KL.
- G. Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches, 120/277 V, 20 A.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; HBL1557.
 - b. Leviton; 1257.
 - c. Pass & Seymour; 1251.
- H. Decorative Rocker Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches, 120/277 V, 15 A:
1. Requirements: Commercial Specification Grade rocker switch.
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Leviton; 5657-2.
 - b. Pass & Seymour; 2601.
- I. Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches, 24 V.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Leviton; 1081.
 - b. Pass & Seymour; 1081.
- A. Decorative Rocker Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches, 24 V:
1. Requirements: Commercial Specification Grade rocker switch.
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; DSM30x2.
 - b. Leviton; 56081-2.

- B. Key-Operated, Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches, 120/277 V, 20 A;
1. Requirements: with factory-supplied key in lieu of switch handle. Corbin-style or Barrel lock and key, single-hump key not acceptable.
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hubbell; HBL1557L.
 - b. Leviton; 1257L.
 - c. Pass & Seymour; 1251L.

2.11 WALL-BOX DIMMERS

- A. General Description: All products listed shall meet the following requirements:
1. Dimmer Switches: Modular, full-wave, solid-state unit with integral, quiet on-off switch complying with UL 20; audible frequency and EMI/RFI suppression filters.
 2. Comply with ANSI/IEEE standard C62.41-1997 for surge withstand.
 3. Control: Continuously adjustable slider; with single-pole or three-way switching. Comply with UL 1472.
 4. Memory: Power-failure memory to maintain previously set lighting level upon return of power after outage without human intervention.
- ~~B. Incandescent Lamp Dimmers: 120 V:~~
- ~~1. Requirements: Control shall follow square-law dimming curve. On-off switch positions shall bypass dimmer module. Select appropriate rated dimmer from the following; Provide dimmer as required to meet load indicated on Drawings.~~
 - ~~a. 600 W; dimmers shall require no derating when ganged with other devices. [Illuminated when "OFF."]~~
 - ~~b. 1000W; narrow-fin design for single-gang box; dimmers shall require no derating when ganged with other devices. [Illuminated when "OFF."]~~
 - ~~c. 1500W; wide-fin design for double-gang box; dimmers shall require no derating when ganged with other devices. [Illuminated when "OFF."]~~
 - ~~d. 2000W; wide-fin design for double-gang box; dimmers shall require no derating when ganged with other devices. [Illuminated when "OFF."]~~
 - ~~2. Products: Subject to compliance with requirements, provide products from one of the following manufacturers:~~
 - ~~a. Leviton.~~
 - ~~b. Lutron.~~
- ~~C. Fluorescent Lamp Dimmer Switches, 120/277 V:~~
- ~~1. Requirements: Control shall follow square-law dimming curve. On-off switch positions shall bypass dimmer module. Modular; compatible with dimmer ballasts as specified under Division 26 Section "Interior Lighting"; trim potentiometer to adjust low-end dimming; dimmer-ballast combination capable of consistent dimming with low end not greater than 20 percent of full brightness. Dimmers shall require no derating when ganged with other devices; provide narrow-fin and wide-fin designs as required.~~
 - ~~2. Products: Subject to compliance with requirements, provide products from one of the following manufacturers:~~
 - ~~a. Leviton.~~
 - ~~b. Lutron.~~

2.12 FAN SPEED CONTROLS

- A. Modular, 120-V:

1. Requirements: Full-wave, solid-state units with integral, quiet on-off switches complying with UL20, and audible frequency and EMI/RFI filters. Comply with UL 1917.
 - a. Continuously adjustable slider, 5 A or 1.5 A as required.
 - b. Three-speed adjustable slider, 1.5 A.
2. Products: Subject to compliance with requirements, provide products from one of the following manufacturers:
 - a. Hubbell.
 - b. Leviton.
 - c. Lutron.
 - d. Novitas.
 - e. Pass & Seymour.

2.13 DIGITAL TIME WALL SWITCH (~~Refer the Drawings from Data Center EPO~~)

- A. Requirements: Adjustable time delay up to 2 hours, LCD digital display, Audible or 'Blink' Warning.
- B. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 1. Hubbell Building Automation; TD200.
 2. Hubbell; DT1277.
 3. Leviton; LTBxx.
 4. Watt Stopper; TS-400.

2.14 EPO SWITCHES

- A. General Description: All products listed shall meet the following requirements:
 1. Operators shall be heavy duty type and comply with UL Type 13/NEMA Type 13 and UL Type 6/NEMA Type 6.
 2. Contact blocks shall be rated 10 amperes continuous.
- B. Available Products: Subject to compliance with requirements, provide the following as indicated on the Drawings:
 1. Push button type: Flush mounted, two position, momentary push button, red insert, with one normally open and one normally closed (1NO - 1NC) contact. Provide with a hinged, lockable protective cover guard.
 2. Key operated type: Flush mounted, two position, key operated push button, with one normally open and one normally closed (1NO - 1NC) contact. The operator shall be set by rotating the key, with the button in the extended position. The key is removable only in this set position. When pushed, the button will then lock into position. The key must be inserted and rotated to reset to the extended position. Provide with a hinged, lockable protective cover guard.

2.15 WALL PLATES

- A. As defined by and coordinated with the Architect, Single and combination types to match corresponding wiring devices.
 1. Requirements:
 - a. Plate-Securing Screws:
 - 1) Metal with head color to match plate finish.
 - b. Material for Finished Areas: Steel with white baked enamel, suitable for field painting; Smooth, high-impact thermoplastic (nylon); 0.035-inch-thick, satin-finished Type 302/304 Non-Magnetic stainless steel; 0.04-inch-thick, brushed

- brass with factory polymer finish; 0.05-inch-thick anodized aluminum] [0.04-inch-thick steel with chrome-plated finish].
 - c. Material for Utility Areas: Galvanized steel; Smooth, high-impact thermoplastic (nylon); Smooth, high-impact thermoplastic (nylon); exposed devices shall be galvanized steel.
 - d. Material for Unfinished Areas: Galvanized steel; Smooth, high-impact thermoplastic (nylon); Smooth, high-impact thermoplastic (nylon); exposed devices shall be galvanized steel.
 - e. Material for Damp Locations: Thermoplastic (nylon) Cast aluminum with spring-loaded lift cover, and listed and labeled for use in "wet locations."
 - f. Material for Multi-device wall plates over 4-gang: [Steel with baked enamel factory painted to match plastic devices; Steel with white baked enamel, suitable for field painting; 0.04-inch-thick, brushed brass with factory polymer finish; 0.05-inch-thick anodized aluminum; 0.04-inch-thick steel with chrome-plated finish.
 - 2. Products: Subject to compliance with requirements, provide plate from same manufacturer as device.
- B. Wet-Location, Weatherproof Cover Plates:
 - 1. Requirements: NEMA 250, complying with type 3R weather-resistant, extra-duty, while-in-use cover and base with lockable cover; non-removable gasket between the mounting plate/base and cover; stainless steel hinges and mounting hardware.
 - 2. As defined by the Architect, Products: Subject to compliance with requirements, provide one of the following:
 - a. Cover and Base Material: UV resistant polycarbonate.
 - 1) Leviton;
 - a) Horizontal Mount: Clear, 5981-UCL or Gray, 5981-UGY.
 - b) Vertical Mount: Clear, 5981-UCL or Gray, 5981-UGY.
 - 2) Pass & Seymour; Horizontal or Vertical Mount: Frosted, WIUC10FRED.
 - 3) TayMac Corporation; a Division of Hubbell Incorporated;
 - a) Horizontal or Vertical Mount: Clear, MM420C or Gray, MM420G.
 - b. Cover and Base Material: Metal.
 - 1) TayMac Corporation; a Division of Hubbell Incorporated;
 - a) Horizontal Mount: Gray, MX4380S.
 - b) Vertical Mount: [White, MX4280WH Bronze, MX4280Z or [Gray, MX4280S.

2.16 FLOOR SERVICE FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Hubbell.
 - 2. Thomas & Betts Corporation.
 - 3. Wiremold Company (The).
- B. Requirements as defined by and coordinated with the Architect:
 - 1. Type: Modular, flush-type; flap-type above-floor, dual-service units suitable for wiring method used.
 - 2. Compartments: Barrier separates power from voice and data communication cabling.
 - 3. Service Plate: Rectangular or Round, die-cast aluminum or solid brass with satin finish, powder painted or electro-plated finish.

4. Power Receptacle: NEMA WD 6 configuration 5-20R], Devices as indicated on Drawings, meeting the requirements for receptacles listed in this section above, unless otherwise indicated.
5. ~~Voice and Data Communication Outlet: Blank cover with bushed cable opening Two modular, keyed, color-coded, RJ-45 Category 5e jacks for UTP cable], Devices as indicated on Drawings.~~

2.17 POKE-THROUGH ASSEMBLIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Hubbell Incorporated; Wiring Device-Kellems.
 2. Pass & Seymour/Legrand.
 3. Square D/Schneider Electric.
 4. Thomas & Betts Corporation.
 5. Wiremold Company (The).
- B. Description: Factory-fabricated and -wired assembly of below-floor junction box with multichanneled, through-floor raceway/firestop unit and detachable matching floor service outlet assembly. Comply with UL 514 scrub water exclusion requirements.
 1. Service Outlet Assembly: Pedestal type with services indicated Flush type with two simplex receptacles and space for two RJ-45 jacks Flush type with four simplex receptacles and space for four RJ-45 jacks Devices as Indicated on Drawings.
 2. Size: Selected to fit either nominal 3-inch or 4-inch cored holes in floor and matched to floor thickness.
 3. Fire Rating: Unit is listed and labeled for fire rating of floor-ceiling assembly.
 4. Closure Plug: Arranged to close unused 3-inch or 4-inch cored openings and reestablish fire rating of floor.
 5. Wiring Raceways and Compartments: For a minimum of four No. 12 AWG conductors and a minimum of two or four, 4-pair, Category 5e voice and data communication cables.

2.18 PREFABRICATED MULTIOUTLET ASSEMBLIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Hubbell Incorporated; Wiring Device-Kellems.
 2. Wiremold Company (The).
- B. Description:
 1. Two-piece surface metal raceway, with factory-wired multioutlet harness.
 2. Components of Assemblies: Products from a single manufacturer designed for use as a complete, matching assembly of raceways and receptacles.
- C. Raceway Material: Aluminum, Steel, PVC As indicated on Drawings.
- D. Multioutlet Harness:
 1. Receptacles: Meeting the requirements for receptacles listed in this section above, unless otherwise indicated.
 2. Receptacle Spacing: 6 inches; 9 inches; 12 inches; 18 inches. As indicated on Drawings or defined by the architect.
 3. Wiring: No. 12 AWG solid, Type THHN copper, single circuit or two circuit, connecting alternating receptacles as indicated.
- E. Finish: As indicated on Drawings As selected by Architect

- F. Power Receptacle: NEMA WD 6 configuration 5-20R, Devices as indicated on Drawings, meeting the requirements for receptacles listed in this section above, unless otherwise indicated.

~~G. Voice and Data Communication Outlet: Devices as Indicated on Drawings.~~

2.19 SERVICE POLES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Hubbell Incorporated; Wiring Device-Kellems.
 2. Wiremold Company (The).
- B. Description: Factory-assembled and -wired units to extend power and voice and data communication from distribution wiring concealed in ceiling to devices or outlets in pole near floor.
1. Poles: Nominal 2.5-inch-square cross section, with height adequate to extend from floor to at least 6 inches above ceiling, and with separate channels for power wiring and voice and data communication cabling.
 2. Mounting: Ceiling trim flange with concealed bracing arranged for positive connection to ceiling supports; with pole foot and carpet pad attachment.
 3. Finishes: As selected by Architect.
 4. Wiring: Sized for minimum of five No. 12 AWG power and ground conductors and a minimum of four, 4-pair, Category 3 or 5 voice and data communication cables.
 5. Power Receptacles: NEMA WD 6 configuration 5-20R, Devices as indicated on Drawings, meeting the requirements for receptacles listed in this section above, unless otherwise indicated.
 6. ~~Voice and Data Communication Outlets: [Blank cover with bushed cable opening] [Two modular, keyed, color-coded, RJ-45 Category 5e jacks for UTP cable] [Devices as Indicated on Drawings].]~~

2.20 FINISHES

- A. Color: Wiring device catalog numbers in Section Text above do not designate device color. The wiring devices and associated wall plates shall conform to the colors listed in Table 1 below or as otherwise required by NFPA 70. Final color selections for all devices and wall plates shall be submitted to and approved by the Architect.
1. * Indicates: Provide Orange Triangle on device to Indicate Isolated Ground Receptacle
 2. ** Indicates: Engrave (Metal) or Hot Stamp (Thermoplastic) as indicated in "Identification" paragraphs of PART 3 - Execution section.

Table 1

<u>Connected to Normal Power in Finish Areas</u>	<u>Device</u>	<u>Wall Plate</u>	<u>Lettering**</u>
Standard NEMA 5-20R Receptacles	White	White	Black
Isolated Ground NEMA 5-20R Receptacles	White*	White	Black
Tamper Resistant NEMA 5-20R Receptacles	White	White	Black
GFCI NEMA 5-20R Receptacles	White	White	Black
Auto Plug Load Controlled NEMA 5-20R Receptacles	White	White	Black
USB NEMA 5-20R Receptacles	White	White	Black
SPD NEMA 5-20R Receptacles	Blue	White	Black
IG-SPD NEMA 5-20R Receptacles	Blue*	White	Black

Switches & Wall Box Dimmers	White	White	Black
Switchbox-Mounted Occupancy Sensors	White	White	Black
<u>Connected to Normal Power in Utility Areas</u>	<u>Device</u>	<u>Wall Plate</u>	<u>Lettering**</u>
Standard NEMA 5-20R Receptacles	White	Metal	Black
GFCI NEMA 5-20R Receptacles	White	Metal	Black
Switches	White	Metal	Black
Switchbox-Mounted Occupancy Sensors	White	Metal	Black

<u>Connected to Emerg. Pwr. in Finish Areas</u>	<u>Device</u>	<u>Wall Plate</u>	<u>Lettering**</u>
Standard NEMA 5-20R Receptacles	Red	Red	White
Isolated Ground NEMA 5-20R Receptacles	Red*	Red	White
Tamper Resistant NEMA 5-20R Receptacles	Red	Red	White
GFCI NEMA 5-20R Receptacles	Red	Red	White
Auto Plug Load Controlled NEMA 5-20R Receptacles	Red	Red	White
USB NEMA 5-20R Receptacles	Red	Red	White
SPD NEMA 5-20R Receptacles	Blue	Red	White
IG-SPD NEMA 5-20R Receptacles	Blue*	Red	White
Switches & Wall Box Dimmers	Red	Red	White
Switchbox-Mounted Occupancy Sensors	White	Red	White
<u>Connected to Emerg. Pwr. in Utility Areas</u>	<u>Device</u>	<u>Wall Plate</u>	<u>Lettering**</u>
Standard NEMA 5-20R Receptacles	Red	Metal	Red
GFCI NEMA 5-20R Receptacles	Red	Metal	Red
Switches	Red	Metal	Red
Switchbox-Mounted Occupancy Sensors	White	Metal	Red

<u>Connected to UPS Power System</u>	<u>Device</u>	<u>Wall Plate</u>	<u>Lettering**</u>
Isolated Ground NEMA 5-20R Receptacles	Orange	White	Black
Under-floor Isolated Ground NEMA 5-20R Receptacles	Orange	Metal	Black
Switchbox-Mounted Occupancy Sensors	Orange	White	Black

PART 3 - EXECUTION

3.1 APPLICATION

- A. Comply with the following for all indoor applications, as defined by and coordinated with the architect, unless otherwise indicated:
 1. Receptacle Grade: Hospital-Grade or Industrial Grade as determined by review of governing authority having jurisdiction. Contractor to have adder price available as necessary for specific areas of the building.
 2. Receptacle Style: Decorative (Rectangular Face)
 3. Switch Style: Decorative Rocker
- B. Receptacles in Patient Care Areas: Install Hospital Grade devices where device is located within a simulated Patient Care Area as defined by NFPA 70 Article 517 or the Authorities Having Jurisdiction, unless industrial grade is sufficient.

- C. GFCI Receptacles: Install in locations as indicated but in no case less than those listed below:
 - 1. Where device is located on the exterior of the building, provide with Wet-Location Weatherproof Cover Plate.
 - 2. Where device is located within kitchen.
 - 3. Where device is located within a garage.
 - 4. Where device is located in an elevator pit.
 - 5. Where device is located within 6 feet (2-m) of a lavatory or sink, except where located on patient headwall].
- D. Tamper-Resistant Receptacles: Install in locations as indicated but in no case less than those listed below:
 - 1. Public Lobbies.
 - 2. Waiting Rooms.
 - 3. Play Rooms and other similar rooms that children are expected to occupy.

3.2 INSTALLATION

- A. Comply with NECA 1, including the mounting heights listed in that standard, unless otherwise indicated.
- B. Mounting Heights: Comply with applicable codes and requirements of Authorities Having Jurisdiction. Mount devices as listed below or as otherwise indicated on Drawings, including but not limited to Architectural elevations. Coordinate all above counter receptacles with backsplash to avoid interferences. All dimensions are given to centerline of box above finished floor (AFF), unless otherwise indicated.
- C. Comply with mounting and support requirements specified in Division 26 Section "Hangers and Supports for Electrical Systems."
- D. Coordination with Other Trades:
 - 1. Take steps to insure that devices and their boxes are protected. Do not place wall finish materials over device boxes and do not cut holes for boxes with routers that are guided by riding against outside of the boxes.
 - 2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.
 - 3. Install device boxes in brick or block walls so that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.
 - 4. Install wiring devices after all wall preparation, including painting, is complete.
 - 5. Install wiring devices with appropriate backbox and raceway according to room finish (i.e. flush mounted devices in recessed backboxes with concealed conduit in finished spaces; surface mounted boxes with exposed conduit in unfinished spaces. Refer to Architectural Documents for room finish types.
- E. Conductors:
 - 1. Do not strip insulation from conductors until just before they are spliced or terminated on devices.
 - 2. Strip insulation evenly around the conductor using tools designed for the purpose. Avoid scoring or nicking of solid wire or cutting strands from stranded wire.
 - 3. The length of free conductors at outlets for devices shall meet provisions of NFPA 70, Article 300, without pigtails.
- F. Device Installation:

1. Replace all devices that have been in temporary use during construction or that show signs that they were installed before building finishing operations were complete.
2. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.
3. Do not remove surface protection, such as plastic film and smudge covers, until substantial completion.
4. Connect devices to branch circuits using pigtails that are not less than 6 inches in length.
5. When there is a choice, use side wiring with binding-head screw terminals. Wrap solid conductor tightly clockwise, 2/3 to 3/4 of the way around terminal screw.
6. Use a torque screwdriver when a torque is recommended or required by the manufacturer.
7. When conductors larger than No. 12 AWG are installed on 15- or 20-A circuits, splice No. 12 AWG pigtails for device connections.
8. Tighten unused terminal screws on the device.
9. When mounting into metal boxes, remove the fiber or plastic washers used to hold device mounting screws in yokes, allowing metal-to-metal contact.
10. Mount Switches or Wall Box Dimmers within 6 inches of door frame, unless otherwise indicated.
11. Install Isolated-Ground devices so as not to bond the ground pole or isolated ground conductor (green/yellow) to the conduit system or equipment ground conductor (green).
12. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical.

G. Receptacle Orientation:

1. Install ground pin of vertically mounted receptacles up and on horizontally mounted receptacles to the left (i.e. neutral blade at the top).

H. Device Plates and Covers:

1. Do not use oversized or extra-deep plates.
2. Repair wall finishes and remount outlet boxes when standard device plates do not fit flush or do not cover rough wall opening.
3. Install weather-proof-while-in-use covers over receptacles in wet, damp and exterior locations.
4. Group adjacent devices under single, multigang wall plates.

I. Dimmers:

1. Install dimmers within terms of their listing.
2. Verify that dimmers used for fan speed control are listed for that application.
3. Install unshared neutral conductors on line and load side of dimmers according to manufacturers' device listing conditions in the written instructions.

J. Floor Service Outlets, Service Poles and Poke-Thru Device

1. Adjust locations of floor service outlets, service poles, and Poke-Thru devices to suit arrangement of partitions and furnishings. Coordinate revised location with Structural Engineer.
2. Install Poke-Thru devices within their listing. Install devices so there is no more than 1 device per 64-square-feet (5.95-Square-meters) of floor area and so there is no less than 2-feet (.61-m) separation between adjacent devices.

3.3 IDENTIFICATION

- A. Comply with Division 26 Section "Identification for Electrical Systems."

1. On the backside of wiring device wall plates identify with a black permanent marking pen the panelboard and branch circuit number the device is served from.
2. Receptacles: Identify panelboard and circuit number from which served on all receptacles Hot Stamped for Thermoplastic wall plates. All lettering shall be filled on face of plate, lettering color as indicated in the table in Part 2 above.
3. Switches: Identify panelboard and circuit number from which served on [All Switches Hot Stamped for Thermoplastic wall plates. All lettering shall be filled on face of plate, lettering color as indicated in the table in Part 2 above.
4. Provide price option for all receptacle and switch ID's to applied with KROY sticky back-labeling.

3.4 CONNECTIONS

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- C. For EPO switches, provide 120V power where control power is not provided from equipment.

3.5 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 1. The tests shall be diagnostic, indicating damaged conductors, high resistance at the circuit breaker, poor connections, inadequate fault current path, defective devices, or similar problems.
 2. Tests for Convenience Receptacles:
 - a. Line Voltage: Acceptable range is 105 to 132 V.
 - b. Percent Voltage Drop under 15-A Load: A value of 6 percent or higher is not acceptable.
 - c. Ground Impedance: Values of up to 2 ohms are acceptable.
 - d. Polarity: test for correct neutral conductor to neutral terminal connection.
 - e. Using the test plug, verify that the device and its outlet box are securely mounted.
 - f. GFCI Receptacles: Test for tripping values specified in UL 1436 and UL 943.
 3. Test Instruments:
 - a. Use instruments that comply with UL 1436.
 - b. Test Instrument for Convenience Receptacles: Digital wiring analyzer with digital readout or illuminated LED indicators of measurement.
- B. Correct Deficiencies and Report:
 1. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace devices as required to bring system into compliance.
 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 3. Prepare a report, certified by testing agency, that identifies enclosure, units, conductors and devices checked and describes results. Include notation of deficiencies detected, remedial action taken, and observations and test results after remedial action.
- C. Wiring device will be considered defective if it does not pass tests and inspections.

3.6 CLEANING

- A. Clean components according to manufacturer's written instructions.
- B. On completion of device box installation but before any wiring devices are installed, inspect interior of boxes and perform the following:
 - 1. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
- C. On completion of wall plate installation, inspect exterior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Remove all temporary markings and labels.
 - 3. Replace cracked or damaged wall plates.
 - 4. Wipe down all wall plates with approve cleaning agent to remove fingerprints and dust.

END OF SECTION

SECTION 262813

FUSES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Cartridge fuses rated 600 V and less for use in the following:
 - a. Control circuits.
 - b. Enclosed Switches
 - c. Elevator Switches

1.2 PERFORMANCE REQUIREMENTS

- A. Overcurrent Protective Device Coordination: All overcurrent protective devices proposed for inclusion in the Work shall be selected to be selectively coordinated with the overcurrent protective devices installed on their supply side such that an overcurrent event (overload, short-circuit, or ground-fault) occurring at the lowest level in the system (branch circuit) cannot cause the feeder protective device supplying the branch circuit panelboard to open. This coordination shall be carried through each level of distribution for all branches of normal and emergency power. Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.

1.3 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Simultaneous Action Submittals: Fuse Product Data submittal shall be made in conjunction with action submittals required under Division 26 Section "Overcurrent Protective Device Coordination Study." The release of electrical equipment submittals (panelboards, engine generators, switchgear, etc.) is dependent on the receipt of a complete and accurate overcurrent protective device coordination study. The Architect and Engineer require a full submittal review period as delineated in Division 01 Section "Submittal Procedures" to adequately review the OCPD study against the submitted electrical components prior to release of submittals for equipment procurement. The submittal schedule required by Division 01 requirements shall provide for this review time in the action submittal process. Delay claims arising due to Contractor's failure to coordinate simultaneous action submittals will not be considered by the Owner.
- C. Product Data: Include the following:
 - 1. For each fuse type indicated, provide dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
 - 2. Let-through current curves for fuses with current-limiting characteristics.
 - 3. Time-current curves, coordination charts and tables, and related data. Include hardcopy of characteristic curve and TCC Number for use with Power Tools by SKM Systems Analysis, Inc.
 - 4. Tabulated schedule which indicates type, characteristics, and ratings of individual fuses and lists the devices and equipment in which they will be applied.
 - 5. Fuse size for elevator feeders and elevator disconnect switches.

- D. Ambient Temperature Adjustment Information: If ratings of fuses have been adjusted to accommodate ambient temperatures, provide list of fuses with adjusted ratings.
 - 1. For each fuse having adjusted ratings, include location of fuse, original fuse rating, local ambient temperature, and adjusted fuse rating.
 - 2. Provide manufacturer's technical data on which ambient temperature adjustment calculations are based.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fuses to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 - a. Let-through current curves for fuses with current-limiting characteristics.
 - b. Time-current curves, coordination charts and tables, and related data.
 - c. Ambient temperature adjustment information.

1.5 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fuses: Quantity equal to one for every ten of each type and rating installed. Furnish at least three of each type.

1.6 QUALITY ASSURANCE

- A. Source Limitations: Obtain fuses from a single source from a single manufacturer.
- B. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size and with system short-circuit current levels. Provide fuses to match utilization equipment requirements.

1.7 PROJECT CONDITIONS

- A. Where ambient temperature to which fuses are directly exposed is less than 40 deg F or more than 100 deg F, apply manufacturer's ambient temperature adjustment factors to fuse ratings.

1.8 COORDINATION

- A. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size. Provide fuses to match utilization equipment requirements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Cooper Bussman; a division of Cooper Industries.
 - 2. Edison; a brand of Cooper Bussman; a division of Cooper Industries.
 - 3. Ferraz Shawmut, Inc.
 - 4. Littelfuse, Inc.
 - 5. Mersen USA.

2.2 CARTRIDGE FUSES

- A. Characteristics: NEMA FU 1, nonrenewable cartridge fuse; class and current rating indicated; voltage rating consistent with circuit voltage.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
- C. Comply with NEMA FU 1.
- D. Comply with NFPA 70.

2.3 SPARE-FUSE CABINET (FOR ELEVATOR FUSES)

- A. Cabinet: Wall-mounted, 0.05-inch-thick steel unit with full-length, recessed piano-hinged door and key-coded cam lock and pull.
 - 1. Size: Adequate for storage of spare fuses specified with 15 percent spare capacity minimum.
 - 2. Finish: ANSI Gray, baked enamel.
 - 3. Identification: "SPARE FUSES" in 1-1/2-inch-high letters on exterior of door.
 - 4. Fuse Pullers: For each size of fuse.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine fuses before installation. Reject fuses that are moisture damaged or physically damaged.
- B. Examine holders to receive fuses for compliance with installation tolerances and other conditions affecting performance, such as rejection features.
- C. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.
- D. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 FUSE APPLICATIONS

- A. Service Entrance: Class L, time delay.
- B. Feeders rated 600 Amperes or less: Class RK1, time delay.
- C. Feeders rated 601 Amperes and above: Class L, time delay.
- D. Motor Branch Circuits: Class RK1, time delay.
- E. Large Motor Branch (601-4000 A): Class L, time delay.
- F. Other Branch Circuits: Class RK1, time delay.

- G. Control Transformer Circuits: Class CC, time delay, control transformer duty.

3.3 INSTALLATION

- A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.
- B. Install spare-fuse cabinet(s).
- C. Install spare-fuse cabinet(s) in location shown on the Drawings or as indicated in the field by Owner.

3.4 IDENTIFICATION

- A. Install labels complying with identification requirements in Division 26 Section "Identification for Electrical Systems" and indicating fuse replacement information on inside door of each fused switch.
- B. Install labels indicating Type and Rating of fuse installed on outside of door of each fused switch.

END OF SECTION

SECTION 262816

ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following individually mounted, enclosed switches and circuit breakers:
 - 1. Fusible switches.
 - 2. Nonfusible switches.
 - 3. Molded-case circuit breakers.
 - 4. Enclosures.

1.2 DEFINITIONS

- A. GFCI: Ground-fault circuit interrupter.
- B. GFEP: Ground-fault equipment protection.
- C. HD: Heavy duty.
- D. RMS: Root mean square.
- E. SPDT: Single pole, double throw.

1.3 PERFORMANCE REQUIREMENTS

- A. Overcurrent Protective Device Coordination: All overcurrent protective devices proposed for inclusion in the Work shall be selected to be selectively coordinated with the overcurrent protective devices installed on their supply side such that an overcurrent event (overload, short-circuit, or ground-fault) occurring at the lowest level in the system (branch circuit) cannot cause the feeder protective device supplying the branch circuit panelboard to open. This coordination shall be carried through each level of distribution for all branches of normal and emergency power. Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.

1.4 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Simultaneous Action Submittals: Enclosed Switches and Circuit Breaker Product Data submittal shall be made in conjunction with action submittals required under Division 26 Section "Overcurrent Protective Device Coordination Study." The release of electrical equipment submittals (panelboards, engine generators, switchgear, etc.) is dependent on the receipt of a complete and accurate overcurrent protective device coordination study. The Architect and Engineer require a full submittal review period as delineated in Division 01 Section "Submittal Procedures" to adequately review the OCPD study against the submitted electrical components prior to release of submittals for equipment procurement.

The submittal schedule required by Division 01 requirements shall provide for this review time in the action submittal process. Delay claims arising due to Contractor's failure to coordinate simultaneous action submittals will not be considered by the Owner.

- C. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
 - 1. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
 - 2. Time-current curves for each type of overcurrent protection device. Include hardcopy of characteristic curve and TCC Number for use with Power Tools by SKM Systems Analysis, Inc. Indicate available setting points and selectable ranges for each type of adjustable circuit breaker.
- D. Shop Drawings: For each enclosed circuit breaker, switch and related equipment.
 - 1. Dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings. Include the following:
 - a. Enclosure types and details for types other than NEMA 250, Type 1.
 - b. Bus configuration, current, and voltage ratings.
 - c. Short-circuit current rating of device and overcurrent protective devices.
 - 2. Wiring Diagrams: Power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Field quality-control test reports including the following:
 - 1. Test procedures used.
 - 2. Test results that comply with requirements.
 - 3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For enclosed switches and circuit breakers to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 - 1. Manufacturer's routine maintenance requirements for enclosed switches and circuit breakers and all installed components.
 - 2. Manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.
 - 3. Time-current curves, including selectable ranges for each type of circuit breaker. Include directory listing each adjustable breaker included in the Work and their final set points.

1.7 QUALITY ASSURANCE

- A. Source Limitations: Obtain enclosed switches and circuit breakers, overcurrent protective devices, components, and accessories through one source from a single manufacturer, unless otherwise indicated.
 - 1. Breaker Manufacturer: Manufacturer for breakers shall be the same as the manufacturer of other breakers proposed for other portions of the Work.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NFPA 70.
- D. Product Options: Drawings indicate spatial allocation for enclosed switches and circuit breakers, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum spatial allocation. Refer to Division 01 Section "Product Requirements."

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Prepare equipment for shipment.
 - 1. Provide suitable crating, blocking, and supports so equipment will withstand expected domestic shipping and handling shocks and vibration.
 - 2. Weatherproof equipment for shipment. Close connection openings to prevent entrance of foreign material during shipment and storage.
- B. Installation Pathway: Coordinate delivery of equipment to allow movement into designated space.
 - 1. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.
 - 2. Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving equipment into place.
- C. Store equipment indoors in clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- D. Handle equipment components according to manufacturer's written instructions. Use factory-installed lifting provisions.

1.9 PROJECT CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation at indicated ampere ratings for the following conditions:
 - 1. Ambient Temperature for Circuit Breakers: Not less than 23 deg F and not exceeding 104 deg F.
 - 2. Ambient Temperature for Fused Switches: Not less than minus 22 deg F and not exceeding 104 deg F.
 - 3. Altitude: Not exceeding 6600 feet (2000 m)

1.10 COORDINATION

- A. Coordinate layout and installation of switches, circuit breakers, and components with other construction, including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate ratings with utilization equipment nameplate limitations of maximum overcurrent protection device size. Provide enclosed switch or circuit breakers to match utilization equipment requirements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 FUSIBLE AND NONFUSIBLE SWITCHES

- A. Manufacturers:
 - 1. Eaton Corporation; Cutler-Hammer Products.
 - 2. General Electric Co.; Consumer and Industrial Division.
 - 3. Siemens Energy & Automation, Inc.
 - 4. Square D/Group Schneider.
- B. Fusible Switch, 1200 A and Smaller: NEMA KS 1, Type HD, with clips or bolt pads to accommodate specified fuses, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.
- C. Nonfusible Switch, 1200 A and Smaller: NEMA KS 1, Type HD, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.
- D. Accessories:
 - 1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
 - 2. Neutral Kit: Internally mounted; insulated, capable of being grounded, and bonded; and labeled for copper and aluminum neutral conductors.
 - 3. Auxiliary Contact Kit: Auxiliary set of contacts arranged to open before switch blades open.
- E. Fuses are specified in Division 26 Section "Fuses."

2.3 MOLDED-CASE CIRCUIT BREAKERS AND SWITCHES

- A. Manufacturers:
 - 1. Eaton Corporation; Cutler-Hammer Products.
 - 2. General Electric Co.; Electrical Distribution & Control Division.
 - 3. Siemens Energy & Automation, Inc.
 - 4. Square D/Group Schneider.
- B. Series-rated devices are not permitted.
- C. Molded-Case Circuit Breaker Requirements: UL 489, NEMA AB 3, with interrupting capacity rating to meet available fault current.
 - 1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 - 2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
 - 3. Electronic trip-unit circuit breakers: RMS sensing, field-replaceable rating plug, and the following field-adjustable settings:
 - a. Long- and short-time pickup levels.
 - b. Long- and short-time time adjustments.

- c. Instantaneous trip.
 - d. Ground-fault pickup level, time delay, and I^2t response, where indicated.
 - e. Ground-fault indication alarm, where indicated.
 - f. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection and short-time trip function.
- D. Molded-Case Circuit-Breaker Features: Standard frame sizes, trip ratings, and number of poles. Provide the following features for all included in the Work:
- 1. Lugs: Mechanical style, suitable for number, size, trip ratings, and conductor material; UL 486 B listed, dual rated and marked for use with copper- or aluminum load-side conductors.
 - 2. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HACR for heating, air-conditioning, and refrigerating equipment.
 - 3. Lock-Out Tag Provisions: For installing at least three Lock-Out tags on each circuit breaker to secure the breaker and prevent movement mechanism.
- E. Circuit-Breaker Accessories: Standard frame sizes, trip ratings, and number of poles. Provide the following accessories where indicated:
- 1. Ground-Fault Protection: Provide integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 - 2. Shunt Trip: Set to trip at 55 percent of rated voltage, where indicated.
 - 3. Communication Capability: Communication module with functions and features compatible with power monitoring and control system specified in Division 26 Section "Electrical Power Monitoring and Control."
 - 4. Key Interlock Kit: where indicated, provide to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
 - 5. Under-voltage Trip Devices: Adjustable time-delay and pickup voltage.
 - 6. Auxiliary Switch: where indicated, provide two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
 - 7. Remote trip indication and control.
- F. Molded-Case Switch Requirements: Molded-case circuit breaker with fixed, high-set instantaneous trip only, and short-circuit withstand rating equal to equivalent breaker frame size interrupting rating.
- G. Molded-Case Switch Features and Accessories:
- 1. Lugs: Mechanical style with compression lug kits suitable for number, size, trip ratings, and material of conductors.
 - 2. Application Listing: Type HACR for heating, air-conditioning, and refrigerating equipment.
 - 1. Under-voltage Trip Devices: Adjustable time-delay and pickup voltage
 - 2. Auxiliary Switch: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
 - 3. Key Interlock Kit: Externally mounted to prohibit operation; key shall be removable only when switch is in off position.

2.4 ELEVATOR SHUNT-TRIP DISCONNECT SWITCHES

- A. Manufacturers:
- 1. Eaton Corporation; Cutler-Hammer Products – ES Elevator Switch
 - 2. Cooper Bussmann, Inc. Model - Power Module Switch - PS
 - 3. Littelfuse, Inc. Model - LPS Series Elevator POWR-Switch

- B. Fusible Switch with Shunt-Trip: Manufactured unit that combines fused disconnect switch with all necessary relay(s), control transformer and other options, required to provide disconnecting means and fire protection shunt-trip interface for elevator controller.
1. Ampere Rating: As required by elevator manufacturer for elevator proposed for inclusion in the Work.
 2. Short-Circuit Current Rating: 200,000A.
 3. Interlocks to prevent the opening of the cover when the switch is in the ON position. Interlock shall be defeatable for testing purposes.
 4. Handle: lockable in the OPEN/OFF position.
 5. Control Power Transformer: Integral 100VA rated with primary and secondary fuses. Primary voltage rating of 480 VAC with a 120 VAC secondary.
 6. Isolation relay (3PDT, 10amp, 120V): Provide isolation relay with 120V AC or 24V DC coil as required to coordinate fire alarm system.
 - a. Coordinate a normally open dry contact to energize the isolation relay and activate the shunt trip solenoid (140VA inrush at 120V); relay provided under Division 28 Section "Fire Alarm System". If 24V DC coil is selected, a separate 24V DC source and contact shall be provided by the Fire Alarm Safety System.
 7. Provide options as follows:
 - a. Key to Test Switch
 - b. Pilot Light indicating systems is in the CLOSED/ON position.
 - c. Isolated Full Capacity Neutral Lug
 - d. For hydraulic elevators with automatic recall: Provide one pole normally closed Mechanical Interlock.
 - e. Fire Alarm Voltage Monitoring Relay; Comply with NFPA 72.

2.5 ENCLOSURES

- A. NEMA AB 1 and NEMA KS 1 to meet environmental conditions of installed location as follows, unless otherwise indicated:
1. Indoor Locations: NEMA 250, Type 1.
 2. Kitchen Areas: NEMA 250, Type 4X, stainless steel.
 3. Outdoor Locations: NEMA 250, Type 3R.
 4. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.
- B. Enclosure Finish for Outdoor Units: Factory-applied finish in manufacturer's standard ANSI Gray enamel over corrosion-resistant treatment or rust-inhibiting primer coat, undersurfaces treated with corrosion-resistant undercoating.
- C. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's standard ANSI Gray enamel over corrosion-resistant treatment or rust-inhibiting primer coat.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elements and surfaces where equipment will be installed for compliance with installation tolerances, required clearances, and other conditions affecting performance.
- B. Examine roughing-in of conduits to verify the following:
1. Wiring entries comply with layout requirements.
 2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.

- C. Verify that ground connections are in place and that requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" have been met.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATION

- A. Fused Power Circuit Device Operating Mechanism: Mechanical Trip, except Electrical Trip for switches with ground-fault protection or remotely tripped switches.
- B. Molded-Case Circuit Breakers OCPD Type: Thermal-Magnetic Circuit Breakers Adjustable Instantaneous-Trip Circuit Breakers Electronic Trip-Unit Circuit Breakers, as indicated required for the installation.

3.3 INSTALLATION

- A. Install and anchor equipment level on concrete bases, 4-inch nominal thickness. Concrete base is specified in Division 26 Section "Hangers and Supports for Electrical Systems," and concrete materials and installation requirements are specified in Division 03.
- B. Comply with applicable portions of NECA 1, NEMA PB 1.1, and NEMA PB 2.1 for installation of enclosed switches and circuit breakers.
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- D. Comply with mounting and support requirements specified in Division 26 Section "Hangers and Supports for Electrical Systems."
- E. Comply with mounting and anchoring requirements specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- F. Mount individual wall-mounting switches and circuit breakers with tops at uniform height, unless otherwise indicated.
- G. Anchor floor-mounting switches to concrete base.
- H. Mount top of trim 74 inches above finished floor, unless otherwise indicated.
- I. Mount plumb and rigid without distortion of box. Mount recessed equipment with fronts uniformly flush with wall finish.
- J. Install overcurrent protective devices, controllers, and instrumentation.
- K. Install filler plates in unused spaces.
- L. Arrange conductors in gutters into groups and bundle and wrap with wire ties.
- M. Close unused conduit opening or other unused holes in sides of box with proper mating blank-off plates.
- N. Do not use gutters of equipment as raceways for routing feeder conductors from bottom entrance to top-feed lugs or vice versa; an external gutter or conduit shall be used for this purpose.

3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."
- B. Enclosure Nameplates: Label each enclosure with engraved Equipment Identification Label as specified in Division 26 Section "Identification for Electrical Systems."

3.5 CONNECTIONS

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.6 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
 - 1. Test insulation resistance for each equipment bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
 - 3. Verify switch and relay type and labeling verification.
 - 4. Verify rating of installed fuses.
 - 5. Assist in field testing of equipment including pre-testing and adjusting of equipment and components.
- B. Perform the following field tests and inspections and prepare test reports:
 - 1. Test mounting and anchorage devices according to requirements in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
 - 2. Inspect equipment installation, including wiring, components, connections, and equipment. Test and adjust components and equipment.
 - 3. Verify that electrical control wiring installation complies with manufacturer's submittal by means of point-to-point continuity testing. Verify that wiring installation complies with requirements in Division 26 Sections.
 - 4. Complete installation and startup checks according to manufacturer's written instructions.
- C. Correct Deficiencies, Retest and Report:
 - 1. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace conductors, units, and devices as required to bring system into compliance.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. Prepare a report, certified by testing agency, that identifies switchboards, units, conductors and devices checked and describes results. Include notation of deficiencies detected, remedial action taken, and observations and test results after remedial action.

3.7 ADJUSTING

- A. Set field-adjustable overcurrent protection device trip characteristics according to settings provided by Engineer-of-Record.
 - 1. Settings will be provided by Engineer-of-Record after the submittal process and review of report required by Division 26 Section "Overcurrent Protective Device Coordination Study." are completed.

3.8 CLEANING

- A. Clean components according to manufacturer's written instructions.
- B. Prior to installation of front trim and cover plates inspect interior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
- C. On completion of front trim and cover installation, inspect exterior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Remove all temporary markings and labels.
 - 3. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
 - 4. Repair exposed surfaces to match original finish.

3.9 PROTECTION

- A. Temporary Heating: Maintain a clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Apply temporary heating as required.
- B. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.

3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's management and maintenance personnel to adjust, operate, and maintain enclosed switches and circuit breakers, overcurrent protective devices, instrumentation, and accessories. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 262913

ENCLOSED CONTROLLERS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes ac, enclosed controllers rated 600 V and less, of the following types:
 - 1. Across-the-line, manual and magnetic controllers.
 - 2. Reduced-voltage controllers.
 - 3. Multi-speed controllers.
- B. Related Sections include the following:
 - 1. ~~Division 26 Section "Electrical Power Monitoring and Control" for interfacing communication and metering requirements.~~
 - 2. Division 23 Sections for general-purpose, ac, adjustable-frequency, pulse-width-modulated controllers for use on constant torque loads in ranges up to 200 hp.
 - 3. Division 26 Section "SPD for Low-Voltage Electrical Power Circuits" for low-voltage power, control, and communication surge suppressors.

1.2 PERFORMANCE REQUIREMENTS

- A. Overcurrent Protective Device Coordination: All overcurrent protective devices proposed for inclusion in the Work shall be selected to be selectively coordinated with the overcurrent protective devices installed on their supply side such that an overcurrent event (overload, short-circuit, or ground-fault) occurring at the lowest level in the system (branch circuit) cannot cause the feeder protective device supplying the branch circuit panelboard to open. This coordination shall be carried through each level of distribution for all branches of normal and emergency power. Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.

1.3 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Simultaneous Action Submittals: Enclosed Controller Product Data submittal shall be made in conjunction with action submittals required under Division 26 Section "Overcurrent Protective Device Coordination Study." The release of electrical equipment submittals (panelboards, engine generators, switchgear, etc.) is dependent on the receipt of a complete and accurate overcurrent protective device coordination study. The Architect and Engineer require a full submittal review period as delineated in Division 01 Section "Submittal Procedures" to adequately review the OCPD study against the submitted electrical components prior to release of submittals for equipment procurement. The submittal schedule required by Division 01 requirements shall provide for this review time in the action submittal process. Delay claims arising due to Contractor's failure to coordinate simultaneous action submittals will not be considered by the Owner.
- C. Product Data: For each type of enclosed controller and related component, include the following:

1. Manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
 2. For enclosed controllers with integral overcurrent protection devices, provide rated capacities, features, operating characteristics, furnished specialties, factory settings, accessories and time-current characteristic curves for individual relays and overcurrent protective devices.
 - a. Time-current curves for each type of overcurrent protection device. Include hardcopy of characteristic curve and TCC Number for use with Power Tools by SKM Systems Analysis, Inc. Indicate available setting points and selectable ranges for each type of adjustable overcurrent protection device.
 3. Power Monitoring Block Diagram: Show devices monitored and interconnections between components specified in this Section and devices furnished under Division 26 Section "Electrical Power Monitoring and Control". Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines. Illustrate coordination among related equipment and power monitoring and control.
- D. Shop Drawings: For each enclosed controller and related equipment, include the following:
1. Dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show method of field assembly and location and size of each field connection. Include the following:
 - a. Enclosure types and details.
 - b. Outline and general arrangement drawing showing dimensions and weights of each assembled section.
 - c. Short-circuit current rating of equipment assembly.
 - d. Feeder entry locations and lug configuration; including size and number of conductors accepted for phase, neutral, and ground conductors.
 - e. Nameplate legends.
 2. **Seismic Design Calculations:** Signed and sealed by a qualified professional engineer. Calculate requirements for selecting seismic restraints.
 3. Wiring Diagrams: For each type of enclosed controller and related equipment, include the following:
 - a. Power, signal, and control wiring.
 - b. Schematic control diagrams.
 - c. Diagrams showing connections of component devices and equipment.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electrical" for each location where enclosed controllers are included in the Work.
- B. Field quality-control Test Method and Procedure: List of procedures to be used during functional and operations sequence testing. Method of Procedure should include but not be limited to the following:
 1. Tabulation of Testing Equipment and PPE required for tests.
 2. Schedule of Shutdowns required.
 3. Manufacturer's Recommended Pre-Start Checklists for the following:
 - a. Overcurrent Protection Devices
 - b. Metering and Monitoring Equipment
 4. Step-by-Step Testing Operations and Criteria for tests listed in Part 3 Paragraph "Field quality-control".

- C. Field quality-control test reports including the following:
 - 1. Test results that comply with requirements.
 - 2. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
- D. Load-Current and Overload-Relay Heater List: Compile after motors have been installed and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.
- E. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed and arrange to demonstrate that dip switch settings for motor running overload protection suit actual motor to be protected.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For electrical equipment, accessories and components to be included in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 - 1. Manufacturer's routine maintenance requirements for enclosed controllers and all installed components.
 - 2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
 - 3. Time-current curves, including selectable ranges for each type of relay and overcurrent protective device. Include directory listing each adjustable breaker included in the Work and their final set points.
 - 4. Manufacturer's sample system checklists and log sheets.

1.6 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Spare Fuses: One for every ten of each type and rating installed. Furnish at least one of each type.
 - 2. Indicating Lights: one for every ten of each type and rating installed. Furnish at least one of each type.
 - 3. Touchup Paint: Three 0.5 pint containers of paint matching enclosure finish.

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer. Maintain, within 100 miles of Project site, a service center capable of providing training, parts, and emergency maintenance and repairs.
- B. Source Limitations: Obtain enclosed controllers, components, and accessories through one source from a single manufacturer, unless otherwise indicated.
- C. Product Options: Drawings indicate spatial allocation for enclosed controllers, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum spatial allocation. Refer to Division 01 Section "Product Requirements."
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

- E. Comply with NFPA 70.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Prepare equipment for shipment.
 - 1. Provide suitable crating, blocking, and supports so equipment will withstand expected domestic shipping and handling shocks and vibration.
 - 2. Weatherproof equipment for shipment. Close connection openings to prevent entrance of foreign material during shipment and storage.
- B. Installation Pathway: Coordinate delivery of equipment to allow movement into designated space.
 - 1. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.
 - 2. Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving equipment into place.
- C. Store equipment indoors in clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- D. Handle equipment components according to manufacturer's written instructions. Use factory-installed lifting provisions.

1.9 COORDINATION

- A. Coordinate layout and installation of enclosed controllers and components with other construction that penetrates floors, ceilings or walls or are supported by them, including but not limited to conduit, piping, other electrical equipment, light fixtures, HVAC equipment, fire-suppression-system components and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels.
- B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- C. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."
- D. Coordinate features of enclosed controllers and accessory devices with pilot devices and control circuits to which they connect.
- E. Coordinate features, accessories, and functions of each enclosed controller with ratings and characteristics of supply circuit, motor, required control sequence, and duty cycle of motor and load.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. ABB Power Distribution, Inc.; ABB Control, Inc. Subsidiary.
 - 2. Cerus Industrial.
 - 3. Danfoss Inc.; Danfoss Electronic Drives Div.
 - 4. Eaton Corporation; Cutler-Hammer Products.

5. General Electrical Company; GE Industrial Systems.
6. Rockwell Automation; Allen-Bradley Co.; Industrial Control Group.
7. Siemens/Furnas Controls.
8. Square D.

2.2 RATINGS

- A. Suitable for application in 3-phase, 60-Hz, solidly grounded-neutral system, unless otherwise indicated.
- B. Nominal System Voltage: As indicated on the Drawings.
- C. Amperage: Amperage as indicated on the Drawings. Provide continuous rating across entire length of main-bus.
- D. Short-Circuit Current: Match rating of overcurrent protective device serving enclosed controller assembly.
 1. Available Short-Circuit Current: As indicated on the Drawings. Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.

2.3 MANUFACTURED UNIT FABRICATION

- A. Fabricate and test enclosed controllers according to IEEE 344 to withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- B. Enclosures: Flush- and surface-mounted cabinets, as indicated.
 1. Rated for environmental conditions at installed location.
 - a. Indoor Locations: NEMA 250, Type 1.
 - b. Outdoor Locations: NEMA 250, Type 3R.
 - c. Kitchen Areas: NEMA 250, Type 4X, stainless steel.
 - d. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.
 - e. Hazardous Areas Indicated on Drawings: NEMA 250, Type 7C.
 2. Enclosure Finish for Outdoor Units: Factory-applied finish in manufacturer's standard ANSI Gray enamel over corrosion-resistant treatment or rust-inhibiting primer coat, undersurfaces treated with corrosion-resistant undercoating.
 3. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's standard ANSI Gray enamel over corrosion-resistant treatment or rust-inhibiting primer coat.
- C. Hand-off-automatic switch: Three-position selector switch.

2.4 ACROSS-THE-LINE ENCLOSED CONTROLLERS

- A. Manual Controller: NEMA ICS 2, general purpose, Class A, with "quick-make, quick-break" toggle or pushbutton action, and marked to show whether unit is "OFF," "ON," or "TRIPPED."
 1. Overload Relay: Ambient-compensated type with inverse-time-current characteristics and NEMA ICS 2, Class 10 tripping characteristics. Relays shall have heaters and sensors in each phase, matched to nameplate, full-load current of specific motor to which they connect and shall have appropriate adjustment for duty cycle.
- B. Magnetic Controller: NEMA ICS 2, Class A, full voltage, non-reversing, across the line, unless otherwise indicated.

1. Control Circuit: 120 V; obtained from integral control power transformer or from a control power ~~transformer~~ source of sufficient capacity to operate connected pilot, indicating and control devices, plus 100 percent spare capacity.
 2. Overload Relay: Ambient-compensated type with inverse-time-current characteristic and NEMA ICS 2, Class 10, 20 or 30 tripping characteristic as appropriate. Provide with heaters or sensors in each phase matched to nameplate full-load current of specific motor to which they connect and with appropriate adjustment for duty cycle.
 3. Adjustable Overload Relay: Dip switch selectable for motor running overload protection with NEMA ICS 2, Class 10, 20 or 30 tripping characteristic, as appropriate and selected to protect motor against voltage and current unbalance and single phasing. Provide relay with Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
- C. Combination Magnetic Controller: Factory-assembled combination controller and disconnect switch.
1. Fusible Disconnecting Means: NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 947-4-1, as certified by an NRTL.
 2. Nonfusible Disconnecting Means: NEMA KS 1, heavy-duty, nonfusible switch.
 3. Circuit-Breaker Disconnecting Means: NEMA AB 1, motor-circuit protector with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.

2.5 REDUCED-VOLTAGE ENCLOSED CONTROLLERS

- A. Wye-Delta Controller: NEMA ICS 2, closed transition with adjustable time delay.
- B. Part-Winding Controller: NEMA ICS 2, closed transition with separate overload relays for starting and running sequences.
- C. Autotransformer Reduced-Voltage Controller: NEMA ICS 2, closed transition.
- D. Solid-State, Reduced-Voltage Controller: NEMA ICS 2, suitable for use with NEMA MG 1, Design B, polyphase, medium induction motors.
1. Adjustable acceleration rate control utilizing voltage or current ramp, and adjustable starting torque control with up to 500 percent current limitation for 20 seconds.
 2. Surge suppressor in solid-state power circuits providing 3-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
 3. LED indicators showing motor and control status, including the following conditions:
 - a. Control power available.
 - b. Controller on.
 - c. Overload trip.
 - d. Loss of phase.
 - e. Shorted silicon-controlled rectifier.
 4. Automatic voltage-reduction controls to reduce voltage when motor is running at light load.
 5. Motor running contactor operating automatically when full voltage is applied to motor.

2.6 MULTI-SPEED ENCLOSED CONTROLLERS

- A. Multi-speed Enclosed Controller: Match controller to motor type, application, and number of speeds; include the following accessories:
1. Compelling relay to ensure that motor will start only at low speed.
 2. Accelerating relay to ensure properly timed acceleration through speeds lower than that selected.

3. Decelerating relay to ensure automatically timed deceleration through each speed.
4. Match multi-speed enclosed controller to motor. Coordinate with motor specified under Division 23 Section "Common Motor Requirements for HVAC Equipment.

2.7 ACCESSORY COMPONENTS AND FEATURES

- A. Provide the following factory-installed devices within the controller enclosure, unless otherwise indicated:
 1. Push-Button Stations, Pilot Lights, and Selector Switches: NEMA ICS 2, heavy-duty type.
 2. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.
 3. Control Relays: Auxiliary and adjustable time-delay relays.
 4. Elapsed Time Meter: Heavy duty with digital readout in hours.
 5. Phase-Failure and Undervoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connection. Provide adjustable undervoltage setting.
 6. Current-Sensing, Phase-Failure Relays for Bypass Controllers: Solid-state sensing circuit with isolated output contacts for hard-wired connection; arranged to operate on phase failure, phase reversal, current unbalance of from 30 to 40 percent, or loss of supply voltage; with adjustable response delay.
 7. Auxiliary Contacts: For remote indication or initiation of controller, with spare auxiliary switches and other auxiliary switches required for normal operation. Provide two sets of contacts arranged with two normally open contacts and two normally closed contacts. Sets shall be removable and field-convertible. Wire contacts through secondary disconnect devices to a terminal block in stationary housing.

2.8 INSTRUMENTATION

- A. Instrument Transformers: NEMA EI 21.1, IEEE C57.13, and the following:
 1. Potential Transformers: Secondary voltage rating of 120 V and NEMA accuracy class of 0.3 with burdens of W, X, and Y.
 2. Current Transformers: Ratios with accuracy class and burden suitable for connected relays, meters, and instruments.
- ~~B. Power Monitor: Provide monitoring and metering equipment according to Division 26 Section "Electrical Power Monitoring and Control."~~
- C. Power Monitor: Microprocessor-based Multifunction Digital-Metering Monitor unit suitable for three- or four-wire systems and with the following features:
 1. Switch-selectable digital display of the following values with maximum accuracy tolerances as indicated:
 - a. Phase Currents, Each Phase: Plus or minus 1 percent.
 - b. Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d. Megawatts: Plus or minus 2 percent.
 - e. Megavars: Plus or minus 2 percent.
 - f. Power Factor: Plus or minus 2 percent.
 - g. Frequency: Plus or minus 0.5 percent.
 - h. Accumulated Energy, Megawatt Hours: Plus or minus 2 percent; accumulated values unaffected by power outages up to 72 hours.

- i. Megawatt Demand: Plus or minus 2 percent; demand interval programmable from five to 60 minutes.
 - j. Contact devices to operate remote impulse-totalizing demand meter.
- 2. Mounting: Display and control unit flush or semi-flush mounted in panel cover trim.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elements and surfaces where equipment will be installed for compliance with installation tolerances, required clearances, and other conditions affecting performance.
- B. Examine roughing-in of conduits to verify the following:
 - 1. Wiring entries comply with layout requirements.
 - 2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.
- C. Verify that ground connections are in place and that requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" have been met.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

- A. Select features of each enclosed controller to coordinate with ratings and characteristics of supply circuit and motor; required control sequence; duty cycle of motor, controller, and load; and configuration of pilot device and control circuit affecting controller functions.
- B. Select horsepower rating of controllers to suit motor controlled.
 - 1. Coordinate motor starter size with motor supplied under other divisions of these specifications prior to procurement.
 - 2. Supply overloads rated to match motor supplied under other divisions of these specifications prior to procurement.

3.3 INSTALLATION

- A. Comply with NECA 230, "Standard for Selecting, Installing, and Maintaining Electric Motors and Motor Controllers (ANSI)" as published by the National Electrical Contractors Association.
- B. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosed controllers and components once unit is secured in place.
- C. Comply with mounting and support requirements specified in Division 26 Section "Hangers and Supports for Electrical Systems."
 - 1. For control equipment at walls: Mount on Steel Slotted Support Systems complying with Division 26 Section "Hangers and Supports for Electrical Systems."
 - 2. For controllers not at walls: Provide freestanding Steel Slotted Support Systems complying with Division 26 Section "Hangers and Supports for Electrical Systems."
 - 3. For free-standing floor-mounted controllers: Install and anchor equipment level on concrete bases, 4-inch nominal thickness. Concrete base is specified in Division 26 Section "Hangers and Supports for Electrical Systems," and concrete materials and installation requirements are specified in Division 03.

- D. Comply with mounting and anchoring requirements specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- E. Mount top of trim 74 inches above finished floor, unless otherwise indicated.
- F. Mount plumb and rigid without distortion of box. Mount recessed enclosed controllers with fronts uniformly flush with wall finish.
- G. Install overcurrent protective devices, controllers, and instrumentation.
- H. Arrange conductors in gutters into groups and bundle and wrap with wire ties.
- I. Close unused conduit opening or other unused holes in sides of box with proper mating blank-off plates.
- J. Do not use gutters of enclosure as raceways for routing feeder conductors from bottom entrance to top-feed lugs or vice versa; an external gutter or conduit shall be used for this purpose.
- K. Enclosed Controller Fuses: Install fuses in each fusible switch. Comply with requirements in Division 26 Section "Fuses."

3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components and provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."
- B. Equipment Identification Nameplates: Label each enclosed controller with engraved Equipment Identification Label as specified in Division 26 Section "Identification for Electrical Systems."

3.5 CONNECTIONS

- A. Tighten electrical connectors, and terminals according to manufacturer's published torque-tightening values.
- B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- C. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- D. Connect hand-off-automatic switch and other automatic-control devices where applicable.
 - 1. Connect selector switches to bypass only manual- and automatic-control devices that have no safety functions when switch is in hand position.
 - 2. Connect selector switches with enclosed controller circuit in both hand and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.6 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
 - 1. Test insulation resistance for each enclosed controller element, bus, component, connecting supply, feeder, and control circuit.

2. Test continuity of each circuit.
 3. Assist in field testing of equipment including pre-testing and adjusting of equipment and components.
- B. Perform the following field tests and inspections and prepare test reports:
1. Test mounting and anchorage devices according to requirements in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
 2. Inspect enclosed controller installation, including wiring, components, connections, and equipment. Test and adjust components and equipment.
 3. Verify that electrical control wiring installation complies with manufacturer's submittal by means of point-to-point continuity testing. Verify that wiring installation complies with requirements in Division 26 Sections.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to perform the following field tests and inspections and prepare certified test reports:
1. Complete installation and startup checks according to manufacturer's written instructions.
- D. Correct Deficiencies, Retest and Report:
1. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace conductors, units, and devices as required to bring system into compliance.
 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 3. Prepare a report[, certified by testing agency,] that identifies enclosed controller, units, conductors and devices checked and describes results. Include notation of deficiencies detected, remedial action taken, and observations and test results after remedial action.
- E. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.7 ADJUSTING

- A. Set field-adjustable overcurrent protection device trip characteristics according to settings provided by Engineer-of-Record.
1. Coordination Study will be completed by Engineer-of-Record after completion of the submittal process.
 2. Settings will be provided by Engineer-of-Record after the submittal process and review of report required by Division 26 Section "Overcurrent Protective Device Coordination Study" are completed.

3.8 CLEANING

- A. Clean components according to manufacturer's written instructions.
- B. Prior to installation of front trim and cover plates inspect interior surfaces and perform the following:
1. Remove paint splatters and other spots.
 2. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
- C. On completion of front trim and cover installation, inspect exterior surfaces and perform the following:
1. Remove paint splatters and other spots.
 2. Remove all temporary markings and labels.
 3. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

4. Repair exposed surfaces to match original finish.

3.9 PROTECTION

- A. Temporary Heating: Maintain a clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Apply temporary heating as required.
- B. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.

3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's management and maintenance personnel to adjust, operate, and maintain enclosed controllers, overcurrent protective devices, instrumentation, and accessories. Refer to Division 01 Section "Demonstration and Training."

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 262923

VARIABLE-FREQUENCY MOTOR CONTROLLERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes separately enclosed, preassembled, combination VFCs, rated 600 V and less, for speed control of three-phase, squirrel-cage induction motors.
- B. Related Requirements:
 - 1. Section 262419 "Motor-Control Centers" for VFCs installed in motor-control centers.

1.2 DEFINITIONS

- A. CE: Conformance Europeene (European Compliance).
- B. CPT: Control power transformer.
- C. DDC: Direct digital control.
- D. EMI: Electromagnetic interference.
- E. LED: Light-emitting diode.
- F. NC: Normally closed.
- G. NO: Normally open.
- H. OCPD: Overcurrent protective device.
- I. PID: Control action, proportional plus integral plus derivative.
- J. RFI: Radio-frequency interference.
- K. VFC: Variable-frequency motor controller.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type and rating of VFC indicated.
 - 1. Include dimensions and finishes for VFCs.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For each VFC indicated.
 - 1. Include mounting and attachment details.

2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 1. Required working clearances and required area above and around VFCs.
 2. Show VFC layout and relationships between electrical components and adjacent structural and mechanical elements.
 3. Show support locations, type of support, and weight on each support.
 4. Indicate field measurements.
- B. Qualification Data: For testing agency.
- C. Seismic Qualification Certificates: For each VFC, accessories, and components, from manufacturer.
 1. Certificate of compliance.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based, and their installation requirements.
- D. Product Certificates: For each VFC from manufacturer.
- E. Harmonic Analysis Report: Provide Project-specific calculations and manufacturer's statement of compliance with IEEE 519.
- F. Source quality-control reports.
- G. Field quality-control reports.
- H. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For VFCs to include in emergency, operation, and maintenance manuals.
 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Manufacturer's written instructions for testing and adjusting thermal-magnetic circuit breaker and motor-circuit protector trip settings.
 - b. Manufacturer's written instructions for setting field-adjustable overload relays.
 - c. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.

- d. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.
- e. Load-Current and Overload-Relay Heater List: Compile after motors have been installed, and arrange to demonstrate that selection of heaters suits actual motor nameplate, full-load currents.
- f. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed, and arrange to demonstrate that switch settings for motor-running overload protection suit actual motors to be protected.

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
 - 1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. If stored in space that is not permanently enclosed and air conditioned, remove loose packing and flammable materials from inside controllers and install temporary electric heating, with at least 250 W per controller.
- B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for VFCs, including clearances between VFCs, and adjacent surfaces and other items.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace VFCs that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCT

2.1 SYSTEM DESCRIPTION

- A. General Requirements for VFCs:
 - 1. VFCs and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - 2. Comply with NEMA ICS 7, NEMA ICS 61800-2, and UL 508A UL 508C.
- B. Application: Constant torque and variable torque.
- C. VFC Description: Variable-frequency motor controller, consisting of power converter that employs pulse-width-modulated inverter, factory built and tested in an enclosure, with integral disconnecting means and overcurrent and overload protection; listed and labeled by an NRTL as a complete unit; arranged to provide self-protection, protection, and variable-speed control of one or more three-phase induction motors by adjusting output voltage and frequency.

1. Units suitable for operation of NEMA MG 1, Design A and Design B motors, as defined by NEMA MG 1, Section IV, Part 30, "Application Considerations for Constant Speed Motors Used on a Sinusoidal Bus with Harmonic Content and General Purpose Motors Used with Adjustable-Voltage or Adjustable-Frequency Controls or Both."
 2. Units suitable for operation of inverter-duty motors as defined by NEMA MG 1, Section IV, Part 31, "Definite-Purpose Inverter-Fed Polyphase Motors."
 3. Listed and labeled for integrated short-circuit current (withstand) rating by an NRTL acceptable to authorities having jurisdiction.
- D. Design and Rating: Match load type, such as fans, blowers, and pumps; and type of connection used between motor and load such as direct or through a power-transmission connection.
- E. Output Rating: Three phase; 10 to 66 Hz, with torque constant as speed changes; maximum voltage equals input voltage.
- F. Unit Operating Requirements:
1. Input AC Voltage Tolerance: Plus 10 and minus 15 percent of VFC input voltage rating.
 2. Input AC Voltage Unbalance: Not exceeding 3 percent.
 3. Input Frequency Tolerance: Plus or minus 3 percent of VFC frequency rating.
 4. Minimum Efficiency: 97 percent at 60 Hz, full load.
 5. Minimum Displacement Primary-Side Power Factor: 98 percent under any load or speed condition.
 6. Minimum Short-Circuit Current (Withstand) Rating: 10 kA.
 7. Ambient Temperature Rating: Not less than 32 deg F (0 deg C) and not exceeding 104 deg F (40 deg C).
 8. Humidity Rating: Less than 95 percent (noncondensing).
 9. Altitude Rating: Not exceeding 3300 feet (1000 m).
 10. Vibration Withstand: Comply with NEMA ICS 61800-2.
 11. Overload Capability: 1.5 times the base load current for 60 seconds; minimum of 1.8 times the base load current for three seconds.
 12. Starting Torque: Minimum 100 percent of rated torque from 3 to 60 Hz.
 13. Speed Regulation: Plus or minus 5 percent.
 14. Output Carrier Frequency: Selectable; 0.5 to 15 kHz.
 15. Stop Modes: Programmable; includes fast, free-wheel, and dc injection braking.
- G. Inverter Logic: Microprocessor based, 32 bit, isolated from all power circuits.
- H. Isolated Control Interface: Allows VFCs to follow remote-control signal over a minimum 40:1 speed range.
1. Signal: Electrical.
- I. Internal Adjustability Capabilities:
1. Minimum Speed: 5 to 25 percent of maximum rpm.
 2. Maximum Speed: 80 to 100 percent of maximum rpm.
 3. Acceleration: 0.1 to 999.9 seconds.
 4. Deceleration: 0.1 to 999.9 seconds.
 5. Current Limit: 30 to minimum of 150 percent of maximum rating.
- J. Self-Protection and Reliability Features:
1. Surge Suppression: Factory installed as an integral part of the VFC, complying with UL 1449 SPD, Type 1 or Type 2.

2. Surge Suppression: Field-mounted surge suppressors complying with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits," UL 1449 SPD, Type 2.
 3. Loss of Input Signal Protection: Selectable response strategy, including speed default to a percent of the most recent speed, a preset speed, or stop; with alarm.
 4. Under- and overvoltage trips.
 5. Inverter overcurrent trips.
 6. VFC and Motor-Overload/Overtemperature Protection: Microprocessor-based thermal protection system for monitoring VFCs and motor thermal characteristics, and for providing VFC overtemperature and motor-overload alarm and trip; settings selectable via the keypad.
 7. Critical frequency rejection, with three selectable, adjustable deadbands.
 8. Instantaneous line-to-line and line-to-ground overcurrent trips.
 9. Loss-of-phase protection.
 10. Reverse-phase protection.
 11. Short-circuit protection.
 12. Motor-overtemperature fault.
- K. Automatic Reset/Restart: Attempt three restarts after drive fault or on return of power after an interruption and before shutting down for manual reset or fault correction; adjustable delay time between restart attempts.
- L. Power-Interruption Protection: To prevent motor from re-energizing after a power interruption until motor has stopped, unless "Bidirectional Autospeed Search" feature is available and engaged.
- M. Bidirectional Autospeed Search: Capable of starting VFC into rotating loads spinning in either direction and returning motor to set speed in proper direction, without causing damage to drive, motor, or load.
- N. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.
- O. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.
- P. Integral Input Disconnecting Means and OCPD: NEMA KS 1, nonfusible switch, with power fuse block and current-limiting fuses with pad-lockable, door-mounted handle mechanism.
1. Disconnect Rating: Not less than 115 percent of VFC input current rating.
 2. Disconnect Rating: Not less than 115 percent of NFPA 70 motor full-load current rating or VFC input current rating, whichever is larger.
 3. Auxiliary Contacts: NO or NC, arranged to activate before switch blades open.
 4. Auxiliary contacts "a" and "b" arranged to activate with circuit-breaker handle.
 5. NC alarm contact that operates only when circuit breaker has tripped.

2.2 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: VFCs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7. The designated VFCs shall be tested and certified by an NRTL as meeting the ICC-ES AC 156 test procedure requirements.

2.3 CONTROLS AND INDICATION

- A. Status Lights: Door-mounted LED indicators displaying the following conditions:
1. Power on.
 2. Run.
 3. Overvoltage.
 4. Line fault.
 5. Overcurrent.
 6. External fault.
- B. Panel-Mounted Operator Station: Manufacturer's standard front-accessible, sealed keypad and plain-English-language digital display; allows complete programming, program copying, operating, monitoring, and diagnostic capability.
1. Keypad: In addition to required programming and control keys, include keys for HAND, OFF, and AUTO modes.
 2. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: View only; view and operate; and view, operate, and service.
 - a. Control Authority: Supports at least four conditions: Off, local manual control at VFC, local automatic control at VFC, and automatic control through a remote source.
- C. Historical Logging Information and Displays:
1. Real-time clock with current time and date.
 2. Running log of total power versus time.
 3. Total run time.
 4. Fault log, maintaining last four faults with time and date stamp for each.
- D. Indicating Devices: Digital display and additional readout devices as required, mounted flush in VFC door and connected to display VFC parameters including, but not limited to:
1. Output frequency (Hz).
 2. Motor speed (rpm).
 3. Motor status (running, stop, fault).
 4. Motor current (amperes).
 5. Motor torque (percent).
 6. Fault or alarming status (code).
 7. PID feedback signal (percent).
 8. DC-link voltage (V dc).
 9. Set point frequency (Hz).
 10. Motor output voltage (V ac).
- E. Control Signal Interfaces:
1. Electric Input Signal Interface:
 - a. A minimum of two programmable analog inputs: 4- to 20-mA dc.
 - b. A minimum of six multifunction programmable digital inputs.
 2. Pneumatic Input Signal Interface: 3 to 15 psig (20 to 104 kPa).

3. Remote Signal Inputs: Capability to accept any of the following speed-setting input signals from the DDC system for HVAC or other control systems:
 - a. 0- to 10-V dc.
 - b. 4- to 20-mA dc.
 - c. Potentiometer using up/down digital inputs.
 - d. Fixed frequencies using digital inputs.
 4. Output Signal Interface: A minimum of two programmable analog output signal(s) (4- to 20-mA dc), which can be configured for any of the following:
 - a. Output frequency (Hz).
 - b. Output current (load).
 - c. DC-link voltage (V dc).
 - d. Motor torque (percent).
 - e. Motor speed (rpm).
 - f. Set point frequency (Hz).
 5. Remote Indication Interface: A minimum of two programmable dry-circuit relay outputs (120-V ac, 1 A) for remote indication of the following:
 - a. Motor running.
 - b. Set point speed reached.
 - c. Fault and warning indication (overtemperature or overcurrent).
 - d. PID high- or low-speed limits reached.
- F. PID Control Interface: Provides closed-loop set point, differential feedback control in response to dual feedback signals. Allows for closed-loop control of fans and pumps for pressure, flow, or temperature regulation.
1. Number of Loops: Two.
- G. Interface with DDC System for HVAC: Factory-installed hardware and software shall interface with DDC system for HVAC to monitor, control, display, and record data for use in processing reports. VFC settings shall be retained within VFC's nonvolatile memory.
1. Hardwired Points:
 - a. Monitoring:
 - 1) On-off status.
 - 2) General alarm.
 - b. Control:
 - 1) On-off operation.
 - 2) Speed Feedback.
 2. Communication Interface: Comply with ASHRAE 135. Communication shall interface with DDC system for HVAC to remotely control and monitor lighting from a DDC system for HVAC operator workstation. Control features and monitoring points displayed locally at lighting panel shall be available through the DDC system for HVAC.

2.4 LINE CONDITIONING AND FILTERING

- A. Input Line Conditioning: Based on the manufacturer's harmonic analysis study and report, provide input filtering, as required, to limit total demand (harmonic current) distortion and total harmonic voltage demand at the defined point of common coupling to meet IEEE 519 recommendations.
- B. Output Filtering: Less than 5% distortion based on building study..
- C. EMI/RFI Filtering: CE marked; certify compliance with IEC 61800-3 for Category C2.

2.5 BYPASS SYSTEMS

- A. Bypass Operation: Safely transfers motor between power converter output and bypass circuit, manually, automatically, or both. Selector switches set modes and indicator lights indicate mode selected. Unit is capable of stable operation (starting, stopping, and running) with motor completely disconnected from power converter.
- B. Bypass Mode: Manual operation only; requires local operator selection at VFC. Transfer between power converter and bypass contactor, and retransfer shall only be allowed with the motor at zero speed.
- C. Bypass Mode: Field-selectable automatic or manual, allows local and remote transfer between power converter and bypass contactor and retransfer, either via manual operator interface or automatic-control system feedback.
- D. Bypass Controller: Three-contactor-style bypass allows motor operation via the power converter or the bypass controller; with input isolating switch and barrier arranged to isolate the power converter input and output and permit safe testing and troubleshooting of the power converter, both energized and de-energized, while motor is operating in bypass mode.
 - 1. Bypass Contactor: Load-break, NEMA-rated contactor.
 - 2. Input and Output Isolating Contactors: Non-load-break, NEMA-rated contactors.
 - 3. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe troubleshooting and testing of the power converter, both energized and de-energized, while motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.
- E. Bypass Contactor Configuration: Reduced-voltage (autotransformer) type.
 - 1. NORMAL/BYPASS selector switch.
 - 2. HAND/OFF/AUTO selector switch.
 - 3. NORMAL/TEST Selector Switch: Allows testing and adjusting of VFC while the motor is running in the bypass mode.
 - 4. Contactor Coils: Pressure-encapsulated type with coil transient suppressors.
 - a. Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufacturer's standard matching control power or line voltage.
 - b. Power Contacts: Totally enclosed, double break, and silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.

5. Control Circuits: 120 -V ac; obtained from integral CPT, with primary and secondary fuses, with CPT of sufficient capacity to operate all integral devices and remotely located pilot, indicating, and control devices.
 - a. CPT Spare Capacity: 50 VA.
6. Overload Relays: NEMA ICS 2.
 - a. Melting-Alloy Overload Relays:
 - 1) Inverse-time-current characteristic.
 - 2) Class 20 tripping characteristic.
 - 3) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
 - b. Bimetallic Overload Relays:
 - 1) Inverse-time-current characteristic.
 - 2) Class 20 tripping characteristic.
 - 3) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
 - 4) Ambient compensated.
 - 5) Automatic resetting.
 - c. Solid-State Overload Relays:
 - 1) Switch or dial selectable for motor-running overload protection.
 - 2) Sensors in each phase.
 - 3) Class 20 tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
 - 4) Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
 - 5) Analog communication module.
 - d. NC isolated overload alarm contact.
 - e. External overload, reset push button.

2.6 OPTIONAL FEATURES

- A. Multiple-Motor Capability: VFC suitable for variable-speed service to multiple motors. Overload protection shuts down VFC and motors served by it, and generates fault indications when overload protection activates.
 1. Configure to allow two or more motors to operate simultaneously at the same speed; separate overload relay for each controlled motor.
 2. Configure to allow two motors to operate separately; operator selectable via local or remote switch or contact closures; single overload relay for both motors; separate output magnetic contactors for each motor.
 3. Configure to allow two motors to operate simultaneously and in a lead/lag mode, with one motor operated at variable speed via the power converter and the other at constant speed via the bypass controller; separate overload relay for each controlled motor.
- B. Damper control circuit with end-of-travel feedback capability.

- C. Sleep Function: Senses a minimal deviation of a feedback signal and stops the motor. On an increase in speed-command signal deviation, VFC resumes normal operation.
- D. Motor Preheat Function: Preheats motor when idle to prevent moisture accumulation in the motor.
- E. Firefighter's Override (Smoke Purge) Input: On a remote contact closure from the firefighter's control station or smoke-control fan controller, this password-protected input:
 - 1. Overrides all other local and external inputs (analog/digital, serial communication, and all keypad commands).
 - 2. Forces VFC to operate motor, without any other run or speed command, at a field-adjustable, preset speed.
 - 3. Forces VFC to transfer to bypass mode and operate motor at full speed.
 - 4. Causes display of override mode on the VFC display.
 - 5. Reset VFC to normal operation on removal of override signal automatically.
- F. Remote Indicating Circuit Terminals: Mode selection, controller status, and controller fault.
- G. Remote digital operator kit.
- H. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting a printer and a notebook computer.

2.7 ENCLOSURES

- A. VFC Enclosures: NEMA 250, to comply with environmental conditions at installed location.
 - 1. Dry and Clean Indoor Locations: Type 1.
 - 2. Outdoor Locations: Type 4X.
 - 3. Areas: Type 4X.
 - 4. Other Wet or Damp Indoor Locations: [Type 4] <Insert type>.
 - 5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12.
- B. Plenum Rating: UL 1995; NRTL certification label on enclosure, clearly identifying VFC as "Plenum Rated."

2.8 ACCESSORIES

- A. General Requirements for Control-Circuit and Pilot Devices: NEMA ICS 5; factory installed in VFC enclosure cover unless otherwise indicated.
 - 1. Push Buttons: Shielded.
 - 2. Pilot Lights: Push to test.
 - 3. Selector Switches: Rotary type.
 - 4. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.
- B. NC bypass contactor auxiliary contact(s).
- C. Control Relays: Auxiliary and adjustable solid-state time-delay relays.

- D. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections. Provide adjustable undervoltage, overvoltage, and time-delay settings.
 - 1. Current Transformers: Continuous current rating, basic impulse insulating level (BIL) rating, burden, and accuracy class suitable for connected circuitry. Comply with IEEE C57.13.
- E. Supplemental Digital Meters:
 - 1. Elapsed-time meter.
 - 2. Kilowatt meter.
 - 3. Kilowatt-hour meter.
- F. Breather and drain assemblies, to maintain interior pressure and release condensation in NEMA 250, Type 4X enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.
- G. Space heaters, with NC auxiliary contacts, to mitigate condensation in NEMA 250, Type 4X enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.
- H. Cooling Fan and Exhaust System: For NEMA 250, Type 12; UL 508 component recognized: Supply fan, with composite intake and exhaust grills and filters; 120 -V ac; obtained from integral CPT.
- I. Sun shields installed on fronts, sides, and tops of enclosures installed outdoors and subject to direct and extended sun exposure.
- J. Spare control-wiring terminal blocks; wired.

2.9 SOURCE QUALITY CONTROL

- A. Testing: Test and inspect VFCs according to requirements in NEMA ICS 61800-2.
 - 1. Test each VFC while connected to a motor that is comparable to that for which the VFC is rated.
 - 2. Verification of Performance: Rate VFCs according to operation of functions and features specified.
- B. VFCs will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, surfaces, and substrates to receive VFCs, with Installer present, for compliance with requirements for installation tolerances, and other conditions affecting performance of the Work.

- B. Examine VFC before installation. Reject VFCs that are wet, moisture damaged, or mold damaged.
- C. Examine roughing-in for conduit systems to verify actual locations of conduit connections before VFC installation.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Wall-Mounting Controllers: Install with tops at uniform height and with disconnect operating handles not higher than **79 inches (2000 mm)** above finished floor, unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."
- B. Floor-Mounting Controllers: Install VFCs on **4-inch (100-mm)** nominal thickness concrete base. Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete."
- C. Roof-Mounting Controllers: Install VFC on roofs with tops at uniform height and with disconnect operating handles not higher than **79 inches (2000 mm)** above finished roof surface unless otherwise indicated, and by bolting units to curbs or mounting on freestanding, lightweight, structural-steel channels bolted to curbs. Seal roof penetrations after raceways are installed.
 - 1. Curbs and roof penetrations are specified in Section 077200 "Roof Accessories."
 - 2. Structural-steel channels are specified in Section 260529 "Hangers and Supports for Electrical Systems."
- D. Seismic Bracing: Comply with requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."
- E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- F. Install fuses in each fusible-switch VFC.
- G. Install fuses in control circuits if not factory installed. Comply with requirements in Section 262813 "Fuses."
- H. Install heaters in thermal-overload relays. Select heaters based on actual nameplate full-load amperes after motors are installed.
- I. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.
- J. Comply with NECA 1.

3.3 CONTROL WIRING INSTALLATION

- A. Install wiring between VFCs and remote devices and facility's central-control system. Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."
- B. Bundle, train, and support wiring in enclosures.
- C. Connect selector switches and other automatic-control devices where applicable.
 - 1. Connect selector switches to bypass only those manual- and automatic-control devices that have no safety functions when switches are in manual-control position.
 - 2. Connect selector switches with control circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor-overload protectors.

3.4 IDENTIFICATION

- A. Identify VFCs, components, and control wiring. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
 - 1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
 - 2. Label each VFC with engraved nameplate.
 - 3. Label each enclosure-mounted control and pilot device.
- B. Operating Instructions: Frame printed operating instructions for VFCs, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of VFC units.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections with the assistance of a factory-authorized service representative.
- D. Acceptance Testing Preparation:
 - 1. Test insulation resistance for each VFC element, bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
- E. Tests and Inspections:
 - 1. Inspect VFC, wiring, components, connections, and equipment installation. Test and adjust controllers, components, and equipment.
 - 2. Test insulation resistance for each VFC element, component, connecting motor supply, feeder, and control circuits.
 - 3. Test continuity of each circuit.
 - 4. Verify that voltages at VFC locations are within 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify Architect before starting the motor(s).

5. Test each motor for proper phase rotation.
 6. Perform tests according to the Inspection and Test Procedures for Adjustable Speed Drives stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 7. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 8. Perform the following infrared (thermographic) scan tests and inspections, and prepare reports:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each VFC. Remove front panels so joints and connections are accessible to portable scanner.
 - b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each VFC 11 months after date of Substantial Completion.
 - c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 9. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
- F. VFCs will be considered defective if they do not pass tests and inspections.
- G. Prepare test and inspection reports, including a certified report that identifies the VFC and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

3.6 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
1. Complete installation and startup checks according to manufacturer's written instructions.

3.7 ADJUSTING

- A. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.
- B. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.
- C. Adjust the trip settings of instantaneous-only circuit breakers and thermal-magnetic circuit breakers with adjustable, instantaneous trip elements. Initially adjust to 6 times the motor nameplate full-load amperes and attempt to start motors several times, allowing for motor cool-down between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed 8 times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify Architect before increasing settings.
- D. Set the taps on reduced-voltage autotransformer controllers.

- E. Set field-adjustable circuit-breaker trip ranges as specified in Section 260573 "Overcurrent Protective Device Coordination Study."
- F. Set field-adjustable pressure switches.

3.8 PROTECTION

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until controllers are ready to be energized and placed into service.
- B. Replace VFCs whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, reprogram, and maintain VFCs.

END OF SECTION 262923

SECTION 263213

ENGINE GENERATORS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes packaged engine-generator sets for use as a legally required emergency generator with the following major features:
 - 1. Diesel engine.
 - 2. Unit-mounted cooling system.
 - 3. Unit-mounted control and monitoring.
 - 4. Outdoor enclosure.
- B. Emergency Generator Summary
 - 1. Provide an emergency standby diesel-powered engine-generator set to support the following loads:
 - a. Data Center UPS
 - b. Data Center cooling (in-row DX split system coolers)
 - c. Atrium & classroom smoke exhaust fans and associated main AHU supply air fans to operate in conjunction with the smoke exhaust fans.
 - d. Control dampers for AHU-1 supply fans shall be included.
 - e. Jockey pump and fire pump
 - f. Emergency egress and exit lighting
 - g. Fire alarm system
 - h. FCU's for main and branch electrical rooms
 - i. FCU's for MDF and IDF rooms
 - j. One elevator at a time during emergency operation.
- C. The genset shall be rated 300 KW at 0.8 PF, 480Y/277V as manufactured by Cummins (equal to model DQDAC), Caterpillar, Kohler, or MTU. The genset shall be a UL2200 self-contained assembly that consists of the following major components:
 - 1. Engine,
 - 2. 125c alternator,
 - 3. Main line circuit breaker,
 - 4. Unit mounted radiator,
 - 5. Flat "hockey puck" style critical grade muffler/silencer,
 - 6. Fixed air intake louvers,
 - 7. Gravity radiator air discharge louvers, and
 - 8. Directional air discharge shroud
 - 9. All enclosed within an 85 db weatherproof enclosure set on top of a sub-base fuel storage tank constructed in accordance with UL2085 standards that requires a double steel wall with a Concrete interstitial cavity sized for 24 hours of operation and maximum tank fill of 90%.
 - 10. The engine will draw its fuel directly from the sub-base tank.
 - 11. The assembly shall be provided with the following auxiliary accessories:
 - a. Batteries and battery charger
 - b. Water jacket heater(s)
 - c. Alternator strip heater
 - d. Remote annunciator panel
 - e. Lighting and convenience receptacles inside enclosure
 - f. Ground fault indication

- g. The genset shall be provided with a data gateway to transmit genset operational, trouble, and alarm data to the FMS.
- h. The manufacturer shall provide full start-up services and full functional performance acceptance testing with a 12 hour 100% load burn-in and final pull-the-plug system test. Provide full certified test report.

1.2 Related Sections include the following:

- A. Division 26 Section "Transfer Switches" for transfer switches including sensors and relays to initiate automatic-starting and -stopping signals for engine-generator sets.

1.3 DEFINITIONS

- A. Operational Bandwidth: The total variation from the lowest to highest value of a parameter over the range of conditions indicated, expressed as a percentage of the nominal value of the parameter.
- B. LP: Liquid petroleum.

1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design outdoor generator-set enclosure and sub-base tank, including comprehensive engineering analysis by a UL certified company, using performance requirements and design criteria indicated.
- B. Overcurrent Protective Device Coordination: All overcurrent protective devices proposed for inclusion in the Work shall be selected to be selectively coordinated with the overcurrent protective devices installed on their supply side such that an overcurrent event (overload, short-circuit, or ground-fault) occurring at the lowest level in the system (branch circuit) cannot cause the feeder protective device supplying the branch circuit panelboard to open. This coordination shall be carried through each level of distribution for all branches of normal and emergency power. Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.
- C. System Function: The engine generator system shall include the capability of being automatically controlled. After starting, the unit shall attain rated speed and voltage, and accept rated load. Generator set speed shall be controlled by the engine governor, while generator output voltage regulation shall be a function of the generator automatic voltage regulator. Manual adjustment of generator speed and voltage shall be provided.

1.5 ACTION SUBMITTALS

- A. Specification Compliance Certification: Submit a Specification Compliance Certification in accordance with Division 26 Section "Common Work Results for Electrical".
- B. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- C. Simultaneous Action Submittals: Engine Generator Product Data submittal shall be made in conjunction with action submittals required under Division 26 Section "Overcurrent Protective Device Coordination Study." The release of electrical equipment submittals (panelboards, engine generators, switchgear, etc.) is dependent on the receipt of a complete and accurate overcurrent protective device coordination study. The Architect and Engineer require a full submittal review period as delineated in Division 01 Section

"Submittal Procedures" to adequately review the OCPD study against the submitted electrical components prior to release of submittals for equipment procurement. The submittal schedule required by Division 01 requirements shall provide for this review time in the action submittal process. Delay claims arising due to Contractor's failure to coordinate simultaneous action submittals will not be considered by the Owner.

- D. Product Data: For each type of packaged engine generator indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. In addition, include the following:
1. Thermal damage curve for generator.
 2. Time-current curves for each generator overcurrent protection device. Include hardcopy of characteristic curve and TCC Number for use with Power Tools by SKM Systems Analysis, Inc. Indicate available setting points and selectable ranges for each type of adjustable circuit breaker.
 3. Fuel System:
 - a. Fuel consumption at: 50-percent rated load, 75-percent rated load and 100-percent rated load.
 - b. Fuel flow at 100-percent rated load.
 - c. Manufacturer Safety Data Sheet for fuel oil
 4. Electrical Characteristics:
 - a. Power rating at 0.8 power factor lagging
 - b. Motor starting, maximum kVA at 90-percent sustained voltage
 - c. Fault current, 3-phase symmetrical
 - d. Number of Poles
 - e. Per Unit Impedance, positive (X'' and X/R ratio)
 - f. Per Unit Impedance, negative (X'' and X/R ratio)
 - g. Per Unit Impedance, zero (X'' and X/R ratio)
 - h. Resistance Stator resistance measured at dc current (R_a)
 - i. Resistance, positive sequence short circuit resistance (r_g)
 - j. Resistance, zero sequence short circuit resistance. (r_o)
 - k. Reactance, subtransient reactance saturated value. 1- to 5-cycle reactance. (X_d'')
 - l. Reactance, transient reactance saturated value. 5- to 200-cycle reactance (X_d')
 - m. Reactance, synchronous reactance saturated value. Above 200 cycles (X_d)
 - n. Reactance, zero sequence short circuit reactance (x_o)
 - o. Time Constant, subtransient time constant (T_d'')
 - p. Time Constant, transient time constant (T_d')
 - q. Time Constant, DC time constant (T_{dc})
 - r. Time Constant, armature short circuit time constant (T_a)
 - s. Field current at given load. Actual pre-fault amperes at the initial loading conditions (I_f)
 - t. Field current at no load rated volts (I_{fg})
 - u. Impedance, neutral Impedance R
 - v. Impedance, neutral Impedance X
 - w. Reactance, Quadrature axis subtransient reactance (saturated) of synchronous machines. (X_q'')
 5. Coolant System:
 - a. Total airflow required including, but not limited to, combustion air, alternate cooling air and radiator cooling air in supply cfm.
 - b. Maximum static airflow restriction of the system in inches of water column.
 6. Exhaust System:
 - a. Maximum allowable exhaust backpressure.
 - b. Exhaust gas flow rate.
 - c. Exhaust stack temperature.

- d. Record of Exhaust Emissions tests for compliance with EPA TIER requirements for the project location.
- 7. Acoustical Silencer Assembly: Maximum allowable external static pressure.
- E. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Dimensioned outline plan and elevation drawings of engine-generator set and other components specified.
 - 2. Total weight of system including, but not limited to, generator, alternator, engine, base, supports, sub-base fuel tank filled with fuel, radiator and enclosure.
 - 3. **Design Calculations: Signed and sealed by a qualified professional engineer. Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.**
 - 4. Vibration Isolation Base Details: Signed and sealed by a qualified professional engineer. Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include base weights.
 - 5. Wiring Diagrams: Power, signal, and control wiring.
 - 6. Exhaust pipe connection and size.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electrical" for each interior location where generators are included in the Work. Include the following:
 - 1. Fuel Oil pipe routing and size.
 - 2. Exhaust pipe routing and size.
- B. **Manufacturer Seismic Qualification Certification: Submit certification that day tank, engine-generator set, batteries, battery racks, accessories, and components will withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems".**
- C. Qualification Data: For installer and manufacturer.
- D. Source quality-control test reports.
 - 1. Certified summary of prototype-unit test report.
 - 2. Certified Test Reports: For components and accessories that are equivalent, but not identical, to those tested on prototype unit.
 - 3. Certified Summary of Performance Tests: Certify compliance with specified requirement to meet performance criteria for sensitive loads.
 - 4. Report of factory test on units to be shipped for this Project, showing evidence of compliance with specified requirements.
 - 5. Report of sound generation.
 - 6. Report of exhaust emissions showing compliance with applicable regulations.
 - 7. Certified Torsional Vibration Compatibility: Comply with NFPA 110.
- E. Extended Maintenance Offer: Priced service contract for Owner's consideration specified in this Section.
- F. Method of Procedure for Field Quality Control Tests.
- G. Field quality-control test reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For packaged engine generators to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 - 1. List of tools and replacement items recommended to be stored at Project for ready access. Include part and drawing numbers, current unit prices, and source of supply.
 - 2. Operating Instructions with description and illustration of the engine-generator set, engine and generator controls and any other controls and indicators.
 - 3. Parts Books that illustrate and list all assemblies, subassemblies and components, except standard fastening hardware (nuts, bolts, washers, etc.).
 - 4. Preventative Maintenance Instructions on the complete system that cover daily, weekly, monthly, biannual, and annual maintenance requirements and include a complete lubrication chart.
 - 5. Routine Test Procedures for all electronic and electrical circuits and for the main AC generator.
 - 6. Troubleshooting Chart covering the complete engine-generator set showing description of trouble, probable cause, and suggested remedy.
 - 7. Wiring Diagrams and Schematics showing function of all electrical components.
- B. Warranty: Special warranty specified in this Section.

1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fuses: One for every ten of each type and rating installed. Furnish at least three of each type.
 - 2. Indicating Lights: one for every ten of each type and rating installed. Furnish at least one of each type.
 - 3. Filters: One set each of lubricating oil, fuel, and combustion-air filters.

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
 - 1. Maintenance Proximity: Maintain a service center available on a 24-hour a day, 365 days a year, on-call basis, via a toll-free call center, capable of dispatching training, parts, and emergency maintenance repairs from the Installer's local or regional maintenance facility. Installer's maintenance facility shall have a response period of less than four hours normal travel time from Installer's place of business to Project site from time of notification. Maintain records of each generator set, by serial number, for service purposes.
 - 2. Engineering Responsibility: Preparation of data for vibration isolators and seismic restraints of engine skid mounts, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.
- B. Manufacturer Qualifications: A qualified manufacturer. Maintain, within 500 miles of Project site, a service center capable of providing parts and emergency maintenance repairs. Maintain records of each generator, by serial number, for service purposes.

- C. Source Limitations: Obtain packaged generator sets and auxiliary components through one source from a single manufacturer.
 - 1. Breaker Manufacturer: Manufacturer for generator breaker shall be the same as the manufacturer of other breakers proposed for other portions of the Work.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with ASME B15.1.
- F. Comply with NFPA 37.
- G. Comply with NFPA 70.
- H. Comply with NFPA 110 requirements for Level 2 emergency power supply system.
- I. Comply with IEEE 43, Recommended Practice for Insulation Testing of Large AC Rotating Machinery
- J. Comply with IEC 34
- K. Comply with UL 2200.
- L. Engine Exhaust Emissions: Comply with applicable federal, state and local government requirements.
- M. Noise Emission: Comply with applicable state and local government requirements for maximum noise level at adjacent property boundaries due to sound emitted by generator set including engine, engine exhaust, engine cooling-air intake and discharge, and other components of installation.
 - 1. Sound level measured at a distance of 10 feet (3 m) from exhaust discharge after installation is complete shall be 85 dBA or less.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Prepare equipment for shipment.
 - 1. Provide suitable crating, blocking, and supports so equipment will withstand expected domestic shipping and handling shocks and vibration.
 - 2. Weatherproof equipment for shipment. Close connection openings to prevent entrance of foreign material during shipment and storage.
- B. Installation Pathway: Coordinate delivery of equipment to allow movement into designated space.
 - 1. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.
 - 2. Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving equipment into place.
- C. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- D. Handle equipment components according to manufacturer's written instructions. Use factory-installed lifting provisions.

1.11 PROJECT CONDITIONS

- A. Interruption of Existing Electric Service: Comply with requirements defined in Division 26 Section "Common Work Results for Electrical".
- B. Environmental Conditions: Engine-generator system shall withstand the following environmental conditions without mechanical or electrical damage or degradation of performance capability:
 - 1. Ambient Temperature: Outdoor Unit: 5 to 123.6 deg F (Minus 15 to plus 50 deg C).
 - 2. Relative Humidity: 0 to 95 percent.
 - 3. Altitude: Sea level to 603 feet.
- C. Unusual Service Conditions: Engine-generator equipment and installation are required to operate under the following conditions:

1.12 COORDINATION

- A. Coordinate size and location of concrete bases for package engine generators. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- B. Coordinate size and location of roof curbs, equipment supports, and roof penetrations for remote radiators. These items are specified in Division 07 Section "Roof Accessories."

1.13 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of switchgear and associated auxiliary components that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Two years from date of Substantial Completion.

1.14 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide full inspection and maintenance by skilled employees of manufacturer's designated service organization during the Warranty period, including any special warranty period specified.
 - 1. Include routine preventive maintenance and adjusting as required for proper operation as recommended by manufacturer. Provide number of visits recommended by manufacturer; but no less than semi-annual inspection service.
 - 2. Provide parts and supplies same as those used in the manufacture and installation of the original equipment.
 - 3. The contractor performing the contract services shall be qualified and listed to maintain ongoing certification and listing of the completed system.
- B. Extended Maintenance Service: Offer for the Owner's consideration and evaluation at the time of Product Data Submittal, a priced inspection, maintenance, testing, and repair contract in compliance with the manufacturer's recommended routine preventive maintenance program.
 - 1. The services offered under this contract shall begin after the completion of the Initial Maintenance Service and Special Warranty Period.
 - 2. The Owner shall have the option of renewing for single or multiple years, up to five years, at the price quoted upon completion of the Warranty period.
 - 3. The contractor performing the contract services shall be qualified and listed to maintain ongoing certification and listing of the completed system.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings, Cummins Power Generation, or a comparable product by one of the following:
1. Caterpillar; Engine Division.
 2. Cummins Power Generation.
 3. Kohler Co.; Generator Division – with Detroit Diesel Engine.
 4. MTU Onsite Energy – with Detroit Diesel Engine.

2.2 ENGINE-GENERATOR SET

- A. Factory-assembled and -tested, engine-generator set.
- B. Comply with EPA Tier emissions requirements of CI NSPS for Stationary Emergency Engine Standards.
- C. Mounting Frame: Maintain alignment of mounted components without depending on concrete foundation; and have lifting attachments.
1. Rigging Diagram: Inscribed on metal plate permanently attached to mounting frame to indicate location and lifting capacity of each lifting attachment and generator-set center of gravity.
- D. Capacities and Characteristics: Suitable for application in 3-phase, 60-Hz system, unless otherwise indicated.
1. Power Output Ratings: Nominal ratings as indicated.
 2. Nominal System Voltage: As indicated on the Drawings.
 3. Output Connections: Three-phase, three wire.
 4. Nameplates: For each major system component to identify manufacturer's name and address, and model and serial number of component.
 5. Service Application: Standby/Emergency Service.
 6. Power rating shall be based on 130-degree C temperature rise when operated at rated load based on ambient conditions stated in PART 1 – "Project Conditions."
- E. Generator-Set Performance for Sensitive Loads:
1. Oversizing generator compared with the rated power output of the engine is permissible to meet specified performance.
 - a. Nameplate Data for Oversized Generator: Show ratings required by the Contract Documents rather than ratings that would normally be applied to generator size installed.
 2. Steady-State Voltage Operational Bandwidth: 1 percent of rated output voltage from no load to full load.
 3. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.
 4. Output Waveform: At no load, harmonic content measured line to neutral shall not exceed 2 percent total with no slot ripple. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.
 5. Sustained Short-Circuit Current: For a single and 3-phase, bolted short circuit at system output terminals, system shall supply a minimum of 300 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to winding insulation or other generator system components.

6. Excitation System: Performance shall be unaffected by voltage distortion caused by nonlinear load.
 - a. Provide permanent magnet generator (PMG) excitation for power source to voltage regulator.
7. Subtransient Reactance: 12 percent.
8. Reverse kVAR Performance: at least 0.15 per unit.
9. Start Time: Comply with NFPA 110, Type 10, system requirements.

2.3 ENGINE

- A. Fuel: Fuel oil, Grade DF-2, Ultra Low Sulfur Diesel.
- B. Rated Engine Speed: 1800 rpm.
- C. Maximum Piston Speed for Four-Cycle Engines: 2250 fpm.
- D. Lubrication System: The following items are mounted on engine or skid:
 1. Filter and Strainer: Replaceable; Rated to remove 90 percent of particles 5 micrometers and smaller while passing full flow.
 2. Thermostatic Control Valve: Control flow in system to maintain optimum oil temperature. Unit shall be capable of full flow and is designed to be fail-safe.
 3. Crankcase Drain: Arranged for complete gravity drainage to an easily removable container with no disassembly and without use of pumps, siphons, special tools, or appliances.
 4. Bypass Valve: Arranged to continue lubrication in the event of filter clogging. The bypass valve shall be integral with the engine filter base or receptacle.
- E. Engine Fuel System:
 1. Main Fuel Pump: Mounted on engine. Pump ensures adequate primary fuel flow under starting and load conditions.
 - a. Variable displacement type to alter the volume of fuel delivered to the spray nozzles according to load demand.
 2. Relief-Bypass Valve: Automatically regulates pressure in fuel line and returns excess fuel to source.
 3. Fuel Filtration: Primary and Secondary system.
 - a. Primary fuel filter between the fuel tank and transfer pump to screen large contaminants.
 - b. Fuel/water separator system with isolation valves to protect the fuel system from water damage.
 4. Fuel Cooler: Provide as required for the engine to deliver its maximum horsepower to achieve its rated KW at project conditions. Cooler shall be capable of exchanging heat rejected at full load with the cooling medium, including 10% spare/reserve capacity to accommodate fouling.
- F. Coolant Jacket Heater: Electric-immersion type, factory installed in coolant jacket system. Comply with NFPA 110 requirements for Level 1 equipment for heater capacity. Compatible with 208V – 3-phase external circuit supplied.
- G. Governor: Electronic speed controller; Adjustable isochronous, with speed sensing.
 1. Speed Adjustment: 0 to 10-percent from no load to full rated load.
 2. Provide magnetic pickup off the engine flywheel ring gear to sense speed.
 3. Provide provisions for remote speed adjustment.
 4. Provide provisions for limiting fuel during start-up, and included capability for actuator compensation adjustment.

5. Provide protections from voltage spikes and reverse. In the event of a DC power loss, the forward acting actuator shall move to the minimum fuel position.
- H. Cooling System: Closed loop, liquid cooled, with radiator factory mounted on engine-generator-set mounting frame and integral engine-driven coolant pump.
1. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
 2. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition. Provide expansion Tank when required. Construct expansion tank of welded steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.
 3. Fan: Driven by multiple belts from engine shaft.
 4. Pumps: Driven by multiple belts from engine shaft. Auxiliary coolant pumps where required for separate circuit after-cooling shall also be engine driven.
 5. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.
 6. Isolation Valves: Provide isolation valves on top and bottom of the radiator tank to facilitate radiator and water pump maintenance.
 7. Coolant Hose: Flexible assembly with inside surface of nonporous rubber and outer covering of aging-, ultraviolet-, and abrasion-resistant fabric.
 - a. Rating: 50-psig maximum working pressure with coolant at 180 deg F, and non-collapsible under vacuum.
 - b. End Fittings: Flanges or steel pipe nipples with clamps to suit piping and equipment connections.
 8. Maximum static airflow restriction of the system: <Insert Static Here>inches of water column
 9. Radiator Capacity: Provide radiator to allow full rated operation at 123.6 deg F (50 deg C).
 10. Construction: Totally enclosed radiator and radiator fan assembly. Provision for a duct flange or perforated metal grill to protect the radiator core. The fan, fan drive, and fan belts shall be covered with punched steel guards for personnel protection.
- I. Muffler/Silencer: Critical type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.
1. Hockey puck style.
 2. Minimum sound attenuation of 25 dB at 500 Hz.
 3. Sound level measured at a distance of 10 feet from exhaust discharge after installation is complete shall not exceed levels listed in Quality Assurance paragraph in Part 1 of this Section.
- J. Air-Intake Filter: Heavy-duty, engine-mounted air cleaner with replaceable dry-filter element and "blocked filter" indicator.
- K. Air-Intake After-Cooler: Provide After-cooler for combustion air. Coat After-cooler core air surfaces with a corrosion inhibitor to minimize oxidation.
- L. Starting System: 12-V or 24-V electric as required, with negative ground.
1. Components: Sized so they will not be damaged during a full engine-cranking cycle with ambient temperature at maximum specified in Part 1 "Project Conditions" Article.
 2. Cranking Motor: Heavy-duty unit that automatically engages and releases from engine flywheel without binding.

3. Cranking Cycle: As required by NFPA 110 for system level specified.
4. Battery: Adequate capacity within ambient temperature range specified in Part 1 "Project Conditions" Article to provide specified cranking cycle at least three times without recharging.
5. Battery Cable: Size as recommended by engine manufacturer for cable length required. Include required interconnecting conductors and connection accessories.
6. Battery Compartment: Factory fabricated of metal with acid-resistant finish and thermal insulation. Include accessories required to support and fasten batteries in place.
7. Battery Heater: Thermostatically controlled heater arranged to maintain battery temperature above 50°F (10°C) and automatically shut off when battery temperature attains 90°F (32°C) regardless of external ambient temperature within range specified in Part 1 "Project Conditions" Article. Heater electrical connection compatible with 120V – 1-phase external circuit supplied.
8. Battery-Charging Alternator: Factory mounted on engine with solid-state voltage regulation and 35-A minimum continuous rating.
9. Battery Charger: Current-limiting, automatic-equalizing and float-charging type. Unit shall comply with UL 1236 and include the following features:
 - a. Operation: Equalizing-charging rate of 10 A shall be initiated automatically after battery has lost charge until an adjustable equalizing voltage is achieved at battery terminals. Unit shall then be automatically switched to a lower float-charging mode and shall continue to operate in that mode until battery is discharged again.
 - b. Automatic Temperature Compensation: Adjust float and equalize voltages for variations in ambient temperature from minus 40 deg C to plus 60 deg C to prevent overcharging at high temperatures and undercharging at low temperatures.
 - c. Automatic Voltage Regulation: Maintain constant output voltage regardless of input voltage variations up to plus or minus 10 percent.
 - d. Ammeter and Voltmeter: Flush mounted in door. Meters shall indicate charging rates.
 - e. Safety Functions: Sense abnormally low battery voltage and close contacts providing low battery voltage indication on control and monitoring panel. Sense high battery voltage and loss of ac input or dc output of battery charger. Either condition shall close contacts that provide a battery-charger malfunction indication at system control and monitoring panel.
 - f. Enclosure and Mounting: NEMA 250, Type 1, wall-mounted cabinet.

2.4 FUEL OIL STORAGE

- A. Comply with NFPA 30.
- B. Base-Mounted Fuel Oil Tank: Factory installed and piped, complying with UL 2085 fuel oil tank. Features include the following:
 1. Tank level indicator.
 2. Capacity: Fuel for 24 hours continuous operation at 100 percent rated power output at 90% full.
 3. Vandal-resistant fill cap.
 4. Containment Provisions: Comply with requirements of authorities having jurisdiction.
 5. Piping Connections: Factory-installed fuel supply and return lines from tank to engine; local fuel fill, vent line, overflow line; and tank drain line with shutoff valve.

2.5 CONTROL AND MONITORING

- A. Panel-mounted control switch(es) marked “run–off–automatic” to perform the following Sequence of Operation:
1. When the mode-selector switch on the control and monitoring panel is in the automatic position, remote-control contacts in one or more separate automatic transfer switches initiate starting and stopping of generator set.
 2. When mode-selector switch is switched to the on position, generator set starts.
 3. The off position of same switch initiates generator-set shutdown. When generator set is running, specified system or equipment failures or derangements automatically shut down generator set and initiate alarms. Operation of a remote emergency-stop switch also shuts down generator set.
- B. Configuration: Operating and safety indications, protective devices, basic system controls, and engine gages shall be grouped in a common control and monitoring panel mounted on the generator set. Mounting method shall isolate the control panel from generator-set vibration.
- C. Provide the following on the generator instrument panel:
1. AC voltmeter(s) for each phase or a phase selector switch.
 2. AC ammeter(s) for each phase or a phase selector switch.
 3. Frequency meter.
 4. Voltage-adjusting rheostat to allow +5 percent voltage adjustment.
 5. DC voltmeter (alternator battery charging).
 6. Engine-coolant temperature gage.
 7. Engine lubricating-oil pressure gage.
 8. Running-time meter.
 9. Fuel Pressure Gauge
 10. Jacket Water Temperature Gauge
- D. Controls to shut down and lock out the generator under any of the following conditions:
1. Failing to start after specified cranking time
 2. Overspeed
 3. Low lubricating-oil pressure
 4. High engine temperature
 5. High lubricating-oil temperature
 6. Operation of remote manual stop station
- E. Indicating and Protective Devices and Controls: As required by NFPA 110 for Level 2 system, including but not limited to the following:

Schedule 1

	Indicator Function	Visual	Shutdown	Audible
1.	Overcrank	Y	Y	Y
2.	Low water temperature	Y	NA	Y
3.	High engine temperature pre-alarm	Y	NA	Y
4.	High engine temperature	Y	Y	Y
5.	Low lube oil pressure pre-alarm	Y	NA	Y

	Indicator Function	Visual	Shutdown	Audible
6.	Low lube oil pressure	Y	Y	Y
7.	Overspeed	Y	Y	Y
8.	Low fuel main tank	Y	NA	Y
9.	Low coolant level	Y	Y	Y
10.	EPS supplying load	Y	NA	NA
11.	Control switch not in automatic position	Y	NA	Y
12.	High battery voltage	Y	NA	NA
13.	Low cranking voltage	Y	NA	Y
14.	Low voltage in battery	Y	NA	NA
15.	Battery charger ac failure	Y	NA	NA
16.	Lamp test	Y	NA	NA
17.	Contacts for local and remote common alarm	Y	NA	Y
18.	Audible alarm silencing switch	NA	NA	Y
19.	Low starting air pressure	Y	NA	NA
20.	Low starting hydraulic pressure	Y	NA	NA
21.	Air shutdown damper when used	Y	Y	Y
22.	Remote emergency stop	NA	Y	NA
23.	Fuel tank derangement alarm	Y	NA	Y
24.	Fuel tank high-level fuel supply shutdown alarm	Y	NA	Y
25.	Generator overload	Y	NA	Y
26.	Low fuel secondary tank	Y	NA	Y
27.	Fuel leak main tank	Y	NA	NA
28.	Fuel leak secondary tank	Y	NA	NA
29.	High Alternator temperature	Y	NA	Y
30.	Ground Fault Indication	Y	NA	NA

- F. Individual alarm indication to annunciate any of the conditions listed above with the following characteristics:
 - 1. Battery powered
 - 2. Visually indicated
 - 3. Have a lamp test switch(es) to test the operation of all alarm lamps
 - 4. Controls to shut down the generator upon removal of the initiating signal or manual emergency shutdown
 - 5. Audible Alarm: Include necessary contacts and terminals in control and monitoring panel. Provide 4 spare spaces for future alarms. Connect so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset.
- G. Supporting Items: Include sensors, transducers, terminals, relays, and other devices and include wiring required to support specified items. Locate sensors and other supporting items on engine or generator, unless otherwise indicated.
- H. TCP/IP and Modem Cards: Provide TCP/IP and modem cards capable of connecting to owners IP network to communicate faults, alarms and send SMS messages.
- I. Remote Emergency Stop Switch: Push button, "break-glass" type: Flush mounted, two position "break glass" operator. Operator shall be held in a depressed position by a glass disc. When the glass disc is broken by the chain-attached hammer, the button shall return to a normal extended position. Provide a package of five discs with the operator. Provide operator and contact block with one normally open and one normally closed (1NO - 1NC) contact.
- J. Connection to Data Link: A separate terminal block, factory wired to Form C dry contacts, for each alarm and status indication is reserved for connections for data-link transmission of indications to remote data terminals. Data system connections to terminals are covered in Division 26 Section "Electrical Power Monitoring and Control."
- K. Remote Alarm Annunciator (GAP): Comply with NFPA 99 and Schedule 1 above. An LED labeled with proper alarm conditions shall identify each alarm event and a common audible signal shall sound for each alarm condition. Silencing switch in face of panel shall silence signal without altering visual indication. Connect so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset. Cabinet and faceplate are surface- or flush-mounting type to suit mounting conditions indicated.

2.6 GENERATOR OVERCURRENT AND FAULT PROTECTION

- A. Generator Circuit Breaker: Molded-case, electronic-trip type; 100 percent rated; complying with UL 489.
 - 1. Coordination: Coordinate selection of Generator Breaker with other breakers included in other portions of the Work. Refer to Division 26 "Overcurrent Protective Device Coordination Study" for further requirements.
 - 2. Tripping Characteristics: Adjustable long-time and short-time delay and instantaneous.
 - 3. Trip Settings: Selected to coordinate with generator thermal damage curve.
 - 4. Shunt Trip: Connected to trip breaker when generator set is shut down by other protective devices.
 - 5. Mounting: Adjacent to or integrated with control and monitoring panel.
 - 6. Locking: Disconnecting means lockable in the open/off position.
- B. Ground-Fault Indication: Comply with NFPA 70, "Emergency System" signals for ground-fault. Integrate ground-fault alarm indication with other generator-set alarm indications.

2.7 GENERATOR, EXCITER, AND VOLTAGE REGULATOR

- A. Comply with NEMA MG 1.
- B. Type: Alternating current, synchronous.
- C. Temperature Rise: As indicated in Engine-Generator Set section above.
- D. Drive: Generator shaft shall be directly connected to engine shaft. Exciter shall be rotated integrally with generator rotor.
- E. Electrical Insulation: Class H.
- F. Stator-Winding Leads: Brought out to terminal box to permit future reconnection for other voltages if required.
- G. Construction shall prevent mechanical, electrical, and thermal damage due to vibration, overspeed up to 125 percent of rating, and heat during operation at 110 percent of rated capacity.
- H. Enclosure: Dripproof.
- I. Instrument Transformers: Mounted within generator enclosure.
- J. Voltage Regulator: Solid-state Microprocessor-based type separate from exciter, providing performance as specified. Control to allow for programmability based on the type of load connected.
 - 1. Adjusting rheostat control and monitoring panel shall provide plus or minus 5 percent adjustment of output-voltage operating band.
 - 2. Features:
 - a. Solid state voltage build up: Integrates accessories into one convenient unit.
 - b. No replaceable fuses.
 - c. Over-excitation Protection: Shuts off generator output when excitation current exceeds normal operating currents for 15 seconds or instantaneous shutoff if output is shorted.
 - d. Fault Detection Logging: Diagnostics identifying operation outside of programmed limits, and specific fault information is available even after the unit has been powered down.
 - e. Digital Display: Allows system parameter monitoring.
 - f. Adjustable overvoltage protection.
 - g. Adjustable undervoltage protection.
 - h. Adjustable Underfrequency protection.
 - i. Gain adjustment 0 to 10-percent to provide output voltage compensation for changes in load or frequency.
 - j. Reactive droop control, adjustable 0 to 10% droop at full load and 0.8 PF.
 - k. True RMS 3-phase voltage monitoring.
 - l. Remote communication capability.
 - m. Rotating diode monitor.
 - n. Protection against loss of voltage sensing and long term overcurrent conditions. The overcurrent protection function shall automatically reset when the regulator is de-energized. The regulator shall not be damaged or result in unsafe operation when subjected to open or shorted input due to sensing loss, or a short to ground or adjacent conductor.
- K. Windings: Two-thirds pitch stator winding and fully linked amortisseur winding.

- L. Strip Heater: Thermostatically controlled unit arranged to maintain stator windings above dew point.

2.8 OUTDOOR GENERATOR-SET ENCLOSURE

- A. Weatherproof Sound Attenuated Enclosure Fabrication: Steel, rated for environmental conditions at installed location.
 - 1. Construction: Vandal-resistant, Galvanized-steel, metal-clad enclosure erected on concrete foundation. Instruments and control shall be mounted within enclosure.
 - 2. Structural Design and Anchorage: Comply with ASCE 7 for wind loads, adequate to resist loads imposed by sustained winds and 3 second gusts based on the project location Exposure criteria. 50-mph (241-km/h) shall be capable of withstanding a minimum of 165 MPH wind speed gust for three (3) seconds, with Exposure C criteria as per ASCE 7.
 - 3. Muffler Location: Within enclosure. Flat hockey-puck style.
 - 4. Hinged Panels: Allow access to generator, control sections, metering, and accessory compartments. Hinged panels must be arranged for minimum of 120-degree swing; standard 90-degrees swing is not acceptable. Multiple panels shall be lockable and provide adequate access to components requiring maintenance.
 - 5. Ventilation louvers equipped with insect and rodent screen arranged to permit air circulation while excluding insects, rodents, and minimize exterior dust.
- B. Engine Cooling Airflow through Enclosure: Maintain temperature rise of system components within required limits when unit operates at 110 percent of rated load for 2 hours with ambient temperature at top of range specified in system service conditions.
 - 1. Louvers: Fixed-engine, cooling-air inlet and discharge. Storm-proof and drainable louvers prevent entry of rain and snow.
 - 2. Automatic Dampers: At engine cooling-air inlet and discharge. Dampers shall be closed to reduce enclosure heat loss in cold weather when unit is not operating.
- C. Interior Lights with Switch: Factory-wired, vaporproof-type fixtures within housing; arranged to illuminate controls and accessible interior. Arrange for external electrical connection.
 - 1. Ballasts for Low-Temperature Environments:
 - a. Temperatures Minus 20 Deg F (Minus 29 Deg C) and Higher: Electromagnetic type designed for use with indicated lamp types.
 - 2. AC lighting system and connection point for operation when remote source is available.
 - 3. Battery for DC lighting system for operation when remote source and generator are both unavailable as follows:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Bodine Company, The.
 - 2) IOTA Engineering, L.L.C.
 - 3) Side Lite.
 - b. Internal Type: Self-contained, modular, battery-inverter unit, factory mounted within luminaire body and compatible with ballast. Comply with UL 924.
 - 1) Compatibility: Certified by manufacturer for use with specific lamp type indicated.
 - 2) Emergency Connection: Operate 1 fluorescent lamp(s) continuously at an output of 1100 lumens each, unless otherwise indicated. Connect unswitched circuit to battery-inverter unit and switched circuit to fixture ballast.
 - 3) Test Push Button and Indicator Light: Visible and accessible without opening fixture or entering ceiling space.

- a) Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
 - b) Indicator Light: LED indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
- 4) Battery: Sealed, maintenance-free, nickel-cadmium type.
- 5) Charger: Fully automatic, solid-state, constant-current type with sealed power transfer relay.
- D. Convenience Outlets: Factory wired, GFCI. Arrange for external electrical connection.
- E. Metal Shroud: Provide metal shroud to force radiator discharge air out through the wall louver and turn up. Provide shroud assembly with gravity type louver in front of the radiator and a drain at the base of the shroud. Finish shroud to match enclosure.
- F. Turning Vane: Provide metal turning vane to force radiator discharge air up vertically. Provide assembly with gravity type louver at in front of the radiator and a drain at the base. Finish turning vane to match enclosure.

2.9 VIBRATION ISOLATION DEVICES

- A. Elastomeric Isolator Pads: Oil- and water-resistant elastomer or natural rubber, arranged in single or multiple layers, molded with a nonslip pattern and galvanized-steel baseplates of sufficient stiffness for uniform loading over pad area, and factory cut to sizes that match requirements of supported equipment.
 - 1. Material: Standard neoprene or Bridge-bearing neoprene, complying with AASHTO M 251.
 - 2. Durometer Rating: as recommended by the engine manufacturer, unless otherwise indicated.
 - 3. Number of Layers: as recommended by the engine manufacturer, unless otherwise indicated.
- B. Spring Isolators: Freestanding, steel, open-spring isolators.
 - 1. Outside Spring Diameter: Not less than 80 percent of compressed height of the spring at rated load.
 - 2. Minimum Additional Travel: 50 percent of required deflection at rated load.
 - 3. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 - 4. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 - 5. Base Plates: Factory drilled for bolting to structure and bonded to 1/4-inch (6-mm) thick, rubber isolator pad attached to underside of base plate. Base Plate shall limit floor load to 500 psig (3447 kPa).
 - 6. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.
- C. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic restraint.
 - 1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to wind loads or if weight is removed; factory-drilled baseplate bonded to 1/4-inch- (6-mm-) thick, elastomeric isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
 - 2. Outside Spring Diameter: Not less than 80 percent of compressed height of the spring at rated load.
 - 3. Minimum Additional Travel: 50 percent of required deflection at rated load.
 - 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.

5. **Overload Capacity:** Support 200 percent of rated load, fully compressed, without deformation or failure.

2.10 FINISHES

- A. Outdoor Enclosures and Components: Factory-applied finish in manufacturer's standard enamel over corrosion-resistant treatment or rust-inhibiting primer coat, undersurfaces treated with corrosion-resistant undercoating.
 1. Color: Manufacturer's Standard Color or Custom Color to match Architect's Selection (with acceptance of optional price adder)

2.11 SOURCE QUALITY CONTROL

- A. Prototype Testing: Factory test engine-generator set using same engine model, constructed of identical or equivalent components and equipped with identical or equivalent accessories.
 1. Tests: Comply with NFPA 110, Level 1 Energy Converters and with IEEE 115.
- B. Project-Specific Equipment Tests: Before shipment, factory test engine-generator set and other system components and accessories manufactured specifically for this Project. Perform tests at rated load and power factor. Include the following tests:
 1. Test components and accessories furnished with installed unit that are not identical to those on tested prototype to demonstrate compatibility and reliability.
 2. Conduct EPA Emissions test in compliance with the TIER Level requirements for the project location.
 3. Full load run (minimum of four hours).
 4. Maximum power.
 5. Voltage regulation.
 6. Transient and steady-state governing.
 7. Single-step load pickup.
 8. Safety shutdown.
 9. Report factory test results within 10 days of completion of test.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, equipment bases, and conditions, with Installer present, for compliance with requirements for installation and other conditions affecting packaged engine-generator performance.
- B. Examine roughing-in of piping systems and electrical connections. Verify actual locations of connections before packaged engine-generator installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to witness and assist with the equipment installations, including connections.

3.3 APPLICATION

- A. Remote Emergency Stop Switch Locations: Provide emergency stop switch in the following locations, unless otherwise indicated:

1. Adjacent Building/Screen Wall near Exterior Generator Enclosure.
 2. Other locations as indicated on the Drawings or required by the AHJ.
- B. Remote Alarm Annunciator Panel (GAP) Locations: Provide annunciator panels in the following locations, unless otherwise indicated:
1. Data Center Control Room.
 2. Central Plant Operations Office.
 3. Building Security Desk.
 4. Other locations as indicated on the Drawings.

3.4 INSTALLATION

- A. Comply with NECA/EGSA 404, "Recommended Practice for Installing Generator Sets" as published by the National Electrical Contractors Association.
- B. Comply with packaged engine-generator manufacturers' written installation and alignment instructions and with NFPA 110.
- C. Install packaged engine generator to provide access, without removing connections or accessories, for periodic maintenance.
- D. Install and anchor equipment level on concrete bases, 4-inch nominal thickness. Concrete base is specified in Division 26 Section "Hangers and Supports for Electrical Systems," and concrete materials and installation requirements are specified in Division 03.
- E. Install packaged engine generator with vibration isolation having a minimum deflection of 1 inch on concrete base.
1. Provide integral vibration isolators and as required for the application and as recommended by the manufacturer elastomeric isolator pads **restrained** spring isolators
 2. Secure engine generator set to anchor bolts installed in concrete bases. Construct concrete bases according to Division 26 Section "Hangers and Supports for Electrical Systems."
- F. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted.
- G. Provide full fuel tank for generator after completion of all tests.

3.5 CONNECTIONS

- A. Piping installation requirements are specified in Division 23 Sections. Drawings indicate general arrangement of piping and specialties.
- B. Connect fuel, cooling-system, and exhaust-system piping adjacent to packaged engine generator to allow service and maintenance.
- C. Connect engine exhaust pipe to engine with flexible connector.
- D. Connect fuel piping to engines with an indicating-type valve and union and flexible connector.

- E. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- F. Connect wiring to remote alarm and annunciator accessories using manufacturers recommended multiconductor wiring method.
- G. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- H. Provide connection from TCP/IP car to Owner's IP network.
- I. Provide connection from terminal block to Facility Management System.

3.6 IDENTIFICATION

- A. Identify system components according to Division 23 Section "Identification for HVAC Piping and Equipment" and Division 26 Section "Identification for Electrical Systems."
- B. Affix a label with a toll-free telephone number for contacting emergency maintenance field service to front of each generator unit.
- C. Warranty Nameplate: Affix a metal label to the generator that lists the following data:
 - 1. Warranty Period
 - 2. Start up Date
 - 3. Termination Date
 - 4. Supplier Name
 - 5. Supplier Address
 - 6. Preventive maintenance Contract Holder

3.7 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
 - 1. Test insulation resistance for each bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
 - 3. Coordinate tests with tests for transfer switches and run them concurrently.
 - 4. Provide Fuel, oil, and other materials necessary to conduct tests.
 - 5. Provide Load Bank, temporary ventilation, instruments, and other testing materials necessary to conduct tests.
 - 6. Perform Engine-Generator Pre-start Checklist provided by manufacturer, including but not limited to the following items, proceed with startup only after all pre-start checklist items are satisfactory and within manufacturers guidelines.
 - a. Verify that all packing materials have been properly removed.
 - b. Verify proper Oil level.
 - c. Verify proper Water level .
 - d. Verify proper Day tank fuel level, where provided.
 - e. Verify proper Sub-base fuel tank fuel level, where provided.
 - f. Verify Battery connection and charge condition are correct.
 - g. Verify Engine to control interconnects are correct.
 - h. Verify Engine-generator intake air/exhaust openings are not obstructed.
 - i. Verify Engine-generator and enclosure ventilation openings are not obstructed.
- B. Perform the following field tests and inspections and prepare test reports:

1. Test mounting and anchorage devices according to requirements in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
 2. Inspect generator installation, including wiring, components, connections, and equipment. Test and adjust components and equipment.
 3. Verify that electrical control wiring installation complies with manufacturer's submittal by means of point-to-point continuity testing. Verify that wiring installation complies with requirements in Division 26 Sections.
- C. Testing Agency: Engage a qualified independent testing and inspecting agency as defined in Division 26 Section "Common Work Results for Electrical" to perform the following field tests and inspections and prepare certified test reports:
1. After installing generator but before equipment is energized, verify that grounding system at generator tests to specified value or better.
 2. Perform each electrical test and visual and mechanical inspection stated in NETA ATS. Certify compliance with test parameters. Perform NETA tests and inspections for each of the following NETA categories:
 - a. Engine Generator Section, 7.22.1.
 - b. Circuit Breakers, Section 7.3.
 - c. Cables, Section 7.3.
 - d. Ground-fault Systems, Section 7.14.
 - e. Battery Systems, Section 7.18.
 3. Infrared Scanning: Perform Thermographic Survey in accordance with NETA ATS, Section 9.0.
 - a. Initial Infrared Scanning: Within 60 Days after Substantial Completion, perform an infrared scan of each power wiring termination and each bus connection. Open or remove doors and covers so connections are accessible to portable scanner.
 - b. Instruments, Equipment:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
- D. The testing agency in conjunction with the Manufacturer's Field Service shall work with a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Assist factory-authorized service representative during testing and correct deficiencies as required. Report results in writing.
1. Complete installation and startup checks according to manufacturer's written instructions.
 2. Perform functional and operational sequence testing according to approved Method or Procedure.
 3. NFPA 110 Acceptance Tests: Perform tests required by NFPA 110 that are additional to those specified here including, but not limited to,
 - a. Single-step full-load pickup test.
 - b. Full load test, minimum of four hours.
 4. Battery Tests: Equalize charging of battery cells according to manufacturer's written instructions. Record individual cell voltages.
 - a. Measure charging voltage and voltages between available battery terminals for full-charging and float-charging conditions. Check electrolyte level and specific gravity under both conditions.
 - b. Test for contact integrity of all connectors. Perform an integrity load test and a capacity load test for the battery.
 - c. Verify acceptance of charge for each element of the battery after discharge.
 - d. Verify that measurements are within manufacturer's specifications.

5. Battery-Charger Tests: Verify specified rates of charge for both equalizing and float-charging conditions.
 6. System Integrity Tests: Methodically verify proper installation, connection, and integrity of each element of engine-generator system before and during system operation. Check for air, exhaust, and fluid leaks.
 7. Exhaust Emissions Test: Comply with applicable government test criteria.
 8. Voltage and Frequency Transient Stability Tests: Use recording oscilloscope to measure voltage and frequency transients for 50 and 100 percent step-load increases and decreases, and verify that performance is as specified.
 9. Harmonic-Content Tests: Measure harmonic content of output voltage under 25 percent and at 100 percent of rated linear load. Verify that harmonic content is within specified limits.
 10. Noise Level Tests: Measure A-weighted level of noise emanating from generator-set installation, including engine exhaust and cooling-air intake and discharge, at four locations on the property line, and compare measured levels with required values.
 11. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 12. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 13. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 14. Testing Instruments: Instruments shall have been calibrated within the last 12 months, traceable to standards of NIST, and adequate for making positive observation of test results. Make calibration records available for examination on request.
- E. Correct Deficiencies, Retest and Report:
1. Report results of tests and inspections in writing.
 2. Record adjustable relay settings and measured insulation resistances, time delays, and other values and observations.
 3. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace switches, relays, conductors, units, and devices as required to bring system into compliance.
 4. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 5. Prepare a report, certified by manufacturer and manufacturer's field service, that identifies component, connection, conductors and devices checked and describes results. Include notation of deficiencies detected, remedial action taken, and observations and test results after remedial action.
- F. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.8 ADJUSTING

- A. Set field-adjustable overcurrent protection device trip characteristics according to settings provided by Engineer-of-Record.
1. Settings will be provided by Engineer-of-Record after the submittal process and review of report required by Division 26 Section "Overcurrent Protective Device Coordination Study." are completed.
- B. Set field-adjustable intervals and delays, and relays per manufacturer's requirements, unless otherwise indicated.

3.9 CLEANING

- A. Clean components according to manufacturer's written instructions.
- B. Prior to installation of cover plates inspect interior surfaces and perform the following:
 - 1. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
- C. On completion of covers installation, inspect exterior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
 - 3. Repair exposed surfaces to match original finish.

3.10 PROTECTION

- A. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.

3.11 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's management and maintenance personnel to adjust, operate, and maintain packaged engine generators. Refer to Division 01 Section "Demonstration and Training."
- B. Coordinate this training with that for transfer switches.

SECTION 263353

STATIC UNINTERRUPTIBLE POWER SUPPLY

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes a three-phase, on-line, double-conversion, static-type, UPS installation complete with the following features:
1. Transient voltage surge suppression.
 2. Input harmonics reduction.
 3. Rectifier-charger.
 4. Battery.
 5. Battery disconnect device.
 6. Inverter.
 7. Static bypass transfer switch.
 8. Maintenance bypass/isolation switch.
 9. Remote UPS monitoring provisions.
 10. Battery monitoring.
- B. UNINTERRUPTIBLE POWER SUPPLY (UPS) SYSTEM BASIC SYSTEM DESCRIPTION
1. Provide a UPS system for the Data Center to be installed in the Data Center room on the concrete floor in-line with the Owner's switch rack row and adjacent to an in-row cooler. The UPS shall be a modular unit equal to Vertiv Liebert model eXM. An acceptable substitute shall be the Schneider Electric APC Symmetra. The UPS system shall be configured in the following manner:
 - a. UPS cabinet - 24" wide by 48" deep
 - b. Battery cabinet with dc breaker - 24" wide by 48" deep
 - c. Maintenance bypass cabinet - 12" wide by 48" deep; 3-breaker BIB, MBB, MIB with SKRU
 - d. Row line-up left to right facing:
 - 1) (5) switch racks rated at 3 KW each, with two (2) PDU power strips each - (1) connected to UPS/genset power and (1) connected to normal/genset power (all racks and PDU power strips will be provided by Owner but installed and connected by electrical contractor)
 - 2) (1) 24" wide in-row cooler
 - 3) Battery cabinet
 - 4) Maintenance bypass cabinet
 - e. Row line-up left to right opposite facing:
 - 1) (1) 12" wide in-row cooler
 - 2) Server racks 1 & 2 each rated at 6 KW and each with four (4) PDU power strips - (2) connected to UPS/genset power and (2) connected to normal/genset power (all racks and PDU power strips will be provided by Owner but installed and connected by electrical contractor)
 - 3) (1) 12" wide in-row cooler
 - 4) Server racks 3, 4, & 5 each rated at 6 KW and each with four (4) PDU power strips - (2) connected to UPS/genset power and (2) connected to normal/genset power (all will be provided by Owner but installed and connected by electrical contractor)
 - 5) (1) 12" wide in-row cooler
 - 6) Server racks 6 (rated at 6 KW) & 7 (rated at 9 KW) and each with four (4) PDU power strips - (2) connected to UPS/genset power and (2)

connected to normal/genset power (all will be provided by Owner but installed and connected by electrical contractor)

- 7) (1) 12" wide in-row cooler
2. The UPS shall be dual input rated 80 KW / 80 KVA; 208V, 3W+G input; 208V, 3W+G bypass; 208V, 4W+G output. The total Rating of the UPS shall be comprised of four (4) 20 KW modules each consisting of a rectifier/charger, Inverter, and fully rated static switch. Three (3) 20 KW modules (or 60 KW) shall be for capacity and one (1) 20 KW module shall be for redundancy. The battery shall be a VRLA cabinet mounted battery, with backup time maximized in one cabinet. Power wiring and control wiring for the UPS system shall be in separate conduits. The UPS shall be provided with a data gateway to transmit UPS operational, trouble, and alarm data to the FMS. The manufacturer shall provide full start-up services and full functional performance acceptance testing including a 12 hour 100% load burn-in and battery discharge test. Provide full certified test report.
3. The Uninterruptible Power System (UPS) shall be optimized for maximum efficiency and shall automatically maintain AC power to the critical load within specified tolerances and without interruption during failure or deterioration of the normal power source. All UPS materials and equipment shall be fully compatible with electrical, environmental, and space conditions at the site, and shall include all equipment necessary to properly interface the AC power source to the intended load and be designed for unattended operation.
4. The UPS cabinet dimensions shall not exceed: 24" Width x 48" Depth x 80" Height. The battery cabinet dimensions shall not exceed: 24" Width x 48" Depth x 80" Height. The external maintenance bypass may be a stand-alone panelboard containing three (3) circuit breakers: bypass isolation breaker (BIB), maintenance isolation breaker (MIB), and maintenance bypass breaker (MBB); a solenoid key release unit (SKRU) interlock; two (2) 250 amp sub-feed load breakers; and 2A/2B aux contacts and LSI electronic trip on all breakers.
5. The UPS shall be able to supply all required power to full rated output kVA loads with power factor from 0.5 lagging to unity and from unity power factor to 0.5 leading power factors subject to derating.
6. Load voltage and bypass line voltage shall be 208VAC, three-phase, four-wire plus ground. Input voltage shall be 208VAC, three-phase, four-wire plus ground. The AC input source and bypass input source shall each be a solidly grounded wye service.
7. The battery shall support the UPS at 100% rated kW load for at least 7 minutes at 77°F (25°C) at startup.
8. The UPS shall have an active power factor-corrected IGBT converter/rectifier, capable of maintaining input power factor and input current total harmonic distortion (THDi) within specifications without an additional input filter.
9. The UPS shall be of transformer-free design, requiring no internal transformer in the main power path for the basic operation of the module.

1.2 DEFINITIONS

- A. EMI: Electromagnetic interference.
- B. LCD: Liquid-crystal display.
- C. LED: Light-emitting diode.
- D. THD: Total harmonic distortion.
- E. UPS: Uninterruptible power supply.
- F. BDC: Bi-Directional AC-to-AC Converter

G. FES: Flywheel Energy Storage

H. MMU: Multi-Module Unit

1.3 PERFORMANCE REQUIREMENTS

- A. Overcurrent Protective Device Coordination: All overcurrent protective devices proposed for inclusion in the Work shall be selected to be selectively coordinated with the overcurrent protective devices installed on their supply side such that an overcurrent event (overload, short-circuit, or ground-fault) occurring at the lowest level in the system (branch circuit) cannot cause the feeder protective device supplying the branch circuit panelboard to open. This coordination shall be carried through each level of distribution for all branches of normal and emergency power. Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.

1.4 ACTION SUBMITTALS

- A. Specification Compliance Certification: Submit a Specification Compliance Certification in accordance with Division 26 Section "Common Work Results for Electrical".
- B. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- C. Simultaneous Action Submittals: Static Uninterruptible Power Supply Product Data submittal shall be made in conjunction with action submittals required under Division 26 Section "Overcurrent Protective Device Coordination Study." The release of electrical equipment submittals (panelboards, engine generators, switchgear, etc.) is dependent on the receipt of a complete and accurate overcurrent protective device coordination study. The Architect and Engineer require a full submittal review period as delineated in Division 01 Section "Submittal Procedures" to adequately review the OCPD study against the submitted electrical components prior to release of submittals for equipment procurement. The submittal schedule required by Division 01 requirements shall provide for this review time in the action submittal process. Delay claims arising due to Contractor's failure to coordinate simultaneous action submittals will not be considered by the Owner.
- D. Product Data: Include data on features, components, ratings, and performance for each UPS component indicated.
1. Detailed installation instructions covering operation under both normal and abnormal conditions.
- E. Shop Drawings: Detail assemblies of equipment indicating dimensions, weights, components, and location and identification of each field connection. Show access, workspace, and clearance requirements; details of control panels; and battery arrangement.
1. Wiring Diagrams: Power, signal, and control wiring.
 2. Assembly and mounting details for all Equipment and shipping splits.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electrical" for each location where static uninterruptible power supplies are included in the Work.

- B. **Manufacturer Seismic Qualification Certification:** certification that switchgear, overcurrent protective devices, accessories, and components will withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- C. **Qualification Data:** For Installer, power quality specialist, and manufacturer.
- D. **Manufacturer Certificates:** For each product, signed by manufacturers.
- E. **Source quality-control test reports.**
- F. **Extended Maintenance Offer:** Priced service contract for Owner's consideration specified in this Section.
- G. **Field Quality-Control and Performance Test Reports:** Indicate test results compared with specified performance requirements, and provide justification and resolution of differences if values do not agree.

1.6 CLOSEOUT SUBMITTALS

- A. **Operation and Maintenance Data:** For UPS units to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 1. Lists of spare parts and replacement components recommended being stored at Project site for ready access.
 2. Detailed operating instructions covering operation under both normal and abnormal conditions.
- B. **Warranties:** Special warranties specified in this Section.

1.7 EXTRA MATERIALS

- A. **Furnish extra materials** described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Deliver extra materials to Owner.
 1. **Fuses:** One for every 10 of each type and rating, but no fewer than 1 of each.
 2. **Cabinet Ventilation Filters:** One complete set.
 3. **Neutralization Kit:** An approved kit for the neutralization of a release of electrolyte. The kit shall be capable of controlling and neutralizing a release of 3 percent of the capacity of the largest battery cell or block in the room to a pH between 7.0 and 9.0.

1.8 QUALITY ASSURANCE

- A. **Installer Qualifications:** Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.
- B. **Power Quality Specialist Qualifications:** A registered professional electrical engineer or engineering technician, currently certified by the National Institute for Certification in Engineering Technologies, NICET Level 4, minimum, experienced in performance testing UPS installations and in performing power quality surveys similar to that required in Part 3 "Performance Testing" Article.
- C. **Manufacturer Qualifications:** Maintain a service center available on a 24-hour a day, 365 days a year, on-call basis, via a toll-free call center, capable of providing training, parts, and emergency maintenance repairs within a response period of less than eight hours from time of notification. Maintain records of each UPS, by serial number, for service purposes.

- D. Source Limitations: Obtain the UPS and associated components specified in this Section from a single manufacturer with responsibility for entire UPS installation.
 - 1. Breaker Manufacturer: Manufacturer for breakers shall be the same as the manufacturer of other breakers proposed for other portions of the Work.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- F. UL Compliance: Listed and labeled under UL 1778 and UL 1004.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Prepare equipment for shipment.
 - 1. Provide suitable crating, blocking, and supports so equipment will withstand expected domestic shipping and handling shocks and vibration.
 - 2. Weatherproof equipment for shipment. Close connection openings to prevent entrance of foreign material during shipment and storage.
 - 3. Deliver equipment in fully enclosed vehicles after spaces where equipment is to be placed meets manufacturer's ambient temperature and humidity tolerances for non-operating equipment.
- B. Installation Pathway: Coordinate delivery of equipment to allow movement into designated space.
 - 1. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.
 - 2. Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving equipment into place.
- C. Store equipment indoors in clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- D. Handle equipment components according to manufacturer's written instructions. Use factory-installed lifting provisions.

1.10 WARRANTY

- A. Special UPS System Warranties: Specified form in which manufacturer and Installer agree to repair or replace UPS system and associated auxiliary components that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Two years from date of Substantial Completion.

- ~~B. Special Battery Warranties: Specified form in which manufacturer and Installer agree to repair or replace UPS system storage batteries that fail in materials or workmanship within specified warranty period.~~

- ~~1. Warranted Cycle Life for Valve-Regulated, Lead-Acid Batteries: Equal to or greater than that represented in manufacturer's published table, including figures corresponding to the following, based on annual average battery temperature of 77 deg F:~~

Discharge Rate	Discharge Duration	Discharge End Voltage	Cycle Life
8 hours	8 hours	1.67	6 cycles
30 minutes	30 minutes	1.67	20 cycles
15 minutes	45 seconds	1.67	120 cycles

2. ~~[Warranted Cycle Life for Premium Valve-Regulated, Lead-Acid Batteries: Equal to or greater than that represented in manufacturer's published table, including figures corresponding to the following, based on annual average battery temperature of 77 deg F:~~

Discharge Rate	Discharge Duration	Discharge End Voltage	Cycle Life
8 hours	8 hours	1.67	40 cycles
30 minutes	30 minutes	1.67	125 cycles
15 minutes	1.5 minutes	1.67	750 cycles

1.11 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide full inspection and maintenance by skilled employees of manufacturer's designated service organization during the Warranty period, including any special warranty period specified.
1. Include routine preventive maintenance and adjusting as required for proper operation as recommended by manufacturer. Provide number of visits recommended by manufacturer; but no less than semi-annual inspection service.
 2. Provide parts and supplies same as those used in the manufacture and installation of the original equipment.
 3. The contractor performing the contract services shall be qualified and listed to maintain ongoing certification and listing of the completed system.
- B. Extended Maintenance Service: Offer for the Owner's consideration and evaluation at the time of Product Data Submittal, a priced inspection, maintenance, testing, and repair contract in compliance with the manufacturer's recommended routine preventive maintenance program.
1. The services offered under this contract shall begin after the completion of the Initial Maintenance Service and Warranty Period.
 2. The Owner shall have the option of renewing for single or multiple years, up to five years, at the price quoted upon completion of the Warranty period.
 3. The contractor performing the contract services shall be qualified and listed to maintain ongoing certification and listing of the completed system.

PART 2 - PRODUCTS

2.1 PERFORMANCE DESCRIPTION

- A. Automatic operation includes the following:
1. Normal Conditions: Supply the load with ac power flowing from the normal ac power input terminals, through the rectifier-charger and inverter, with the battery connected in parallel with the output.
 2. Abnormal Supply Conditions: If normal ac supply deviates from specified and adjustable voltage, voltage waveform, or frequency limits, the battery supplies energy to maintain constant, regulated inverter ac power output to the load without switching or disturbance.
 3. If normal power fails, energy supplied by the battery continues supply-regulated ac power to the load without switching or disturbance.
 4. When power is restored at the normal supply terminals of the system, controls automatically synchronize with the external source before transferring the load. The

- rectifier-charger then supplies power to the load and simultaneously recharges the battery.
5. If the battery becomes discharged and normal supply is available, the rectifier-charger charges the battery. On reaching full charge, the rectifier-charger automatically shifts to float-charge mode.
 6. If any element of the UPS system fails and power is available at the normal supply terminals of the system, the static bypass transfer switch switches the load to the normal ac supply circuit without disturbance or interruption.
 7. If a fault occurs in the system supplied by the UPS, and current flows in excess of the overload rating of the UPS system, the static bypass transfer switch operates to bypass the fault current to the normal ac supply circuit for fault clearing.
 8. When the fault has cleared, the static bypass transfer switch returns the load to the UPS system.
 9. If the battery is disconnected, the UPS continues to supply power to the load with no degradation of its regulation of voltage and frequency of the output bus.
- B. Manual operation includes the following:
1. Turning the inverter off causes the static bypass transfer switch to transfer the load directly to the normal ac supply circuit without disturbance or interruption.
 2. Turning the inverter on causes the static bypass transfer switch to transfer the load to the inverter.
- C. Internal and External Maintenance Bypass/Isolation Switch Operation: Switch is interlocked so it cannot be operated unless the static bypass transfer switch is in the bypass mode. Device provides manual selection between the following three conditions without interrupting supply to the load during switching:
1. Full Isolation: Load is supplied, bypassing the UPS. Normal UPS ac input circuit, static bypass transfer switch, and UPS load terminals are completely disconnected from external circuits.
 2. Maintenance Bypass: Load is supplied, bypassing the UPS. UPS ac supply terminals are energized to permit operational checking, but system load terminals are isolated from the load.
 3. Normal: Normal UPS ac supply terminals are energized and the load is supplied through either the static bypass transfer switch and the UPS rectifier-charger and inverter, or the battery and the inverter.

2.2 SERVICE CONDITIONS

- A. Environmental Conditions: The UPS shall be capable of operating continuously in the following environmental conditions without mechanical or electrical damage or degradation of operating capability, except battery performance.
1. Ambient Temperature for Electronic Components: 32 to 104 deg F.
 2. Ambient Temperature for Battery: 41 to 95 deg F.
 3. Relative Humidity: 0 to 95 percent, noncondensing.
 4. Altitude: Sea level to 4000 feet.

2.3 PERFORMANCE REQUIREMENTS

- A. The UPS shall perform as specified in this Article while supplying rated full-load current, composed of any combination of linear and nonlinear load, up to 100 percent nonlinear load with a load crest factor of 3.0, under the following conditions or combinations of the following conditions:
1. Inverter is switched to battery source.
 2. Steady-state ac input voltage deviates up to plus or minus 10 percent from nominal voltage.

3. Steady-state input frequency deviates up to plus or minus 5 percent from nominal frequency.
 4. THD of input voltage is 10 ~~45~~ percent or more with a minimum crest factor of 3.0, and the largest single harmonic component is a minimum of 5 percent of the fundamental value.
 5. Load is 30 ~~[50]~~~~[100]~~ percent unbalanced continuously.
- B. Minimum Duration of Supply: If battery is sole energy source supplying rated full UPS load current at 80 percent power factor, minimum duration of supply is 5 minutes.
 - C. Input Voltage Tolerance: System steady-state and transient output performance remains within specified tolerances when steady-state ac input voltage varies plus 10, minus 15 ~~[20]~~~~[30]~~ percent from nominal voltage.
 - D. Overall UPS Efficiency: Equal to or greater than 94 percent at 100 percent load, 95 percent at 75 percent load, and 95 percent at 50 percent load.
 - E. Maximum Acoustical Noise: Maximum 60 dBA, emanating from any UPS component under any condition of normal operation, measured 48 inches from nearest surface of component enclosure, unless otherwise indicated.
 - F. Maximum Energizing Inrush Current: Eight times the full-load current.
 - G. Maximum AC Output-Voltage Regulation for Loads up to 50 Percent Unbalanced: Plus or minus 2 percent over the full range of battery voltage.
 - H. Output Frequency: 60 Hz, plus or minus 0.5 percent over the full range of input voltage, load, and battery voltage.
 - I. Limitation of harmonic distortion of input current to the UPS shall be as follows:
 1. Description: Either a tuned harmonic filter or an arrangement of rectifier-charger circuits shall limit THD to 5 or 10 percent, maximum, at rated full UPS load current, for power sources with X/R ratio between 2 and 30.
 - J. Maximum Harmonic Content of Output-Voltage Waveform: 5 percent RMS total and 3 percent RMS for any single harmonic, for 100 percent rated nonlinear load current with a load crest factor of 3.0.
 - K. Minimum Overload Capacity of UPS at Rated Voltage: 125 percent of rated full load for 10 minutes, and 150 percent for 30 seconds in all operating modes.
 - L. Maximum Output-Voltage Transient Excursions from Rated Value: For the following instantaneous load changes, stated as percentages of rated full UPS load, voltage shall remain within stated percentages of rated value and recover to, and remain within, plus or minus 2 percent of that value within 100 ms:
 1. 50 Percent: Plus or minus 5 percent.
 2. 100 Percent: Plus or minus 5 percent.
 3. Loss of AC Input Power: Plus or minus 1 percent.
 4. Restoration of AC Input Power: Plus or minus 1 percent.
 - M. Input Power Factor: A minimum of 0.85 lagging when supply voltage and current are at nominal rated values and the UPS is supplying rated full-load current.
 - N. EMI Emissions: Comply with FCC Rules and Regulations, and with 47 CFR 15 for Class A equipment.

2.4 UPS SYSTEMS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings, Liebert eXM; a division of Vertiv as base bid. Provide alternate pricing in accordance with Division 01 Section "Alternates" for a comparable product by one of the following:
 - 1. APC; a division of Schneider Electric
 - 2. Powerware; a division of Eaton
- B. Electronic Equipment: Solid-state devices using hermetically sealed, semiconductor elements. Devices include rectifier-charger, inverter, static bypass transfer switch, and system controls.
- C. Enclosures: Comply with NEMA 250, Type 1, unless otherwise indicated.
- D. Control Assemblies: Mount on modular plug-ins, readily accessible for maintenance.
- E. Surge Suppression: Protect internal UPS components from surges that enter at each ac power input connection including main disconnect switch, static bypass transfer switch, and maintenance bypass/isolation switch. Protect rectifier-charger, inverter, controls, and output components.
 - 1. Use factory-installed surge suppressors tested according to IEEE C62.41, Category B.
 - 2. Additional Surge Protection: Protect internal UPS components from low-frequency, high-energy voltage surges described in IEEE C62.41. Design the circuits connecting with external power sources and select circuit elements, conductors, conventional surge suppressors, and rectifier components and controls so input assemblies will have adequate mechanical strength and thermal and current-carrying capacity to withstand stresses imposed by 40-Hz, 180 percent voltage surges described in IEEE C62.41.
- F. Maintainability Features: Rectifier-charger and inverter sections and the static bypass transfer switch shall be modular plug-ins, readily accessible for maintenance.
- G. Capacity Upgrade Capability: Arrange wiring, controls, and modular component plug-in provisions to permit future increase in UPS capacity. Refer to UPS system description hereinbefore.
- H. Seismic-Restraint Design: UPS assemblies, subassemblies, and components (and fastenings and supports, mounting, and anchorage devices for them), shall be designed and fabricated to withstand static and seismic forces.
- I. UPS Cabinet Ventilation: Redundant fans or blowers draw in ambient air near the bottom of cabinet and discharge it near the top rear.
- J. Output Circuit Neutral Bus, Conductor, and Terminal Ampacity: Rated phase current times a multiple of 1.73, minimum.

2.5 STATIC DISCONNECT SWITCH

- A. Description: Continuous duty rated, phase controlled, full wave, three-phase, line-commutated electronic switch using SCRs as switching devices. Each phase protected by fast-acting fuses. Isolated from the input by a contactor.

- B. Operation: The switch shall turn off within one-half cycle of detecting an input voltage or frequency outside of preset limits as specified. Phasing of the switch shall also inhibit reverse power flow from the output of the switch to the input. Connection to the AC input through the switch shall be initiated when the phase difference between the input and output is less than one-half degree to reduce inrush currents when reconnecting to input power after a discharge.

2.6 RECTIFIER-CHARGER

- A. Capacity: Adequate to supply the inverter during rated full output load conditions and simultaneously recharge the battery from fully discharged condition to 95 percent of full charge within 10 times the rated discharge time for duration of supply under battery power at full load.
- B. Output Ripple: Limited by output filtration to less than 0.5 percent of rated current, peak to peak.
- C. Rectifier-Charger Control Circuits: Immune to frequency variations within rated frequency ranges of normal and emergency power sources.
 - 1. Response Time: Field adjustable for maximum compatibility with local generator-set power source.
- D. Battery Float-Charging Conditions: Comply with battery manufacturer's written instructions for battery terminal voltage and charging current required for maximum battery life.

2.7 INVERTER

- A. Description: Insulated gate bi-polar transistor (IGBT), Pulse-width modulated, with sinusoidal output. Include a bypass phase synchronization window adjustment to optimize compatibility with local engine-generator-set power source.

2.8 STATIC BYPASS TRANSFER SWITCH

- A. Description: Solid-state switching device providing uninterrupted transfer. A contactor automatically provides electrical isolation for the switch.
- B. Switch Rating: Continuous duty at the rated full UPS load current, minimum.

2.9 BATTERY

- A. Description: Valve-regulated, premium, heavy-duty, recombinant, lead-acid units, factory assembled in a separate matching cabinet, complete with battery disconnect switch. The selection of the battery shall be such that it is regularly matched with the specified UPS.
 - 1. Arrange for drawout removal of battery assembly from cabinet for testing and inspecting.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C&D Technologies, Inc.
 - b. Eaton Corporation; Powerware Division.
 - c. EnerSys, Inc.
 - d. Exide Technologies
 - e. HOPPECKE.
 - f. Panasonic Corporation of North America; Panasonic Industrial Company.
 - g. SAFT.

- C. **Seismic-Restraint Design:** Battery racks, cabinets, assemblies, subassemblies, and components (and fastenings and supports, mounting, and anchorage devices for them), shall be designed and fabricated to withstand static and seismic forces.

2.10 CONTROLS AND INDICATIONS

- A. Description: Group displays, indications, and basic system controls on a common control panel on front of UPS enclosure.
- B. Minimum displays, indicating devices, and controls include those in lists below. Provide sensors, transducers, terminals, relays, and wiring required to support listed items. Alarms include audible signals and visual displays.
- C. Indications: Plain-language messages on a digital LCD or LED. Not all of these points may be available. Define what is available in the submittal.
1. Quantitative indications shall include the following:
 - a. Input voltage, each phase, line to line.
 - b. Input current, each phase, line to line.
 - c. Bypass input voltage, each phase, line to line.
 - d. Bypass input frequency.
 - e. System output voltage, each phase, line to line.
 - f. System output current, each phase.
 - g. System output frequency.
 - h. Elapsed time discharging battery.
 - i. System output power factor.
 - j. System output apparent power in kVA.
 - k. System output real power in kW.
 - l. DC bus voltage.
 - m. Battery current and direction (charge/discharge).
 2. Basic status condition indications shall include the following:
 - a. Normal operation.
 - b. Load-on bypass.
 - c. Inverter off.
 - d. Alarm condition.
 - e. Load-on battery.
 3. Alarm indications shall include the following:
 - a. Bypass ac input overvoltage or undervoltage.
 - b. Bypass ac input overfrequency or underfrequency.
 - c. Bypass ac input and inverter out of synchronization.
 - d. Bypass ac input wrong-phase rotation.
 - e. Bypass ac input single-phase condition.
 - f. Bypass ac input filter fuse blown.
 - g. Internal frequency standard in use.
 - h. Control power failure.
 - i. Fan failure.
 - j. UPS overload.
 - k. Input overvoltage or undervoltage.
 - l. Input transformer overtemperature.
 - m. Input circuit breaker tripped.
 - n. Input wrong-phase rotation.
 - o. Input single-phase condition.
 - p. Static bypass transfer switch over temperature.
 - q. UPS overload shutdown.
 - r. Inverter current sensor fault.
 - s. Inverter output contactor open.

- t. Inverter current limit.
- u. Identification of faulty inverter section/leg.
- v. Inverter fuse blown.
- w. Inverter transformer overtemperature.
- x. Inverter overtemperature.
- y. Inverter output overvoltage or undervoltage.
- z. Inverter power supply fault.
- aa. Inverter transistors out of saturation.
- bb. Battery system alarm.
- cc. Battery undervoltage shutdown.
- dd. Maximum battery voltage.
- ee. Approaching end of battery operation.
- ff. Battery-charging control faulty.
- 4. Controls shall include the following:
 - a. UPS start.
 - b. Alarm silence/reset.
 - c. Output-voltage adjustment.
 - d. Inverter on-off.
 - e. Battery test.
- D. Dry-form "C" contacts shall be available for remote indication of the following conditions:
 - 1. UPS on-line.
 - 2. UPS load-on bypass.
 - 3. UPS in alarm condition.
 - 4. UPS off (maintenance bypass closed).
 - 5. UPS on battery.
- E. Emergency Power Off Switch: Capable of local operation and operation by means of activation by external dry contacts.

2.11 MAINTENANCE BYPASS/ISOLATION SWITCH

- A. Description: Manually operated switch or arrangement of switching devices with mechanically actuated contact mechanism arranged to route the flow of power to the load around the rectifier-charger, inverter, and static bypass transfer switch.
 - 1. Switch shall be electrically and mechanically interlocked to prevent interrupting power to the load when switching to bypass mode.
 - 2. Switch shall electrically isolate other UPS components to permit safe servicing.
- B. Comply with NEMA PB 2 and UL 891.
- C. Switch Rating: Continuous duty at rated full UPS load current.
- D. Mounting Provisions: Internal to system cabinet.
- E. Key interlock requires unlocking maintenance bypass/isolation switch before switching from normal position with key that is released only when the UPS is bypassed by the static bypass transfer switch. Lock is designed specifically for mechanical and electrical component interlocking.

2.12 MONITORING BY REMOTE STATUS AND ALARM PANEL

- A. Description: Labeled LEDs on panel faceplate indicate basic status conditions. Audible signal indicates alarm conditions. Silencing switch in face of panel silences signal without altering visual indication.

1. Cabinet and Faceplate: Surface or flush mounted to suit mounting conditions indicated.

2.13 CAPABILITY OF MONITORING BY REMOTE COMPUTER

- A. Description: Communication module in unit control panel provides capability for remote monitoring of status, parameters, and alarms specified in "Controls and Indications" Article. The remote computer and the connecting signal wiring are not included in this Section. Include the following features:
 1. Connectors and network interface units or modems for data transmission via RS-232 link.
 2. Software designed for control and monitoring of UPS functions and to provide on-screen explanations, interpretations, diagnosis, action guidance, and instructions for use of monitoring indications and development of meaningful reports. Permit storage and analysis of power-line transient records. Design for windows applications using a personal computer, which is not included in this Section.

2.14 BASIC BATTERY MONITORING

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Albercorp; Hawker Siddeley.
 2. BTECH Inc.
 3. MetriXX USA, Inc.
 4. NDSL Group Ltd.
 5. Powerware; an Invensys Company.
- B. Battery Ground-Fault Detector: Initiates alarm when resistance to ground of positive or negative bus of battery is less than 5000 ohms.
- C. Annunciation of Alarms: At UPS control panel.

2.15 BATTERY-CYCLE WARRANTY MONITORING

- A. Description: Electronic device, acceptable to battery manufacturer as a basis for warranty action, for monitoring of charge-discharge cycle history of batteries covered by cycle-life warranties.
- B. Performance: Automatically measures and records each discharge event, classifies it according to duration category, and totals discharges according to warranty criteria, displaying remaining warranted battery life on front panel display.
- C. Additional monitoring functions and features shall include the following:
 1. Measuring and Recording: Total voltage at battery terminals; initiates alarm for excursions outside the proper float-voltage level.
 2. Monitors: Ambient temperature at battery; initiates alarm if temperature deviates from normally acceptable range.
 3. Keypad on Device Front Panel: Provides access to monitored data using front panel display.
 4. Alarm Contacts: Arranged to initiate alarm for battery discharge events, abnormal temperature, and abnormal battery voltage or temperature.
 5. Memory: Stores recorded data in nonvolatile electronic memory.
 6. RS-232 Port: Permits downloading of data to a portable personal computer.
 7. Modem: Makes measurements and recorded data accessible to remote personal computer via telephone line. Computer is not specified in this Section.

2.16 SOURCE QUALITY CONTROL

- A. Factory test complete UPS system before shipment. Use simulated battery testing. Include the following:
 - 1. Test and demonstration of all functions, controls, indicators, sensors, and protective devices.
 - 2. Full-load test.
 - 3. Transient-load response test.
 - 4. Overload test.
 - 5. Power failure test.
- B. Report test results. Include the following data:
 - 1. Description of input source and output loads used. Describe actions required to simulate source load variation and various operating conditions and malfunctions.
 - 2. List of indications, parameter values, and system responses considered satisfactory for each test action. Include tabulation of actual observations during test.
 - 3. List of instruments and equipment used in factory tests.

2.17 ACCESSORY COMPONENTS AND FEATURES

- A. TCP/IP Capability: Provide TCP/IP capable of connecting to owners IP network to communicate faults, alarms and send SMS messages.
- B. Connection to Data Link Capability: A separate terminal block, factory wired to Form C dry contacts, for each alarm and status indication is reserved for connections for data-link transmission of indications to remote data terminals.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with NECA 411, "Standard for Installing and Maintaining Uninterruptible Power Supplies (UPS)" as published by the National Electrical Contractors Association and adopted by ANSI.
- B. Install and anchor equipment level on concrete bases, 4-inch nominal thickness. Concrete base is specified in Division 26 Section "Hangers and Supports for Electrical Systems," and concrete materials and installation requirements are specified in Division 03.
- C. Maintain minimum clearances and workspace at equipment according to manufacturer's written instructions and NFPA 70.

3.2 GROUNDING

- A. Separately Derived Systems: If not part of a listed power supply for a data-processing room, comply with NFPA 70 requirements for connecting to grounding electrodes and for bonding to metallic piping near isolation transformer.

3.3 CONNECTIONS

- A. Interconnect system components. Make connections to supply and load circuits according to manufacturer's wiring diagrams, unless otherwise indicated.

- B. Wiring to Remote Components: Match type and number of cables and conductors to control and communication requirements of UPS remote alarm panels as recommended by manufacturer. Provide raceway sizes necessary to accommodate required wiring.
- C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- E. Provide connection capability from TCP/IP card to Owner's IP network.
- F. Provide connection capability from terminal block to Facility Management System.

3.4 IDENTIFICATION

- A. Identify components and wiring according to Division 26 Section "Identification for Electrical Systems."

3.5 BATTERY EQUALIZATION

- A. Equalize charging of battery cells according to manufacturer's written instructions. Record individual-cell voltages.

3.6 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
 1. Test insulation resistance for each bus, component, connecting supply, feeder, and control circuit.
 2. Test continuity of each circuit.
 3. Assist in field testing of equipment including pre-testing and adjusting of equipment and components.
- B. Testing Agency: Engage a qualified independent testing and inspecting agency as defined in Division 26 Section "Common Work Results for Electrical" to perform the following field tests and inspections and prepare certified test reports:
 1. Inspect interiors of enclosures for integrity of mechanical and electrical connections, component type and labeling verification, and ratings of installed components.
 2. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specifications Section 7.18 and 7.22.2. Certify compliance with test parameters.
 3. Test manual and automatic operational features and system protective and alarm functions.
 4. Verify that UPS is installed and connected according to the Contract Documents.
 5. Verify that electrical wiring installation complies with manufacturer's submittal and installation requirements in Division 26 Sections.
 6. Complete installation and startup checks according to manufacturer's written instructions.
 7. Test communication of status and alarms to remote monitoring equipment.
 8. Load the system using a variable-load bank to simulate kilovolt amperes, kilowatts, and power factor of loads for unit's rating. Use instruments calibrated, within the previous six months according to NIST standards.
 - a. Simulate malfunctions to verify protective device operation.
 - b. Test duration of supply on emergency, low-battery voltage shutdown, and transfers and restoration due to normal source failure.

- c. Test harmonic content of input and output current less than 25, 50, and 100 percent of rated loads.
 - d. Test output voltage under specified transient-load conditions.
 - e. Test efficiency at 50, 75, and 100 percent of rated loads.
 - f. Test remote status and alarm panel functions.
- Test battery-monitoring system functions.
- C. The testing agency shall work in conjunction with the Manufacturer's Field Service shall work with a factory-authorized service representative to perform the start-up, field tests and inspections and prepare certified test reports.
- D. Testing Agency: Engage a qualified independent testing and inspecting agency as defined in Division 26 Section "Common Work Results for Electrical" to perform the following field tests and inspections and prepare certified test reports:
 - 1. Inspect interiors of enclosures for integrity of mechanical and electrical connections, component type and labeling verification, and ratings of installed components.
 - 2. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specifications Section 7.18 and 7.22.2. Certify compliance with test parameters.
 - 3. Test manual and automatic operational features and system protective and alarm functions.
 - 4. Verify that UPS is installed and connected according to the Contract Documents.
 - 5. Verify that electrical wiring installation complies with manufacturer's submittal and installation requirements in Division 26 Sections.
 - 6. Complete installation and startup checks according to manufacturer's written instructions.
 - 7. Test communication of status and alarms to remote monitoring equipment.
 - 8. Load the system using a variable-load bank to simulate kilovolt amperes, kilowatts, and power factor of loads for unit's rating. Use instruments calibrated, within the previous six months according to NIST standards.
 - a. Simulate malfunctions to verify protective device operation.
 - b. Test duration of supply on emergency, low-battery voltage shutdown, and transfers and restoration due to normal source failure.
 - c. Test harmonic content of input and output current less than 25, 50, and 100 percent of rated loads.
 - d. Test output voltage under specified transient-load conditions.
 - e. Test efficiency at 50, 75, and 100 percent of rated loads.
 - f. Test remote status and alarm panel functions.
 - g. Test battery-monitoring system functions.
- E. Seismic-restraint tests and inspections shall include the following:
 - 1. Inspect type, size, quantity, arrangement, and proper installation of mounting or anchorage devices.
 - 2. Test mounting and anchorage devices according to requirements in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- F. Correct Deficiencies, Retest and Report:
 - 1. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace units and devices as required to bring system into compliance.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. Prepare a report, certified by testing agency, that identifies unit components and devices checked and describes results. Include notation of deficiencies detected, remedial action taken, and observations and test results after remedial action.

- G. Record of Tests and Inspections: Maintain and submit documentation of tests and inspections, including references to manufacturers' written instructions and other test and inspection criteria. Include results of tests, inspections, and retests.

3.7 ADJUSTING

- A. Set field-adjustable overcurrent protection device trip characteristics according to settings provided by Engineer-of-Record.
 - 1. Settings will be provided by Engineer-of-Record after the submittal process and review of report required by Division 26 Section "Overcurrent Protective Device Coordination Study." are completed.

3.8 CLEANING

- A. Clean components according to manufacturer's written instructions.
- B. Prior to installation of front trim and cover plates inspect interior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
- C. On completion of front trim and cover installation, inspect exterior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
 - 3. Repair exposed surfaces to match original finish.

3.9 PROTECTION

- A. Temporary Heating: Maintain a clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Apply temporary heating as required.
- B. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.

3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's management and maintenance personnel to adjust, operate, and maintain the UPS. Refer to Division 01 Section "Demonstration and Training."

SECTION 263600

TRANSFER SWITCHES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes transfer switches rated 600 V and less, including the following:
 - 1. Automatic transfer switches.
 - 2. Bypass/isolation switches.
 - 3. Remote annunciation systems.
- B. Automatic Transfer Switches (ATS) Basic Description
 - 1. Provide automatic transfer switches as follows:
 - a. ATS-1 – 260A / 4-pole, open transition:
 - 1) Emergency egress and exit lighting
 - 2) Genset auxiliary loads
 - 3) Elevators
 - 4) Smoke exhaust fans
 - 5) AHU-1 supply air fans-1,2,3,4 (primary set of supply air fans for smoke exhaust system)
 - b. ATS-2 – 100A / 3-pole, delayed transition:
 - 1) AHU-1 supply air fans-5,6,7,8 (redundant set of supply air fans for smoke exhaust system)
 - c. ATS-3-NDC - 200A / 4-pole, delayed transition:
 - 1) Redundant normal power source for data center UPS loads
 - 2) Redundant cooling for data center cooling
 - d. ATS(BPS)-4-UDC (includes bypass isolation switch) – 200A / 4-pole, delayed transition:
 - 1) Data Center UPS
 - 2) Data Center Cooling
 - e. ATS-FP (by fire protection contractor)
 - 2. ATS's shall be rated for 480Y/277V, 3-pole no neutral or 4-pole with switched neutral, open transition (OT) or delayed transition (DT) transfer switching as indicated above.
 - 3. ATS's shall be equal to ASCO 7000 series or comparable switch provided by Russelectric, GE Zenith, Cummins, or Kohler.
 - 4. ATS's shall be UL1008 with standard NEMA Type 1 enclosure.
 - 5. The ATS shall be provided with a data gateway to transmit ATS operational, trouble, and alarm data to the FMS.
 - 6. The manufacturer shall provide full start-up services and full functional performance acceptance testing with a 12 hour 100% load burn-in and final pull-the-plug system test. Provide full certified test report.
 - 7. ATS's shall be rated for standard 3 to 18-cycle WCR.
 - 8. ATS's shall include a programmable controller with keypad and LCD display. Controller shall display ATS & BPS switch position indicating lights, typical time delays for engine start, transfer, and retransfer, voltage and frequency sensing, and power meter data including volts, amps, freq, pf, kw, kva, kvar. Include aux contacts, 2 closed in normal and 2 closed in emergency. The bypass isolation switch shall be drawout design allowing for bypass without load interruption. ATS and BPS shall have identical electrical ratings.

9. The manufacturer shall provide full start-up services and full functional performance acceptance TESTING IN COORDINATION WITH Generator testing and a final pull-the-plug system test. Provide full certified test report.

C. Related Sections include the following:

1. Transfer Switches for Fire Pumps are specified in Division 21 Section "Electric-Drive, Centrifugal Fire Pumps" for automatic transfer switches for fire pumps.

1.2 PERFORMANCE REQUIREMENTS

- A. Overcurrent Protective Device Coordination: All overcurrent protective devices proposed for inclusion in the Work shall be selected to be selectively coordinated with the overcurrent protective devices installed on their supply side such that an overcurrent event (overload, short-circuit, or ground-fault) occurring at the lowest level in the system (branch circuit) cannot cause the feeder protective device supplying the branch circuit panelboard to open. This coordination shall be carried through each level of distribution for all branches of [normal and] emergency power. [Refer to Division 26 Section "Overcurrent Protective Device Coordination Study" for additional requirements.

B. Sequence of Operation for Automatic Transfer

1. Loss of Normal Source:

- a. After an adjustable time delay period of 0-10 seconds (default setting of 1 seconds), the Engine starting contacts shall close to initiate the starting of the standby engine-generator set when any of the following occur:
 - 1) Voltage on any phase of the normal source drops below 80-percent of nominal or increases to 120-percent of nominal.
 - 2) Frequency drops below 90-percent of nominal or increases to 110-percent of nominal.
 - 3) Voltage differential between phases is greater than 20-percent.

- b. When the emergency source has reached a voltage value of 90-percent of nominal and achieved frequency within 95-percent of the rated value, the load shall be transferred to the emergency source based on the following:

1) Delayed Transition Switches:

- a) When the emergency source has reached the values listed above, the load shall be transferred to the neutral position for an adjustable time period of 0-10 seconds. Upon completion of this neutral time delay the switch shall be transferred to the emergency source.

2) Closed Transition Switches:

- a) When the emergency source has reached the values listed above, the load shall be transferred to the emergency source without delay.

2. Restoration of Normal Source:

- a. Upon restoration of normal power source on all phases to a preset value of 90-percent to 110-percent of rated voltage, 95-percent to 105-percent of rated frequency, and below 20-percent, voltage differential, the switch shall retransfer to the normal source based on the following:

1) Delayed Transition Switches:

- a) When the normal source has been restored to the values listed above, and the time delay transfer to normal has expired, the load shall be retransferred to the neutral position for an adjustable time period of 0-10 seconds. After which the switch shall be connected to the normal source.

2) Closed Transition Switches:

- a) When the normal source has been restored to the values listed above, load shall synchronize and be retransferred to the normal source without delay.
 - b. After retransfer to normal, the generator set shall be allowed to operate at no load for an adjustable period of 0-10 minutes (default setting at 5 minutes). The generator shall run unloaded for this time period and then automatically shut down. The generator shall be ready for automatic operation upon the next failure of the normal source.
- 3. Special Conditions and Failure Modes:
 - a. If the engine generator should fail while carrying the load, retransfer to the normal source shall be made instantaneously upon restoration of proper voltage (90-percent) on the normal source.
 - b. [Bypass-isolation Switch: Switch shall be equipped with an independent engine start circuit. Should a utility outage occur while operating the bypass in normal or isolated modes, the engine will automatically start and allow immediate selection to emergency bypass.

1.3 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Simultaneous Action Submittals: Transfer Switch Product Data submittal shall be made in conjunction with action submittals required under Division 26 Section "Overcurrent Protective Device Coordination Study." The release of electrical equipment submittals (panelboards, engine generators, switchgear, etc.) is dependent on the receipt of a complete and accurate overcurrent protective device coordination study. The Architect and Engineer require a full submittal review period as delineated in Division 01 Section "Submittal Procedures" to adequately review the OCPD study against the submitted electrical components prior to release of submittals for equipment procurement. The submittal schedule required by Division 01 requirements shall provide for this review time in the action submittal process. Delay claims arising due to Contractor's failure to coordinate simultaneous action submittals will not be considered by the Owner.
- C. Product Data: For each type of product indicated. Include rated capacities, weights, operating characteristics, furnished specialties, and accessories.
 - 1. Indicate whether the transfer switch withstand and closing rating is based on "Three-Cycle Testing" or "specific coordinated circuit breaker".
 - a. Where a specific circuit breaker rating is used, the submittal data shall include information supporting the actual "coordinated" rating. Include the withstand and closing rating chart showing the transfer switches respective rating with the specific circuit breaker included in the Work to which the transfer switch is being connected to for this project. Coordinate this with the electrical power distribution equipment manufacturer to determine the actual circuit breaker proposed for inclusion in the Work and submit in conjunction with associated power distribution equipment.
- D. Shop Drawings: Dimensioned plans, elevations, sections, and details showing minimum clearances, conductor entry provisions, gutter space, installed features and devices, and material lists for each switch specified.
 - 1. Single-Line Diagram: Show connections between transfer switch, bypass/isolation switch, power sources, and load; and show interlocking provisions for each combined transfer switch and bypass/isolation switch.
 - 2. Control schematics and wiring diagrams.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electrical" for each location where transfer switches are included in the Work.
- B. **Manufacturer Seismic Qualification Certification: Submit certification that transfer switches, accessories, and components will withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems".**
- C. Source quality-control test reports.
- D. Extended Maintenance Offer: Priced service contract for Owner's consideration specified in this Section.
- E. Field quality-control test reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For electrical equipment, accessories and components to be included in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 - 1. Manufacturer's routine maintenance requirements for transfer switch and all installed components.
 - 2. Features and operating sequences, both automatic and manual.
 - 3. List of all factory settings of relays; provide relay-setting and calibration instructions, including software, where applicable.
 - 4. Manufacturer's written instructions for testing and adjusting device settings.
 - 5. Manufacturer's sample system checklists and log sheets.
 - 6. Manufacturer's written instructions for sequence of operation.
- B. Warranty: Special warranty specified in this Section.

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: For independent agency as defined in Division 26 Section "Common Work Results for Electrical".
- B. Manufacturer Qualifications: Maintain a service center available on a 24-hour a day, 365 days a year, on-call basis, via a toll-free call center, capable of providing training, parts, and emergency maintenance repairs within a response period of less than [eight] hours from time of notification. Maintain records of each transfer switch, by serial number, for service purposes.
- C. Source Limitations: Obtain automatic transfer switches, bypass/isolation switches, remote annunciators through one source from a single manufacturer.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with NEMA ICS 1.
- F. Comply with NFPA 70.

- G. Comply with NFPA 110.
- H. Comply with UL 1008, unless requirements of these Specifications are stricter.
 - 1. During the UL 1008 withstand and closing tests, there shall be no contact welding or damage.
 - 2. The test shall verify that contacts separation has not occurred, and there is contact continuity across all phases.
 - 3. The tests shall be performed without the use of current limiting fuses.
 - 4. Where switch is coordinated with current limiting fuses, the switch shall have withstand and closing current ratings of 200,000 amperes at 480V. Use of current limiting fuses in coordination with a switch is only acceptable if specifically designed as such and indicated on the Drawings.
 - 5. Where switch is coordinated with current limiting circuit breakers, the switch shall have greater withstand and closing current ratings, from 85,000 amperes to 200,000 amperes at 480V, depending on switch size. Use of current limiting circuit breakers in coordination with a switch is only acceptable if specifically designed as such and indicated on the Drawings.
 - 6. Where conducting temperature rise tests to UL-1008, include post-endurance temperature rise tests to verify the ability of the transfer switches to carry full rated current after completing the overload and endurance tests.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Prepare equipment for shipment.
 - 1. Provide suitable crating, blocking, and supports so equipment will withstand expected domestic shipping and handling shocks and vibration.
 - 2. Weatherproof equipment for shipment. Close connection openings to prevent entrance of foreign material during shipment and storage.
- B. Installation Pathway: Coordinate delivery of equipment to allow movement into designated space.
 - 1. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.
 - 2. Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving equipment into place.
- C. Store equipment indoors in clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- D. Handle equipment components according to manufacturer's written instructions. Use factory-installed lifting provisions.

1.8 PROJECT CONDITIONS

- A. Environmental Limitations:
 - 1. Rate equipment for continuous operation under the following conditions, unless otherwise indicated:
 - a. Ambient Temperature for Micro-Processor Based controls: Not less than 68 deg F and not exceeding 104 deg F.
 - b. Ambient Humidity for Micro-Processor Based controls: Zero percent to 99 percent relative humidity, non-condensing.
 - c. Altitude: Not exceeding 6600 feet.

1.9 COORDINATION

- A. Coordinate layout and installation of transfer switches and components with other construction that penetrates walls or is supported by them, including but not limited to electrical and other types of equipment, raceways, piping, and encumbrances to workspace clearance requirements.
- B. Coordinate size and location of concrete bases for floor mounted units. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- C. Coordinate installation of wall-mounting supports with actual transfer switches provided.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of switchgear and associated auxiliary components that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Two years from date of Substantial Completion.

1.11 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide full inspection and maintenance by skilled employees of manufacturer's designated service organization during the Warranty period, including any special warranty period specified.
 - 1. Include routine preventive maintenance and adjusting as required for proper operation as recommended by manufacturer. Provide number of visits recommended by manufacturer; but no less than semi-annual inspection service.
 - 2. Provide parts and supplies same as those used in the manufacture and installation of the original equipment.
 - 3. The contractor performing the contract services shall be qualified and listed to maintain ongoing certification and listing of the completed system.
- B. Extended Maintenance Service: Offer for the Owner's consideration and evaluation at the time of Product Data Submittal, a priced inspection, maintenance, testing, and repair contract in compliance with the manufacturer's recommended routine preventive maintenance program.
 - 1. The services offered under this contract shall begin after the completion of the Initial Maintenance Service and Special Warranty Period.
 - 2. The Owner shall have the option of renewing for single or multiple years, up to five years, at the price quoted upon completion of the Warranty period.
 - 3. The contractor performing the contract services shall be qualified and listed to maintain ongoing certification and listing of the completed system.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings, ASCO, or a comparable product by one of the following:
 - 1. Contactor Transfer Switches:
 - a. Caterpillar; Engine Div; Series CTS / CBTS.
 - b. ASCO Power Technologies, LP; Series 7000.
 - c. GE Zenith Controls; Series ZTS / ZBTS.
 - d. Kohler Power Systems; Generator Division.

- e. Cummins Power Generation; Industrial Business Group; Series OTPC / BTPC.
- f. Russelectric, Inc; Series RTS.

2.2 GENERAL TRANSFER-SWITCH PRODUCT REQUIREMENTS

- A. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.
- B. Tested Fault-Current Closing and Withstand Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.
 - 1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location.
- C. Solid-State Controls: Repetitive accuracy of all settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C and 0 to 99 percent relative humidity, non-condensing.
- D. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1. Micro-Processor capable of withstanding surges in accordance with ANSI/IEEE C-37.90A
- E. Electrical Operation: Accomplish by a nonfused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.
- F. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.
 - 1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are not acceptable.
 - 2. Switch Action: Double throw; mechanically held in both directions.
 - 3. Contacts: Silver composition or silver alloy for load-current switching. Conventional automatic transfer-switch units, rated 225 A and higher, shall have separate arcing contacts.
- G. Neutral Switching: Where four-pole switches are indicated, provide neutral pole switched simultaneously with phase poles.
- H. Lugs: Mechanical style one or two hole style to suit conditions, suitable for quantity and size of conductor, dual rated for use with copper- or aluminum conductors; UL 486 B listed, marked [AL7CU for 75 degrees C rated circuits] [and] [AL9CU for 90 degrees C rated circuits].
- I. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall have communication capability matched with remote device.
- J. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, either by color-code or by numbered or lettered wire and cable tape markers at

terminations. Color-coding and wire and cable tape markers are specified in Division 26 Section "Identification for Electrical Systems."

1. Designated Terminals: Pressure type, suitable for types and sizes of field wiring indicated.
2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as required to meet field conditions.
3. Control Wiring:
 - a. Equipped with lugs suitable for connection to terminal strips.
 - b. Wire auxiliary contacts to terminal strips.

2.3 ENCLOSURES

- A. NEMA ICS 6 and UL 508 to meet environmental conditions of installed location as follows, unless otherwise indicated:
 1. Indoor Locations: NEMA 250, Type 1.

2.4 AUTOMATIC TRANSFER SWITCHES

- A. Comply with Level 1 equipment according to NFPA 110.
- B. Manual Switch Operation: Unloaded. Control circuit automatically disconnects from electrical operator during manual operation.
- C. Signal-Before-Transfer Contacts: Provide ATS's with two sets of normally open/normally closed dry contacts to operate in advance of retransfer to normal source. Interval is adjustable from 1 to 300 seconds.
- D. Digital Communication Interface: Matched to capability of remote annunciator or annunciator and control panel.
- E. Automatic Delayed-Transition Transfer Switches using Programmed Neutral Switch Position: Switch operator has a programmed neutral position arranged to provide a midpoint between the two working switch positions, with an intentional, time-controlled pause at midpoint during transfer. Pause is adjustable from 0.5 to 30 seconds minimum and factory set for 0.5 second, unless otherwise indicated. Time delay occurs for both transfer directions. Pause is disabled unless both sources are live.
- F. Automatic Transfer-Switch Features:
 1. Undervoltage Sensing for Each Phase of Normal Source: Sense low phase-to-ground voltage on each phase. Pickup voltage shall be adjustable from 85 to 100 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. (Factory set for pickup at 90 percent and dropout at 85 percent.)
 2. Overvoltage Sensing for Each Phase of Normal Source: Sense high phase-to-ground voltage on each phase. Pickup shall be adjustable from 110 to 120 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. (Factory set for pickup at 120 percent and dropout at 110 percent.)
 3. Under-frequency Sensing of Normal Source: Sense low frequency. Pickup frequency shall be adjustable from 85 to 100 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. (Factory set for pickup at 95 percent and dropout at 90 percent.)
 4. Over-frequency Sensing of Normal Source: Sense high frequency. Pickup frequency shall be adjustable from 105 to 120 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. (Factory set for pickup at 110 percent and dropout at 105 percent.)

5. Adjustable Time Delay: For override of normal-source voltage sensing to delay transfer and engine start signals. Adjustable from zero to six seconds, and factory set for one second.
6. Voltage/Frequency Lockout Relay: Prevent premature transfer to generator. Pickup voltage shall be adjustable from 85 to 100 percent of nominal. Factory set for pickup at 90 percent. Pickup frequency shall be adjustable from 90 to 100 percent of nominal. (Factory set for pickup at 95 percent.)
7. Commit/No-Commit Option: Selectable setting to select either "commit" or "no commit" to transfer operation in the event of a normal power failure.
 - a. In the "commit" position the load will transfer to the emergency source after any normal power failure.
 - b. In the "no commit" position, the load will transfer to the emergency position unless normal power returns before the emergency source has reach 90-percent of it's rated values (switch will remain in normal).
8. Time Delay for Retransfer to Normal Source: Adjustable from 0 to 30 minutes, and factory set for 10 minutes to automatically defeat delay on loss of voltage or sustained undervoltage of emergency source, provided normal supply has been restored.
9. Local Test Switch: Simulate normal-source failure.
10. Switch-Position Pilot Lights: Indicate source to which load is connected.
11. Source-Available Indicating Lights: Supervise sources via transfer-switch normal-and emergency-source sensing circuits.
 - a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."
 - b. Emergency Power Supervision: Red light with nameplate engraved "Emergency Source Available."
12. Unassigned Auxiliary Contacts: Two sets of normally open/normally closed dry contacts, single-pole, double-throw contacts for each switch position, rated 10 A at 240-V ac.
13. Transfer Override Switch: Overrides automatic retransfer control so automatic transfer switch will remain connected to emergency power source regardless of condition of normal source. Pilot light indicates override status.
14. Engine Starting Contacts: One isolated and normally closed, and one isolated and normally open; rated 10 A at 32-V dc minimum.
15. Engine Shutdown Contacts: Time delay adjustable from zero to five minutes, and factory set for five minutes. Contacts shall initiate shutdown at remote engine-generator controls after retransfer of load to normal source.
16. Engine-Generator Exerciser: Solid-state, programmable-time switch starts engine generator and transfers load to it from normal source for a preset time, then retransfers and shuts down engine after a preset cool-down period. Initiates exercise cycle at preset intervals adjustable from 7 to 30 days. Running periods are adjustable from 10 to 30 minutes. Factory settings are for 7-day exercise cycle, 20-minute running period, and 5-minute cool-down period. Exerciser features include the following:
 - a. Exerciser Transfer Selector Switch: Permits selection of exercise with and without load transfer.
 - b. Push-button programming control with digital display of settings.
 - c. Integral battery operation of time switch when normal control power is not available.
17. Load Shed Function: Provide load shed function to disconnect the load from the emergency source under the following conditions:
 - a. Overload
 - b. Fire Pump activation: Retransfer to the emergency source upon the fire pump disengagement.

2.5 BYPASS/ISOLATION SWITCHES

- A. Comply with requirements for Level 1 equipment according to NFPA 110.
- B. Description: Manual type, arranged to select and connect either source of power directly to load, isolating transfer switch from load and from both power sources. Include the following features for each combined automatic transfer switch and bypass/isolation switch:
 - 1. Means to lock bypass/isolation switch in the position that isolates transfer switch with an arrangement that permits complete electrical testing of transfer switch while isolated. While isolated, interlocks prevent transfer-switch operation, except for testing or maintenance.
 - 2. Drawout Arrangement for Transfer Switch: Provide physical separation from live parts and accessibility for testing and maintenance operations.
 - 3. Bypass/Isolation Switch Current, Voltage, Closing, and Short-Circuit Withstand Ratings: Equal to or greater than those of associated automatic transfer switch, and with same phase arrangement and number of poles.
 - 4. Contact temperatures of bypass/isolation switches shall not exceed those of automatic transfer-switch contacts when they are carrying rated load.
 - 5. Operability: Constructed so load bypass and transfer-switch isolation can be performed by 1 person in no more than 2 operations in 15 seconds or less.
 - 6. Legend: Manufacturer's standard legend for control labels and instruction signs shall describe operating instructions.
 - 7. Maintainability: Fabricate to allow convenient removal of major components from front without removing other parts or main power conductors.
 - 8. No Load Break: Switch constructed so load bypass and transfer-switch isolation can be performed without interruption to load.
- C. Interconnection of Bypass/Isolation Switches with Automatic Transfer Switches: Factory-installed copper bus bars; plated at connection points and braced for the indicated available short-circuit current.

2.6 REMOTE ANNUNCIATOR SYSTEM

- A. Functional Description: Remote annunciator panel shall annunciate conditions for indicated transfer switches. Annunciation shall include the following:
 - 1. Sources available, as defined by actual pickup and dropout settings of transfer-switch controls.
 - 2. Switch position.
 - 3. Switch in test mode.
 - 4. Failure of communication link.
 - 5. Switch in Manual/Override.
- B. Annunciator Panel: LED-lamp type with audible signal and silencing switch.
 - 1. Indicating Lights: Grouped for each transfer switch monitored.
 - 2. Label each group, indicating transfer switch it monitors, location of switch, and identity of load it serves.
 - 3. Mounting: Flush, modular, steel cabinet, unless otherwise indicated.
 - 4. Lamp Test: Push-to-test or lamp-test switch on front panel.

2.7 SOURCE QUALITY CONTROL

- A. Factory test and inspect components, assembled switches, and associated equipment. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1. Submit written test results.

2.8 ACCESSORY COMPONENTS AND FEATURES

- A. ~~TCP/IP and Modem Cards:~~ Provide TCP/IP and modem cards] capable of connecting to owners IP network to communicate faults, alarms and send SMS messages.
- B. Connection to Data Link: A separate terminal block, factory wired to Form C dry contacts, for each alarm and status indication is reserved for connections for data-link transmission of indications to remote data terminals. ~~Data system connections to terminals are covered in Division 26 Section "Electrical Power Monitoring and Control."~~
- C. Metering Provisions
 - 1. Requirements:
 - a. Factory installed metering class current transformers (CTs) mounted on each phase of the ATS load-side terminals, wired to a CT shorting block.
 - b. Factory installed meter voltage taps on each phase of the ATS load-side terminal with a properly sized fused block and isolation switch.
- A. Status Contacts: Provide each ATS with normally open/normally closed dry contacts for the following:
 - 1. ATS "Normal" switch position.
 - 2. ATS "Emergency" switch position.
 - 3. ATS "Test Active".

PART 3 - EXECUTION

3.1 APPLICATION

- A. Transfer switch mounting:
 - 1. 1000 Amp or less: Wall mounted, unless otherwise indicated.
 - 2. Over 1000 Amp: Floor mounted, unless otherwise indicated.
- B. Transfer/Bypass Switch mounting:
 - 1. In most cases no matter what amperage size – floor mounted.
- C. Remote Annunciator Panel (ATSAP) Locations: Provide annunciator panels in the following locations, unless otherwise indicated:
 - 1. Data Center Control Room
 - 2. Central Plant Operations Office
 - 3. Building Security Desk

3.2 INSTALLATION

- A. Design each fastener and support to carry load indicated by seismic requirements and according to seismic-restraint details per Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- B. Floor Mounted Switch: Install and anchor equipment level on concrete bases, 4-inch nominal thickness. Concrete base is specified in Division 26 Section "Hangers and Supports for Electrical Systems," and concrete materials and installation requirements are specified in Division 03.
- C. Wall-Mounting Switch: Install level.
 - 1. Wall mounted units shall utilize appropriate hardware based on the weight of the unit and installation location.

- D. Annunciator and Control Panel Mounting: Flush in wall, unless otherwise indicated.

3.3 CONNECTIONS

- A. Wiring to Remote Components: Match type and number of cables and conductors to control and communication requirements of transfer switches as recommended by manufacturer. Increase raceway sizes at no additional cost to Owner if necessary to accommodate required wiring.
- B. Connect start signal and other necessary wiring to Engine Generator control system; coordinate requirements with [Division 26 Section "Engine Generators". Each Automatic transfer switch shall have dedicated control wiring homerun to generator start control. Do not 'daisy-chain' control wiring between switches.
- C. Connect relay wiring to Elevator controller; coordinate requirements with Division 14 "Conveying Equipment."
- D. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- E. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- F. Provide capability of connection from TCP/IP card to Owner's IP network.
- G. Provide capability of connection from terminal block to Facility Management System.

3.4 IDENTIFICATION

- A. Identify components according to Division 26 Section "Identification for Electrical Systems."
- B. Affix a label with a toll-free telephone number for contacting emergency maintenance field service to front of each switch.

3.5 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
 - 1. Test insulation resistance for each transfer switch bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
- B. The testing agency in conjunction with manufacturer's field service shall work with a factory-authorized service representative to perform start-up, load bank and field tests and inspections and prepare certified test reports:
- C. Testing Agency: Engage a qualified independent testing and inspecting agency as defined in Division 26 Section "Common Work Results for Electrical" to perform the following field tests and inspections and prepare certified test reports:
 - 1. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
 - 2. Perform each electrical test, visual and mechanical inspection, and operational test stated in NETA ATS, Sections 7.22.3 as appropriate. Certify compliance with test parameters.
 - 3. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test

voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.

- a. Check for electrical continuity of circuits and for short circuits.
 - b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
 - c. Verify that manual transfer warnings are properly placed.
 - d. Perform manual transfer operation.
4. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.
- a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
 - b. Simulate loss of phase-to-ground voltage for each phase of normal source.
 - c. Verify time-delay settings.
 - d. Verify pickup and dropout voltages by data readout or inspection of control settings.
 - e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.
 - f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
 - g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.
5. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.
- a. Verify grounding connections and locations and ratings of sensors.
6. Record adjustable relay settings and measured insulation and contact resistances and time delays.
7. Infrared Scanning: Perform Thermographic Survey in accordance with NETA ATS, Section 9.0.
- a. Initial Infrared Scanning: Within 60 Days after Substantial Completion, perform an infrared scan of each switch. Open or remove doors and covers so connections are accessible to portable scanner.
 - b. Instruments, Equipment:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
- D. Correct Deficiencies and Report:
1. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace switches, relays, conductors, units, and devices as required to bring system into compliance.
 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 3. Prepare a report, certified by testing agency, that identifies switch, connection, conductors and devices checked and describes results. Include notation of deficiencies detected, remedial action taken, and observations and test results after remedial action.
- E. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.6 ADJUSTING

- A. Set field-adjustable intervals and delays, relays, and engine exerciser clock. Set delays as indicated below.

ATS Name	Priority Level	Load Shed Function	Time Delay Transfer to Emergency (Sec)	Time Delay Retransfer to Normal Power (Sec)
ATS-1	1	NO	0	300
ATS-2	2	NO	5	360
ATS-3-NDC	4	YES	15	480
ATS(BPS)-4-UDC	3	NO	10	420

3.7 CLEANING

- A. Clean components according to manufacturer's written instructions.
- B. Prior to installation of front trim and cover plates inspect interior surfaces and perform the following:
1. Remove paint splatters and other spots.
 2. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
- C. On completion of front trim and cover installation, inspect exterior surfaces and perform the following:
1. Remove paint splatters and other spots.
 2. Remove all temporary markings and labels.
 3. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
 4. Repair exposed surfaces to match original finish.

3.8 PROTECTION

- A. Temporary Heating: Maintain a clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Apply temporary heating as required.
- B. Protect equipment from exposure to dirt, fumes, water, corrosive substances, and physical damage.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's management and maintenance personnel to adjust, operate, and maintain transfer switches and related equipment as specified below. Refer to Division 01 Section "Demonstration and Training."
- B. Coordinate this training with that for generator equipment.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 264113

LIGHTNING PROTECTION FOR STRUCTURES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes lightning protection for buildings and building site components including, but not limited to outdoor generator-set enclosures.
- B. Related Sections include the following:
 - 1. Division 26 Section "Grounding and Bonding for Electrical Systems" for common grounding and bonding.

1.2 DEFINITIONS

- A. LPI: Lightning Protection Institute.
- B. NRTL: National recognized testing laboratory.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design lightning protection, including comprehensive engineering analysis by a UL certified company, using performance requirements and design criteria indicated.
- B. Design lightning protection components and systems to meet the requirements of UL 96A, NFPA 780 and LPI 175.

1.4 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Product Data: For air terminals, conductors, and mounting accessories.
- C. Delegated-Design Shop Drawings: Detail lightning protection system, including air-terminal locations, conductor routing, conductor connections, and bonding and grounding provisions. In addition also Include the following on shop drawings:
 - 1. Type, material, and size of conductors.
 - 2. Indications for where raceways will be used.
 - 3. Data on how concealment requirements will be met,
 - 4. Calculations required by NFPA 780 for bonding of grounded and isolated metal bodies.
 - 5. Installation details for thru roof penetrations.
 - 6. Installation details for conductor connections.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification data for firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include data on listing or certification by an NRTL or LPI.
- B. Certification, signed by Contractor, that roof adhesive for air terminals is approved by manufacturers of both the terminal assembly and the single-ply membrane roofing material where air terminals are mounted on single-ply membrane roofing.
- C. Field inspection reports indicating compliance with specified requirements.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For lightning protection system, to include in emergency, operation, and maintenance manuals. Provide items specified in Division 01 Section "Operation and Maintenance Data."
- B. Label and Certification: LPI System Certification, a written guarantee of UL compliance, and subsequent issuance of the UL Certificate of Inspection with surge verification.

1.7 QUALITY ASSURANCE

- A. Designer and Installer Qualifications: Engage an experienced installer who is an NRTL or who is certified by LPI as a Master Installer/Designer.
- B. Listing and Labeling: As defined in NFPA 780, "Definitions" Article.

1.8 COORDINATION

- A. Coordinate installation of lightning protection with installation of other building systems and components, including electrical wiring, supporting structures and building materials, metal bodies requiring bonding to lightning protection components, and building finishes.
- B. Coordinate installation of air terminals attached to roof systems with roofing manufacturer and Installer.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Advanced Lightning Technology, Ltd.
 - 2. Automatic Lightning Protection.
 - 3. East Coast Lightning Equipment, Inc.
 - 4. ERICO International Corporation.
 - 5. Harger Lightning Protection, Inc.
 - 6. Heary Bros. Lightning Protection Co. Inc.
 - 7. Independent Protection Co.
 - 8. Robbins Lightning Inc.

2.2 LIGHTNING PROTECTION SYSTEM COMPONENTS

- A. Comply with UL 96.
- B. Classification of Lightning Protection Equipment: Provide components in accordance with reference standards.
 - 1. For Roof Levels 75 feet and below in height: Provide NFPA Class I or II components, as required.
 - 2. For Roof Levels greater than 75 feet in height: Provide NFPA Class II components.
- C. Roof-Mounting Air Terminals: Solid Aluminum or Copper, as required by standards and dictated by construction materials to which lightning protection systems components are attached.
- D. Conductors: Stranded Aluminum or Copper, as required by standards and dictated by construction materials to which lightning protection systems components are attached.
 - 1. Provide copper down lead conductors even when aluminum is required at roof level. Extend Copper down lead conductors to roof. Provide approved bi-metallic connector at the thru-roof assembly to transition between aluminum and copper.
- E. Roof Attachment Components: Coordinate installation of roof-attachment components and roof penetrations with roofing installer. Refer to items specified in Division 07 Sections for roofing materials specified and other roof accessories.
 - 1. Provide specialty membrane patches, pads, pavers or other specialty items as required by the roofing manufacturer.
 - 2. Single-Membrane, Roof-Mounting Air Terminals: Where single membrane roofs are specified, provide products designed for single-membrane roof materials.
- F. Mounting Hardware: Stainless steel.
- G. Stack-Mounting Air Terminals: Stainless steel.
- H. Below Grade Cable Connections: Use approved exothermic-welded connections for all conductor splices and connections between conductors and other components.
- I. Above Grade Cable Connections: Use approved bolted connections for all conductor splices and connections between conductors and other components. Pressure squeeze clamps are not acceptable.
- J. Ground Rods, Ground Loop Conductors, and Concrete-Encased Electrodes: Comply with Division 26 Section "Grounding and Bonding for Electrical Systems" and with standards referenced in this Section.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install lightning protection components and systems according to UL 96A and NFPA 780.
- B. Install conductors with direct paths from air terminals to ground connections. Avoid sharp bends and narrow loops.
- C. Comply with mounting and support requirements specified in Division 26 Section "Hangers and Supports for Electrical Systems."

- D. Conceal the following conductors:
 - 1. System conductors.
 - 2. Down conductors.
 - 3. Interior conductors.
 - 4. Conductors within normal view from exterior locations at grade within 200 feet of building.
 - 5. Notify Architect at least 48 hours in advance of inspection before concealing lightning protection components.
- E. Air Terminals on Single-Ply Membrane Roofing: Comply with adhesive manufacturer's written instructions.
- F. For building in excess of 60 feet (18 m) Tall: Bond lightning protection components with intermediate-level interconnection loop conductors to grounded metal bodies of building at 60-foot intervals.

3.2 CORROSION PROTECTION

- A. Do not combine materials that can form an electrolytic couple that will accelerate corrosion in the presence of moisture unless moisture is permanently excluded from junction of such materials.
- B. Use conductors with protective coatings where conditions would cause deterioration or corrosion of conductors.

3.3 FIELD QUALITY CONTROL

- A. UL Inspection: Provide inspections as required to obtain a UL Certificate of Inspection for system.
- B. Provide an inspection by an inspector certified by LPI to obtain an LPI certification.

END OF SECTION

SECTION 264300

SURGE PROTECTIVE DEVICES

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes Surge Protective Devices for low-voltage power, control, and communication equipment.
- B. Related Sections include the following:
 - 1. Division 26 Section "Wiring Devices" for devices with integral SPD's.

1.2 DEFINITIONS

- A. SPD: Surge Protective Device.
- B. VPR: Voltage Protection Rating.

1.3 ACTION SUBMITTALS

- A. Compliance Certification: Submit a Specification Compliance Certification in accordance with Division 26 Section "Common Work Results for Electrical".
- B. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- C. Product Data: For each type of product indicated. Include rated capacities, operating weights, operating characteristics, furnished specialties, and accessories.
- D. Product Certificates: For surge protective devices, signed by product manufacturer certifying compliance with the following standards:
 - 1. UL 1283.
 - 2. UL 1449.
 - 3. MIL-STD 220A. Conduct spectrum analysis of each unit based on test procedures between 50kHz and 200kHz indicating the device noise attenuation.
 - 4. ANSI/IEEE C62.41.2 and ANSI/IEEE C62.45: Provide certified documentation of applicable Location Category Testing in full compliance guidelines.
- E. Shop Drawings: Submit shop drawings to indicate information not fully described by the product data.
 - 1. Include electrical characteristics and ratings for the specified equipment.
 - 2. Include wiring diagrams indicating the internal connections of the specified equipment within its enclosure.
 - 3. Indicate device dimensions, weights, mounting provisions, and connection details.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control test reports, including the following:
 - 1. Test procedures used.

2. Test results that comply with requirements.
3. Failed test results and corrective action taken to achieve requirements.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For surge protective devices to include in emergency, operation, and maintenance manuals. Provide items specified in Division 01 Section "Operation and Maintenance Data."
- B. Warranties: Special warranties specified in this Section.

1.6 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Replaceable Protection Modules: One Twoof each size and type installed.

1.7 QUALITY ASSURANCE

- A. Testing Agency Qualifications: For independent agency as defined in Division 26 Section "Common Work Results for Electrical".
- B. Source Limitations: Obtain suppression devices and accessories through one source from a single manufacturer.
 1. Exception: Factory-installed devices specified in other Division 26 Sections are not required to match externally mounted units.
- C. Product Options: Drawings indicate size, spatial requirements, and electrical performance of suppressors and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with IEEE C62.41, "IEEE Guide for Surge Voltages in Low Voltage AC Power Circuits," and test devices according to IEEE C62.45, "IEEE Guide on Surge Testing for Equipment Connected to Low-Voltage AC Power Circuits."
- F. Comply with UL 1283, "Electromagnetic Interference Filters," and UL 1449, "Safety for Surge Protective Devices."

1.8 PROJECT CONDITIONS

- A. Service Conditions: Rate surge protection devices for continuous operation under the following conditions, unless otherwise indicated:
 1. Maximum Continuous Operating Voltage: Not less than 115 percent of nominal system operating voltage.
 2. Operating Temperature: 30 to 120 deg F
 3. Storage Temperature: -40 to 185 deg F (-40 to 85 deg C)
 4. Operating Frequency: 47 to 63 Hertz.
 5. Humidity: 0 to 85 percent, noncondensing
 6. Altitude: Less than 12,000 feet above sea level.

1.9 COORDINATION

- A. Coordinate location of field-mounted surge suppressors to allow adequate clearances for maintenance.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of surge suppressors that fail in materials or workmanship within five years from date of Substantial Completion.
- B. Special Warranty for Cord-Connected, Plug-in Surge Suppressors: Manufacturer's standard form in which manufacturer agrees to repair or replace electronic equipment connected to circuits protected by surge suppressors.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. ACT Communications, Inc.
 - 2. Current Technology, Inc.
 - 3. General Electric Co.; Electrical Distribution & Protection Div.
 - 4. LEA International.
 - 5. Leviton Mfg. Company Inc.
 - 6. Liebert Corporation; a division of Emerson.
 - 7. Siemens Energy & Automation, Inc.
 - 8. Square D; Schneider Electric.
 - 9. United Power Corporation.
 - 10. Surge Suppression, Inc.
 - 11. Others as approved.

2.2 COMMON REQUIREMENTS FOR SUPPRESSORS

- A. Surge Protection Device Description: Modular design with field-replaceable modules, sine-wave-tracking type with the following features and accessories:
 - 1. Fuses, rated at 200-kA interrupting capacity. SCCR rating of the SPD shall be 200kAIC without the need for upstream overcurrent protection.
 - 2. Fabrication using bolted compression lugs for internal wiring.
 - 3. Redundant suppression circuits.
 - 4. Redundant replaceable modules.
 - 5. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
 - 6. LED indicator lights for power and protection status.
 - 7. Audible alarm, with silencing switch, to indicate when protection has failed.
 - 8. One set of dry contacts rated at 2 A and 24-V dc, for remote monitoring of protection status. Coordinate with building power monitoring and control system.
 - 9. Surge-event operations counter: Six-digit transient counter set to total all transient surges that deviate from the fundamental sine wave by more than 125V.
 - 10. Normal Audible Noise less than 0dB.
 - 11. EMI/RFI Noise attenuation: Exceeding 30dB at 100kHz, using 50 ohm insertion loss test.
 - 12. Magnetic Fields: No appreciable magnetic fields shall be generated. The device shall be capable of use directly in computer rooms in any location without danger to data storage systems or devices.

13. Leakage Current less than 1mA.

2.3 SERVICE ENTRANCE SUPPRESSORS

- A. Service Entrance Suppressors to meet "Common Requirements for Suppressors" listed above, unless otherwise indicated.
- B. Maximum Category C combination wave clamping voltage shall not exceed the following:
 - 1. 1000V, line to neutral and line to ground on 120/208 V systems.
 - 2. 1500V, line to neutral and line to ground on 277/480 V systems
- C. Withstand Capabilities: 10,000 Category C surges with less than 10 percent change in clamping voltage.
- D. Peak Single-Impulse Surge Current Rating:
 - 1. 240 kA per mode/480 kA per phase.
- E. Minimum single impulse current ratings, using 8-by-20-mic.sec waveform described in IEEE C62.41.2
 - 1. Line to Neutral: 80,000 A.
 - 2. Line to Ground: 80,000 A.
 - 3. Neutral to Ground: 50,000 A.
- F. Nominal Discharge Current I(n): 20kA.
- G. Connection Means: Permanently wired.
- H. Protection modes and UL 1449 VPR with integral disconnect for grounded wye circuits with voltages of 480Y/277 208Y/120, 3-phase, 4-wire circuits shall be as follows:
 - 1. For Non-Fused Devices:
 - a. Line to Neutral: 1200 V for 480Y/277
 - b. Line to Ground: 1200 V for 480Y/277
 - c. Neutral to Ground: 1200 V for 480Y/277
 - 2. For Fused Devices:
 - a. Line to Neutral: 1500 V for 480Y/277
 - b. Line to Ground: 1500 V for 480Y/277
 - c. Neutral to Ground: 1500 V for 480Y/277

2.4 DISTRIBUTION PANELBOARD SUPPRESSORS

- A. Distribution Panelboard Suppressors to meet "Common Requirements for Suppressors" listed above, unless otherwise indicated.
- B. Peak Single-Impulse Surge Current Rating:
 - 1. 160 per mode/320 kA per phase.
- C. Minimum single impulse current ratings, using 8-by-20-mic.sec waveform described in IEEE C62.41.2
 - 1. Line to Neutral: 60,000 A.
 - 2. Line to Ground: 60,000 A.
 - 3. Neutral to Ground: 50,000 A.
- D. Nominal Discharge Current I(n): 20kA.
- E. Connection Means: Permanently wired.

- F. Protection modes and UL 1449 VPR with integral disconnect for grounded wye circuits with voltages of 480Y/277 208Y/120, 3-phase, 4-wire circuits shall be as follows:
 - 1. For Non-Fused Devices:
 - a. Line to Neutral: 1200 V for 480Y/277
 - b. Line to Ground: 1200 V for 480Y/277
 - c. Neutral to Ground: 1200 V for 480Y/277
 - 2. For Fused Devices:
 - a. Line to Neutral: 1500 V for 480Y/277
 - b. Line to Ground: 1500 V for 480Y/277
 - c. Neutral to Ground: 1500 V for 480Y/277

2.5 LIGHTING AND APPLIANCE PANELBOARD SUPPRESSORS

- A. Lighting and Appliance Panelboard Suppressors to meet "Common Requirements for Suppressors" listed above, unless otherwise indicated.
- B. Peak Single-Impulse Surge Current Rating:
 - 1. 100 per mode/240 kA per phase.
- C. Nominal Discharge Current I(n): 20kA.
- D. Connection Means: Permanently wired.
- E. Protection modes and UL 1449 VPR with integral disconnect for grounded wye circuits with voltages of 480Y/277 and 208Y/120, 3-phase, 4-wire circuits shall be as follows:
 - 1. For Non-Fused Devices:
 - a. Line to Neutral: 1200 V for 480Y/277 and 700 V for 208Y/120.
 - b. Line to Ground: 1200 V for 480Y/277 and 700 V for 208Y/120.
 - c. Neutral to Ground: 1200 V for 480Y/277 and 700 V for 208Y/120.

2.6 ENCLOSURES

- A. NEMA 250, with type matching the enclosure of panel or device being protected.

2.7 INTEGRAL DISCONNECT SWITCH

- A. Each device to have a NEMA compliant safety interlocked integral disconnect switch with an externally mounted metal manual operator.
- B. Switch shall disconnect all ungrounded circuit conductors from the distribution system to enable testing and maintenance without interruption to the facility's distribution system.
- C. Switch shall be rated for 600Vac.
- D. Capable of withstanding, without failure, the published maximum surge current magnitude without failure or damage to the switch.
- E. Line side of the integral disconnect shall be blocked off so that when the SPD is opened there is no direct access to the voltage present on the line side of the disconnect.

PART 3 - EXECUTION

3.1 INSTALLATION OF SURGE PROTECTION DEVICES

- A. Install devices at service entrance on load side, with ground lead bonded to service entrance ground.
- B. Install devices for panelboard and auxiliary panels with conductors or buses between suppressor and points of attachment as short and straight as possible. Do not exceed manufacturer's recommended lead length. Do not bond neutral and ground.
 - 1. Provide multipole, 100-A frame circuit breaker as a dedicated disconnect for suppressor, unless otherwise indicated. Comply with manufacturer's written recommendation for conductor and trip rating of circuit-breaker for connecting SPD devices to distribution system. Match circuit-breaker size to conductor size.
- C. Comply with mounting and support requirements specified in Division 26 Section "Hangers and Supports for Electrical Systems."

3.2 PLACING SYSTEM INTO SERVICE

- A. Do not energize or connect service entrance equipment and panelboards to their sources until surge protection devices are installed and connected.

3.3 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components and provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."
- B. Equipment Identification Nameplates: Label each SPD with engraved Equipment Identification Label as specified in Division 26 Section "Identification for Electrical Systems."
- C. Provide a permanent label indicating UL 1449 Voltage Protective Rating (VPR) on each SPD.

3.4 CONNECTIONS

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
 - 1. Test insulation resistance for each component, connecting supply, feeder, and control circuit.
 - a. Do not perform insulation resistance tests of the distribution wiring equipment with the surge protective device installed. Disconnect before conducting insulation resistance tests, and reconnect immediately after the testing is over.
 - 2. Test continuity of each circuit.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to perform the following field tests and inspections and prepare certified test reports:
 - 1. After installing surge protection devices, but before electrical circuitry has been energized, test for compliance with requirements.
 - 2. Complete startup checks according to manufacturer's written instructions.
 - 3. Perform each visual and mechanical inspection and electrical test stated in NETA ATS 7.19.1, "Surge Arresters, Low-Voltage Surge Protection Devices" Section. Certify compliance with test parameters.
 - 4. Infrared Scanning: Perform Thermographic Survey in accordance with NETA ATS, Section 9.0.
 - a. Initial Infrared Scanning: Within 60 Days after Substantial Completion, perform an infrared scan of each unit. Open or remove doors and covers so connections are accessible to portable scanner.
 - b. Instruments, Equipment:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
- C. Correct Deficiencies and Report:
 - 1. Correct unsatisfactory conditions, and retest to demonstrate compliance; replace SPD, conductors, units, and devices as required to bring system into compliance.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. Prepare a report, certified by testing agency, that identifies switch, connection, conductors and devices checked and describes results. Include notation of deficiencies detected, remedial action taken, and observations and test results after remedial action.

3.6 CLEANING

- A. Clean components according to manufacturer's written instructions.
- B. Prior to installation of front trim and cover plates inspect interior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
- C. On completion of front trim and cover installation, inspect exterior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Remove all temporary markings and labels.
 - 3. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
 - 4. Repair exposed surfaces to match original finish.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's management and maintenance personnel to adjust, operate, and maintain surge protective devices. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

SECTION 265100

INTERIOR LIGHTING

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Interior luminaires, lamps, and ballasts.
 - 2. Solid State luminaires, and drivers.
 - 3. Emergency lighting units.
 - 4. Exit signs.
 - 5. Luminaire supports.

1.2 DEFINITIONS

- A. BF: Ballast factor.
- B. CCT: Correlated Color Temperature.
- C. CRI: Color-rendering index.
- D. CU: Coefficient of utilization.
- E. FMG: FM Global (formally Factory Mutual).
- F. HID: High-intensity discharge.
- G. LED: Light emitting diode.
- H. LER: Luminaire efficacy rating.
- I. Luminaire: Complete Lighting unit including, housing, lamps, reflector, socket, wiring, diffuser, and ballast and ballast housing where applicable.
- J. RCR: Room cavity ratio.
- K. Solid State: Lighting products that use semiconductor light-emitting diodes (LEDs), organic light-emitting diodes (OLED), or polymer light-emitting diodes (PLED) as sources of illumination rather than electrical filaments, plasma, or gas.
- L. TM-21 L70: The time it takes a Luminaire to reach 70% Lumen maintenance based on extrapolations from LM-80-08 data using the approved methods required in IESNA Technical Memorandum 21 (TM-21).

1.3 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.

- B. Product Data: For each type of luminaire, arranged in order of fixture designation. Include data on features, accessories, finishes and the following:
1. Physical description of luminaire including dimensions.
 2. Emergency lighting units including battery and charger.
 3. Performance data for Ballast.
 4. Energy-efficiency data.
 5. Life, output, and energy-efficiency data for lamps.
 6. Photometric data, in IESNA LM-63-2002 format, based on laboratory tests of each luminaire type, outfitted with lamps, ballasts, and accessories identical to those indicated for the luminaire as applied in this Project.
 - a. Provide optical performance, polar diagrams, and relevant luminance and illuminance photometric data.
 - b. Photometric data shall be certified by a qualified independent testing agency or by a manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program (NVLAP) for Energy Efficient Lighting Products.
 - c. LM-79 luminaire photometric reports for Solid State luminaires. The test laboratory must hold National Voluntary Laboratory Accreditation Program (NVLAP) accreditation for the IES LM-79 test procedure or must be qualified, verified, and recognized through the U.S. Department of Energy's CALiPER program.
 7. Solid State Luminaire reliability reports indicating that the manufacturer of the LED (chip, diode, or package) has performed JEDEC (Joint Electron Devices Engineering Council) reliability tests on the LEDs as follows:
 - a. High Temperature Operating Life (HTOL).
 - b. Room Temperature Operating Life (RTOL).
 - c. Low Temperature Operating Life (LTOL).
 - d. Powered Temperature Cycle (PTMCL).
 - e. Non-Operating Thermal Shock (TMSK).
 - f. Mechanical shock.
 - g. Variable vibration frequency.
 - h. Solder Heat Resistance (SHR).
- C. Shop Drawings: Show details of nonstandard or custom luminaires. Indicate dimensions, weights, methods of field assembly, components, features, and accessories.
1. Wiring Diagrams: Power and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit Reflected Ceiling Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electrical."
- B. Product Certificates: For each type of ballast for bi-level and dimmer-controlled fixtures, signed by product manufacturer.
- C. Qualification Data: For agencies providing photometric data for luminaires.
- D. Field quality-control test reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For luminaires and accessories to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation And Maintenance Data," include the following:

1. Manufacturer's routine maintenance requirements for lighting and all installed components.
 2. Special Lamp and Ballast disposal requirements; including manufacturer's safety data sheet with EPA requirements.
 3. Lamp and Ballast Summary: Prepare a tabulation of lamps and ballast used on project; include part numbers and ordering information.
- B. Warranties: Special warranties specified in this Section. Include registration information for Lamp and Ballast Specialty Warranty Programs (i.e. Sylvania Quick60+®, Advance PLUS 90 Protection®, etc).

1.6 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Lamps: 10 for every 100 of each type and rating installed. Furnish at least one of each type.
 2. Plastic Diffusers and Lenses: 1 for every 100 of each type and rating installed. Furnish at least one of each type.
 3. Battery and Charger Data: One for each emergency lighting unit.
 4. Ballasts: 1 for every 100 of each type and rating installed. Furnish at least one of each type.
 5. Globes and Guards: 1 for every 20 of each type and rating installed. Furnish at least one of each type.
 6. Exit Signs: 5 for every 100 of each type and installed. Furnish at least one of each type.

1.7 QUALITY ASSURANCE

- A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.
- B. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7.
- C. Source Limitations: All luminaires with the same type designation shall be obtained from a single manufacturer. Obtain similar luminaire types through one source from a single manufacturer, unless otherwise indicated.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with NFPA 70.
- F. FMG Compliance: Luminaires for hazardous locations shall be listed and labeled for indicated class and division of hazard by FMG.
- G. Mockups: Provide interior luminaires for room or module mockups, complete with power and control connections. Refer to Division 01 for which portions of the Work require Mockups.
1. Obtain Architect's approval of fixtures for mockups before starting installations.

2. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Prepare products for shipment.
 1. Provide suitable packaging materials, crating, blocking, and supports so equipment will withstand expected domestic shipping and handling shocks and vibration.
 2. Weatherproof packaging for shipment. Close connection openings to prevent entrance of foreign material during shipment and storage.
- B. Store luminaires indoors in clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Protect products from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- C. Handle product components according to manufacturer's written instructions.

1.9 COORDINATION

- A. Coordinate layout and installation of luminaires and suspension system with other construction that penetrates ceilings or is supported by them, including but not limited to HVAC equipment, fire-suppression system, and partition assemblies.

1.10 WARRANTY

- A. Special Warranty for Emergency Lighting Batteries: Manufacturer's standard form in which manufacturer of battery-powered emergency lighting unit agrees to repair or replace components of rechargeable batteries that fail in materials or workmanship within specified warranty period.
 1. Warranty Period for Emergency Lighting Unit Batteries: 10 years from date of Substantial Completion. Full warranty shall apply for first year, and prorated warranty for the remaining nine years.
- B. Special Warranty for Ballasts: Manufacturer's standard form in which ballast manufacturer agrees to replace ballasts replace lamps that fail in materials or workmanship, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
 1. Warranty Period for Electronic Ballasts: 36 months from date of Substantial Completion.
- C. Special Warranty for Solid State Power Supplies and Drivers: Manufacturer's standard form, made out to Owner and signed by manufacturer agreeing to replace power supplies or drivers that fail in materials or workmanship, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Provide luminaires in accordance with the designations and descriptions in the "Luminaire Schedule" located on the Drawings. In Luminaire Schedule, products are listed below column or row headings that introduce lists, the following requirements apply to product selection:
 1. Available Manufacturers: Where the Luminaire Schedule indicates only one product by manufacturer and associated catalog number and does not list other manufacturers by name; the design for each luminaire is based on the product

- named by manufacturer and associated catalog number scheduled. Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.
2. Manufacturers: Where the Luminaire Schedule indicates more than one manufacturer and associated catalog number; Subject to compliance with requirements, provide one of the products named by the manufacturers specified.
 3. Basis-of-Design Product: Where the Luminaire Schedule indicates only one product by manufacturer and associated catalog number and lists other manufacturers by name only; the design for each luminaire is based on the product named by manufacturer and associated catalog number scheduled. Subject to compliance with requirements; provide either the named product or a comparable product by one of the other manufacturers specified.
 4. Specific Product: Where the Luminaire Schedule indicates only one product by manufacturer and associated catalog number and does not list other manufacturers by name and includes the phrase "NO SUBSTITUTIONS ALLOWED"; the design for each luminaire is based on the product named by manufacturer and associated catalog number scheduled. Subject to compliance with requirements, provide the product named by the manufacturers specified. Provide a list of Unit Prices for these items in accordance with requirements of Division 01 Section "Unit Prices".

2.2 LUMINAIRES AND COMPONENTS, GENERAL REQUIREMENTS

- A. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures.
- B. Solid State Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5B.
- C. Metal Parts: Free of burrs and sharp corners and edges.
- D. Sheet Metal Components: Steel, unless otherwise indicated. Form and support to prevent warping and sagging.
- E. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position.
- F. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:
 1. White Surfaces: 85 percent.
 2. Specular Surfaces: 83 percent.
 3. Diffusing Specular Surfaces: 75 percent.
 4. Laminated Silver Metallized Film: 90 percent.
- G. Plastic Diffusers, Covers, and Globes:
 1. Acrylic Lighting Diffusers: 100 percent virgin acrylic plastic. High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
 - a. Lens Thickness: At least 0.125 inch (3.175 mm) minimum unless different thickness is indicated.
 - b. UV stabilized.
 2. Glass: Annealed crystal glass, unless otherwise indicated.
- H. Electromagnetic-Interference Filters: Factory installed to suppress conducted electromagnetic-interference as required by MIL-STD-461E. Fabricate luminaires with one filter on each ballast indicated to require a filter.

2.3 LUMINAIRE DISCONNECTING MEANS

- A. Disconnect for Ballasted Luminaires: Provide a Factory-Installed in-line disconnecting means for ballasted luminaires. Provide disconnect at each luminaire. Locate disconnect internal or external to luminaire; for disconnects external to luminaire, disconnect shall be attached to the luminaire.
 - 1. Available Manufacturers: Subject to compliance with requirements, provide Sta-Kon® Luminaire Disconnect manufactured by Thomas and Betts or similar products meeting requirement listed herein.

2.4 EXIT SIGNS

- A. Description: Comply with UL 924; for sign colors, visibility, luminance, and lettering size, comply with authorities having jurisdiction.
- B. Chevrons: Fixture Schedule does not indicate chevron quantity or direction. Coordinate chevron arrows required with plans. Chevrons shall be external to the lettering on sign face.
- C. Internally Lighted Signs:
 - 1. Lamps for AC Operation: LEDs, 70,000 hours minimum rated lamp life use less than 5 watts of electricity
 - 2. Self-Powered Exit Signs (Battery Type): Integral automatic charger in a self-contained power pack.
 - a. Battery: Sealed, maintenance-free, nickel-cadmium type.
 - b. Charger: Fully automatic, solid-state type with sealed transfer relay.
 - c. Operation: Relay automatically energizes lamp from battery when circuit voltage drops to 80 percent of nominal voltage or below. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
 - d. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
 - e. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
 - f. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.
 - 3. Master/Remote Sign Configurations:
 - a. Master Unit: Comply with requirements above for self-powered exit signs, and provide additional capacity in LED power supply ballast for power connection to remote unit.
 - b. Remote Unit: Comply with requirements above for self-powered exit signs, except omit power supply, battery and test features. Arrange to receive full power requirements from master unit. Connect for testing concurrently with master unit as a unified system.

2.5 EMERGENCY LIGHTING UNITS

- A. Description: Self-contained units complying with UL 924.
 - 1. Battery: Sealed, maintenance-free, lead-acid type.
 - 2. Charger: Fully automatic, solid-state type with sealed transfer relay.
 - 3. Operation: Relay automatically turns lamp on when power supply circuit voltage drops to 80 percent of nominal voltage or below. Lamp automatically disconnects from battery when voltage approaches deep-discharge level. When normal voltage

is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.

4. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
5. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
6. Wire Guard: Heavy-chrome-plated wire guard protects lamp heads or fixtures.
7. Integral Time-Delay Relay: Holds unit on for fixed interval of 15 minutes when power is restored after an outage.
8. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.

2.6 LAMPS – GENERAL

- A. General: Configurations and ratings as noted in Luminaire Schedule on Drawings.
 1. Requirements: Comply with subparagraphs below for specific lamp types.
 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. General Electric;
 - b. OSRAM Sylvania;
 - c. Phillips;

2.7 SOLID STATE LIGHTING SYSTEMS

- A. Solid State luminaires will comply with the requirements of the following standards:
 1. ANSI/NEMA/ANSI C78.377-2008 – American National Standard for the Chromaticity of Solid State Lighting Products.
 2. LM-79-08, IESNA Approved Method for the Electrical and Photometric Measurements of Solid-State Lighting Products.
 3. LM-80-08, IESNA Approved Method for Measuring Lumen Maintenance of LED Light Sources.
- B. LED Chip Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Osram.
 2. Philips – LumiLEDs.
 3. Nichia.
 4. Cree.
 5. Seoul Semi-Conductor.
 6. Xicato.
 7. Bridgelux.
- C. General: Provide Solid State systems and LED components meeting the following requirements:
 1. Provide Solid State systems from same binning process to maintain color consistency.
 2. Deliver all Solid State products at the same time and store on site to ensure that products have been produced from the same bin. Tolerances exceeding 200K will not be acceptable.
 3. The Solid State Luminaires shall be operated at constant and carefully regulated current levels. LEDs shall not be overdriven beyond their specified nominal voltage and current.

4. Provide Electrical connections protected from reverse polarity. Provide high voltage protection in the event connections are reversed or shorted during the installation process.
 5. Provide Solid State Luminaires and power/data supplies from a single manufacturer to ensure compatibility.
 6. Provide all Solid State controls, peripheral devices, and software from a single manufacturer to ensure compatibility.
 7. Conduct minimum eight-hour burn-in test during manufacturing on Solid State Luminaires (100% of each lot).
- D. White & Static Color Solid State Systems: White LED sources must meet the following requirements:
1. Luminaires must be rated for -40°C to +50°C operation.
 2. Duv tolerance of 0.001 ± 0.006 .
 3. Color Rendering Index (CRI): greater than or equal to 80.
 4. Correlated Color Temperature (CCT) as Specified in Luminaire Schedule. Meet the following tolerance requirements for CCT specified:
 - a. Nominal 2700K CCT: 2725 ± 50 .
 - b. Nominal 3000K CCT: 3045 ± 50 .
 - c. Nominal 3500K CCT: 3465 ± 50 .
 - d. Nominal 4000K CCT: 3985 ± 50 .
 - e. Nominal 4500K CCT: 4503 ± 50 .
 - f. Nominal 5000K CCT: 5028 ± 50 .
 - g. Nominal 5700K CCT: 5665 ± 50 .
 - h. Nominal 6500K CCT: 6530 ± 50 .
- E. Dynamic Color Changing Solid State Systems: RGB LED sources must meet the following requirements:
1. Luminaires must be rated for -40°C to +50°C operation.
 2. Duv tolerance of 0.001 ± 0.006 .
 3. Color Rendering Index (CRI): greater than or equal to 80 for RGB mixed white.
 4. Controllability:
 - a. 8-bit control of red, green and blue LEDs to produce 16.7 million colors or more.
 - b. Digital driver using high-speed pulse width modulation (PWM).
 - c. Integral and differential nonlinear control.
 - d. 14-bit or greater nonlinear scaling techniques for high-resolution output.
 - e. Selectable means of external control via a data network.
 - f. Support frame rates greater than 30 frames per second.
 - g. Constant data transmission rates shall be employed, resulting in the output being independent of distance of cable between power supply and light source within the specified length.
- F. Luminaire: Configurations, requirements and ratings are noted in Luminaire Schedule on Drawings. Correlated Color Temperature (CCT) is specified in Luminaire Schedule. Comply with subparagraphs below for specific luminaire types, unless otherwise indicated on Drawings:
1. Parking Garage Luminaires:
 - a. Minimum Light Output: 2000 lumens, unless otherwise indicated.
 - b. Allowable CCT per ANSI C78.377: Less than or equal to 5700K.
 - c. CRI: Minimum of 50, unless otherwise indicated.
 - d. TM-21 L70 Lumen Maintenance: 100,000 Hours.
 - e. Minimum Luminaire Efficacy: 60 lumens / watt.
 - f. Housing: IP56 rated.
 2. Linear Panels, Linear Strips and Troffers:

- a. Minimum Light Output: 3000 lumens, unless otherwise indicated.
 - b. Allowable CCT per ANSI C78.377: Less than or equal to 5700K.
 - c. CRI: Minimum of 80, unless otherwise indicated.
 - d. TM-21 L70 Lumen Maintenance: 50,000 Hours.
 - e. Minimum Luminaire Efficacy: 65 lumens / watt.
3. High Bay and Low Bay Luminaires:
- a. Minimum Light Output: 10,000 lumens, unless otherwise indicated.
 - b. Allowable CCT per ANSI C78.377: Less than or equal to 5700K.
 - c. CRI: Minimum of 80, unless otherwise indicated.
 - d. TM-21 L70 Lumen Maintenance: 50,000 Hours.
 - e. Minimum Luminaire Efficacy: 70 lumens / watt.
4. Round and Square Aperture Downlights Luminaires:
- a. Minimum Light Output: 500 lumens, unless otherwise indicated.
 - b. Allowable CCT per ANSI C78.377: Less than or equal to 5700K.
 - c. CRI: Minimum of 80, unless otherwise indicated.
 - d. TM-21 L70 Lumen Maintenance: 35,000 Hours.
 - e. Minimum Luminaire Efficacy: 40 lumens / watt.

2.8 DRIVERS FOR SOLID STATE LIGHTING

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- 1. Lutron Electronics Co., Inc.
 - 2. OSRAM Sylvania.
- B. Description: Electronic programmed rapid-start type, complying with FCC Part 15 Class A or Class B, designed for type and quantity of LEDs indicated. Driver shall be designed for full light output and include dimming capability.
- 1. Compatibility: Certified by manufacturer for use with LED type provided.
 - 2. Comply with UL 8750 Class 2.
 - 3. Thermal Protection: Comply with UL Class P, Type 1 Outdoor.
 - 4. Sound Rating: Class A.
 - 5. Total Harmonic Distortion Rating: Less than 10 percent.
 - 6. Transient Voltage Protection: ANSI/IEEE C62.41, Category A or better.
 - 7. Input Voltage Range: 108-305 Volts.
 - 8. Output Voltage: not exceeding 60V (Complies with Class 2 for US).
 - 9. Maximum inrush current: 2 amperes for 120V and 277V drivers.
 - 10. Minimum Efficiency at Full Load: 85%.
 - 11. Power Factor: 0.9 or higher.
 - 12. Starting Temperature: Minus 5 Deg F (Minus 20 Deg C) minimum to 104 Deg F (40 Deg C), unless otherwise indicated.
 - 13. Case Temperature: 75 Deg C maximum, unless otherwise indicated or used in LM70 reporting.
 - 14. Housing: minimum IP20 rating for dry location installation, higher rating as required for exterior use.
 - 15. Remote Mounting Distance: Up to 18-feet, where indicated.
 - 16. Interference: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for non-consumer equipment.
 - 17. Rated Life: minimum of 50,000 hours of rated lifetime at maximum operating conditions.
 - 18. Dimmable with standard dimmers down to 1%. 0-10V, 3-wire, or 3. Forward Phase Control (neutral wire required) (Line Voltage Controlled) Dimming as required to be compatible with lighting control system specified.

2.9 LUMINAIRE SUPPORT COMPONENTS

- A. Comply with Division 26 Section "Hangers and Supports for Electrical Systems" for channel- and angle-iron supports and nonmetallic channel and angle supports.
- B. Single-Stem Hangers: 1/2-inch steel tubing with swivel ball fittings and ceiling canopy. Finish same as fixture, unless otherwise indicated.
- C. Twin-Stem Hangers: Two, 1/2-inch steel tubes with single canopy designed to mount a single fixture. Finish same as fixture, unless otherwise indicated.
- D. Wires: ASTM A 641/A 641M, Class 3, soft temper, zinc-coated steel, 12 gage.
- E. Wires for Humid Spaces: ASTM A 580/A 580M, Composition 302 or 304, annealed stainless steel, 12 gage.
- F. Rod Hangers: 3/16-inch minimum diameter, cadmium-plated, threaded steel rod.
- G. Hook Hangers: Integrated assembly matched to fixture and line voltage and equipped with threaded attachment, cord, and locking-type plug.
- H. Suspension Bar for Light Fixtures: Factory-fabricated metal hanger for supporting luminaires at locations between ceiling system t-grid components. Attached to ceiling tee bar with screws or integral clamp for stability. Includes tab for independent support wire attachment.
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Cooper B-Line, Inc.; a division of Cooper Industries.
 - b. ERICO International Corporation.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with NECA/IESNA 500 "Standard for Installing Indoor Commercial Lighting" as published by the National Electrical Contractors Association.
- B. Comply with applicable portions of NECA/IESNA 502 "Standard for Installing Industrial Lighting Systems" as published by the National Electrical Contractors Association.
- C. Refer to Architectural Reflected Ceiling Plans for locations of luminaires. Do not scale locations from Electrical Drawings.
- D. Luminaires: Set level, plumb, and square with ceilings and walls. Install so as not to interfere with the installation or removal of adjacent ceiling panels.
- E. Lamps: Install lamps in each fixture.
- F. Ballasts: Provide multiple ballasts as required to accommodate multilevel switching indicated on Drawings.
- G. Flanges: Verify the exact ceiling type and arrangement within which the luminaires will be installed with the Architectural reflected ceiling plans prior to procurement. Provide

appropriate flanges and accessories with each luminaire to accommodate the defined ceiling.

- H. Support for Luminaires in or on Grid-Type Suspended Ceilings: Use grid as a support element in conjunction with independent supports.
 - 1. Support Clips: Fasten to luminaires and to ceiling grid members at or near each fixture corner with clips that are UL listed for the application.
 - 2. Install at least two independent support rods or wires from structure to a tab on luminaire at opposite corners. For fixture over 48 inches (1220 mm) in length, provide intermediate independent supports at a minimum of 48 inches (1220 mm) on center. Wire or rod shall be independent of ceiling support system and shall have breaking strength of the weight of fixture at a safety factor of 3.
 - 3. Fixtures of Sizes Less Than Ceiling Grid: Install fixture as indicated on reflected ceiling plans or center in acoustical panel, and support fixtures independently with at least two factory-fabricated metal Suspension Bar for Light Fixtures spanning.
- I. Suspended Luminaire Support:
 - 1. Pendants and Rods: Where longer than 48 inches, brace to limit swaying or other horizontal movement.
 - 2. Stem-Mounted, Single-Unit Fixtures: Suspend with stem hangers, unless otherwise indicated.
 - 3. Fixtures Support Points: Where support points for suspended luminaires are required in locations between ceiling grip components, install at location indicated or in center in acoustical panel, and support with a factory-fabricated Tee Bar Grid Box Hanger spanning and secured to ceiling tees with integral factory-fabricated clamp.
 - 4. Continuous Rows: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of fixture chassis, including one at each end, unless otherwise indicated.

3.2 CONNECTIONS

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.3 CLEANING AND RELAMPING

- A. Clean components according to manufacturer's written instructions.
- B. After completing equipment installation and before substantial completion, inspect all luminaires and components.
 - 1. Remove paint splatters and other spots, dirt, fingerprints and debris.
 - 2. Repair damaged finish to match original finish.
 - 3. Dust or Vacuum interiors of suspended indirect and pendant luminaires to remove all dust, dirt, and debris.
 - 4. Clean all lenses with cleaning agent approved by Luminaire Manufacturer.
 - 5. Verify all warning labels in fixtures do not obstruct any reflective surface. Relocate warning labels as necessary so that they are not in plain view, yet they are still accessible to qualified personnel during re-lamping.
 - 6. Perform Lamp Burn-in procedure for all lamps as recommended by the lamp and ballast manufacturer prior to Final Acceptance.

3.4 FIELD QUALITY CONTROL

- A. Test for Emergency Lighting: Verify transfer from normal power to battery and retransfer to normal by both of the following methods.
 - 1. Interrupt power supply to demonstrate proper operation.
 - 2. Depress Push-To-Test button to demonstrate proper operation.
- B. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

3.5 FOLLOW-UP SERVICE

- A. Final Aiming and Adjusting: Perform adjustments to all aimable and track mounted luminaires as directed by the Architect to provide required light intensities and distributions.
 - 1. Scheduling: After Substantial Completion, but not more than three months after Final Acceptance; after delivery and placement of amenities including but not limited to furniture, artwork, plantings, and signage/graphics; during a period mutually agreeable to the Architect and Owner.
 - 2. Required Equipment: Provide scaffolding, ladders, motorized man-lifts or hoists as required to reach luminaires.
 - 3. Re-Lamp: Utilizing the extra materials furnished under Part 1 above, re-lamp fixtures with new lamps having differing beam-spreads as directed by the Architect. Return all unused or minimally-used lamps to the facilities stock at the completion of the aiming and adjustment as directed by the Owner.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 265600

EXTERIOR LIGHTING

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Exterior luminaires.
 - 2. Solid State luminaire, and drivers.
 - 3. Luminaire-mounted photoelectric relays.
 - 4. Poles and accessories.
- B. Related Sections include the following:
 - 1. Division 26 Section "Interior Lighting" for exterior luminaires normally mounted on interior surfaces of buildings.
 - 2. Division 26 Section "Vibration and Seismic Controls for Electrical Systems" for seismic design criteria for Poles, bases and accessories.

1.2 DEFINITIONS

- A. CCT: Correlated Color Temperature.
- B. CRI: Color-rendering index.
- C. HID: High-intensity discharge.
- D. LED: Light emitting diode.
- E. LER: Luminaire efficacy rating.
- F. Luminaire: Complete Lighting unit including, housing, lamps, reflector, socket, wiring, diffuser, and ballast and ballast housing where applicable.
- G. Pole: Luminaire support structure, including tower used for large area illumination.
- H. Standard: Same definition as "Pole" above.
- I. Solid State: Lighting products that use semiconductor light-emitting diodes (LEDs), organic light-emitting diodes (OLED), or polymer light-emitting diodes (PLED) as sources of illumination rather than electrical filaments, plasma, or gas.
- J. TM-21 L70: The time it takes a Luminaire to reach 70% Lumen maintenance based on extrapolations from LM-80-08 data using the approved methods required in IESNA Technical Memorandum 21 (TM-21).

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design support bases and select poles and other support components for the standard mounted luminaires proposed for inclusion in the Work. Include

comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

1.4 STRUCTURAL ANALYSIS CRITERIA FOR POLE SELECTION

- A. Dead Load: Weight of luminaire and its horizontal and vertical supports, lowering devices, and supporting structure, applied as stated in AASHTO LTS-4.
- B. Ice Load: Load of 3 lbf/sq. ft., applied as stated in AASHTO LTS-4.
- C. Wind Load: Pressure of wind on pole and luminaire, calculated and applied as stated in AASHTO LTS-4.

1.5 ACTION SUBMITTALS

- A. Submit product data and shop drawings in accordance with Division 01 and Division 26 Section "Common Work Results for Electrical" for products specified under PART 2 - PRODUCTS.
- B. Product Data: For each luminaire, pole, and support component, arranged in order of lighting unit designation. Include data on features, accessories, finishes, and the following:
 - 1. Physical description of luminaire, including materials, dimensions, effective projected area, and verification of indicated parameters.
 - 2. Details of attaching luminaires and accessories.
 - 3. Details of installation and construction.
 - 4. Luminaire materials.
 - 5. Photometric data, in IESNA LM-63-2002 format, based on laboratory tests of each luminaire type, complete with indicated lamps, ballasts, and accessories.
 - a. Provide optical performance, polar diagrams, and relevant luminance and illuminance photometric data.
 - b. Photometric data shall be certified by a qualified independent testing agency or by a manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program (NVLAP) for Energy Efficient Lighting Products.
 - c. LM-79 luminaire photometric reports for Solid State luminaires. The test laboratory must hold National Voluntary Laboratory Accreditation Program (NVLAP) accreditation for the IES LM-79 test procedure or must be qualified, verified, and recognized through the U.S. Department of Energy's CALiPER program.
 - 6. Solid State Luminaire reliability reports indicating that the manufacturer of the LED (chip, diode, or package) has performed JEDEC (Joint Electron Devices Engineering Council) reliability tests on the LEDs as follows:
 - a. High Temperature Operating Life (HTOL)
 - b. Room Temperature Operating Life (RTOL)
 - c. Low Temperature Operating Life (LTOL)
 - d. Powered Temperature Cycle (PTMCL)
 - e. Non-Operating Thermal Shock (TMSK)
 - f. Mechanical shock
 - g. Variable vibration frequency
 - h. Solder Heat Resistance (SHR)
 - 7. Photoelectric relays.
 - 8. Performance data for Ballasts, including energy-efficiency data.
 - 9. Lamps, including life, output, and energy-efficiency data.
 - 10. Materials, dimensions, and finishes of poles.

11. Means of attaching luminaires to supports, and indication that attachment is suitable for components involved.
12. Anchor bolts for poles.
13. Manufactured pole foundations.

C. Shop Drawings:

1. Anchor-bolt templates keyed to specific poles and certified by manufacturer.
2. Support base design, certified by a qualified professional engineer, indicating installation details of pole foundations and soil conditions on which they are based.
3. Wiring Diagrams: Power and control wiring.
4. Photometric Calculation Drawings: overall site plan prepared using computerized point-by-point analysis software based on luminaires proposed for inclusion in the Work. Plans shall indicate the following:
 - a. Illuminance levels at grade on a maximum of a 24-inch by 24-inch grid.
 - b. Schedule of Luminaires, include the following:
 - 1) Make and Model number of Luminaires.
 - 2) Description of Luminaire; including mounting and accessories.
 - 3) Lamps, including initial and maintained lumen output.
 - 4) Assumed light loss factors used in calculations.
 - c. Calculation Summary showing the following:
 - 1) Average Illuminance.
 - 2) Minimum to Maximum Ratio.
 - 3) Average to Minimum Ratio.
 - 4) Maximum illuminance at Property Line
5. Design calculations, certified by a qualified professional engineer, indicating strength of screw foundations and soil conditions on which they are based.

- D. Finish Samples for Verification: Nominal 3-inch by 3-inch metal squares, factory finished for all standard finishes available; indicate specified finish with unique tag or marker.

1.6 INFORMATIONAL SUBMITTALS

- A. Pole and Support Component Certificates: Signed by manufacturers of poles, certifying that products are designed for indicated load requirements in AASHTO LTS-4 and that load imposed by luminaire has been included in design.
- B. Qualification Data: For agencies providing photometric data for Luminaires.
- C. Field quality-control test reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For luminaires and poles to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation And Maintenance Data," include the following:
 1. Manufacturer's routine maintenance requirements for lighting and all installed components.
 2. Special Lamp and Ballast disposal requirements; including manufacturer's safety data sheet with EPA requirements.
 3. Lamp and Ballast Summary: Prepare a tabulation of lamps and ballast used on project; include part numbers and ordering information.
- B. Warranty: Special warranty specified in this Section.

1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Lamps: 10 for every 100 of each type and rating installed. Furnish at least one of each type.
 - 2. Glass and Plastic Lenses, Covers, and Other Optical Parts: 10 for every 100 of each type and rating installed. Furnish at least one of each type.
 - 3. Ballasts: 10 for every 100 of each type and rating installed. Furnish at least one of each type.
 - 4. Globes and Guards: 10 for every 20 of each type and rating installed. Furnish at least one of each type.

1.9 QUALITY ASSURANCE

- A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.
- B. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7.
- C. Source Limitations: All luminaires with the same type designation shall be obtained from a single manufacturer. Obtain similar luminaire types through one source from a single manufacturer, unless otherwise indicated.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with IEEE C2, "National Electrical Safety Code."
- F. Comply with NFPA 70.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Prepare products for shipment.
 - 1. Provide suitable packaging materials, crating, blocking, and supports so equipment will withstand expected domestic shipping and handling shocks and vibration.
 - 2. Weatherproof packaging for shipment. Close connection openings to prevent entrance of foreign material during shipment and storage.
- B. Store luminaires in clean dry area in accordance with manufacturer's requirements. Protect products from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- C. Handle product components according to manufacturer's written instructions.
- D. Package aluminum poles for shipping according to ASTM B 660.
- E. Store poles on decay-resistant-treated skids at least 12 inches above grade and vegetation. Support poles to prevent distortion and arrange to provide free air circulation.

- F. Retain factory-applied pole wrappings on metal poles until right before pole installation. For poles with nonmetallic finishes, handle with web fabric straps.

1.11 WARRANTY

- A. Special Warranty for Luminaire and Luminaire Accessories: Manufacturer's standard form in which manufacturer agrees to repair or replace products that fail in materials or workmanship; that corrode; or that fade, stain, perforate, erode, or chalk due to effects of weather or solar radiation within specified warranty period. Manufacturer may exclude lightning damage, hail damage, or unauthorized repairs or alterations from special warranty coverage. Manufacturer may exclude vandalism or abuse for luminaires that are not designated as high-abuse products where vandal resistance is a product requirement.
 - 1. Warranty Period for Luminaires: Five years from date of Substantial Completion.
 - 2. Warranty Period for Metal Corrosion: Five years from date of Substantial Completion.
 - 3. Warranty Period for Color Retention: Five years from date of Substantial Completion.
 - 4. Warranty Period for Poles: Repair or replace lighting poles and standards that fail in finish, materials, and workmanship within manufacturer's standard warranty period, but not less than three years from date of Substantial Completion.
- B. Special Warranty for Solid State Power Supplies and Drivers: Manufacturer's standard form, made out to Owner and signed by manufacturer agreeing to replace power supplies or drivers that fail in materials or workmanship, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
 - 1. Warranty Period: 60 months from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Provide luminaires in accordance with the designations and descriptions in the "Luminaire Schedule" located on the Drawings. In Luminaire Schedule, products are listed below column or row headings that introduce lists, the following requirements apply to product selection:
 - 1. Available Manufacturers: Where the Luminaire Schedule indicates only one product by manufacturer and associated catalog number and does not list other manufacturers by name; the design for each luminaire is based on the product named by manufacturer and associated catalog number scheduled. Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.
 - 2. Manufacturers: Where the Luminaire Schedule indicates more than one manufacturer and associated catalog number; Subject to compliance with requirements, provide one of the products named by the manufacturers specified.
 - 3. Basis-of-Design Product: Where the Luminaire Schedule indicates only one product by manufacturer and associated catalog number and lists other manufacturers by name only; the design for each luminaire is based on the product named by manufacturer and associated catalog number scheduled. Subject to compliance with requirements; provide either the named product or a comparable product by one of the other manufacturers specified.
 - 4. Specific Product: Where the Luminaire Schedule indicates only one product by manufacturer and associated catalog number and does not list other manufacturers by name and includes the phrase "NO SUBSTITUTIONS ALLOWED"; the design for each luminaire is based on the product named by manufacturer and associated catalog number scheduled. Subject to compliance with requirements, provide the

product named by the manufacturers specified. Provide a list of Unit Prices for these items in accordance with requirements of Division 01 Section "Unit Prices".

2.2 LUMINAIRES, GENERAL REQUIREMENTS

- A. Luminaires shall comply with UL 1598 and be listed and labeled for installation in wet locations by an NRTL acceptable to authorities having jurisdiction.
- B. Comply with IESNA RP-8 for parameters of lateral light distribution patterns indicated for luminaires.
- C. Metal Parts: Free of burrs and sharp corners and edges.
- D. Sheet Metal Components: Corrosion-resistant aluminum, unless otherwise indicated. Form and support to prevent warping and sagging.
- E. Housings: Rigidly formed, weather- and light-tight enclosures that will not warp, sag, or deform in use. Provide filter/breather for enclosed luminaires.
- F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position. Doors shall be removable for cleaning or replacing lenses. Designed to disconnect ballast when door opens.
- G. Exposed Hardware Material: Stainless steel.
- H. Plastic Parts: High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
- I. Light Shields: Metal baffles, factory installed and field adjustable, arranged to block light distribution to indicated portion of normally illuminated area or field, where indicated in Luminaire Schedule.
- J. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:
 - 1. White Surfaces: 85 percent.
 - 2. Specular Surfaces: 83 percent.
 - 3. Diffusing Specular Surfaces: 75 percent.
- K. Lenses and Refractors Gaskets: Use heat- and aging-resistant resilient gaskets to seal and cushion lenses and refractors in luminaire doors.
- L. Luminaire Finish: Finish as indicated in Luminaire Schedule. Manufacturer's standard paint or clear coat finish and custom Colors where indicated; applied to factory-assembled and -tested luminaire before shipping. Where indicated, match finish process and color of pole or support materials.

2.3 LUMINAIRE-MOUNTED PHOTOELECTRIC RELAYS

- A. Comply with UL 773 or UL 773A.
- B. Contact Relays: Factory mounted, single throw, designed to fail in the on position, and factory set to turn light unit on at 1.5 to 3 fc and off at 4.5 to 10 fc with 15-second minimum time delay. Relay shall have directional lens in front of photocell to prevent artificial light sources from causing false turnoff.

1. Relay with locking-type receptacle shall comply with NEMA C136.10.
2. Adjustable window slide for adjusting on-off set points.

2.4 LAMPS – GENERAL

- A. General: Configurations and ratings as noted in Luminaire Schedule on Drawings.
 1. Requirements: Comply with subparagraphs below for specific lamp types.
 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. General Electric;
 - b. OSRAM Sylvania;
 - c. Phillips;

2.5 SOLID STATE LIGHTING SYSTEMS

- A. Solid State luminaires will comply with the requirements of the following standards:
 1. ANSI/NEMA/ANSI C78.377-2008 – American National Standard for the Chromaticity of Solid State Lighting Products.
 2. LM-79-08, IESNA Approved Method for the Electrical and Photometric Measurements of Solid-State Lighting Products.
 3. LM-80-08, IESNA Approved Method for Measuring Lumen Maintenance of LED Light Sources.
- B. LED Chip Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Osram.
 2. Philips – LumiLEDs.
 3. Nichia.
 4. Cree.
 5. Seoul Semi-Conductor.
 6. Xicato.
 7. Bridgelux.
- C. General: Provide Solid State systems and LED components meeting the following requirements:
 1. Provide Solid State systems from same binning process to maintain color consistency.
 2. Deliver all Solid State products at the same time and store on site to ensure that products have been produced from the same bin. Tolerances exceeding 200K will not be acceptable.
 3. The Solid State Luminaires shall be operated at constant and carefully regulated current levels. LEDs shall not be overdriven beyond their specified nominal voltage and current.
 4. Provide Electrical connections protected from reverse polarity. Provide high voltage protection in the event connections are reversed or shorted during the installation process.
 5. Provide Solid State Luminaires and power/data supplies from a single manufacturer to ensure compatibility.
 6. Provide all Solid State controls, peripheral devices, and software from a single manufacturer to ensure compatibility.
 7. Conduct minimum eight-hour burn-in test during manufacturing on Solid State Luminaires (100% of each lot).
- D. White & Static Color Solid State Systems: White LED sources must meet the following requirements:

1. Luminaires must be rated for -40°C to +50°C operation.
 2. Duv tolerance of 0.001 ± 0.006 .
 3. Color Rendering Index (CRI): greater than or equal to 80.
 4. Correlated Color Temperature (CCT) as Specified in Luminaire Schedule. Meet the following tolerance requirements for CCT specified:
 - a. Nominal 2700K CCT: 2725 ± 50 .
 - b. Nominal 3000K CCT: 3045 ± 50 .
 - c. Nominal 3500K CCT: 3465 ± 50 .
 - d. Nominal 4000K CCT: 3985 ± 50 .
 - e. Nominal 4500K CCT: 4503 ± 50 .
 - f. Nominal 5000K CCT: 5028 ± 50 .
 - g. Nominal 5700K CCT: 5665 ± 50 .
 - h. Nominal 6500K CCT: 6530 ± 50 .
- E. Dynamic Color Changing Solid State Systems: RGB LED sources must meet the following requirements:
1. Luminaires must be rated for -40°C to +50°C operation.
 2. Duv tolerance of 0.001 ± 0.006 .
 3. Color Rendering Index (CRI): greater than or equal to 80 for RGB mixed white.
 4. Controllability:
 - a. 8-bit control of red, green and blue LEDs to produce 16.7 million colors or more.
 - b. Digital driver using high-speed pulse width modulation (PWM).
 - c. Integral and differential nonlinear control.
 - d. 14-bit or greater nonlinear scaling techniques for high-resolution output.
 - e. Selectable means of external control via a data network.
 - f. Support frame rates greater than 30 frames per second.
 - g. Constant data transmission rates shall be employed, resulting in the output being independent of distance of cable between power supply and light source within the specified length.
- F. Luminaire: Configurations, requirements and ratings are noted in Luminaire Schedule on Drawings. Correlated Color Temperature (CCT) is specified in Luminaire Schedule. Comply with subparagraphs below for specific luminaire types, unless otherwise indicated on Drawings:
1. Outdoor Pole and Arm Mounted Area Luminaires for Roadways:
 - a. Minimum Light Output: 1000 lumens, unless otherwise indicated.
 - b. Allowable CCT per ANSI C78.377: Less than or equal to 5700K.
 - c. CRI: Minimum of 50, unless otherwise indicated.
 - d. TM-21 L70 Lumen Maintenance: 50,000 Hours.
 - e. Minimum Luminaire Efficacy: 60 lumens / watt.
 - f. Housing: IP56 rated.
 2. Outdoor Wall Mounted Area Luminaires:
 - a. Minimum Light Output: 300 lumens, unless otherwise indicated.
 - b. Allowable CCT per ANSI C78.377: Less than or equal to 5700K.
 - c. CRI: Minimum of 50, unless otherwise indicated.
 - d. TM-21 L70 Lumen Maintenance: 50,000 Hours.
 - e. Minimum Luminaire Efficacy: 60 lumens / watt.
 - f. Housing: IP56 rated.
 3. Outdoor Bollards:
 - a. Minimum Light Output: 500 lumens, unless otherwise indicated.
 - b. Allowable CCT per ANSI C78.377: Less than or equal to 6500K.
 - c. CRI: Minimum of 50, unless otherwise indicated.
 - d. TM-21 L70 Lumen Maintenance: 50,000 Hours.
 - e. Minimum Luminaire Efficacy: 60 lumens / watt.

- f. Housing: IP56 rated.
- 4. Linear Panels, Linear Strips and Troffers:
 - a. Minimum Light Output: 3000 lumens, unless otherwise indicated.
 - b. Allowable CCT per ANSI C78.377: Less than or equal to 5700K.
 - c. CRI: Minimum of 80, unless otherwise indicated.
 - d. TM-21 L70 Lumen Maintenance: 50,000 Hours.
 - e. Minimum Luminaire Efficacy: 65 lumens / watt.

2.6 DRIVERS FOR SOLID STATE LIGHTING

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Lutron Electronics Co., Inc.
 - 2. OSRAM Sylvania.
- B. Description: Electronic programmed rapid-start type, complying with FCC Part 15 Class A or Class B, designed for type and quantity of LEDs indicated. Driver shall be designed for full light output and include dimming capability.
 - 1. Compatibility: Certified by manufacturer for use with LED type provided.
 - 2. Comply with UL 8750 Class 2.
 - 3. Thermal Protection: Comply with UL Class P, Type 1 Outdoor.
 - 4. Sound Rating: Class A.
 - 5. Total Harmonic Distortion Rating: Less than 10 percent.
 - 6. Transient Voltage Protection: ANSI/IEEE C62.41, Category A or better.
 - 7. Input Voltage Range: 108-305 Volts.
 - 8. Output Voltage: not exceeding 60V (Complies with Class 2 for US).
 - 9. Maximum inrush current: 2 amperes for 120V and 277V drivers.
 - 10. Minimum Efficiency at Full Load: 85%.
 - 11. Power Factor: 0.9 or higher.
 - 12. Starting Temperature: Minus 5 Deg F (Minus 20 Deg C) minimum to 104 Deg F (40 Deg C), unless otherwise indicated.
 - 13. Case Temperature: 75 Deg C maximum, unless otherwise indicated or used in LM70 reporting.
 - 14. Housing: minimum IP20 rating for dry location installation, higher rating as required for exterior use.
 - 15. Remote Mounting Distance: Up to 18-feet, where indicated.
 - 16. Interference: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for non-consumer equipment.
 - 17. Rated Life: minimum of 50,000 hours of rated lifetime at maximum operating conditions.
 - 18. Dimmable with standard dimmers down to 1%. 0-10V, 3-wire, or 3. Forward Phase Control (neutral wire required) (Line Voltage Controlled) Dimming as required to be compatible with lighting control system specified.

2.7 POLES AND SUPPORT COMPONENTS, GENERAL REQUIREMENTS

- A. Structural Characteristics: Comply with AASHTO LTS-4.
 - 1. Wind-Load Strength of Poles: Adequate at indicated heights above grade without failure, permanent deflection, or whipping in steady winds of speed indicated in Part 1 "Structural Analysis Criteria for Pole Selection" Article, with a gust factor of 1.3.
 - 2. Strength Analysis: For each pole, multiply the actual equivalent projected area of luminaires and brackets by a factor of 1.1 to obtain the equivalent projected area to be used in pole selection strength analysis.

- B. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless-steel fasteners and mounting bolts, unless otherwise indicated.
- C. Mountings, Fasteners, and Appurtenances: Corrosion-resistant items compatible with support components.
 - 1. Materials: Shall not cause galvanic action at contact points.
 - 2. Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication, unless stainless-steel items are indicated.
 - 3. Anchor-Bolt Template: Plywood or steel.
- D. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Concrete, reinforcement, and formwork are specified in Division 03 Section "Cast-in-Place Concrete."
- E. [Power-Installed Screw Foundations: Factory fabricated by pole manufacturer, with structural steel complying with ASTM A 36/A 36M and hot-dip galvanized according to ASTM A 123/A 123M; and with top-plate and mounting bolts to match pole base flange and strength required to support pole, luminaire, and accessories.]
- F. [Breakaway Supports: Frangible breakaway supports, tested by an independent testing agency acceptable to authorities having jurisdiction, according to AASHTO LTS-4.]

2.8 STEEL POLES

- A. Poles: Comply with ASTM A 500, Grade B, carbon steel with a minimum yield of 46,000 psig; 1-piece construction up to 40 feet in height with access handhole in pole wall.
 - 1. Shape: ~~[Round, tapered]~~ ~~[Round, straight]~~ ~~[Square, tapered]~~ ~~[Square, straight]~~ [As indicated in Luminaire Schedule on Drawings].
 - 2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- B. Steel Mast Arms: [Single-arm], [Truss] or [Davit] as required type, continuously welded to pole attachment plate. Material and finish same as pole.
- C. Brackets for Luminaires: Detachable, cantilever, without underbrace.
 - 1. Adapter fitting welded to pole and bracket, then bolted together with [stainless] ~~[galvanized]~~-steel bolts.
 - 2. Cross Section: Tapered oval, with straight tubular end section to accommodate luminaire.
 - 3. Match pole material and finish.
- D. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.
- E. Intermediate Handhole and Cable Support: Weathertight, 3-by-5-inch handhole located at midpoint of pole with cover for access to internal welded attachment lug for electric cable support grip.
- F. Grounding and Bonding Lugs: Welded 1/2-inch threaded lug, complying with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.

- G. Cable Support Grip: Wire-mesh type with rotating attachment eye, sized for diameter of cable and rated for a minimum load equal to weight of supported cable times a 5.0 safety factor.
- H. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.
- I. Galvanized Finish: After fabrication, hot-dip galvanized complying with ASTM A 123/A 123M.
- J. Factory-Painted Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
 - 2. Interior Surfaces of Pole: One coat of bituminous paint, or otherwise treat for equal corrosion protection.
 - 3. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.
 - a. Color: ~~[As indicated in Luminaire Schedule]~~ [As selected by Architect from manufacturer's full range].

2.9 ALUMINUM POLES

- A. Poles: Seamless, extruded structural tube complying with ASTM B 429, Alloy 6063-T6 with access handhole in pole wall.
- B. Poles: ASTM B 209, 5052-H34 marine sheet alloy with access handhole in pole wall.
 - 1. Shape: ~~[Round, tapered]~~ ~~[Round, straight]~~ ~~[Square, tapered]~~ ~~[Square, straight]~~ [As indicated in Luminaire Schedule on Drawings].
 - 2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- C. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.
- D. Grounding and Bonding Lugs: Welded 1/2-inch threaded lug, complying with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.
- E. Brackets for Luminaires: Detachable, with pole and adapter fittings of cast aluminum. Adapter fitting welded to pole and bracket, then bolted together with stainless-steel bolts.
 - 1. Tapered oval cross section, with straight tubular end section to accommodate luminaire.
 - 2. Finish: Same as [pole] or [luminaire], unless otherwise indicated as directed by the architect.
- F. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.
- G. Aluminum Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.
3. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
4. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.
 - a. Color: ~~[As indicated in Luminaire Schedule]~~ [As selected by Architect from manufacturer's full range].

2.10 DECORATIVE POLES

- A. Pole Material:
 1. Cast ductile iron.
 2. Cast gray iron, according to ASTM A 48/A 48M, Class 30.
 3. Cast aluminum.
 4. Cast concrete.
 5. Spun concrete.
 6. Steel tube, covered with closed-cell polyurethane foam, with a polyethylene exterior.
- B. Mounting Provisions:
 1. Bolted to concrete foundation.
 2. Embedded.
- C. Fixture Brackets:
 1. Cast ductile iron.
 2. Cast gray iron.
 3. Cast aluminum.
- D. Pole Finish: [As selected by Architect from manufacturer's full range]

2.11 POLE ACCESSORIES

- A. Base Covers: Manufacturers' standard metal units, arranged to cover pole's mounting bolts and nuts. Finish same as pole.
- B. Transformer Type Base: Same material and color as pole. Coordinate dimensions to suit pole's base flange and accept ballast(s) and indicated accessories.

PART 3 - EXECUTION

3.1 LUMINAIRE INSTALLATION

- A. Comply with NECA/IESNA 501 "Standard for Installing Exterior Lighting Systems" as published by the National Electrical Contractors Association.
- B. Fasten luminaire to indicated structural supports.
 1. Use fastening methods and materials selected to resist seismic forces defined for the application and approved by manufacturer.
- C. Install lamps in each luminaire.

- D. Adjust luminaires that require field adjustment or aiming. Include adjustment of photoelectric device to prevent false operation of relay by artificial light sources.

3.2 POLE INSTALLATION

- A. Align pole foundations and poles for optimum directional alignment of luminaires and their mounting provisions on the pole.
- B. Harmonic Dampener: Provide harmonic dampeners on conductors within pole.
- C. Clearances: Maintain the following minimum horizontal distances of poles from surface and underground features, unless otherwise indicated on Drawings:
 - 1. Fire Hydrants and Storm Drainage Piping: 60 inches.
 - 2. Water, Gas, Electric, Communication, and Sewer Lines: 10 feet.
 - 3. Trees: 15 feet.
- D. Concrete Pole Foundations: Set anchor bolts according to anchor-bolt templates furnished by pole manufacturer. Concrete materials, installation, and finishing requirements are specified in Division 03 Section "Cast-in-Place Concrete."
- E. Foundation-Mounted Poles: Mount pole with leveling nuts, and tighten top nuts to torque level recommended by pole manufacturer.
 - 1. Use anchor bolts and nuts selected to resist seismic forces defined for the application and approved by manufacturer.
 - 2. Grout void between pole base and foundation. Use nonshrink or expanding concrete grout firmly packed to fill space.
 - 3. Install base covers, unless otherwise indicated.
 - 4. Use a short piece of 1/2-inch-diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.
- F. Poles and Pole Foundations Set in Concrete Paved Areas: Install saw-cut or formed control joint in concrete slab within 12-inches of pole or pole foundation. Coordinate with Division 32 Section "Concrete Paving."
- G. Poles and Pole Foundations Set in Concrete Paved Areas: Install poles with minimum of 6-inch- (150-mm-) wide, unpaved gap between the pole or pole foundation and the edge of adjacent concrete slab. Fill unpaved ring with pea gravel to a level 1 inch (25 mm) below top of concrete slab.
- H. Raise and set poles using web fabric slings (not chain or cable).

3.3 BOLLARD LUMINAIRE INSTALLATION

- A. Align units for optimum directional alignment of light distribution.
- B. Install on concrete base with top 4 inches above finished grade or surface at bollard location. Cast conduit into base, and shape base to match shape of bollard base. Finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in Division 03 Section "Cast-in-Place Concrete."

3.4 INSTALLATION OF INDIVIDUAL GROUND-MOUNTING LUMINAIRES

- A. Install on concrete base with top 4 inches above finished grade or surface at luminaire location. Cast conduit into base, and finish by troweling and rubbing smooth. Concrete

materials, installation, and finishing are specified in Division 03 Section "Cast-in-Place Concrete."

3.5 CORROSION PREVENTION

- A. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum by insulating fittings or treatment.
- B. Steel Conduits: Comply with Division 26 Section "Underground Ducts and Raceways for Electrical Systems." In concrete foundations, wrap conduit with 20 mil polyvinyl chloride (PVC) tape with a high-tack adhesive and pipe primer to provide a corrosion- and impact-resistant seal. Apply with a 50 percent overlap.

3.6 CONNECTIONS

- A. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- B. Secure all wiring routed inside poles using cable support grips. Remove slack in conductors to prevent lateral movement.

3.7 GROUNDING

- A. Ground metal poles and support structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."
 - 1. Install grounding electrode for each pole.
 - 2. Install grounding conductor pigtail in the base for connecting luminaire to grounding system.
- B. Ground nonmetallic poles and support structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."
 - 1. Install grounding electrode for each pole.
 - 2. Install grounding conductor and conductor protector.
 - 3. Ground metallic components of pole accessories and foundations.

3.8 FIELD QUALITY CONTROL

- A. Inspect each installed fixture for damage. Replace damaged fixtures and components.
- B. Illumination Observations: Verify normal operation of lighting units after installing luminaires and energizing circuits with normal power source.
 - 1. Verify operation of photoelectric controls.
- C. Illumination Tests:
 - 1. Measure light intensities at night. Use photometers with calibration referenced to NIST standards. Comply with requirements of authorities having jurisdiction and the following IESNA testing guide(s):
 - a. IESNA LM-50, "Photometric Measurements of Roadway Lighting Installations."
 - b. IESNA LM-64, "Photometric Measurements of Parking Areas."
 - c. IESNA LM-72, "Directional Positioning of Photometric Data."
- D. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards and design requirements.

3.9 CLEANING AND RELAMPING

- A. Clean components according to manufacturer's written instructions.
- B. After completing equipment installation and before substantial completion, inspect all luminaires and components.
 - 1. Remove paint splatters and other spots, dirt, fingerprints and debris.
 - 2. Repair damaged finish to match original finish.
 - 3. Dust or Vacuum interiors of luminaires to remove all dust, dirt, and debris.
 - 4. Clean all lenses with cleaning agent approved by Luminaire Manufacturer.
 - 5. Verify all warning labels in fixtures do not obstruct any reflective surface. Relocate warning labels as necessary so that they are not in plain view, yet they are still accessible to qualified personnel during re-lamping.
 - 6. Perform Lamp Burn-in procedure for all lamps as recommended by the lamp and ballast manufacturer prior to Final Acceptance.

3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's management and maintenance personnel to adjust, operate, and maintain luminaire lowering devices. Refer to Division 01 Section "Demonstration and Training."

THIS PAGE INTENTIONALLY LEFT BLANK

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 270000

COMMUNICATIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. This section includes general design requirements, administration topics, and installation for communications systems.

1.2 SYSTEM DESCRIPTION

- A. The objective of this project is to provide a complete communications cabling infrastructure system installation including, but not limited to: fiber backbone, riser system, horizontal data and voice cabling with attendant terminations, mounting equipment, cable pathway and management systems, testing and other items/materials, as specified in drawings, these specifications, and contract documents.
- B. Related Sections
 - 1. Section 260000 Electrical (including related sub-sections)
 - 2. Section 270526 Grounding and Bonding for Communications Systems
 - 3. Section 270528 Pathways for Communications
 - 4. Section 270810 Fiber Optics Testing and Measurements
 - 5. Section 271100 Communications Equipment Room Fittings
 - 6. Section 271300 Communications Backbone Cabling
 - 7. Section 271500 Communications Horizontal Cabling
 - 8. Section 274100 Audio-Visual Systems (including related sub-sections)
 - 9. Section 280000 Electronic Security (including related sub-sections)

1.3 SCOPE OF WORK

- A. This section establishes an infrastructure to be used as signal pathways for communications systems, but is not limited to the following:
 - 1. Comply with all Project Contract documents and the following requirements for a complete project installation.
 - 2. Provide a structured cabling system as described hereafter that includes, but is not limited to, supplying, installing and testing of: backbone cabling, riser cabling; data and voice horizontal cabling, cable connectors, communications outlets and terminations, and equipment racks/cabinets for networking hardware and patch panels.
 - 3. Furnish all labor, materials, tools, equipment and services for the installation described herein.
 - 4. Follow industry standard installation procedures for communications cable to assure that the mechanical and electrical transmission characteristics of this cable plant and equipment are maintained.
- B. Work of this section covers complete installation of permanent links for a data and voice communications networks utilizing copper and fiber transmission media that includes, but is not limited to the following:

1. Provide, install, terminate, test, and document all fiber and copper backbone cables, riser cables, and horizontal cables.
2. Provide and install all termination devices such as, but not limited to, modular patch panels, termination blocks, information outlets (jacks and plates), phone jacks, fiber distribution panels, bulkheads, connectors, and fiber fan out kits. Document all termination devices with proper labeling.
3. Provide in quantities specified, interconnect components such as, but not limited to, fiber patch cables, copper patch cords, and station cables.
4. Provide and install specified Telecommunication Room equipment such as, but not limited to, racks, cabinets, horizontal and vertical cable support devices, cable trays and cable runway, and required mounting brackets/hardware.
5. Provide and install UL-approved firestopping systems in all communication pass-through locations of rated ceiling, wall or floor penetrations involving, conduits, cable, and cable trays in coordination with General Contractor.
6. Provide and install grounding and bonding connection to the bus (TGMB/TGB) provided by Division 26.
7. Provide and install all appropriate consumable items required to complete the installation.
8. Coordination with other trades.
9. Provide complete documentation and demonstration of work.
10. Provide indexed and organized complete Test Results of all copper and fiber cable and their components.
11. Provide Submittals as outlined below.
12. Provide a Manufacturer's Extended Product Warranty and System Assurance Warranty for this wiring system.
13. Conduct a final document handover meeting with client, consultant, and PM to review, discuss and educate the Owner on the final product, test results, and As-Built Drawings.

C. Changes to the Scope of Work

1. Owner changes to the scope of work shall be in writing.
2. Change orders shall be submitted to the Owner/Project Manager complete with price breakdown and description for approval before any work is done.
3. The Contractor shall respond to these changes with a complete material list, including pricing, labor, and taxes in writing to be presented to the Owner for approval.
4. The Contractor shall not proceed with additional scope of work without signed approval by the Owner. Owner will not pay for additional work performed by the Contractor without written/signed approval of these changes.
5. Contractor will attach a copy of the signed change order with billing information.

1.4 PRODUCTS AND WORK BY OTHERS (NIC)

- A. The Owner may separately procure and/or provide certain equipment and component that will be installed during the course of project. Such items may not be indicated in the documents.
- B. Contractor shall cooperate with the Owner and Owner's suppliers when considering:
1. The provision and installation of phone systems, related system equipment/software, and employee station equipment/software.
 2. The provision and installation of multi-port routers, switches, and other Layer 2 / Layer 3 networking components in communications rooms.
 3. The provision and installation of Uninterruptable Power Source (UPS) devices in communications rooms.
 4. Communications grounding busbars and grounding wires connecting to the main building electrode system.
 5. Dedicated power panels, ground busbars, circuits, and utility outlets.

6. The installation and finishing of plywood backboards.
7. Building mechanical ductwork, cooling/heating system (HVAC), and environmental control sensors.
8. Communication pathway devices such as, but not limited to, cable tray and flex-tray in corridors, office spaces and open areas, outlet boxes and stub-ups, conduits, conduit sleeves, and penetrations in walls and floors.

1.5 SUBSTITUTION PROCEDURES

- A. Substitution may be considered when a product becomes unavailable through no fault of the Contractor. An alternate product must be equal to or exceed specified requirements. The material substituted shall not void, alter or change manufacturers' structured cabling system warranty.
- B. Document substitution requests with complete data substantiating compliance of proposed substitution with Contract Documents. Include in each request for substitution:
 1. Product identification, manufacturer's name and address
 2. Product Data:
 - a) Description, performance and test data, reference standards, finishes and colors.
 - b) Samples: Finishes.
 - c) Complete and accurate drawings indicating construction revisions required (if any) to accommodate substitutions.
 - d) Data relating to changes required in construction schedule.
 - e) Cost comparison between specified and proposed substitution.
- C. Substitutions will not be considered when they are indicated or implied on shop drawing or product data submittals, without separate written request, or when acceptance will require revision to the Contract Documents.
- D. The Owner will be the final judge of acceptability, with review by DataCom Design Group and the distribution of the acceptance by the Architect.
- E. No substitute shall be ordered, installed or utilized without the Architect's prior written verification of acceptance from the Owner.

1.6 REFERENCES AND RELATED DOCUMENTS

- A. Drawings and General provisions of the contract, including Uniform General Conditions, Supplementary General Conditions, Architectural plans and specifications, requirements of Division 1, Electrical, Mechanical, Plumbing, Audio-Visual, Security and Communications specifications and plans, and the publications listed below apply to the Communications section, are incorporated into this specification by reference, and shall be considered a part of this section.
- B. Reference to codes, rules, regulations, standards, manufacturer's instructions, or requirements of regulatory agencies shall mean reference to the latest printed edition of each in effect at the date of contract.
- C. The Contractor shall read all sections in their entirety and apply them as appropriate for work in this section.
- D. Conflicts

1. Drawings and specifications are to be used in conjunction with one another and to supplement one another.
2. In general, the specifications determine the nature and quality of the materials and tests, and the drawings establish the quantities, details, and give characteristics of performance that should be adhered to during the installation of the communications system components.
3. If there is an apparent conflict between the drawings and specifications, or between specification sections, the items with the greater quantity and/or quality shall be estimated and installed.
4. Clarification with the Owner and/or DataCom Design Group about these items shall be made in writing prior to procurement and installation.

E. Codes and Standards

1. American National Standards Institute/Telecommunications Industry Association (ANSI/TIA)
 - a) ANSI/TIA-568-C.0 "Generic Telecommunications Cabling for Customer Premises"
 - b) ANSI/TIA-568-C.1 "Commercial Building Telecommunications Cabling Standard"
 - c) ANSI/TIA-568-C.2 "Balanced Twisted-Pair Telecommunication Cabling and Components Standard"
 - d) ANSI/TIA-568-C.3 "Optical Fiber Cabling Components Standard"
 - e) ANSI/TIA-568-C.4 "Broadband Coaxial Cabling and Components Standard"
 - f) ANSI/TIA-569-C "Telecommunications Pathways and Spaces"
 - g) ANSI/TIA-606-B "Administration Standard for Commercial Telecommunications Infrastructure"
 - h) ANSI/TIA-607-B "Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications"
 - i) ANSI/TIA-862-A "Building Automation Systems Cabling Standard"
 - j) ANSI/TIA-942-A: "Telecommunications Infrastructure Standard for Data Centers"
 - k) ANSI/TIA-1152: "Requirements for Field Test Instruments and Measurements for Balanced Twisted-Pair Cabling"
2. American National Standards Institute (ANSI)
 - a) ANSI C80.1 Electrical rigid steel conduit (ersc)
3. BICSI
 - a) BICSI Telecommunications Distribution Methods Manual (TDMM)
4. Federal Specifications (FS)
 - a) FS W-C-58C Conduit Outlet Boxes, Bodies Aluminum and Malleable Iron
 - b) FS W-C-1094 Conduit and Conduit Fittings Plastic, Rigid
 - c) FS WW-C-566C Flexible Metal Conduit
 - d) FS WW-C-581D Coatings on Steel Conduit
5. Institute of Electrical and Electronic Engineers (IEEE)
 - a) IEEE 142-1991 Recommended Practice for Grounding of Industrial and Commercial Power Systems
 - b) IEEE 1100-2005 IEEE Recommended Practice for Powering and Grounding Electronic Equipment

6. National Electrical Code (NEC)
 - a) NEC Article 250 - Grounding and Bonding
 - b) NEC Chapter 8 - Communications Systems
7. National Electrical Manufacturers Association (NEMA)
 - a) NEMA RN1 Polyvinyl Chloride (PVC) Externally Coated Galvanized Rigid Steel Conduit and Intermediate Metal Conduit
 - b) NEMA TC2 Electrical Polyvinyl Chloride (PVC) Tubing and Conduit
 - c) NEMA TC3 Polyvinyl Chloride (PVC) Fittings for Use with Rigid PVC Conduit and Tubing
 - d) NEMA VE 1 - Metal Cable Tray Systems
 - e) NEMA VE 2 - Cable Tray Installation Guidelines
8. Underwriters' Laboratories (UL)
 - a) UL Cable Certification and Follow-Up Program
 - b) UL 6: Electrical Rigid Metal Conduit - Steel
 - c) UL 83: Thermoplastic-Insulated Wires and Cables
 - d) UL 467: Grounding and Bonding Equipment
 - e) UL 514B: Conduit, Tubing, and Cable Fittings
 - f) UL 651: Standard for Schedule 40, 80, Type EB and A Rigid PVC Conduit and Fittings
 - g) UL 651A: Schedule 40 and 80 High Density Polyethylene (HDPE) Conduit
 - h) UL 1666: Standard for Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts
9. Local, county, state and federal regulations and codes in effect as of date of installation.
10. Equipment of foreign manufacture must meet U.S. codes and standards.
 - a) It shall be indicated in the proposal the components that may be of foreign manufacture, if any, and the country of origin.

1.7 QUALITY ASSURANCE

- A. Communications Contractor shall have a complete working knowledge of low voltage communications cabling applications such as, but not limited to data, voice and video network systems.
- B. Communications Contractor shall have installed similar-sized systems in at least ten (10) other projects in the last five (5) years prior to this bid and be regularly engaged in the business of installation of the types of systems specified in this document.
- C. Communications Contractor and individual installation crew members shall be experienced and qualified to perform the work specified herein at time of bid submission. All onsite supervision personnel that will be assigned to this project shall be listed in the Pre-Installation Submittal.
 1. 80% shall have a minimum of three (3) years of experience in the installation of the types of systems, equipment, and cables specified in this document prior to this bid.
 2. All installation team members must demonstrate knowledge and compliance with all applicable methods, standards, and codes.
 3. All members of the installation team shall be certified by the Structured Cabling System Assurance Warranty provider as having completed the necessary training to complete their

part of the installation and capable of an installation that falls under manufacturer's guidelines necessary to obtain the Manufacturer's System Assurance Warranty.

4. Any personnel substitutions shall be noted in writing to the Owner.

D. A BICSI RCDD shall supervise and approve all on-site work as a recognized member of the Contractor's installation team.

E. Refer also to General Conditions.

1.8 CONTRACTOR REQUIREMENTS

A. In order to accomplish the conditions of this agreement, the Contractor shall perform the specific duties listed herein.

B. Contractor shall provide and pay for all labor, supervision, tools, equipment, test equipment, tests and services to provide and install a complete communications cabling infrastructure system. Pay all required sales, gross receipts, and other taxes.

C. Insurance

1. The Contractor shall procure, submit for review, and maintain for the duration of this agreement, insurance against claims for injuries to persons or damages to property which may arise from, or in connection with, the performance of work hereunder by the Contractor, his agents, representatives, employees or subcontractor. The Contractor shall pay the cost of such insurance.

2. The Owner, its directors, officers, representatives, agents and employees, respectively, shall have no responsibility to the Contractor with respect to any insurance in accordance with the provisions set forth herein.

D. Regulatory Requirements

1. Communications Contractor shall supply all city, county, and state telecommunication cabling permits required by Authority Having Jurisdiction (AHJ).

2. Communications Contractor shall be licensed and/or bonded as required for telecommunications/low voltage cabling systems.

E. Privacy and Confidentiality

1. The Contractor will respect and protect the privacy and confidentiality of Owner, its employees, processes, products, and intellectual property to extent necessary, consistent with the legal responsibilities of the Owner policies.

2. Contractors shall sign a non-disclosure agreement and abide by the requirements to keep confidential all information concerning bid documents and this project.

F. Use of Subcontractors

1. Successful bidder shall inform the Owner's contact and General Contractor in writing about the intention to use Subcontractors and the scope of work for which they are being hired.

2. The Owner or Owner's designated contact must approve the use of Subcontractors in writing prior to the Subcontractor's hiring and start of any work.

G. The Contractor's designated Project Manager will be recognized as the single point of contact. The Project manager shall oversee all work performed to ensure compliance with specifications as outlined in bid documents (which includes all specifications, references, and drawings) to

ensure a quality installation and attend project meetings with the telecommunication consultant, the Owner and others.

H. Coordination

1. Coordinate installation work with other trades (examples include ceiling grid contractors, HVAC and sheet metal contractors, etc.) to resolve procedures and installation placement for cable trays and cable bundle pathways.
2. The goal of this coordination will be to establish priority pathways for critical data/voice network cable infrastructure, materials, associated hardware, as well as mitigate delays to the project and to allow service access for communications and HVAC components.
3. Exchange information and agree on details of equipment arrangements and installation interfaces.
4. Coordinate with electrical contractors and plan for the pathway routes used communications cabling to minimize cable lengths. Report any potential over distance cable runs for approval before pulling the cables.
5. Record agreements with other trades and distribute record to other participants, Owner and telecommunication consultant.

1.9 PRE-INSTALLATION MEETINGS

A. Communications Contractor shall attend and/or arrange a scheduled pre-installation conference prior to beginning any work of this section. This venue is to ask and clarify questions in writing with consultant and/or project manager/Owner representative.

B. Agenda

1. Safety
2. Work to be performed
3. Scheduling
4. Coordination
5. Other topics as necessary

C. Attendance

1. Communications project manager/supervisor shall attend meetings arranged by General Contractor, Owner's representatives, and other parties affected by work of this document.
2. All individuals who will serve in an on-site supervisory capacity, including project managers, site supervisors, and lead installers, shall be required to attend the pre-installation conference. Individuals who do not attend the conference will not be permitted to supervise the installation and testing of communications cables on the project.

1.10 CONTRACT ADMINISTRATION

A. DataCom Design Group may perform site visits and provide job field reports upon inspection of Contractor's installation, materials, supporting hardware, coordination with other trades and progress to schedule to the client.

B. Job Field Report outline:

1. General: The general installation progress in relation to scheduled work made by the Contractor up to that date.
2. Deficiencies and/or Items of Note: Documents observations of the cable installation that may require corrective action by the Contractor.

1.11 POST INSTALLATION MEETINGS

- A. At the time of substantial completion the contractor shall call and arrange for a post installation meeting to present and review all submittal documents to include but not be limited to As-Built Drawings, Test reports, Warranty paperwork, etc.
- B. Attendees shall include
 - 1. Communications Contractor
 - 2. Project Manager/Owner Representative
 - 3. DataCom Design Group
 - 4. General Contractor
 - 5. Other trades that the GC deems appropriate.
- C. At this meeting the Communications Contractor shall present and explain all documentation.
- D. Any discrepancies or deviations noted by and agreed to by participants shall be remedied by the Communications Contractor and resubmitted within one (1) week of the meeting.

1.12 DELIVERY, STORAGE, AND HANDLING

- A. Coordination with delivery companies, drivers, site address, and contact person(s) will be the responsibility of the Contractor.
- B. Communications Contractor requirements:
 - 1. Be responsible for prompt material deliveries to meet contracted completion date.
 - 2. Coordinate deliveries and submittals with the General Contractor to ensure a timely installation.
 - 3. No equipment materials shall be delivered to the job site more than three weeks prior to the commencement of its installation.
 - 4. Equipment shall be delivered in original packages with labels intact and identification clearly marked.
 - 5. Equipment shall not be damaged in any way and shall comply with manufacturer's operating specifications.
 - 6. Equipment and components shall be protected from the weather, humidity, temperature variations, dirt, dust, or other contaminants.
 - 7. Equipment damaged prior to system acceptance shall be replaced at no cost to the Owner.
 - 8. Contractor shall be responsible for all handling and control of equipment. Contractor is liable for any material loss due to delivery and storage problems.
- C. Owner/General Contractor shall provide the security requirements for Contractor to follow.

1.13 PROJECT/SITE CONDITIONS

- A. For all environmental recommendations, refer to master Architectural section.
- B. For all security recommendations, refer to related consultant sections.
- C. Contractor shall provide daily a clean work environment that is free from trash/rubbish accumulated during and after cabling installation.

- D. Contractor shall keep all liquids (drinks, sodas, etc.) away from finished spaces. If any liquid or other detriment (cuts, soils, stains, etc.) damages any finishes, Contractor shall provide professional services to clean or repair scratched/soiled finishes, at Contractor's expense.
- E. Damage by Communications Contractor to the work of others will be remedied at the Contractor's expense in a timely manner.

1.14 WARRANTY

- A. The Contractor shall be a certified Manufacturer's Value Added Reseller (VAR) and/or Authorized Installer and provide an end-to-end product warranty, adhere to the industry standard engineering, installation and testing procedures and utilize the authorized manufacturer components and distribution channels in provisioning this project.
- B. Contractor shall coordinate with manufacturer for warranty paperwork and procedures prior to the start of the project.
- C. Contractor shall provide a minimum one (1) year warranty on installation and workmanship PLUS an Extended Product Warranty and System Assurance Warranty for this wiring system and shall commit to make available local support for the product and system during the Warranty period.
 - 1. The Extended Product Warranty shall apply to all passive structured cabling system components and shall cover the replacement or repair of defective products and labor for the replacement or repair of such defective products for a minimum of one (1) year.
 - 2. The System Assurance Warranty provides a complete system and product warranty that will be extended to the end-user, ensuring the structured cabling system will be free of defects in materials and workmanship, will meet or exceed applicable performance requirements defined in the contract documents, and support all current and future network applications for a minimum of twenty (20) years.
- D. System Certification: Upon successful completion of the installation and subsequent inspection, the customer shall be provided with a numbered certificate, from the manufacturer, registering the installation.

1.15 PAYMENT

- A. Refer to the General Contractor contract documents and/or master specifications issued by Architect for project and cost payment details.

1.16 SUBMITTALS

- A. Refer to Requirements of Division 1
- B. Refer to Sections 271300 and 271500.
- C. The Communications Contractor shall not perform any portion of the work requiring submittal and review of shop drawings, product data, or samples until Owner has approved the respective submittal in writing. Such work shall be in accordance with approved submittals.
- D. Pre-Installation Submittal Requirements
 - 1. Communications Contractor shall provide certificates for the appropriate insurance coverage as defined in contract documents.

2. City, county, and/or state telecommunication cabling permits as required by Authority Having Jurisdiction (AHJ).
3. Executed non-disclosure agreement.
4. Appoint a Project Manager and provide the name and contact information.
5. Shop Drawings
 - a) Communications Contractor shall submit, for approval, floor plans that identify all device locations, cable routes and quantities, cable types, riser locations, and references to installation details and diagrams.
 - 1) Communication Contractor shall notify Owner of cable routes exceeding standardized lengths.
 - b) Communications Contractor shall submit, for approval, diagrams that show room layouts, rack layouts (including elevations), riser layouts, etc.
 - c) The Contractor shall make any corrections as required by the consultant team and submit revised shop drawings to the team for approval.
 - d) Approval by the Consultant of such drawings or schedules shall not relieve the Contractor from responsibility for deviations from the drawings or specifications, nor shall it relieve the Contractor from responsibility for errors of any sort in shop drawings or schedules. Requests to deviate shall be submitted in writing to the Architect.
 - e) Release of CAD Files
 - 1) Contractor may request to utilize the DataCom Design Group AutoCAD floor plan files for assistance in producing shop drawings.
 - 2) Request shall be made by signing the DataCom Design Group "Agreement for Release of CAD Files" letter.
6. Product Data Cut-sheets
 - a) Communications Contractor shall submit catalogue cut-sheets that include manufacturer, trade name, and complete model number for each product specified. Model number shall be handwritten and/or highlighted to indicate exact selection.
 - b) Communications Contractor shall identify applicable specification section reference for each product performance for each component specified for approval prior to purchase and installation.
7. Warranty
 - a) The Communications Contractor shall submit appropriate documentation from the certifying manufacturer showing the project is registered and qualified for the System Assurance Warranty.
 - b) All subsequent work shall be in accordance with approved submittals. The Communications Contractor shall not perform any portion of the work requiring approval of the System Assurance Warranty manufacturer's warranty registration qualification procedures that would disqualify any part or all of the wiring system from that warranty qualification.
8. Qualifications
 - a) Communications Contractor shall submit a list of the Contractor's previous projects that demonstrate qualification for this project. This list shall include, but not be limited to:

- 1) At least ten (10) other projects in the last five (5) years
 - 2) Name and location of project
 - 3) Project contacts, email addresses, and phone numbers
 - 4) Total square footage
 - 5) Total number of cables/drops
 - 6) Types of media
 - b) Communications Contractor shall submit an up-to-date and valid statement of qualifications for those assigned to perform the work specified herein at time of bid submission.
 - 1) Communications Contractor Employees
 - 2) Subcontractors
 - c) Manufacturer certifications for Contractor and installers.
9. Cable Testing Plan
- a) The Contractor shall provide a complete and detailed test plan for approval of the cabling system specified herein, including a complete list of test equipment for copper and fiber components and accessories prior to beginning cable testing.
 - b) The following minimal items shall be submitted for review:
 - 1) A testing plan that clearly describes procedures and methods.
 - 2) Product data for test equipment.
 - 3) Certifications and qualifications of all persons conducting the testing.
 - 4) Calibration certificates indicating that equipment calibration meets National Institute of Standards and Technology (NIST) standards and has been calibrated at least once in the previous year of the testing date.
 - 5) Examples of test reports, including all graphs, tables, and charts necessary for display of testing results.

10. Samples

- a) For workstation outlet connectors, jack assemblies, housings and faceplates for color selection and evaluation of technical specifications and requirements. Confirm with Architect, interior designer, and Owner representative for color before purchasing materials.

E. Closeout Submittal Requirements

1. As-Built Drawings

- a) Communications Design drawings are to be supplied to the Architect to prepare the master "As-Built" drawings.
- b) Submit one electronic copy and one hard copy with project deliverables within three (3) weeks subsequent to substantial completion. Provide a laminated floorplan with drop designations in the respective serving Telecom Room.
- c) As-Built drawings shall be in AutoCAD format, same version as used by Architect and consultant. Dimensions and scale of the drawing sheets submitted shall match the size of the drawing sheets used for the contract documents.
- d) Utilize normal recognized drafting procedures that match AutoCAD standards, Architect and Consultant guidelines, and methodology.

- e) The As-Built drawings shall incorporate all changes made to the building identified in, but not limited to, addendum, change notices, site instructions or deviations resulting from site conditions.
 - 1) Contractor shall clearly identify any resubmitted drawing sheets, documents or cut sheets either by using a color to highlight or cloud around resubmitted information.
 - 2) Maintain drawing numbering or page/sheet scheme consistency as per previously issued drawings/documents.
- f) Provide dimensioned plan and elevation views of networking components, showing:
 - 1) All work area outlet locations complete with outlet/cable labeling.
 - 2) Rack and/or cabinet locations complete with labeling.
 - 3) One-line diagram of equipment/device interconnections with the cable plant.
 - 4) Standard or typical details of installations unique to Owner's requirements.
 - 5) Graphic symbols and component identification on detail drawing shall conform to the latest conventions:
 - i) ANSI/TIA-568-C.0 "Generic Telecommunications Cabling for Customer Premises"
 - ii) ANSI/TIA-569-C "Telecommunications Pathways and Spaces"
 - iii) ANSI/TIA-606-B "Administration Standard for Commercial Telecommunications Infrastructure"
 - iv) ANSI/TIA-607-B "Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications"
- 2. The Communications Contractor shall deliver the Installer's Extended Product Warranty and Manufacturer's signed System Assurance Warranty of installed cabling system to include all components that comprise the complete cabling system.
 - a) Delivery shall be completed within two (2) weeks of the time of final punch list review.
 - b) Product Certificates shall be signed by manufacturers of cables, connectors, and terminal equipment certifying that products furnished comply with requirements.
- 3. Cable Testing Report Requirements
 - a) Submit certified test reports of Contractor-performed tests. Contractor shall submit the required Test Reports in the format and media specified, upon completion of testing the installed system.
 - b) The tests shall clearly demonstrate that the media and its components fully comply with the requirements specified herein.
 - c) Three (3) sets of electronic and hardcopy versions of test reports shall be submitted together and clearly identified with cable designations.
 - d) Cable inventory data shall be submitted for all fiber, copper, and coaxial cabling and termination components. Include products furnished:
 - 1) Manufacturer's name
 - 2) Manufacturer's part numbers
 - 3) Cable designations
 - 4) Location and riser assignments
 - 5) Product Data
- 4. Supply Owner with training manuals with instructions on methods of adding or removing cabling to/from firestopped sleeves and chases.

- F. The Contractor's BICSI Registered Communications Distribution Designer (RCDD) supervisor shall review, approve and stamp all documents prior to submitting. The Contractor's RCDD shall warrant in writing that 100% of the installation meets the requirements specified herein upon completion of all work.

PART 2 - PRODUCTS

2.1 SUMMARY

- A. Equipment and materials shall be standard products of a manufacturer regularly engaged in the manufacture of telecommunications cabling products and shall be the manufacturer's latest standard design in satisfactory use for at least one year prior to bid opening.
- B. All material and equipment, as provided, should be the standard Commercial-Off-The-Shelf (COTS) products of a manufacturer engaged in the manufacturing of such products.
 - 1. All shall be typical commercial designs that comply with the requirements specified.
 - 2. All material and equipment shall be readily available through manufacturers and/or distributors.
- C. All equipment shall be standard catalogued items of the manufacturer and shall be supplied complete with any optional items required for proper installation.
- D. Coordinate the features of materials and equipment so they form an integrated system. Match components and interconnections for optimum future performance and backward compatibility.
- E. All materials shall be UL- and/or ETL-approved and labeled in accordance with NEC for all products where labeling service normally applies.
- F. Materials and equipment requiring UL 94, 149 or 1863 listing shall be so labeled. Modification of products that nullifies UL labels is not permitted.
- G. Backward Compatibility: The provided products shall be backward compatible with lower category ratings such that if higher category components are used with lower category components, the basic link and channel measures shall meet or exceed the lower category's specified parameters.
- H. Component Compliance: The provided products shall each meet the minimum transmission specifications listed herein such that no individual component will be less than specifications for permanent link and channel, regardless of the fact that tests for link and channel ultimately meet required specifications.

2.2 ACCEPTABLE MANUFACTURERS

- A. Identification (Labeling) System
 - 1. Brady
 - 2. Dymo
 - 3. Hellerman-Tyton
 - 4. Acceptable alternate
- B. Fire-Stop Systems

1. Hilti
2. SpecSeal
3. 3M
4. Acceptable alternate

C. Other Products as Referenced in other Division 27 Specifications.

PART 3 - EXECUTION

3.1 PREPARATION

A. Field Measurements

1. Verify dimensions in areas of installation by field measurements before fabrication and indicate measurements on shop drawings. Coordinate fabrication schedule with construction progress to avoid delaying the work.

B. Established Dimensions

1. Where field measurements cannot be made without delaying the work, coordinate with the General Contractor to establish dimensions.
2. When approved in writing, proceed with fabricating units without field measurements.
3. Coordinate supports, adjacent construction, and fixture locations to ensure actual dimensions correspond to established dimensions.

C. Pre-installation inspection

1. The Contractor shall visually inspect all cables, cable reels, and shipping cartons to detect possible cable damage incurred during shipping and transport.
2. Visibly damaged goods are not acceptable and shall be replaced by the contractor at no additional cost to the Owner.

3.2 INSTALLATION

A. General

1. Contractor shall install work in accordance with specifications, drawings, manufacturer's instructions and approved submittal data.

B. Allowable cable bend radius and pull tension:

- a) In general, communications cable cannot tolerate sharp bends or excessive pull tension during installation.
- b) Refer to cable manufacturer's bend radius recommendations for the maximum allowable limits.
- c) After installation, exposed cable and other surfaces must be cleaned free of lubricant residue. Use only lubricants specifically designed for cable installation.

C. Pull Strings

1. Provide pull strings in all new conduits, including all conduits with cable installed (trailer strings) as part of this contract.
2. Data and video cables can be pulled in tandem with pull strings.

3. The pull strings must move freely to prevent cable jacket/cable damage during pulls.

D. Labeling

1. Cable labels: Self-adhesive vinyl or vinyl-cloth wraparound tape markers, machine printed with alphanumeric cable designations.
2. Flat-surface labels: Self-adhesive vinyl or vinyl-cloth labels, machine printed with alphanumeric cable designations.
3. Provide transparent plastic label holders, and 4-pair marked colored labels.
4. In accordance with ANSI/TIA-606-B "Administration Standard for Commercial Telecommunications Infrastructure":
 - a) Install colored labels according to the type of field as per color code designations.
 - b) Use "designation strip color-code guidelines for voice, data, cross-connect, riser, and backbone fields".
5. Pathway Labels and Labeling System
 - a) Labeling system shall consist of a hand-held portable printer
 - b) Conduits: General-purpose label designed for powdered coated surfaces with an ultra-aggressive adhesive. Label size shall be appropriate for the conduit size. Font size shall be legible from the finished floor.
 - c) Inner duct: Polyethylene general-purpose tagging material attached using tie wraps.
 - d) Junction boxes: General-purpose label designed for powdered coated surfaces with an ultra-aggressive adhesive, trade name. Font size shall be easily visible from the finished floor.
 - e) All labels shall be permanent, i.e. will not fade, peel, or deteriorate due to environment or time.
 - f) Identification
 - 1) All conduits, junction boxes, gutters, and pull boxes shall have machine-generated labels easily visible from the finished floor.
 - 2) Conduits shall be labeled with the word "communications" and the conduit's origination room number and destination room number.
 - 3) The Contractor shall label conduit at each wall and floor penetration and at each conduit termination, such as outlet boxes, pull boxes, and junction boxes, or as otherwise specified in other sections.
 - 4) Junction boxes, gutters and pull boxes shall be labeled with identification name or number as determined by contractor and submitted for approval.
 - 5) The Contractor shall label conduit sleeves at each wall and floor penetration.

E. Firestop

1. Provide approved fire-resistant materials to restore originally-designed fire-ratings to all wall, floor, and ceiling penetrations used in the distribution and installation for communications cabling system.
2. Install and seal penetrations (conduit, sleeves, slots, chases) in fire-rated barriers created for communications infrastructure to prevent the passage of smoke, fire, toxic gas, or water through the penetrations.
3. The firestopping material shall maintain/establish the fire-rated integrity of the wall/barrier that has been penetrated.
4. All through penetrations in a fire rated surface require a sleeve, regardless of penetration diameter or penetrating cable count.

5. Using a "ring and string" method of installing cabling for membrane penetrations in a wall cavity is acceptable, provided the solution was accepted by the Owner in writing. Code-compliant firestopping rules still apply.
 6. Coordinate firestopping procedures and materials with General Contractor.
 7. Sharing the pathway of other trades/utilities through compliant and non-compliant penetrations does not remove the requirement to maintain code-compliant firestopping.
 8. Provide and install removable, intumescent mechanical systems in floor chases for all openings greater than 0'-4".
 9. Provide and install removable, intumescent, firestop bricks for all openings greater than 0'-4" where there are penetrations through walls.
 10. Bricks shall be listed for insertion in fire-rated openings and require restraining materials or apparatus as needed per manufacturers' specifications.
 11. Provide manufacturer recommended material for rated protection for any given barrier.
 12. Laminate and permanently affix adjacent to chases the following information:
 - a) Manufacturer of firestop system.
 - b) Date of installation/repair.
 - c) Part and model numbers of system and all components.
 - d) Name and phone numbers of local distributor and manufacturer's corporate headquarters.
 13. Solutions and shop drawings/submittals for firestop materials and systems shall be presented to the General Contractor for written approval of materials/systems prior to purchase and installation.
 14. Materials shall be installed per manufacturer instructions, be UL-listed for intended use, and meet NEC and locals codes for fire stopping measures.
 15. The material chosen shall be distinctively colored to be clearly distinguishable from other materials, adhere to itself, and maintain the characteristics for which it is designed to allow for the removal and/or addition of communication cables without the necessity of drilling holes in the material.
 16. Develop training manuals with instructions on methods of adding or removing cabling to/from firestopped sleeves and chases.
- F. Within the normal environment, the installed systems shall not generate nor be susceptible to any harmful electromagnetic emission, radiation, or induction that degrades, or obstructs any equipment.
- G. Expansion Capability: Unless otherwise indicated, provide spare conductor pairs in cables, positions in patch panels, cross connects, and terminal strips, and space in cable pathways and backboard layouts to accommodate 20% future increase in structure cable system capacity.
- H. In the event of a breach of the representations and warranties contained herein, the Contractor, at their own expense, shall take all measures necessary to make the cabling system work and comply with the applicable manufacturer written technical recommendations and standards.
- I. System Tests
1. Upon completion of the installation of the communications infrastructure systems, including all pathways and grounding, the Contractor shall test the system.
 - a) Cables and termination modules shall be affixed, mounted or installed to the designed/specified permanent location prior to testing.
 - b) Any removal and reinstallation of any component in a circuit, including faceplates, shall require retesting of that circuit and any other disturbed or affected circuits.
 - c) Approved instruments, apparatus, services, and qualified personnel shall be utilized.

- d) The Contractor must verify that the requirements of the specifications are fully met through testing with an approved tester (rated for testing parameters listed elsewhere), and documentation as specified below.
- e) This includes confirmation of requirements by demonstration, testing and inspection. Demonstration shall be provided at final walk-through in soft copy and printed test data.

2. Non-Compliant Cabling

- a) Testing that shows some or all pairs of a cable do not comply with specifications, without written approval by the Owner, shall be replaced at Contractor's expense (including respective connectors).
- b) With the Owner's written approval, the over-length cable(s) shall be excluded from requirements to pass standardized tests and shall be explicitly identified.
 - 1) Testing is still required for non-compliant cabling.
 - 2) The tests shall be for wire-mapping, opens, cable-pair shorts, and shorts-to-ground.
 - 3) The test results must be within acceptable tolerances and shall be submitted with the Owner's acceptance document.

3. Failed Tests

- a) If tests fail, Contractor shall correct as required to produce a legitimate passing test.
- b) Manipulation of tester parameters on a failing test in order to achieve a passing test is unacceptable.
- c) If the Contractor is found to have manipulated or falsified any failing test result to show a "PASS" for any reason (without written notice and prior approval of the Owner), the Contractor shall be required to employ a Third-Party Testing Agent selected by the Owner to retest the complete cable plant and shall be required to pay all costs associated with this retesting.

4. Owner reserves the right to be present during any or all testing.

3.3 CLEANING

- A. The Contractor will clean all surfaces prior to final acceptance by Owner.

3.4 COMPLETION INSPECTION AND PUNCH LIST

- A. When the Contractor determines that the Scope of Work has been completed in accordance with the plans and specifications, Contractor shall schedule a Completion Inspection with the Owner.
- B. A Punch List will be generated during the Completion Inspection containing deficiencies in need of corrective action.
- C. Complete all punch list deficiencies within 10 working days. The work is not complete until all punch list deficiencies have been addressed.

3.5 ACCEPTANCE

- A. Once all work has been completed, test documentation has been submitted, and Owner is satisfied that all work is in accordance with contract documents, the Owner shall notify Contractor in writing of formal acceptance of the system.
- B. Contractor must warrant in writing that 100% of the installation meets the requirements specified herein (Standards Compliance & Test Requirements).
- C. Acceptance shall be subject to completion of all work, successful post-installation testing which yields 100% PASS rating, and receipt of full documentation soft and hard copies as described herein.

END OF SECTION

SECTION 270526

GROUNDING AND BONDING FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. This section includes grounding and bonding products, design requirements and installation for communications systems.
- B. Related Sections
 - 1. Section 260000 Electrical (including related sub-sections)
 - 2. Section 270000 Communications
 - 3. Section 270528 Pathways for Communications Systems
 - 4. Section 270810 Optical Fiber Testing and Measurements
 - 5. Section 271100 Communications Equipment Room Fittings
 - 6. Section 271300 Communications Backbone Cabling
 - 7. Section 271500 Communications Horizontal Cabling
 - 8. Section 274100 Audio-Visual Systems
 - 9. Section 280000 Electronic Security (including related sub-sections)

1.2 REFERENCES

- A. The publications referenced in Section 27 00 00 form a part of this specification. The publications are referred to in the text by basic designation only.
- B. Specific reference in specifications to codes, rules, regulations, standards, manufacturer's instructions, or requirements of regulatory agencies shall mean the latest printed edition of each in effect at the date of contract unless the document is shown dated.
- C. Conflicts
 - 1. Refer to Section 270000.
- D. Codes and Standards
 - 1. Refer to Section 270000.

1.3 SYSTEM REQUIREMENTS

- A. General
 - 1. All conductor wire, busbars and conduit shall be UL listed.
 - 2. The communications ground system shall be independent from all power grounding except for the connection to the building's electrical service main grounding electrode system.
 - 3. Power grounding and/or bonding shall not be allowed to interfere or provide any back feed or be a conductor to the separate communications ground system source or to any communications bonded materials or equipment.

- B. Telecommunications Main Grounding Busbar (TMGB) and Bonding Conductor for Telecommunications (BCT)
 - 1. The main ground source feed for the Telecommunications Main Grounding Busbar (TMGB) in the MC (MDF) shall be an independent feed from the building's electrical service main grounding electrode system, known as the Bonding Conductor for Telecommunications (BCT).
 - 2. The BCT shall be a stranded copper ground wire from the building ground system to the TMGB in the MC (MDF) sized at a minimum #4/0 unless otherwise sized by the Electrical Engineer of Record.
 - 3. The BCT connections shall be low emission exothermic welds at the connecting ends.
- C. Telecommunication Bonding Backbone (TBB) and Telecommunications Grounding Busbar (TGB)
 - 1. The Telecommunication Bonding Backbone (TBB) originates at the TMGB and shall be extended from the TMGB within the MC (MDF) throughout the building along the same route as the telecommunications backbone pathways, to the Telecommunications Grounding Busbar(s) (TGBs) in each TR (IDF).
 - 2. The minimum TBB conductor size between busbars shall be a stranded copper ground wire one (1) AWG size smaller than the Bonding Conductor for Telecommunications (BCT).
- D. TEBC and RBC
 - 1. All cabinets and racks shall be connected by the Telecommunications Equipment Bonding Conductor (TEBC). The TEBC is a stranded copper #4 conductor from the TMGB/TGB extending along each row of racks within the room. Bond each rack with a Rack Bonding Conductor (RBC). The RBC is a stranded copper #6 conductor connected to the vertical rack bonding terminal. All connections shall be irreversible crimp connections. Route conductor so as to minimize the quantity of sweeping bends.

1.4 SUBMITTALS

- A. Refer to Section 270000.

1.5 QUALITY ASSURANCE

- A. Refer to Section 270000.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Refer to Section 270000.
- B. The Contractor shall ship on manufacturer's standard reel sizes of one continuous length. Where cut lengths are specified, mark reel quantity accordingly.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Subject to compliance with requirements, manufacturers that may be incorporated in the work, include:
- B. Cable Manufacturers
 - 1. Houston Wire and Cable Company
 - 2. Okonite Company
 - 3. General Cable
 - 4. Pirelli Cable Corporation
 - 5. Triangle Wire and Cable
 - 6. Owner Approved Alternate
- C. Electrical Service Entrance Bonding Conductor and Connector Manufacturers
 - 1. Copperweld
 - 2. Thomas & Betts
 - 3. Blackburn
 - 4. Owner Approved Alternate
- D. Exothermic Connector Manufacturers
 - 1. Erico Products (Cadweld)
 - 2. Continental Industries (thermOweld)
 - 3. Harger
 - 4. Owner Approved Alternate
- E. Crimp Connector Manufacturers
 - 1. Thomas & Betts
 - 2. FCI Burndy Electrical
 - 3. O-Z/Gedney
 - 4. Owner Approved Alternate
- F. Telecommunication Grounding Busbars
 - 1. Chatsworth
 - 2. Panduit
 - 3. Leviton
 - 4. Owner Approved Alternate
- G. Bonding Straps
 - 1. Chatsworth
 - 2. Harger
 - 3. Brundy
 - 4. Owner Approved Alternate
- H. C-Type Compression Taps
 - 1. Brundy
 - 2. Harger
 - 3. Owner Approved Alternate
- I. Antioxidant Joint Compound

1. Chatsworth
2. Owner Approved Alternate

J. Labeling

1. Refer to Section 270000.

K. Firestopping

1. Refer to Section 270000.

2.2 MATERIALS

A. Communications Grounding Conductors: Copper American Wire Gauge (AWG) wire of the following sizes:

1. Bonding Conductor for Telecommunications (BCT): #4/0 (unless otherwise sized by the Electrical Engineer of Record)
2. Telecommunication Bonding Backbone (TBB): #3/0 (unless otherwise sized by the Electrical Engineer of Record)
3. Grounding Equalizer (GE): equal AWG as the TBB (unless otherwise sized by the Electrical Engineer of Record)
4. Telecommunications Equipment Bonding Conductor (TEBC): #4
5. Rack Bonding Conductor (RBC): #6

B. Grounding Connectors

1. Connectors shall be a copper alloy material and two-hole, double-crimp compression lug type at the connecting ends.

C. Telecommunications Main Ground Busbar (TMGB)

1. Use pre-drilled copper busbar with standard NEMA bolt hole sizing and spacing for the type of connectors.
2. Sized for the immediate requirements and allow for 25% growth.
3. The minimum dimensions shall be 0'-1/4" thick X 0'-4" wide X 2'-0" long.
4. Contain (2) tiers of pre-drilled holes for use with standard sizes of two-hole copper compression lugs.
5. ASTM-B187-C11000 Copper bar suitable for use with two-hole compression-type copper lugs.

D. Telecommunications Ground Busbar (TGB)

1. Use pre-drilled copper busbar with standard NEMA bolt hole sizing and spacing for the type of connectors.
2. Sized for the immediate requirements and allow for 25% growth.
3. The minimum dimensions shall be 0'-1/4" thick X 0'-4" wide X 0'-10" long.
4. Contain (2) tiers of pre-drilled holes for use with standard sizes of two-hole copper compression lugs.
5. ASTM-B187-C11000 Copper bar suitable for use with two-hole compression type copper lugs.

E. Equipment Cabinet and Rack Ground Busbar

1. Provide and install a vertical ground busbar in all racks and equipment cabinets to be used as an equipment grounding bus.
2. The busbar shall be equal-flange (channel) 1'-7" (19) rack width and shall include ground bar, splice plate and #12-24 mounting hardware.
3. The minimum dimensions shall be 0'-3/4" in width by 0'-3/16" in thickness.
4. The busbar shall have pre-drilled holes and shall be suitable for use with two-hole compression-type copper lugs.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Refer to Section 270000.

3.2 PREPARATION

- A. Refer to Section 270000.
- B. Copper and copper alloy connections should be cleaned prior to connection.

3.3 INSTALLATION

- A. Refer to Section 270000.
- B. The Contractor shall install the work in accordance with the specifications, drawings, manufacturer's instructions and approved submittal data.
- C. All work shall be supervised and reviewed by the Contractor's on-site RCDD.
- D. Installation plans and Requests For Information (RFIs) shall be reviewed by the Contractor's RCDD.
- E. General
 1. Bonding and grounding procedures and components shall comply with ANSI/TIA-607-B "Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications".
 2. Bonding should be accomplished such that the bonding system is integrated and compliant with NEC specifications.
 3. Bonding conductors shall be routed with minimum bends or changes in direction and should be made directly to the points being bonded.
 4. Bonding connections should be made by using compression copper lugs. However, for parts of the ground electrode system that are subject to corrosion, must carry high currents reliably, or for locations that require minimum maintenance, connections are made with low emission exothermic welding (see NEC Article 250).
 5. Make connections to dry surfaces only.
 6. Remove paint, rust, oxides, scales, grease and dirt from surfaces before making connection.

7. Burnish clean a 0'-1" X 0'-1" area, drill, tap, apply an adequate amount of antioxidant joint compound mixed for the metal surface types affected, and bolt conductor and connector to burnished and compounded area. Ensure proper conductivity.
8. Route bonding conductor(s) the shortest distance between bonding contact points.
9. The ground-wire connecting ends shall have a minimum amount of insulation removed at the ground lug.
10. Do not connect ground wire in power cable assemblies to the telecommunications ground system.
11. All grounding and bonding conductors shall be copper and may be insulated. If bare-bonding conductors are used, isolate bonding conductors and prevent contact.
12. Antioxidant material shall be installed to separate dissimilar metals and prevent corrosion.
13. If multiple systems are involved (lightning protection systems, communications, radio and TV, CATV, etc.), those systems shall be bonded together to minimize potential differences between the systems, per NEC 250.94.

F. Telecommunication Bonding Conductors

1. Each telecommunications grounding and bonding conductor shall be labeled at each end detailing the function and room number of its opposite end. Labels shall be located on conductors as close as practicable to their point of termination in a readable position. Labels shall be nonmetallic and include the following text, "TELECOMMUNICATIONS GROUND - DO NOT REMOVE. IF THIS CONNECTOR OR CABLE IS LOOSE OR MUST BE REMOVED, PLEASE CALL THE BUILDING TELECOMMUNICATIONS MANAGER".
2. Furnish and install all required bonding material, hardware, and utilize tools manufactured for this purpose.
3. The connections of the BCT, TBB, GE, TEBC, and RBC shall be made using low emission exothermic welding or hydraulically crimped with a double crimp connector. Two-hole grounding lugs are preferred for connection to the grounding bus bars.
 - a) All low emission exothermic welding shall be by Division 26.
 - b) Coordinate with the building services personnel in occupied spaces to prevent the smoke from the exothermic weld process from potentially setting off smoke/fire alarms.
4. Grounding and bonding conductors should not be placed in ferrous metallic conduit. If it is necessary to place grounding and bonding conductors in a ferrous metallic conduit that exceeds 1m (3ft) in length, the conductors shall be bonded to each end of the conduit using a grounding bushing or a No. 6AWG conductor, minimum.
5. The bonding conductors should be installed without splices.
 - a) Where splices are necessary, the number of splices should be minimized, be accessible, and be located within the telecommunications spaces.
 - b) Joined segments of a bonding conductor shall be connected using exothermic welding, irreversible compression-type connectors, or equivalent. All joints shall be adequately supported and protected from damage.

G. Equipment Cabinets and Racks

1. The busbar shall be installed at the base and back of each cabinet/rack for floor fed cabinets/racks.
2. The busbar shall be installed at the top and back of each cabinet/rack for top fed cabinets/racks.
3. Each cabinet and rack shall be provided with a minimum # 6 AWG ground wire.

4. Do not loop from cabinet/rack to cabinet/rack.
5. Each cabinet or rack bay against the wall shall be bottom/side ground fed from the wall.
 - a) Wall ground feeds/raceways to racks shall not be exposed on the walls.
 - b) Exception: Some cabinet or rack bays will require the ground to be fed from the ceiling raceway.
6. All ground raceways within each cabinet/rack or cabinet base and adjacent-ganged cabinet base shall be an insulated metallic flex type raceway and shall not interfere with equipment mounting frames or equipment mounting brackets.

H. Cable Runway, Cable Raceway and Support System Grounding

1. The Contractor shall provide communications cable tray and cable runway systems with a communications dedicated ground from the TGB.
2. All cable tray needs to be electrically continuous per NEC 250.96.
 - a) Metal raceways, wire-mesh cable trays, cable armor, cable sheath, enclosures, frames, fittings, and other metal non-current-carrying parts that are to serve as an alternate grounding path, with or without the use of supplementary equipment grounding conductors, shall be effectively bonded where necessary to ensure electrical continuity and the capacity to conduct safely any fault current plausibly to be imposed on them.
 - b) Any nonconductive paint, enamel, or similar coating shall be removed at the threads, contact points, and contact surfaces.
 - c) Grounding or bonding conductors shall be connected by fittings designed for that purpose to ensure adequate bonding.
3. The Contractor shall provide and install a #6 AWG ground wire to bond one end of each cable tray/runway system to the TGB.
4. For electrically non-continuous conduits that contain only grounding conductor, the Contractor shall bond the conduit and conductor together at both ends to ground to the nearest TGB with grounding bushings or ground clamps.

I. Shielded Backbone Cabling

1. The Contractor shall terminate and bond the shield to the nearest TGB or TMGB at both ends, following manufacturer's guidelines.

3.4 FIELD QUALITY CONTROL

A. Testing

1. Upon completion of the electrical system, including all grounding, the Electrical Contractor shall test the system for stray currents, ground shorts, etc.
2. Approved instruments, apparatus, services, and qualified personnel shall be utilized.
3. If stray currents, shorts, etc., are detected, eliminate or correct as required.

END OF SECTION

SECTION 270528

PATHWAYS FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes

1. Hangers and Supports, including open-top supports (cable hooks) for communications systems.
2. Conduits and Pull Boxes for communications systems.
3. Cable Tray and Cable Runway with associated accessories and fittings for communications systems.

B. Related Sections

1. Section 260000 Electrical (including related sub-sections)
2. Section 270000 Communications Systems
3. Section 270526 Grounding and Bonding for Communications Systems
4. Section 270810 Optical Fiber Testing and Measurements
5. Section 271100 Communications Equipment Room Fittings
6. Section 271300 Communications Backbone Cabling
7. Section 271500 Communications Horizontal Cabling
8. Section 274100 Audio-Visual Systems
9. Section 280000 Electronic Security (including related sub-sections)

1.2 REFERENCES

- A. The publications referenced in Section 270000 form a part of this specification. The publications are referred to in the text by basic designation only.
- B. Specific reference in specifications to codes, rules, regulations, standards, manufacturer's instructions, or requirements of regulatory agencies shall mean the latest printed edition of each in effect at the date of contract unless the document is shown dated.
- C. Conflicts
 1. Refer to Section 270000.
- D. Codes and Standards
 1. Refer to Section 270000.

1.3 SUBMITTALS

- A. Refer to Section 270000.

1.4 QUALITY ASSURANCE

- A. Refer to Section 270000.

1.5 DELIVERY, STORAGE, and HANDLING

- A. Refer to Section 270000.

- B. Conduit Storage

1. Package conduits in bundles maximum 10'-0" long, with conduit and coupling thread protectors for indoor/outdoor storage.
2. Package fittings in manufacturer's standard quantities and packaging suitable for indoor storage.
3. Protect coating on plastic-coated rigid conduit, fittings, and bodies from damage during shipment and storage.
4. Store conduit above ground on horizontal racks to prevent corrosion and entrance of debris.
5. Equipment and components shall be protected from the weather, humidity, temperature variations, dirt, dust, or other contaminants. Protect plastic conduit and inner duct from sunlight. Equipment damaged prior to system acceptance shall be replaced at no cost to the Owner.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Subject to compliance with requirements, manufacturers that may be incorporated in the work, include:

- B. Cable Hooks

1. Cooper B-Line, Inc.
2. Erico
3. Caddy
4. Owner approved alternate

- C. Basket Tray

1. Cooper B-Line, Inc.
2. Chatsworth (CPI)
3. Hoffman
4. WBT Wire Mesh
5. Owner approved alternate

- D. Polyethylene Cable Support System

1. Erico
2. Owner approved alternate

- E. Innerduct

1. Carlon Riser Guard Flexible Raceway (corrugated innerduct)
2. MaxCell (fabric innerduct)
3. Owner approved alternate

F. In Floor Infrastructure Termination Box

1. FSR FL-200

G. Lead Lined Backboxes in X Ray Rooms (See Division 26)

1. Owner approved

H. Measured pull tape (pull tape printed with sequential footage markings)

1. Fibertek
2. Condux International
3. Owner approved alternate

I. Labeling

1. Refer to Section 270000.

J. Firestopping

1. Refer to Section 270000.

2.2 CABLE HOOKS

A. Cable hooks shall be factory assembled for direct attachment to walls, hanger rods, beam flanges, purlins, strut, floor posts, etc. to meet job conditions.

B. Features

1. Cable hooks shall have a flat bottom and provide a minimum of 0'-1.625" cable-bearing surface.
2. Cable hooks shall have 90° radius edges to prevent damage while installing cables.
3. Cable hooks shall be designed so that the mounting hardware is recessed to prevent cable damage.
4. Cable hooks for non-corrosive areas shall be pre-galvanized steel. Where additional strength is required, cable hooks shall be spring steel with a zinc-plated finish.
5. Cable hooks for corrosive areas shall be stainless steel.
6. Cable hooks shall have a stainless steel cable latch retainer to provide containment of cables within the hook.
7. The retainer shall be removable and reusable.

C. Factory assembled multi-tiered cable hooks shall be used where required to provide separate cabling compartments, or where additional capacity is needed.

D. Load cable hooks in accordance with manufacturer requirements and recommendations.

E. Provide capacity for 20% growth, add additional hooks as needed.

2.3 PULL BOXES, JUNCTION BOXES, AND GUTTERS

- A. All junction boxes, gutters and pull boxes shall be UL listed and comply with NEC requirements.
- B. All junction boxes, gutters and pull boxes shall meet the following minimum material requirements:
 - 1. 16-gauge steel or heavier
 - 2. Seams shall be continuously welded and grounded smooth
 - 3. External screws and clamps
 - 4. External mounting feet (where applicable)
 - 5. Oil-resistant gasket and adhesive
 - 6. ANSI 61 gray polyester powder coating inside and out over phosphatized surface
- C. All junction boxes, gutters and pull boxes shall be provided with bushings for conduits and/or cabling.
- D. All junction boxes, gutters and pull boxes shall be securely installed.

2.4 CONDUITS

- A. All conduits shall be UL listed and comply with NEC requirements.
- B. Conduit Fittings
 - 1. All fittings shall be compression or threaded.
 - 2. Fittings shall provide a secure connection for pulling communications cables.
 - 3. Setscrew fittings are not permitted.
 - 4. Conduit "condulets" are not permitted.
- C. Non-metallic conduits are not permitted in above ground installations. Conversion fittings are required for non-metallic (below ground) to metallic (above ground) transitions.
- D. Innerduct:
 - 1. All fiber shall be installed in innerduct unless fiber cabling is armored.
 - 2. Shall be constructed of non-metallic material.
- E. Only manufacturer's fittings, transition adapters, terminators and fixed bends shall be used.
- F. Measured Pull Tape
 - 1. Pre-lubricated, woven polyester, low friction, and high abrasion resistant yarn with footage markers printed on the tape.
 - 2. Minimum average tensile strength shall be 1130 lbs. for 0'-1.5" and smaller conduits and innerduct.
 - 3. Minimum average tensile strength shall be 1800 lbs. for conduits larger than 0'-1.5".
- G. Fill and Bend Radius
 - 1. Conduit fill shall comply with NEC requirements.
 - 2. The minimum bend radius is 6 X the conduit inside diameter (ID) for 0'-2" conduit or less.
 - 3. The minimum bend radius is 10 X the conduit ID for a conduit greater than 0'-2".
 - 4. There shall be no more than two 90° bends (180° total) between conduit pull boxes.

5. Changes in direction shall be accomplished with sweeping bends observing minimum bend radius requirements above.
6. Do not use pull boxes for direction changes unless specifically designated otherwise in the drawings.
7. Unless otherwise noted in the drawings, conduits entering pull boxes shall be aligned with exiting conduits.

H. Routing

1. Conduits shall be routed in the most direct route possible, with the fewest number of bends possible.
2. There shall be no continuous conduit sections longer than 100'-0" for premises conduits. For runs that total more than 100'-0", insert junction or pull boxes so that no continuous run between pull boxes is greater than 100'-0".

I. Penetrations

1. All conduit penetrations shall comply with all applicable fire codes.
2. All conduit penetrations in fire-rated walls or floors shall be sealed and fire-proofed to meet or exceed the designed rating of the penetration area.

2.5 BASKEY TRAY

- A. Basket tray systems are defined to include, but are not limited to, straight sections of basket trays, bends, tees, elbows, reducers, crosses, wyes, vertical bends, up/down tees, cable support fittings, drop-outs, supports and accessories.
- B. Install all tray types utilizing manufacturer recommended installation instructions and applicable standards.
- C. Load basket tray and cable runway in accordance with manufacturer requirements and applicable standards.
- D. Basket Tray Materials
 1. Aluminum
 2. Pre-galvanized Steel
 3. Hot-dip Galvanized Steel
 4. Stainless Steel
 5. Yellow Zinc Dichromate
 6. Pre-Galvanized Zinc
 7. Electro-Galvanized Zinc
- E. Basket trays shall have sufficient depth and width so as not to exceed a maximum 50% fill ratio, including 20% capacity for anticipated growth.
- F. All straight sections shall be supplied in minimum 8'-0" lengths, except where shorter lengths are permitted to facilitate tray assembly lengths.

2.6 HANGERS AND SUPPORT

- A. Steel support brackets shall be galvanized steel and capable of supporting a minimum of 200 lbs with a safety factor of 3.
- B. Steel support brackets shall have a removable galvanized steel retaining strap.
- C. Steel support brackets shall accept 0'-3/8" (10mm) threaded rod for attachment to building structure or sub structure.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Refer to Section 270000.

3.2 PREPARATION

- A. Refer to Section 270000.
- B. Verify system is properly sized for cables before installation.
- C. Verify that the manufacturer recommended loads are not exceeded.
- D. Verify general routing and coordinate locations with other trades before installation. Layout cable runs in advance to determine quantities of cable to be installed along pathways, and to ensure non-interference from other trade installations.

3.3 INSTALLATION

- A. Refer to Section 270000.
- B. Cable Hooks
 - 1. Provide cable hook (j-hook) cable support system for horizontal and/or riser cabling in accessible ceiling space. Assemblies shall be complete with mounting hardware.
 - 2. Provide threaded rod for supporting hangers when hanging from floor deck and deck members.
 - 3. Follow manufacturers fill capacities.
 - 4. Locate cable hooks on 4' to 5' centers to adequately support and distribute the cable's weight.
 - 5. Suspended cables shall be installed with at least 0'-3" of clear vertical space above the ceiling tiles and support channels.
 - 6. For larger quantities of cables, provide special supports that are specifically designed to support the required cable weight and volume.
 - 7. Do not support pathways or cables with the ceiling suspension system or use electrical, plumbing, or other pipes for support.
 - 8. Cable supports shall be permanently anchored to building structure or substrates. Provide attachment hardware and anchors designed for the structure to which attached, and that are suitably sized to carry the weight of the cables to be supported.

9. Secure and support exposed horizontal cable at intervals not exceeding 5'-0" and not less than 1'-4" (16") from cabinets, rack pole, boxes, fittings, outlets, racks, frames, and terminals.
10. Cable sag between vertical supports for horizontal pathway shall not exceed 0'-6". Provide at least 0'-3" cable sag between supports.
11. Painted J-hooks shall meet or exceed NEC requirements for the environment in which the product is installed.

C. Conduit and Pull Boxes

1. The Contractor shall route the conduit in approximate locations unless drawing is dimensioned for precise placement.
2. Conduit cuts shall be square. Ream ends of burrs, and remove metal shavings and cutting lubricants before conduit is connected to the conduit system.
3. For conduit embedded in concrete, coat threaded connections in conduits with colloidal rust and corrosion inhibitor and sealant. Conduit must be clean and dry and must pass standard sizing test after concrete is poured.
4. Cap unused conduits with watertight caps.
5. Make conduit connections with appropriate fittings and tighten securely.
6. Use appropriate tools to install PVC coated conduit; avoid damage to exterior coating.
7. Install liquid-tight flexible metal conduit where exposed to weather, water, or other liquids.
8. Use IMC, PVC conduit, or rigid galvanized steel conduit in underground installations.
9. The Contractor shall provide fabric innerduct in all underground conduits, as indicated on the drawings.
 - a) The Contractor shall use pre-lubricated, woven polyester, low friction, and high abrasion resistant fabric.
 - b) The Contractor shall be trained for proper installation technique by the innerduct manufacturer. The Contractor shall coordinate with the owner to demonstrate that pull ropes in each inner duct cell move freely from end to end.

D. Cable Tray and Cable Runway

1. Cut wire basket tray members square with approved cable tray cutting tool as to not leave sharp edges at cut point. Remove burrs and smooth the ends before the cut is connected to wire-mesh tray system.
2. Ensure that standard splices are designed to have less than 1 milliohm (0.0001 Ω) of resistance between connections and provide bonding between sections. Painted wire mesh tray requires the outer mask of the non-conductive surface be removed at each end of the tray prior to installing the splice to provide continuity between painted tray sections.
3. Threaded rod (minimum 0'-½" diameter) or equivalent and slotted channel shall be used for hanging cable tray between floor deck and deck members

E. Fiber Support:

1. Support vertical fiber optic cable with basket weave wire/cable grips. Support fiber riser with single weave support grip with a single offset eye.
2. Mount/attach pulling eye to a wall or ceiling deck secured hook to support/provide strain relief to riser cable. Provide a minimum 3'-0" loop of fiber prior to entering fire stopped floor sleeve.
3. Where required coil up slack fiber cable into pull box and secure with single weave support grip.

F. Clearances

1. A minimum of 1'-0" access headroom shall be provided above a cable tray. Ensure that other building components do not restrict access to the cable trays from the sides.
2. Power outlets shall not be installed in or mounted to cable tray or cable runway.
3. Provide 3'-0" of unencumbered space for every 10'-0" segment of tray.
4. Cable tray clearances
 - a) Motors or transformers: 4'-0"
 - b) Power cables and conduit: 1'-0"
 - c) Fluorescent lighting: 0'-5"
 - d) Halide lights: 1'-0"
 - e) Above the ceiling tiles: 0'-3"
 - f) Access above and on one side of the cable tray: 1'-0"

3.4 FIELD QUALITY CONTROL

- A. Test system to ensure electrical continuity of bonding and grounding connections.
- B. Ensure compliance with specified maximum ground resistance.
- C. Refer to NFPA 70B Chapter 18 for testing and test methods.

3.5 CLEANING

- A. Remove all unnecessary tools and equipment, unused materials, packing materials, and debris from each area where Work has been completed unless designated for storage.
- B. Wipe clean all cable trays and apply appropriate manufacturer's paint to areas that have been scratched.

END OF SECTION

SECTION 270810

OPTICAL FIBER TESTING AND MEASUREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings, Contract Forms, Conditions of the Contract, including Construction Manager/General Contractor (CM/GC) Agreement, Exhibits and other Specification Sections that apply to this section.

1.2 SCOPE OF WORK

- A. Provide all labor, materials, tools, field-test instruments and equipment required for the complete and proper test measurements of the installed optical fiber cabling.
- B. In order to conform to the overall project event schedule, the contractor shall survey and coordinate the optical fiber testing with other applicable trades.
- C. In addition to the test regiment detailed in this document, the contractor shall notify the Owner or the Owner's representative of any additional tests that are deemed necessary to guarantee a fully functional system. The contractor shall carry out and record any additional measurement results at no additional charge.
- D. The contractor shall provide all test measurement results two (2) weeks prior to substantial completion in manifest spreadsheet format and native file format from the test instrument. Software shall also be provided to view the native results.

1.3 SCOPE

- A. Test measurements shall be carried out in accordance with the Tier 2 specification of ANSI/TIA-568-C.0, Annex E, plus an image capture of connector end-faces. Tier 2 testing is a higher level of testing that provides qualitative measures of the installed condition and performance of the cabling system and its components. Tier 2 testing includes length measurement, attenuation measurement, verifying polarity (using an optical loss test set (OLTS) and obtaining a trace and event table of the fiber with an optical time domain reflectometer (OTDR). OTDR traces are used to evaluate the installed cabling for anomalies and assuring uniformity of cable attenuation and connector insertion loss.
- B. Testing shall be performed on each optical fiber cabling link (adapter to adapter).
- C. All tests shall be documented including OLTS dual wavelength attenuation measurements for multimode (850nm and 1300nm) and single mode links (1310nm and 1550nm), OLTS length measurements for multimode and single mode links, OTDR traces and event tables for multimode and single mode links, and image captures of connector end-faces.

1.4 Definitions

- A. Optical fiber cabling link: A fiber with an adapter on each end.

1.5 QUALITY ASSURANCE

- A. Refer to Section 270000.
- B. Trained technicians who have successfully attended an optical fiber testing training program, which includes testing with an OLTS and an OTDR and have obtained a certificate as proof thereof shall execute the tests. These certificates may have been issued by any of the following organizations or an equivalent organization:
 - 1. Manufacturer of the fiber optic cable and/or the fiber optic connectors.
 - 2. Manufacturer of the test equipment used for the field certification.
 - 3. Training organizations (e.g., BICSI, A Telecommunications Association).
- C. The Owner or the Owner's representative shall be invited to witness, review or both witness and review field-testing.
 - 1. The Owner or the Owner's representative shall be notified of the testing start date, five (5) business days before testing commences.
 - 2. The Owner or the Owner's representative will select a random sample of 5% of the installed links and test that sample. The measured results obtained from the random sample shall be compared to the data provided by the contractor. If more than 2% of the sample results differ in terms of the pass/fail determination, the contractor under supervision of the Owner or Owner's representative shall repeat 100% of the testing at no cost to the Owner.

1.6 SUBMITTALS

- A. Manufacturers catalog sheets and specifications for the fiber optic field-test instruments including optical loss test sets (OLTS), optical time domain reflectometer (OTDR) and end face inspection capture device.
- B. A schedule (list) of all optical fibers to be tested identified per UT Administration Office specifications.
- C. Sample test reports.

1.7 Acceptance of test results

- A. Link attenuation measurement and allowance calculation
 - 1. The measured link attenuation shall be less than the link attenuation allowance. The link attenuation allowance is calculated as:

$$\text{Link Attenuation Allowance (dB)} = \text{Cable Attenuation Allowance (dB)} + \text{Connector Insertion Loss Allowance (dB)} + \text{Splice Insertion Loss Allowance (dB)}$$

Where:

$$\text{Connector Insertion Loss Allowance (dB)} = \text{Number of Connector Pairs} \times 0.4\text{dB}$$

$$\text{Splice Insertion Loss Allowance (dB)} = \text{Number of Splices} \times 0.15\text{dB}$$

$$\text{Cable Attenuation Allowance (dB)} = \text{Maximum Cable Attenuation Coefficient (dB/km)} \times \text{Length (km)}$$

Optical fiber cable attenuation performance

Optical fiber and cable type ²	Wavelength (nm)	Maximum attenuation (dB/km)
62.5/125 μ m Multimode (OM1)	850	3.5
	1300	1.5
50/125 μ m Multimode (OM2)	850	3.5
	1300	1.5
850 nm Laser-Optimized 50/125 μ m Multimode (OM3)	850	3.5
	1300	1.5
50/125 μ m Multimode (OM4)	850	3.5
	1300	1.5
Single-Mode Indoor-Outdoor (OS1) (OS2) ³	1310	0.5
	1550	0.5
Single-Mode Inside Plant (OS1) (OS2) ³	1310	1.0
	1550	1.0
Single-Mode Outside Plant (OS1) (OS2) ³	1310	0.5
	1550	0.5

- B. All installed cabling links shall be field-tested and pass the link attenuation measurement and allowance calculation and OTDR analysis. Any optical fiber link that fails these requirements shall be diagnosed and corrected. Any corrective action that must take place shall be documented and followed with a new test to prove that the corrected link meets performance requirements. The final and passing result of the tests for all links and channels shall be provided in the test results documentation in accordance with Part 3.
- C. Individual connector, splice and fiber insertion loss shall be evaluated using the OTDR trace. These components shall meet or exceed the values in 1.7, A,1.

PART 2 - PRODUCTS

1.1 OPTICAL FIBER CABLE Testers

- A. The field-test instrument shall be within the calibration period recommended by the manufacturer.
- B. The field-test instrument shall contain the most recent software and firmware provided by the manufacturer prior to testing.
- C. Optical loss test set (OLTS)
1. The OLTS shall be capable of providing length measurement of the fiber under test.
 2. Multimode optical fiber light source
 - a. Provide dual LED light sources with central wavelengths of 850 nm (± 30 nm) and 1300 nm (± 20 nm)
 - b. Output power of -20 dBm minimum.
 - c. The light source shall meet the launch requirements of ANSI/EIA/TIA-455-50B, Method A. This launch condition can be achieved either within the field test equipment or by use of an external mandrel wrap (see Part 3, 3.2, C, 1, c) with a Category 1 light source.
 3. Singlemode optical fiber light source
 - a. Provide dual laser light sources with central wavelengths of 1310 nm (± 20 nm) and 1500 nm (± 20 nm).

- b. Output power of -10 dB minimum.
 - 4. Power Meter
 - a. Provide 850nm, 1300nm and 1500nm wavelength test capability.
 - b. Power measurement uncertainty of ± 0.25 dB.
 - c. Store reference power measurement.
 - d. Save at least 100 results in internal memory.
 - e. PC interface (serial or USB).
 - 5. Acceptable manufacturers, models:
 - a. Fluke Networks, OptiFiber (OLTS and OTDR combined)
 - b. Fluke Networks, DTX (OLTS; MFM2, SFM2)
 - c. Corning Cabling Systems OTS-613QD (OLTS)
 - d. Exfo, FOT-600 OLTS (OLTS)
 - e. Owner-approved equivalent
- D. Optical Time Domain Reflectometer (OTDR)
 - 1. Shall have a bright, color transmissive LCD display with backlight.
 - 2. Shall have rechargeable Li-Ion battery for 8 hours of normal operation.
 - 3. Internal non-volatile memory and removable memory device with at least 16 MB capacity for results storage.
 - 4. Serial and USB ports to transfer data to a PC.
 - 5. Multimode OTDR
 - a. Wavelengths of 850 nm (± 20 nm) and 1300 nm (± 20 nm).
 - b. Event dead zones typically of 0.5 m at 850 nm and 1.3 m at 1300 nm.
 - c. Attenuation dead zones 4.5 m at 850 nm and 10.5 m at 1300 nm.
 - d. Distance range 3 km at 850 nm and 7 km at 1300 nm.
 - e. Dynamic range 15 dB at 850 nm and 14 dB at 1300 nm.
 - 6. Single-mode OTDR
 - a. Wavelengths of 1310 nm (± 25 nm) and 1550 nm (± 30 nm).
 - b. Event dead zones typically of 1 m at 1310 nm and 1 m at 1550 nm.
 - c. Attenuation dead zones typically of 8 m at 1310 nm and 8 m at 1550 nm.
 - d. Distance range at least 60 km.
 - e. Dynamic range 26 dB at 1310 nm and 24 dB at 1550 nm.
 - 7. Acceptable manufacturers, models:
 - a. Fluke Networks, OptiFiber (OLTS and OTDR combined with end face image capture)
 - b. Fluke Networks, DTX (QUAD-OTDR)
 - c. Corning Cabling Systems, OV-1000 OTDR
 - d. Exfo, FTB-150 OTDR
 - e. Approved equivalent
- E. Fiber Microscope
 - 1. Magnification of 250X or 400X for end-face inspection
 - 2. Video camera and display showing magnified end-face image.
 - 3. Camera probe tips permitting inspection through adapters.
 - 4. Capable of saving end-face image.
 - 5. Acceptable manufacturers, models:
 - a. Corning Cabling Systems, VIP-CCO-K17
 - b. Fluke Networks, OptiFiber (OLTS and OTDR combined with end face image capture)
 - c. Approved equivalent
- F. Administration
 - 1. The test result information for each link shall be recorded in the memory of the field-test instrument upon completion of the test.
 - 2. The test result records saved within the field-test instrument shall be transferred into a Windows™-based database utility that allows for the maintenance, inspection and archiving of these test records.

PART 3 - EXECUTION

1.1 General

- A. All tests performed on optical fiber cabling that use a laser or LED in a test set shall be carried out with safety precautions in accordance with ANSI Z136.2.
NOTE – A visible fault locator (VFL) normally uses a Class 2 or 3 light source and should not be directly viewed. Safe usage of the tool requires indirect viewing of the light source by pointing the end of the fiber at an adjacent surface (or introducing another surface in front of a fixed mounted connector) until the presence of light is determined.
- B. All outlets, cables, patch panels and associated components shall be fully assembled and labeled prior to field-testing. Any testing performed on incomplete systems shall be redone on completion of the work.
- C. Dust caps shall be placed on fiber end faces or adapters for each optical fiber link after all testing is complete on the fiber link.
- D. Testing shall be performed in accordance with ANSI/TIA-568-C.0 Annex E, Tier 2 testing on each cabling segment (i.e., verify polarity, measuring length, OLTS attenuation measurement, and OTDR trace).
- E. In addition to Tier 2 testing of ANSI/TIA-568-C.0 Annex E, an image of each fiber optic connector end face shall be taken, recorded and provided as part of the records.
- F. Optical fiber link test results from the OLTS, OTDR and end face image shall be recorded in the memory of the field-test instrument.
- G. Each optical fiber test shall be uploaded to a PC in which the administrative documentation (reports) shall be generated.
- H. The records for each test shall be provided to the owner a minimum of two weeks prior to substantial completion in Excel format and the native format to the test instrument. The Owner can supply an Excel spreadsheet template upon request for the contractor's use.

1.2 OPTICAL FIBER TESTING

- A. Polarity
 - 1. For duplex connector systems, polarity shall be verified. The polarity shall be verified with an OLTS while performing attenuation tests.
- B. Length measurement
 - 1. Each optical fiber link shall be measured for its length. The fiber length may be obtained by a capable OLTS or by an OTDR.
- C. Attenuation measurement (OLTS)
 - 1. General
 - a. Optical sources shall be turned on for a minimum of 5 minutes prior to referencing.
 - b. Test jumpers shall be reference quality and between 1m and 5m in length.
 - c. Where mandrels are used, secure the mandrel to the light source by some means such as a cable tie or tape. Care should be taken to ensure that the fiber jacket is not deformed or damaged when using a cable tie or tape.
 - d. The light source shall be referenced to the meter a minimum of twice daily (i.e., in the morning and noon).

- e. Fiber test jumpers shall be of the same core size as the cabling under test (e.g., singlemode to singlemode, 62.5µm multimode to 62.5µm multimode, 50µm multimode to 50µm multimode). Additionally the test jumpers shall meet the performance specifications of the fiber under test and that of the test instrument manufacturer.
 - f. Fiber test jumpers shall be cleaned prior to connection to the test instrument. After cleaning, cleaning solutions shall be given sufficient time to evaporate (approximately 30 seconds) prior to the mating of fiber test jumper to the test instrument.
 - g. The end of the fiber test jumper that will connect to the fiber link to be tested, the adapters and fiber under test shall be cleaned immediately prior to each fiber being tested. After cleaning, cleaning solutions shall be given sufficient time to evaporate (approximately 30 seconds) prior to the mating of fiber test jumper to the fiber under test.
 - h. The test jumper connected to the source shall not be removed after referencing so as not to adversely influence the attenuation measurement. Removal and reattachment of the test jumper connection from the source may affect the referenced power level. Re-referencing is to be performed if the test jumper is disconnected from the light source.
 - i. Singlemode optical fiber links shall be tested at 1310 nm and 1550 nm in accordance with ANSI/TIA/EIA-526-7, Method A.1, One Reference Jumper.
 - j. Multimode optical fiber links shall be tested at 850 nm and 1300 nm in accordance with ANSI/TIA/EIA-526-14-A, Method B, One Reference Jumper.
 - k. Multimode and singlemode optical fiber links shall be measured and reported for attenuation in each direction and attenuation bi-directionally (averaged in both directions). The measurements shall be less than or equal to the link attenuation allowance calculation (see Part 1, 1.7, A.).
2. Steps to measure and calculate optical fiber link attenuation include a) verifying test jumper quality; b) setting the reference; c) measuring link attenuation; and d) calculating link attenuation.

This example below describes the process when testing multimode fiber with the test jumper connected to the source having five non-overlapping wraps of multimode fiber on a mandrel. The procedure is also applicable to single-mode cabling, however, the five non-overlapping wraps of multimode fiber would be replaced with a single 30 mm (1.2 in) diameter loop of single-mode fiber.

- a. Verifying test jumper quality
 - 1) Test jumpers shall be tested for quality prior to use as a test jumper. See example below.

To verify that the test jumpers are in acceptable condition, first reference the light source to the optical power meter (see figure 1). Disconnect test jumper (J1) from the power meter (only) and insert a second test jumper (J2) by connecting it to the power meter and to (J1) with a mating adapter (see figure 2) and record the measurement. Disconnect both ends of J2, interchange the ends, and reconnect it and record the measurement. The resulting measurements, P_{verify} , should be within the appropriate connector loss specification. For example, if the connector used is specified at 0.32 dB, the reading on the power meter should be within 0.32 dB of P_1 .

Figure 1 – Example of OLTS reference measurement (P_1) with one test jumper (multimode)

Figure 2 – Example of a measurement (P_2) when verifying OLTS test jumpers (multimode)

- b. Setting the reference
 - 1) One test jumper (J1) is to be connected between the light source and the power meter and a reference measurement taken (P_1 [dBm]). When testing a multimode optical fiber link, a mandrel wrap shall be applied to the test jumper (J1) prior to setting the reference and for all subsequent measurements. When testing a singlemode optical fiber link, a single 30 mm (1.2 in) diameter loop shall be applied to the test jumper (J1) prior to setting the reference and for all subsequent measurements.

Figure 3 – Example of OLTS reference measurement (P_1) with one test jumper (multimode)

- c. Measuring link attenuation
 - 1) Connect the end of test jumper (J1) (source end) to one end of the link, and connect an verified test jumper (J2) between the other end of the link and the meter (see figure 4). The optical power reading is P_2 (dBm).

Figure 4 – Example of a multimode link attenuation measurement (P_2)

- 3. Link attenuation measurement and allowance calculation
 - a. The measured link attenuation shall be less than the link attenuation allowance.

D. Optical fiber end face image

1. An image of each optical fiber end face shall be taken and recorded after Tier 2 testing of the optical fiber link is completed. The end face image shall be captured at either 250X or 400X.
- E. OTDR trace
1. An OTDR trace shall be taken of each optical fiber link in one direction to ensure uniformity of cable attenuation and connector insertion loss. Multimode fiber traces shall be taken at 850nm and 1300nm. Singlemode fiber traces shall be taken at 1310nm and 1550nm.
 2. A launch cable to the length specified by the manufacturer of the OTDR shall be installed between the OTDR and the first link connection. The launch cable shall be of the same fiber type as the link under test.
 3. A receive cable shall be installed after the last link connection to be part of the OTDR trace. The receive cable shall be at least 100m (328ft) in length and of the same fiber type as the link under test.
 4. Selectable parameters affecting the OTDR measurement may include the test source wavelength, pulse duration or signal strength, length range, backscatter coefficient, signal averaging (time or count) and the group index of the fiber (also known as the index of refraction or the refractive index). The display shall be adjusted to view the region of interest on the trace on both the horizontal and vertical axes.

Figure 5 – OTDR setup illustration of fiber link testing

1.3 Administration

- A. Test results documentation
1. Test results saved within the field-test instrument shall be transferred into a Windows™-based database utility that allows for the maintenance, inspection and archiving of the test records. These test records shall be uploaded to the PC unaltered, i.e., "as saved in the field-test instrument".
 2. The test results documentation shall be available for inspection by the Owner or the Owner's representative during the installation period. The contractor shall retain a copy to aid preparation of as-built information.
 3. The records for each test shall be provided to the owner a minimum of two weeks prior to substantial completion in Excel format and the native format to the test instrument. The Owner can supply an Excel spreadsheet template upon request for the contractors use.
 4. Circuit IDs reported by the field-test instrument shall match the label ID specified by the Owner.
 5. The detailed test results documentation data is to be provided in an electronic database for each tested optical fiber and shall contain the following information
 - a. The identification of the customer site as specified by the end-user
 - b. The name of the standard selected to execute the stored test results
 - c. The name of the test personnel

- d. The date and time the test results were saved in the memory of the tester
- e. The manufacturer, model and serial number of the field-test instrument
- f. The version of the test software and the version of the test standards database held within the test instrument
- g. The value of the 'index of refraction' used for length calculations
- h. The fiber identification number
- i. The length for each optical fiber calculated by the OLTS.
- j. Test results to include OLTS attenuation link and channel measurements at 850 nm and 1300 nm for multimode cabling, and at 1310 nm and 1550 nm for singlemode cabling and the margin (difference between the measured attenuation and the test limit value).
- k. Test results shall be submitted to include OTDR link and channel traces and event tables at 850 nm and 1300 nm for multimode cabling, and at 1310 nm and 1550 nm for singlemode cabling and the margin (difference between the measured attenuation and the test limit value).
- l. The length for each optical fiber calculated by the OTDR.
- m. The overall Pass/Fail evaluation of the link-under-test for OLTS and OTDR measurements
- n. A picture or image of each fiber end-face

End of Section

SECTION 271100

COMMUNICATIONS ROOM FITTINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. This section includes basic communications and equipment room design requirements and fittings including:
 - 1. Equipment cabinets, racks, frames and enclosures
 - 2. Cable management and ladder racks
 - 3. Telecommunications service entrance pathways
 - 4. Rack mounted power protection and power strips
- B. Related Sections
 - 1. Section 260000 Electrical (including related sub-sections)
 - 2. Section 270000 Communications
 - 3. Section 270526 Grounding and Bonding for Communications Systems
 - 4. Section 270528 Pathways for Communications
 - 5. Section 270810 Fiber Optic Testing and Measurements
 - 6. Section 271300 Communications Backbone Cabling
 - 7. Section 271500 Communications Horizontal Cabling
 - 8. Section 274100 Audio-Visual Systems
 - 9. Section 280000 Electronic Security (including related sub-sections)

1.2 REFERENCES

- A. The publications listed below form a part of this specification. The publications are referred to in the text by basic designation only.
- B. Specific reference in specifications to codes, rules, regulations, standards, manufacturer's instructions, or requirements of regulatory agencies shall mean the latest printed edition of each in effect at the date of contract unless the document is shown dated.
- C. Conflicts
 - 1. Refer to section 270000.
- D. Codes and Standards (Most recent editions or as required in contract)
 - 1. Refer to section 270000.
- E. Communications rooms must be dedicated to designated equipment and services:
 - 1. Space shall not be used for storage of equipment not related to designated equipment and services.
 - 2. Hazardous or corrosive materials shall not be stored in the space.

3. Piping, ductwork and distribution of power, not related to designated equipment and services shall not pass through or be located within the space.
 - a) Foreign piping such as water pipes, steam pipes, soil pipes, sanitary drains, storm drains, A/C ducts, and other unrelated systems utilized for or containing liquids, or gases shall not be installed or pass through communication rooms.
 - b) With the exception of fire sprinklers, all water pipes shall be routed around communications room.
- F. Each communication room shall be equipped with fire detection, fire-extinguishing system and prevention devices. Connect detection devices to base building fire alarm system. A minimum of one (1) smoke detector shall be installed in each communications room.
- G. Walls shall be covered with 0'- $\frac{3}{4}$ " X 4'-0" X 8'-0" AC-grade plywood backboard 1'-0" AFF (smooth side to interior of room mounted vertically), capable of supporting mounted hardware and equipment.
 1. Plywood shall be affixed to the studs in the walls with screws that penetrate the studs a minimum of 0'-1", are spaced not greater than 1'-6" (18") apart in each stud, and with screws 0'-0" from the top and bottom of plywood.
 2. Plywood shall be sealed against the wall and painted on all exposed sides with two coats of flat white non-reflective paint.
 3. If applicable fire-treatment verification stamps on plywood shall be left unpainted to be readable.
- H. Communications room walls shall extend from floor slab to ceiling deck, with no drop ceilings installed.
- I. Cable tray or ladder rack should be used to distribute cables between rooms through finished wall penetrations.
- J. Cable ladder rack should be used to distribute cables within rooms, complete with cable bend limiters (drop outs).
- K. To reduce static, floors should not have carpet, but be sealed concrete to prevent concrete dust from forming.
- L. Communications rooms shall have only one lockable entrance door, a minimum of 3'-0" wide and 7'-0" high, that opens towards the outside of the room, and does not open into another room.
 1. Doors shall be provided with a lockset for the appropriate technology key with pinned hinges and anti-pry guards.
 2. Doors should have no windows or door seals.
 3. Communications rooms should have no exterior identifying markings.
- M. Mechanical
 1. Install monitoring sensors with dedicated environmental controls operating 24 hours a day, 365 days a year in the communications rooms.
 2. Provide ventilation in the communications rooms to dissipate heat generated by active devices.
 3. Temperature and Humidity requirements:

- a) Maintain communication rooms at an average of 60°F to 70°F, with a relative non-condensing humidity of 30% to 50%.
- b) The temperature range should be maintained within $\pm 9^\circ$

N. Plumbing

- 1. If “wet” fire suppression is used, install wire cages on sprinkler heads to prevent accidental operation.
- 2. Do not place sprinkler heads over equipment or cabling. In the event of a leak this will protect the equipment and cabling.
- 3. Drainage troughs are also recommended for leakage protection.

O. Electrical

- 1. One manufacturer’s product is recommended for each type of installation. The mixing of different manufacturer products for one item is not acceptable.
- 2. No electrical feeders/branch circuits shall be placed in or run through any communications room except as required to service those rooms.
- 3. The Contractor shall install a slot (a UL-approved fire-rated assembly) to accommodate cable runway entry from corridor and a fire-retardant system (bricks, boards, mechanical, etc). The formed slot shall have no burrs or sharp edges. This opening in the wall will be used to pass data and voice cabling from the corridor cable tray into the communications room.
- 4. The Contractor shall provide uniform illumination of at least 50 foot-candles (fc) 3’-0” AFF for communications rooms located a minimum of 8’-6” AFF.
 - a) Light fixtures in communications rooms are to be positioned for maximum lighting. Do not install over cable tray, ladder rack, or 1’-7” (19”) standing racks.
 - b) Provide enough power receptacles to support equipment and service. Coordinate power requirements of active equipment with electrical designer.

P. Relay Racks

- 1. 1’-7” (19”) X 7’-0” relay racks are to be used for mounting and termination of inter-building and intra-building fiber optic/ copper cables and components.
 - a) The racks shall have adequate horizontal and vertical cable management for the 8P8C patch panels and switches.
 - b) Racks with active electronics shall have rack mounted power strips.

1.3 SUBMITTALS

- A. Refer to section 270000.

1.4 QUALITY ASSURANCE

- A. Refer to section 270000.
- B. Product Standards

1. Equipment and materials shall be standard products of a manufacturer regularly engaged in the manufacture of telecommunications cabling products and shall be the manufacturer's latest standard design in satisfactory use for at least one year prior to bid opening.
2. Items of the same classification shall be identical. This requirement includes equipment, modules, assemblies, parts, and components.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Refer to section 270000.
- B. Coordinate layout and installation of equipment with owner's communications and LAN equipment and service suppliers. Coordinate service entrance arrangement with local exchange carrier.

1.6 PROJECT/SITE CONDITIONS

- A. Refer to section 270000.

1.7 WARRANTY

- A. Refer to section 270000.
- B. At the start of the project, contractor shall register the project with the manufacturer to help insure and facilitate manufacturer's warranty process.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. 1'-7" (19") Floor-Mounted Equipment Racks with Vertical Managers
 1. Siemon – RS3-07-S
 2. Owner approved alternate
- B. Horizontal Rack-Mount Cable Management
 1. ~~Siemon RS3-RWM4-2~~
 2. **Siemon RS3-RWM-2**
 3. Owner approved alternate
- C. Equipment Cabinet, Floor-Mounted (42U with doors and sides)
 1. APC NetShelter
 2. Owner approved alternate
- D. Labeling
 1. Refer to section 270000.
- E. Firestopping

1. Refer to section 270000.

2.2 ACCESSORIES

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Refer to Section 270000.

3.2 PREPARATION

- A. Refer to section 270000.
- B. Meet jointly with telecommunications and LAN equipment suppliers, local exchange carrier representatives, and Owner to exchange information and agree on details of equipment arrangements and installation interfaces.
- C. Adjust arrangements and locations of equipment with distribution frames, cross-connects, and patch panels of cabling systems of other communications, electronic safety and security, and related systems that share space in the equipment room.
- D. Coordinate location of power raceways and receptacles with locations of communications equipment requiring electrical power to operate.

3.3 INSTALLATION

- A. Refer to section 270000.

3.4 FIELD QUALITY CONTROL

- A. Refer to section 270000.

3.5 CLEANING

- A. Refer to section 270000.

3.6 ACCEPTANCE

- A. Refer to section 270000.

END OF SECTION

SECTION 271300

COMMUNICATIONS BACKBONE CABLING

PART 1 - GENERAL

1.1 SUMMARY

- A. This section includes the backbone cabling portion of a structured cabling system including:
 - 1. Fiber backbone cabling
 - 2. Splicing
 - 3. Termination and patch cables
- B. Provide all backbone cabling, terminating hardware, adapters, and cross-connecting hardware necessary to interconnect all system equipment including equipment located in Communications rooms.
- C. Related Sections
 - 1. Section 260000 Electrical (including related sub-sections)
 - 2. Section 270000 Communications
 - 3. Section 270526 Grounding and Bonding for Communications Systems
 - 4. Section 270528 Pathways for Communications
 - 5. Section 270810 Optical Fiber Testing and Measurements
 - 6. Section 271100 Communications Equipment Room Fittings
 - 7. Section 271500 Communications Horizontal Cabling
 - 8. Section 274100 Audio-Visual Systems
 - 9. Section 280000 Electronic Security (including related sub-sections)

1.2 REFERENCES

- A. The publications listed below form a part of this specification. The publications are referred to in the text by basic designation only.
- B. Specific reference in specifications to codes, rules, regulations, standards, manufacturer's instructions, or requirements of regulatory agencies shall mean the latest printed edition of each in effect at the date of contract unless the document is shown dated.
- C. Conflicts
 - 1. Refer to section 270000.
- D. Codes and Standards (Most recent editions or as required in contract)
 - 1. Refer to section 270000.

1.3 SUBMITTALS

- A. Refer to section 270000.

B. Cable Pulling Plan

1. The contractor shall submit a cable pulling plan prior to installation.
2. Submittal requirements:
 - a) Indicate the installed backbone conduit layout in schematic format, including junction boxes and distances between junction boxes.
 - b) Indicate contents of each conduit.
 - c) Indicate the cable pulling calculations, conduit fill ratios and actual cable runs and tensions.
 - d) Include detail and schedule showing the construction sequence of communications rooms.
 - e) Installation of cabling shall not commence prior to approval of the pulling plan and calculations by the engineer.

C. Splice Plan

1. The contractor shall submit shop drawings indicating the intended cable splice points, mounting method and equipment list prior to installation

D. Cable Testing Plan

1. Refer to Section 270000.

E. Cable Testing Reports

1. Refer to Section 270000.

1.4 QUALITY ASSURANCE

- A. Refer to section 270000.
- B. Cable splicing personnel shall have a minimum of five years splicing experience and shall have completed a minimum of five major splicing projects.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Refer to section 270000.
- B. Storage temperature range: -40°F to 149°F (-40°C to 65°C)
- C. Fiber cables shall be shipped on reels in lengths as specified with a minimum overage of 10%:
 1. The cable shall be wound on the reel so that unwinding can be done without kinking the cable.
 2. Two meters of cable at both ends of the cable shall be accessible for testing.
 - a) All fiber shall be tested on the reel for continuity and distance compliance before installation.
 3. Each reel shall have a permanent label attached showing length, cable identification number, cable size, cable type, attenuation, bandwidth, and date of manufacture.

- a) Labels shall be water resistant and the writing on the labels shall be indelible.

1.6 PROJECT/SITE CONDITIONS

- A. Refer to section 270000.

1.7 WARRANTY

- A. Refer to section 270000.

1.8 MAINTENANCE AND SUPPORT

- A. Refer to section 270000.

PART 2 - PRODUCTS

2.1 ACCEPTABLE FIBER CABLE MANUFACTURERS

- A. ~~Armored OSP (Outside Plant) cable with rodent resistant insulation~~
 - 1. ~~Corning~~
 - 2. ~~Owner approved alternate~~
- B. Backbone **Armored** Plenum Rated ~~(Riser)~~ cable **(24-Strand Single Mode)**
 - 1. ~~Corning — 12 Strand Single Mode 012E88-33131-29~~
 - 2. Corning – 24 Strand Single Mode 024E88-33131-29
 - 3. ~~Corning — 12 Strand 62.5um Multi Mode 012K88-33130-29~~
 - 4. ~~Corning — 24 Strand 62.5um Multi Mode 024K88-33130-29~~
 - 5. Owner approved alternate

2.2 ACCEPTABLE COMPONENT MANUFACTURERS

- A. Fiber Connectors, (SC)
 - 1. Corning
 - 2. Owner approved alternate
- B. Fiber Duplex Patch Cables (Type SM)
 - 1. ~~Leviton~~
 - 2. ~~CommScope~~
 - 3. ~~Berk-tek~~
 - 4. Corning
 - 5. ~~Panduit~~
 - 6. Owner approved alternate
- C. ~~Fiber adapter panels (6-Port)~~

1. ~~OCC Part 6012DSC~~
2. ~~Owner approved alternate~~

D. Fiber adapter panels (12-Port)

1. OCC – 12F SM FAP 6112SMDSC
2. ~~OCC – 12F MM FAP 6112MMDSC~~
3. OCC – FAP Blank 600
4. Owner approved alternate

E. Fiber Termination Shelf (Rack-Mounted)

1. ~~OCC – RTC2U-6APB (2RU enclosure)~~
2. OCC – RTC4U-12APB (4RU enclosure)
3. Owner approved alternate

F. Labeling

1. Refer to section 270000.

G. Firestopping

1. Refer to section 270000.

2.3 FIBER BACKBONE CABLING

A. Fiber General Requirements

1. Fiber shall be certified to meet all parts of TIA-455 and comply with TIA-492, ANSI/ICEA S-83-596 and ANSI/ICEA S-83-640 and the NEC.
2. Fibers shall have D-LUX coating or approved equivalent to ensure color retention, minimize micro bending losses and improve handling. The coating shall be mechanically strippable.
3. Cable installed in plenums or air-handling spaces shall meet UL 910 and shall be marked OFNP (optical fiber non-conductive plenum) in accordance with the NEC.
 - a) Plenum Fiber rated cable consisting of multiple fibers shall have a Plenum PVC outer jacket.
 - 1) Each group of fibers shall have a color-coded Low Smoke PVC buffer.
 - 2) The buffered fibers are organized in subunits of fibers, reinforced with aramid yarn for extra strength and surrounded with a color-coded low smoke tube.
 - b) Within the premises, all fiber shall be placed in plenum rated innerduct the entire length of the cable for protection. Use manufacturer plenum rated couplings for all connections.
4. Riser cable shall meet UL 1666 and be marked OFNR (optical fiber nonconductive riser) in accordance with the NEC.
 - a) Non-plenum, riser rated cable consisting of multiple fibers, shall have an orange, Polyvinyl Chloride (PVC) outer jacket.
5. OSP (Outside Plant) Fiber

- a) Stranded loose tube dielectric fiber cable shall be utilized for underground conduit, direct buried, or aerial applications.
 - b) Underground cable, including cable installed in conduits or duct banks, shall contain an additional moisture barrier in the form of a flooding compound.
 - c) All OSP fiber strength members shall be dielectric without any metallic elements.
6. Fiber conductors shall follow standard color code schemes. Fiber numbers and binders shall correspond to the following color codes:
- a) Fiber/Binder No. 1 – blue
 - b) Fiber/Binder No. 2 – orange
 - c) Fiber/Binder No. 3 – green
 - d) Fiber/Binder No. 4 – brown
 - e) Fiber/Binder No. 5 – slate
 - f) Fiber/Binder No. 6 – white
 - g) Fiber/Binder No. 7 – red
 - h) Fiber/Binder No. 8 – black
 - i) Fiber/Binder No. 9 – yellow
 - j) Fiber/Binder No. 10 – violet
 - k) Fiber/Binder No. 11 – rose
 - l) Fiber/Binder No. 12 – aqua
7. Cable Minimum Bending Radius:
- a) During Installation: 20X cable diameter
 - b) After Installation: 10X cable diameter
8. Operating temperature range: -76°F to 185°F (-60°C to 85°C)

B. Single Mode Fiber Requirements

- 1. Fibers shall have dual wavelength capability, transmitting at 1310 and 1550 nm ranges.
- 2. 8.3 μm core
- 3. 125 $\mu\text{m} \pm 1 \mu\text{m}$ cladding diameter
- 4. Cladding non-circularity: = 1%
- 5. Core/cladding concentricity error: = .5 μm
- 6. Colored fiber diameter: 254 $\mu\text{m} \pm 7 \mu\text{m}$
- 7. Maximum Attenuation: 1.0 dB/km at 1310 and 1550 nm (inside premises) and 0.5 dB/km at 1310 and 1550 nm (OSP)
- 8. Minimum Bandwidth: 20 GHz
- 9. The mechanical and environmental specifications for OSP fiber cable shall be in accordance with ANSI/ICEA S-87-640. OSP fiber cables shall be of a water-block construction and meet the requirements for compound flow and water penetration as established by ANSI/ICEA S-87-640. Outdoor cable shall have minimum pull strength of 2670 N (600 lbf).

2.4 COPPER PATCH CABLES

- A. Refer to Section 271500.

2.5 FIBER PATCH CABLES

- A. Verify exact quantities and lengths with Owner prior to purchase
- B. Provide the appropriately-rated (matched to the installed cable plant) Modular Patch Cords for the appropriate location and equipment.
- C. Single Mode patch cables shall be a stepped-index 8.3 μm core with a 125 μm cladding.
- D. Duplex SC connectors shall meet the following specifications:
 - 1. Made and warranted by the manufacturer of the cabling system installed in this project and shall meet or exceed patch cord specifications as outlined in TIA standards.
 - 2. Patch cords shall be in original packaging when presented to the Owner.
- E. Aramid yarn and a jacket of flame-retardant PVC shall cover the fiber cladding.
- F. Single Mode patch cable additional requirements:
 - 1. Return Loss: -50 dB maximum
 - 2. Mated Connector Loss: $\mu = 0.35$ dB, $\sigma = 0.2$ dB
 - 3. Connection Repeatability: 0.20 dB maximum changes per 200 re-connects.
- G. The Single Mode connector (visible portion) and adapter/outlet shall be identified by the color blue.

2.6 LABELING

- A. Refer to Section 271500.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Refer to Section 270000.
- B. Verify the following before proceeding:
 - 1. Conduits, cable trays and pull boxes are properly installed following section 270528
 - 2. Backboards in communications rooms are properly installed following section 271100
 - 3. Grounding system is properly installed and tested following section 270526
 - 4. Liquid-carrying pipes are not installed in or above voice and data system communications rooms.
 - a) Do not proceed with installation in affected areas until removed.

3.2 PREPARATION

- A. Refer to section 270000.
- B. OSP Cable

1. The Contractor shall verify pulling material (pull rope, mule tape, etc.) average breaking strength based on cable type and size, pulling distance and pathway, and other pertinent factors.

3.3 FIBER INSTALLATION

A. Fiber Cable Installation

1. Fiber cable shall be installed in innerduct from near end termination point to far end termination point.
 - a) Only UL-approved plenum-rated innerduct shall be installed in all plenum areas.
 - b) Metallic conduit may be used in lieu of innerduct in plenum-rated ceilings if it is bonded and grounded correctly.
2. Only technicians certified by the product manufacturer shall perform terminations.
 - a) Terminations shall be made in a controlled environment.
 - b) Cables may be assembled off-site, although testing must be completed with the cable in its final installed condition.
 - c) Test optical fiber on the reel for distance and continuity verification before installation.
3. At each location where fiber cable is exposed to human intrusion, it shall be marked with warning tags.
 - a) These tags shall be yellow or orange in color, and shall contain the warning "CAUTION FIBER OPTIC CABLE".
 - b) The text shall be permanent, black, block characters, and at least 0'-1.875" high.
 - c) A warning tag shall be permanently affixed to each exposed cable or bundle of cables, at intervals of not less than 5'-0".
 - d) Any section of exposed cable that is less than 5'-0" in length shall have at least one warning tag affixed to it.

B. Fiber Distribution Center

1. Contractor shall provide sufficient spare adapter plates to fill the appropriate-sized FDC.

3.4 FIBER TERMINATION AND SPLICING

A. Interconnect Units and Distribution Shelves

1. Modular in design and used in fiber interconnection, cross-connection, and splicing applications
2. 1'-7" (19") rack-mountable
3. Accept 12-strand, 24-strand, 48-strand or 72-strand terminations
4. Owner approved industry standard connector

B. Splicing and closures

1. Fiber splice modules shall be utilized for all OSP terminations.
2. The link shall consist of:

- a) Fiber cable
- b) Splice
- c) Splice tray holder/closure
- d) Fiber panel/coupler
- e) Pre-manufactured fiber pigtail with pre-polished fiber connector
- f) Fiber jumper to connect the pigtail-coupled link to the appropriate electronic switch

C. Fiber Fusion Splice

- 1. Fusion splices shall be mounted in protective trays within the closure.
- 2. Fusion splices shall not exceed a maximum optical attenuation of 0.3 dB when measured in accordance with ANSI/TIA-455-34, Method a (factory testing) or ANSI/TIA-455-59 (field testing).
 - a) Fiber splices shall have a minimum return loss of 26 dB for Single Mode
 - 1) Minimum Single Mode return loss for broadband analog video (CATV) applications is 55 dB.

3.5 INSTALLATION REQUIREMENTS

- A. All installation shall be done in conformance with ANSI/TIA-568-B standards, BICSI methods, and industry standard installation guidelines.
 - 1. The Contractor shall ensure that the maximum pulling tensions of the specified distribution cables are not exceeded and cable bends maintain the proper radius during the placement of the facilities.
 - 2. Failure to follow the appropriate guidelines shall require the Contractor to provide in a timely fashion the additional material and labor necessary to properly rectify the situation.
 - 3. This shall also apply to any and all damages sustained to the cables by the Contractor during the implementation.
- B. The Contractor shall provide service loops for cables terminating in the communications rooms.
 - 1. A 10'-0" service loop shall be provided and secured in a neat and standards-compliant manner above the equipment racks or cable trays unless specified otherwise.
 - 2. This allows for future changes or expansion without installing new cables.
- C. Documentation
 - 1. All cable inventory data documentation shall be submitted in format coordinated with and approved by owner so that data can be incorporated into existing databases.
 - 2. Documentation shall include cable identification number, source and destination, type of cable, length of cable and number of pairs or fibers.
 - 3. Complete cross connect documentation is required. It shall include detailed documentation of each pair of all copper backbone cable and strand of fiber.

3.6 FIELD QUALITY CONTROL

- A. Refer to section 270000.

3.7 COPPER POST-INSTALLATION TESTING

- A. Contractor shall test each pair or strand of every cable prior to acceptance.
- B. Refer to Sections 270000 and 271500.
- C. Copper Test Documentation
 - 1. Refer to Section 271500.

3.8 FIBER POST-INSTALLATION TESTING

- A. Provide all labor, materials, tools, field-test instruments and equipment required for the complete and proper test measurements of the installed fiber cabling.
- B. Contractor shall have successfully attended a fiber testing training program, which includes testing with an OLTS and an OTDR and have obtained a certificate as proof thereof.
- C. All outlets, cables, patch panels and associated components shall be fully assembled and labeled prior to field-testing.
 - 1. Any testing performed on incomplete systems shall be redone on completion of the work.
- D. Dust caps shall be placed on fiber endfaces or adapters for each optical fiber link after all testing is complete on the fiber link.
- E. Pre-test Submittals
 - 1. Manufacturers catalog sheets and specifications for the fiber cable field-test instruments including
 - a) OLTS (Optical Loss Test Set)
 - b) OTDR (Optical Time Domain Reflectometer)
 - 2. A schedule (list) of all fiber cables to be tested
 - 3. Fiber testing training program certificate
 - 4. Sample test reports
- F. Fiber testing standards
 - 1. The Contractor shall meet or exceed the following standards and guidelines:
 - a) ANSI/TIA-568-C.0 Optical Fiber Transmission/Test Requirements, and Annex E: Optical Fiber Field Test Guidelines (Tier 2)
 - 1) Tier 2 testing is a higher level of testing that provides qualitative measures of the installed condition and performance of the cabling system
 - b) ANSI/TIA-568-B.3 Optical Fiber Cabling Components Standard
 - c) TIA/TSB-140 Additional Guidelines for Field-Testing Length, Loss and Polarity of Optical Fiber Cabling Systems
 - 2. Single Mode requirements

- a) ANSI/TIA-526-7, Method A.1: Optical Power Loss Measurements of Installed Single Mode Fiber Cable Plant-OFSTP-7
- 3. The cable installers shall have a copy of these references in their possession and be familiar with the contents
- G. In order to conform to the overall project event schedule, the contractor shall survey and coordinate the optical fiber testing with other applicable trades.
- H. In addition to the test regiment detailed in this document, the contractor shall notify the Owner of any additional tests that are deemed necessary to guarantee a fully functional system.
 - 1. The contractor shall carry out and record any additional measurement results at no additional charge.
- I. The contractor shall provide all test measurement results two (2) weeks prior to substantial completion in spreadsheet format and native file format from the test instrument.
 - 1. Software shall also be provided to view the native results.
- J. All tests performed on optical fiber cabling that use a laser or LED in a test set shall be carried out with safety precautions in accordance with ANSI Z136.2.
 - 1. A visible fault locator (VFL) normally uses a Class 2 or 3 light source and should not be directly viewed.
 - 2. Safe usage of the tool requires indirect viewing of the light source by pointing the end of the fiber at an adjacent surface (or introducing another surface in front of a fixed mounted connector) until the presence of light is determined.
- K. Link attenuation measurement and allowance calculation
 - 1. The measured link attenuation shall be less than the link attenuation allowance. The link attenuation allowance is calculated as:
 - a) $\text{Link Attenuation Allowance (dB)} = \text{Cable Attenuation Allowance (dB)} + \text{Connector Insertion Loss Allowance (dB)} + \text{Splice Insertion Loss Allowance (dB)}$
 - 1) $\text{Connector Insertion Loss Allowance (dB)} = \text{Number of Connector Pairs} \times 0.4\text{dB}$
 - 2) $\text{Splice Insertion Loss Allowance (dB)} = \text{Number of Splices} \times 0.15\text{dB}$
 - 3) $\text{Cable Attenuation Allowance (dB)} = \text{Maximum Cable Attenuation Coefficient (dB/km)} \times \text{Length (km)}$
- L. Fiber Testing Requirements
 - 1. All installed fiber links shall be field-tested and pass the following tests:
 - a) OLTS (Optical Loss Test Set) length and dual wavelength attenuation
 - b) OTDR (Optical Time Domain Reflectometer) traces and event tables
 - 2. OLTS (Optical Loss Test Set)
 - a) The length and attenuation of each installed fiber link shall be measured and documented.

- b) System loss measurements requirements:
 - 1) 850 and 1300 nanometers for Multi-mode
 - 2) 1310 and 1550 nanometers for Single Mode
 - c) Reflective events (connections) shall not exceed 0.75 dB.
 - d) Non-reflective events (splices) shall not exceed 0.3 dB.
 - e) The acceptable link attenuation for Multi-mode horizontal fiber is based on the maximum distance of 295'-0".
 - f) A horizontal link in a network with a consolidation point may be tested using a fixed upper limit for attenuation of 2.75 dB.
 - g) Optical sources shall be turned on for a minimum of 5 minutes prior to referencing.
 - h) Fiber links shall be measured and reported for attenuation in each direction and attenuation bi-directionally (averaged in both directions)
 - i) Polarity shall be verified for duplex connector systems
 - j) Mandrels
 - 1) Mandrels shall be used when testing attenuation of Multi-mode fiber cabling
 - 2) Where mandrels are used, secure the mandrel to the light source by some means such as a cable tie or tape.
 - 3) Care should be taken to ensure that the fiber jacket is not deformed or damaged when using a cable tie or tape.
 - 4) The light source shall be referenced to the meter a minimum of twice daily (i.e., in the morning and noon).
3. OTDR (Optical Time Domain Reflectometer)
- a) An OTDR trace shall be taken of each fiber link in one direction to ensure uniformity of cable attenuation and connector insertion loss
 - b) Testing shall consist of a bi-directional end to end OTDR trace performed per TIA 455-61
 - c) Individual connector, splice and fiber insertion loss shall be evaluated using the OTDR trace.
 - d) Fibers shall be inspected at 250X for Multi-mode and 400X for Single Mode
4. Maximum Attenuation
- a) Single Mode ISP (inside) 1.0 dB/km at 1310 nm and 1550 nm
 - b) Single Mode OSP (outside) 0.5 dB/km at 1310 nm and 1550 nm
5. Test Cords (Jumpers)
- a) Testing of the cabling shall be performed using high-quality test cords of the same fiber type and core size as the cabling under test.
 - 1) OLTS test cords shall be between 3'-3" (1m) and 16'-4" (5m).
 - 2) OTDR testing shall be approximately 328'-0" (100m) for the launch cable and at least 82'-0" (25m) for the receive cable.
 - b) The test jumper, the adapters, and fiber under test shall be cleaned immediately prior to each fiber being tested.

- 1) After cleaning, cleaning solutions shall be given sufficient time to evaporate (approximately 30 seconds) prior to the mating of fiber test jumper to the fiber under test.
6. Test Failure
- a) Any fiber link that fails these requirements shall be diagnosed and corrected.
 - b) Any corrective action that must take place shall be documented and followed with a new test to prove that the corrected link meets performance requirements
7. Acceptable Testers
- a) Fluke DTX CableAnalyzer
 - b) Owner Approved equivalent
- M. The Owner or the Owner's representative shall be invited to witness, review or both witness and review field-testing.
1. The Owner or the Owner's representative shall be notified of the testing start date, five (5) business days before testing commences.
 2. The Owner or the Owner's representative will select a random sample of 5% of the installed links and test that sample.
 - a) The measured results obtained from the random sample shall be compared to the data provided by the contractor.
 - b) If more than 2% of the sample results differ in terms of the pass/fail determination, the contractor under supervision of the Owner or Owner's representative shall repeat 100% of the testing at no cost to the Owner.
- N. Test Results
1. The detailed test results documentation data is to be provided in an electronic database for each tested fiber strand and shall contain the following information:
 - a) Identification of the customer site as specified by the end-user
 - b) Name of the test limit selected to execute the stored test results
 - c) Name of the personnel performing the test
 - d) Date and time the test results were saved
 - e) The manufacturer, model and serial number of the test instrument.
 - f) The version of the test software and the version of the test limit database held within the test instrument.
 - g) Fiber identification number
 - h) Length for each optical fiber
 - i) Index of refraction used for length calculation when using a length capable OLTS.
 - j) Test results to include OLTS attenuation link and channel measurements at the appropriate wavelength(s) and the margin (difference between the measured attenuation and the test limit value).
 - k) Test results to include OTDR link and channel traces and event tables at the appropriate wavelength(s).
 - l) Length for each optical fiber as calculated by the OTDR
 - m) Overall Pass/Fail evaluation of the link-under-test for OLTS and OTDR measurements
 - n) Circuit IDs reported by the test instrument should match the specified label ID

3.9 CLEANING

- A. Refer to section 270000.

3.10 ACCEPTANCE

- A. Refer to Section 271500.

END OF SECTION

SECTION 271500

COMMUNICATIONS HORIZONTAL CABLING

PART 1 - GENERAL

1.1 SUMMARY

- A. This section of the horizontal cabling portion of a structured cabling system includes:
 - 1. UTP Copper cabling
 - 2. Termination and patch cables
 - 3. Coaxial Cabling
- B. Provide all horizontal cabling, terminating hardware, adapters, and cross-connecting hardware necessary to interconnect all system equipment including equipment located in communications rooms.
- C. Related Sections
 - 1. Section 260000 Electrical (including related sub-sections)
 - 2. Section 270000 Communications
 - 3. Section 270526 Grounding and Bonding for Communications Systems
 - 4. Section 270528 Pathways for Communications
 - 5. Section 270810 Fiber Optic Testing and Measurements
 - 6. Section 271100 Communications Equipment Room Fittings
 - 7. Section 271300 Communications Backbone Cabling
 - 8. Section 274100 Audio-Visual Systems
 - 9. Section 280000 Electronic Security (including related sub-sections)

1.2 REFERENCES

- A. The publications listed below form a part of this specification. The publications are referred to in the text by basic designation only.
- B. Specific reference in specifications to codes, rules, regulations, standards, manufacturer's instructions, or requirements of regulatory agencies shall mean the latest printed edition of each in effect at the date of contract unless the document is shown dated.
- C. Conflicts
 - 1. Refer to section 270000.
- D. Codes and Standards
 - 1. Refer to section 270000.

1.3 SUBMITTALS

- A. Refer to sections 270000 and 271300.

1.4 QUALITY ASSURANCE

- A. Refer to section 270000.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Refer to sections 270000 and 271300.
- B. Storage temperature range: -40°F to 149°F (-40°C to 65°C)

1.6 PROJECT/SITE CONDITIONS

- A. Refer to section 270000.

1.7 WARRANTY

- A. Refer to section 270000.

1.8 MAINTENANCE AND SUPPORT

- A. Refer to section 271300.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Labeling
 - 1. Refer to section 270000.
- B. Firestopping
 - 1. Refer to section 270000.

2.2 ACCEPTABLE COPPER MANUFACTURERS

- A. Category 6 UTP Plenum Rated Cable
 - 1. Siemon – 9C6P4-E2-06-RXA
 - 2. Owner approved alternate
- B. ~~Data/Voice Outlet Components~~

1. ~~Siemon MX6-02 (White) MX6-20 (Ivory)~~
2. ~~Siemon 1 Port Faceplate MX-FP-S-01-02 (White) MX-FP-S-01-20 (Ivory)~~
3. ~~Siemon 2 Port Faceplate MX-FP-S-02-02 (White) MX-FP-S-02-20 (Ivory)~~
4. ~~Siemon 4 Port Faceplate MX-FP-S-04-02 (White) MX-FP-S-04-20 (Ivory)~~
5. ~~Siemon 6 Port Faceplate MX-FP-S-06-02 (White) MX-FP-S-06-20 (Ivory)~~
6. ~~Siemon 2 Port Surface Mount Box MX-SMZ2-02 (White) MX-SMZ2-20 (Ivory)~~
7. ~~Siemon Max Outlet Blanks MX-BL-02 (White) MX-BL-20 (Ivory)~~
8. ~~Owner approved alternate~~

C. Data/Voice Outlet Components

1. Siemon MX6-F02 (White)
2. Siemon MX6-F25 (Ivory)
3. Owner approved alternate

D. 1 Port Faceplate

1. Siemon – 1 Port Faceplate MX-FP-S-01-02 (White) MX-FP-S-01-20 (Ivory)
2. Owner approved alternate

E. 2 Port Faceplate

1. Siemon MX-FP-S-02-02 (White)
2. Siemon MX-FP-S-02-20 (Ivory)
3. Owner approved alternate

F. 4 Port Faceplate

1. Siemon MX-FP-S-04-02 (White)
2. Siemon MX-FP-S-04-20 (Ivory)
3. Owner approved alternate

G. 6 Port Faceplate

1. Siemon MX-FP-S-06-02 (White)
2. Siemon MX-FP-S-06-20 (Ivory)
3. Owner approved alternate

H. Outlet Blanks

1. Siemon MX-BL-02 (White)
2. Siemon MX-BL-20 (Ivory)
3. Owner approved alternate

I. Patch Panels (24 port)

1. Siemon – HD6-24
2. Owner approved alternate

J. Patch Panels (48 port)

1. Siemon – HD6-48
2. Owner approved alternate

K. Rack Blanks

1. Siemon – PNL-BLNK-2

L. Copper Patch Cords

1. Siemon
2. Owner approved alternate

2.3 ACCESSORIES

- A. Mount one laminated full-size hard copy in color of an as-built floor plan designating workstation locations, pathways, and communications room locations. Confirm hard copy size with Owner.
- B. Provide clear plastic lamination serving each communication room.
- C. Install the laminated drawings within a protective Plexiglas encasement on the wall of the servicing communications rooms. To ease accessibility the Plexiglas encasement shall be in either flip-down format or file folder format.

2.4 HORIZONTAL COPPER CABLING

- A. Recognized cabling for providing the signal medium from the work area to the communications room shall include the following:
 1. Category 6 UTP cable
 2. 75 Ohm coaxial cable.
- B. Category 6 UTP Cable Requirements
 1. 23/24 AWG solid bare copper
 2. Cable jacket shall comply with NEC Article 800 for use as a plenum cable and shall be UL and c (UL) Listed Type CMP (communications multipurpose plenum)
 3. Cable shall terminate on an eight-pin modular jack at each outlet. All horizontal cabling shall meet or exceed the ANSI/TIA-568-C.2 Commercial Building Telecommunications Cabling Standard, Part 2: Balanced Twisted Pair Cabling Components
 4. Cables shall be marked as UL verified with a minimum of Category 6 rating
 5. The cable shall support Voice, Analog Base band Video/Audio, Fax, Modem, Switched-56, T-1, ISDN, RS-232, RS-422, RS-485, 10BASE-T Ethernet, Token Ring, 100Mbps TP-PMD, 100BASE-T Ethernet, 155 Mbps ATM, AES/EBU Digital Audio, 270 Mbps Digital Video, 622 Mbps 64-CAP ATM and emerging high-bandwidth applications, including 1 Gbps Ethernet, gigabit ATM, as well as all 77 channels (550 Mhz) of analog broadband video
 6. The maximum horizontal cable length for Category 6 copper cable from the termination of the cable in the communications room to the outlet is 295'-0".
 7. Cable shall meet or exceed the following electrical characteristics:
 8. Cable shall be specified to 250 MHz and shall meet the manufacturer's guaranteed electrical performance and physical specifications.

2.5 TERMINATION HARDWARE

- A. Patch panels
 - 1. Patch panels shall be rated to match installed cable plant
 - 2. The wiring block shall accommodate #23 AWG cable conductors.
 - 3. All modular cross connect panels shall be UL-listed.
- B. Work Area Outlet
 - 1. Universal eight-position jack pin/pair assignments
- C. Work Area Outlet Faceplates:
 - 1. White or ivory to match electrical outlets.

2.6 PATCH CABLES

- A. Verify exact quantities and lengths with Owner prior to purchase
- B. Patch Cable requirements:
 - 1. Category 6, stranded UTP cable
 - 2. Standard modular non-keyed, 8-position 8-conductor plug
 - 3. 94V-0 rated
 - 4. UL listed
 - 5. Meets FCC Part 68
- C. Provide 3'-0", 5'-0", 7'-0", and 10'-0" Patch Cords at the communications room for each installed port.
 - 1. Coordinate with Owner on the active equipment layout prior to purchase to ensure correct sizing of patch cords from patch panels to switching equipment.
- D. Provide a 10'-0" Station Cord for each work area outlet port.
- E. All cords shall conform to the requirements of ANSI/TIA-568-C.2 Commercial Building Telecommunications Cabling Standard, Horizontal Cabling Section, and be part of the UL LAN Certification and Follow-up Program.
- F. Cords shall be equipped with an eight-pin modular connector on each end, wired straight through and shall be of appropriate length for application.
- G. All rated patch cords shall be round, and consist of #23 AWG copper, stranded conductors, tightly twisted into individual pairs.
- H. Patch cords shall be made and warranted by the manufacturer of the cabling system installed in this project and shall meet or exceed patch cord specifications as outlined in TIA standards.

2.7 IDENTIFICATION (LABELING) SYSTEM

- A. Refer to sections 270000 and 271300.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Refer to Section 270000 and 271300.

3.2 PREPARATION

- A. Refer to section 270000.
- B. The Contractor shall check pathways, raceways, and other elements for compliance with space allocations, installation tolerances, debris, hazards to cable installation, and other conditions affecting installation prior to installation.

3.3 INSTALLATION REQUIREMENTS

- A. Refer to section 270000.
- B. All installation shall be done in conformance with ANSI/TIA-568-C standards, BICSI methods, industry standards and manufacturer's installation guidelines.
 - 1. The Contractor shall ensure that the maximum pulling tensions of the specified distribution cables are not exceeded and cable bends maintain the proper radius during the placement of the facilities.
 - 2. Failure to follow the appropriate guidelines shall require the Contractor to provide in a timely fashion the additional material and labor necessary to properly rectify the situation.
 - 3. This shall also apply to any and all damages sustained to the cables by the Contractor during the implementation.
- C. Install cable using techniques, practices, and methods that are consistent with specified data cabling and the installed components and that ensure specified performance levels of completed and linked signal paths, end to end.
 - 1. Pull cables in smooth and regular motions using methods that prevent cable kinking.
 - 2. Pull cables simultaneously if more than one is being installed in the same raceway/pathway.
 - 3. If necessary, use approved cable pulling lubricant
 - 4. Use fish tape, cable, rope, basket weave wire/cable grips, and other tools that will ensure no damage to the media or raceway.
 - 5. Install open cabling parallel and perpendicular to surfaces or structural members following surface contours where possible.
 - 6. Do not bend cable greater than a bend radius of 0'-1".
- D. Provide a 10'-0" service loop at the communications room and shall provide a 3'-0" service loop above the access ceiling or cable trays unless specified otherwise.
 - 1. All service loops shall be a minimum of 1'-6" (18") in diameter and be accessible for maintenance.
- E. Coordinate loop placement and orientation with the technology consultant.

1. This allows for future changes or expansion without installing new cables.
- F. Install cables in continuous “home run” lengths from work station outlet to specified patch panel.
 1. No intermediate punch down blocks or splices may be installed or utilized between the communications rooms and the workstation outlet without written Owner permission.
- G. All cable must be handled with care during installation so as not to change performance specifications.
 1. Factory twists of each individual pair must be maintained up to the connection points at both ends of the cable.
 2. There shall never be more than 0'-½" of unsheathed cable at either the wiring closet or the workstation termination locations.
- H. All cabling and associated hardware shall be placed so as to make efficient use of available space.
 1. All cabling and associated hardware shall be placed so as not to impair equipment's efficient use of their full capacity.

3.4 CABLING METHODS

- A. The Contractor shall provide cabling in accessible spaces, cable tray, (surface and/or enclosed raceway), conduits, and/or J-Hook cable support system.
 1. Within consoles, racks, cabinets, desks, and counters, in accessible ceilings spaces and in gypsum board partitions where open cable method may be used.
 2. Use UL or ETL listed plenum rated cable in all spaces.
 3. Provide all necessary installation materials, hardware, tools and equipment to perform insulation displacement type terminations at all data outlets and patch panel materials.
- B. Conceal raceway and cabling except in unfinished spaces as is practical.
- C. Exposed Cable
 1. All station cabling shall be installed inside walls or ceiling spaces whenever possible.
 2. Exposed station cable will only be run where indicated on the drawings and will only be allowed when no other options exist.
 - a) Owner must approve all exceptions.
- D. The Contractor shall utilize conduits/cable tray as indicated on the drawings.
- E. All cabling placed above drop ceilings must be supported by cable tray, J-hooks, caddy bags or conduit.
 1. The Contractor shall permanently affix cable supports to the building structure or substrates and provide attachment hardware and anchors designed for the structure to which attached and are suitably sized to sustain the weight of the cables to be supported.
 - a) Attaching cable to pipes or other mechanical items is not permitted.
 - b) Cabling shall not be attached to ceiling grid wires.

2. Multiple cables are to be dressed every 5'-0" to 7'-0".
 - a) Maximum cable sag between cable hooks is 3"-6".
 - F. The Contractor shall route data and voice cables separately in a neat and orderly fashion.
 1. No cable ties or wraps shall be used to secure the cables in the runway outside of the communications rooms. Cable ties shall be rated for the environment.
 - G. Keep all items protected before and after installation with dust and moisture proof barrier materials/envelopes.
 - H. If wiring is terminated on patch panels, data, voice jacks prior to painting, carpet installation, and general finish clean up, these jacks shall be placed in a protective envelope to ensure dust, debris, moisture, and other foreign material do not settle onto jacks' contacts.
 1. Envelope will be removed on final trim out after other trades have completed their finish work.
 2. It shall be the Contractor's responsibility to ensure the integrity of these protective measures throughout the life/installation of the project.
 - a) Cable bundles brought into the communications rooms shall be routed and dressed in such a manner that prior to termination the cables are not subject to damage and misuse such as installers walking on the bundles that are on the floor.
 - b) Cable pulling force shall not exceed 25 lbs of pulling tension or cable manufacturer's recommended pulling tensions.
 - c) Do not leave cables on the floor unprotected or cable bundles hanging from the ceilings. Coil them up in a temporary manner and protect them from damage.
 - I. Communications room cables shall be combed and dressed in a manner as to prevent twists, "braiding" and crossed cables in the cable bundle from the communication room entrance to the termination point at the rear of the patch panel.
 1. Behind the patch panel, the cable bundle shall be attached to the rear cable support bar, and shall drop out each cable in a neat, cascading manner to prevent crossed and/or interwoven cables to each patch panel port termination point.
 - a) Use Velcro wraps instead of cables ties for all bundling in the communications rooms.
 - b) Plastic/nylon tie-wraps are not allowed to permanently secure cables inside the communications room.
- 3.5 CABLING SEPARATION
- A. Comply with TIA rules for separating unshielded copper communication and data-processing equipment cables from potential EMI sources, including electrical power lines and equipment.
 - B. Maintain a minimum spacing of 1'-6" (18") from electrical feeders and/or branch circuit wiring including, but not limited to, light fixtures, sources of heat and EMI sources.
 - C. Maintain a minimum spacing of 1'-0" from auxiliary systems cabling.

- D. Maintain a 1'-0" separation where cables must pass perpendicularly to electrical, plumbing, or other wiring, conduit, or piping systems.
 - 1. Use non-conduit bushings, if necessary to maintain separation, which allow for the addition of a reasonable number of cables in the future.
- E. Maintain communications pathways away from electrical apparatus such as motor driven equipment and transformers, minimum separation distance of 10'-0" is recommended.

3.6 CABLING TERMINATION

- A. Terminate cables in consistent consecutive order.
- B. Terminate cables onto 8P8C modular patch panels without damaging twisted pairs or jacket.
- C. Arrange cables on patch panels in ascending order of room numbers and outlet numbers within rooms.
- D. Provide a 10'-0" service loop for horizontal cables at each rack in communications rooms.
 - 1. Locate loop at ceiling deck or on bottom of cable runway in minimum 1'-6" (18") diameter.
- E. Provide a 3'-6" service loop for horizontal cables at work area outlets. Locate service loop above or below data/voice outlet where vertical cable run transitions to horizontal run.
- F. Maintain twists in cable pairs to within 0'-½" of termination.
- G. Video Surveillance Systems Cabling (Electronic Safety and Security <ESS> devices)
 - 1. Video Cameras will require a field terminated plug on the end of a horizontal cable to be directly plugged into device.
 - a) Follow TIA-862-A Building Automation Standard.
 - b) Contractor shall use applicable equipment in testing solid conductor plug.
 - 2. Group all security systems cables in one group.
 - 3. Clearly label cable number and function, in the last positions on the horizontal cabling blocks in each communications room.
- H. Building Systems Cabling (BAS, FA, elevator line, etc)
 - 1. Coordinate exact placement and connectivity requirements with applicable trade prior to installation.
 - 2. Group all building systems cables in one group.
 - 3. Clearly label cable number and function, in the last positions on the horizontal cabling blocks in each communications room.
- I. Limit cable-bending radius to 20X the cable diameter during installation, and 15X the cable diameter after installation.
- J. Start numbering at the left of the main door to the room and continue in a clockwise direction around the room.

1. The cables within the room will be terminated starting with the cables located to the left of the main door to the room and continue around the room in a clockwise direction.

3.7 TERMINATION HARDWARE

A. Station Hardware

1. Flush mount jacks shall be mounted in a faceplate with back box.
2. Outlets shall not be mounted on temporary, movable, or removable surfaces, doors, or access hatches without prior Owner approval.
3. 8P8C Jack Pin Assignments for work area outlets shall match the T-568B wiring scheme.

B. Patch panels

1. Copper cables shall be terminated in eight position/eight conductor (8P8C) modular patch panels.
2. All Modular jack panels shall match the T-568B wiring scheme.

C. Work Area Outlet

1. 8P8C non-keyed modular outlets for applications up to one Gbps and ANSI/TIA-568-C compliant for the specified transmission requirements

D. Work Area Outlet Faceplates:

1. Furnish and install blank plates in all unused ports.

3.8 SPECIAL CIRCUITS

- #### A.
- The Contractor shall coordinate with the Owner on the cable termination plan for special circuits, including cables to wireless access point locations, security, elevators, fire alarms, etc.

B. Wireless Access Points

1. Install two (2) cable(s) from dedicated wireless patch panel(s) in communications room to outlets having 8P8C connectors within a secure metal enclosure.
2. Enclosures shall be NEMA rated for the environment to which they are exposed.
3. 30'-0" of cable slack shall be coiled and hung on a "J"-hook at the enclosure location.

3.9 IDENTIFICATION AND LABELING

- #### A.
- Labeling system shall consist of a hand-held portable printer and labels appropriate to the application. Handwritten labels are not acceptable.
- #### B.
- Fiber termination hardware (designation strip) shall have a 0'- $\frac{3}{4}$ " x 0'- $\frac{1}{4}$ " thermal transfer printable label with a permanent acrylic adhesive
- #### C.
- All labels shall be permanent and shall not fade, peel, or deteriorate due to environment or time.
- #### D.
- The Contractor shall provide a copy of the finalized plan in writing to the Owner representative and DataCom Design Group for review and authorization to proceed.

1. Coordinate with Owner for specifications on labeling of all hardware, cabling, and related equipment prior to any testing.

E. Labeling requirements:

1. Label cable terminations on designation strips
2. Label all cable at each terminating point.
3. Label each port of the work area outlet.
4. Cable identification numbers shall not be duplicated.
5. Label patch panels in the communications rooms to match those on the corresponding voice and data outlets.
 - a) The font shall be at least 0'-1/8" in height.
6. Where a wireless access point is installed above an acoustical ceiling, label the ceiling grid frame below the access point, displaying the data port number and, if applicable, the access point identification number. Coordinate labeling of grid with Owner and Architect prior to application of labels.
7. Label each distribution rack, block and other terminating equipment unit and field within that unit within 0'-4" from the block or patch panel termination. Keep labels in a neat and orderly lineup.
8. Label each connector and each discrete unit of cable-terminating and connecting hardware within connector fields, in wiring closets and equipment rooms.
 - a) Where similar jacks and plugs are used for both communication and data-processing equipment, use a different color for jacks and plugs of each service.
9. Post the cable schedule in a prominent location in each wiring closet and equipment room. List incoming and outgoing cables and their designations, origins, and destinations.

F. Location and termination field description

1. Room location
2. Rack-mount or Wall mount
3. Termination field type
 - a) Specific patch panel ports versus a separate dedicated patch panel

G. Unique identifiers

1. Segregation and position on equipment rack
2. Port color-coding
3. Unique labeling

H. Documentation

1. Provide electronic copy of final comprehensive schedules for project in software and format selected by Owner.
 - a) All labels shall correspond to as-built drawings and to final test reports.
2. All cable inventory data documentation shall be submitted in format coordinated with and approved by Owner so that data can be incorporated into existing databases.

3. Documentation shall include cable identification number, source and destination, type of cable, length of cable and number of pairs or fibers.
4. Complete cross connect documentation is required.

3.10 FIELD QUALITY CONTROL

- A. Refer to section 270000.

3.11 POST-INSTALLATION TESTING

- A. Contractor shall test each pair or strand of every cable prior to acceptance. (100% PASS)
- B. Contractor shall submit acceptance documentation as defined below. No cabling installation is considered complete until test results have been completed, submitted and approved.
- C. Standards Compliance and Test Requirements:
 1. Cabling shall meet ANSI/TIA-568-C.2 Category 6 Horizontal cabling requirements.
- D. Attenuation, NEXT, PSNEXT, Return Loss, ELFEXT, and PSELFEXT data that indicate the worst case result, the frequency at which it occurs, the limit at that point, and the margin.
 1. These tests shall be performed in a swept frequency manner from 1 MHz to highest relevant frequency, using a swept frequency interval that is consistent with TIA and ISO requirements.
 2. Information shall be provided for all pairs or pair combinations and in both directions when required by the appropriate standards.
 3. Length, propagation delay, and delay skew relative to the relevant limit.
 - a) Length, propagation delay, and delay skew shall be tested relative to the relevant limit.
 - b) Test shall also include mutual capacitance and characteristic impedance.
 - 1) Any individual test that fails the relevant performance specification shall be marked as a 'FAIL'.
- E. Cable Test Documentation:
 1. Cable test documentation shall be submitted in hard copy and electronic formats.
 - a) If proprietary software is used, disk or CD shall contain any necessary software application required to view test results.
 - b) Electronic reports shall be accompanied by a Certificate signed by an authorized representative of the Contractor warranting the truth and accuracy of the electronic report.
 - c) Certificate shall reference traceable circuit numbers that match the electronic record.
 2. Each test record shall contain the cable ID as follows:
 - a) "MEDIA TYPE – SOURCE ROOM – DESTINATION ROOM – STRAND/PAIR #",
e.g. MM-MC-HC23-001.

3. Test results saved within the field-test instrument shall be transferred into an accessible database utility that allows for the maintenance, inspection and archiving of the test records.
 - a) These test records shall be uploaded to the PC unaltered, i.e., "as saved in the field-test instrument".
 - b) The file format, CSV (comma separated value), does not provide adequate protection of these records and shall not be used.
4. Test reports shall include the following information for each cabling element:
 - a) Wire map results that indicate that 100% of the cabling has been tested for shorts, opens, miss-wires, splits, polarity reversals, transpositions, presence of AC voltage and end-to-end connectivity.
 - b) Length, propagation delay, and delay skew relative to the relevant limit. Any individual test that fails the relevant performance specification shall be marked as a FAIL.
 - c) Cable manufacturer, cable model number/type, and NVP
 - d) Tester make & model, serial number, hardware version, and software version.
 - e) Cable ID and project name
 - f) Auto-test specification used
 - g) Overall pass/fail indication
 - h) Date of test

F. Cable Test Equipment

1. Contractor shall supply all of the required test equipment used to conduct acceptance tests.
2. Test equipment used under this contract shall be from manufacturers that have a minimum of 5 years experience in producing field test equipment. Manufacturers shall be ISO 9001 certified.
3. Testing equipment shall be UL-verified to meet Level III accuracy.
 - a) The cable installers shall have a copy of this reference in their possession and be familiar with the contents.
4. Testing equipment shall be within the calibration period recommended by the manufacturer.
5. Testing equipment shall have the latest software and firmware installed.
6. Testing equipment of a given type shall be from the same manufacturer, and have compatible electronic results output.
7. Test adapter cables shall be approved by the manufacturer of the test equipment.
 - a) Adapter cables from other sources are not acceptable.
 - b) Adapter cables must be replaced after 1000 tests to ensure accuracy.
8. Test equipment must have a dynamic range of at least 100 dB to minimize measurement uncertainty.
9. Test equipment must be capable of storing full frequency sweep data for all tests and printing color graphical reports for all swept measurements.
10. Test equipment must include S-Band time domain diagnostics for NEXT and return loss (TDNXT and TDRL) for accurate and efficient troubleshooting.
11. Test equipment must be capable of running individual NEXT, return loss, etc measurements in addition to auto tests. Individual tests increase productivity when diagnosing faults.
12. Test equipment must include a library of cable types, sorted by major manufacturer.

13. Test equipment must be able to internally group auto tests and cables in project folders for good records management.
 - a) Test equipment must store at least 1000 auto tests in internal memory.
14. Test equipment must include DSP technology for support of advanced measurements.
15. Test equipment must make swept frequency measurements in compliance with TIA standards.
16. The measurement reference plane of the test equipment shall start immediately at the output of the test equipment interface connector.
17. There shall not be a time domain dead zone of any distance that excludes any part of the link from the measurement.
18. Acceptable testers:
 - a) Fluke DTX CableAnalyzer
 - b) Owner approved equivalent

3.12 FIBER TESTING

- A. Refer to Section 271300.

3.13 CLEANING

- A. Refer to section 270000.

3.14 ACCEPTANCE

- A. Once all work has been completed, test documentation has been submitted and approved, and the Owner is satisfied that all work has been completed in accordance with contract documents, the Owner will notify Contractor in writing of formal acceptance of the system.
- B. Contractor's RCDD shall warrant in writing that 100% of the installation meets the requirements specified herein.
- C. Acceptance shall be subject to completion of all work, successful post-installation testing which yields 100% PASS rating, and submittal and approval of full documentation as described above. Tests with the "** PASS" (asterisk) will not be acceptable.
 1. These circuits must be repaired to meet "PASS".

END OF SECTION

SECTION 27 41 13

ARCHITECTURALLY INTEGRATED AUDIOVISUAL INFRASTRUCTURE

PART 1 GENERAL

1.1 CONDITIONS AND REQUIREMENTS

- A. The General Conditions, Supplementary Conditions, and Division 01 – General Requirements apply.

1.2 SECTION INCLUDES

- A. Floor Boxes
- B. Poke-Thru Devices
- C. Flat Panel Display In-Wall Storage Boxes
- D. Wall Junction Boxes
- E. Pull Boxes
- F. Plenum Ceiling Boxes
- G. Projection Screens

1.3 RELATED SECTIONS

- A. Division 09 – Flooring Systems
- B. Division 26 – Electrical: Electrical Systems and Components
- C. Division 27 – Communications: Communications Systems and Components
- D. Division 28 – Electronic Safety and Security: Security Systems and Components

1.4 Submittals

- A. Comply with requirements of Section 01 33 00 – Submittal Procedures.
 - 1. Product Data: For the following AV Infrastructure System components:
 - a. Floor Boxes
 - b. Poke-Thru Devices
 - c. Flat Panel Display In-Wall Storage Boxes
 - d. Wall Junction Boxes
 - e. Pull Boxes
 - f. Plenum Ceiling Boxes
 - g. Projection Screens
 - 2. Shop Drawings: For the following AV Infrastructure System components. Include plans, elevations, sections, details, and attachments to other work:
 - a. Floor Boxes
 - b. Poke-Thru Devices
 - c. Flat Panel Display In-Wall Storage Boxes
 - d. Wall Junction Boxes
 - e. Pull Boxes
 - f. Plenum Ceiling Boxes
 - g. Projection Screens

1.5 QUALITY ASSURANCE

A. General:

1. Floor Boxes provide the interface between power, audio-video (A/V), and communications cabling in concrete floors and decks at activation locations requiring power, audio-video, or communication device outlets.
 - a. ADA Compliance: Flush-mounted floor device outlets shall not create tripping hazard.
2. Poke-thru devices provide the interface between power, communication and audio-video (A/V) cabling in an above grade concrete floor and the activation location where power communication and/or A/V device outlets are required. These poke-thru devices provide recessed device outlets that will not obstruct the floor area.
 - a. ADA Compliance: Flush-mounted floor device outlets shall not create tripping hazard.
3. Flat Panel Display In-Wall Storage Boxes provide the interface between power, audio-video (A/V), and communications cabling in recessed cavity of wall behind flat panel displays where power, communication and/or A/V device outlets and/or device storage/mounting is required.
4. Wall Outlet Boxes provide the interface between power, audio-video (A/V) and communications cabling in walls at activation locations requiring power, audio-video, or communication device outlets.
5. Pull and Junction boxes provide an accessible pathway in a run of conduit to facilitate the pulling in of wires and cables.

B. Manufacturer Qualifications: Firms regularly engaged in manufacture of floor boxes, poke-thru devices and in-wall storage boxes of the types and sizes required, whose products have been in satisfactory use in similar service for not less than 10 years. Provide floor boxes, poke-thru devices, in-wall storage boxes, electrical junction boxes, pull boxes and plenum ceiling boxes that are produced by a manufacturer listed in this section.

C. Electrical Raceways and Components: Comply with requirements of applicable local codes, NEC, UL, and NEMA Standards pertaining to raceways and components. Listed and labeled in accordance with NFPA 70, Article 100.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Deliver floor boxes, poke-thru devices, and in-wall storage boxes and associated fittings in factory labeled packages.
- B. Store and handle in strict compliance with manufacturer's written instructions and recommendations.
- C. Protect from damage due to weather, excessive temperature, and construction operations.

PART 2 PRODUCTS

2.1 GUIDELINES

- A. Floor Boxes, Poke-thru Devices, Wall Junction Boxes and Pull & Junction Boxes shall be furnished and installed by the Electrical Contractor selected by the Owner unless specifically excluded in these specifications or drawings.

1. Coordinate with AV Contractor regarding proper placement of duplex outlets for any AV designated floor box or Poke-thru Device. Electrical circuits should be connected (and outlets wired) to the designated AV circuit breaker panel (N.I.C.). Ensure that "Star" ground configuration is properly implemented. Ensure that ground wires from each outlet are isolated from conduit, neutrals, and each other.
- B. In-Wall Storage Boxes and Plenum Ceiling Boxes shall be furnished, and installed by the Electrical Contractor unless specifically excluded in these specifications or drawings.
1. Coordinate with AV Contractor regarding proper placement of duplex outlets for any AV designated Plenum Ceiling Box and/or In-Wall Storage Box.
- C. Floor Box Inserts/Plate and Poke-thru Device Inserts/Plates shall be furnished and installed by the AV Contractor selected by the Owner unless specifically excluded in these specifications or drawings.
- D. Condition - Provide and install products listed in this section in factory new condition, conforming to applicable provisions of American National Standards Institute.

2.2 ACCEPTABLE MANUFACTURER

A. Basis of Design Product:

1. The design for floor boxes and fittings is based on the FL Floor Box Series manufactured by FSR, Inc., 244 Bergen Blvd., Woodland Park. NJ 07424, telephone 973- 998-2000, Web Site: www.fsrinc.com).
2. The design for poke-thru devices and fittings is based on the Evolution Poke-thru Device Series manufactured by Legrand/Wiremold , 60 Woodlawn Street, West Hartford, CT 06110; toll-free 800-621-0049, telephone 860-233-6251, fax 860-232-2062; Web Site: www.legrand.us/Wiremold.com. (OR: *poke-thru devices and fittings manufactured by FSR, Inc., 244 Bergen Blvd., Woodland Park. NJ 07424, telephone 973- 998-2000, Web Site: www.fsrinc.com).*
3. The design for in-wall storage boxes and fittings is based on the PAC52* Series In-Wall Storage Box Series manufactured by Chief Manufacturing, 6436 City West Parkway, Eden Prairie, MN 55344, toll-free 800-582-6480, telephone 952-894-6280, fax 877-894-6918, Web Site: www.chiefmfg.com.
4. The design for wall junction boxes and fittings is based on products manufactured by RACO, 3902 West Sample Street, South Bend IN 46634-4002, telephone 800-722-6437, Web Site: www.hubbell-rtb.com. (OR: *Garvin Industries, 3700 Sandra Street, Franklin Park, IL, telephone 847-455-0188, fax 847-455-0334; Web Site: www.garvinindustries.com*).
5. The design for pull boxes and fittings is based on products manufactured by Hoffman, a Pentair Company, 2100 Hoffman Way, Anoka, MN, telephone 763-421-2241, fax 763-422-2600; Web Site: www.hoffmanonline.com.
6. The design for plenum ceiling boxes and fittings is based on the CB Plenum Rated Storage Box series manufactured by FSR, Inc., 244 Bergen Blvd., Woodland Park. NJ 07424, telephone 973- 998-2000, Web Site: www.fsrinc.com.

7. The design for projection screens is based on products manufactured by Draper, Inc., 411 South Pearl Street. Spiceland, IN 47385, toll free 800-238-7999, telephone 765-987-7999, fax 765-987-7142, Web Site: www.draperinc.com. (OR: Da-Lite, 3100 N. Detroit Street, Warsaw, IN 46582, toll-free 800-622-3737, Web Site: www.da-lite.com). (OR: Stewart Filmscreen, 1161 W. Sepulveda Blvd, Torrance, CA 90502-2754, toll-free 800-762-4999, Web Site: www.stewartfilmscreen.com).

B. Substitutions will be considered under provisions of Section 01 25 00.

2.3 FLOOR BOXES

- A. Classification and Use: Floor boxes shall have been examined and tested by Underwriters Laboratories Inc. to meet UL514A and/or UL514C and Canadian Standard C22.2, No. 18.1-04 and 18.2-06 and bear the U.S. and Canadian UL Listing Mark. Floor boxes shall also have been tested by Underwriters Laboratories Inc. and classified for fire resistance and bear the U.S. and Canadian UL Classification Mark. Devices shall be classified for use in 2-hour rated, unprotected reinforced concrete floors and 2-hour rated floors employing unprotected steel floor units and concrete toppings (D900 Series Designs) or concrete floors with suspended ceilings (fire resistive designs with suspended ceilings should have provisions for accessibility in the ceiling below the floor boxes). Floor boxes shall also conform to the standards set in Section 300-21 of the National Electrical Code. Floor boxes shall meet UL scrub water requirements, but are not suitable for wet or damp locations, or other areas subject to saturation with water or other liquids such as commercial kitchens. Floor boxes shall also have been evaluated by UL to meet the applicable U.S. and Canadian safety standards for scrub water exclusion when used on tile, bare concrete, terrazzo, wood, and carpet covered floors. Floor boxes shall be suitable for use in air handling spaces in accordance with Section 300-22 (C) of the National Electrical Code.

B. Floor Boxes, General: FSR FL 500 Series Floor Boxes for use on on-grade and above grade concrete floors, raised floors or wood floors. Provide boxes with a component to permit installation in polished concrete or terrazzo floors. Boxes shall be compatible with complete line of Ortronics® workstation connectivity outlets and modular inserts.

1. Floor boxes provide the interface between power, communication and audio/video (A/V) cabling in above-grade floors, on-grade concrete floors, raised floors, wood floors, and fire-classified floors and the workstation or activation location where power and communication and/or A/V device outlets are required. Boxes shall provide recessed device outlets that will not obstruct the floor area. Refer to Drawings for size and types.
2. When installed in on-grade slab with dirt in-fill, provide with the pour pan accessory.
3. When installing in elevated concrete slabs on upper floors, Contractor must provide a fire-rated assembly of 2 hours. Contractor must follow manufacturer's installation instructions to insure a 2-hour assembly.
4. Floor boxes shall permit all wiring to be completed at floor level. The FC models shall be used as defined by the UL Fire Resistance Directory at a minimum spacing of two (2) ft. [610mm] on center.

C. (FB TYPE 1) FL-500-6-P Floor Boxes: Manufactured from stamped steel with optional pour pan approved for use on-grade concrete floors. Boxes shall have the ability to accept a component that will allow the box to be installed in polished concrete or terrazzo floors. Provide boxes with three (3) independent wiring compartments configured in the 1-2 scenario. That allow for up to two (2) receptacles, communication and/or audio/video services. Boxes shall have removable and relocatable dividers to permit custom configuration of compartments as well as permit feed to adjacent

compartments. Boxes shall permit feed to compartments on the opposite side of the box through a tunnel. Each of the three (3) compartments shall have a minimum depth of 3-7/8" [98mm] behind the plate. Provide boxes with removable compartments to facilitate installation and moves, additions, and changes. The compartments shall be removable from the top and back of the floor box. Provide boxes with two (2) cable guides to organize and maintain the cables egress out of the box. Provide boxes with removable knockout plates to allow for the maximum cable pass-through area. The cable pass-through area shall be a minimum of 6-15/16 in² [176mm²]. Boxes shall be fully adjustable, accommodating a maximum 2-inch [51mm] pre-concrete pour and a maximum 1/2" [12.7mm] post-concrete pour adjustment. The box shall be able to accept 2-3/4" x 4-1/2" standard size wall plates. Include mounting brackets with the boxes that will accommodate two (2) 20 amp straight blade, receptacles, Ortronics® workstation connectivity and modular adapters, a variety of audio/video devices from most manufacturers.

- D. (FB TYPE 2) FL-500P-6-FRK Floor Boxes: Manufactured from stamped steel approved for use above-grade concrete floors. Floor Box assembly to have a 2-hour fire rating. Boxes shall have the ability to accept a component that will allow the box to be installed in polished concrete or terrazzo floors. Provide boxes with three (3) independent wiring compartments that allow for up to two (2) receptacles, communication and/or audio/video services. Boxes shall have removable and relocatable dividers to permit custom configuration of compartments as well as permit feed to adjacent compartments. Boxes shall permit feed to compartments on the opposite side of the box through a tunnel. Each of the three (3) compartments shall have a minimum depth of 3-7/8" [98mm] behind the plate. Provide boxes with removable compartments to facilitate installation and moves, additions, and changes. The compartments shall be removable from the top and back of the floor box. Provide boxes with two (2) cable guides to organize and maintain the cables egress out of the box. Provide boxes with removable knockout plates to allow for the maximum cable pass-through area. The cable pass-through area shall be a minimum of 6-15/16 in² [176mm²]. Boxes shall be fully adjustable, accommodating a maximum 2-inch [51mm] pre-concrete pour and a maximum 1/2" [12.7mm] post-concrete pour adjustment. The box shall be able to accept 2-3/4" x 4-1/2" standard size wall plates. Include mounting brackets with the boxes that will accommodate two (2) 20 amp straight blade, receptacles, Ortronics® workstation connectivity and modular adapters, a variety of audio/video devices from most manufacturers.

2.4 FLOOR BOX COVERS

- A. FSR FL Series Covers: Manufactured of stamped steel. Covers shall be available in surface mount and flush versions. Covers to be UL scrub water rated. Covers shall be available with a carpet recess area or a solid lid. Coordinate cover type with floor finish. Coordinate cover selection and color with Architect.

2.5 FLOOR BOX COMMUNICATION MODULES MOUNTING ACCESSORIES

2.6 POKE-THRU DEVICES

- A. Manufacturer – The Evolution Poke-Thru Devices described shall be manufactured by Wiremold/Legrand. The poke-thru device shall be compatible with the complete line of Ortronics® workstation connectivity outlets and modular inserts, or the Pass & Seymour Network Wiring System. Poke-thru devices of other manufacturers may be considered, if equal in functionality and quality, by written approval of the specifying engineer and shall meet all the performance standards specified herein. The same manufacturer shall provide all poke-thru types for the project. In addition, the contractor shall have ten days prior to the date for receipt of bids to submit to the specifying engineer a working sample from any other manufacturer.

- B. (PT TYPE 1) 6AT Poke-Thru Assembly – This assembly consists of an insert and an activation cover. Overall poke-thru assembly length shall be 16 3/4" [425mm].

1. Insert:

- a. The insert body shall recess the devices a minimum of 2 3/4" [69 mm] and have a polyester based backing enamel finished interior (ivory). There shall be the necessary channels to provide complete separation of power and communication services. There shall be three compartments that allow for up to three duplex receptacles that can be wired as a standard receptacle or isolated ground and/or twelve communication ports and/or ten of Extron® Electronics MAAP™ and/or two AAP™ devices.
- b. The body will consist of an intumescent fire stop material to maintain the fire rating of the floor slab. The intumescent material will be held securely in place in the insert body and shall not have to be adjusted to maintain fire rating of the unit and the floor slab. The insert shall have retaining feature that will hold the poke-thru device in the floor slab without additional fasteners. The poke-thru insert shall also consist of a 3/4" trade size conduit stub that is connected to the insert body and a 24.5 cu. in. [402ml] stamped steel junction box for wire splices and connections. The stamped steel junction box shall also contain the necessary means to electrically ground the poke-thru device to the system ground.

2. Activation Cover – The activation covers shall be manufactured of die-cast aluminum alloy and be available in powder-coated gray, black, or plated in brass, nickel or bronze finish. Two gaskets (one for carpet and one for tile) are provided to go under the trim flange to maintain scrub water tightness. The activation cover shall be 7 1/4" [184mm] in diameter. The activation covers shall be available in carpet and tile versions. The carpet covers shall be surface mounted and the tile covers shall be flush with the finished floor covering. The cover shall have spring loaded slides to allow cables to egress out of the unit and maintain as small an egress opening as possible.

3. Communication Modules Mounting Accessories – The activation shall have three locations to mount communication connectors. Connectors shall be mounted using a mounting bracket. Mounting brackets shall be provided to mount up to twelve Ortronics TracJack Category 6 insert modules or TechChoice™ Category 6 discrete keystone connectors. The unit will also be supplied with two Category 6 keystone connectors and two Lucent® keystones. The unit shall also accommodate a mechanism to permit protection of communication cabling. This mechanism shall be stamped steel construction and accept both flexible and rigid conduit. This mechanism shall accept 3/4", 1-1/4" or 2" trade size conduits.

- C. (PT TYPE 2) 8AT Poke-Thru Assembly – This assembly consists of an insert and an activation cover. Overall poke-thru assembly length shall be 16 3/4" [425mm].

1. Insert:

- a. The insert body shall recess the devices a minimum of 2 3/4" [69 mm] and have a polyester based backing enamel finished interior (ivory). There shall be the necessary channels to provide complete separation of power and communication services. There shall be five compartments that allow for up to five duplex receptacles that can be wired as a standard receptacle or isolated ground and/or twenty-two communication ports and/or sixteen of Extron® Electronics MAAP™ and/or four AAP™ devices.
- b. The body will consist of an intumescent fire stop material to maintain the fire rating of the floor slab. The intumescent material will be held securely in place in the insert body and shall not have to be adjusted to maintain fire rating of the unit and the floor slab. The insert shall have

retaining feature that will hold the poke-thru device in the floor slab without additional fasteners. The poke-thru insert shall also consist of a 3/4" trade size conduit stub that is connected to the insert body and a 24.5 cu. in. [402ml] stamped steel junction box for wire splices and connections. The stamped steel junction box shall also contain the necessary means to electrically ground the poke-thru device to the system ground.

2. Activation Cover – The activation covers shall be manufactured of die-cast aluminum alloy and be available in powder-coated gray, black, or plated in brass, nickel or bronze finish. Two gaskets (one for carpet and one for tile) are provided to go under of the trim flange to maintain scrub water tightness. The activation cover shall be 9 1/4" [235mm] in diameter. The activation covers shall be available in carpet and tile versions. The carpet covers shall be surface mounted and the tile covers shall be flush with the finished floor covering. The cover shall have spring loaded slides to allow cables to egress out of the unit and maintain as small an egress opening as possible.
3. Communication Modules Mounting Accessories – The activation shall have three locations to mount communication connectors. Connectors shall be mounted using a mounting bracket. Mounting brackets shall be provided to mount up to twelve Ortronics TracJack Category 6 insert modules or TechChoice™ Category 6 discrete keystone connectors. The unit will also be supplied with two Category 6 keystone connectors and two Lucent® keystones. The unit shall also accommodate a mechanism to permit protection of communication cabling. This mechanism shall be stamped steel construction and accept both flexible and rigid conduit. This mechanism shall accept 3/4", 1-1/4" or 2" trade size conduits.

2.7 FLAT PANEL DISPLAY IN-WALL STORAGE BOX

- A. Classification and Use: In-Wall Storage Boxes shall have been tested by Underwriters Laboratories Inc. and classified for fire resistance and bear the U.S. UL Classification Mark. In-wall storage boxes shall be suitable for use in air handling spaces in accordance with Section 300-22 (C) of the National Electrical Code.
- B. (FPD TYPE 1) Model PAC525FCW In-Wall Storage Box with Flange and Cover: Manufactured from stamped steel approved for use in standard 3.5" stud and 2.5" stud walls with the same product. Box shall have a finished interior, black in color. Boxes shall be 9" H x 14.25" W x 3.9" D [228.6mm x 361.95mm x 99.06mm]. Knockouts shall be provided for single gang outlets and 1-1/4" & 1/2" conduit. Box shall have universal zip tie anchor points. Box shall be provided with a paintable flange and cover. Cover shall include tamper proof security and include four knockouts for cable routing and ventilation.
 1. Provide with Raco 560 3" x 2" box, 2-3/4" deep electrical box.
 2. Provide with Raco 864 single duplex electrical box cover.
- C. (FPD TYPE 2) Model PAC526FCW Large In-Wall Storage Box with Flange and Cover: Manufactured from stamped steel approved for use in standard 3.5" stud and 2.5" stud walls with the same product. Box shall have a finished interior, black in color. Boxes shall be 14.25" H x 14.25" W x 3.9" D [361.95mm x 361.95mm x 99.06mm]. Knockouts shall be provided for single gang outlets and 1-1/4" & 1/2" conduit. Box shall have universal zip tie anchor points. Box shall be provided with a paintable flange and cover. Cover shall include tamper proof security and include four knockouts for cable routing and ventilation.
 1. Provide with Raco 560 3" x 2" box, 2-3/4" deep electrical box.
 2. Provide with Raco 864 single duplex electrical box cover.

2.8 WALL JUNCTION BOXES

- A. All device boxes for communications systems shall be extra-deep designation.
- B. Sheet Metal Junction Boxes: NEMA OS 1, UL 514A, galvanized steel with stamped knockouts.
- C. Wall mounted communication boxes concealed within the wall shall be a minimum 4-11/16" square with a minimum depth of 3" with reducer device plate per schedule.
- D. Antenna Junction Box (A) Raco Model 260 Electrical Junction Boxes shall be 3-1/4" deep, 4-11/16" square with (2) 1/2"-3/4", (2) 3/4"-1" and (2) 1-1/4" side knockouts and (2) 1/2" & (2) 3/4"-1" bottom knockouts. Box shall be provided with Raco 843 single gang device cover.
- E. AV Plate Junction Box (AVP TYPE 1) Raco Model 260 Electrical Junction Boxes shall be 3-1/4" deep, 4-11/16" square with (2) 1/2"-3/4", (2) 3/4"-1" and (2) 1-1/4" side knockouts and (2) 1/2" & (2) 3/4"-1" bottom knockouts. Box shall be provided with Raco 843 single gang device cover.
- F. AV Plate Junction Box (AVP TYPE 2) Raco Model 260 Electrical Junction Boxes shall be 3-1/4" deep, 4-11/16" square with (2) 1/2"-3/4", (2) 3/4"-1" and (2) 1-1/4" side knockouts and (2) 1/2" & (2) 3/4"-1" bottom knockouts. Box shall be provided with Raco 818 two gang device cover.
- G. AV Plate Junction Box (AVP TYPE 3) Raco Model 263 Electrical Junction Boxes shall be 3-1/2" Deep, 6" Square with (6) 1/2"-3/4", (2) 3/4"-1" and (2) 1"-1-1/4" side knockouts and (2) 1/2"-3/4", (2) 3/4"-1" and (2) 1-1/4" bottom knockouts. Box shall be provided with Raco 793 three gang device cover.
- H. Camera Junction Box (CAM) Raco Model 260 Electrical Junction Boxes shall be 3-1/4" deep, 4-11/16" square with (2) 1/2"-3/4", (2) 3/4"-1" and (2) 1-1/4" side knockouts and (2) 1/2" & (2) 3/4"-1" bottom knockouts. Box shall be provided with Raco 818 two gang device cover.
- I. Intercom Call Button (CB) Raco Model 260 Electrical Junction Boxes shall be 3-1/4" deep, 4-11/16" square with (2) 1/2"-3/4", (2) 3/4"-1" and (2) 1-1/4" side knockouts and (2) 1/2" & (2) 3/4"-1" bottom knockouts. Box shall be provided with Raco 843 single gang device cover.
- J. Listening Assist Transmitter Junction Box (LA) Raco Model 260 Electrical Junction Boxes shall be 3-1/4" deep, 4-11/16" square with (2) 1/2"-3/4", (2) 3/4"-1" and (2) 1-1/4" side knockouts and (2) 1/2" & (2) 3/4"-1" bottom knockouts. Box shall be provided with Raco 818 two gang device cover.
- K. Projector (PRJ) Raco Model 260 Electrical Junction Boxes shall be 3-1/4" deep, 4-11/16" square with (2) 1/2"-3/4", (2) 3/4"-1" and (2) 1-1/4" side knockouts and (2) 1/2" & (2) 3/4"-1" bottom knockouts. Box shall be provided with Raco 818 two gang device cover.
- L. Paging Speaker (PS) Raco Model 260 Electrical Junction Boxes shall be 3-1/4" deep, 4-11/16" square with (2) 1/2"-3/4", (2) 3/4"-1" and (2) 1-1/4" side knockouts and (2) 1/2" & (2) 3/4"-1" bottom knockouts. Box shall be provided with Raco 843 single gang device cover.
- M. Sound Reinforcement Speaker Junction Box (S) Raco Model 260 Electrical Junction Boxes shall be 3-1/4" deep, 4-11/16" square with (2) 1/2"-3/4", (2) 3/4"-1" and (2) 1-1/4" side knockouts and (2) 1/2" & (2) 3/4"-1" bottom knockouts. Box shall be provided with Raco 843 single gang device cover.
- N. Switch Junction Box (SWT) Raco Model 471 Electrical Junction Boxes shall be 2-1/4" deep, 3" x 2" with one 1/2" conduit knockout.
- O. Volume Control Junction Box (VC) Raco Model 260 Electrical Junction Boxes shall be 3-1/4" deep, 4-11/16" square with (2) 1/2"-3/4", (2) 3/4"-1" and (2) 1-1/4" side knockouts and (2) 1/2" & (2) 3/4"-1" bottom knockouts. Box shall be provided with Raco 843 single gang device cover.

- P. Wall Control Panel Junction Box (WCP TYPE 1) Raco Model 260 Electrical Junction Boxes shall be 3-1/4" deep, 4-11/16" square with (2) 1/2"-3/4", (2) 3/4"-1" and (2) 1-1/4" side knockouts and (2) 1/2" & (2) 3/4"-1" bottom knockouts. Box shall be provided with Raco 843 single gang device cover.
- Q. Wall Control Panel Junction Box (WCP TYPE 2) Raco Model 260 Electrical Junction Boxes shall be 3-1/4" deep, 4-11/16" square with (2) 1/2"-3/4", (2) 3/4"-1" and (2) 1-1/4" side knockouts and (2) 1/2" & (2) 3/4"-1" bottom knockouts. Box shall be provided with Raco 818 two gang device cover.
- R. Wall Control Panel Junction Box (WCP TYPE 3) Raco Model 263 Electrical Junction Boxes shall be 3-1/2" Deep, 6" Square with (6) 1/2"-3/4", (2) 3/4"-1" and (2) 1"-1-1/4" side knockouts and (2) 1/2"-3/4", (2) 3/4"-1" and (2) 1-1/4" bottom knockouts. Box shall be provided with Raco 793 three gang device cover.
- S. Specific-use Wall Junction Boxes:
 - 1. For situations where oversized conduit is used so a standard 4-11/16"x4-11/16" box is inadequate for the terminations required, use:
 - a. Hubbell Recessed Wall Mounted Gang – WSCS-MMO-X per schedule, or approved equal.

2.9 PULL BOXES

- A. Small Sheet Metal Pull Boxes: NEMA OS1; galvanized steel
- B. Minimum size:
 - 1. 4" square by 2.125" deep for use with 1" conduit and smaller
 - 2. 4-11/16" square by 3" deep for use with 1-1/4" conduit and larger.
- C. Maximum size:
 - 1. 24" square by 8" deep for collecting multiple 1" station conduit. Sheet metal boxes larger than 12" in any direction are required to have a hinged cover or a chain installed between box and cover.
- D. Manufacturers: Hoffman Enclosures or approved equal. Field fabricated boxes are not allowed.
- E. Floor Mounted Rack Pull Box (FRK) Hoffman Item #ASE16X14X4NK 16" x 14" x 4" deep square pull box. Box shall be provided with screw cover.
- F. Millwork Mounted Rack Pull Box (MRK) HOFFMAN ASE8x9x3 8" x 9" x 3" NEMA 1 pull box. Box shall be provided with screw cover.
- G. Wall Mounted Rack Pull Box (WRK) Hoffman Model ASE16X14X3 16" x 14" x 3" screw cover pull box at wall behind rack.
- H. Paging Speaker Pull Box (PS) – Hoffman Model ASE4X4X3 4" x 4" x 3".
- I. Sound Reinforcement Loudspeaker (S) – Hoffman Model ASE4X4X3 4" x 4" x 3"

2.10 PLENUM CEILING BOXES

- A. Projector Mount Plenum Ceiling Box (PRJ TYPE 1) FSR, Inc. Model CB-12P 1' x 2' plenum

rated ceiling box with projector pole adapter.

1. Provide with CB-THRD threaded rod mounting kit.
- B. Projector Mount Plenum Ceiling Box (PRJ TYPE 2) FSR, Inc. Model CB-22P 2' x 2' plenum rated ceiling box with projector pole adapter.
 1. Provide with CB-THRD threaded rod mounting kit.
- C. Storage Ceiling Plenum Box (SCB TYPE 1) FSR, Inc. Model CB-12 1' x 2' plenum rated ceiling enclosure.
 1. Provide with CB-THRD threaded rod mounting kit.
- D. Storage Ceiling Plenum Box (SCB TYPE 2) FSR, Inc. Model CB-22 2' x 2' plenum rated ceiling enclosure.
 1. Provide with CB-THRD threaded rod mounting kit.

2.11 MOTORIZED, CEILING RECESSED, FRONT PROJECTION SCREENS

- A. Access//Series V: Electric motor operated, steel case. Ceiling-recessed, 18-gauge steel headbox, 6-1/2 inches (182 mm) deep and 6-13/16 inches (182 mm) wide with white paint finish and stamped 13-gauge steel end caps. UL approved "Suitable for use in environmental air space." Bottom closure panel forms slot for passage of viewing surface and can be released to hang down or be removed for access to operating mechanism and viewing surface. Bottom perimeter flange provides support and trim for acoustical ceiling panels and trim for gypsum board ceiling. The Access case may be ordered in advance and the screen installed later to eliminate field damage. Housing is symmetrical allowing for left and right hand motor locations and for viewing surface to unroll off front or back of roller. Steel mounting brackets slide in extruded aluminum mounting system along top of case. Brackets supporting roller/fabric assembly slide in tracks inside the top of the case, allowing viewing surface to be centered in case. Steel leveling brackets are attached to case to prevent deflection. Housing designed with internal junction box and plug-in wiring connections to allow housing to be installed and connected to building power supply separately from motor and viewing surface.
 1. Motor mounted inside screen roller on rubber isolation insulators. Motor UL certified, rated 110-120V AC, 60 Hz, three wire, instantly reversible, lifetime lubricated with pre-set accessible limit switches.
 2. Quiet Motor mounted inside screen roller on rubber isolation insulators. Motor operates at 44db and is UL certified, rated 110-120V AC, 60 Hz, three wire, instantly reversible, lifetime lubricated with pre-set accessible limit switches.
 - a. Single station control rated 115V AC, 60 Hz with 3-position rocker switch with cover plate to stop or reverse screen at any point.
 - b. Multiple station control rated 115V AC, 60 Hz with 3-position rocker switches with cover plates to stop or reverse screen at any point. Automatic override allows only one signal to reach the motor when operated simultaneously.
 - c. Low voltage control unit with three button 24V switches and cover plate to stop or reverse screen at any point, built-in RF receiver, built-in Video Interface Control trigger for 3V-28V, RS232, and dry contact relays.
 - d. Low voltage 24V control unit with hand held RF remote three button control switch to

stop or reverse screen at any point, built-in RF receiver, built-in Video Interface Control trigger for 3V-28V, RS232, and dry contact relays.

- e. Key Operated power supply switch to control power to control system.
- f. Locking switch cover plate for limited access to three position switch.
- g. Key operated 3-position control switch rated 115V AC, 60 Hz to stop or reverse screen at any point.
- h. Key operated 3-position low voltage control switch rated 24V to stop or reverse screen at any point.
- i. Group low voltage control unit to control ____ motorized screens.
- j. Video Interface Control for use with equipment with a 115V switched outlet.
- k. Video Interface Control for use with equipment with a 12V switched outlet.
- l. Video Interface Control for use with equipment with a 6V switched outlet.
- m. Motor shall be right mounted.
- n. Motor shall be left mounted.

3. Projection Viewing Surface

- a. Matte White XT1000V - On Axis gain of 1.0. 180 degree viewing cone. GREENGUARD Gold certified. Available with or without black backing.
- b. Pure White XT1300V - On Axis gain of 1.3. 180 degree viewing cone. For use in situations where lighting is well controlled and where enhanced brightness is needed due to limited projector brightness. Available with or without black backing.
- c. Grey XH600V - On Axis gain of 0.6. Provides excellent contrast and color reproduction. GREENGUARD Gold certified. Maximum size 9 feet by 12 feet (275 cm x 366 cm). Available with or without black backing.
- d. Pearl White MH1500V - On Axis gain of 1.5. Matt white surface with reflective pearlescent coating with black backing. Maximum size 9 feet by 12 feet (275 cm x 366 cm).
- e. ReAct MS1000V - On Axis gain of 1.0. 60 degree viewing cone. Silver/grey surface provides superior performance in ambient light conditions, offers excellent contrast, optimal color rendition, and is fully HD compliant. Maximum size 79 inches by 140 inches (201 cm x 356 cm).
- f. ClearSound NanoPerf XT800V - On Axis gain of 0.8. 180 degree viewing cone. Acoustically transparent white PVC fabric with microscopic perforations. Not recommended for use in sizes less than 80 inches (203 cm) wide. Not recommended for viewing less than 10 feet (305 cm) from screen.
- g. ClearSound Perf XT900V - On Axis gain of 1.0. 180 degree viewing cone. Acoustically transparent. Flexible matt white perforated surface. Reasonable control of ambient light is recommended. Not recommended for use in sizes less than 80 inches (203 cm) wide. Not recommended for viewing less than 20 feet (610 cm) from screen.

- h. TecVision XH700X Grey - On Axis gain of 0.7. 180 degree viewing cone. Designed for blending applications on curved or flat screens where ambient light is present. Provides very good contrast and color reproduction. Imaging Science Foundation certified and 4K ready. Dark backing.
- i. TecVision XT1100X White - On-Axis gain of 1.1. 180 degree viewing cone. Designed for use when the projector brightness and size of screen require a minimal increase in gain. Imaging Science Foundation certified and 4K ready. Dark backing.
- j. TecVision XH900X Grey - On Axis gain of 0.9. 180 degree viewing cone. Provides very good contrast and color reproduction. Imaging Science Foundation certified. 4K ready. Dark backing.
- k. TecVision MS1000X Grey - On Axis gain of 1.0. 70 degree viewing cone. Provides excellent contrast and color reproduction. Performs well in ambient light. Imaging Science Foundation certified. 4K ready. Dark backing.
- l. TecVision XT1000X White - On Axis gain of 1.0. 180 degree viewing cone. Imaging Science Foundation certified. 4K ready reference screen surface for blending applications, precise resolution, and color accuracy. Dark backing.
- m. TecVision XT1300X White - On Axis gain of 1.3. 180 degree viewing cone. Imaging Science Foundation certified. 4K ready. Dark backing.
- n. TecVision XT1600X White - On Axis gain of 1.6. 180 degree viewing cone. Imaging Science Foundation certified. 4K ready. Dark backing.
- o. TecVision XT1800X White - On Axis gain of 1.8. 180 degree viewing cone. Imaging Science Foundation certified. Suited for active 3D or color combining passive 3D systems. 4K ready. Dark backing.
- p. CineFlex CH1200V - On Axis gain of 1.2. 60 degree viewing cone. Neutral grey rear projection diffusing surface. Provides high resolution and excellent contrast, even in lighted rooms. Recommended for use with low to medium output projectors.
- q. CineFlex XT600V - On Axis gain of 0.6. 180 degree viewing cone. White rear projection surface works well for edge matching or edge blending applications, and also for short throw rear projection. Reasonable control of ambient light is recommended.

- r. CineFlex MH800V - On Axis gain of 0.8. 78 degree viewing cone. Low gain flexible rear material. Designed for use with high light output projectors and wide audience seating pattern.

4. Tab-Tensioning System

- a. Viewing surface with integrated tabs and cable on each side of fabric to provide tension and ensure flat viewing surface. Viewing surface and tabs CNC cut as a single piece. Tabs RF welded to the back of viewing surface to prevent tab separation. Tab adhesives are not acceptable. Viewing surface inserted into aluminum bottom dowel. Warranted for 5 years against tab separation.

5. Viewing Area H x W

- a. HDTV Format (16:9). Black masking borders standard:

- 1) 133 inch (3378 mm) diagonal, 65 inches x 116 inches (1651 mm x 2947 mm).
- 2) 161 inch (4089 mm) diagonal, 80 inches x 140 inches (2032 mm x 3556 mm).
- 3) 184 inch (4674 mm) diagonal, 90 inches x 160 inches (2286 mm x 4064 mm).
- 4) 193 inches (490 cm diagonal, 94 1/2 inches x 168 inches (240 cm x 427 cm).
- 5) 220 inches (559 cm) diagonal, 108 inches x 192 inches (274 cm x 488 cm).

- b. 16:10 Format. Black masking borders standard.

- 1) 137 inch (3480) diagonal, 72-1/2 inches x 116 inches (1842 mm by 2946 mm).
- 2) 165 inch (4191 mm) diagonal, 87-1/2 inches x 140 inches (2223 mm by 3556 mm).
- 3) 189 inch (4800 mm) diagonal, 100 inches x 160 inches (2540 mm x 4064 mm).
- 4) 198 inches (503 cm) diagonal, 105 inches x 168 inches (267 cm x 427 cm).
- 5) 226 inches (574 cm) diagonal, 120 inches x 192 inches (305 cm x 488 cm).

- 6. Provide an extra screen drop with an overall screen drop of ____ feet (____ m) with top border matching viewing surface color.

- 7. Provide an extra screen drop with an overall screen drop of ____ feet (____ m) with a black masking top border.

- B. Access Fit/Series V: Electric motor operated, steel case. Ceiling-recessed, 18-gauge steel headbox, 5-1/8 inches (130 mm) deep and 4-7/8 inches (124 mm) wide with white paint finish and stamped 13-gauge steel end caps. UL approved "Suitable for use in environmental air space." Bottom closure panel forms slot for passage of viewing surface and can be released to hang down or be removed for access to operating mechanism and viewing surface. Bottom perimeter flange provides support and trim for acoustical ceiling panels and trim for gypsum board ceiling. The Access Fit case may be ordered in advance and the screen installed later to eliminate field damage. Housing is symmetrical allowing for left and right hand motor locations and for viewing surface to unroll off front or back of roller. Steel mounting brackets slide in extruded aluminum mounting system along top of case. Brackets supporting roller/fabric assembly slide in tracks inside the top of the case, allowing viewing surface to be centered in case. Steel leveling brackets are attached to case to prevent deflection. Housing designed with

internal junction box and plug-in wiring connections to allow housing to be installed and connected to building power supply separately from motor and viewing surface.

1. Motor mounted inside screen roller on rubber isolation insulators. Motor UL certified, rated 110-120V AC, 60 Hz, three wire, instantly reversible, lifetime lubricated with pre-set accessible limit switches.
2. Quiet Motor mounted inside screen roller on rubber isolation insulators. Motor operates at 44db. UL certified, rated 110-120V AC, 60 Hz, three wire, instantly reversible, lifetime lubricated with pre-set accessible limit switches.
3. Motor Screen Controls, UL certified.
 - a. Single station control rated 115V AC, 60 Hz with 3-position rocker switch with cover plate to stop or reverse screen at any point.
 - b. Multiple station control rated 115V AC, 60 Hz with 3-position rocker switches with cover plates to stop or reverse screen at any point. Automatic override allows only one signal to reach the motor when operated simultaneously.
 - c. Low voltage control unit with three button 24V switches and cover plate to stop or reverse screen at any point, built-in RF receiver, built-in Video Interface Control trigger for 3V-28V, RS232, and dry contact relays.
 - d. Low voltage 24V control unit with hand held RF remote three button control switch to stop or reverse screen at any point, built-in RF receiver, built-in Video Interface Control trigger for 3V-28V, RS232, and dry contact relays.
 - e. Low voltage 24V control unit with hand held IR remote three button control switch to stop or reverse screen at any point, built-in RF receiver, built-in Video Interface Control trigger for 3V-28V, RS232, and dry contact relays.
 - f. Key Operated power supply switch to control power to control system.
 - g. Locking switch cover plate for limited access to three position switch.
 - h. Key operated 3-position control switch rated 115V AC, 60 Hz to stop or reverse screen at any point.
 - i. 3-position low voltage control switch rated 24V to stop or reverse screen at any point.
 - j. Video Interface Control for use with equipment with a 115V switched outlet.
 - k. Video Interface Control for use with equipment with a 12V switched outlet.
 - l. Video Interface Control for use with equipment with a 6V switched outlet.
 - m. Motor shall be right mounted.
 - n. Motor should be left mounted.
4. Projection Viewing Surface
 - a. Matte White XT1000V - On Axis gain of 1.0. 180 degree viewing cone. GREENGUARD Gold certified. Available with or without black backing.

- b. Pure White XT1300V - On Axis gain of 1.3. 180 degree viewing cone. For use in situations where lighting is well controlled and where enhanced brightness is needed due to limited projector brightness. Available with or without black backing.
- c. Grey XH600V - On Axis gain of 0.6. Provides excellent contrast and color reproduction. GREENGUARD Gold certified. Maximum size 9 feet by 12 feet (275 cm x 366 cm). Available with or without black backing.
- d. Pearl White MH1500V - On Axis gain of 1.5. Matt white surface with reflective pearlescent coating with black backing. Maximum size 9 feet by 12 feet (275 cm x 366 cm).
- e. ReAct MS1000V - On Axis gain of 1.0. 60 degree viewing cone. Silver/grey surface provides superior performance in ambient light conditions, offers excellent contrast, optimal color rendition, and is fully HD compliant. Maximum size 79 inches by 140 inches 201 cm x 356 cm).
- f. ClearSound NanoPerf XT800V - On Axis gain of 0.8. 180 degree viewing cone. Acoustically transparent white PVC fabric with microscopic perforations. Not recommended for use in sizes less than 80 inches (203 cm) wide. Not recommended for viewing less than 10 feet (305 cm) from screen.
- g. ClearSound Perf XT900V - On Axis gain of 1.0. 180 degree viewing cone. Acoustically transparent. Flexible matt white perforated surface. Reasonable control of ambient light is recommended. Not recommended for use in sizes less than 80 inches (203 cm) wide. Not recommended for viewing less than 20 feet (610 cm) from screen.
- h. TecVision XH700X Grey - On Axis gain of 0.7. 180 degree viewing cone. Designed for blending applications on curved or flat screens where ambient light is present. Provides very good contrast and color reproduction. Imaging Science Foundation certified and 4K ready. Dark backing.
- i. TecVision XT1100X White - On-Axis gain of 1.1. 180 degree viewing cone. Designed for use when the projector brightness and size of screen require a minimal increase in gain. Imaging Science Foundation certified and 4K ready. Dark backing.
- j. TecVision XH900X Grey - On Axis gain of 0.9. 180 degree viewing cone. Provides very good contrast and color reproduction. Imaging Science Foundation certified. 4K ready. Dark backing.
- k. TecVision MS1000X Grey - On Axis gain of 1.0. 70 degree viewing cone. Provides excellent contrast and color reproduction. Performs well in ambient light. Imaging Science Foundation certified. 4K ready. Dark backing.
- l. TecVision XT1000X White - On Axis gain of 1.0. 180 degree viewing cone. Imaging Science Foundation certified. 4K ready reference screen surface for blending applications, precise resolution, and color accuracy. Dark backing.
- m. TecVision XT1300X White - On Axis gain of 1.3. 180 degree viewing cone. Imaging Science Foundation certified. 4K ready. Dark backing.
- n. TecVision XT1600X White - On Axis gain of 1.6. 180 degree viewing cone. Imaging Science Foundation certified. 4K ready. Dark backing.
- o. TecVision XT1800X White - On Axis gain of 1.8. 180 degree viewing cone. Imaging Science Foundation certified. Suited for active 3D or color combining passive 3D

systems. 4K ready. Dark backing.

- p. CineFlex CH1200V - On Axis gain of 1.2. 60 degree viewing cone. Neutral grey rear projection diffusing surface. Provides high resolution and excellent contrast, even in lighted rooms. Recommended for use with low to medium output projectors.
- q. CineFlex XT600V - On Axis gain of 0.6. 180 degree viewing cone. White rear projection surface works well for edge matching or edge blending applications, and also for short throw rear projection. Reasonable control of ambient light is recommended.
- r. CineFlex MH800V - On Axis gain of 0.8. 78 degree viewing cone. Low gain flexible rear material. Designed for use with high light output projectors and wide audience seating patterns.

5. Tab-Tensioning System:

- a. Viewing surface with integrated tabs and cable on each side of fabric to provide tension and ensure flat viewing surface. Viewing surface and tabs CNC cut as a single piece. Tabs RF welded to the back of viewing surface to prevent tab separation. Tab adhesives are not acceptable. Viewing surface inserted into aluminum bottom dowel. Warranted for 5 years against tab separation.

6. Viewing Area H x W:

- a. HDTV Format (16:9). Black masking borders standard.

- 1) 92 inch (2337 mm) diagonal, 45 inches x 80 inches (1143 mm x 2032 mm).
- 2) 100 inch (2540 mm) diagonal, 49 inches x 87 inches (1245 mm x 2210 mm).
- 3) 106 inch (2692 mm) diagonal, 52 inches x 92 inches (1321 mm x 2337 mm).
- 4) 110 inch (2794 mm) diagonal, 54 inches x 96 inches (1372 mm x 2438 mm).
- 5) 119 inch (3023 mm) diagonal, 58 inches x 104 inches (1473 mm x 2642 mm).
- 6) 133 inch (3378 mm) diagonal, 65 inches x 116 inches (1651 mm x 2947 mm).

- b. 16:10 Format. Black masking borders standard.

- 1) 94 inch (2438 mm) diagonal, 50 inches x 80 inches (1270 mm x 2032 mm).
- 2) 109 inch (2769 mm) diagonal, 57-1/2 inches x 92 inches (1461 mm x 2337 mm).
- 3) 113 inch (2870 mm) diagonal, 60 inches x 96 inches (1524 mm x 2438 mm).
- 4) 123 inch (3124 mm) diagonal, 65 inches x 104 inches (1351mm x 2642 mm).

- 7. Provide an extra screen drop with an overall screen drop of ____ feet (____ m) with top border matching the viewing surface.
- 8. Provide an extra screen drop with an overall screen drop of ____ feet (____ m) with a black masking top border.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine conditions under which boxes, poke-thrus' fittings, and projection screens are to be installed and substrate that will support boxes. Notify the Architect in writing of conditions detrimental to proper completion of the work. Do not proceed with work until unsatisfactory conditions have been corrected.
 - 1. Do not begin installation until substrates have been properly prepared.
 - 2. Verify rough-in openings are properly prepared.

3.2 DOCUMENT INTERPRETATION

- A. The locations of the outlet symbols shown in the Drawings represent a close approximation of the exact location where the outlet shall be installed. This location may be shifted left or right eight inches to allow for stud alignment or coordination with electrical outlet locations. Approval by Owner is required for more extensive adjustments to outlet location.
- B. Outlet Schedule
 - 1. Refer to the outlet schedule contained [on the Drawings sheet XXX] for outlet mounting height, device box size, and station conduit size.

3.3 PREPARATION

- A. Clean surfaces thoroughly prior to installation.
- B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.4 INSTALLATION

- A. Strictly comply with manufacturer's installation instructions and recommendations and approved shop drawings. Coordinate installation with adjacent work to ensure proper clearances and to prevent electrical hazards.
- B. Mechanical Security: Raceway systems shall be mechanically continuous and connected to all electrical outlets, boxes, device mounting brackets, and cabinets, in accordance with manufacturer's installation sheets.
- C. Accessories: Provide accessories as required for a complete installation, including insulated bushings and inserts where required by manufacturer.
- D. Unused Openings: Close unused box openings using manufacturers recommended accessories.
- E. Provide a minimum concrete pour depth of 3-7/16-inch [87mm] plus 1/16-inch [1.6mm] above the top of the box for the RFB4, RFB4-4DB, RFB2, and the RFB2-OG Series Boxes; 2-7/16-inch [62mm] plus 1/16-inch [1.6mm] for the RFB4-SS and RFB2-SS Series Boxes; and 3-7/16-inch [87mm] plus 13/16-inch [21mm] above the top of the box for the RFB4-CI-1, RFB6, and RFB6-OG Series Boxes; and 4-1/16-inch [103mm] above the top of the RFB4E and RFB4E-OG Series Boxes; and 4-inch [102mm] above the top of the RFB6E and RFB6E-OG Series Boxes. Provide the box with four (4) locations to accommodate leveling for pre-concrete pour adjustment and include four (4) leveling screws for the pre-pour adjustment.
- F. The 6AT, and 6ATCFF units shall mount in a 6" [152mm] cored hole, actual 6 1/16" [154mm]

core hole. The 8AT units shall mount in an 8" [203mm] cored hole, actual 8 1/16" [205mm] core hole. Use is defined by the UL Fire Resistance Directory as a minimum spacing of "2 ft. [610mm] on center and not more than one device per each 65 sq. ft. [6m²] of floor area in each span".

1. Installation shall be completed by pushing unit down into the cored hole. Prior to and during installation, refer to system layout and/or approval drawings. Installer shall comply with detailed manufacturer's instruction sheet included with each device. The unit shall contain a retainer for securing the device in the slab, as well as the necessary intumescent material to seal the cored hole under fire conditions.

G. Outlet Box Mounting:

1. Station cable boxes shall be 4-11/16" square x 3" deep regardless of cable count or cable type.
2. Height: unless otherwise noted in the Outlet Schedule, all communication outlet boxes shall be installed at the same height as electrical outlets, except WCP outlets, which shall be installed at 48 inches AFF to center of box.
3. Install boxes to accommodate device indicated by symbol, in conformance with code requirements and consistent with type of construction.
4. Install the appropriate work cover on all outlet boxes.
5. Set front edge of device box flush with the finished surfaces except on walls of noncombustible materials where the boxes may have maximum set back of 1/4". Secure flush-mounted box to interior wall and partition studs. Accurately position to allow for surface finish thickness.
6. Set outlet boxes parallel to construction and independently attached to same.
7. Do not install back-to-back and through-the-wall boxes. Install with a minimum 6" horizontal separation between closest edges of the boxes. Install with minimum 24" separation in acoustic rated walls.
8. Outlet boxes for audiovisual shall be in a separate box from electrical outlets.

H. Box Support:

1. Mount boxes straight and plumb.
2. Install stud support one side, with short piece of stud, for up to 2-Gang device boxes.
3. Do not support boxes with tie-wire.
4. For one- and two-gang box support, manufactured bracket supports shall be accepted alternate.
5. Support boxes independently of raceways.
6. Install adjustable steel channel fasteners for hung ceiling outlet boxes.
7. Install stamped steel bridges to fasten flush-mounted junction box between studs.
8. Do not install boxes to ceiling support wires or other piping systems.

9. When boxes are installed in fire-resistive walls and partitions, provide 24" horizontal separation between boxes on opposite sides of a wall. In addition, limit penetrations to 16 square inches per penetration and not to exceed a total of 100 square inches per 100 square feet of wall area. Apply fire stop putty or muffins acceptable to the authority having jurisdiction (AHJ).

I. Projection Screen Installation

1. Install in accordance with manufacturer's instructions.
2. Install front projection screens with screen cases in position and relationship to adjoining construction as indicated, securely anchored to supporting substrate, and in manner that produces a smoothly operating screen with plumb and straight vertical edges and plumb and flat viewing surfaces when screen is lowered.
3. Test electrically operated units to verify that screen, controls, limit switches, closure and other operating components are in optimum functioning condition.

3.5 CLEANING AND PROTECTION

- A. Clean exposed surfaces using non-abrasive materials and methods recommended by manufacturer.
- B. Protect boxes and fittings until acceptance.

3.6 STORAGE AND HANDLING

- A. Schedule delivery to minimize delays in the project.
- B. Provide storage protection against temperature and humidity extremes, theft, vandalism, physical damage, and environmental damage.

END OF SECTION

SECTION 27 4116

AUDIO VISUAL SYSTEMS

PART 1 - GENERAL

1.1. SUMMARY

- A. This document covers the general requirements for the installation of audiovisual (AV) systems for the Health Science and Human Services Building Project located at Midwestern State University, Wichita Falls, Texas.

1.2. RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.3. CODES

- A. Execute work in accordance with best AV system installation practices, National Electrical Code, and applicable state and local codes.

1.4. REGULATIONS

- A. Comply with terms and conditions of Americans with Disabilities Act, especially regarding provisions for hearing impaired and wheelchair access in control areas.

1.5. SUBMITTALS

- A. General
 - 1. Refer to Division 1.
 - 2. Submit in quantities, format and timetable as required by General Conditions.
- B. Product Data Binders
 - 1. Minimum number of Sets: four (4).
 - 2. Timetable
 - a. Submit within thirty (30) days after award of contract.
 - b. Submit simultaneously with Shop Drawings.
 - c. Allow minimum of ten (10) business days for review. All sets minus one (1) will be returned with review comments. If a resubmit is required, resubmit total quantity of complete sets. If second resubmit is required, Contractor shall reimburse Owner for expenses incurred during additional review process.
 - d. Review and approval of Product Data is required before equipment purchase and installation.
 - e. Bind product data sheets together either in GBC or 3-ring type binders.
- C. Shop Drawings
 - 1. Minimum Number of Sets: four (4).
 - 2. Timetable
 - a. Submit within thirty (30) days after award of contract.
 - b. Submit simultaneously with Product Data Binders.
 - c. Allow minimum of ten (10) business days for review. All sets minus one (1) will be returned with review comments. If a resubmit is required, resubmit total quantity of complete sets. If second resubmit is required, Contract shall reimburse Owner for expenses incurred during additional review process.

3. Description:
 - a. Shop Drawings shall be used for coordination between trades and updated as final record drawings.
 - b. Bind all Shop Drawings together to form set. Loose drawings will not be accepted.
 - c. Each drawing shall include: Project, Building, Location, Contractor Name, Architect, AV Consultant, Date and Revision Number.
 - d. Number and title each drawing in logical manner as a set.
 - e. Include cover sheet with listing of all drawings included in bound set.
 - f. Ensure that labeling on Shop Drawings match labeling on equipment.
 - g. Minimum Scale:
 - 1) Floor Plans: 1/8 inch = 1 foot.
 - 2) Rack Elevations: 1-1/2 inch = 1 foot.
 - 3) Plate/Panel Details: 6 inches = 1 foot.
 - 4) Loudspeaker Details: 1 inch = 1 foot.
 - h. Include as a minimum:
 - 1) Floor plans indicating locations of all AV devices, vertical risers, pull boxes, and exposed wiring. Include Device ID (PRJ, SCREEN, FRK, FB, AVP, etc., as referenced in design contract documents), as appropriate for projectors, screens, racks, floor boxes, AV plates in walls, etc.
 - 2) Schematic diagram showing all primary and secondary devices, interconnectivity and signal flow.
 - 3) Plate details showing size, material, finish, connectors, engraving, etc.
 - 4) Mounting detail drawings of loudspeakers, racks, and overhead equipment. Hire services of professional structural engineer, licensed by the appropriate governing authority, to review shop drawings, building structural drawings, and any existing structures from which equipment is to be suspended. Include Structural Engineer's stamped report with shop drawing submittal. Report shall include:
 - i. Itemization of items reviewed by the Structural Engineer.
 - j. Confirmation that proposed methods of suspending equipment as shown on the shop drawings conform to required safety factors.
 - k. Confirmation that building structure from which equipment is to be suspended will support equipment including required safety factors.
 - 1) Rack elevations.
 - 2) Complete schematic diagram. One-line diagram with detailed descriptions of product inputs and outputs is acceptable. Include terminal strip details and cable label information. If wiring diagram spans more than three (3) sheets, additionally provide simplified block diagram of entire system on one (1) sheet.
 - 3) Electrical power wiring diagram. Include circuit, switching, and control details.
 - 4) Wiring diagram of grounding and shielding scheme.
 - 5) Drawings for custom-fabricated items (i.e., plates, panels, cables, and assemblies).
 - 6) General construction drawings necessary for completion of work.

D. Operation and Maintenance Manuals

1. Minimum number of Sets: four (4).
2. Bind Operation and Maintenance Manuals using either GBC or 3-ring binders.
3. Format and Minimum Information below:
 - a. Section 1 - System Operation.
 - 1) Introduction/overview to system components and their functions and locations. Include a brief listing of basic system functions.
 - 2) Complete but simple system operating instructions to accomplish basic system functions, written for non-technical personnel.

- 3) Certificate indicating names of Owner personnel trained by AV Contactor, date of training, name of AV Contractor representative that provided training, and name of project.
- b. Section 2 - System Documentation.
 - 1) Simplified system one-line schematic diagram showing changes made during construction.
 - 2) Complete inventory of system components including serial numbers. Identify location (equipment rack, over stage, stored in control room, etc.) of each component.
 - 3) Cable and terminal strip documentation including cable numbers, functions, originating locations, terminating locations, and signal levels.
 - 4) All Shop Drawings corrected to reflect as-built conditions.
 - 5) Other data and drawings required during construction.
 - 6) Initial Tests and Adjustments data.
 - 7) Final Tests and Adjustments data.
 - 8) CD-ROM discs including all utilized manufacturer's software and saved copies of software configurations (configurations as established during Final Tests and Adjustments).
- c. Section 3 - Manufacturer's Documentation.
 - 1) For each equipment model at no additional costs to Owner, even if manufacturer does not include costs of such documentation with purchase of equipment item.
 - 2) Manufacturer's Product Data.
 - 3) Operating instructions.
 - 4) Installation instructions.
 - 5) Service information.
 - 6) Schematic diagrams.
 - 7) Replacement parts list.
- d. Section 4 - Maintenance Information.
 - 1) Preventive maintenance schedule letter clearly stating target dates of six month and end-of-warranty preventative maintenance inspections, and list of maintenance tasks performed.
 - 2) Maintenance instructions including manufacturer's recommended maintenance, recommended maintenance schedule and information concerning proper inspection, testing, and replacement of components.
 - 3) Troubleshooting information complete with instructions for procedures during equipment failure.
- e. Section 5 – Warranty Information
 - 1) System warranty letter.
4. Provide three (3) sets on CD-R disc that include all material in Operation and Maintenance Manuals in PDF format except for copyrighted material.
5. Submit one (1) set of Operation and Maintenance Manuals at least ten (10) days before Final Tests and Adjustments procedures (minus data from Final Tests and Adjustments). This set will be reviewed by Owner and returned to Contractor. Re-submit after Final Tests and Adjustments and include data. NOTE: Do not schedule Final Tests and Adjustments or perform training of Owner personnel before submitting Operation and Maintenance Manual.
6. Submit remaining number of complete manuals as required by General Conditions within ten (10) days after return of reviewed set(s). Include Final Tests and Adjustment data, warranty period letter, and any other data not included in first submission.

E. Samples

1. Request for Samples - Upon request, furnish samples (at no additional cost) to Owner and/or General Contractor of submitted items proposed as substitutes for specified items. Products will be reviewed to determine if proposed substitute items meet required function and quality.

2. Product Tests
 - a. Products submitted as samples may require testing by independent laboratory. Testing at expense of Contractor.
 - b. Obtain written approval of tested products before incorporating into system.

1.6. QUALITY ASSURANCE

- A. AV Contractor Qualifications
 1. Be established AV System Contractor, regularly engaged in furnishing and installing AV systems. NOTE: Electrical or general contracting firms responsible for completion of this work, but not meeting above requirement, shall employ services of approved AV Contractor as subcontractor to perform work described herein.
 2. Be experienced in installations of similar size and scope within last five (5) years. Submit list of four (4) (minimum) installed jobs of similar magnitude, completed within last five years. For verification, submit complete information, including project name, project address, contact person, daytime telephone number plus month and year of project completion. At Owner's request, accompany Owner or Owner's representative on visit to any or all example completed projects submitted.
 3. Be Authorized Dealer for all major lines of equipment listed in Part 2 (Biamp, Sony, Crown, Sharp, Crestron, etc.) Must have at least one permanent staff member who is factory trained in the installation and maintenance of each major product line offered.
 4. Employ personnel (at all levels of work) experienced in projects of similar size and scope. Provide list of key personnel to be responsible for each of the following aspects of work: Project Management, Technical Documentation, Control System programming, DSP programming and Leadership of Field Work (one who is present for all field work). For each identified employee, indicate number of years employed by contractor, number of years' experience in assigned responsibilities, and list of previously completed projects where similar responsibilities were required.
 5. Project manager assigned to this project must have a minimum of five (5) years' experience in installing and integrating AV systems of similar scale. Project Manager shall also have either an INFOCOMM CTS-I or CTS-D certification.

PART 2 - PRODUCTS

1.1. GUIDELINES

- A. All active AV equipment shall be furnished by AV Contractor selected by the Owner. All active electronics shall be contractor furnished, contractor installed (CFCI).
- B. Infrastructure Products – All conduits, basket tray/cable tray, pull boxes and associated parts required for infrastructure shall be installed by the electrical contractor unless specifically excluded in these specifications or drawings.
- C. Performance - Regardless of completeness of descriptive paragraphs herein, each device shall meet its manufacturer's published specifications. Verify performance.
- D. Contract Documents - Drawings and specifications are to be used in conjunction with one another and to supplement one another. In general, the specifications determine the nature and quality of the materials, and the drawings establish the quantities, details, and give characteristics of performance that should be adhered to in the installation of the AV system components. If there is an apparent conflict between the drawings and specifications, the items with the greater quantity or quality shall be provided and installed. Clarification with the owner about these items shall be made prior to the ordering and installation.
- E. Quantities – All quantities are indicated on AV drawings or in Part 2 AV Products list. Confirm quantities on final Contract Documents. If Contract Documents do not include quantities necessary to deliver complete working system, provide notification of disparity, and install required quantity of devices for complete working system.

- F. Small Parts - Systems are described in terms of major products. Even if not specifically mentioned, provide and install patch cables, connectors, hardware, converters, power supplies, labels, terminals, mounting accessories etc. necessary for complete and working system meeting design intent of specifications.
- G. Balanced Lines – Unless specifically directed otherwise, wire all line and microphone level circuits as balanced with respect to signal ground. For products without balanced inputs or outputs, provide high quality balancing transformers with proper level, shielding, and impedance characteristics. Assure all audio levels arriving and leaving matrix and routing switchers are equal to the manufacturer's recommended input audio level. If required, use Radio Design Labs, Inc. products or equivalent for level matching.
- H. Keys - Provide five (5) sets of keys for any AV system product requiring keys.
- I. Condition – Provide and install products listed in this section in factory new condition, conforming to applicable provisions of American National Standards Institute.
- J. Designations - Each major product item is given unique designation (such as MIX1 for mixer number 1). The product designations are unique in this section only and may be repeated in other specification sections.
- K. Security Screws - Use Middle Atlantic HSK Guardian Series button-head screws and bits to secure rack components, LCD mounts, Projector mounts and any other location deemed necessary by Owner. Use nylon washers (not provided by Bryce) to protect equipment surfaces. Account for appropriate tip wear when ordering quantity and do not use a bit beyond the manufacturer's recommendations. Provide ten (10) additional unused driver bits and deliver to the customer after completion.
- L. AV Electrical Power - Ensure that "Star" ground configuration is properly implemented by the Electrical Contractor. Ensure that ground wires from each outlet are isolated from conduit, neutrals, and each other and are each home-run back to the dedicated breaker panel for AV systems.
- M. Wireless Microphones - Coordinate frequency selection with other radio-frequency sources in the area and with manufacturer's recommendations.
- N. Control System Programming:
 - 1. Program each panel to provide simple, intuitive control of all basic AV functions including: per zone program and speech volume levels, video source and destination routing, AV system power, media player transport functions and CATV tuner control (including channel guide, navigation, last channel, channel select (up, down and manual input) and channel presets).
 - 2. Utilize InfoComm International's "Dashboard for Controls" concept for touch panel layout unless directed otherwise by Owner.
 - 3. Control system shall be integrated into Crestron's Fusion management system allowing the Owner to manage and control the building's AV systems and provides reports on system usage, down time and other reportable attributes as requested by Owner.
 - 4. AV management software shall be installed on Owner furnished computer(s) with adequate specifications per manufacturer's recommendations.
 - 5. Provide layout of each and every touch panel and hard-button panel pages in the product data submittal for approval by Owner.
 - 6. Provide web-control for each touch panel in AV system. Include page tracking, and track current button feedback between touch panel and web-control panel.
 - 7. Staff member certified by control system manufacturer shall program control system. Control programming must be done by in-house personnel. Programming cannot be subbed out to another contractor or individual.
 - 8. After programming is approved, all control system code and programming, including touch panel code and graphics, will become property of Owner. AV Contractor shall provide Owner both raw and compiled code on CD-R disc.

- O. Audio System Programming - Owner shall coordinate layout and logical branching of DSP audio system. Include screen layout and menu branching drawings in AV submittal. After AV system is approved, all audio control system code and programming will become property of Owner. AV Contractor shall provide Owner both raw and compiled code on CD-R disc.
- P. EDID Configuration – The variety of resolutions of laptops and other computer devices that may be connected to these systems is unknown. Set preferred EDID settings to 1920x1080, 60Hz, 2-channel audio.
- Q. AV Racks:
 - 1. Provide blank faceplate in any area marked BLANK in drawings.
 - 2. Provide shelf for mounting of any device for which rack mount kit is not available.
 - 3. Provide one Panelcrafters DATCO-XXXXX-RHIM-01 designer/integrator information plate or approved alternate per rack. Install information plate at the top of each rack unless 1RU space is not available. Contact Panelcrafters sales department to add AV Contractor graphic to the “integrator” section (approximately 8.5” x 1.75” of the right-hand side). All alternates must include AV Consultant graphic. Submit to AV designer for approval of final plate design prior to purchasing and installation.
- R. AV Floor Boxes and Poke-thrus:
 - 1. Clean floor boxes and poke-thrus of all dust and debris prior to installation of any active or connectorized plate.
 - 2. Any floor box or poke-thru with active or connectorized AV plates found to have any dust, debris or water in bottom of box are subject to replacement of all plates and components. A re-test of all associated components must be completed.
 - 3. Provide blank plates for all unused compartments in the AV floor boxes and poke-thrus.
- S. AV Plates
 - 1. The project standard plate color is white unless the plate is mounted on a wood or stone wall in which case it is to be stainless steel.
- T. AV Design Bid & Substitutions:
 - 1. System design is around products listed in Part 2. Intent of product specification is to provide standard of quality and function for installed materials. Certain performance specifications are given to clarify job requirements.
 - 2. Bid AV system with products specified in section below unless noted otherwise from Owner.
 - 3. No substitutions will be allowed without prior approval from Owner specific to proposed manufacturer and model numbers.
 - 4. Equipment listed in Part 2 is based on performance criteria to meet Owner design requirements.
 - 5. All requested substitutions need to meet or exceed performance of devices listed in Part 2. For each request provide manufacturer’s published specifications to verify performance and explain functional and cost impact.
 - 6. Evaluation and approval of substitution requests will be performed by Owner.

1.2. ROOM DESCRIPTIONS

- A. Conference / Debriefing Rooms (#202, #352, #446): Each room will have a wall mounted flat panel display. ~~The two (2) debriefing rooms~~ **Debriefing Room 202** will have existing interactive boards with **existing wall mounted projector**. A wired input at the table via cable cubby and a wired input at the wall to support owner furnished devices are provided. **USB extender will be provided from interactive board in room 202 to table.** Speech reinforcement and program audio will be accommodated via ceiling mounted loudspeakers. An output for a portable assistive listening system will be included per ADA requirements. Control of the flat panel will be via wall mounted control keypad.

- B. Classrooms Typical (#101, #302, #304, #306, #332): Each classroom will be flexible with multiple displays to allow for multiple configurations. All the wall mounted flat panel displays can be fed the same input source or discrete sources. Sources for display include wired inputs at the lectern via cable cubby and at the wall to support owner furnished devices, a wireless presentation system for display of presenter or participant devices (e.g. laptops or tablets), a document camera, a cable television tuner (cable service feed by others) and a dedicated owner furnished room computer. All equipment will reside in the local lectern. A wired "button" microphone at the lectern and a wireless microphone system for use throughout the room will provide speech reinforcement. Program audio and speech reinforcement will be accommodated via ceiling mounted loudspeakers. An assistive listening system will be included per ADA requirements. Control will be handled via a touchscreen control panel mounted to the lectern. Intuitive controls via graphic touch panel interface will control system power, program audio source selection and volume control, plus lighting presets and shade control (if available).
- C. Dental Lab 103A/103B: This instructional lab is a large dividable room with a movable partition. Each lab classroom will have a local lectern housing a wireless presentation system for display of presenter or participant devices (e.g. laptops or tablets), a document camera, a cable television tuner (cable service feed by others) and a dedicated owner furnished room computer. A wired input at the lectern via cable cubby to support an owner furnished device will be provided. A wired "button" microphone at the lectern and a wireless microphone system for use throughout the room will provide speech reinforcement. Program content will be presented with a motorized projection screen and a ceiling mounted video projector. An assistive listening system will be included for each classroom per ADA requirements. Control will be handled via a touchscreen control panel mounted to the lectern. Intuitive controls via graphic touch panel interface will control system power (including screen up and down), program audio source selection and volume control, plus lighting presets and shade control (if available). In the large room configuration with wall partition opened, the presentation content can be distributed from either lectern position.
- D. Nursing Skills Lab #2: This instructional lab will have a local lectern housing a wireless presentation system for display of presenter or participant devices (e.g. laptops or tablets), a document camera, a cable television tuner (cable service feed by others) and a dedicated owner furnished room computer. A ceiling mounted PTZ camera in a dome mount will be mounted in instructional area for close-ups of demonstrations of equipment or working with a manikin. A wired input at the lectern via cable cubby to support an owner furnished device will be provided. A wired "button" microphone at the lectern and a wireless microphone system for use throughout the room will provide speech reinforcement. Program content will be presented on ceiling mounted projection screen and ceiling projector (OFE), on an interactive white board via ceiling mounted video projector. A wired input and output at the wall will provide source input and content output to the portable interactive white board. An assistive listening system will be included per ADA requirements. Control will be handled via a touchscreen control panel mounted to the lectern.
- E. Radiologic Sciences Lab: This instructional lab will have a local lectern housing a wireless presentation system for display of presenter or participant devices (e.g. laptops or tablets), a document camera, a cable television tuner (cable service feed by others) and a dedicated owner furnished room computer. A wired "button" microphone at the lectern and a wireless microphone system for use throughout the room will provide speech reinforcement. Program content will be presented with Wall mounted interactive white board (OFE) via ceiling mounted video projector. A wired input and output at the wall will provide source input and content output to a portable interactive white board. An assistive listening system will be included per ADA requirements. Control will be handled via a touchscreen control panel mounted to the lectern.
- F. Respiratory Care Skills Lab: This instructional lab will have a local lectern housing a wireless presentation system for display of presenter or participant devices (e.g. laptops or tablets), a

document camera, a cable television tuner (cable service feed by others) and a dedicated owner furnished room computer. A wired input at the lectern via cable cubby to support an owner furnished device will be provided. A wired "button" microphone at the lectern and a wireless microphone system for use throughout the room will provide speech reinforcement. Program content will be presented with a motorized projection screen via ceiling mounted video projector. A large flat panel display will also be provided to present supplementary program content. An assistive listening system will be included per ADA requirements. Control will be handled via a touchscreen control panel mounted to the lectern.

- G. Anatomage/Virtual Lab: This instructional lab will have wired inputs at the center table via cable cubby to support owner furnished devices. A dedicated owner furnished room computer and HDMI extenders will be housed in the equipment cabinet under the anatomage table. Program content will be presented with one (1) fixed wall mount projection screen (2 x 1 configuration) and ceiling mounted video projectors. Ceiling speakers connected to the PC will provide any program audio. A wall mounted 5" touch panel connected to control system will provide control of system.
- H. Classroom with ITV Distance Learning (#240): Each classroom will be flexible with multiple displays to allow for multiple configurations. All the wall mounted flat panel displays can be fed the same input source or discrete sources. Sources for display include wired inputs at the lectern via cable cubby and at the wall to support owner furnished devices, a wireless presentation system for display of presenter or participant devices (e.g. laptops or tablets), a document camera, a cable television tuner (cable service feed by others) and a dedicated owner furnished room computer. All equipment will reside in the local lectern. A wired "button" microphone at the lectern and a wireless microphone system for use throughout the room will provide speech reinforcement. Program audio and speech reinforcement will be accommodated via ceiling mounted loudspeakers. An assistive listening system will be included per ADA requirements. Control will be handled via a touchscreen control panel mounted to the lectern. Intuitive controls via graphic touch panel interface will control system power, program audio source selection and volume control, plus lighting presets and shade control (if available). An Add Alternate provides additional equipment for ITV Distance Learning from this room. Displays have been optimized for this use. An additional Codec with a camera in the rear of the classroom as well as the front. Overhead microphones will be added for audience response. A DSP audio processor will need to be added to handle the additional microphones.
- I. Dean's Conference Room (#411): Each room will have a wall mounted flat panel display. A wired input at the table via cable cubby and a wired input at the wall to support owner furnished devices are provided. Speech reinforcement and program audio will be accommodated via ceiling mounted loudspeakers. An output for a portable assistive listening system will be included per ADA requirements. Control of the flat panel will be via wall mounted control keypad.
- J. Student Lounge 140: Lounge will have Infrastructure for future wall mounted flat panel display for showing cable television (cable television feed by others) and/or digital signage (see below). Control will be handled via the flat panel display's remote.
- K. Digital Signage: Each digital signage location will have a wall mounted flat panel display. A small form factor, IP addressable PC will be located at each panel for pushing content from an owner provided signage system.

1.3. AV PRODUCTS

A. The following are major active and infrastructure products for this project.

1. AMP – Power Amplifier
 - a. Type 1 – Extron ~~MPA 152 70V 15watt~~ **MPA 601 60 watt** audio amplifier with rack mount kit
 - b. Type 2 – Extron XPA 2001 70V 100wattt audio amplifier with rack mount kit
2. AVP – AV Input Plate
 - a. Type 1 – Custom one-gang AV plate with one (1) HDMI passive connector to be Extron WPD 110 A
 - b. Type 2 – Custom one-gang AV plate with one (1) DTP transmitter and one (1) microphone input (XLR)
 - c. Type 3 – Custom two-gang AV plate with one (1) **DTP USB** transmitter and one (1) DTP receiver
3. AVT – Tuner
 - a. Aurora VTUNE PRO 4K/QAM/NTSC/IPTV Tuner
 - 1) Include manufacturer recommended rack mount kit
4. CAM – PTZ Video Camera
 - a. Type 1 - Polycom EagleEye Director II auto tracking camera.
 - 1) Provide with cable extenders and adaptors as required to connect to CODEC **(ADD Alternate #5 only)**.
 - 2) Provide with wall mount that will house all the parts required at the camera location.
 - b. Type 2 – Vaddio RoboShot 12 HDBT (ceiling mounted) with OneLink HDMI Extension module.
 - 1) Provide the Vaddio 12” clear indoor flush mount dome
5. CC - Cable Cubby
 - a. Type 1 – Extron Cable Cubby 202 with pass-through plates
 - 1) Coordinate exact mounting location with architect
6. CDC – Videoconferencing Codec **(ADD Alternate #5 Only)**
 - a. Polycom RealPresence Group 700 CODEC.
 - b. Provide with rack mount and required adaptors, power supplies to provide complete system.
7. **CMIC – Ceiling microphone (ADD Alternate #5).**
 - a. **Shure MXA910W-60CM Ceiling Array microphone With IntelliMix DSP Suite.**
 - b. **Dante Audio out.**
 - c. **Provide with PoE power supply to power system.**
8. CP – Control Processor
 - a. Type 1 – Extron IPCP Pro 250 control processor.
9. DOC – Document Camera
 - a. Type 1 - Wolfvision VZ-3 desktop visualizer
10. DSP – Digital Signal Processor
 - ~~a. Type 1 – Shure DFR22~~
 - b. Type 2 – Extron DMP 128 Plus C **V AT (ADD Alternate #5 only)**.
 - 1) Use Extron Electronics ASA 131 passive audio summing adapters for incoming balanced stereo audio signals.
 - 2) **Provide with AEC, Dante and VOIP features.**
11. DSPC – Digital Signage PC
 - a. Black Box ICKS-VE-KU-N K Series VESA Digital Signage Player.
12. FPD - Flat Panel Display
 - a. Type 1 – Samsung DM82E-BR 82” flat panel display
 - 1) Include Chief Manufacturing XSMU1 wall mount
 - 2) Include active unbalanced to balanced audio converter for audio output
 - b. Type 2 – Samsung DM65E-BR 65” flat panel display
 - 1) Include Chief Manufacturing XSM1U wall mount

- 2) Include active unbalanced to balanced audio converter for audio output
- c. Type 3 – Samsung DM75E-BR 75" flat panel display
 - 1) Include Chief Manufacturing XSM1U wall mount
 - 2) Include active unbalanced to balanced audio converter for audio output
- d. Type TV/DS and DS – Samsung DM55E 55" flat panel display
 - 1) Include Chief Manufacturing MSM1U wall mount
 - 2) Include active unbalanced to balanced audio converter for audio output
- 13. FRK – Floor Rack
 - a. Middle Atlantic ERK-4425
 - 1) Power strip for appropriate power distribution
 - 2) Middle Atlantic caster base
 - 3) Middle Atlantic ERK-4QFT-FC fan top
 - 4) Middle Atlantic D Series Drawer
 - 5) Middle Atlantic vents and blanks as indicated on the drawings
- 14. IWB – Interactive White Board
 - a. Type 1 – OFE existing portable Prometheus Boards with built-in short throw projector.
 - b. Type 2- OFE existing wall mounted Prometheus Board utilizing new type 4 2 ceiling mounted projector. USB extender to be mounted in FPD back box.
 - c. **Type 3 – OFE existing wall mounted Prometheus Board with existing wall mounted projector.**
- 15. LA - Listening Assist System
 - a. Listen LT82-01 IR Transmitter with:
 - 1) Listen LA-140-WH IR emitter- white.
 - 2) Listen LA-326 Transmitter rack mount kit
 - 3) Listen LA-364 Recharging station
 - 4) Provide four (4) Listen LR-44 receivers with two (2) LA-164 over the ear headphones and two (2) LA-166 Neck Loop.
- 16. LECTERN
 - a. SoundCraft MWSU – LECTERN 32 Custom Lectern with Logo. Match University standard finish. Submit sample to Architect.
 - 1) Include rack rails.
 - 2) Include cutouts for the cable cubby and microphone.
 - 3) Include sliding keyboard and mouse tray.
 - 4) Include casters with brakes.
 - 5) Include document camera shelf.
 - 6) Include Monitor arm to be installed at site.
 - 7) Finish: Charcoal Grey Carpet.
- 17. NET – Network Switch
 - a. HP 5120-EI-24G-PoE+ gigabit ethernet switch
- 18. PMIC – Lectern Microphone
 - a. Clear One 910-103-162 "button" microphone with shock mount.
 - 1) Secured to lectern top. Coordinate mounting with architect and consultant.
 - 2) Coordinate mounting with architect
- 19. PRJ - Video Projector
 - a. Type 1 - Panasonic PT-RZ660BU (6500 lumens) with appropriate lens
 - 1) Include Chief Manufacturing RPA universal ceiling projector mount
 - 2) Include Chief Manufacturing CMS adjustable extension column and CMA plate
 - b. Type 2 – Panasonic PT RZ575BU (5200 lumens) with appropriate short throw lens
 - 1) Include Chief Manufacturing RPA universal ceiling projector mount
 - 2) Include Chief Manufacturing CMS adjustable extension column and CMA plate.
 - c. **Type 3 – Existing wall mounted projector.**

20. PSW – Presentation Switcher
 - a. Type 1 - Extron DTP Crosspoint 108 4K all-in-one presentation switcher
 - 1) Use Extron Electronics ASA 131 passive audio summing adapters for incoming/outgoing balanced stereo audio signals.
 - 2) Include RS-232 extenders for cable runs over 50 feet.
 - b. Type 2 - Extron DTP Crosspoint 84 4K all-in-one presentation switcher
 - 1) Use Extron Electronics ASA 131 passive audio summing adapters for incoming/outgoing balanced stereo audio signals.
 - 2) Include RS-232 extenders for cable runs over 50 feet.
21. PWR - Power Management
 - a. Type 1 - Middle Atlantic PDC-915R-6 power supply
 - b. Type 2 – Middle Atlantic UPS-2200R-IP uninterruptable power supply.
22. S – Loudspeaker
 - a. Extron FF-220T Full-Range Flat Field
 - 1) Tap at 7.5 watts.
 - 2) Follow manufacturer's guidelines to paint speakers to match architect provided color sample
23. TP - Control Touch Panel
 - a. Type 1 – Extron TLP Pro 520M wall mount 5" touch panel
 - 1) Coordinate color with architect
 - 2) Include PoE injector connected to building LAN
24. UPS – Uninterruptable Power Supply
 - a. APC SMT1000RM2U Smart UPS 1000VA RM @U 120V.
 - 1) Mount in bottom of each Lectern.
25. UTP Rx – Digital Twisted Pair Receiver
 - a. Type 1 - Extron DTP HDMI 4K 230 Rx DTP receiver
 - b. Type 2 – Extron DTP HDMI 4K 230 D Rx DTP receiver (decora style)
26. UTP Tx – Digital Twisted Pair Transmitter
 - a. Type 1 - Extron DTP T UWP 232 D two input DTP transmitter (decora style)
 - b. Type 2 - Extron DTP T HWP 4K 231 D DTP transmitter (decora style)
27. USB Rx – Digital USB Twisted Pair Receiver
 - a. Real prType 1 – Extron USB Extender Plus R USB Extender Receiver
28. USB Tx – Digital USB Twisted Pair Transmitter
 - a. Type 1 – Extron USB Extender Plus T USB Extender Transmitter
29. WCP – Wall Mounted Control Panel
 - a. Type 1 – Extron TLP Pro 520M wall mount 5" touch panel
 - 1) Coordinate color with architect
 - 2) Include PoE injector connected to building LAN
 - b. Type 2 – Extron EBP 100 wall mount push button control panel
 - 1) Include PoE injector connected to building LAN
 - 2) Coordinate color with architect.
 - c. Type 3 – Extron MLC Plus 84D Media Link Controller (Decora Style)
 - 1) Coordinate color with Architect
 - 2) Power unit from power outlet behind Flat Panel Display.
 - 3) Connect RS232 directly to Flat Panel Display.
30. WMIC – Wireless Microphone
 - a. Shure ULXD Single Receiver System
 - 1) Extend antenna as necessary for full coverage within each system's corresponding room.
 - 2) Provide Shure UA864US ceiling mounted antennas when extending.
 - 3) Provide Shure ULXD1 body pack with MX153 earset head-worn microphone.
 - 4) Provide Shure ULXD2/SM58 hand-held transmitter.
 - 5) Provide with charging station and rechargeable batteries

31. WPS – Wireless Presentation System
 - a. OFE Apple TV
 - 1) Include Middle Atlantic RSH4A2S custom rack shelf.
32. SCREEN - FIXED – Wall mounted fixed stretched projection screen Anatomage Room (303) only.
 - a. Draper Clarion wall mounted fixed stretched screen.
 - 1) Size: 208" W x 65" T Frame (dual 16:10 images).
 - 2) Projection Material: OptiFlex Matt White XT1000V.
 - 3) Provide additional frame support trusses as required.
 - 4) Provide wall mount brackets.

1.4. CABLES

- A. Interconnect Wiring – All AV cables will be plenum rated per NEC.
 1. Analog Audio Plenum Rated Cable - West Penn 25291, or similar.
 2. Digital Audio Plenum Rated Cable: Belden 1801B plenum-rated AES/EBU compliant equivalent.
 3. Analog Composite Video Plenum Rated Cable: West Penn 25806 or Belden 89120.
 4. RGBHV Plenum Rated Cable: Belden 1283S5, or West Penn 258195.
 5. Control Plenum Rated Cable: West Penn D25350.
 6. Loudspeaker Plenum Rated Cable: West Penn 25226B & 25227B.
 7. Shielded Cat7a Cable: Crestron DM-CBL-ULTRA
 8. Fiber 62.5 μ m Cable: Corning 62.5/125.
 9. Interface/Adapter Cables: AMX or Extron Certified Cables
 10. HDMI Interconnect Cables: Extron Pro Series HDMI Cables
- B. Connectors – All AV (including microphone) connectors shall be made by Canare or Neutrik. Connectors shall be of the quantity and type as required for proper and durable operation, and signal transmission of the electrical characteristics for associated circuitry.
 1. Microphone connectors: 3-conductor XLR AES/EBU compliant (for microphones in tables/lecterns, use Neutrik RF shielded connectors).
 2. Control panels: XLR type with number of conductors as required.
 3. Line level and left/right audio connectors: tip/ring/sleeve 1/4" phone jacks with insulated bushings.
 4. Composite video and RGBHV connectors: BNC dual crimp true 75 ohm BCP-C.
 5. BNC shall be made by ADC or Kings and be HD-SDI compliant to 3 GHz.
 6. Fiber: UniCam LC connectors.
 7. Loudspeaker shall be Neutrik Speakon type.
 8. Provide strain relief for each and every connector.

PART 3 - EXECUTION

1.1. INSTALLATION

- A. General Guidelines
 1. Quality of Work - Perform labor to accepted industry standards and state and local codes to accomplish complete and working system.
 2. Material and Labor - Provide specified products and other incidental materials, appliances, tools, and transportation required for complete and functioning systems. Provide personnel to perform labor who are skilled in techniques and can demonstrate technical knowledge AV infrastructure system installations.
 3. Documents at Job Site - Keep following documents at job site during entire construction period:
 - a. Complete Specifications and Drawings.
 - b. Approved Shop Drawings.
 - c. Approved Product Data.

- d. Progress Set of Project Record Documents.
 4. Mounting - Mount equipment and enclosures plumb and square. Ensure that permanently installed equipment is firmly and safely held in place. Design equipment supports to support loads imposed with project safety factor of five (5) or greater. For devices hung overhead, obtain review by Structural Engineer licensed by the appropriate governing authority prior to installation.
 5. Dimension Verification - Verify dimensions and space requirements to assure that proper mounting, clearance, and maintenance access space is available for system components.
 6. Clean-Up - Leave project clean each day. Place debris where designated by General Contractor. Debris includes but not limited to: solder splatter, cable ends, stripped insulation, spent crimp connectors, gypsum board and ceiling tile dust, and product wrappings and cartons. After completion of installation, thoroughly clean areas worked, including non-visible areas such as equipment rack interiors, rack top panels, and inside lockable floor and wall boxes.
 7. Coordinate installation of AV infrastructure and equipment with other trades in order to follow project schedule.
 8. Maintain any licensing required by the appropriate governing authority to install and terminate low voltage systems.
- B. Labeling
1. Equipment Labels - AV Contractor shall provide engraved lamicoïd labels on front and rear of rack-mounted equipment. Mount labels plumb and square. Include schematic reference design, item name, and system or area controlled by labeled component. On program preamps and mixers, provide label for each input indicating which source is controlled by labeled channel. Unless otherwise indicated, provide permanently-mounted black labels engraved with 1/8-inch white block characters. Handwritten, self-laminating, or embossed plastic (Dymo) labels are not acceptable. Provide labels for major equipment with two (2) lines (minimum) of engraving, coded as follows:
 - a. Line 1: Generic name of device, such as MIXER AMPLIFIER.
 - b. Line 2: Schematic designation of device, such as AV-MSW-1.
 2. Control Labels - AV Contractor shall provide engraved label over each user-operated control that describes the function or purpose of control. Provide label of proper size to fit available space.
 3. Terminal Strip Labels - AV Contractor shall label each terminal strip with unique identification code in addition to numerical label (Cinch MS series) for each terminal. Show terminal strip codes on system schematic drawings included with Project Record Documents.
 4. Rear Equipment Labels - AV Contractor shall provide adhesive label on rear of equipment where cables attach, to indicate designation of cable connected at each point.
 5. Cable and Wire Labels - Label cables and wiring logically, legibly and permanently for easy identification. Labels on cables shall be adhesive strip type, covered with clear heat shrink tubing. Factory stamped heat shrink tubing may be used. Hand-written or self-laminating type labels are not acceptable.
 6. Cable Label Codes and Locations - Label each cable with unique alpha-numeric code. Locate cable designation at start and end of each cable run, within three (3) inches of termination point. For cable runs that have intermediate splice points, label cable with same designation throughout, with additional suffix to indicate each segment of run. Provide cable designation codes to schematic drawings included with Project Record Documents and Operation and Maintenance Manuals.
- C. Power and Grounding
1. Power Coordination - Coordinate final connection of power and ground wiring to rack. Electrical contractor will provide power to audio visual systems. Before installation, verify load requirements for systems as accepted.
 2. Bus Bars - Install 1-inch by ¼-inch copper ground bus bar, top to bottom in floor mounted AV racks. Ground and bond equipment chassis of each rack-mounted component

without three-pin grounding plug to bus bars with #12 AWG insulated green wire using 6-32 or larger nuts, bolts, lock-washers, and appropriate NEMA connectors. Electrical Contractor (Division 16) shall provide and connect #4 AWG green insulated wire from Bus Bars to ground point in AV technical electrical panel.

D. Equipment Racks

1. Ventilation - Provide ventilation adequate to keep temperature in rack below 85 degrees Fahrenheit. Use "whisper" type ventilation fans in racks, adjusted to come on when temperature in rack rises above 85 degrees Fahrenheit, only if adequate cooling cannot be provided by Owner.

E. Wiring

1. Wiring Standards - Execute wiring in strict adherence to best AV engineering practices.
2. Field Connection Devices - Connect cable to active components through screw terminal connections and spade lugs when appropriate. For BNC connections use three-piece, dual crimp BNC properly sized for cable with insulating bushings. Wire nut or "Skotchlock" connectors are not acceptable. Do not wrap audio cable splices or connections with adhesive backed tape. Punch connectors or telephone-style punch blocks are not acceptable anywhere in the installation unless specifically authorized by Owner.
3. Run cable in ceiling plenums neatly parallel to building walls, supported every three feet to structure with plenum rated ties.
4. Raceways - Run vertical wiring inside rack in Panduit (or equivalent) plastic raceways with snap-on covers, sized to allow at least 50% future wiring. Mount raceways on full length ¾-inch flat black plywood backboards, attached to rack sides. If between-rack wiring chases are provided, Panduit raceways are not required. Horizontal wiring in rack shall be neatly tied in manageable bundles with cable lengths cut to minimize excess cable slack, but still allow for service and testing. Provide horizontal support bars if cable bundles sag. Individually bundle excess AC power cable away from rack mounted equipment with plastic cable ties. Electrical tape and adhesive backed cable tie anchors are not acceptable.
5. Accessibility - Ensure that wiring and connections are completely visible and labeled in rack. Mount termination resistors, if required, on terminal strips, fully visible and not concealed within equipment or connectors.
6. Loudspeaker Polarity - Connect loudspeakers electrically in phase, using same wire color for loudspeaker wiring throughout project.
7. Physical Damage Prevention - Take necessary precautions to prevent physical damage to cables and equipment. Damaged cables or equipment will not be accepted. Separate, organize, and route cables to restrict channel crosstalk and feedback oscillation.
8. Racks - Looking into the rack from the rear, locate AC power, control, data and speaker wiring on the left; line level audio, control, video, and RF wiring on the right. Keep several inches of space between power cables and other signals.
9. Hum Prevention - Ensure that electromagnetic and electrostatic hum is at inaudible levels. For line level signals, float cable shields at the output of the source device. Do not cut or remove shield conductors; fold back unconnected shields over cable jacket and cover with clear heat-shrink tubing. Do not obstruct cable labels.
10. Other Connections - Make connections using rosin core solder or approved mechanical connectors. Where spade lugs are used, crimp properly with ratchet type crimping tool. Solder spade lugs mounted on #22 AWG or smaller cable after crimping.

1.2. STORAGE AND HANDLING

- A. Power up any electronic equipment to ensure its proper functioning before its arrival onsite.
- B. Ensure that materials (especially electronic and electro-acoustic devices) are protected against physical, environmental, and electronic damage until final acceptance by Owner.

- C. Schedule delivery to minimize delays in the project.
- D. Provide storage protection against temperature and humidity extremes, theft, vandalism, physical damage, and environmental damage.

1.3. WARRANTY

- A. Refer to Division 1.
- B. Warranty - Submit letter providing warranty covering labor and materials supplied under this contract. Bind in Operation and Maintenance Manuals. Terms as described in General Conditions. Minimum terms as follows:
 - 1. System - Systems shall be free of manufacturing or installation defects for a minimum period of one (1) year from the date of final acceptance. Clearly designate begin and end dates of system warranty period.
 - 2. Parts and Labor - Provide parts and labor to repair defects in materials and workmanship during system warranty period.
 - 3. Response Time - Within system warranty period, provide initial on-site service response within one (1) business day of service call. Provide resolution to any system defects within 72 hours or within 48 hours of receipt of repaired or replaced product from manufacturer.
 - 4. Replacement Products - If any item must be removed for repair during system warranty period, provide replacement item of similar quality at no charge.
 - 5. Repair Limit - Do not repair any piece of equipment found defective during installation or system warranty period more than two (2) times. After second repair, replace defective item with similar approved item at no additional cost to Owner.
 - 6. Extended Manufacturer's Warranties – Identify products with manufacturer's warranties extending beyond one (1) year. Provide terms and conditions of such warranties.
 - 7. Service Personnel Information - Provide name(s) and telephone number(s) of service personnel to be contacted regarding repair and maintenance.
- C. Extended Warranty - Provide cost to extend complete AV system warranty from one (1) year to three (3) years. Included a list of all provided services including maintenance schedules.

1.4. INITIAL TESTS

- A. Purpose – These tests are to ensure that the AV system is installed and functioning as specified, and to ensure the system is ready for Final Tests and Adjustments (described later).
- B. Testing Standards – Perform testing in accordance with ANSI standards.
- C. Inspection - Verify prior to beginning actual tests and adjustments on systems:
 - 1. Proper grounding of all electronic components (through third prong of power connector or separate connection between component chassis and ground bus bar).
 - 2. Cables dressed, routed, and labeled, connected with proper polarity.
 - 3. Insulation and shrink tubing in place.
 - 4. Dust, debris, solder splatter, etc. removed.
 - 5. Proper frequency settings (or modules) at crossovers and controllers.
 - 6. All equalizer bands and tone controls set for flat frequency response.
 - 7. Survey temperatures of each piece of equipment after four (4) hours use (minimum). Note and report any hot equipment.
- D. Electrical Power Quality - While all sound and AV system components are unplugged from electrical power outlets, AV Contractor shall turn on power to outlets, and confirm proper voltages at each outlet across the following pairs of terminals: hot and neutral, hot and ground, and neutral and ground (zero volts across neutral and ground). AV Contractor to document measurements.

- E. General Function Tests - Test each piece of equipment to ensure that it performs its intended function. Include all portable equipment in tests. Intent of initial tests is to verify complete, functioning system before Final Tests and Adjustments. Correct problems found during initial testing before beginning Final Tests and Adjustments. Document whether all pieces performed intended functions; note any unresolved malfunctions.
- F. Initial Tests and Adjustments Data - Submit written report of Initial Tests and Adjustments data upon completion to Owner. Include printed name(s) of technician(s) performing tests, date(s) and time(s) of tests, model and serial numbers of test equipment, results of each initial test, descriptions of problems encountered and their solutions, and statement that system is ready for Final Tests and Adjustments. Initial Tests and Adjustments Data to include signatures of technician(s) performing tests.

1.5. FINAL TESTS AND ADJUSTMENTS

- A. Purpose – These tests are to be witnessed by AV Consultant to determine if system is complete and functioning as designed and specified. Also, AV Consultant will perform listening and viewing tests and witness adjustments of all images for optimum clarity.
- B. Timetable - Coordinate with Owner, General Contractor, and AV Consultant to schedule Final Tests and Adjustments after submittal of Initial Tests and Adjustments data.
- C. System and Site Conditions – AV Consultant will witness Final Tests and Adjustments. Have systems fully functional and ready for observation and testing upon AV Consultant's arrival. Coordinate with all trades for quiet conditions throughout the listening areas and for the duration of the test schedule. If upon AV Consultant's arrival, systems do not meet criteria, site is not sufficiently quiet, or if Owner or AV Consultant is required to make additional trips to job site to witness additional testing or perform additional reviews of installed equipment, Contractor shall reimburse Owner for labor and expenses incurred by having incurred costs deducted from payments to contractor.
- D. Test Labor - Provide technician familiar with this project's AV systems and operation of test equipment to perform testing. Provide additional technician to assist in the tests and to perform troubleshooting, repairs, and adjustments. Include labor for these technicians to be present for one (1), eight (8)-hour day during Final Tests and Adjustments.
- E. Tools - Provide standard hand tools including screwdrivers, pliers, wire strippers, nut drivers, soldering iron, and other tools appropriate for troubleshooting system problems.
- F. Ladders and Scaffolds - Provide ladders and scaffolds to inspect/adjust loudspeakers and rigging points.
- G. Verification of Initial Tests and Adjustments - Verify that Initial Tests and Adjustments have been performed and meet criteria. During Final Tests and Adjustments, AV Consultant may require portions of the Initial Tests and Adjustments to be repeated. Repeat measurements as requested without claim for additional payment.

1.6. FINAL ACCEPTANCE BY OWNER

- A. Certificate – Submit Certificate of Final Acceptance form signed by Owner verifying complete installation and proper operation of systems upon fulfillment of all requirements and upon recommendation by Owner.
- B. General Adjustments – Adjust, balance, and align equipment for optimum quality, meeting manufacturers published specifications.
- C. Input/Output Jack Demonstration – Demonstrate proper performance and phase of each system input and output jack (all audio input and output jacks) as received at AV and network systems.
- D. Inventory – Inventory all installed and portable equipment for correct quantities.

- E. Functional Demonstration – Demonstrate operation of each function of each major piece of equipment.
 - F. Other Tests - Perform any other tests on any part of the AV system as requested by Owner.
 - G. Final Equipment Settings – Record final settings of all equalizer bands, tone controls, filters, delays, limiters, etc., including those established through computer software settings. Include descriptions of settings (including software settings) in Operation and Maintenance Manual. Include software copy of configuration file(s) in Operation and Maintenance Manual.
 - H. Security Inspection – Inspect equipment for security from tampering (covers, shaft-locks, etc.).
 - I. Review of Labels – Review installed labels on cables, equipment, controls, and terminal strips.
- 1.7. OWNER TRAINING
- A. Provide Owner training as described in General Conditions. As a minimum, provide twelve (12) hours instruction (within four (4) trips to site) regarding AV Systems operation to Owner-designated personnel. Schedule instruction time(s) with Owner to occur after completion of Final Tests and Adjustments. Coordinate with Owner in advance to schedule instruction time. Document date, time, and attendees of the training session and include documentation in Operation and Maintenance Manuals to serve as record of trained personnel.
- 1.8. SUPPORT DURING OWNER'S FIRST USE OF COMPLETED SYSTEM
- A. Provide personnel familiar with design, installation, and operation of each system to be present at Owner's first use of each completed system (up to six (6) hours total in two sessions). During first use of each system, respond to Owner requests for troubleshooting, adjustments, and additional training. If no one contractor employee or representative can provide expertise in all aspects of the system, provide multiple personnel for the six (6) hours per session as required. Schedule presence of personnel in advance with Owner. Should significant elements of the new system be operational prior to final completion, Owner may elect to schedule contractor presence for Owner function prior to final completion of system. Should Owner exercise this option, contractor presence will not be required at first use following final completion.

END OF SECTION 27 41 16

SECTION 280000

ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 PROJECT SUMMARY/OVERVIEW

- A. This document covers the general requirements for work to be performed to provide electronic security and surveillance.
- B. The contents of this document, along with related drawings and other documentary material, are critical to the security of this project and Owner and shall remain secure and confidential.
 - 1. Confidential information shall not be deliberately or inadvertently disclosed to anyone other than the Contractor's personnel and subcontractors who require disclosure to perform their portion of the work.
 - 2. This confidential information shall be tracked to ensure that copies are accounted for and properly destroyed when no longer needed to perform the work.
- C. The security systems shall consist of the following integrated subsystems as specified herein:
 - 1. Electronic Access Control and Intrusion Detection
 - 2. Video Surveillance
 - 3. Emergency Intercommunications and Duress
 - 4. Wire and Cable
- D. Provide complete turnkey systems with the exception of those items noted within this specification as being provided by others.
- E. Related Sections include:
 - 1. Section 087100 Door Hardware
 - 2. Section 142000 Elevators (including related sub-sections)
 - 3. Section 260000 Electrical (including related sub-sections)
 - 4. Section 270000 Communications (including related sub-sections)
 - 5. Section 281000 Electronic Access Control and Intrusion Detection
 - 6. Section 282300 Video Surveillance
 - 7. Section 282600 Emergency Intercommunications and Duress
 - 8. Section 283100 Fire Alarm and Smoke Detection

1.2 GENERAL REQUIREMENTS

- A. Upon completion of commissioning testing and Owner acceptance, DataCom Design Group bears no liability or responsibility for the continued proper operation of the installed systems.
- B. Upon completion of commissioning testing and Owner acceptance, DataCom Design Group bears no liability or responsibility for the continued proper operation of the installed systems.

- C. The Items described herein shall not be modified or substituted without consent of DataCom Design Group and/or the Owner.
- D. Electronic security systems integrator (security subcontractor) manager/supervisor shall attend meetings arranged by the Contractor, Architect, Owner or other parties affected by the work of this Section 280000.
- E. If the manufacturer of security devices or connecting hardware has supplied post manufacture performance data, copies of such are to be kept for inclusion in the documentation and made available to the Owner upon request.
- F. All materials are to be new unused and of the latest series of model number, unless otherwise indicated by the Owner or security system designer.
- G. All security integrator personnel must be manufacturer certified and capable of an installation that falls under the manufacturer's guidelines necessary to obtain a manufacturer warranty.
 - 1. The integrator shall provide all components/materials essential for a complete and functional security access and surveillance system.
- H. Security integrator shall issue a two (2) year warranty on installation and workmanship.
- I. These Specifications and Drawings are intended for bidding purposes only, No part shall be copied or used for any purpose other than bidding on this project.
 - 1. This package shall be contractual upon bid award.
- J. Drawings and Specifications are to be used in conjunction with one another and to supplement one another.
 - 1. In general Specifications determine the nature and quality of the materials and tests, and drawings establish the quantities, details and give characteristics of performance that should be adhered to in the installation of the security system components.
 - 2. If there is an apparent conflict between the drawings and specifications, or within the specifications themselves, the items with greater quantity or quality shall be estimated and installed.
 - 3. Clarification with the Owner/Designer about these items shall be made prior to purchase and installation.
 - 4. Questions regarding the Specification or system requirements should be directed in writing to DataCom Design Group or the Owner.
- K. Security integrator shall adhere to Division 1 general requirements and written security Specifications and Drawings within this construction package and shall be responsible for complying with all local, state and federal laws or regulations applicable to the work being performed, even though said law, rule or regulation is not identified herein.
- L. Security integrator shall arrange and pay for any inspections required by the public agencies having jurisdiction in the area.
- M. The security contractor shall procure and maintain for the duration of this agreement, insurance against claims for injuries to persons or damages to property which may arise from, or conjunction with, the performance of the work hereunder by the security integrator, his agents, representatives, or employees.

1. The security integrator shall pay the cost of such insurance.
- N. The security integrator will respect and protect the privacy and confidentiality of the Owner, his employees, processes, products, and intellectual property to the extent necessary, consistent with the legal responsibilities of the State of Texas and the Owner.
- O. If required the security integrator shall sign a non-disclosure agreement and abide by its requirements to keep confidential all information concerning bid documents and this Project.
- P. Furnish submittals and manuals in accordance with Division 1.
- Q. Furnish a detailed material list complete with suppliers (distributors) list of components and distributors name, address, and phone number.
- R. Refer to Specifications issued by Architect, Division 1, for Project and cost payments.

1.3 REFERENCES

- A. The publications listed below form a part of this Specification. The publications are referred to in the text by basic designation only.
- B. Specific reference in Specifications to codes, rules, regulations, standards, manufacturer's instructions, or requirements of regulatory agencies shall mean the latest printed edition of each in effect at the date of contract unless the document is shown dated.
- C. For conflicts between referenced requirements and contract documents comply with the one that is more stringent.
1. Federal, State, and Local codes, regulations and ordinances
 2. NFPA 101: Life Safety Code
 3. NFPA 72: National Fire Alarm Code
 4. NFPA 730: Guide for Premises Security
 5. NFPA 731: Standard for the Installation of Electronic Premises Security
 6. National Electric Code (NEC), latest edition
 7. Building Codes (UBC) (IBC), latest editions
 8. Occupational Health and Safety Act (OSHA)
 9. Americans with Disabilities Act (ADA)
 10. Local Governing Authorities Having Jurisdiction
 11. Underwriters Laboratory (UL) Applicable Standards for Safety and Security
 12. Institute of Electrical and Electronics Engineers (IEEE) Applicable Standards
 13. Telecommunications Industry Association (TIA) Applicable Standards
 14. Midwestern State University standards for Security Systems
- D. Related Documents
1. Security Drawings
 2. General provisions of contract
 3. Uniform general conditions
 4. Supplementary general conditions
 5. Architectural plans & specifications
 6. Requirements of Division 1
 7. Electrical / Mechanical / Telecommunications specifications and plans.

1.4 DESCRIPTION OF SYSTEM WORK

- A. Furnish and install all materials, tools, equipment, and services for all electronic security/surveillance devices to provide functioning systems in accordance with performance requirements specified and any modifications resulting from reviewed shop and field coordinated drawings.

1. Access Control System

- a) This system replaces the typical mechanical key controlled door lock with a door locking system that uses an access card as the access credential.
- b) The system includes an electric door-locking mechanisms, card reader located adjacent the door, door status sensor, door prop alarm and a request to exit device.
- c) Typical system configuration is card or schedule controlled entry with free exiting.

2. Intrusion Detection System

- a) This system monitors areas for unauthorized entrance or intruder.
- b) This system can consist of motion sensors, door status sensors, glass break sensors and one or more control keypads.
- c) The keypad is used to arm/disarm system by entering a numeric code on the keypad.

3. Video Surveillance System

- a) This system is used to provide video surveillance through the use of cameras of security sensitive areas and target items.
- b) The system shall allow for the viewing and recording of images.

4. Emergency Intercommunications and Duress Systems

a) Duress Buttons

- 1) These buttons, also known as panic buttons, are installed in locations where potential personal safety or security threats exist.
- 2) Depressing the button sends a silent priority alarm signal to assigned monitor with location and specific alarm information
- 3) The panic button is usually located in the knee space underneath a desk or service counter.

b) Emergency Phone / Intercom / Call Stations

- 1) The device typically is a distinct box or pole with a call button.
- 2) Depressing the call button puts the individual in direct voice contact with assigned monitor along with specific location information.

B. RACKS AND ENCLOSURES

- 1. Wall mounted enclosures, data gathering panels, and power supply panels shall be installed as per manufacturer's requirements.
 - a) Coordinate pathways and power with Electrical and Telecommunications Contractors

- b) Furnish all labor, materials, tools, equipment, and services for all control consoles, equipment racks, cabinets, and enclosures not provided by others in accordance with contract documents.
 - c) Completely coordinate with work of other trades to avoid duplication in purchasing.
 - d) Although such work is not specifically indicated, furnish and install all supplementary or miscellaneous items, and devices incidental to or necessary for a sound, secure and complete installation.
- 2. The installation of the relay racks/cabinets for Electronic Surveillance shall be coordinated with the Telecommunications Contractor and G.C.
- 3. The designated security space will provide an area reserved for rack and wall mounted security equipment.
 - a) The rack area allows for vertical relay rack(s).
 - b) Backboard wall area of 8'-0" X 8'-0" shall be reserved for wall-mounted components.
 - c) Cable tray/ ladder shall be by the telecommunications contractor and is provided to facilitate cable access into both wall and rack mounted equipment.
- C. Provide all supplementary or miscellaneous items and devices incidental to or necessary for a sound and complete installation.
- D. Drawings are representative and show general arrangement of systems and equipment, except when dimensioned or detailed.
 - 1. For exact locations refer to dimensioned architectural drawings.
 - a) Field measurements take precedence over dimensioned drawings.
 - b) Field verify locations and arrangement of all systems and equipment.
 - c) Coordinate all work with other trades and Contractor.
- E. Circuit Supervision
 - 1. Supervise all signal and data transmission lines, links with other systems, and sensors.
 - a) Indicate circuit and detection device faults with both protected zone and trouble signals.
 - b) Initiate an alarm in response to opening, closing, or shorting of a signal or data transmission line.
- F. Electronics systems work as specified in this Section and Sections 281000, 282300, 282600 shall include:
 - 1. A project kick-off/pre-submittal meeting with the Architect, Designer, and Contractor to review security design package.
 - a) Additional participants shall include:
 - 1) Division 8 subcontractors
 - 2) Division 14 subcontractors
 - 3) Division 26 subcontractors

2. Preparation of pre-installation submittals, including point-to-point wiring information for security equipment to interface to work by others prior to start of any installation work. Include lock permit requests in submittals for review.
3. Furnishing and installation of all security devices, components and accessories.
4. The furnishing and coordination on installation of special back boxes for security equipment and field devices as required.
5. Furnishing, installation and termination of all copper wiring and cabling including any special purpose wire and cable for electronic security systems.
 - a) Coordinate all network and fiber optic cable interface provided by telecommunications subcontractor.
6. Coordinate raceway and power distribution systems provided by Division 26.
7. Provide and install 12/24 VAC/DC input power to all field devices as required.
8. Coordination with other trades and Owner required to facilitate the installation of the security equipment including:
 - a) Division 08 (doors)
 - b) Division 26 (power, raceways, and fire alarms)
 - c) Division 14 (elevator controls)
 - d) Division 27 (telecommunications network interface).
9. Wiring and termination of electrified door hardware by security subcontractor shall be concurrent with the installation of these electrified components by the door hardware subcontractor.
10. Programming of all security control equipment and prior coordination with the Owner's security and telecommunications personnel.
11. Preparation of "As-Built" documentation.
12. Warranty service for completed work.

1.5 SUBMITTALS

- A. Refer to Requirements of Division 1.
- B. Pre-Installation Submittal Requirements
 1. Submittals for electronic security shall be complete and submitted at the same time.
 - a) No partial submittals will be accepted for review.
 - b) Allow 2 weeks for consultant review of submittals.
 2. General Requirements
 - a) A functional description of each system.
 - b) All cable and wiring types for each device type used.
 - c) Certification that lock wiring and access control systems requirements have been coordinated with electrified door hardware, fire alarm systems, automatic door controls, and overhead door controls specified in other sections and other packages.
 - d) Power supply points listing with devices and maximum loads to prevent overloading.
 - e) Battery backup calculations to show load and back-up times for UPS and power supplies with batteries.

- f) Equipment schedules listing all system components, manufacturer, model number and quantities of each.
- g) Qualifications and proof of work history (with references).

3. Product Data Cut-sheets

- a) Complete manufacturer's technical data including manufacturer warranty information, descriptive literature, illustrations, and installation instructions for all components included within this project indicating compliance with applicable referenced standards, size, dimensions, model number, electrical characteristics, support requirements, connection requirements and all applicable information verifying that submitted components comply with Contract Documents.

4. Shop Drawings

- a) Floor plans necessary to identify specific device locations, cable routes and quantities, cable types, riser locations, and references to installation details and diagrams.
- b) Riser diagram showing routes between floors or other areas that are not easily identified on the floor plans.
- c) Security One-line diagrams showing all input and output points of the system.
 - 1) The Contractor shall make any corrections required by the consultant team, file with him two corrected copies and furnish such other copies as may be needed.
 - 2) The consultant's approval of such drawings or schedules shall not relieve the Contractor from responsibility for deviations from drawings or specifications, unless he has in writing called the Architect's attention to such deviations at the time of submission, nor shall it relieve him from responsibility for errors of any sort in shop drawings or schedules.
- d) Release of CAD Files
 - 1) Contractor may request to utilize DataCom's AutoCAD floor plan files for assistance in producing shop drawings.
 - 2) Request shall be made by signing DataCom's "Agreement for Release of CAD Files" letter.

5. Warranty

- a) The Contractor shall provide the appropriate documentation to comply with the requirements described in the WARRANTY section.

6. Qualifications

- a) The Contractor shall provide the appropriate documentation to comply with the requirements described in the QUALITY ASSURANCE section.

C. As-Built drawings shall be in current AutoCAD format, same version as used by the Architect.

- 1. Dimensions and scale of the drawing sheets submitted shall match the size of the drawing used for the contract documents, and shall include the following.

- a) Utilize normally recognized drafting procedures that match AutoCAD standards, Architect, and Designer guidelines and methodology.
 - b) The As-Built drawings shall incorporate all changes made to the building identified in, but not limited to, Addenda, contemplated change notices, Site Instructions or deviations resulting from site conditions.
 - c) Dimensioned plan and elevation views of all security components.
 - d) Cable routing paths of security cables to identified infrastructure pathways.
 - e) All rack, cabinet, and enclosure locations and labeling thereof.
 - f) One-line diagrams of equipment/device interconnecting cabling of the security systems.
 - g) Standard or typical installation details of installations unique to Owner's requirements.
 - h) Submit one soft and one hard copy with project deliverables within 30 days of project completion.
- D. Security integrator shall provide three (3) paper copies and one (1) electronic copy (PDF format) of a properly indexed O&M Manual at the conclusion of the project, which will include, but not be limited to the following requirements:
- 1. Ring binder with project title, properly indexed, and contractor's name on cover and spine including:
 - a) Sequence of operations, design philosophy, and specific functions
 - b) System block diagram
 - c) Equipment list including:
 - 1) A brief description
 - 2) Model
 - 3) Total number of each item used in the project.
 - d) Camera schedule including:
 - 1) Number
 - 2) Location
 - 3) Camera model/manufacturer
 - 4) View
 - 5) Lens
 - 6) Power source
 - 7) Multiplexer/input
 - 8) Settings entered on site
 - e) Manufacturers' data sheet and O&M manual for associated equipment.
 - f) Maintenance requirements for equipment, inspections and preventative maintenance schedules.
 - g) As-built drawings for each floor plan layout and rack and wall elevation layouts. Each drawing shall show:
 - 1) Cable type and identifier
 - 2) Actual cable routing pathway
 - 3) Device number (camera, etc.),
 - 4) Device input/output number.
 - h) Final test data (measured video levels, day & night camera snapshots in JPEG format and other significant operating parameters).

- i) List of system associated mechanical locking keys with key codes and tamper resistant hardware types.

1.6 QUALITY ASSURANCE

- A. Only approved security contractors may perform work on the CBORD system at Midwestern State University.
 - 1. List of approved security contractors:
 - a) **Blackhawk Integration**
 - 1) (325) 651-5733
 - 2) (325) 829-5127
- B. Electronic security systems integrator (security subcontractor) shall meet the following minimum requirements.
 - 1. Maintain a valid Type B license from the Texas Private Security Bureau.
 - 2. Have successfully completed three (3) projects of similar size and complexity that have been in proper operation for a period of one (1) year.
 - 3. Technicians shall be factory trained and certified in specified systems.
 - 4. The Project manager and supervising/lead technician shall have been regularly engaged in the installation and testing of the products specified for not less than five (5) years and maintain manufacturer certification.
 - 5. The security integrator must maintain an operating facility in the local area (50 mile radius) of the Project location to provide service to the Owner for the warranty period.
 - a) At the Owners request for service, the security integrator shall dispatch a service technician to the location to affect the required repairs or adjustments.
 - 6. The contractor shall maintain a spare parts inventory necessary to resolve component failures of the system.
 - a) Refer to individual specification section for a list of specifically required parts provided to the owner and stored on site. These parts will become the property of the owner.
 - 1) At the end of the warranty period the security integrator shall test the owner's spare parts and repair or replace as needed to bring the parts up to proper operation.
- C. Security integrators desiring approval must comply with Division 1 requirements.
- D. Security integrator must be cognizant of site conditions, verify locations of new and existing equipment, and determine exact requirements for connection and interface.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Equipment and components shall be delivered properly protected and undamaged with original containers, packaging, and labels intact.

- B. Store, handle, and protect all related materials and equipment in accordance with Manufacturer's recommendations.
- C. Provide additional protection during handling as necessary to prevent breaking, scraping, marring, or otherwise damaging products or surrounding areas.
- D. Equipment and components shall be protected from the weather, humidity, temperature variations, dirt, dust, or other contaminants.
 - 1. Equipment damaged prior to system acceptance shall be replaced at no cost to the owner.
- E. Protect all equipment and components that are to be installed from theft, vandalism, or use by unauthorized persons.

1.8 PROJECT/SITE CONDITIONS

- A. Security integrator is responsible for conducting a site survey prior to the commencement of work to determine locations of all existing security devices and verify the proposed locations of the new components to be installed.
- B. Security integrator will coordinate all work through the Contractor and schedule work to cause as little interference or interruption of existing services as possible.
- C. Security integrator will arrange and pay for all necessary permits, licenses, and inspections.
 - 1. Security integrator shall prepare all information necessary to obtain a permit for Electronic Locking Mechanisms in compliance with the Owner requirements.
- D. Verify with Division 26 installer all conduits and special back box requirements in a timely manner.

1.9 WARRANTY

- A. See requirements in Division 1 Specifications.
- B. The Security Integrator shall warrant all completed work, including all materials and labor, to be free from defects in design, workmanship, and/or materials for a period of two (2) years from final acceptance date.
 - 1. System acceptance is defined as the completion of all functional performance testing and the resolution of all punch list items.
- C. Warranty Service
 - 1. In the event that defects in the materials and/or workmanship are identified during the warranty period, the contractor shall provide all labor and materials to correct the deficiency.
 - 2. All service work shall be performed by factory certified technicians.
 - 3. All warranty service shall include the replacement of all parts and or components as required to restore normal system operation.

- a) If parts or components need to be repaired, a loaner will be supplied and installed until the part or component can be repaired and reinstalled.
- 4. Immediately following a warranty service request, the Contractor shall provide written documentation to Owner which details the service work completed, cause of trouble, and any outstanding work required to restore a complete and normal system.
- D. Warranty service requests shall be responded to within 4 hours of notification with a qualified service technician on site.
- E. All repairs shall be completed within 48 hours upon site arrival.
 - 1. If the failure exceeds 48 hours, the Owner reserves the right to require the contractor provide on-site manufacturer support at no additional cost to Owner.
- F. Extended warranties on equipment components offered by the manufacturer shall be passed through to the Owner.
 - 1. Warranty provisions shall be fully transferable only at the direction of the Owner, in the event that ownership of the installed security systems is transferred.

1.10 SYSTEMS STARTUP AND TRAINING

- A. After all systems have been tested, accepted and turned on for operation, the Security integrator shall provide "User Training" to Owner personnel.
 - 1. The onsite training shall cover all newly installed electronic security components, devices and systems. The training classes shall total a minimum of twelve (12) hours for up to four (4) people of the Owner's choosing.
 - 2. Two (2) separate training sessions will be conducted, one for system operators and one for system administrators.
 - 3. The contents of the manuals will include:
 - a) Title page with subject, system name, owner's name, and an owner approved confidentiality notice.
 - b) Table of contents.
 - c) Manual that details system and sub-system operation.
 - d) Manuals that details system administration procedures and tasks.
 - e) Manuals that fully detail all programming commands.
 - 4. Provide two (2) Bound hardcopy System Administration training manuals and one electronic copy (PDF format).

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturer's are shown in individual specification sections.

- B. Equipment manufacturers and model numbers indicated in individual specification sections are identified as minimum equipment requirements.
- C. All substitutions shall meet or exceed these minimum requirements and must be approved by the Owner/Architect prior to purchase.
- D. All manufacturers' equipment shall be available through a nationally recognized supplier network.

2.2 EQUIPMENT

- A. Provide security fasteners on all equipment, device plates, etc. within public areas.
 - 1. Allen head with center pin, hardened steel.
 - 2. Provide four (4) fastener tools to Owner.
- B. Equipment installed in exterior applications shall be fitted with fasteners and exposed surfaces of stainless steel or other corrosion resistant material.
- C. All materials and equipment used must be new and unused, prime quality products.
- D. All equipment or components installed on the exterior of a building where the equipment is subject to adverse weather/elements shall be enclosed in weatherproof enclosures.

2.3 WIRE AND CABLE

- A. All wire and cable shall be U.L. approved for its intended application and shall meet or exceed manufacturer's recommendations for the components connected.
- B. All conductors and cable shall meet individual security system manufacturer specifications.
 - 1. Provide shielded conductors and cable as required by the manufacturer or as required to provide for interference-free signals.
 - 2. Color coding shall be accomplished by using solidly colored insulation.
 - a) Grounding conductors, where insulated, shall be colored solid green or identified with green color as required by NEC.
- C. Increase conductor sizes on cables as required to be consistent with circuit current ratings, length of wire runs, and manufacturers' recommendations.
 - 1. Alarm device field wiring shall be in accordance with the equipment manufacturer's specifications.
 - 2. Low voltage power circuits shall use conductors as required by the equipment manufacturer's specifications.
 - 3. Plenum rated cable shall be used as required by code.
- D. UTP Structured Cabling Systems for IP cameras and intercoms (including pulling, terminating, and testing) by Division 27 Telecommunications contractor.
 - 1. Intra-building data communications circuits shall utilize UTP cable as specified in Telecommunications specifications.

- E. Fiber Optic Structured Cabling Systems for IP cameras and intercoms (including pulling, terminating, and testing) by Division 27 Telecommunications contractor.
 - 1. Inter-building and building exterior data communications circuits shall utilize fiber optic cable as specified in Telecommunications specifications.
- F. Coaxial Cable
 - 1. RG-59U Coaxial Cable at 75 Ω with minimum center conductor of 20AWG solid Copper Center Conductor and dual braid shield shall be used for lengths up to 750'-0".
 - 2. RG-6/U Coaxial Cable at 75 Ω with minimum center conductor of 18AWG solid, bare copper and overall bare copper braided shield shall be used for cable runs more than 750'-0".
 - 3. All Coaxial Cable shall never be subjected to a bend less than a 0'-6" radius.
 - 4. Coaxial cable connectors shall consist of three-piece crimp BNC connectors.
 - 5. Coaxial cables with copper coated steel center conductors shall not be acceptable.
 - 6. All Coaxial Cable runs shall have a service loop of 20'-0" to compensate for any final field modification.
 - a) The cable shall be bundled and wrapped neatly in the above ceiling.
- G. Patch Cables
 - 1. Provide pre-manufactured patch cables (cable, connectors, boots, etc.) as required to connect security systems to voice and data communication outlets.
 - 2. Patch cables shall be certified for their specific use to meet or exceed applicable industry specifications.
 - 3. Provide cable lengths as necessary to neatly route cables through cable management systems and other cable organization systems.
 - 4. Provide connectors as required for proper termination.
 - a) Provide boots for connectors where applicable to prevent snagging.
- H. The minimum conductor sizes are for distances as per the manufacturer's specifications from security device to security panel.
 - 1. The contractor shall size the conductor accordingly for longer runs.
 - 2. Minimum Conductor and Cable Types and Sizes.
 - a) Alarm device field wiring shall be 18/20 AWG stranded copper conductors.
 - b) Low voltage power circuits will use 18 AWG stranded copper conductors.
 - 1) Increase conductor gauge consistent with circuit current requirements.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. All personnel working on this project shall be experienced, highly skilled installers with a minimum of three (3) years work on similar type projects.

- B. Changes in location of any work require the written approval of the Architect/Owner prior to initiation.
- C. Changes in indicated sizes shall not be made without the written approval of the Owner/Architect.
- D. Install all equipment in accordance with manufacturer's recommendations.
- E. All systems shall be designed and installed to provide 24 hour a day, 7 days a week operation.
- F. Primary pathways
 - 1. All security cabling run from rack/enclosure head-end equipment to security devices shall follow primary telecom routing pathways.
 - 2. Security wire non-UTP cabling shall be kept separated from the data cabling
 - 3. Security wire non-UTP cabling shall be routed in bridle rings secured to the outside of the telecom tray where applicable.
 - a) Arlington loops or J hooks shall be used where telecom pathways are not present
 - 4. Provide all necessary anchoring devices and supports.
 - a) Use structural supports suitable for equipment, or as indicated.
 - b) Check loading and dimensions of equipment with shop drawings.
 - c) Do not cut or weld to, building structural members.
- G. Secondary pathways
 - 1. Arlington loops or J hooks shall be used for secondary pathways
 - 2. Security wire non-UTP cabling shall be kept separated from the data cabling
 - 3. Provide all necessary anchoring devices and supports.
 - a) Use structural supports suitable for equipment, or as indicated.
 - b) Check loading and dimensions of equipment with shop drawings.
 - c) Do not cut or weld to, building structural members.
- H. Conduits (By Div 26)
 - a) All conduits shall be EMT unless specifically otherwise indicated.
- I. Coordinate extension and connection to commercial, emergency/UPS power circuits provided by Division 26.
 - 1. Make power connections in accordance with Division 26.
- J. Shielded and/or screened cables shall be grounded per the hardware manufacturer's instruction.
 - 1. Single point shield grounds shall be grounded at the field panel feeding the device or sub panel and insulated from ground at the termination end of the cable.
- K. All installation of security systems shall be complete at least thirty calendar days prior to occupancy.

3.2 RACK AND CABINET INSTALLATION

- A. Rack/cabinet installation by Telecommunications contractor.
- B. After racks are installed, install all required components to support rack mounted security equipment.
 - 1. Extend UPS/emergency power to rack mounted equipment as required.
- C. Install all conduits, back boxes, wire and cable management as required for interconnection of security equipment, data gathering panels, power supply enclosures, and distribution panels in the Security room.
- D. Extend commercial/emergency/UPS power circuits as required to security components as required.
- E. Neatly lace and dress all cables in each rack.
 - 1. All wiring and cable shall be properly supported.
 - 2. Utilize suitable cable management devices, no tie-wraps for UTP structured cabling allowed.

3.3 GROUNDING AND BONDING

- A. Equipment Cabinets and Racks
 - 1. To provide electrical continuity between rack elements, paint-piercing grounding washers shall be used where rack sections bolt together, on both sides, under the head of the bolt and between the nut and rack.
 - 2. A horizontal busbar shall be installed at the top and back of each rack for floor fed cabinets/racks.
 - 3. A vertical busbar shall be installed to the rear of the right-hand side rail with thread-forming screws to ensure metal-to-metal contact.
 - 4. Each rack shall be provided with a minimum # 6 AWG insulated ground wire.
 - 5. Do not bond racks serially (loop from rack to rack).
 - 6. Each rack bay against a wall shall be bottom/side ground feeds from the wall.
 - a) Wall ground feeds/raceways to racks shall not be exposed on the walls.
 - b) Exception
 - 1) Some rack bays will require the ground to be fed from the ceiling raceway. Refer to drawings for details.
 - 7. The Contractor shall provide a ground strap for each equipment rack and bond to the nearest Telecommunications Bonding Backbone (TBB) connection, Furnish all required bonding materials and hardware manufactured for this purpose.
 - a) Follow NEC bonding procedures/specifications.
 - 8. All ground raceways within each rack shall be an insulated metallic flex type raceway and shall not interfere with equipment mounting frames or equipment mounting brackets.
 - 9. Each ground feed shall provide proper installation allowances and penetration depths to provide conversion fittings from solid metallic to insulated metallic flex conduit raceways.

10. To bond each rack to ground, burnish clean a one square inch area, drill, tap, apply an adequate amount of antioxidant joint compound mixed for the metal surface types affected, and bolt connectorized conductor to burnished and compounded area.

- a) Ensure proper conductivity.

B. Cable Runway, Cable Raceway and Support System Grounding

1. The Contractor shall provide communications cable tray and cable runway systems with a communications isolated ground from the TBB.
2. All cable tray needs to be electrically continuous per NEC 250.96.
 - a) Metal raceways, wire-mesh cable trays, cable armor, cable sheath, enclosures, frames, fittings, and other metal non-current-carrying parts that are to serve as an alternate grounding path, with or without the use of supplementary equipment grounding conductors, shall be effectively bonded where necessary to ensure electrical continuity and the capacity to conduct safely any fault current likely to be imposed on them.
 - b) Any nonconductive paint, enamel, or similar coating shall be removed at threads, contact points, and contact surfaces, and be connected by means of fittings designed so as to make good bonding points.
3. The Contractor shall provide and install #6 AWG insulated ground wire to bond one end of each cable tray/runway system to the #2/0 TBB.
4. For electrically non-continuous conduits that contain only grounding conductor, the Contractor shall bond the conduit and conductor together at both ends to ground to nearest TGB with grounding bushings or ground clamps.

3.4 Labeling

- A. Provide labeling for all security equipment components using waterproof, self-adhesive computer printed labels.
 1. Coordinate with Owner on numbering/labeling scheme.
- B. Provide labeling for all security cable/wiring using waterproof, self-adhesive computer printed labels.
 1. Coordinate with Owner on numbering/labeling scheme.
 2. Label all cables/wiring on both ends.
 3. At multi conductor cable terminations label each conductor.
 4. At a minimum, each cable/wire label shall designate:
 - a) Origination Point
 - b) Alarm point description
 - c) Opening description (if applicable)
- C. Provide a complete cable/wire identification plan/list with project completion submittal.
- D. Conduit and junction box exteriors may be identified with unique color paint, but shall not be identified with written words that easily identify the function of the conduit and boxes.

3.5 POWER REQUIREMENTS

- A. 120 VAC power dedicated to security will be provided. (By Electrical Contractor)
- B. Back-up power for all equipment and devices shall be for at least 4 hours unless otherwise specified.
 - 1. When generator backup power is available, provide a UPS, rated to maintain the load for a minimum of 15 minutes for all 120VAC equipment.
- C. Rack-mounted Uninterruptible Power Supply (UPS)
 - 1. Provide a UPS to support 120% of the required load to allow for future load expansion and age related deterioration of the battery performance.
 - 2. The UPS interface port shall have an RS-232 communications port and a 10 Base-T Ethernet for LAN management.
 - a) Provide the necessary data connection, hardware and software to remotely monitor the UPS
 - b) Provide user configurable computer operating system shutdown capability
 - 3. The control panel shall have a LED status display for load and battery bar graphs in addition to replace battery and overload indicators.
 - a) Rack-mounted surge suppression shall be vertically mounted and made for this orientation.
- D. All electronic locks shall be 12/24VDC (By Division 08)
- E. Connect to AC power and provide UL listed power supplies and transformers to distribute low voltage power to the system components as required.
 - 1. Provide uninterrupted battery backup power for the duration required above.
- F. All equipment connected to AC circuits shall be protected from power surges.
 - 1. The devices shall be installed and grounded per manufacturer instructions.
 - 2. Equipment protection shall meet requirements of ANSI C62.41.
 - 3. Fuses shall not be used for surge protection.
- G. All non-fiber optic data circuits that serve devices exterior to the buildings will be protected by surge protectors at the device and the termination.
 - 1. The devices shall be installed and grounded per manufacturer instructions.
 - 2. Equipment protection shall meet requirements of ANSI C62.41.
 - 3. Fuses shall not be used for surge protection.

3.6 Testing

- A. Ensure that all provisions and requirements of this specification are met.
 - 1. Verify through inspections, demonstrations and tests.

- B. Perform required tests to demonstrate workmanship, operation, and performance.
 - 1. Conduct tests with Architect/Owner and if required, inspectors of agencies having jurisdiction present.
 - 2. Arrange test dates in advance and give all parties a minimum of 48 hours notice.
- C. Repair or replace equipment or systems found defective or inoperative and re-test until 100% satisfactory results are obtained.
- D. Verification inspections will be made of all equipment components and installations for proper functioning of locking hardware and lock controls, mounting/placement of sensors, and cameras, etc. to guarantee requirements of the Contract Documents are complied with.
 - 1. The Owner's quality control representative shall have the opportunity to witness all inspections, or to conduct installation inspections of his own.

3.7 Functional Performance Test

- A. The Functional Performance Test (FPT) will be conducted at the end of the project and prior to system acceptance by the Owner.
 - 1. The security integrator will provide all necessary staff and communications needed to fully test all functions of the system.
 - 2. The contractor will submit for approval by the Architect and Owner, a comprehensive test plan that will include testing of every function on every door and security device thirty (30) days prior to the scheduled start of the test.
 - 3. The system will not be considered for acceptance prior to the successful completion of the FPT and completion of punch list items.
- B. Pre-Testing
 - 1. Following installation and prior to the FPT, the security integrator shall individually test each component and field device and verify the proper functioning of each component within a particular sub-system.
 - a) The contractor shall also test each sub-system until all detection zones, alarm assessment components, alarm reporting, surveillance and display components; along with access control functions have been verified.
 - b) Prior to the FPT all deficiencies must be corrected.
 - c) After sub-system verification is complete, test the entire system to assure that all elements and subsystems are compatible and function properly as a complete system.
- C. Upon completion of the outlined tasks and tests the security integrator shall schedule the FPT with the Architect and Owner.
 - 1. The security contractor must demonstrate that the security system components and sub-systems operate together as a system and meet specification requirements in the "As-Installed" operating environment.
 - 2. On conclusion of the FPT the test report document will be submitted to the architect for approval.
 - 3. The FPT will be observed by the architect's and Owner's representatives.

4. The FPT may be stopped at any time by these representatives if they believe the failure rate is too high or the system is not performing to contract document requirements.
5. The FPT will only resume when all deficiencies have been corrected.
6. Retesting will be required of all failed tests.

3.8 System Operational Test

- A. Upon completion of the FPT, conduct a formal test to be known as the System Operational Test (SOT), in which all components and sub-systems of the security system are demonstrated to operate error and failure free together as a system.
 1. This test is to be performed over a continuous seventy-two (72) hour period.
 2. A formal test plan and test procedures shall be prepared by the security subcontractor and submitted to the Owner/Architect for approval.
 3. The Security integrator must demonstrate that the system components and sub-systems meet specification requirements in the "As-Installed" operating environment and operate error and failure free for the duration of the test.
 4. If a system failure does occur, the failure must be documented and repaired, after which the seventy-two hour SOT period will restart.
- B. In the event that the Owner, Architect, or Contractor are required to witness a retest at a later date because the Security integrator is not properly prepared to conduct the acceptance tests or because the systems being tested have failed such tests, which shall be solely determined by the Architect or Owner witnessing the tests, the cost of witnessing additional tests shall be borne exclusively by the Security integrator.
 1. Costs are to be based on time and materials at the established rates of the Architect or Owner.

END OF SECTION 280000

SECTION 280500

COMMON WORK RESULTS FOR ELECTRONIC SAFETY AND SECURITY

PART 1 - GENERAL

1.1 SUMMARY

- A. The requirements contained in this Section apply to all Section of this Division.
- B. Section Includes:
 - 1. Common terminology and requirements used throughout this Division.
 - 2. Requirements for Manufacturer Seismic Certification.
 - 3. Requirements for Manufacturer Special Seismic Certification.
 - 4. Electronic safety and security equipment coordination and installation.
 - 5. Sleeves for raceways and cables.
 - 6. Sleeve seals.
 - 7. Grout.
 - 8. Common electronic safety and security installation requirements.

1.2 DEFINITIONS

- A. AHJ: Authorities Having Jurisdiction.
- B. Bound Material: Bound refers to materials permanently bound, as by stitching or glue, or materials securely fastened in their covers by multiple fasteners that penetrate all papers. Ring binders, spiral binders, brads and screw posts are acceptable fasteners. Loose papers clipped together or stapled at one corner are not acceptable.
- C. Business Day: Where this Section and other Sections of this Division use the term "Business Day" it shall mean Monday thru Friday, excluding Holidays recognized by Federal, State and Local government.
- D. EPDM: Ethylene-propylene-diene terpolymer rubber.
- E. FMS: Facility management system.
- F. NBR: Acrylonitrile-butadiene rubber.
- G. Seismic Certification: Seismic certification refers to a manufacturer's certification for architectural, mechanical, and electrical components, supports, and attachments pursuant to ASCE/SEI 7-05 Section 13.2.1.2.
- H. Seismic Qualification: Same as Special Seismic Certification
- I. Special Seismic Certification: Seismic certification of mechanical and electrical equipment based on ASCE/SEI 7-05 Section 13.2.2. Special Seismic Certification is required for active mechanical and electrical equipment that must remain operable following the design earthquake.

1.3 PERFORMANCE REQUIREMENTS

- A. The Drawings diagrammatically show the sizes and locations of various equipment and devices, and the sizes of the major interconnecting wires, without showing exact details as to elevations, offsets, wiring and other installation requirements. Carefully layout the Work at the site to conform to the architectural and structural conditions, to avoid obstructions and to permit proper grading of pipe associated with other portions of the Work. In cooperation with other trades, determine the exact location of equipment and devices and connections thereto by reference to the submittals and rough-in drawings, and by measurements at the site. Make minor relocations necessitated by the conditions at the site, or directed by the Owner, without additional cost to the Owner.

1.4 ACTION SUBMITTALS

- A. Common Requirements for Product Data: Where this Section and other Sections of this Division require Product Data to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures". In addition to the requirements of Division 01 comply with the following:
 - 1. Submit hardcopy of Product Data in the quantity as required under Division 01 Section "Submittal Procedures". Hardcopies of product data submittals shall be bound materials as defined above. Separate products under distinct subheadings that correspond to paragraphs in specification text. Divide sections in binder with labeled divider tabs.
 - 2. In addition to hardcopies required by Division 01, submit one copy of product data in electronic format. All files shall be in Portable Document Format (.pdf).
 - 3. Product Data shall not consist of manufacturer's catalogs or cut sheets that contain no indication of the exact item offered. The submission on individual items shall designate the exact item offered.
- B. Product Data: Submit product data for each of the following.
 - 1. Sleeves.
 - 2. Sleeve seals.
 - 3. Grout.
- C. Common Requirements for Shop Drawings: Where this Section and other Sections of this Division require Shop Drawings to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures". In addition to the requirements of Division 01 comply with the following:
 - 1. Prepare Shop Drawings using computerized drafting software compatible with AutoDesk's AutoCAD®.
 - 2. Submit hardcopy of Shop Drawings in the quantity as required under Division 01 Section "Submittal Procedures". Hardcopies of Shop Drawings shall have each sheet clearly labeled with a unique sheet identification number.
 - 3. In addition to hardcopies required by Division 01, submit one copy of Shop Drawings in electronic format. Files shall include both AutoCAD® compatible source files and files printed to Portable Document Format (.pdf).
 - 4. Shop Drawings shall be of appropriate scale but shall not be smaller than a scale of 1/4-inch equals one foot.

1.5 INFORMATIONAL SUBMITTALS

- A. Common Requirements for Coordination Drawings: Where this Section and other Sections of this Division require Coordination Drawings to be submitted, meet the requirements defined in Division 01 Section "Submittal Procedures" and Division 01 Section "Project

Management and Coordination". In addition to the requirements of Division 01 comply with the following:

1. Prepare Coordination Drawings using computerized drafting software compatible with AutoDesk's AutoCAD®. Drawings files must be composite with multiple distinctive layers for each of the various trades.
 2. Submit hardcopy of Coordination Drawings in the quantity as required under Division 01. Hardcopies of Coordination Drawings shall have each sheet clearly labeled with a unique sheet identification number.
 3. In addition to hardcopies required by Division 01, submit one copy of Shop Drawings in electronic format. Files shall include both AutoCAD® compatible source files and files printed to Portable Document Format (.pdf).
 4. Coordination Drawings shall be of appropriate scale but shall not be smaller than a scale of 1/4-inch equals one foot.
- B. Coordination Drawings: Floor plans showing dimensioned layout for the following:
1. Penetration and Structural Opening: Floor plans showing sleeves and formed structural penetrations. Show sleeve and formed penetration layouts and relationships between structural components and other adjacent building elements, including but not limited to pre-tensioning and post-tensioning members where used.
 2. Reflected Ceiling Plans: ceiling plans, sections, and other necessary details showing dimensioned layouts for equipment located in or on the ceiling plane. Base dimensions on exact dimensioned data obtained from product submittals for products to be included in the Work. Differentiate between field measurements and assumed dimensions. Include the following items coordinated with each other, based on input from installers of the items involved:
 - a. Suspended ceiling components.
 - b. Structural members to which suspension systems for luminaires will be attached.
 - c. Perimeter moldings, decorative ceiling elements, and Architectural features.
 - d. Luminaires.
 - e. HVAC Diffusers, Registers and Grilles.
 - f. Speakers.
 - g. Sprinklers.
 - h. Fire Alarm initiating devices, including but not limited to the following:
 - 1) Smoke detectors.
 - 2) Heat detectors.
 - i. Fire Alarm notification appliances.
 - j. Occupancy sensors.
 - k. Access panels.
 - l. Security cameras and occupancy detectors.
 - m. Wireless Access Points.
 3. Equipment Layouts: Floor plans, elevations, and other necessary details showing dimensioned layouts for spaces containing safety and security equipment. Base equipment dimensions on exact dimensioned data obtained from product submittals for products to be included in the Work. Differentiate between field measurements and assumed dimensions. Include the following items coordinated with each other, based on input from installers of the items involved:
 - a. Equipment layout and relationships between components and adjacent structural and mechanical elements.
 - b. Indication of required working clearances and required area above and around electrical equipment where pipes and ducts are prohibited.
 - c. Location of Conduit entry into equipment.
 - d. Location of luminaires, sprinkler piping and heads, ducts, and diffusers.
 - e. Equipment support locations, type of support, and weight on each support.
 - f. Location of structural supports for structure-supported raceways.

- g. For floor mounted equipment: concrete base dimension, outline of equipment, and required clearances.
 - h. Location of structural supports for seismic bracing.
- C. Common Requirements For Qualification Data:
- 1. Professional Engineer Qualifications: Where this Section and other Sections of this Division require a Professional Engineer to be responsible for Delegated Design requirements; Submit Qualification data for Professional Engineer including, but not limited to, proof of registration in the Project location.
 - 2. Manufacturer Seismic Qualification Certification: Where this Section and other Sections of this Division require products to meet seismic requirements; Submit certification that equipment, devices, accessories, and components will withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems" Include the following:
 - a. Basis of Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 1) [The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."]
 - 2) [The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."]
 - b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
 - 3. Manufacturer Special Seismic Certification: Where this Section and other Sections of this Division require products to meet seismic requirements; Submit certification that equipment, devices, accessories, and components will withstand seismic forces defined in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment" Include the following:
 - a. Basis of Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 1) The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 - b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

1.6 QUALITY ASSURANCE

- A. Common Requirements for Material Quality: Materials, equipment and devices shall be new and of the quality specified, and shall be free from defects at the time of installation. Materials, equipment and devices damaged in shipment or otherwise damaged or found defective prior to acceptance by the Owner shall be replaced with new materials, equipment or devices identical with those damaged, unless approved otherwise by the Owner in writing.
- B. Common Requirements for Code Compliance: In case where differences occur between building codes, state laws, local ordinances, industry standards, and the Contract Documents, the most stringent shall govern. Perform the following:

1. Promptly notify the Architect in writing of any such difference.
 2. Obtain approval from Architect before proceeding with the Work.
 3. Should the Contractor perform any work that knowingly does not comply with local codes, laws and ordinances, industry standards, or other governing regulations; the Work shall be corrected at no cost to the Owner.
- C. Common Requirements for Compliance with AHJ Instructions: In cases where the Authority Having Jurisdiction requires deviations from the requirements of the Contract Documents, perform the following:
1. Promptly notify the Architect in writing of any such difference.
 2. Obtain approval from Architect before proceeding with the Work.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
1. Wherever a UL standard has been established for a particular type of material, equipment or device, each item of such material, equipment or device provided shall meet the requirements of the UL standard.

1.7 PRODUCT SUBSTITUTIONS

- A. Comply with provisions of Division 01 Section "Product ~~[Requirements]~~[Substitution Procedures]".
1. If item of equipment or device offered as Substitution differs in dimension or configuration from that indicated in the Contract Documents, provide, as part of the substitution submittal, a drawing that shows that the equipment or devices proposed for Substitution can be installed in the space available without interfering with other trades or with access requirements for operations and maintenance in the completed project. Drawings shall be of appropriate scale but shall not be smaller than a scale of 1/4-inch equals one foot.
 2. Where substitute equipment or devices requires different arrangement or connections from that indicated in the Contract Documents, install the equipment or devices to operate properly and in accordance with the requirements of the Contract Documents. Make incidental changes necessary in piping, ductwork or wiring which results from the inclusion of the substitute equipment or device without any additional cost to the Owner. Pay all additional costs incurred by other trades in connection with changes required by the inclusion of the substituted equipment or device in the Work.

1.8 PROJECT CONDITIONS

- A. [Interruption of Existing Fire-Alarm [and Security] Service: Do not interrupt fire-alarm [or security] service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary fire alarm service or fire watch according to requirements of local fire marshal:
1. Notify [Architect] [Construction Manager] [and] [Owner] no fewer than [five business] <Insert number> days in advance of proposed interruption of Fire-Alarm [or Security] service.
 2. Do not proceed with interruption of Fire-Alarm [or Security] service without [Architect's] [Construction Manager's] [and] [Owner's] written permission.]

1.9 COORDINATION

- A. In describing various materials, equipment and devices, in general each item may be described singularly, even though there may be a multiplicity of identical items. Also,

where the description is general in nature, the exact sizes, duties, space arrangements, and other requirements must be obtained by reference to other portions of Contract Documents.

- B. Space allocations for materials, equipment and devices have been made on the basis of present and known future requirements and the dimensions of items of equipment or devices of a particular manufacturer. Verify that all materials, equipment and devices proposed for use on this Project are within the constraints of the allocated space.
- C. Coordinate arrangement, mounting, and support of electronic safety and security equipment:
 - 1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
 - 2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
 - 3. To allow right of way for piping and conduit installed at required slope.
 - 4. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
- D. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
- E. Coordinate location of access panels and doors for electronic safety and security items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Division 08 Section "Access Doors and Frames."
- F. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping".

PART 2 - PRODUCTS

2.1 SLEEVES FOR RACEWAYS AND CABLES

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- C. Sleeves for Rectangular Openings: Galvanized sheet steel.
 - 1. Minimum Metal Thickness:
 - a. For sleeve cross-section rectangle perimeter less than 50 inches and no side more than 16 inches, thickness shall be 0.052 inch.
 - b. For sleeve cross-section rectangle perimeter equal to, or more than, 50 inches and 1 or more sides equal to, or more than, 16 inches, thickness shall be 0.138 inch.

2.2 SLEEVE SEALS

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Advance Products & Systems, Inc.

- b. Calpico, Inc.
- c. Metraflex Co.
- d. Pipeline Seal and Insulator, Inc.
- 2. Sealing Elements: EPDM or NBR interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.
- 3. Pressure Plates: Carbon steel. Include two for each sealing element.
- 4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.3 GROUT

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

PART 3 - EXECUTION

3.1 COMMON REQUIREMENTS FOR ELECTRONIC SAFETY AND SECURITY INSTALLATION

- A. Comply with NECA 1 - Standard Practices for Good Workmanship in Electrical Construction, as published by the National Electrical Contractors Association.
- B. Comply with NECA 305 - Standard for Fire Alarm System Job Practices, as published by the National Electrical Contractors Association.
- C. Comply with NFPA 731 - Standard for the Installation of Electronic Premises Security Systems.
- D. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items, unless otherwise indicated.
- E. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.
- F. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electronic safety and security equipment and other nearby installations. Connect in such a manner as to facilitate future disconnecting with minimum interference with other items in the vicinity.
- G. Right of Way: Give to piping systems installed at a required slope.
- H. Access Panels: Provide wall and ceiling access panels for unrestricted access to all concealed fire-alarm [and security] equipment items and devices installed behind furrings, chases or non-removable suspended ceilings. Access Panel materials and installation requirements are specified in Division 08 Section "Access Doors and Frames."
- I. Installation Inspections and Certifications
 - 1. Obtain timely inspections of the installation by Authorities Having Jurisdiction. Remedy any deficiencies to the satisfaction of the inspecting official.
 - 2. Upon final completion of the Work, obtain certificates of acceptance from the Authorities Having Jurisdiction. Deliver the certificates to the Owner.

3.2 SLEEVE INSTALLATION FOR ELECTRONIC SAFETY AND SECURITY PENETRATIONS

- A. Electronic safety and security penetrations occur when raceways, pathways, cables, wireways, or cable trays penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.
- B. Concrete Slabs and Walls: Install sleeves where cable or conduit penetrations occur. Install sleeves during erection of slabs and walls.
 - 1. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
 - 2. Exception: Slab-on-grade construction shall not require sleeves or curbed formed openings when conduits or pipes that penetrate the slab-on-grade are installed and properly supported prior to the pouring of the slab.
- C. Masonry Walls: Install sleeves where cable or conduit penetrations occur. Install sleeves during erection of walls.
 - 1. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- E. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."
- F. Non Fire-Rated Assemblies: Install sleeves where cable penetrations occur. Install sleeves during erection of walls.
 - 1. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- G. Cut sleeves to length for mounting flush with both surfaces of walls.
- H. Extend sleeves installed in floors a minimum of 2 inches above finished floor level.
- I. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable, unless otherwise indicated **or unless seismic criteria requires different clearance**.
- J. Seal space outside of sleeves with grout for penetrations of concrete and masonry
 - 1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.
 - 2. Apply approved joint compound for gypsum board assemblies where masonry or concrete wall is faced on interior side with gypsum board.
- K. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Division 07 Section "Joint Sealants."
- L. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping."

- M. Roof-Penetration Sleeves: Seal penetration of individual conduits and cables with flashing units applied in coordination with roofing work. Provide flashing unit as specified in Division 07 Section "Sheet Metal Flashing and Trim".
- N. Aboveground, Exterior-Wall Penetrations: Seal penetrations using cast-iron pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- O. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch annular clear space between raceway or cable and sleeve for installing mechanical sleeve seals.

3.3 SLEEVE-SEAL INSTALLATION

- A. Install to seal exterior wall penetrations. Use type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.4 SEALANT

- A. Apply sealant to penetrations of all floor and wall assemblies to maintain pressure differentials required by for all pressure sensitive rooms. Sealant materials and installation requirements are specified in Division 07 Section "Joint Sealants" and Division 09 Section "Gypsum Board Assemblies."

3.5 FIELD QUALITY CONTROL

- A. Conduct tests as part of the Work of this Division. Include the services of qualified personnel as well as all equipment, apparatus, and services required.
- B. Conduct tests under conditions free from short circuits and from grounds.
- C. Prior to execution of testing, notify Architect of proposed test procedures and forms.
- D. Testing requirements are listed under individual sections of this Division. Sections requiring testing include, but are not limited to the following:
 - 1. NFPA 72 acceptance tests and startup for fire alarm system, in accordance with Division 28 Section "Fire Detection and Alarm."

3.6 FIRESTOPPING

- A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electronic safety and security installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."
- B. Apply putty pads to boxes located in fire-rated wall assemblies in which a horizontal distance of greater than 24" between boxes is not maintained. Putty pad materials and installation requirements are specified in Division 09 Section "Gypsum Board Assemblies."

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 281000

ELECTRONIC ACCESS CONTROL AND INTRUSION DETECTION

PART 1 - GENERAL

1.1 SUMMARY/OVERVIEW

- A. This section provides specifications for the installation of Electronic Access Control (AC), Intrusion Detection (ID), and related components.
- B. Related Sections
 - 1. Section 087100 Door hardware
 - 2. Section 260000 Electrical (including related sub-sections)
 - 3. Section 270000 Communications (including related sub-sections)
 - 4. Section 280000 Electronic Security
 - 5. Section 282300 Video Surveillance
 - 6. Section 282600 Emergency Intercommunications and Duress
 - 7. Section 283100 Fire Alarm and Smoke Detection

1.2 REFERENCES

- A. See Section 280000 Electronic Security.

1.3 SYSTEM COORDINATION

- A. The Security Integrator shall completely coordinate all relevant work of other trades/systems including, but not limited to:
 - 1. Door hardware
 - 2. Fire Alarm System
 - 3. Elevator Control System
 - 4. Electrical Systems(s)
 - 5. Telecommunications System(s)
- B. Electric Locking Mechanisms
 - 1. The security integrator and door hardware contractor shall coordinate all door hardware, door and door frame design.
 - 2. The security contractor shall verify all specified door hardware is appropriate for the security application and verify the sequence of operations for each access controlled opening.
- C. Elevator Control System
 - 1. The security integrator shall verify the elevator security requirements and coordinate with the elevator installer to ensure the appropriate system interfaces are in place.

D. Fire Alarm and Life Safety

1. The security integrator shall coordinate the access control system design with the life safety consultant to insure compliance with applicable codes and requirements.
2. This includes, but is not limited to:
 - a) Fire alarm interface
 - b) Fail safe/fail secure locking mechanisms
 - c) Delayed egress

1.4 GENERAL SYSTEM DESCRIPTION

A. General Requirements

1. Furnish all labor, materials, tools, equipment, and services for a complete security system as indicated and in accordance with provisions of the contract documents.
2. Although such work is not specifically indicated, furnish and install all supplementary or miscellaneous items, and devices incidental to or necessary for a sound, secure and complete installation.
3. Comply with the provisions of Division 1 for General Requirements.
 - a) In the event of a conflict between the provisions of this Section and Division 1, the more stringent provisions shall apply.
4. All system devices and components included shall be compatible.

B. The project shall be equipped with a **CBORD** Access Control / Services system that is an extension of an existing system maintained by Midwestern State University Card Services at the Clark Student Center.

1. All work required within the project for extension of the AC/ID system to the existing system head end shall be furnished and installed by the project security contractor.

C. The AC/ID system will support the needs of the project in accordance with these specifications.

1. The AC/ID system shall have the capability for future expansion to support the security needs of the completed complex.

D. The AC/ID system shall be interfaced with the Fire Alarm system (by others) as required to comply with all building code requirements.

E. Emergency/UPS power will be utilized to power the AC/ID system's computer workstation (client) at the Security head end equipment location.

F. Emergency/APS power will be utilized to power the AC/ID system's Data Gathering Panels and control components as required throughout the facility.

1.5 ACCESS CONTROL SYSTEM

A. The AC system will consist of card readers, door position switches, and request-to-exit sensors operating in conjunction with associated electric door hardware.

1. Card readers and adjunct devices shall be provided as shown on the drawings.
 - a) Provide card readers, Data Gathering Panels <DGP>, and alarm input and output devices connected to the security management system via Local Area Network (LAN).
 - b) The security integrator shall coordinate network and IP address requirements with Owner to identify the Media Access Control (MAC) address (Layer 2) of each provided device, the location to be installed, and the port configuration needed for communication.
 - c) Furnish all labor, materials, tools, equipment, and services for a complete system as indicated and in accordance with provisions of the contract documents.
 - d) Although such work is not specifically indicated, furnish and install all supplementary or miscellaneous items, and devices incidental to or necessary for a sound, secure and complete installation.
- B. Card readers will work such that upon presentation of a valid AC card, the unique card data shall be transmitted to an associated control panel where the data is compared to an authorized user database and access is approved or rejected accordingly.
 1. A valid authorization will activate operation of the electric lock and shunt the door position switch. The alarm shunt will not affect supervision of the detection circuit.
 2. Coordinate with owner on card format and other pertinent details.
- C. Card readers shall support Magnetic Stripe technology.
- D. Door position switches at card reader controlled location serve to indicate the open/closed status of the associated door and shall establish the basis for reporting a door-propped or unauthorized entry condition.
 1. Provide door position switches as indicated on drawings.
 2. Security contractor is responsible for coordinating the contact configuration (SPDT) (DPDT) and rating for door position switches, and for connection of switches with the AC.
- E. Electrified door hardware for card reader controlled doors will include electrified locksets, electric exit devices, and electric power transfer as shown on the drawings.
 1. All electrified door hardware shall be provided under the work of Division 08 unless otherwise noted.
 2. Security subcontractor shall provide all security cables and, low voltage power supplies for operation of electrified door hardware associated with card reader controlled doors.
- F. Request-to-exit (REX) devices at designated card reader controlled doors shall cause the associated door position switches to be shunted.
 1. The alarm shunt shall not affect the supervision of the alarm detection circuit.
 2. Electrified Lockset shall have an integral REX switch.
 3. Electrified Exit devices shall have an integral REX switch.
 4. Magnetic Locks shall have a Passive InfraRed (PIR) motion sensor REX device.
 - a) Wire the PIR to the Door REX Input. The configuration on this motion shall be non-resettable and activate for only 2 seconds.
 - b) A second set of output contacts for the REX motion sensor shall be wired in series with the power to the lock, disconnecting power to the lock when motion is sensed.
 - c) The PIR REX shall be mounted and the sensor positioned to avoid detection more than three feet from the door and at the door bottom sweep.

- 1) Deter under door spoofing attacks by pointing the sensor away from the door threshold. Position the sensor to detect motion at the door handle or door push plate.
 - d) Connect to REX switch in exit device (by Division 8).
 - 1) Coordinate with Division 8 to ensure proper REX switch configuration
 - 2) Wire the REX switch as described for the above motion sensor to disconnect power to the lock and activate the REX input on the DGP.
 - e) Doors with out exit devices, a UL listed double pole pushbutton exit switch shall be provided as a redundant REX device.
 - 1) It shall be wired as described for the above motion sensor to disconnect power to the lock and activate the REX input on the DGP.
 - 2) Locate within 6'-0" of the door push-plate/handle.
- G. Card Reader Controlled Automatic Sliding 'Storefront' Doors
1. Interface the Card Reader Control Point to the Automatic Sliding 'Storefront' Doors to activate/deactivate locking solenoid and to enable and disable the outside motion detector.
 2. The egress motion detector shall always unlock and open the sliding door and send a signal to the system to shunt the notification of an intrusion alarm.
- H. Card Reader Controlled Elevators
1. The system shall provide for card reader control of Elevator Floor select buttons.
 2. When the card reader is in Card Access mode, a properly programmed card shall enable the floor select buttons allowing the user to select the appropriate floor select button for access.
 3. The contractor shall provide a relay for every floor in every cab.
 - a) Example: 3 floors and 2 cabs = 6 relays.
 4. The system shall allow button selection for 5 seconds per valid card read.
 5. When the card reader is in free access, the floor select buttons shall operate normally.
- I. Remote Door Release Button
1. Designated doors equipped with electric locking devices that can be released from a remote location through the use of a door release push-button.
 - a) The momentary push-button shall be interfaced with the request-to-exit signal of the associated card reader to provide momentary release of lock and momentary door alarm shunt.
- J. Power over Ethernet (PoE) Electrified hardware with Card Reader
1. Electrified door hardware includes Card Reader, Door Position Switch, and Request to Exit (REX) all in device.

- a) The Security contractor shall be responsible for furnishing and installing conductors (harness) from UTP termination above door (By Div 27) to PoE lockset as per manufacturers requirements.
- b) The Security contractor shall ensure all PoE lock components are properly grounded as per manufacturers' requirements.
- c) The Security contractor shall be responsible for furnishing and installing the PoE lockset as per manufacturers' requirements and coordinating with Division 08 on PoE lock requirements including:
 - 1) Coordinate with Division 08 all door, bracket, and frame requirements.
 - 2) Coordinate with Owner all PoE switch gear and IP/TCP routing requirements.
 - 3) Provide any and all licensing requirements and integration programming with existing systems to allow for a fully functional controlled opening.

1.6 INTRUSION DETECTION SYSTEM

- A. A series of field installed alarm initiating devices shall be connected to the ID system so that status changes of the devices are transmitted to the security management system.
 - 1. Provide Data Gathering Panels <DGP>, alarm devices, and keypads to be connected to the security management system via Local Area Network (LAN).
 - 2. The security integrator shall coordinate network and IP address requirements with Owner to identify the Media Access Control (MAC) address (Layer 2) of each provided device, the location to be installed, and the port configuration needed for communication.
- B. Wireless Alarm Receiver
 - 1. Provide wireless alarm receivers to receive wireless device alarms and transmit alarms to AC/ID system monitoring locations.
 - 2. Provide wireless survey to confirm coverage area and quantity of receivers, repeaters, and/or antennas required. Provide adequate quantity of receivers, repeaters, and/or antennas to provide reliable wireless communications with wireless alarm transmitters.
 - 3. Provide full integration of the wireless alarm receiver with the AC/ID system
 - 4. Provide dry contact alarm relay or high level interface to AC/ID alarm panel
 - 5. Provide individual alarm notification for fault, low battery, transmitter missing/out-of-range and all other transmitter/receiver failures.
 - 6. Provide alarm logging.
- C. Motion Detector
 - 1. Provide dual technology (microwave and infrared) to prevent false alarms.
 - a) Specific model depends on application and mounting requirements.
 - b) One motion detector per zone, do not wire in series.
- D. Glass Break Detector
 - 1. Contractor will need to provide compatible glass break tester for device being installed.
 - 2. One glass break detector per zone, do not wire in series.
- E. Tamper Switches

1. Typically closed tamper switches to monitor the secure status of all DGP's, power supplies, terminal cabinets, power distribution units, and other Security System cabinets and enclosures.
2. Fasten tamper switches within the cabinet to provide no access to the switch and fasteners when the cabinet is closed.
3. Provide independent monitoring of tamper conditions for each cabinet.

a) Include the number of tamper switches in the total alarm input figures.

- F. Provide ID keypads conveniently located near areas being protected so as to allow devices to arm and disarm.

1.7 SUBMITTALS

- A. Follow provisions of Section 280000 additional requirements.
- B. Field Test Reports
1. Upon completion and testing of the installed system, test reports shall be submitted in booklet form and electronic media showing all field tests performed on, and adjustments made to each/any component and all field tests performed to prove compliance with the specified performance criteria.
 2. Indicate and interpret test results in written form and verbally to owner/DataCom for compliance with performance requirements at a pre-scheduled meeting.
- C. Battery calculations to show the expected loads and backup duration for power supplies and UPS devices for all active AC/ID equipment.
- D. Security Contractor is responsible to prepare and submit as required to the Authority Having Jurisdiction (AHJ) any and all information to obtain an Electronic Locking Mechanisms permit.

1.8 QUALITY ASSURANCE

- A. Follow provisions of Section 280000.
- B. Spare Parts:
1. Provide spare components for every model and configuration of electronic components and devices used on the project as spare parts inventory.
 - a) The security integrator will turn over the new and unused components and devices to the owner at project closeout.

1.9 DELIVERY, STORAGE AND HANDLING

- A. Follow provisions of Section 280000.

1.10 PROJECT/SITE CONDITIONS

- A. Follow provisions of Section 280000.

1.11 WARRANTY

- A. Follow provisions of Section 280000.
- B. All devices and components shall comply with applicable U.L. standards.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. AC System Platform Software
 - 1. CBORD (Existing)
- B. Access Control Data Gathering Panels <DGP>
 - 1. CBORD System compatible
- C. Card Readers <CR>
 - 1. MR5 CBORD reader
- D. Door position Switches <DP>
 - 1. Concealed Magnetic Door position Switch
 - a) Sentrol 1076D
 - b) Magnasphere MSS-19C/L / MSS-25C/L
 - c) Detection Systems, Inc
 - d) Owner Approved Equivalent
 - 2. Surface Mount Door and Hatch Position Switch
 - a) Sentrol 2500
 - b) Magnasphere MSS-3XXS
 - c) Owner Approved Equivalent
 - 3. Overhead Door position Switch
 - a) Sentrol 2200 (floor)
 - b) Sentrol 2300 (side)
 - c) Owner Approved Equivalent
- E. Electric Locking Mechanism Power Supply
 - 1. Altronix
 - 2. Alarm-Saf
 - 3. LifeSafety Power
 - 4. Owner Approved Equivalent
- F. Uninterruptible Power Supply <UPS>

1. Eaton UPS
 - a) 5S series for workstations
 - b) 9170 for rack mounted equipment
 2. APC Smart-UPS Series
 - a) SMT series for workstations
 - b) Smart-UPS on-Line series for rack mounted equipment
 3. MinuteMan
 - a) Pro series for workstations
 - b) Enterprise Plus series for rack mounted equipment
 4. Owner Approved Equivalent
- G. Wire & Cable
1. Belden
 2. Windy City
 3. General Cable
 4. Owner Approved Equivalent
- H. Keypads
1. CBORD System compatible
 2. Owner Approved Equivalent
- I. Tamper Switches
1. Sentrol 3010
 2. Owner Approved Equivalent

PART 3 - EXECUTION

3.1 GENERAL REQUIREMENTS

- A. Power Supplies
1. Power supply requirements
 - a) A switch and on/off indicator within the power supply cabinet.
 - b) Four hours of sealed gel battery backup to provide continuous operation during power failure.
 - 1) Provide batteries as required to provide specified battery backup time for a fully loaded power supply, regardless of the connected load.
 - c) A battery charger to maintain the battery.
 - d) Low battery and power fail contacts to monitor the status of the input power and the battery.

- 1) Connect each power supply low battery and power fail alarm as a separate alarm input into DGP.
 - e) Key lockable wall mount metal enclosure with tamper switch.
 2. Additional DGP Power Supply Requirements
 - a) The DGP power supply provides power only to DGP's and shall not provide power for locks or any other low voltage device.
 3. Additional Electric Locking Mechanism Power Supply Requirements
 - a) Fail secure electric locking mechanisms shall remain locked during power failure and fire alarm conditions.
 - b) Connect fail safe locking devices in accordance with applicable life safety codes to unlock automatically under the following conditions:
 - 1) Loss of power to the power supply
 - 2) Failure of the power supply
 - 3) Fire alarm activation
 - c) Provide power distribution boards with independently fused output relays and fire alarm control panel interface.
 4. Additional Device Power Supply Requirements
 - a) Provide device power supplies for other security system devices requiring power (e.g. card readers, local alarms, motion sensors, etc.)
 - b) Provide power distribution boards with independently fused outputs.
- B. Video Surveillance System Integration
1. Automatic Video Call-up
 - a) All alarms shall call up all cameras in the area of alarm to the screen of the ACID alarm operator workstation to allow for operator assessment of the alarm.
 2. Pre and Post Alarm Video
 - a) The operator shall be able to view up to 10 seconds of video before the alarm and 30 seconds after the alarm for all cameras associated with the alarm.
 - b) This feature is to be integrated with the operator alarm notification to assist in alarm assessment.
 - c) This feature shall be displayed as an option on the alarm notification screen and will not require operator to make a manual video search.
 3. Recording
 - a) All cameras whose field of view that include images of the area affected by the alarm, shall be recorded when an alarm is detected for use in forensic analysis, including the pre and post alarm video.
 4. Duress and Emergency Intercommunications Integration

- a) Calls from emergency intercoms/phones with cameras shall provide the above video call-up and the pre and post alarm video capabilities.

C. Tamper Resistant Screws

- 1. Provide appropriate screw heads for each application (e.g. countersunk heads for recessed cover plate screws, flat head screws for standard junction box covers, etc.).
- 2. The security integrator shall provide Torx® tamper resistant screws for:
 - a) Junction boxes located above doors
 - b) Junction boxes located below ceiling height and/or within reach of hatch ladders
 - c) Security device cover plates
 - d) Surface mounted door position switches and armored cable

3.2 ENCLOSURE INSTALLATION

- A. Enclosures shall be lockable with a tamper switch and installed in a manner to be accessible with clearance to fully open enclosure door.
- B. All security panels shall be wired through a dedicated power supply with battery backup.
 - 1. Power to the data gathering panels is to be hardwired utilizing EMT or rigid conduit in accordance with the Electrical specifications.
 - 2. A circuit from the Fire Alarm panel must be installed to each lock power distribution panel.
- C. Enclosures shall be installed on designated wall fields in a neat and compact manner to allow for future growth.
- D. Enclosures shall be sized to allow for 20% growth in each panel.
- E. All panels and boards shall be installed in enclosure(s) suitable to their environment and have sufficient size and orientation to include all system components.
- F. Each panel shall be labeled accordance with Owner standards.

The label for each panel shall be posted on the exterior of the panel door.

- a) Each panel shall have a list of devices connected to it located on the inside cover.
- b) A detailed device layout drawing will be located on the inside of the panel door in an appropriate sleeve and keeper.

3.3 FURTHER REQUIREMENTS

- A. Refer to provisions of Section 280000.
- B. Furnish and coordinate installation of all special device back boxes and ACID field devices as shown on the security drawings and as specified in this section.
- C. The exact installation locations of all equipment shall be coordinated and verified with the Contractor prior to installation.

1. Subcontractor shall notify the Contractor if any location appears to be unsuitable.
- D. Provide low voltage power supplies for electric locking devices and ACID devices and components as shown on the security drawings and specified in this Section.
- E. Coordinate with the Telecommunications Subcontractor for data network connections, IP address requirements, and telephone circuits as required.
- F. Prepare all systems for user operation.
 1. The security system must be complete and ready to operate prior to Owner final acceptance of the system.
- G. Coordinate with the Owner for all system programming requirements.
- H. Perform database programming as required to support the card reader, alarm point, surveillance system integration, and control panel configuration as required.

END OF SECTION 281000

SECTION 282300
VIDEO SURVEILLANCE

PART 1 - GENERAL

1.1 SUMMARY/OVERVIEW

- A. This section provides specifications for the installation of an IP based Video Surveillance System (VS) and related components.
- B. Related Sections
 - 1. Section 260000 Electrical (including related sub-sections)
 - 2. Section 270000 Communications (including related sub-sections)
 - 3. Section 280000 Electronic Security
 - 4. Section 281000 Electronic Access Control and Intrusion Detection
 - 5. Section 282600 Duress and Emergency Intercommunications and Duress

1.2 REFERENCES

- A. See Section 280000 Electronic Security.

1.3 SYSTEM DESCRIPTION

- A. The Health Science & Human Services Center will be equipped with a Video Management System (VMS) that is an extension of the existing **Avigilon** VMS maintained by Midwestern State University campus police department.
 - 1. The new Video Management System (VMS) shall facilitate interface with the existing security head end equipment.
 - 2. All work required to make available an extension to existing equipment shall be furnished and installed by the security subcontractor.
 - 3. The Local Area Network (LAN) shall be used to make available the viewing of live and recorded signals from the local PC based NVR to other locations.
- B. The security integrator shall furnish and install the surveillance system, consisting of camera assemblies, NVR, wiring & cabling, and low voltage camera power supplies.
 - 1. All active surveillance equipment and communication devices shall be on emergency/UPS power.
- C. Camera assemblies include camera, lens, housing, and mount. Provide and install wiring and low voltage power from the security wall field/rack to the camera locations.
 - 1. Scope of work shall be complete from point of origin (camera) to point of termination (security rack).

- D. Provide rack mount 1U monitor/keyboard/track ball drawer with 20" LCD monitor for display and programming, keyboard, track ball, and integrated four-port KVM switch.
 - 1. Provide additional KVM ports as required plus two spare ports if Work includes more than two NVRs.
- E. Coordinate all work that must be performed in security head end spaces with the General Contractor, the Electrical Contractor, and the Telecommunications contractor. (if applicable)
- F. Camera images shall support H.264 compression formats.
- G. The NVR shall not be loaded to exceed 50% of the camera and/or storage capacity to allow room for expansion.
- H. Camera lenses for fixed cameras shall be varifocal and sized to provide the owner approved field of view. The lens shall be IR corrected and have megapixel resolution.
- I. Surveillance camera audio functions shall not be installed and/or disabled unless specifically requested by Owner.

1.4 SUBMITTALS

- A. Follow provisions of Section 280000 for additional requirements.
- B. Project Data
 - 1. Provide a description of system operation indicating the purpose and capability of each device/component of the system with a functional diagram indicating all interfaces to other systems.
- C. Video Quality test reports shall be provided for all cameras to confirm an optimum high definition video signal.
- D. Shop drawings shall reflect all requirements associated with Owner provided or existing equipment and materials that will be used as part of this system.
- E. Video Storage calculations to show the system capacity can accommodate the specified video retention.
- F. Battery calculations to show the expected loads and backup duration for camera power supplies and UPS devices for all active surveillance equipment.
- G. System programming, camera titles, descriptions, camera images and database
 - 1. Camera titles and descriptions prior to system programming
 - 2. Programming/database prior to performance testing
 - 3. Provide a cross reference between specified camera numbers and programmed camera numbers
 - 4. Final programming, camera images and system documentation on electronic media to Owner
- H. Product Data

1. Manufacturer's technical data sheets and specifications

1.5 QUALITY ASSURANCE

- A. Follow provisions of Section 280000.
- B. Spare Parts:
 1. Provide spare components for every model and configuration of electronic components and devices used on the project as spare parts inventory.
 - a) The security integrator will turn over the new and unused components and devices to the owner at project closeout.

1.6 DELIVERY, STORAGE AND HANDLING

- A. See Section 280000.

1.7 PROJECT/SITE CONDITIONS

- A. See Section 280000.

1.8 WARRANTY

- A. See Section 280000.

PART 2 - PRODUCTS

2.1 CAMERA SPECIFICATIONS

- A. All cameras shall be a Dome Camera unless otherwise specified
 1. Compatible with the VMS
 2. Vandal resistant with polycarbonate dome
 3. Wide Dynamic Range Feature: All exterior cameras and interior cameras that have exterior lighting or headlights in their field of view shall have a Wide Dynamic Range feature to improve picture quality in situations with strong backlighting.
 4. Multi-stream so that recording and viewing can be at different frame rate and compression.
 5. Day-night Color/B&W camera with cut filter
 6. Exterior cameras:
 - a) Shall be outdoor rated
 - b) Include a heater to permit fog-free viewing in low temperatures
 - c) Fan to prevent overheating in high temperatures (as required)
- B. Interior Fixed Dome Cameras:

1. Shall be IP, PoE IEEE 802.3af
2. Day-night Color/B&W camera with cut filter
3. Smoked lower dome
4. Resolution shall be a minimum of 2MP (1080p) at 30 FPS
5. Vari-focal auto-iris fixed lens sized to provide the owner approved field of view
6. Shall have a minimum sensitivity of 0.05 Lux at:
 - a) 30 IRE
 - b) 75% reflectance
 - c) AGC off
 - d) 1.2 f-stop
 - e) Sense-Up off

C. Interior/Exterior Fixed Wide Angle Lens Cameras:

1. Resolution shall be a minimum of 5.0 MP at 30 FPS
2. Dome Camera is preferred over a Box Camera
3. Wide angle view cameras include views of 180°, 270°, and 360° (as indicated)
4. Auto-iris wide angle lens
 - a) Shall be Rectilinear Lens to minimize barrel distortion
 - b) C/CS mount removable lens
 - c) Wide horizontal field of view minimum of 90°
 - d) Size lens to provide the owner approved field of view
5. Size camera and lens for facial recognition at a minimum of 60 pixels per foot at the target location
6. Shall have a minimum sensitivity of 0.05 Lux at:
 - a) 30 IRE
 - b) 75% reflectance
 - c) AGC off
 - d) 1.2 f-stop
 - e) Sense-Up off

D. Exterior Fixed Dome Cameras:

1. Shall be IP, PoE IEEE 802.3af
2. Clear lower dome, unless otherwise specified
3. Resolution shall be a minimum of 2MP (1080p) at 30 FPS
4. Vari-focal auto-iris fixed lens sized to provide the owner approved field of view.
5. Shall include remote focus and zoom over the network
6. Shall have a minimum sensitivity of 0.05 Lux at:
 - a) 30 IRE
 - b) 75% reflectance
 - c) AGC off
 - d) 1.2 f-stop
 - e) Sense-Up off

E. Interior/Exterior Pan Tilt Zoom (PTZ) Dome Cameras:

1. Shall be IP
2. Clear lower dome
3. Resolution shall be a minimum of 1.3MP (720p) at 30 FPS

4. Auto-iris
5. Zoom - 18 x optical zoom lens and 12 x digital zoom.
6. Operator controlled panning speed shall be at least 300 degrees per second and 360 degree continuous pan rotation.
7. 50 presets minimum
8. Shall have a minimum sensitivity of 0.04 Lux at:
 - a) 30 IRE
 - b) 75% reflectance
 - c) AGC off
 - d) 1.2 f-stop
 - e) Sense-Up off

F. License Plate Cameras:

1. Shall be IP, PoE IEEE 802.3af or 802.3at
2. Include pole and wall mount accessories
3. Include infrared (IR) illuminator accessory
4. Include camera housing with sunshield, heater/blower to meet IP66, IP67 and NEMA 4
5. Include an SD card sized to allow for scheduled and event based storage of images
6. Camera resolution shall be a minimum of 2MP (1080p) at 30 FPS
7. Include IR corrected, varifocal CS-mount lens. Provide lens sized to provide the owner approved field of view. Size camera and lens to view a minimum of 60 pixels per foot at the target location
8. Camera shall have remote focus and zoom over the network
9. Camera shall have a minimum sensitivity of 0.22 lux (color) and 0.02 lux (B/W) at 50 IRE
10. Locate camera perpendicular to the viewing surface

2.2 NETWORK VIDEO RECORDER

A. The Network Video Recorder shall be compatible with the existing Avigilon video management system along with the following minimal requirements:

1. Hot swappable storage drives in a RAID 5 array
2. Dual hot swappable redundant power supplies
3. Support dual stream cameras
4. Include a dual Network Interface Card (NIC) that supports:
 - a) Full duplex
 - b) Fault tolerance
 - c) Link aggregation
 - d) Load Balancing
 - e) Traffic prioritization
 - f) Hot swap
5. Native support of H.264 compression that does not require the use of additional software or equipment
6. Provide a 20 inch 1080P service monitor and keyboard at each NVR equipment rack
7. Provide video storage capacity for 30 days using the following minimum criteria
 - a) All cameras using H.264 compression
 - b) Interior cameras: Use native camera resolution
 - c) Exterior cameras: Use native camera resolution
 - d) Wide angle lens cameras: Use native camera resolution

e) Motion triggered recording

- 1) Assume that motion will be detected 50% of the day
- 2) Motion detection will be configurable by camera and schedule to mitigate nuisance triggers
- 3) Record video at 12 FPS when motion is detected
- 4) Record video at 1 FPS when no motion is detected

B. Coordinate with owner on the number of user licenses required

C. Provide UPS for backup power to the NVR and peripheral equipment

1. Follow provisions of Section 28000 for UPS power requirements
2. Coordinate with Division 26 to provide a dedicated power circuit

2.3 PoE NETWORK SWITCH

A. Provide a fully configured rack mounted PoE Managed 10/100/1000Mbps Layer 3 Switch.

1. Coordinate switch make and model with Owner / Owner network representative prior to purchase to ensure compatibility with existing and non-surveillance related network appliances.
2. Coordinate with Owner / Owner network representative on video surveillance subnet assignment.
3. Switch port count shall allow for 10% growth.

2.4 SURVEILLANCE CAMERA ELEVATOR TRANSCEIVER

A. For each elevator cab equipped with a surveillance camera, provide transceivers at elevator machine room and at elevator cab for transmission of surveillance video signals over traveling cable.

B. Camera technology: IP, PoE IEEE 802.3af

C. Traveling cable: Coaxial, STP, UTP, provided by elevator contractor. Coordinate and confirm traveling cable specification and camera transceiver requirements with elevator contractor.

D. Power supply:

1. Elevator machine room: 120VAC 60Hz input voltage
2. Elevator cab: PoE over elevator traveling cable

2.5 ACCEPTABLE MANUFACTURERS

A. Video Management System (VMS) Platform Software

1. Avigilon (existing)

B. NVR Server: Compatible with VMS Requirements

1. NVR specification compliant hardware

C. Video Monitor:

1. LG
2. Optquest
3. Samsung
4. Viewsonic
5. Owner Approved Equivalent

D. Interior IP Camera Mini Dome

1. American Dynamics
2. Axis Communications
3. Bosch
4. FLIR Systems
5. Panasonic
6. Pelco
7. Samsung
8. Sony
9. Vicon
10. Owner Approved Equivalent

E. Exterior IP Camera Mini Dome

1. American Dynamics
2. Axis Communications
3. Bosch
4. FLIR Systems
5. Panasonic
6. Pelco
7. Samsung
8. Sony
9. Vicon
10. Owner Approved Equivalent

F. Exterior Color Camera PTZ Dome

1. American Dynamics
2. Axis Communications
3. Bosch
4. FLIR Systems
5. Pelco
6. Samsung
7. Sony
8. Vicon
9. Owner Approved Equivalent

G. Exterior Parapet/Roof Deck Camera Mount

1. Axis Communications
2. American Dynamics
3. Pelco
4. Owner Approved Equivalent

H. Wide Angle Megapixel Camera Lens

1. Computar
 2. Theia
 3. Owner Approved Equivalent
- I. Camera Power Supply
1. Altronix
 2. Alarm-Saf
 3. LifeSafety Power
 4. Owner Approved Equivalent
- J. Equipment Racks and Racks Components: (By Division 27)
1. Chatsworth Products (CPI)
 2. Ortronics
 3. Newton Instruments
 4. Owner Approved Equivalent
- K. Lockable Equipment Cabinet and Components: (By Division 27)
1. Chatsworth Products (CPI)
 2. Ortronics
 3. Newton Instruments
 4. Owner Approved Equivalent
- L. PoE Network Switch –Coordinate with Owner
1. Brocade
 2. Cisco
 3. Juniper
 4. Arista
 5. Owner Approved Equivalent
- M. Surveillance Camera Elevator Transceiver
1. Network Video Technologies
 2. Nitek International
 3. Axis Communications
 4. Owner Approved Equivalent
- N. Video Wire & Cable
1. Windy City
 2. General Cable
 3. Belden
 4. CommScope
 5. Owner Approved Equivalent
- O. Uninterruptible Power Supply (UPS)
1. Eaton UPS
 - a) 5S series for workstations
 - b) 9170 for rack mounted equipment

2. APC Smart-UPS Series
 - a) SMT series for workstations
 - b) Smart-UPS on-Line series for rack mounted equipment
3. MinuteMan
 - a) Pro series for workstations
 - b) Enterprise Plus series for rack mounted equipment
4. Owner Approved Equivalent

PART 3 - EXECUTION

3.1 CONFIGURATION

A. Video Cameras

1. Provide day/night cameras in exterior locations
2. Lenses shall be field tested with Owner present to verify clear, crisp images and desired field of view
 - a) Substitute camera lenses as necessary to obtain required field of view at no additional cost
 - b) Provide spot filters for exterior lenses as required to reduce picture washout caused by sunlight

B. IP PoE Cameras

1. The security integrator shall coordinate network and IP address requirements with Owner to identify the Media Access Control (MAC) address (Layer 2) of each provided camera, the location to be installed, and the port configuration needed for communication.
2. Make all necessary adjustments to camera lenses to obtain clear, crisp images and desired field of view to the Owners satisfaction.
 - a) Substitute camera lenses as necessary to obtain required field of view at no additional cost.
 - 1) Adjust all cameras to produce high-definition images with no blooming, streaking or noticeable lag.
 - 2) Provide and install in-line PoE injectors as required when non PoE network switches are used or when manufacturer specified power is not available to the camera.
 - 3) All camera power shall comply with the specified power requirements.

3.2 POWER REQUIREMENTS

A. Provide uninterruptible power supplies for all active surveillance equipment

1. Rack mounted components, including all active network communication hardware, shall be on an Uninterruptible Power Supply <UPS> system.

2. Refer to Section 280000 for UPS and power requirements
3. Camera power supplies shall be on an Auxiliary Power Supply <APS>, system as required, with a battery backup.

- a) The Auxiliary power supply shall be furnished with a power distribution panel with each camera individually fused or protected with an over-current protector.

B. Power supplies shall provide:

1. 120 VAC input and output voltage as required
 2. UL Listed
 3. Power fail contacts to monitor the status of the input power
- a) Connect each power supply power fail alarm as a separate alarm input into AC/ID system
4. Key lockable wall mount metal enclosure with tamper switch
 5. Independently fused outputs

3.3 INSTALLATION

A. Refer to provisions of Section 280000

B. All surveillance system devices and components shall be compatible.

C. Camera Housings and Mounts

1. Cameras shall include housings and mounts as indicated in the Drawings.
- a) Provide the smallest available housing for each camera application.
- 1) Integrated miniature dome cameras are preferred
2. Wiring to cameras shall pass from the back-box through the mount and into the housing. Exposed wiring or conduit shall not be acceptable.
 3. Provide sun shields for camera housings in outdoor locations exposed directly to sunlight.
 4. Provide surge protection for power and copper video cables for exterior cameras at the camera and at the point of termination (security rack).
 5. Field verify the exact camera location, position, and mounting prior to installation.
 6. Roof mounted cameras shall use roof deck brackets.

D. Video Management Control System

1. System platform software shall be 'open architecture' allowing for compatibility and integration with other building automated systems.
2. The system shall allow for secure remote viewing of live and recorded video as required.

E. Provide labeling suitable to Owner for all major equipment components. Coordinate with Owner on numbering scheme to match existing. Major equipment components:

1. Video monitors, IP camera Patch Panels, PoE Switches (or mid-span units), Network Video Recorders (NVR), and fiber mux units (if required).

- F. Coordinate with Telecommunication subcontractor for network and patch panel provisions for security connections in the IT room. (If applicable)
- G. Coordinate with Owner for all system programming and database requirements.
 - 1. Provide all programming, setup, camera and device titling and data entry
 - 2. Camera and device title and descriptions shall be consistent for all components
- H. Install all Point-to-Point wiring with appropriate terminal connections for every wire and component termination so that all connections are mechanically and electrically secure.
- I. Install field wiring in continuous lengths, without splices.
- J. Verify upon job completion that all wiring and terminations are clearly labeled to identify the wire and terminal.
- K. Testing of the surveillance system includes checkout of installed cameras back to the Security head end equipment to confirm proper operation of camera assemblies. Security integrator shall provide all necessary test equipment to fully demonstrate proper performance of field devices. Copies of test results shall be included in the project completion submittals given to the Owner.

END OF SECTION 282300

SECTION 282600

EMERGENCY INTERCOMMUNICATIONS AND DURESS

PART 1 - GENERAL

1.1 SUMMARY/OVERVIEW

- A. This section provides specifications for the installation of Emergency Intercommunications and Duress (EID) system and related components.
 - 1. Emergency Phones
 - 2. Intercoms
 - 3. Duress Buttons
- B. Related Sections
 - 1. Section 087100 Door Hardware
 - 2. Section 260000 Electrical (including related sub-sections)
 - 3. Section 270000 Communications (including related sub-sections)
 - 4. Section 280000 Electronic Security
 - 5. Section 281000 Electronic Access Control and Intrusion Detection
 - 6. Section 282300 Video Surveillance
 - 7. Section 283100 Fire Alarm and Smoke Detection

1.2 REFERENCES

- A. See Section 280000 Electronic Security.

1.3 SYSTEM COORDINATION

- A. The Security Integrator shall completely coordinate all relevant work of other trades/systems including, but not limited to:
- B. Fire Alarm System
 - 1. Electrical Systems(s)
 - 2. Telecommunications System(s)
- C. Fire Alarm and Life Safety
 - 1. The security integrator shall coordinate the EID system with the life safety consultant to insure compliance with applicable codes and requirements.

1.4 GENERAL SYSTEM DESCRIPTION

- A. General Requirements

1. Furnish all labor, materials, tools, equipment, and services for a complete system as indicated and in accordance with provisions of the contract documents.
 2. Install per manufacturer's recommendations.
 3. Although such work is not specifically indicated, furnish and install all supplementary or miscellaneous items, and devices incidental to or necessary for a sound, secure and complete installation.
 4. Comply with the provisions of Division 1 for General Requirements.
 - a) In the event of a conflict between the provisions of this Section and Division 1, the more stringent provisions shall apply.
 5. All system devices and components included shall be compatible.
- B. The project shall be equipped with a system that is an extension of an existing system maintained by Midwestern State University campus police.
1. All work required within the project for extension of the EID system to the existing system head end shall be furnished and installed by the project security contractor.
- C. The EID system will support the needs of the project in accordance with these specifications.
1. The EID system shall have the capability for future expansion to support the security needs of the completed complex.
- D. EID systems utilized for life safety shall comply with all applicable codes.
- E. Emergency/UPS power will be utilized to power the EID system's components at the Security head end equipment location.

1.5 EMERGENCY PHONE

- A. Provide outdoor rated, ADA-compliant hands-free Emergency Phones and compatible with the existing system.
1. Vandal resistant stainless steel faceplate.
 2. Provide buttons for emergency and non emergency calls
 3. Support SIP protocol
 4. Provide call status LEDs
- B. Emergency Phone Tower
1. Provide Blue LED/CFL light to attract attention.
 - a) The Lighting powered from an power source.
 2. Coordinate with owner on tower color and graphics
 - a) Coordinate with Section 282300
 - b) Coordinate with owner on the orientation of camera mounting arm to mitigate the camera blind spot caused by the arm
- C. Emergency Phone Wall Mounted Enclosure

1. Provide Blue LED/CFL light to attract attention.
 - a) The Lighting powered from an emergency power source.
2. Coordinate with owner on housing color and graphics

1.6 IP Based Video Intercom System

- A. Computer Based Master Station
 1. Provide PTZ control of substation camera
 2. Hands-free VOX communication
 3. Door release control
 4. Provide software and install on owner provided PCs
 5. Provide microphone and speakers for owner provided PCs
- B. Hardware Based Master Station
 1. Provide PTZ control of sub station camera
 2. Handset or Hands-free VOX/ PTT communication
 3. Door release control
 4. Wall or Desk Mounting
 5. PoE (802.3af) powered
- C. Video Sub Station
 1. Digital PTZ color camera
 2. Dry Contact for Door Release
 3. LED illumination for nighttime viewing
 4. IP addressable
 5. PoE (802.3af) powered
- D. Control Unit (as required)
 1. Rack mounted

1.7 AREA OF REFUGE EMERGENCY PHONE

- A. Provide at designated locations an ADA compliant hands free Emergency Phone
 1. Shall be compatible with the Area of Refuge base station.
 2. Shall be phone line powered or have battery backup power
 3. Phone operation indicator for the hearing impaired
 4. Operate over the owner's voice phone network
 - a) Coordinate with owner for routing and patching in IDF
 5. Auto-dialer shall support calling a second number if the first number does not answer
 6. Provide at each Emergency Phone an Area of Refuge Instruction Sign
 7. Provide recordable location identifier to identify the calling phone's location
 8. Communication pathway shall have at least a Level 2 Pathway Survivability.

- a) As per NFPA 72, Level 2 Pathway Survivability shall consist of one or more of the following:
 - 1) 2-hour fire-rated circuit integrity (CI) cable
 - 2) 2-hour fire-rated cable system [electrical circuit protective system(s)]
 - 3) 2-hour fire-rated enclosure or protected area
 - 4) 2-hour performance alternatives approved by the authority having jurisdiction
- b) Install Emergency Phone and communication pathway(s) per all current applicable life safety, fire alarm, building, and electrical codes.

1.8 DURESS PANIC BUTTONS

- A. The Duress panic button is a switch that allows an individual to covertly send a duress signal, with no visible or audible indication when activated.
 - 1. Wired Duress Button
 - a) Switch shall have a shroud over the activating lever that locks in activated position until reset with a key or have two buttons that must be press simultaneously to send alarm

1.9 SUBMITTALS

- A. Follow provisions of Section 280000 additional requirements.

1.10 QUALITY ASSURANCE

- A. Follow provisions of Section 280000.
- B. Spare Parts:
 - 1. Providespare components for every model and configuration of electronic components and devices used on the project as spare parts inventory.
 - a) The security integrator will turn over the new and unused components and devices to the owner at project closeout.

1.11 DELIVERY, STORAGE AND HANDLING

- A. Follow provisions of Section 280000.

1.12 PROJECT/SITE CONDITIONS

- A. Follow provisions of Section 280000.

1.13 WARRANTY

- A. Follow provisions of Section 280000.
- B. All devices and components shall comply with applicable U.L. standards.

PART 2 - PRODUCTS

2.1 ACCEPTABLE SYSTEM MANUFACTURERS

- A. Emergency Duress Buttons
 - 1. United Security
 - 2. Ademco 269
 - 3. Viking PB-1
 - 4. Owner Approved Equivalent
- B. Wireless Duress Pendant
 - 1. AC/ID System compatible (reference specification 281000)
 - 2. Owner Approved Equivalent
- C. Security Intercom System
 - 1. Aiphone
 - 2. Commend
 - 3. Stentofon
 - 4. Talk-A-Phone
 - 5. Owner Approved Equivalent
- D. Video Intercom System
 - 1. Aiphone
 - 2. Commend
 - 3. Siedle
 - 4. Stentofon
 - 5. Owner Approved Equivalent
- E. Emergency Phone
 - 1. Aiphone
 - 2. Code Blue
 - 3. Commend
 - 4. Stentofon
 - 5. Talk-A-Phone
 - 6. Owner Approved Equivalent
- F. Emergency Phone Wall Mount Enclosure
 - 1. Code Blue
 - 2. Talk-A-Phone
 - 3. Owner Approved Equivalent
- G. Emergency Phone Tower

1. Code Blue
2. Talk-A-Phone
3. Owner Approved Equivalent

H. Area of Rescue Emergency Phone

1. Talk-A-Phone
2. Rath Microtech
3. Owner Approved Equivalent

I. Wire & Cable

1. Windy City
2. General Cable
3. Belden
4. Owner Approved Equivalent

PART 3 - EXECUTION

3.1 GENERAL REQUIREMENTS

A. Power Supplies

1. Provide device power supplies for all security system devices requiring power
2. Provide power distribution boards with independently fused outputs.
3. Power supply requirements:
 - a) Sealed gel battery backup to provide continuous operation during power failure.
 - 1) Provide batteries as required to provide specified battery backup time for a fully loaded power supply, regardless of the connected load.
 - b) A battery charger to maintain the battery.
 - c) Low battery and power fail contacts to monitor the status of the input power and the battery.
 - d) Key lockable wall mount metal enclosure with tamper switch.

B. Video Surveillance System Integration

1. Automatic Video Call-up
 - a) Intercom / Phones shall position PTZ cameras and call-up all cameras in the area, to the alarm assessment workstation
 - b) Record video of alarm calls

C. Tamper Resistant Screws

1. Provide appropriate screw heads for each application (e.g. countersunk heads for recessed cover plate screws, flat head screws for standard junction box covers, etc.).
2. The security integrator shall provide Torx® tamper resistant screws for:
 - a) Security device cover plates

- b) Duress buttons

3.2 FURTHER REQUIREMENTS

- A. Refer to provisions of Section 280000.
- B. Furnish and coordinate installation of all special device back boxes and field devices as shown on the security drawings and as specified in this section.
- C. The exact installation locations of all equipment shall be coordinated and verified with the Contractor prior to installation.
 - 1. Subcontractor shall notify the Contractor if any location appears to be unsuitable.
- D. Labeling
 - 1. Provide labeling suitable to Owner for all major equipment components.
 - a) Coordinate with Owner on numbering scheme to match existing.
 - 2. Provide labeling for all security equipment racks and enclosures.
 - 3. Provide labeling for all security device wiring.
 - a) Label all cables and wiring using waterproof, self-adhesive computer printed labels. Label both ends of each cable.
 - b) At multi conductor cable terminations label each conductor.
- E. Coordinate with the Telecommunications Subcontractor for data network connections and telephone circuits as required.
- F. Prepare all systems for user operation.
 - 1. The security system must be complete and ready to operate prior to Owner final acceptance of the system.
- G. Coordinate with the Owner for all system programming requirements.
- H. Perform database programming as required to support the security sub-system integration, and control panel configuration as required.

END OF SECTION 282600

SECTION 283100

FIRE DETECTION AND ALARM

PART 1 - GENERAL

1.1 SUMMARY

A. This Section Includes:

1. Delegated Design requirements for system design.
2. Fire-alarm control unit (panel).
3. Remote annunciator.
4. System printer.
5. Manual fire-alarm boxes.
6. System smoke detectors.
7. Nonsystem smoke detectors.
8. Heat detectors.
9. Notification appliances.
10. Device Guards.
11. Magnetic door holders.
12. Addressable interface devices.
13. Digital alarm communicator transmitter.
14. Radio alarm transmitter.
15. Firefighters' Smoke Control Station (panel).

B. FIRE ALARM SYSTEM BASIC DESCRIPTION

1. Fire alarm systems is a delegated design system.
2. The associated project drawings for the fire alarm system are intended to show general guidelines for the placement of fire alarm devices as they relate to other (non-fire alarm) systems and for permitting purposes. The final fire alarm plans to be submitted for AHJ approval shall be produced and sealed by a NICET level III certified designer; refer to the specifications (project manual) for further requirements. The designer shall provide all devices shown on these drawings and any additional devices or components required for a complete system. If other devices are anticipated to be required for proper system functionality, compliance with national and local codes or approval of the AHJ. The contractor shall qualify their bid and shall provide an add-alternate price making note of the specific anticipated additional requirements.
3. The fire alarm system shall be provided to meet the requirements of the authority having jurisdiction and latest edition of NFPA 72. The system shall be complete with detectors, manual fire alarm boxes (pull stations), audible and visual signal devices, a voice communication system, and link with the atrium smoke exhaust system. The system shall be a network based analog-addressable fire alarm system including class a wiring and voice evacuation notification. The main control panel shall be located at the AHJ approved location in the building along with a remote annunciator located at each main entry/exit door and one in the Data Center room. The system shall have a graphic interface. Fire alarm devices shall be provided as required by code and the AHJ. Manual fire alarm boxes shall be provided as required by code and the AHJ. Manual fire alarm boxes shall be located at all exits and at all doors leaving a floor. Smoke detectors shall be located within five feet of all magnetically held doors and in any space open to the corridor.
 - a. System smoke and heat detectors for pre-action fire protection systems shall be provided in the data center room.

- b. Duct-mounted smoke detectors shall be installed in the supply and return of all air handling units and at each smoke and fire/smoke damper. Additional duct detectors and smoke detectors shall be located as required for smoke control systems.
 - c. Audible/visual (A/V) alarms shall be located throughout the facility in accordance with latest requirements of NFPA 72 and ADA. Wall-mounted speaker-strobes shall be the primary notification appliance used throughout the facility.
 - d. Visual devices shall not be installed in teaching patient rooms or patient treatment areas (ex. Operating rooms, imaging treatment rooms, etc.) Per exceptions allowed by ADA and as allowed by AHJ.
 - e. Fire suppression system (sprinkler) tamper switches, flow switches, and pressure indicating alarms (on dry and pre-action systems) shall be connected to the fire alarm system.
 - f. Smoke and heat detectors for elevator recall shall be connected to the fire alarm system.
4. Fire alarm zoning shall be per code and AHJ requirements. Multiple electrical circuits and relays shall be provided to achieve proper zoning. A smoke compartment shall be the notification zone.
5. Upon activation of any manual or automatic alarm:
- a. All A/V alarms shall be activated throughout the facility. System shall be capable, thru programming, of floor-by-floor and compartment-by-compartment notification as acceptable by the AHJ.
 - b. All magnetically held doors shall be released.
 - c. All air handlers and smoke dampers not used for a specialized smoke control scheme shall close on a per zone basis.
 - d. Automatic notification of the fire department shall occur.
6. Fire alarm system interface with the smoke control system shall be in accordance with the prescriptive requirements of the fire protection engineer. An emergency responder DAS system shall be provided throughout the building for fire fighter communications.

1.2 DEFINITIONS

- A. Definitions in NFPA 72 apply to fire alarm terms used in this Section
- B. CPVC: Chlorinated Poly Vinyl Chloride
- C. EPO: Emergency Power Off System.
- D. FAAP: Fire Alarm Annunciator Panel (Remote Annunciator).
- E. FACP: Fire Alarm Control Unit (Panel).
- F. FSCS: Firefighters' Smoke Control Station (panel).
- G. IDC: Initiating Device Circuit
- H. LED: Light-emitting diode
- I. NAC: Notification appliance circuit.
- J. NICET: National Institute for Certification in Engineering Technologies.
- K. NRTL: Nationally Recognized Testing Laboratory

L. SLC: Signaling Line Circuit

1.3 SYSTEM DESCRIPTION

- A. Noncoded, UL-certified] addressable system, with automatic sensitivity control of certain smoke detectors and multiplexed signal transmission, dedicated to fire-alarm service only. The system shall detect fire conditions, alarm the building occupants of a fire condition, control the necessary systems to suppress fire and smoke and shall summon the local Fire Department automatically without the need for human intervention/human action.
- B. The fire alarm system shall be a microprocessor based network system with graphical workstation that includes a pictorial image of the protected premises.

1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: These specifications and the accompanying Drawings define the intent of the fire alarm system to be provided. In addition to the system as specified herein and shown on the Drawings, provide all planning, design, calculations, equipment, devices, raceways, boxes, cabling, system programming and any other component or service required for a complete, fully operational and code compliant system.
 - 1. Premises protection includes Construction Type and Occupancy
- B. Survivability of System: Fire-alarm control system and all associated circuits shall withstand attack by fire in accordance with "Protected Premises Fire Alarm Systems" Chapter of NFPA 72. Provide a two-hour fire rating for all notification appliance circuits, communications circuits, and NAC Power Extender trigger circuits, and other circuits necessary to ensure the continued operation of the emergency communications system which are outside the evacuation signaling zone.
 - 1. The two-hour rating shall consist of any of the following:
 - a. Two-hour rated cabling in conduit system to the evacuation signaling zone. Cabling shall be constructed in accordance with UL Fire Resistance Directory (FHJR) and conduit system shall be constructed in accordance with UL Fire Resistance Directory (FHIT).
 - b. Cabling in conduit which is encased in a minimum 50 mm (2 in.) of concrete to the evacuation signaling zone.
 - c. Cabling in conduit which is routed within fire resistant enclosures or protected areas to the evacuation signaling zone. Fire resistant enclosures shall be constructed in accordance with UL Fire Resistance Directory (FHIT).
 - d. Cabling in conduit which is enclosed in fire resistant materials to the evacuation signaling zone. System must be part of an electrical circuit protective material (FHIY) listed in UL Fire Resistance Directory.
 - 2. For audible notification circuits, the two-hour rating must extend from the amplifiers/voice command center to each evacuation signaling zone. Audible notification circuits within the evacuation signaling zone they serve may be non-rated cable.
 - 3. For visible notification circuits, the two-hour rating must extend from the FACP triggering the NAC Power Extender to the evacuation signaling zone where the NAC Power Extender is located. NAC trigger circuits and NAC output circuits within the evacuation signaling zone they serve may be non-rated cable.
- C. System Zoning: Fire-alarm control system and all associated circuits shall be arranged to comply with zoning requirements of NFPA 72 and the following:
 - 1. In association with the AHJ, determine the evacuation signaling zones by the entire building, by each smoke compartment, or by each floor.

2. Display each intelligent addressable device at the main fire alarm control panel in accordance with the following:
 - a. Use a unique alphanumeric label identifying each device location.
 - b. Include a descriptive reference with alphanumeric label that corresponds to devices' specific location and zone.
 - c. Comply with the Owner's labeling methodology requirements. Present proposed labeling methodology to Owner and Engineer prior to implementation.
- D. Voltage Drop Calculations: Design system for a maximum of 10 percent voltage drop for each notification appliance circuit.
- E. Seismic Performance: Fire-alarm control unit and raceways shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

1.5 ACTION SUBMITTALS

- A. Specification Compliance Certification: Submit a Specification Compliance Certification in accordance with Division 26 Section "Common Work Results for Electrical".
- B. Submit product data and shop drawings in accordance with Division 01 and Division 28 Section "Common Work Results for Electronic Safety and Security" for products specified under PART 2 - PRODUCTS.
- C. General Submittal Requirements:
 1. Submittals shall be approved by Architect prior to submitting them to authorities having jurisdiction.
 2. Comply with recommendations in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72.
- D. Simultaneous Action Submittals: Product Data, Delegated-Design Submittal, and Delegated-Design Shop Drawings submittal shall be submitted simultaneously.
- E. Product Data: For each type of product indicated, include the following:
 1. Supervisory power usage.
 2. Alarm power usage.
 3. Physical dimensions of equipment.
 4. Finish.
 5. Mounting requirements.
 6. Performance parameters and installation details for each type of detector.
 7. Performance parameters for duct-mounted detectors verifying that each detector is listed for complete range of air velocity, temperature, and humidity possible when air-handling system is operating.
- F. Delegated-Design Submittal: For fire-alarm system. Signed and sealed by the qualified professional responsible for their preparation. Include the following:
 1. Circuit loading and voltage drop calculations for each circuit. Include voltage drop calculations for notification appliance circuits.
 2. Battery-size calculations in a spreadsheet type format with a complete listing of all devices, quantities, individual component supervisory current and alarm current. Indicate the total supervisory and alarm currents, hours of backup, minutes in alarm and total battery amp-hour rating.

3. Calculations for selecting the spacing and sensitivity of detection devices.
 - a. Include calculations for area and duct-mounted detectors.
 4. Mathematical justification for audible notification device placement to meet code required sound dB levels.
 5. Complete sequence of operation of the fire alarm system.
 6. System Input-Output Matrix.
- G. Delegated-Design Shop Drawings: For fire-alarm system. Signed and sealed by the qualified professional responsible for their preparation. Include the following:
1. Plans, elevations, sections, details, and attachments to other work. Include floor plans to indicate final outlet locations showing address of each addressable device.
 - a. Prepare shop drawings using symbols and notes as recommended in NFPA 170 "Standard for Fire Safety and Emergency Symbols."
 - b. Include location of each smoke and heat detector, ratings of each, and installation details as needed to comply with listing conditions of the detector.
 - c. Include location of each audible notification device, ratings of each, and installation details as needed to comply with NFPA 72 sound dB level requirement. Annotate to correspond with mathematical calculations.
 - d. Include location of each visible notification device, ratings of each, and installation details as needed to comply with NFPA 72. Annotate coverage patterns to show placement meets coverage requirements of NFPA 72.
 - e. Show size and route of cable and conduits.
 2. Dimensional drawings and elevations of all system enclosures including but not limited to the following:
 - a. Fire Alarm Control Unit (panel),
 - b. Remote Annunciators.
 - c. Firefighters' Smoke Control Station. Include elevation view of panel face drawn at full scale, including custom graphics.
 - d. Audio control panel
 - e. Voice/alarm signaling-service equipment rack or console layout, include grounding schematic and single-line connection diagram.
 3. One-line riser drawing for the entire system network indicating panel-to-panel conductors including type, size, quantity and specific function.
 4. System address and labeling methodology
 5. System wiring diagrams indicating interfaces to equipment supplied by others.
 6. Device "typical" wiring diagrams. These drawings shall indicate specific termination details for all peripheral equipment and/or interface devices.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Submit Coordination Drawings in accordance with Division 26 Section "Common Work Results for Electronic Safety and Security". Include the following:
1. Enlarged Equipment Room layouts.
 2. Reflected Ceiling Plans.
 3. Heating, ventilating, and air-conditioning duct drawings, drawn to scale and coordinating installation of duct smoke detectors and access to them. Show critical dimensions that relate to placement and support of sampling tubes, detector housing, and remote status and alarm indicators.
- B. Qualification Data: For qualified Designer and Installer.
1. Copy of State license showing the fire alarm contractor to be certified in the layout and installation of fire alarm systems.
 2. Copy of NICET certification showing the fire alarm contractor to be certified in the layout, equipment selection, installation, acceptance testing, trouble-shooting, servicing and sales of fire alarm systems.

- C. Seismic Qualification Certificates: For fire-alarm control unit, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- D. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fire-alarm systems and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 - 1. Comply with the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
 - 2. Provide "Record of Completion Documents" according to NFPA 72 article "Permanent Records" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter.
 - 3. Record copy of site-specific software.
 - 4. Provide "Maintenance, Inspection and Testing Records" according to NFPA 72 article of the same name and include the following:
 - a. Frequency of testing of installed components.
 - b. Frequency of inspection of installed components.
 - c. Requirements and recommendations related to results of maintenance.
 - d. Manufacturer's user training manuals.
 - 5. Manufacturer's required maintenance related to system warranty requirements.
 - 6. Abbreviated operating instructions for mounting at fire-alarm control unit.
 - 7. Copy of NFPA 25 "Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems".
- B. Software and Firmware Operational Documentation:
 - 1. Software operating and upgrade manuals.
 - 2. Program Software Backup: On magnetic media or compact disk, complete with data files.
 - 3. Device address list.

1.8 QUALITY ASSURANCE

- A. Designer Qualifications: Shop Drawings shall be prepared and signed by personnel with the following qualifications:
 - 1. Trained and certified by manufacturer.
 - 2. Certified by NICET as minimum Level III or a qualified professional engineer.
 - 3. Licensed by authorities having jurisdiction.
- B. Installer Qualifications: Personnel shall be trained and certified by manufacturer and be certified by NICET as follows:
 - 1. Supervisor: Level III or higher.
 - 2. Technician: Level II or higher.
- C. Source Limitations for Fire-Alarm System and Components: Obtain fire-alarm system from single source from single manufacturer. Components shall be compatible with, and operate as, an extension of existing system.

- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. NFPA Certification: Obtain certification according to NFPA 72 by an NRTL listed or approved alarm company.
- F. NFPA Certification: Obtain certification according to NFPA 72 by a UL-listed alarm company.
- G. NFPA Certification: Obtain certification according to NFPA 72 in the form of a placard by an FMG-approved alarm company.
- H. Comply with NFPA 70
- I. Comply with NFPA 72
- J. Comply with the Americans with Disabilities Act (ADA); including local amendments, modifications and additional accessibility requirements of the authorities having jurisdiction.
- K. Comply with International Standards Organization (ISO)
 - 1. ISO-9000
 - 2. ISO-9001

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Prepare products for shipment.
 - 1. Provide suitable packaging materials, crating, blocking, and supports so equipment will withstand expected domestic shipping and handling shocks and vibration.
 - 2. Weatherproof packaging for shipment. Close connection openings to prevent entrance of foreign material during shipment and storage.
- B. Store products indoors in clean dry space with uniform temperature in accordance with manufacturer's requirements to prevent condensation. Protect products from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- C. Handle product components according to manufacturer's written instructions.

1.10 PROJECT CONDITIONS

- A. Interruption of Existing Fire-Alarm Service: Comply with requirements defined in Division 28 Section "Common Work Results for Safety and Security".

1.11 COORDINATION

- A. Coordinate installation and operational requirements for automatic elevator recall, including but not limited to the recall signal time frame, with Division 14 and with authorities having jurisdiction.
- B. Coordinate installation and operational requirements for hoistway ventilation with Divisions 14 and 23.
- C. Coordinate installation and operational requirements for smoke control systems with Division 23.

- D. Coordinate installation and operational requirements for fire-protection systems, including but not limited to water-based sprinkler system and pre-action sprinkler system with Division 21.
- E. Coordinate installation and operational requirements for duct mounted smoke detectors with Division 21 and 23.

1.12 SOFTWARE SERVICE AGREEMENT

- A. Comply with UL 864.
- B. Technical Support: Beginning with Substantial Completion, provide software support for two years.
- C. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system. Upgrade shall include new or revised licenses for use of software.
 - 1. Provide 30 days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment if necessary.

1.13 MAINTENANCE AGREEMENT

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide full inspection and maintenance by skilled employees of manufacturer's designated service organization during the Warranty period, including any special warranty period specified.
 - 1. Include inspection, maintenance, testing, and repair contract in compliance with the manufacturer's recommended routine preventive maintenance program and NFPA 72 requirements necessary to maintain full ongoing listing on the complete installed system.
 - 2. Provide parts and supplies same as those used in the manufacture and installation of the original equipment.
 - 3. The contractor performing the contract services shall be qualified and listed to maintain ongoing certification and listing of the completed system.
- B. Extended Maintenance Service: Offer for the Owner's consideration and evaluation at the time of Product Data Submittal, a priced inspection, maintenance, testing, and repair contract in compliance with the manufacturer's recommended routine preventive maintenance program and NFPA 72 requirements necessary to maintain full ongoing listing on the complete installed system.
 - 1. The services offered under this contract shall begin after the completion of the Initial Maintenance Service and Warranty Period.
 - 2. The Owner shall have the option of renewing for single or multiple years, up to five years, at the price quoted upon completion of the Warranty period.
 - 3. The contractor performing the contract services shall be qualified and listed to maintain ongoing certification and listing of the completed system.

PART 2 - MANUFACTURERS

2.1 Manufacturer

- A. Manufacturers: Determine the prevalent manufacturer for the campus fire alarm systems and use this system as the base system. All others shall submit a system proposal as a substitute manufacturer. Subject to compliance with requirements, provide products by the base system one of the following:

1. GE Infrastructure; a unit of General Electric Company.
2. NOTIFIER; a Honeywell company.
3. Siemens Building Technologies, Inc.; Fire Safety Division.
4. SimplexGrinnell LP; a Tyco International company.

2.2 SYSTEMS OPERATIONAL DESCRIPTION

A. Alarm signals:

1. Fire-alarm signal initiation (General Alarm) shall be by one or more of the following devices and systems:
 - a. Manual Fire-Alarm Boxes.
 - b. Heat detectors.
 - c. Smoke detectors.
 - d. Duct-Mounted smoke detectors.
 - e. Automatic sprinkler system water flow.
 - f. Heat detectors in elevator shaft and pit.
 - g. Fire-extinguishing system operation including but not limited to dry-pipe sprinkler system and pre-action sprinkler systems.
2. Supervisory signal initiation (Supervisory Alarm) shall be by one or more of the following devices and actions:
 - a. Valve supervisory switch. (Operation of a fire-protection system valve tamper switch.)
 - b. Low-air-pressure switch of a dry-pipe sprinkler system.
 - c. Low-air-pressure switch of a pre-action sprinkler system.
 - d. Fire-pump running.
 - e. Fire-pump power failure, including a dead-phase or phase-reversal condition.
 - f. Elevator shunt-trip supervision.
3. System trouble signal initiation (Trouble Alarm) shall be by one or more of the following devices and actions:
 - a. Open circuits, shorts, and grounds in designated circuits.
 - b. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.
 - c. Loss of primary power at fire-alarm control unit.
 - d. Ground or a single break in fire-alarm control unit internal circuits.
 - e. Abnormal ac voltage at fire-alarm control unit.
 - f. Break in standby battery circuitry.
 - g. Failure of battery charging.
 - h. Abnormal position of any switch at fire-alarm control unit or annunciator.

B. Alarm Actions:

1. Fire alarm signal (General Alarm) shall initiate the following actions:
 - a. Continuously operate alarm notification appliances as indicated. Notification of a General Alarm conditions within the protected premises shall be similar to the following methodology:
 - 1) Notification: In conjunction with the AHJ, determine the notification options below that are available for this building.
 - 2) Activate audible and visible indicating devices throughout the entire facility.
 - 3) Notification: Comply with the NFPA 72 requirements for Relocation and Partial Evacuation. Activate audible indicating devices throughout the entire facility with specific audio messages as listed below. Activate visible indicating devices throughout the evacuation signaling zone where the alarm signal originated. Provide custom programming to modify standard audio messages to comply with the Owners' evaluation protocol. Provide separate notification circuits as required to

accomplish the following audio messages and actions that shall occur simultaneously:

- a) An 'evacuation' message shall be sounded in the evacuation signaling zone where the alarm originated. The intent of this message to advise occupants hearing this message that they are near danger and should leave the zone in alarm immediately.
 - b) An 'alert' message shall be sounded throughout the remainder of the facility. It is the intent of this message to advise occupants that an alarm has been reported in the building and they should prepare for evacuation if necessary, but should remain in place until instructed to evacuate.
 - c) An 'instructional' message shall be sounded in the elevator cabs. It is the intent of this message to advise elevator occupants that an emergency exists, the elevator has been directed to the safe return floor, and that occupants should quickly exit the building.
 - d) Provide selective paging to each individual evacuation zone. In addition to the message/channels detailed above, a dedicated page channel shall be capable of simultaneously providing live voice instructions without interrupting any of the messages listed above.
 - e) Provide separate notification zone for selective manual paging for enclosed stairways. Automatic messages in stairwells are not permitted.
- 4) Notification: Comply with the NFPA 72 requirements for Relocation and Partial Evacuation. Activate audible indicating devices throughout the entire facility with specific audio messages as listed below. Activate visible indicating devices throughout the evacuation signaling zone where the alarm signal originated and in the evacuation zones immediately above and below the zone of origination. Provide separate notification circuits as required to accomplish the following audio messages and actions that shall occur simultaneously:
- a) An 'evacuation' message shall be sounded in the evacuation signaling zone where the alarm originated and in the evacuation zones immediately above and below the zone of origination. The intent of this message to advise occupants hearing this message that they are near danger and should leave the building immediately.
 - b) An 'alert' message shall be sounded throughout the remainder of the facility. It is the intent of this message to advise occupants that an alarm has been reported in the building and they should prepare for evacuation if necessary, but should remain in place until instructed to evacuate.
 - c) An 'instructional' message shall be sounded in the lobby. It is the intent of this message to advise lobby occupants to leave the lobby and clear the area for arriving firefighters.
 - d) An 'instructional' message shall be sounded in the elevator cabs. It is the intent of this message to advise elevator occupants that an emergency exists, the elevator has been directed to the safe return floor, and that occupants should quickly exit the building.
 - e) Provide selective paging to each individual evacuation zone. In addition to the message/channels detailed above, a dedicated page channel shall be capable of simultaneously providing live voice instructions without interrupting any of the messages listed above.

- f) Provide separate notification zone for selective manual paging for enclosed stairways. Automatic messages in stairwells are not permitted.
- 5) Notification: Comply with the NFPA 72 requirements for Relocation and Partial Evacuation. Activate audible indicating devices throughout the entire facility with specific audio messages as listed below. Activate visible indicating devices throughout the evacuation signaling zone where the alarm signal originated and in the evacuation zones immediately above and below the zone of origination. Provide custom programming to modify standard audio messages to comply with the Owners' evaluation protocol. Provide separate notification circuits as required to accomplish the following audio messages and actions that shall occur simultaneously:
 - a) An 'evacuation' message shall be sounded in the evacuation signaling zone where the alarm originated [and if required in the evacuation zones immediately above and below the zone of origination]. The intent of this message to advise occupants hearing this message that they are near danger and should leave the zone in alarm immediately.
 - b) An 'alert' message shall be sounded throughout the evacuation zone(s) adjacent to the zone of origination. It is the intent of this message to advise occupants that an alarm has been reported in an adjacent zone and to prepare for the arrival of evacuees.
 - c) An 'alert' message shall be sounded throughout the remainder of the facility. It is the intent of this message to advise occupants that an alarm has been reported in the building and they should prepare for evacuation if necessary, but should remain in place until instructed to evacuate.
 - d) An 'instructional' message shall be sounded in the lobby. It is the intent of this message to advise lobby occupants to leave the lobby and clear the area for arriving firefighters.
 - e) An 'instructional' message shall be sounded in the elevator cabs. It is the intent of this message to advise elevator occupants that an emergency exists, the elevator has been directed to the safe return floor, and that occupants should quickly exit the building.
 - f) Provide selective paging to each individual evacuation zone. In addition to the message/channels detailed above, a dedicated page channel shall be capable of simultaneously providing live voice instructions without interrupting any of the messages listed above.
 - g) Provide separate notification zone for selective manual paging for enclosed stairways. Automatic messages in stairwells are not permitted.
- b. Identify alarm at fire-alarm control unit and remote annunciators. Indication, notification and acknowledgement of alarm conditions at the fire-alarm control unit shall be similar to the following methodology:
 - 1) When the system control panel goes into alarm condition the normal indicator light shall extinguish and an alarm indicator light shall illuminate, a control panel audible alert (buzzer) shall pulsate.
 - 2) Visually indicate, via the system control panel LCD display, all applicable information associated with the status condition including; the real time, the number of messages waiting, the type of alarm, the alarm zone number, the device type, the device location, the time/date the alarm occurred and any user specified message(s).

- 3) The operator shall acknowledge the alarm/message by pressing an acknowledge button, and the buzzer shall silence providing there isn't an additional alarm pending. If there are additional alarms waiting the operator must acknowledge all pending alarms/messages before the buzzer will silence.
- 4) To silence audible devices and stop visible devices from flashing the operator may press the alarm silence button; a new alarm shall cause the audible and visible devices to resound/flash. The visible devices shall stop operating when the "Alarm Silence" button is pressed, failure to do so could result in confusion of hearing-impaired occupants.
- 5) To reset the system the operator shall press the reset button.
- 6) Any remote or local annunciator LCD/LED's associated with the status zone shall be illuminated.
- 7) The operator shall not be able to acknowledge or silence the alarm from a remote annunciator. All acknowledge and silence features are limited to the fire alarm control unit and fire command center locations.
- c. Transmit an alarm signal to the remote alarm supervising station.
 - 1) Operate alarm relay contacts to initiate the transmission of an alarm to the following:
 - a) A Central Monitoring Station retained by the Owner via an auto-dialer or within the system control panel.
 - b) A proprietary alarm central station operated by the Owner via a digital communications output within the system control panel.
- d. Unlock electric door locks in path of egress.
- e. Release fire and smoke doors held open by magnetic door holders.
 - 1) Door hold-open devices that are controlled by smoke detectors at doors in smoke barrier walls shall be connected to fire-alarm system.
- f. Activate voice/alarm communication system.
- g. Display the event on the graphical workstation and display a pictorial image.
- h. Transmit signal to the facility management system, include address of initiating device.
- i. Interface with Security System.
- j. Transmit alarm text messages to "alpha-numerical" display pagers.
- k. Record events in the system memory.
- l. Record events by the system printer.
- m. Comply with additional sequences specified under the "Additional Specialized Alarm Actions" paragraph in Part 2 of this section.
2. System Trouble and Supervisory Signal Actions shall initiate the following actions:
 - a. Notification appliance and annunciate at the FACP and remote annunciators.
 - b. Record events in the system memory.
 - c. Record events by the system printer.
 - d. Display the event on the graphical workstation and display a pictorial image.
 - e. Transmit signal to the facility management system, include address of initiating device.
 - f. Transmit alarm text messages to "alpha-numerical" display pagers.
 - g. Transmit alarm signal to the remote supervising station.
 - 1) Operate alarm relay contacts to initiate the transmission of an alarm to the following:
 - a) A Central Monitoring Station retained by the Owner via an auto-dialer or within the system control panel.
 - b) A proprietary alarm central station operated by the Owner via a digital communications output within the system control panel.
 - h. Comply with additional sequences specified under the "Additional Specialized Alarm Actions" paragraph in Part 2 of this section.

- C. Additional Specialized Alarm Actions:
1. Fuel Supply Shutoff: Activate emergency fuel supply shutoff to start upon receipt of a General Alarm by the Fire Alarm Control Unit (panel). Comply with the following:
 - a. Operate control relay contacts to close solenoid valve(s) to shut-off designated gas and fuel supplies, not the emergency generator fuel supply. Coordinate and interface with Division 23.
 2. Elevator Recall: Activate elevator recall system to start in accordance with ANSI Standard A17.1 and NFPA 72. Comply with the following:
 - a. Initiate Elevator Recall Sequence to return elevators to their primary or alternate recall floors upon receipt of a General Alarm by the Fire Alarm Control Unit (panel).
 - b. Alarm-initiating devices, except those listed, shall not start elevator recall. Smoke detectors in locations indicated below shall initiate automatic elevator recall:
 - 1) Elevator lobby detectors.
 - 2) Smoke detector in elevator machine room.
 - 3) Smoke detectors in elevator hoistway.
 - c. Smoke detectors designated for Elevator Recall shall be connected to fire-alarm system. Initiate a General Alarm upon detection of smoke.
 - d. Actuation of the elevator lobby detector located on the designated primary recall floor shall signal the cars to move to the alternate recall floor.
 3. Elevator Shunt-Trip Operation: Heat detectors designated for elevator power removal shall be connected to fire-alarm system. Alarm-initiating devices, except those listed, shall not start elevator power removal.
 - a. Actuation of heat detectors in the locations indicated below shall shut down power, via a shunt trip operator, to the elevators associated with the location without time delay:
 - 1) Heat detector in elevator machine room; locate detector within two feet of each sprinkler head.
 - 2) Heat detectors in elevator hoistway; locate detector within two feet of each sprinkler head.
 4. Elevator Shunt-Trip Operation: Water-flow alarm connected to sprinkler in an elevator hoistway and elevator machine room shall shut down power, via a shunt trip operator, to elevators associated with the location without time delay. Alarm-initiating devices, except those listed, shall not start elevator power removal.
 - a. Water-flow switch associated with the sprinkler in the elevator pit may have a delay to allow elevators to move to the designated recall floor.
 5. Air-Handling System Shut-Down: Upon receipt of a General Alarm by the Fire Alarm Control Unit. Notification: Activate audible and visible indicating devices throughout the entire facility.
 - a. Operate control relay contacts to signal shutdown of the Air-Handling system(s) serving the evacuation signaling zone where the alarm signal originated. Signal shall remain on until alarm conditions are cleared and fire-alarm system is reset. Signal shall not stop in response to alarm acknowledge or signal silence commands. Coordinate and interface with Division 23.
 - a. Shut the smoke or combination fire/smoke dampers at that specific air-handling units' supply and return connections. Shut all smoke and combination fire/smoke dampers associated with the air-handling system.
 - b. Provide for an adjustable time delay, initially set at 20 seconds, to delay the transmission of close signals to the dampers. The intent of this time delay is to allow the air-handling unit fan(s) to receive the stop signal and slow down before closing any dampers in order to avoid a high static-pressure alarm/trip on the air-handling system.

6. Atrium Smoke Control System: An alarm signal from a smoke detector, duct-mounted smoke detector, water flow, or other initiating device associated with smoke control system shall operate control relay contacts to initiate the smoke control system in accordance with the smoke control sequence specified on the Smoke Control Drawings.
 - a. Initiate General Alarm when the smoke control system is activated.
 - b. Coordinate and interface with Division 23.
 - c. Provide separate programmed initiation signals with the required quantity of control relays to meet the requirements of the smoke control sequence specified on the Smoke Control Drawings.
 - d. Smoke Control System may activate when a general alarm is received at fire-alarm control unit from initiating device other than those specifically listed in the smoke control sequence when required by the authorities having jurisdiction. Provide additional hardware and programming to accomplish this function when required by the AHJ.
7. Pre-Action Fire Suppression System (Option 1)
 - a. Detector Type: Detection within the protected area shall be provided by the following:
 - 1) Verified Detection: Sound alarm on activating single-detection device, and start extinguishing-agent discharge sequence on actuating second-detection device.
 - b. System Operating Sequence as follows:
 - 1) Actuating First Detector: Visible indication on annunciator panel, energize audible alarm and visible alarms (slow pulse), shut down air-conditioning and ventilating systems serving protected area, close doors in protected area, and send trouble alarm signal to fire-alarm control unit.
 - 2) Actuating Second Detector: Visible indication on annunciator panel, energize audible and visible alarms (fast pulse), shut down power to protected equipment, start time delay for extinguishing-agent discharge for 60 seconds (adjustable), send trouble alarm signal to fire-alarm control unit,. At conclusion of time delay if an abort signal has not been received, release pre-action valve to allow water to fill sprinkler system, head must fuse to release water onto protected area allow water to fill sprinkler system, open heads immediately release water onto protected area. On agent discharge, send general alarm signal to fire-alarm control unit and operate audible and visible alarm appliance inside and immediately outside the protected area.
 - 3) Operating "Abort" switches shall delay extinguishing-agent discharge while being activated (constantly depressed); release delay timer will continue to run while the abort switch is depressed. Release of hand pressure on the switch will cause agent discharge if the time delay has expired. Switches must be reset to prevent agent discharge.
 - 4) Operating "Manual Discharge" switches shall immediately discharge extinguishing agent.
 - 5) Operating "EPO" switches will terminate power to protected equipment immediately on actuation but shall not initiate pre-action extinguishing agent sequence without actuation of smoke detector.
8. Pre-Action Fire Suppression System (Option 2)
 - a. Detector Type: Detection within the protected area shall be provided by the following:
 - 1) Cross-Zoned Air-Sampling Detection: Remote air-sampling detector system and spot photoelectric detectors reporting to a fully programmable microprocessor-based control panel.
 - b. System Operating Sequence as follows:

- 1) First Detection Level (Alert): Mild audible and visible indication on annunciator panel. Visible device labeled "ALERT" flashes slowly in the protected area.
- 2) Second Detection Level (Action): Strong audible and visible indication on annunciator panel. Visible device labeled "ACTION" flashes rapidly in the protected area.
- 3) Third Detection Level (Fire 1): Visible indication on annunciator panel, energize audible and visible alarms (fast pulse), shut down power to protected equipment, start time delay for extinguishing-agent discharge for 60 seconds (adjustable), send trouble alarm signal to fire-alarm control unit,. At conclusion of time delay if an abort signal has not been received, release pre-action valve to allow water to fill sprinkler system, head must fuse to release water onto protected area ~~[allow water to fill sprinkler system, open heads immediately release water onto protected area.]~~ On agent discharge, send alarm signal to fire-alarm control unit and operate audible and visible alarm appliance inside and immediately outside the protected area.
- 4) Fourth Detection Level (Fire 2): Same as Fire 1.
- 5) Actuation of photoelectric smoke detector in zone shall initiate agent discharge sequence as described for the third detection level (Fire 1) above.
- 6) Operating "Abort" switches shall delay extinguishing-agent discharge while being activated (constantly depressed); release delay timer will continue to run while the abort switch is depressed. Release of hand pressure on the switch will cause agent discharge if the time delay has expired. Switches must be reset to prevent agent discharge.
- 7) Operating "Manual Discharge" switches shall immediately discharge extinguishing agent.
- 8) Operating "EPO" switches will terminate power to protected equipment immediately on actuation but shall not initiate pre-action extinguishing agent sequence without actuation of smoke detector.

2.3 FIRE-ALARM CONTROL UNIT (PANEL)

A. General Requirements for Fire-Alarm Control Unit:

1. The system shall have the capability of being activated into alarm, supervisory and trouble modes of operation from both manual and automatic devices.
2. Field-programmable, microprocessor-based, modular, power-limited design with electronic modules, complying with UL 864 and listed and labeled by an NRTL.
 - a. System software and programs shall be held in flash electrically erasable programmable read-only memory (EEPROM), retaining the information through failure of primary and secondary power supplies.
 - b. Include a real-time clock for time annotation of events on the event recorder and printer.
3. Addressable initiation devices that communicate device identity and status.
 - a. Smoke sensors shall additionally communicate sensitivity setting and allow for adjustment of sensitivity at fire-alarm control unit.
 - b. Temperature sensors shall additionally test for and communicate the sensitivity range of the device.
4. Addressable control circuits for operation of mechanical equipment.

B. Alphanumeric Display and System Controls: Arranged for interface between human operator at fire-alarm control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.

1. Annunciator and Display: LCD Touchscreen or Liquid-crystal type, with minimum of 2 line(s) of 40 characters.
 2. Keypad: Arranged to permit entry and execution of programming, display, and control commands and to indicate control commands to be entered into the system for control of smoke-detector sensitivity and other parameter.
- C. Smoke-Alarm Verification: Provide input module and appurtenances necessary for Smoke-Alarm Verification. Program smoke-alarm verification sequence in accordance with sequence of operation.
- D. Notification Appliance Circuit: Operation shall sound in same pattern as existing system.
- E. Elevator Recall: Provide an output signal using an addressable relay to start elevator recall sequence in accordance with sequence of operation.
- F. Smoke Control System: Provide an output signal using an addressable relay to start the smoke control system.
- G. Remote Smoke-Detector Sensitivity Adjustment: Controls shall select specific addressable smoke detectors for adjustment, display their current status and sensitivity settings, and change those settings. Allow controls to be used to program repetitive, time-scheduled, and automated changes in sensitivity of specific detector groups. Record sensitivity adjustments and sensitivity-adjustment schedule changes in system memory, and print out the final adjusted values on system printer.
- H. Transmission to Remote Supervising Station: Automatically transmit alarm, supervisory, and trouble signals to a remote alarm station.
- I. Voice/Alarm Signaling Service: Central emergency communication system with redundant microphones, preamplifiers, amplifiers, and tone generators provided in a separate cabinet or as a special module that is part of fire-alarm control unit.
1. Indicated number of alarm channels for automatic, simultaneous transmission of different announcements to different zones or for manual transmission of announcements by use of the central-control microphone. Amplifiers shall comply with UL 1711 and be listed by an NRTL.
 - a. Allow the application of and evacuation signal to indicated number of zones and, at same time, allow voice paging to the other zones selectively or in any combination.
 - b. Programmable tone and message sequence selection.
 - c. Standard digitally recorded messages for "Evacuation" and "All Clear."
 - d. Generate tones to be sequenced with audio messages of type recommended by NFPA 72 and that are compatible with tone patterns of notification appliance circuits of fire-alarm control unit.
 2. Status Annunciator: Indicate the status of various voice/alarm speaker zones ~~and the status of firefighters' two-way telephone communication zones.~~
 3. Preamplifiers, amplifiers, and tone generators shall automatically transfer to backup units, on primary equipment failure.
- J. Printout of Events: On receipt of signal, print alarm, supervisory, and trouble events. Identify zone, device, and function. Include type of signal (alarm, supervisory, or trouble) and date and time of occurrence. Differentiate alarm signals from all other printed indications. Also print system reset event, including same information for device, location, date, and time. Commands initiate the printing of a list of existing alarm, supervisory, and trouble conditions in the system and a historical log of events.

- K. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Initiating devices, notification appliances, signaling lines, trouble signals, supervisory signals, supervisory and digital alarm communicator transmitters and digital alarm radio transmitters, where provided, shall be powered by 24-V dc source.
 - 1. Alarm current draw of entire fire-alarm system shall not exceed 80 percent of the power-supply module rating.
- L. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch.
 - 1. Batteries: Sealed lead calcium.
- M. Instructions: Computer printout or typewritten instruction card mounted behind a plastic or glass cover in a stainless-steel or aluminum frame. Include interpretation and describe appropriate response for displays and signals. Briefly describe the functional operation of the system under normal, alarm, and trouble conditions.

2.4 REMOTE ANNUNCIATOR

- A. Description: Annunciator functions shall match those of fire-alarm control unit for alarm, supervisory, and trouble indications. Manual switching functions shall match those of fire-alarm control unit.
 - 1. Mounting: Flush cabinet, NEMA 250, Type 1.
- B. Display Type and Functional Performance: Alphanumeric display and LED indicating lights shall match those of fire-alarm control unit. Provide controls to acknowledge, silence, reset, and test functions for alarm, supervisory, and trouble signals.

2.5 SYSTEM PRINTER

- A. Printer shall be listed and labeled by an NRTL as an integral part of fire-alarm system.

2.6 MANUAL FIRE-ALARM BOXES

- A. General Requirements for Manual Fire-Alarm Boxes: Comply with UL 38. Boxes shall be finished in red with molded, raised-letter operating instructions in contrasting color; shall show visible indication of operation; and shall be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.
 - 1. Single-action mechanism, pull-lever type; with integral addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to fire-alarm control unit if acceptable by the AHJ.Otherwise provide,
 - 2. Double-action mechanism requiring two actions to initiate an alarm, pull-lever type; with integral addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to fire-alarm control unit.
 - 3. Station Reset: Key- or wrench-operated switch.
 - 4. Indoor Protective Shield: Factory-fabricated clear plastic enclosure hinged at the top to permit lifting for access to manual fire alarm box to initiate an alarm. Lifting the protective shield actuates an integral battery-powered audible horn intended to discourage false-alarm operation.

2.7 SYSTEM SMOKE DETECTORS

- A. General Requirements for System Smoke Detectors:
 - 1. Comply with UL 268; operating at 24-V dc, nominal.
 - 2. Detectors shall be two-wire or four-wire type, as required.

3. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.
 4. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.
 5. Integral Visible-Indicating Light: LED type indicating detector has operated and power-on status.
 6. Remote Control: Unless otherwise indicated, detectors shall be analog-addressable type, individually monitored at fire-alarm control unit for calibration, sensitivity, and alarm condition and individually adjustable for sensitivity by fire-alarm control unit.
 - a. Rate-of-rise temperature characteristic shall be selectable at fire-alarm control unit for 15 or 20 deg F per minute.
 - b. Fixed-temperature sensing shall be independent of rate-of-rise sensing and shall be settable at fire-alarm control unit to operate at 135 or 155 deg F.
 - c. Provide multiple levels of detection sensitivity for each sensor.
- B. Photoelectric Smoke Detectors:
1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
 2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
 - a. Primary status.
 - b. Device type.
 - c. Present average value.
 - d. Present sensitivity selected.
 - e. Sensor range (normal, dirty, etc.).
- C. Duct-Mounted Smoke Detectors: Photoelectric type complying with UL 268A.
1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
 2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
 - a. Primary status.
 - b. Device type.
 - c. Present average value.
 - d. Present sensitivity selected.
 - e. Sensor range (normal, dirty, etc.).
 3. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector.
 4. Remote test station with keyswitch, red LED alarm indicator, and green power-on LED.
 5. Each sensor shall have multiple levels of detection sensitivity.
 6. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.
 7. Provide relay at each duct-mounted detector for Fan Shutdown, Smoke Damper actuation or Fire/Smoke Damper actuation. Contacts rated to interrupt control circuit.
 8. Provide relay at each detector located at an air-handling unit to interface with the Facility Management System (FMS) and communicate the device address and status.
- D. Beam-Type Smoke Detector: Each detector shall consist of a separate transmitter and receiver, and shall have the following features:
1. UL 268 listed, operating at 24-V dc, nominal.
 2. Adjustable Sensitivity: At least six sensitivity levels, settable at the receiver, measured as percent of obscuration.

3. Two selectable alarm delay settings, allowing each to be associated with a corresponding sensitivity.
 4. Trouble signal delay, fixed at 20 seconds.
 5. Separate Color-Coded LEDs: Indicate normal, alarm, and trouble status with remote indicator panels.
- E. Remote Air-Sampling Detector System: Includes air-sampling pipe network, a high efficiency aspirator laser-based photoelectric detector, a sample transport fan, and a control unit.
1. UL 268 listed, operating at 24-V dc, nominal.
 2. Pipe Network: Recessed piping network to connect control unit with sampling ports.
 - a. Piping Material: CPVC piping meeting requirements of UL 1887 "Standard for Fire Test of Plastic Sprinkler Pipe for Visible Flame and Smoke Characteristics." Pre-marked with "SMOKE DETECTOR SAMPLING TUBE – DO NOT DISTURB".
 3. Sampling Ports: Nozzle-type detector sampling orifice connected to piping network with flexible tubing.
 4. Smoke Detector: Particle-counting type with continuous laser beam. Sensitivity adjustable to a minimum of three preset values. Two-stage filtration system with HEPA final filter.
 5. Smoke Detector System Memory: Nonvolatile type.
 6. Sample Transport Fan: Centrifugal type, creating a minimum static pressure of 0.05-inch wg (12.5 Pa) at all sampling ports.
 7. Control Unit: Single-zone or multi-zone unit as indicated. Provides same system power supply, supervision, and alarm features as specified for the central fire-alarm control unit plus separate trouble indication for airflow and detector problems.
 8. Signals to the Central Fire-Alarm Control Unit: Any type of local system trouble is reported to the central FACP as a composite "trouble" signal. Alarms on each system zone are individually reported to the central Fire-Alarm Control Unit as separately identified alarm zones.

2.8 NONSYSTEM SMOKE DETECTORS

- A. Single-Station Smoke Detectors:
1. Comply with UL 217; suitable for NFPA 101; operating at 120-V ac with 9-V dc battery as the secondary power source. Provide with "low" or "missing" battery chirping-sound device.
 2. Auxiliary Relays: One Form A and one Form C, both rated at 0.5 A.
 3. Audible Notification Appliance: Piezoelectric sounder rated at 90 dBA at 10 feet according to UL 464.
 4. Visible Notification Appliance: 177-cd strobe.
 5. Heat sensor, 135 deg F combination rate-of-rise and fixed temperature.
 6. Test Switch: Push to test; simulates smoke at rated obscuration.
 7. Tandem Connection: Allow tandem connection of number of indicated detectors; alarm on one detector shall actuate notification on all connected detectors.
 8. Plug-in Arrangement: Detector and associated electronic components shall be mounted in a plug-in module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.
 9. Self-Restoring: Detectors shall not require resetting or readjustment after actuation to restore them to normal operation.
 10. Integral Visible-Indicating Light: LED type indicating detector has operated and power-on status.
- B. Single-Station Duct-Mounted Smoke Detectors:
1. Comply with UL 268A; operating at 120-V ac.

2. Sensor: LED or infrared light source with matching silicon-cell receiver.
 - a. Detector Sensitivity: Smoke obscuration between 2.5 and 3.5 percent/foot when tested according to UL 268A.
3. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. The fixed base shall be designed for mounting directly to air duct. Provide terminals in the fixed base for connection to building wiring.
 - a. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector.
4. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.
5. Relay Fan Shutdown: Rated to interrupt fan motor-control circuit.

2.9 HEAT DETECTORS

- A. General Requirements for Heat Detectors: Comply with UL 521.
- B. Heat Detector, Combination Type: Actuated by either a fixed temperature of 135 deg F or a rate of rise that exceeds 15 deg F per minute, unless otherwise indicated.
 1. Mounting: Twist-lock base interchangeable with smoke-detector bases.
 2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.
- C. Continuous Linear Heat-Detector System:
 1. Detector Cable: Rated detection temperature 155 deg F. NRTL listed for "regular" service and a standard environment. Cable includes two steel actuator wires twisted together with spring pressure, wrapped with protective tape, and finished with PVC outer sheath. Each actuator wire is insulated with heat-sensitive material that reacts with heat to allow the cable twist pressure to short-circuit wires at the location of elevated temperature.
 2. Control Unit: Two-zone or multizone unit as required. Provide same system power supply, supervision, and alarm features as specified for fire-alarm control unit.
 3. Signals to Fire-Alarm Control Unit: Any type of local system trouble shall be reported to fire-alarm control unit as a composite "trouble" signal. Alarms on each detection zone shall be individually reported to central fire-alarm control unit as separately identified zones.
 4. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

2.10 NOTIFICATION APPLIANCES

- A. General Requirements for Notification Appliances: Connected to notification appliance signal circuits, zoned as required by AHJ, equipped for mounting and with screw terminals for system connections.
 1. Combination Devices: Factory-integrated audible and visible devices in a single-mounting assembly, equipped for mounting and with screw terminals for system connections.
- B. Visible Notification Appliances: Xenon strobe lights comply with UL 1971, with clear polycarbonate lens mounted on an aluminum faceplate. The word "FIRE" is engraved in minimum 1-inch-high letters on the device faceplate.
 1. Rated Light Output: 15/30/75/110 cd, selectable in the field.
 2. Mounting: Wall mounted, unless otherwise indicated.
 3. For units with guards to prevent physical damage, light output ratings shall be determined with guards in place.

4. Flashing shall be in a temporal pattern, synchronized with other units.
 5. Strobe Leads: Factory connected to screw terminals.
 6. Mounting Faceplate: Factory finished, red with white lettering or white with red lettering, as approved by the Architect.
- C. Horns: Electric-vibrating-polarized type, 24-V dc; with provision for housing the operating mechanism behind a grille. Comply with UL 464. Horns shall produce a sound-pressure level of 90 dBA, measured 10 feet from the horn, using the coded signal prescribed in UL 464 test protocol.
- D. Voice/Tone Notification Appliances:
1. Appliances shall comply with UL 1480 and shall be listed and labeled by an NRTL.
 2. High-Range Units: Rated 2 to 15 W.
 3. Low-Range Units: Rated 1 to 2 W.
 4. Mounting: Flush, unless otherwise indicated.
 5. Matching Transformers: Tap range matched to acoustical environment of speaker location.
- E. Low Frequency Tone Notification Appliances:
1. Appliances shall comply with UL and shall be listed and labeled by an NRTL.
 2. Alarm signal shall be a square wave or provide equivalent awakening ability.
 3. The wave shall have a fundamental frequency of 520 Hz \pm 10 percent.

2.11 CONDUCTORS AND CABLES

- A. Conductors and cables defined below shall be acceptable for used as approved by the AHJ.
- B. Optical Fiber Cable
1. Available Manufacturers: Provide products from manufacturers offering products that comply with requirements.
 2. Description: Multimode optical fiber cable.
 - a. Comply with ICEA S-83-596 for mechanical properties.
 - b. Comply with TIA/EIA-568-B.3 for performance specifications.
 - c. Comply with TIA-492AAAB or TIA-492AAAA-A as applicable.
 - d. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444, UL 1651, and NFPA 70 for the following types:
 - e. Minimum Modal Bandwidth: 160 MHz-km at 850 nm; 500 MHz-km at 1300 nm.
 - f. Cable cordage jacket, fiber, unit, and group color shall be according to TIA-598-C.
 - g. Imprinted with fiber count, fiber type, and aggregate length at regular intervals not to exceed 40 inches.
- C. RS-232 Cable
1. Standard Cable: NFPA 70, Type CM.
 - a. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
 - b. Polypropylene insulation.
 - c. Individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage.
 - d. PVC jacket.
 - e. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
 - f. Flame Resistance: Comply with UL 1581.

2. Plenum-Rated Cable: NFPA 70, Type CMP.
 - a. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
 - b. Plastic insulation.
 - c. Individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage.
 - d. Plastic jacket.
 - e. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
 - f. Flame Resistance: Comply with NFPA 262.

D. Fire Alarm Wire And Cable

1. Available Manufacturers: Provide products from manufacturers offering products that comply with requirements.
2. General Wire and Cable Requirements: NRTL listed and labeled as complying with NFPA 70, Article 760.
3. Signaling Line Circuits: Twisted, shielded pair, size as recommended by system manufacturer.
 - a. Circuit Integrity Cable: Twisted shielded pair, NFPA 70, Article 760, Classification CI, for power-limited fire alarm signal service Type FPL. NRTL listed and labeled as complying with UL 1424 and UL 2196 for a 2-hour rating.
4. Non-Power-Limited Circuits: Solid-copper conductors with 600-V rated, 75 deg C, color-coded insulation.
 - a. Low-Voltage Circuits: No. 16 AWG, minimum.
 - b. Line-Voltage Circuits: No. 12 AWG, minimum.
5. Multiconductor Armored Cable: NFPA 70, Type MC, copper conductors, Type TFN/THHN conductor insulation, copper drain wire, copper armor with outer jacket with red identifier stripe, NRTL listed for fire alarm and cable tray installation, plenum rated, and complying with requirements in UL 2196 for a 2-hour rating.

E. Circuit Class and Style:

1. Initiating Device, Notification Appliance, and Signaling Line Circuits: NFPA 72, Class A.
 - a. Install no more than 50 addressable devices on each signaling line circuit.
2. Initiating Device, and Signaling Line Circuits: NFPA 72, Class A.
 - a. Install no more than 50 addressable devices on each signaling line circuit.
3. Notification Appliance Circuits: NFPA, Class B.
4. Initiating Device, Notification Appliance, and Signaling Line Circuits: NFPA 72, Class B.
 - a. Install no more than 50 addressable devices on each signaling line circuit.
5. Serial Interfaces: Two RS-232 ports for printers.

2.12 DEVICE GUARDS

- A. Description: Welded wire mesh of size and shape for the manual station, smoke detector, gong, or other device requiring protection.
1. Factory fabricated and furnished by manufacturer of device.
 2. Finish: Paint of color to match the protected device.

2.13 MAGNETIC DOOR HOLDERS

- A. Description: Units are equipped for wall or floor mounting as indicated and are complete with matching doorplate.
1. Electromagnet: Requires no more than 3 W to develop 25-lbf holding force.
 2. Wall-Mounted Units: Flush mounted, unless otherwise indicated.
 3. Rating: 24-V ac or dc.

- B. Material and Finish: Match door hardware.

2.14 ADDRESSABLE INTERFACE DEVICE

- A. Description: Microelectronic monitor module, NRTL listed for use in providing a system address for alarm-initiating devices for wired applications with normally open contacts.
- B. Integral Relay: Capable of providing a direct signal to the following:
 - 1. Elevator controller to initiate elevator recall.
 - 2. Circuit-breaker shunt trip for elevator power shutdown.
 - 3. Atrium Smoke Control System.

2.15 DIGITAL ALARM COMMUNICATOR TRANSMITTER

- A. Digital alarm communicator transmitter shall be acceptable to the remote central station and shall comply with UL 632 and be listed and labeled by an NRTL.
- B. Functional Performance: Unit shall receive an alarm, supervisory, or trouble signal from fire-alarm control unit and automatically capture two telephone line(s) and dial a preset number for a remote central station. When contact is made with central station(s), signals shall be transmitted. If service on either line is interrupted for longer than 45 seconds, transmitter shall initiate a local trouble signal and transmit the signal indicating loss of telephone line to the remote alarm receiving station over the remaining line. Transmitter shall automatically report telephone service restoration to the central station. If service is lost on both telephone lines, transmitter shall initiate the local trouble signal.
- C. Local functions and display at the digital alarm communicator transmitter shall include the following:
 - 1. Verification that both telephone lines are available.
 - 2. Programming device.
 - 3. LED display.
 - 4. Manual test report function and manual transmission clear indication.
 - 5. Communications failure with the central station or fire-alarm control unit.
- D. Digital data transmission shall include the following:
 - 1. Address of the alarm-initiating device.
 - 2. Address of the supervisory signal.
 - 3. Address of the trouble-initiating device.
 - 4. Loss of ac supply or loss of power.
 - 5. Low battery.
 - 6. Abnormal test signal.
 - 7. Communication bus failure.

- E. Secondary Power: Integral rechargeable battery and automatic charger.

- F. Self-Test: Conducted automatically every 24 hours with report transmitted to central station.

2.16 RADIO ALARM TRANSMITTER (as required by AHJ)

- A. Transmitter shall comply with NFPA 1221 and shall be listed and labeled by an NRTL.
- B. Comply with 47 CFR 90.

- C. Description: Manufacturer's standard commercial product; factory assembled, wired, tested, and ready for installation and operation.
1. Packaging: A single, modular, NEMA 250, Type 1 metal enclosure with a tamper-resistant flush tumbler lock.
 2. Signal Transmission Mode and Frequency: VHF or UHF 2-W power output, coordinated with operating characteristics of the established remote alarm receiving station designated by Owner.
 3. Normal Power Input: 120-V ac.
 4. Secondary Power: Integral-sealed, rechargeable, 12-V battery and charger. Comply with NFPA 72 requirements for battery capacity; submit calculations.
 5. Antenna: Omnidirectional, coaxial half-wave, dipole type with driving point impedance matched to transmitter and antenna cable output impedance. Wind-load strength of antenna and mounting hardware and supports shall withstand 100 mph with a gust factor of 1.3 without failure.
 6. Antenna Cable: Coaxial cable with impedance matched to the transmitter output impedance.
 7. Antenna-Cable Connectors: Weatherproof.
 8. Alarm Interface Devices: Circuit boards, modules, and other auxiliary devices, integral to the transmitter, matching fire-alarm and other system outputs to message-generating inputs of the transmitter that produce required message transmissions.
- D. Functional Performance: Unit shall receive an alarm, supervisory, or trouble signal from fire-alarm control unit or from its own internal sensors or controls and shall automatically transmit signal along with a unique code that identifies the transmitting station to the remote alarm receiving station. Transmitted messages shall correspond to standard designations for fire-reporting system to which the signal is being transmitted and shall include separately designated messages in response to the following events or conditions:
1. Transmitter Low-Battery Condition: Sent when battery voltage is below 85 percent of rated value.
 2. System Test Message: Initiated manually by a test switch within the transmitter cabinet, or automatically at an optionally preselected time, once every 24 hours, with transmission time controlled by a programmed timing device integral to transmitter controls.
 3. Transmitter Trouble Message: Actuated by failure, in excess of one-minute duration, of the transmitter normal power source, derangement of the wiring of the transmitter, or any alarm input interface circuit or device connected to it.
 4. Local Fire-Alarm-System Trouble Message: Initiated by events or conditions that cause a trouble signal to be indicated on the building system.
 5. Local Fire-Alarm-System Alarm Message: Actuated when the building system goes into an alarm state. Identifies device that initiated the alarm.
 6. Local Fire-Alarm-System Supervisory-Alarm Message: Actuated when the building alarm system indicates a supervisory alarm.

2.17 FIREFIGHTERS' SMOKE CONTROL STATION (PANEL)

- A. A firefighters' smoke control panel shall be provided and shall include manual control or override of automatic control for mechanical smoke-control systems. The HVAC control and supervisory functions of the panel shall be coordinated with the energy management system functions to assure proper automatic and manual operation of system equipment. Coordinate interface requirements with applicable Division 23 Sections.
- B. Comply with UL 864 and Listed to UUKL.
- C. Comply with NFPA 92A

- D. Comply with NFPA 92B
- E. Enclosure Construction: Cold rolled steel with welded and ground seams and finished with a black powder textured finish.
 - 1. Door: attached with concealed stainless steel piano hinge. Door fastened with keyed lock with no other fasteners visible. Finished with a powder textured finish.
- F. Control system for mechanical smoke control systems shall include provisions for verification. Verification shall include positive confirmation of actuation, testing, manual override, the presence of power down stream of all disconnects and, through a pre programmed weekly test sequence report, abnormal conditions audibly, visually and by printed report.
- G. The panel shall be designed to graphically depict the building arrangement and smoke-control system zones served by the systems. The status of each smoke-control zone shall be indicated by lamps and appropriate legends. Refer to Drawings for additional details.
- H. The graphic display shall be a lamination which consists of a velvet textured polycarbonate face, a reverse printed image and a 1/8" aluminum backing. The display shall be printed with pigmented inks, for long life, on UL94VO flame retardant grade lexan. The graphic must have full color capacity to show different colors for supply, exhaust, and pressurization. A velvet texture finish must be applied to the polycarbonate face to eliminate glare. A dry erase coating shall be applied to display, when required.
- I. LEDs shall protrude through the laminate for 180 degrees visibility. They shall be wired to designated terminals for interface with remote controllers.
- J. Fans, major ducts, dampers, and door and window operators within the building that are portions of the smoke-control systems shall be shown on the panel and shall be shown connected to their respective ducts with a clear indication of the direction of airflow.
- K. AHU switches must be UL recognized components with a minimum rating of 24 VDC/AC, lamp. They shall be wired to designated terminals for interface with remote controllers.
- L. Provide relay controls to operate all automatic doors and windows associated with the smoke-control systems.
- M. Devices, switches, indicators and the like shall bear identifying legends.
- N. Status indicators shall be provided for all smoke-control equipment and annunciated by fan and zone, by pilot lamp-type indicators as follows:
 - 1. Fans, dampers and other operating equipment in their normal or "on" status: WHITE.
 - 2. Fans, dampers and other operating equipment in their "off" or closed status: RED.
 - 3. Fans, dampers and other operating equipment in their "on" or open status: GREEN.
 - 4. Fans, dampers and other operating equipment in a fault status: YELLOW/AMBER.
- O. Provision for testing the pilot lamp on the panel by means of one or more "lamp test" momentary push buttons or other self-restoring means shall be included. Light-emitting diodes may be used in lieu of pilot lamps with prior approval of authorities having jurisdiction.
- P. Provide Key Enable Switch, and a Power On LED.
- Q. The fault status shall be further identified by pulsing the indicator lamp.

- R. The panel shall provide control capability over the complete smoke-control system equipment within the building as follows:
1. ON-AUTO-OFF control over each individual piece of operating smoke-control equipment that can also be controlled from other sources within the building.
 2. OPEN-AUTO-CLOSE control over all individual dampers relating to smoke control and that are also controlled from other sources within the building.
 3. ON-OFF or OPEN-CLOSE control over all smoke-control and other critical equipment associated with a fire or smoke emergency and that can only be controlled from the panel.
- S. The panel actions shall be as follows:
1. The panel control actions shall have the highest priority of any control point within the building. Once issued from the panel, no automatic or manual control from any other control point within the building shall contradict the control action. Where automatic means is provided to interrupt normal, non-emergency equipment operation or produce a specific result to safeguard the building or equipment (i.e., duct freezestat, duct-mounted smoke detectors, high-temperature cutouts, temperature-actuated linkage and similar devices), such means shall be capable of being overridden by the panel control action and the last control action as indicated by each panel switch position shall prevail. In no case shall control actions require the smoke control system to assume more than one configuration at any one time.
 2. Only the AUTO position of each three-position control panel switch shall allow automatic or manual control action from other control points within the building. The AUTO position shall be the NORMAL non-emergency, building control position. When a panel is in the AUTO position, the actual status of the device (on, off, open, closed) shall continue to be indicated by the status indicator described above. When directed by an automatic signal to assume an emergency condition, the NORMAL position shall become the emergency condition for that device or group of devices within the zone. In no case shall control actions require the smoke control system to assume more than one configuration at any one time.
- T. Atrium smoke-control system activation shall be initiated immediately after receipt of an appropriate automatic or manual activation command. Smoke-control systems shall activate individual components (such as dampers and fans) in the sequence necessary to prevent physical damage to the fans, dampers, ducts and other equipment. The total response time for individual components to achieve their desired operating mode shall not exceed the following:
- | | |
|--|--------------------|
| 1. Control air isolation valve | Immediately |
| 2. Smoke damper closing | 15 seconds |
| 3. Smoke damper opening | 15 seconds maximum |
| 4. Fan starting (energizing) | 15 seconds maximum |
| 5. Fan stopping (de-energizing) | Immediately |
| 6. Fan volume modulation | 30 seconds maximum |
| 7. Pressure control modulation | 15 seconds maximum |
| 8. Temperature control safety override | Immediately |
| 9. Positive indication of status | 15 seconds maximum |
- U. For purposes of smoke control, the panel response time shall be the same for automatic or manual smoke-control action initiated from any other building control point.

PART 3 - EXECUTION

3.1 APPLICATION

- A. Fire-Alarm Control Unit (FACP) Locations: Provide control units in the following locations, unless otherwise indicated:
 - 1. Lobby
- B. Remote Alarm Annunciator Panel (FAAP) Locations: Provide Remote Alarm Annunciator panels in the following locations, unless otherwise indicated:
 - 1. Locations as indicated on the Drawings or defined herein.
- C. Fire Fighters' Smoke-Control Station (FSCS) Location: Provide Smoke-Control Station in the following locations, unless otherwise indicated:
 - 1. Lobby.

3.2 EQUIPMENT INSTALLATION

- A. Comply with NFPA 72 for installation of fire-alarm equipment.
- B. Comply with NECA 305 "Standard for Fire Alarm System Job Practices" as published by the National Electrical Contractors Association.
- C. Comply with NFPA 92A, 92B, and IBC chapter 9 for installation of Firefighters' Smoke-Control Station.
- D. Equipment Mounting: Install wall-mounted equipment, with tops of cabinets not more than 72 inches (1830 mm) above the finished floor.
 - 1. Comply with requirements for seismic-restraint devices specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- E. Smoke- or Heat-Detector Spacing:
 - 1. Comply with NFPA 72, "Smoke-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for smoke-detector spacing.
 - 2. Comply with NFPA 72, "Heat-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for heat-detector spacing.
 - 3. Smooth ceiling spacing shall not exceed the listing of the detector.
 - 4. Spacing of detectors for irregular areas, for irregular ceiling construction, and for high ceiling areas shall be determined according to Appendix A in NFPA 72.
 - 5. HVAC: Locate detectors not closer than 5 feet from air-supply diffuser or 3 feet from return-air opening.
 - 6. Lighting Fixtures: Locate centerline of detectors not closer than 12 inches from any part of a lighting fixture.
- F. Duct-Mounted Smoke Detectors: Comply with NFPA 72 and NFPA 90A. Install sampling tubes within 10' of straight duct and so they extend the full width of duct. Where installation within 10' of straight duct is not feasible, provide additional sampling tubes as required to protect ductwork branches.
- G. Heat Detectors in Elevator Shafts: Coordinate temperature rating, thermal response characteristic and location with sprinkler rating and location.
- H. Single-Station Smoke Detectors: Where more than one smoke alarm is installed within a dwelling or suite, they shall be connected so that the operation of any smoke alarm causes the alarm in all smoke alarms within the respective suite to sound.

- I. Remote Status and Alarm Indicators: Install near each smoke detector and each sprinkler water-flow switch and valve-tamper switch that is not readily visible from normal viewing position.
- J. Notification Devices: Install devices with appropriate backbox and raceway according to room finish (i.e. flush mounted devices in recessed backboxes with concealed conduit in finished spaces; surface mounted boxes with exposed conduit in unfinished spaces. Refer to Architectural Documents for room finish types.
- K. Device Location-Indicating Lights: Locate in public space near the device they monitor.
- L. Antenna for Radio Alarm Transmitter, if necessary: Mount to building structure where indicated. Use mounting arrangement and substrate connection that will resist 100-mph wind load with a gust factor of 1.3 without damage.

3.3 WIRING INSTALLATION

- A. Install wiring according to the following:
 - 1. NECA 1.
 - 2. TIA/EIA 568-A.
 - 3. Cables, raceways, and support pathways, including but not limited to j-hooks and cable tray, that are used for fire alarm circuits and equipment control wiring associated with the fire alarm system shall not contain any other wire or cable.
 - 4. Signaling Line Circuits: Power-limited fire alarm cables shall not be installed in the same cable or raceway as signaling line circuits.
- B. Comply with mounting and support requirements specified in Division 26 Section "Hangers and Supports for Electrical Systems."
- C. Wiring Method: Install wiring in metal raceway according to Division 26 Section "Raceways and Boxes for Electrical Systems."
- D. Wiring Method for vertical risers penetrating floor slabs: Install wiring in metal raceway according to Division 26 Section "Raceways and Boxes for Electrical Systems."
- E. Wiring Method for circuits concealed in Walls, Partitions, and Inaccessible Ceilings: Install wiring in metal raceway according to Division 26 Section "Raceways and Boxes for Electrical Systems."
- F. Wiring Method for surface mounted and other exposed circuits, including in Crawlspace: Install wiring in metal raceway according to Division 26 Section "Raceways and Boxes for Electrical Systems."
- G. Wiring Method for circuits concealed in accessible ceilings, install plenum-rated fire alarm cables supported on j-hooks or cable tray as space may be available by coordination with the tele-data com system.
 - 1. For wall mounted devices: Install recessed device back boxes with conduit extended to above accessible ceiling according to Division 26 Section "Raceways and Boxes for Electrical Systems."
- H. Wiring Method for Smoke Control Systems: Install wiring in metal raceway according to Division 26 Section "Raceways and Boxes for Electrical Systems"
 - 1. Circuits and equipment control wiring associated with the Smoke Control system shall be installed in a dedicated raceway system.

- I. Wiring within Enclosures:
 - 1. Separate power-limited and non-power-limited conductors as recommended by manufacturer.
 - 2. Install conductors parallel with or at right angles to sides and back of the enclosure.
 - 3. Bundle, lace, and train conductors to terminal points with no excess.
 - 4. Connect conductors that are terminated, spliced, or interrupted in any enclosure associated with the fire alarm system to terminal blocks.
 - 5. Mark each terminal according to the system's wiring diagrams.
 - 6. Make all connections with approved crimp-on terminal spade lugs, pressure-type terminal blocks, or plug connectors.
- J. Cable Taps: Use numbered terminal strips in junction, pull, and outlet boxes, cabinets, or equipment enclosures where circuit connections are made.
- K. Wiring to Remote Alarm Transmitting Device: Provide 1-inch (25-mm) conduit between the FACP and the transmitter. Install number of conductors and electrical supervision for connecting wiring as needed to suit monitoring function.
- L. Conductors: Size according to system manufacturer's written instructions, unless otherwise indicated.
- M. General Requirements for Cabling:
 - 1. Comply with TIA/EIA-568-B.1.
 - 2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices."
 - 3. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
 - 4. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches and not more than 6 inches from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
 - 5. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Install lacing bars and distribution spools.
 - 6. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
 - 7. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
 - 8. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.
- N. Optical Fiber Cable Installation:
 - 1. Comply with TIA/EIA-568-B.3.
 - 2. Cable shall be terminated on connecting hardware that is rack or cabinet mounted.
- O. Color-Coding: Color-code fire alarm conductors differently from the normal building power wiring. Use one color-code for alarm circuit wiring and another for supervisory circuits. Color-code audible alarm-indicating circuits differently from alarm-initiating circuits. Use different colors for visible alarm-indicating devices. Paint fire alarm system junction boxes and covers red.

3.4 CONNECTIONS

- A. Make addressable connections with a supervised interface device to the following devices and systems. Install the interface device less than 3 feet from the device controlled. Make an addressable confirmation connection when such feedback is available at the device or system being controlled.
 - 1. Alarm-initiating connections to the following:
 - a. Atrium smoke-control system (smoke management) at firefighter smoke-control panel.
 - b. Elevator Recall system and components.
 - c. Emergency shutoffs for gas and fuel supplies.
 - d. Smoke dampers and combination Fire/Smoke dampers in air ducts of designated air-conditioning duct systems.
 - e. Air handling systems for shutdown control relay.
 - f. Horizontal Sliding Fire Doors; Accordion-Type Fire Doors; Fire Shutters; or Fire Curtains.
 - 2. Supervisory connections to the following:
 - a. Valve supervisory switches.
 - b. Low-air-pressure switch of each dry-pipe sprinkler system.
 - c. Elevator shunt trip breaker.
 - d. Fire-pump engine control panel, including power failure, dead-phase or phase-reversal condition.
- B. Where fire-protection systems are specified in Division 08 Section "Door Hardware" to be integral to doors in fire-rated walls and partitions and to doors in smoke partitions, comply with requirements in Division 08 Section and Connect hardware and devices to fire-alarm system.
 - 1. Verify that hardware and devices are NRTL listed for use with fire-alarm system in this Section before making connections.

3.5 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."
 - 1. Paint junction box cover plates using red paint. Stencil the letters "FA" in white paint over red background.
 - 2. For all components of the fire alarm system requiring 120VAC power, provide a permanent engraved label at the component indicating the panel and circuit number from which it is fed.
- B. Install framed instructions in a location visible from fire-alarm control unit.
- C. Color-Coding:
 - 1. Color-code fire alarm conductors differently from the normal building power wiring.
 - 2. Use one color-code for alarm circuit wiring and a different color-code for supervisory circuits.
 - 3. Color-code audible alarm-indicating circuits differently from alarm-initiating circuits. Use different colors for visible alarm-indicating devices.
- D. Provide a red marking on all circuit breakers feeding any fire alarm control system in accordance with NFPA 72. Provide a permanent engraved label next to the circuit breaker(s) feeding the system that reads "Fire Alarm Control Circuit".

3.6 GROUNDING

- A. Ground fire-alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire-alarm control unit.

3.7 FIELD QUALITY CONTROL

- A. Field tests shall be witnessed by authorities having jurisdiction, as required.
 - 1. Provide 14 days' advance notice of tests and opportunity for observation of tests by Engineer and Owner's representative.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Tests and Inspections:
 - 1. Visual Inspection: Conduct visual inspection prior to testing.
 - a. Inspection shall be based on completed Record Drawings and system documentation that is required by NFPA 72 in its "Completion Documents, Preparation" Table in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter.
 - b. Comply with "Visual Inspection Frequencies" Table in the "Inspection" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72; retain the "Initial/Reacceptance" column and list only the installed components.
 - 2. Optical Fiber Cable Tests:
 - a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-B.1. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
 - b. Link End-to-End Attenuation Tests:
 - 1) Multimode Link Measurements: Test at 850 or 1300 nm in 1 direction according to TIA-526-14-A, Method B, One Reference Jumper.
 - 2) Attenuation test results for links shall be less than 2.0 dB. Attenuation test results shall be less than that calculated according to equation in TIA/EIA-568-B.1.
 - 3. System Testing: Comply with "Test Methods" Table in the "Testing" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
 - 4. Test audible appliances for the public operating mode according to manufacturer's written instructions. Perform the test using a portable sound-level meter complying with Type 2 requirements in ANSI S1.4.
 - 5. Test audible appliances for the private operating mode according to manufacturer's written instructions.
 - 6. Test visible appliances for the public operating mode according to manufacturer's written instructions.
 - 7. Conduct Acceptance Testing per NFPA 92A (8.4) for Firefighters' Smoke-Control Station.
 - 8. Factory-authorized service representative shall prepare the "Fire Alarm System Record of Completion" in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72 and the "Inspection and Testing Form" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
- D. Reacceptance Testing: Perform reacceptance testing to verify the proper operation of added or replaced devices and appliances.
- E. Fire-alarm system will be considered defective if it does not pass tests and inspections.

- F. Prepare test and inspection reports.
- G. Maintenance Test and Inspection: Perform tests and inspections listed for weekly, monthly, quarterly, and semiannual periods. Use forms developed for initial tests and inspections.
- H. Annual Test and Inspection: One year after date of Substantial Completion, test fire-alarm system complying with visual and testing inspection requirements in NFPA 72. Use forms developed for initial tests and inspections.

3.8 ADJUSTING

- A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project outside normal occupancy hours for this purpose.
- B. Follow-Up Tests and Inspections: After date of Substantial Completion, test the fire alarm system complying with testing and visual inspection requirements in NFPA 72. Perform tests and inspections listed for three monthly, and one quarterly, periods.

3.9 CLEANING

- A. Clean components according to manufacturer's written instructions.
- B. On completion of device box installation but before any wiring devices are installed, inspect interior of boxes and perform the following:
 - 1. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
- C. On completion of initiation and notification devices installation, inspect exterior surfaces and perform the following:
 - 1. Remove paint splatters and other spots.
 - 2. Remove all temporary markings and labels.
 - 3. Wipe down all devices with approve cleaning agent to remove fingerprints and dust.

3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's management and maintenance personnel to adjust, operate, and maintain fire-alarm system. Refer to Division 01 Section "Demonstration and Training."

SECTION 283500

REFRIGERANT DETECTION AND ALARM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes refrigerant monitors, notification appliances, and SCBA.

1.3 DEFINITIONS

- A. CMOS: Complementary metal-oxide semiconductor.
- B. LCD: Liquid-crystal display.
- C. LED: Light-emitting diode.
- D. MOS: Metal-oxide semiconductor.
- E. NDIR: Non-dispersive infrared.
- F. PIR: Photoacoustic infrared.
- G. SCBA: Self-contained breathing apparatus.

1.4 ACTION SUBMITTALS

- A. Product Data:
 - 1. For each type of refrigerant monitor, include refrigerant sensing range in ppm, temperature and humidity range, alarm outputs, display range, furnished specialties, installation requirements, and electric power requirement.
 - 2. For SCBA, include mounting details, service requirements, and compliance with authorized Federal agency.
- B. Shop Drawings:
 - 1. Air-Sampling Tubing: Size, routing, and termination including elevation above finished floor.
 - 2. Wiring Diagrams: Power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Include machinery-room layout showing location of monitoring devices and air-sampling tubing with filter/inlet locations in relation to refrigerant equipment.
- B. Product Certificates: For monitoring devices and SCBA, signed by product manufacturer.
- C. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For refrigerant monitoring equipment and SCBA to include in emergency, operation, and maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. One calibration kit including clean air calibration gas bottle for zero calibration and specific refrigerant calibration gas for span calibration, minimum 58-L capacity, pressure regulator, and tubing.

1.8 COORDINATION

- A. Coordinate refrigerant detection and alarm system with refrigerant contained in refrigeration equipment for compatibility.

PART 2 - PRODUCTS

2.1 [CMOS] [MOS] REFRIGERANT MONITOR

- A. Description: Sensor shall be factory tested, calibrated, and certified to continuously measure and display the specific gas concentration and shall be capable of indicating, alarming, [shutting down fuel-fired equipment,]and automatically activating ventilation system.
- B. ASHRAE: Monitoring system shall comply with ASHRAE 15.
- C. Performance:
 - 1. Refrigerant to Be Monitored: [R-22] [R-134a] [R-407C] [R-410A].
 - 2. Range: 0 to 1000 ppm.
 - 3. Minimum Detectability: [50] <Insert value> ppm.
 - 4. Accuracy: Maximum 10 percent of full scale.
 - 5. Repeatability: Maximum plus or minus 2 percent of full scale.
 - 6. Response: Maximum 150 seconds for 90 percent of full scale, and 20-second step change.
 - 7. Detection Level Set Points:
 - a. Detection Level 1: [50] <Insert value> ppm.

- b. Detection Level 2: [250] <Insert value> ppm.
- 8. Operating Temperature: 32 to 104 deg F (0 to 40 deg C).
- 9. Relative Humidity: 20 to 95 percent, noncondensing over the operating temperature range.
- 10. Site Elevation: Maximum [6560 feet (2000 m)] <Insert elevation>.

D. Input/Output Features:

- 1. Maximum Power Input: 120-V ac, 60 Hz, 75 W.
- 2. Number of Sensor/Transmitter Points: [One] [Four] <Insert number>.
- 3. Alarm Relays: Minimum 3 relays at a minimum of 5-A resistive load each.
- 4. Alarm Set Points: Displayed and adjustable through keypad on front of meter.
- 5. Alarm Silence Switch: Mount in the front panel of the monitor to stop audible and visual notification appliances, but alarm LED remains illuminated.
- 6. Alarm Manual Reset: Momentary-contact push button in the front panel of the monitor stops audible and visual notification appliances, extinguishes alarm LED, and returns monitor to detection mode at current detection levels.
- 7. Display: Alphanumeric LCD, LED indicating lights for each detection level; acknowledge switch and test switch mounted on front panel; alarm status LEDs and service fault/trouble LEDs.
- 8. Audible Output: Minimum 75 dB at 10 feet (3 m).
- 9. Visible Output: Strobe light.
- 10. Analog Output: 0- to 10-V dc into 2k ohms, or 4- to 20-mA into 1k ohms.
- 11. Serial Output: RS-232 or RS-485[compatible with HVAC controls].
- 12. Enclosure: NEMA 250, [Type 1] [Type 12] <Insert type>, with locking quarter-turn latch and key.

2.2 NDIR REFRIGERANT MONITOR

- A. Description: Sensor shall be factory tested, calibrated, and certified to continuously measure and display the specific gas concentration and shall be capable of indicating, alarming, [shutting down fuel-fired equipment,]and automatically activating ventilation system.
- B. ASHRAE: Monitoring system shall comply with ASHRAE 15.
- C. Performance:
 - 1. Refrigerant to Be Monitored: [R-22] [R-123] [R-134a] [R-407C] [R-410A].
 - 2. Range: 0 to 1000 ppm.
 - 3. Sensitivity:
 - a. Minimum Detectability: [10] <Insert value> ppm.
 - b. Accuracy: 0 to 100 ppm; plus or minus 10 ppm. 100 to 1000 ppm; plus or minus 10 percent of reading.
 - c. Repeatability: Plus or minus 1 percent of full scale.
 - d. Response: Maximum [10] <Insert value> seconds per sample.
 - e. Detection Level Set Points:
 - 1) Detection Level 1: [1] <Insert value> ppm.
 - 2) Detection [Level 2] [Level 1]: [10] [50] <Insert value> ppm.
 - 3) Detection [Level 3] [Level 2]: [50] [250] <Insert value> ppm.
 - 4. Sensitivity:

- a. Minimum Detectability: [20] <Insert value> ppm.
- b. Accuracy: 0 to 100 ppm; plus or minus 20 ppm, 100 to 1000 ppm; plus or minus 5 percent of reading.
- c. Repeatability: Plus or minus 1 percent of full scale.
- d. Response: 50 percent of a step change in 60 seconds.
- e. Detection Level Set Points:
 - 1) Detection Level 1: [20] <Insert value> ppm.
 - 2) Detection [Level 2] [Level 1]: [50] <Insert value> ppm.
 - 3) Detection [Level 3] [Level 2]: [250] <Insert value> ppm.
- 5. Operating Temperature: 32 to 104 deg F (0 to 40 deg C).
- 6. Relative Humidity: 20 to 95 percent, noncondensing over the operating temperature range.[Compensate sensor for relative humidity.]
- 7. Site Elevation: Maximum [6560 feet (2000 m)] <Insert elevation>.

D. Input/Output Features:

- 1. Maximum Power Input: 120-V ac, 60 Hz, 75 W.
- 2. Number of Air-Sampling Points: [One] [Four] [Eight] [16] <Insert number>.
- 3. Air-Sampling Point Inlet Filter: 0.10-micron filter element for each sampling point.
- 4. Air-Sampling Point Analog Output: 0- to 10-V dc into 2k ohms, or 4- to 20-mA into 1k ohms matched to sensor output.
- 5. Alarm Relays: Minimum [3] [4] relays at a minimum of 5-A resistive load each.
- 6. Alarm Set Points: Displayed on front of meter and adjustable through keypad on front of meter.
- 7. Alarm Acknowledge Switch: Mount in the front panel of the monitor to stop audible and visual notification appliances, but alarm LED remains illuminated.
- 8. Alarm Manual Reset: Momentary-contact push button in the front panel of the monitor stops audible and visual notification appliances, extinguishes alarm LED, and returns monitor to detection mode at current detection levels.
- 9. Display: Alphanumeric LCD, LED indicating lights for each detection level; acknowledge switch and test switch mounted on front panel; alarm status LEDs and service fault LEDs.
- 10. Audible Output: Minimum 75 dB at 10 feet (3 m).
- 11. Visible Output: Strobe light.
- 12. Sensor Analog Output: 0- to 10-V dc into 2k ohms, or 4- to 20-mA into 1k ohms.
- 13. Serial Output: RS-232 or RS-485[compatible with HVAC controls].
- 14. Enclosure: NEMA 250, [Type 1] [Type 12] <Insert type>, with locking quarter-turn latch and key.

2.3 PIR REFRIGERANT MONITOR

- A. Description: Sensor shall be factory tested, calibrated, and certified to continuously measure and display the specific gas concentration and shall be capable of indicating, alarming, [shutting down fuel-fired equipment,]and automatically activating ventilation system.
- B. ASHRAE: Monitoring system shall comply with ASHRAE 15[and ASHRAE 147].
- C. Performance:
 - 1. Refrigerant to Be Monitored: [R-22] [R-123] [R-134a] [R-407C] [R-410A].
 - 2. Range: 0 to 1000 ppm.
 - 3. Sensitivity:

- a. Minimum Detectability: [1] <Insert value> ppm.
 - b. Accuracy: 0 to 50 ppm; plus or minus 1 ppm. 51 to 1000 ppm; plus or minus 10 percent of reading.
 - c. Repeatability: Plus or minus 1 percent of full scale.
 - d. Response: Maximum [10] <Insert value> seconds per sample.
 - e. Detection Level Set Points:
 - 1) Detection Level 1: [1] <Insert value> ppm.
 - 2) Detection [Level 2] [Level 1]: [10] [50] <Insert value> ppm.
 - 3) Detection [Level 3] [Level 2]: [50] [250] <Insert value> ppm.
4. Sensitivity:
- a. Minimum Detectability: [20] <Insert value> ppm.
 - b. Accuracy: 0 to 100 ppm; plus or minus 20 ppm, 100 to 1000 ppm; plus or minus 5 percent of reading.
 - c. Repeatability: Plus or minus 1 percent of full scale.
 - d. Response: 50 percent of a step change in 60 seconds.
 - e. Detection Level Set Points:
 - 1) Detection Level 1: [20] <Insert value> ppm.
 - 2) Detection [Level 2] [Level 1]: [50] <Insert value> ppm.
 - 3) Detection [Level 3] [Level 2]: [250] <Insert value> ppm.
- 5. Operating Temperature: 32 to 104 deg F (0 to 40 deg C).
 - 6. Relative Humidity: 20 to 95 percent, noncondensing over the operating temperature range. Compensate sensor for relative humidity.
 - 7. Site Elevation: Maximum [6560 feet (2000 m)] <Insert elevation>.

D. Input/Output Features:

- 1. Maximum Power Input: 120-V ac, 60 Hz, 75 W.
- 2. Number of Air-Sampling Points: [One] [Four] [Eight] [16] <Insert number>.
- 3. Air-Sampling Point Inlet Filter: 0.10-micron filter element for each sampling point.
- 4. Air-Sampling Point Analog Output: 0- to 10-V dc into 2k ohms, or 4- to 20-mA into 1k ohms matched to sensor output.
- 5. Alarm Relays: Minimum [3] [4] relays at a minimum of 5-A resistive load each.
- 6. Alarm Set Points: Displayed and adjustable through keypad on front of meter.
- 7. Alarm Silence Switch: Mount in the front panel of the monitor to stop audible and visual notification appliances, but alarm LED remains illuminated.
- 8. Alarm Manual Reset: Momentary-contact push button in the front panel of the monitor stops audible and visual notification appliances, extinguishes alarm LED, and returns monitor to detection mode at current detection levels.
- 9. Display: Alphanumeric LCD, LED indicating lights for each detection level; acknowledge switch and test switch mounted on front panel; alarm status LEDs and service fault/trouble LEDs.
- 10. Audible Output: Minimum 75 dB at 10 feet (3 m).
- 11. Visible Output: Strobe light.
- 12. Sensor Analog Output: 0- to 10-V dc into 2k ohms, or 4- to 20-mA into 1k ohms.
- 13. Serial Output: RS-232 or RS-485[compatible with HVAC controls].
- 14. Enclosure: NEMA 250, [Type 1] [Type 12] <Insert type>, with locking quarter-turn latch and key.

2.4 MONITOR ALARM SEQUENCE

- A. Detection Level 1: Notify HVAC control workstation of detection in the refrigeration equipment room on a rise or fall of refrigerant concentration to this level. Start ventilation system at low speed to allow occupancy by maintenance technicians to identify leaks. Cycle blue strobe lights.
- B. Detection [Level 2] [Level 1]: Notify the HVAC control workstation of the detection in the refrigeration equipment room on a rise or fall of refrigerant concentration to this level. Run ventilation system at high speed on a rise in concentration to this level, and change to low speed on a reduction in concentration below this level. Operate the ventilation system at high speed for a minimum of five minutes. Cycle amber strobe lights.
- C. Detection [Level 3] [Level 2]: Notify the HVAC control workstation of the detection in the refrigeration equipment room on a rise or fall of refrigerant concentration to this level. Sound alarm horns and cycle red strobe lights inside and outside refrigeration equipment room. Terminate operation of any combustion-process equipment located in the refrigeration equipment room. Provide manual reset for this detection level.
- D. Sensor Fault/Trouble: Notify HVAC control workstation of fault/trouble detection in monitor.

2.5 NOTIFICATION APPLIANCES

- A. Horns: Comply with UL 464; electric-vibrating-polarized type, listed by a qualified testing agency with provision for housing the operating mechanism behind a grille. Horns shall produce a sound-pressure level of 90 dBA, measured **10 feet (3 m)** from the horn.
- B. Visible Alarm Devices: Comply with UL 1971; three color xenon strobe lights, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate. The words "REFRIGERANT DETECTION" printed in minimum **1/2-inch- (13-mm-)** high letters on the lens. Rated light output is [75] [110] <Insert number> candela.

2.6 AIR-SAMPLING TUBING

- A. Annealed-Temper Copper Tubing: **ASTM B 88, Type L (ASTM B 88M, Type B).**
- B. Polyethylene Tubing: ASTM D 2737, flame-retardant, nonmetallic tubing rated for ambient temperature range of **10 to 150 deg F (minus 13 to plus 65 deg C).**

2.7 SCBA

- A. Description: Open-circuit, pressure-demand, compressed-air SCBA; includes completely assembled, portable, self-contained devices designed for application in hazardous breathing environment. Tested and certified by the National Institute for Occupational Safety and Health and the Mine Safety and Health Administration according to 42 CFR 84, Subpart H.
- B. Face Piece: [Silicon] [EPDM] [Nitrile rubber] [Silicon, EPDM, or nitrile rubber], one-size-fits-all with double-sealing edge, stainless-steel speaking diaphragm and lens retainer, five adjustable straps to hold face piece to head (two straps on each side and one on top), exhalation valve in mask, close-fitting nose piece to ensure no CO₂ buildup, and perspiration drain to avoid skin irritation and prevent lens fogging.

- C. Backplate: Ergonomically designed of [glass fiber] [aluminum] [thermoset plastic] [glass fiber, aluminum, or thermoset plastic].
- D. Harness and Carrier Assembly: Large triangular back pad, with backplate and adjustable waist and shoulders straps. Modular design, detachable components, easy to clean and maintain. Shoulder straps are padded with flame-resistant material, reinforced with stainless-steel cable, and attached with T-nuts, washers, and screws.
- E. Air Cylinder, Regulator, and Pressure Gages: [30] [45] [60]-minute, low-pressure 2216-psig (15.3-MPa), [carbon-fiber composite] [fiberglass composite] [all-] [carbon-fiber composite, fiberglass composite, or all-] aluminum cylinders fitted with quick-fill assembly for refilling and air transfer. Two-stage regulator, and gage with end of service time whistle signal.
- F. Wall-Mounted Case: Watertight[, high visibility orange or yellow], corrosion-resistant, tough, lockable plastic case.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with ASHRAE 15[and ASHRAE 147].
- B. Install air-sampling inlets, or diffusion type monitors in pits, tunnels, or trenches in machinery room that are accessible to personnel.
- C. Floor mount diffusion-type monitor, sensor/transmitters, or air-sampling inlets on slotted channel frame 12 to 18 inches (300 to 450 mm) above the floor in a location near the refrigerant source or between the refrigerant source and the ventilation duct inlet.
- D. Wall mount air-sampling multiple-point monitors with top of unit 60 inches (1525 mm) above finished floor.
- E. Run air-sampling tubing from monitor to air-sampling point, in size as required by monitor manufacturer. Install tubing with maximum unsupported length of 36 inches (915 mm), for tubing exposed to view. Terminate air-sampling tubing at sampling point with filter recommended by monitor manufacturer.
- F. Install air-sampling tubing with sufficient slack and flexible connections to allow for vibration of tubing and movement of equipment.
- G. Purge air-sampling tubing with dry, oil-free compressed air before connecting to monitor.
- H. Number-code or color-code air-sampling tubing for future identification and service of air-sampling multiple-point monitors.
- I. Extend air-sampling tubing from exhaust part of multiple-point monitors to outside.
- J. Extend air-sampling tubing from outdoors to outdoor inlet connection of NDIR monitors. Terminate air-sampling tubing at outdoor inlet location with filter recommended by monitor manufacturer.
- K. Install warning signs, labels, and nameplates to identify detection devices and SCBA according to Section 230553 "Identification for HVAC Piping and Equipment."

- L. Place warning signs inside and outside each door to the refrigeration equipment room. Sample wording: "AUDIBLE AND VISUAL ALARM SOUNDING INDICATES REFRIGERANT DETECTION - ENTRY REQUIRES SCBA."
- M. Audible Alarm-Indicating Devices: Install at each entry door to refrigeration equipment room, and position not less than **6 inches (150 mm)** below the ceiling. Install horns on flush-mounted back boxes with the device-operating mechanism concealed behind a grille.
- N. Visible Alarm-Indicating Devices: Install adjacent to each alarm horn at each entry door to refrigeration equipment room, and position at least **6 inches (150 mm)** below the ceiling.
- O. Mount primary[and secondary backup] SCBA on wall outside [each]interior door to refrigeration equipment room.

3.2 FIELD QUALITY CONTROL

- A. Testing Agency: [Owner will engage] [Engage] a qualified testing agency to perform tests and inspections and prepare test reports.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- C. Perform tests and inspections and prepare test reports.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Tests and Inspections:
 - 1. Inspect field-assembled components, equipment installation, and electrical connections for compliance with requirements.
 - 2. Test and adjust controls and safeties.
 - 3. Test Reports: Prepare a written report to record the following:
 - a. Test procedures used.
 - b. Test results that comply with requirements.
 - c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
- E. Repair or replace malfunctioning units and retest as specified above.

3.3 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain refrigerant detection devices and SCBA equipment. Refer to requirements in Section 017900 "Demonstration and Training."
- B. SCBA Training: Provide an instructional video that details operating procedures of equipment.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 311000
SITE PREPARATION

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Work included in this Section, while not inclusive but listed as a guide, shall include:
 - 1. Furnishing of all labor, tools, equipment and incidentals required to complete the work.
 - 2. Layout of work.
 - 3. Protection of existing trees.
 - 4. Removal of trees and other vegetation.
 - 5. Topsoil stripping.
 - 6. Clearing and grubbing.
 - 7. General site excavation.
 - 8. Removing below-grade improvements.

1.2 RELATED SECTIONS

- A. Coordinate the work of this Section with the Work of other Sections as required to properly execute the Work and as necessary to maintain satisfactory progress of the work of other Sections. Other Sections containing related work include but are not limited to the following:
 - 1. Erosion Control - Section 312500

1.3 REFERENCES

Meet requirements and recommendations of applicable portions of Standard listed.

- A. ASTM D698 - Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 lb/ft²).
- B. ASTM D4318 - Liquid Limit, Plastic Limit and Plasticity Index of Soils.
- C. Texas Department of Transportation Standard Specifications for Construction of Highways, Streets, and Bridges, 2014, TxDOT.

1.4 SUBMITTALS

- A. Samples:
 - 1. Provide adequate samples for determination of moisture density relationships and Plasticity Index (P.I.) of on-site materials, imported fill material and drainage aggregate.
- B. Tests Reports: Submit complete laboratory analysis of soil material proposed for fill material.
 - 1. Establish moisture density relationship of in-place sub-grade in accordance with ASTM D-698.
 - 2. Establish moisture density relationship of proposed select fill(s) material in accordance with ASTM D-698.
 - 3. Perform PI test on proposed select fill material to confirm conformance with the project specifications in accordance with ASTM D-4318.
 - 4. Gradation of drainage aggregate in accordance with ASTM C-136.

1.5 JOB CONDITIONS

- A. Traffic: Conduct site clearing operations to ensure minimum interference with roads, streets,

walk, and other adjacent occupied or used facilities. Do not close or obstruct streets, walks, or other occupied or used facilities without permission from the Owner.

- B. Protection of Existing Improvements: Provide protections necessary to prevent damage to existing improvements indicated to remain in place.
- C. Protect improvements on adjoining properties and on Owner's property.

1.6 NOTIFICATION OF OWNERS OF UTILITY LINES AND EQUIPMENT

- A. Notify any corporation, company, individual or local authority owning conduits, wires, pipes or equipment on site that is affected by demolition work.
- B. Arrange for removal or relocation of indicated items and pay any fees or costs in conjunction with removal or relocation, except as otherwise noted.
- C. Cap lines in accordance with instructions of governing authorities or Owners.

1.7 EXPLOSIVES

Use of explosives is strictly prohibited.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS

- A. Top Soil: Shall be rich, friable, sandy loam, free of lumps, debris, wood, roots, Nutgrass, Dallisgrass and reasonably free of other weeds and foreign grasses. Existing topsoil obtained by stripping and meeting the above requirements shall be stockpiled on site.
- B. Select Fill: Shall be select non-expansive sandy clay or clayey sand fill with a Plasticity Index (P.I.) of 4 to 12 and a Liquid Limit of 30% or less.
- C. Sand: Sand for wall backfill shall be pit run, free of organic matter, clays or other binders (concrete sand) with less than 10% passing the #200 mesh sieve.
- D. Non-select Fill: On-site clay material free of debris and vegetation processed so that clods or particles are a maximum of 2" in diameter.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Verify that abandoned utilities have been properly disconnected and capped.
- B. Verify that required barricades and other protective measures are in place.

3.2 DEMOLITION OPERATIONS

- A. Execute demolition of designated existing site items.
- B. Materials, equipment and debris resulting from demolition operations shall become property of Contractor, unless otherwise noted. Immediately remove demolition debris from site and legally dispose.

3.3 SALVAGE

- A. Salvage designated site items for relocation and reinstallation.
- B. Store and protect items until ready for installation.

3.4 CLEARING AND GRUBBING

- A. The designated area shall be cleared of all trees, brush, shrubbery, plants, etc., not indicated on the plans to be preserved. Concrete shall be removed where indicated. Trees and brush designated to be left in place shall be carefully trimmed as directed and shall be protected from scarring, barking or other injuries during construction operations. Pruned limbs over two inches in diameter shall be treated by painting the exposed ends with an approved asphaltic material. Unless otherwise indicated on the plans, trees and stumps shall be cut off or otherwise removed as close to the natural ground as practicable on areas which are to be covered by at least three feet of embankment. On areas required for borrow sites and materials sources, stumps, roots, etc., shall be removed to the complete extent necessary to prevent such objectionable matter becoming mixed with the material to be used in construction.

3.5 GENERAL SITE EXCAVATION

- A. The term Building area shall mean the area generally within a line 5 feet from all exterior building wall lines and includes walks abutting the building or walks within the building area.
- B. The entire building and paving site shall be cleaned of all debris, vegetation, organic matter, concrete and asphalt paving to a depth of 4" minimum before excavation is begun.
- C. Perform the necessary cutting of the site to establish the grade indicated on the Grading Plan. Cutting shall be sufficiently deep to allow for fill materials to be placed on top of cut area with the finish top soil or paving material to attain the final finish grades.
- D. After acceptance of exposed cut surfaces by the Testing Laboratory, the exposed surface shall be proof-rolled. Soft, loose areas shall be removed to a level of stiff or dense soil. Backfill with acceptable select fill, moisture condition and compact as required by these specifications and the plans.
- E. Areas designated for planting or within the limit of construction not covered by building or pavements shall be held down 6" below finish grade for topsoil placement.
- F. General Demolition: Shall consist of removal and disposal of pavements and other obstructions visible at the ground surface, underground structures and utilities indicated to be demolished and removed. Remove all such excavated materials from site.
- G. Unauthorized Excavation: Consists of removal of materials beyond indicated subgrade elevations or dimensions without prior approval by engineer. Under footings, foundation bases, or retaining walls, fill unauthorized excavation by extending the indicated bottom elevation of the footing or base to the excavation bottom, without altering required top elevation. Backfill and compact unauthorized excavations as specified for authorized excavations of same classification.

3.6 BACKFILL AND FILL - GENERAL

- A. Surface Preparation for Fill: Scarify soil to a depth of 6", moisture condition the soil at optimum moisture. Compact to 95% of Standard Proctor at moisture contents at or above the Proctor optimum.

- B. Backfill and Fill: Place backfill and Select Fill materials in 6" loose lift. Before compaction, bring soil to optimum moisture. Compact each layer to required percentage of maximum density for each area of classification. Do not place backfill material on surfaces that are muddy or frozen.

3.7 GRADING

Uniformly grade all areas including adjacent transition areas and at all miscellaneous ground structures, curbs and walks, grade surrounding area uniformly to top of curb, walk or structure unless shown otherwise.

- A. Finish Grading: Grade area adjacent to building lines to drain away from structures and to prevent ponding. Finish surfaces to be free from irregular surface changes.
- B. Topsoil: Where areas are designated as planting, hold down subgrade 6". Fill with topsoil to required finish grade or to top of surrounding ground structure. Top soil shall be placed to a depth of 6", spread and hand raked to required finish grades. Top soil be placed over all fill areas, areas designated as planting and all areas not covered by building or pavement included in this contract. Coordinate topsoil placement and requirements with landscape work.

3.8 MAINTENANCE

- A. Protect newly graded areas from traffic and erosion and keep free of trash and debris.
- B. Repair and re-establish grades in settled, eroded and rutted areas to required finish elevations.
- C. When completed, compacted areas are disturbed by subsequent construction operations or adverse weather, scarify the surface, reshape and compact to the required density prior to further construction.

3.9 DISPOSAL OF SPOILAGE AND CLEANOUT:

- A. All materials excavated or scheduled to be removed from the site, including, but not limited to concrete paving, asphalt paving, natural soils, abandoned utilities, rock, etc. shall be legally disposed off the site by the Contractor.
- D. During the course of the construction, the site shall be maintained free of excavated materials, spoilage, etc. and shall be kept clean and neat at all times.

END OF SECTION

SECTION 312000

EARTH MOVING

PART 1 - GENERAL

1.1 SECTION INCLUDES:

- A. Work included in this Section, while not at all inclusive but listed as a guide, shall include:
 - 1. Furnishing of all labor, tools, equipment and incidentals to complete the work.
 - 2. Layout of the work.
 - 3. All required excavation within the limits of the site.
 - 4. Removal, proper utilization or disposal of all excavated material.
 - 5. Shaping and finishing of all earthwork in conformity to the lines and grades as shown on the plans.
 - 6. Placement and compaction of all suitable material obtained from excavation, or other excavation on the site.
 - 7. Backfill for structures.

1.2 RELATED SECTION

- A. Coordinate the work of this Section with the Work of other Sections as required to properly execute the Work and as necessary to maintain satisfactory progress of the work of other Sections. Other Sections containing related work include but are not limited to the following:
 - 1. Erosion Control - Section 312500

1.3 REFERENCES

Meet requirements and recommendations of applicable portions of Standard listed.

- A. ASTM D698 - Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 lb/ft²).
- B. ASTM D4318 - Liquid Limit, Plastic Limit and Plasticity Index of Soils.
- C. Texas Department of Transportation Standard Specifications for Construction of Highways, Streets, and Bridges, 2014, TxDOT.

1.4 SUBMITTALS

- A. Samples: Provide adequate samples for determination of moisture density relationships and Plasticity Index (P.I.) of on-site materials, imported fill material and drainage aggregate.
- B. Safety Plan: When trench excavation exceeds a depth of five feet (5'), submit detailed plans and specifications for trench safety systems to meet the OSHA requirements necessary to satisfy federal and state laws and regulations. The trench safety plan shall be designed and sealed by a Registered Professional Engineer, licensed in the State Texas.
- C. Storm Water Pollution Prevention Plan: Prior to beginning the Earthwork, the Contractor shall develop and enforce a Storm Water Pollution Prevention Plan in accordance with the latest E.P.A. regulations. The Plan shall be prepared and sealed by a Registered Professional Engineer in the State of Texas. Submit five (5) copies of the Plan for the review.
- D. Test Reports: Submit complete laboratory analysis of soil material proposed for fill material.
 - 1. Establish moisture density relationship of in-place sub-grade in accordance with ASTM

- D-698.
2. Establish moisture density relationship of proposed select fill(s) material in accordance with ASTM D-698.
 3. Perform PI test on proposed select fill material to confirm conformance with the project specifications in accordance with ASTM D-4318.
 4. Gradation of Drainage Aggregate in accordance with ASTM C-136.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS

- A. Top Soil: Shall be rich, friable, sandy loam, free of lumps, debris, wood, roots, Nutgrass, Dallisgrass and reasonably free of other weeds and foreign grasses. Existing topsoil obtained by stripping and meeting the above requirements shall be stockpiled on site.
- B. Select Fill: Shall be select non-expansive sandy clay or clayey sand fill with a Plasticity Index (P.I.) of 4 to 12 and a Liquid Limit of 30% or less.
- C. Sand: Sand for wall backfill shall be pit run, free of organic matter, clays or other binders (concrete sand) with less than 10% passing the #200 mesh sieve.
- D. Non-select Fill: On-site clay material free of debris and vegetation processed so that clods or particles are a maximum of 2" in diameter.

2.2 ACCESSORIES

- A. Drainage Fabric:
 1. Mirafi Filter Fabric(O.A.E.), ASTM D4491.

2.3 ON SITE ROCK

- A. Rock Excavated on-site may be utilized as embankment, backfill, subgrade and base material provided it meets the following usage requirements.
 1. Embankment: The maximum dimension of any rock, clod or lump shall be less than the depth of the embankment layer, and in no case shall any rock over two (2) feet in its maximum dimension be placed in an embankment. Any over-sized rock, which is otherwise acceptable material, may be broken to the required dimension and utilized in embankment construction.
 2. Backfill: See Section 312334 - Excavation and Backfill for Conduits.

2.4 BORROW

This material shall consist of suitable earth material, other than rock, such as loam clay, or other such materials approved by engineer that will form a stable embankment.

PART 3 - EXECUTION

3.1 EXCAVATION

- A. Construction Methods: The Contractor shall abide by all applicable federal, state and/or local laws governing excavation work. All excavation shall be in accordance with the lines, grades and typical sections as shown on the plans. Unless otherwise shown on the plans, excavation shall be made to the subgrade. Where excavation terminates in unstable soil, the Contractor shall remove the unstable soil and backfill to the required grade.
Where excavation terminates in loose or solid rock, the Contractor may be required to extend

the depth of excavation six inches and to backfill with select material compacted as required.

- B. Provisions for Drainage: If it is necessary in the execution of the work to interrupt the natural drainage of the surface, or the flow of artificial drains, the Contractor shall provide temporary drainage facilities that shall prevent damage to public or private interest and shall restore the original drains as soon as the work shall permit. The Contractor shall be held liable for all damages which may result from neglect to provide for either natural or artificial drainage which his work may have interrupted.
- C. Excess Excavation: Excavation in excess of that needed for construction shall be disposed of by the Contractor at no additional cost to the Owner. In general, excess excavation shall be used in widening of embankments, flattening of slopes, etc. but, if it becomes necessary to waste any material, it shall be disposed of in such a manner as to present a neat appearance and to not obstruct proper drainage or cause injury to any improvements or abutting property.

3.2 EMBANKMENT

- A. Construction Methods: Prior to the placing of any embankment, all clearing and grubbing and site preparation shall have been completed. Stump holes or other small excavations within the limits of the embankment shall have been backfilled before commencing the subgrade construction. The surface of the ground, including plowed or loosened ground or small ditches or washers, shall be restored to approximately its original slope.
 - 1. The surface of hillsides shall be loosened by the scarifying or plowing to a depth of not less than four inches, or cut into steps before embankment materials are placed. The embankment shall then be placed in layers as hereinafter specified, beginning at the low side in part widths as the embankment is raised. The material which has been loosened shall be re-compacted simultaneously with embankment material placed at the same elevation. Where embankment is to be placed over or adjacent to existing embankments, the slopes shall be plowed or scarified to a depth not less than four inches and the embankment built up in successive layers, as hereinafter specified, to the level of the old embankment before its height is increased. Then, the old embankment shall be scarified and re-compacted with the next layer of embankment. The total depth of the scarified and added materials shall not exceed the permissible depth of the layer.
 - 2. All embankments for road beds or pavements shall be constructed in layers approximately parallel to the finished grade of the street and shall be so constructed as nearly as possible to conform to the cross section of the subgrade section. Embankments shall be constructed to the established grade and to the shape of the typical section shown on the plans, and each section shall conform to the detailed sections of slopes. After completion of the embankment, it shall be continuously maintained to its finished section and grade until the project is accepted.
 - 3. Earth embankments shall be constructed in successive layers, for the full width of specified depth or cross sections; and in such length as are suitable for the sprinkling and compaction methods to be used. Each layer of earth embankment shall be uniform as to material, density, and moisture content before beginning compaction. Prior to compaction, the layers shall not exceed six inches in depth for pneumatic tire rolling or eight inches in depth for rolling with other types of rollers.
 - 4. Earth embankment placed adjacent to and over pipes, culverts, and other structures shall be of suitable material and shall be placed in successive layers approximately horizontal. Layers of embankment shall be brought up uniformly on each side of the structure, and special care shall be taken to prevent any wedging action against the structure. For such distances along embankments adjacent to structures where it is impracticable to obtain compaction by rolling, the embankment material shall be placed in layers not exceeding six inches in depth of loose material wetted uniformly to the moisture content just above optimum; and shall then be compacted by mechanical hand compactors or other approved methods, maintaining the required moisture content by additional sprinkling, if

necessary, supplemented by such hand work as is necessary to secure a uniform and thoroughly compacted fill, until each layer has been uniformly compacted.

5. All earth, cuts, full of part width in the side of a hill, which are not required to be excavated below subgrade elevation for base or backfill, shall be scarified to a uniform depth of not less than six inches below grade shown on the plans; and the materials shall be mixed and reshaped by blading and then sprinkled and rolled in accordance with the hereinabove outlined requirements for earth embankments.

- B. Density Testing: For each layer of earth embankment and select material, the relative compaction of the embankment shall be as shown on the plans. After each section of earth embankment or select material is completed, moisture-density tests shall be made as follows:

Paved Areas/Structural Foundations - one test per 2000 sf.
Sidewalk and grassed areas - one test per 3000 sf.

3.3 BACKFILL FOR STRUCTURES

- A. Preparation:
 1. Prior to backfilling below grade walls, verify that preceding work has been satisfactory completed, including membrane waterproofing and sub-soil drainage system.
 2. Verify that forms, trash, debris and any temporary shoring has been removed.
 3. Verify that basements walls or other earth retaining walls shown on the plans are supported as required on the structural drawings.
- B. Grade Beams: Backfill with select fill. Place backfill in layers not exceeding 8" loose depth, compact to density specified elsewhere.
- C. Basement Walls: Backfill with select fill and as noted in sections and details on the drawings. Extend backfill to within 2 feet of established rough grade. Place backfill in layers not exceeding 8" loose depth and compact to 95% Standard Proctor. Backfill final one foot with approved clay material.
 1. When planting is scheduled adjacent to building, hold top of clay fill down to depth required for placement of top soil.
 2. When pavement is scheduled adjacent to wall, backfill with select fill and carry it to the required sub-grade elevation required for pavements.

3.4 SUBGRADE PREPARATION FOR PAVEMENTS

- A. Scarify existing soil prior to placing any fill material, or providing soil stabilization. Compact in-place material to a minimum of 95% Standard Proctor density.
- B. Place fill material (or stabilized soil) in 6" loose lifts, compact each lift to 95% Standard Proctor density.

3.5 GRADING

Uniformly grade all areas including adjacent transition areas and at all miscellaneous ground structures, curbs and walks, grade surrounding area uniformly to top of curb, walk or structure unless shown otherwise.

- A. Finish Grading: Grade area adjacent to building lines to drain away from structures and to prevent ponding. Finish surfaces to be free from irregular surface changes.
- B. Topsoil: Where area are designated as planting, hold down subgrade 6". Fill with topsoil required finish grade or to top of surrounding ground structures. Top soil shall be placed to a

depth of 6", spread and hand raked to required finish grades. Top soil shall be placed over all fill areas, areas designated as planting and all areas not covered by building or pavement included in this contract. Coordinate topsoil placement and requirements with landscape work.

END OF SECTION

SECTION 312313

SUBGRADE PREPARATION

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Work included in this Section, while not all inclusive but listed as a guide shall include.
 - 1. Furnishing of all labor, tools, equipment and incidentals to complete the work.
 - 2. Layout of the work.
 - 3. All required excavation within the limits of the work area.
 - 4. Removal, proper utilization or disposal of all excavated material.
 - 5. Compacting, shaping and finishing of all subgrade in conformity to the alignment, cross section, and elevation shown on the plans.
 - 6. Sprinkling for dust control.
- B. Submit complete laboratory analysis of soil material proposed for fill material.
 - 1. Establish moisture density relationship of in-place sub-grade in accordance with ASTM D-698.
 - 2. Establish moisture density relationship of proposed select fill(s) material in accordance with ASTM D-698.
 - 3. Perform PI test on proposed select fill material to confirm conformance with the project specifications in accordance with ASTM D-4318.

1.2 RELATED SECTIONS

- A. Coordinate the work of this Section with the Work of other Sections as required to properly execute the Work and as necessary to maintain satisfactory progress of the work of other Sections. Other Sections containing related work include but are not limited to the following:
 - 1. Earthwork – Section 312315
 - 2. Excavation and Backfill for Conduits – Section 312334

1.3 REFERENCES

Meet requirements and recommendations of applicable portions of Standards listed.

- A. ASTM D698 - Laboratory Compaction Characteristic of Soil Using Standard Effort (12,400 lb/ft;).
- B. ASTM D4318 - Liquid Limit, Plastic Limit and Plasticity Index of Soils.
- C. Texas Department of Transportation Standard Specifications for Construction of Highways, Streets, and Bridges, 2014, TxDOT.

PART 2 - PRODUCTS n/a

PART 3 - EXECUTION

- 3.1 **GENERAL:** After the excavation or embankment has been substantially completed, the subgrade shall be brought to the proper alignment, cross-section and elevation, so that after rolling and subsequent finishing operations, it shall conform to the correct configuration and dimensions as indicated on plans.

- 3.2 EQUIPMENT: All equipment necessary for the construction of this item shall be suitable for the work considering the confined work area and shall be approved by the **engineer** as to condition before the contractor shall be permitted to begin construction operations on which the equipment is to be used. Hand operated mechanical tampers may be used.
- 3.3 COMPACTION: Compaction shall consist of the equipment operation, as herein specified discretion.
- A. Compaction Methods: The method of compaction shall be left to the discretion of the contractor. Each layer of fill, if dry, shall be wetted uniformly to the moisture content required to obtain the desired density and shall be compacted by means of tamps or rammers.
- 3.4 FINISHED SUBGRADE: After completion of the compaction and immediately ahead of the application of pavement, the subgrade shall then be tested with templates or string lines by the Contractor. All irregularities which develop in excess of one-half inch in a length of 16 feet (12.5 mm in 5M) measured longitudinally shall be corrected by loosening, adding or removing material; reshaping; and recompacting by sprinkling and rolling. The completed subgrade shall have a uniform density of not less than of the maximum density, as shown on the plans, determined by ASTM D 698. Moisture content shall be within minus 2 to plus 4 of optimum.
- The subgrade shall be maintained in a smooth, compacted condition, in conformity with the required pavement section and established grade, until the pavement is placed, and shall be kept wetted down sufficiently in advance of placing any pavement to ensure its being in a firm and moist condition for at least two inches below surface of the prepared subgrade. Only such subgrade as is necessary for the satisfactory prosecution of the work shall be completed ahead of the placement of pavement. Complete drainage of the subgrade shall be provided at all times.
- 3.5 SPRINKLING FOR DUST CONTROL: Sprinkling for dust control shall consist of the authorized application of water on those portions of the projects as shown on the plans or as directed and herein specified.
- The Contractor shall operate a sprinkler which shall insure the distribution of water in a uniform and controllable rate of application. It shall be the Contractor's continuous responsibility at all times including nights, holidays, weekends, etc., until acceptance of the project by the owner, to maintain the project free of dust in a manner which shall cause the least inconvenience to the public.
- 3.6 COMPACTION TESTS: The completed subgrade shall be tested for compaction and moisture content at the rate of one test per 10,000 square foot.

END OF SECTION

SECTION 312334

EXCAVATION AND BACKFILL FOR CONDUITS

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Work included in this Section, while not all inclusive but listed as a guide, shall include:
 - 1. Furnishing of all labor, tools, equipment, materials and incidentals to complete the work.
 - 2. Layout of work.
 - 3. Excavation and backfill for underground pipes and conduits.
 - 4. Trench safety.
 - 5. Testing.
 - 6. Clean up.

1.2 RELATED SECTIONS

- A. Coordinate the work of this Section with the Work of other Sections as required to properly execute the work as necessary to maintain satisfactory progress of the Work of other Sections. Other Sections containing related work include but are not limited to the following:
 - 1. Storm Sewer Line Installation - Section 334100

1.3 REFERENCES

Meet requirements and recommendations of applicable portions of the Standards listed.

- A. ASTM C33 - Concrete Aggregates.
- B. ASTM D4318 - Liquid Limit, Plastic Limit and Plasticity Index of Soils.
- C. ASTM D698 - Laboratory Compaction Characteristics of Soil Using Standard Effort.
- D. American Society of Testing and Materials, ASTM.
- E. Texas Department of Transportation Standard Specifications for Construction of Highways, Streets, and Bridges, TxDOT 2014.

1.4 SUBMITTALS

- A. Samples:
 - 1. Provide adequate samples for determination of moisture density relationship and Plasticity Index (P.I.) of on-site materials, imported fill material and drainage aggregate.
- B. Trench Excavation Protection shall be as required by the provisions of Part 1926, Subpart P - Excavations, trenching, and shoring of the Occupational Safety and Health Administrations Standards and Interpretations. Additional information may be obtained from the U.S. Department of Labor Occupational Safety and Health Administration (OSHA), 525 Griffin Square Building, Room 602, Dallas, Texas 75202, (214) 767-4731.
- C. Furnish and pay for services of Professional Engineer registered in the State of Texas to prepare detailed plans and specifications for trenching and excavation safety systems to meet the requirements of OSHA and Federal, City, and State Law and regulations. Such documents when prepared shall be separately issued by the Contractor to be included within the

- D. Submit one copy of the trench and safety documents to the Owner.

PART 2 - PRODUCTS

2.1 PIPE BEDDING MATERIAL FOR STORM SEWERS

- A. General: The pipe shall be bedded in accordance with details shown on the plans for the type of bedding indicated or specified.
- B. Gravel:
1. Screened Pit Gravel: Passing 1 inch sieve and retained on 5/8 inch sieve.
 2. Pea Gravel: Passing 5/8 inch sieve and retained on 1/8 inch sieve.
 3. The aggregate used shall contain not more than a total of eight percent by weight of deleterious substances such as clay, shale or organic matter.

2.2 PIPE BEDDING MATERIAL FOR WATER AND SANITARY SEWER MAINS

- A. Crushed Stone Embedment:
1. Description: The aggregate shall consist of durable particles of crushed stone; free from frozen material or injurious amount of salt, alkali, vegetable matter or other material either free or as adherent coating; and its quality shall be reasonably uniform throughout. It shall have a wear of not more than 40 percent when tested in accordance with Texas TxDOT Test Method Tex-410-A.
 2. Test: When tested by standard laboratory methods, crushed rock embedment for each gradation shall meet the following requirements for percentage by weight.

	<u>PERCENT</u>
Retained on 1-1/2 inch sieve	0%
Retained on 1 inch sieve	0-5%
Retained on 2 inch sieve	40-75%
Retained on No. 4 sieve	90-100%
Retained on No. 8 sieve	95-100%

Fine Crushed Rock - Aggregate Grade 8

	<u>PERCENT</u>
Retained on 2 inch sieve	0%
Retained on 3/8 inch sieve	0-5%
Retained on No. 4 sieve	35-60%
Retained on No. 8 sieve	90-100%

<u>Coarse Crushed Rock</u>	<u>PERCENT</u>
Passing 1-1/2 inch sieve	100%
Retained on 3/4 inch sieve	100%

- B. Granular Material: Granular material shall be free flowing, such as sand or hydraulically graded crushed stone fines, or mixed sand and gravel, or sandy loam. The material shall be free from lumps, stones over two inches in diameter, clay and organic matter.
- C. Select Material: Select material shall be gravel, fine rock cuttings sand, sandy loam or loam free from excessive clay. Rock cuttings shall have no dimension greater than two inches.

- D. Natural Gravel: Natural gravel shall consist of uncrushed stones meeting the requirements for wear as outlined in Item 2.2A. The material shall be washed and screeded and not have by weight more than one percent organic matter, clays or loam are not more than five percent by weight of anyone of or combination of slate, shale, schist or soft particles of sandstone. The graduation shall be:

	<u>PERCENT</u>
Passing 1-1/2 inch sieve	100%
Retained on 3/4 inch sieve	100%

- E. Sand: Sand shall consist of clean, hard, durable, uncoated grains, free from lumps and organic material. All particles must pass a No. 8 sieve.

PART 3 - EXECUTION

3.1 EXCAVATION

- A. General: In general, all excavation shall be made in open cut from the surface of the ground and shall be no greater in width or depth than is necessary to permit the proper construction of the work in accordance with the plans and these specifications. All excavation shall be to the line and grade shown on the plans. The entire foundation area in the bottom of all excavation shall be firm, stable, and at uniform density as nearly as practicable. Unless necessary, materials shall not be disturbed. The final cleaning off and preparing of the foundation area shall be done immediately prior to the placing of the conduit or structures.

1. Trench Bottom Elevation. All trenches for installation of water, storm sewer and/or sanitary sewer lines shall be excavated to a point below the barrel of the pipe for the type of embedment specified.
2. Trench Overcut. Should the Contractor excavate below the plan trench bottom for water or sewer lines, he shall backfill to trench bottom grade shown on the plan with approved aggregate, consolidated and compacted. If the Contractor elects to overcut the trench and use gravel and drain pipe as an underdrain in lieu of or in conjunction with pumping, draining or well pointing, the additional work shall be considered as incidental work; and additional compensation shall not be allowed.

Where the character of the foundation material is such that a proper foundation cannot be prepared at the elevation shown on the plans, the Contractor shall deepen the excavation to where a proper foundation can be prepared. Such material removed shall be replaced with foundation materials and thoroughly compacted in place to the finished grade elevation.

3. Excess Trench Width. When the following maximum trench widths are not maintained to a point of one foot above the top of the pipe, the Contractor shall provide at his expense the next higher class of embedment; or embedment as directed by the Owner which shall provide adequate support.

a) Width of Trench. The limiting trench width shall be as follow:

- 1) For 24-inch pipe and smaller, the trench width shall be taken as 24 inches or O.D. of the pipe plus 16 inches whichever is greater.
- 2) For pipe larger than 24 inch size, but not to exceed 72-inch, the trench width shall be taken as equal to the O.D. of the pipe installed plus 24 inches.
- 3) For pipe larger than 72-inch (1.8M) size, the trench width shall be taken as equal to the O.D. times plus 1.25 plus 1 ft.
- 4) Progress: The Owner shall have the right to limit the amount of trenches that shall be opened, or partly opened, in advance of or following the pipe laying operation. Unless otherwise directed by the Owner, the completion of backfill shall immediately follow the pipe laying. In the event the

Contractor fails to comply with this requirements, the Owner may stop the pipe laying until the requirements are met.

- B. Excavation Classifications: All excavation is unclassified and involves removal of all materials necessary to permit carrying on the completion of the work. Bidders must satisfy themselves as to the actual existing subsurfaces conditions, including but not limited to the depth, location and sizes of pipe or conduits of various kinds in place.
- C. Existing Utilities: The Contractor shall thoroughly familiarize himself with available information regarding existing on-site utilities. He shall uncover critical points prior to beginning any trench excavation. Changes to the drawings due to conflicts with existing utilities require the prior approval of the Owners Representative.
- D. Work Sequence: The Contractor shall schedule his work so that all utilities are fully operational. Maintaining acceptable clearance between utilities will be the responsibility of the Contractor.

3.2 SHORING AND SHEETING

When necessary to prevent caving or unduly hazardous working conditions, or to comply with existing laws, trench walls shall be appropriately braced; or sheeted and braced. Where bracing or sheeting and bracing are used, the trench width shall be increased accordingly, shall be considered as incidental work; and shall not be paid for as a separate item. In wet, saturated or flowing materials where it is necessary to install tight sheeting or cofferdams, wood or steel sheet piling shall be used. All sheeting, shoring and bracing shall have strength and rigidity to withstand the pressure exerted; to maintain the side of the excavation properly in place; and to protect all persons or property from injury or damage. When excavations are made adjacent to existing buildings or other structures, or in paved streets, particular care shall be taken to adequately sheet, shore and brace the sides of the excavation to prevent undermining of, or settlement beneath the structures or pavement. Underpinning of adjacent structures or pavement has become necessary it shall be removed, the void satisfactorily refilled, compacted and the pavement replaced. Wooden sheeting, shoring and bracing shall be left in place where it is adjacent to the pipe embedment for the initial lift of backfill. The removal of all sheeting, shoring and bracing shall be done in such manner as not to endanger or damage either new or existing structures, private or public properties; and so as to avoid cave-ins, or sliding of the banks. All holes or voids left by the removal of the sheeting, shoring or bracing shall be immediately and completely filled and compacted with suitable materials. If, for any reason, the Contractor elects to leave in place the sheeting, shoring or bracing, no payment shall be allowed for such material left in place.

- A. Disposal of excavated materials: Suitable excavated materials may be piled adjacent to the work to be used for backfilling. Excavated materials unsuitable for backfilling, or in excess of that required for backfilling, shall be disposed of. Desirable topsoil, sod, etc., shall be carefully removed and piled separately adjacent to the work when required. Excavated materials shall be handled at all times in such manner as to cause a minimum of inconvenience to public travel and to permit safe and convenient access to private and public property adjacent to or along the lie of the work. The excavated material in rock which is not suitable material for bedding or backfill shall be disposed of. Suitable selected bedding or backfill material shall be provided at no additional cost to the Owner. The contractor shall indemnify and hold harmless the Owner and all of his officers, agents and employees from all suits, actions or claims of any character resulting from his arrangements for and disposal of soil.
- B. Dewatering: The Contractor shall remove all water from any source which may accumulate in the excavation. The embedment or pipe shall not be installed in water. No water shall be allowed to flow through or over unset concrete or through the completed line. All water removed from excavations shall be disposed of in an approved manner, so as not to create

unsanitary conditions; nor to cause injury to persons or property; nor damage to the work in progress, and/or not to interfere unduly with the use of streets, private driveways or entrances. Pumping, bailing and draining, underdrains, ditches, etc., shall be considered as incidental work and shall not be paid for as separate items.

3.3 BACKFILL

- A. Backfill Procedure: Backfill procedure is that procedure required to return trenches or excavated areas to a satisfactory condition. Such backfilling occurs in two general areas: They are:

1. Areas not subject to vehicular traffic:
and
2. Areas subjected directly to, or influenced by, vehicular traffic.

The methods of backfilling to be used shall vary with the width of trench, the character of the materials excavated, the method of excavation, the type of conduit and the degree of compaction required. The placing of backfill shall not begin until the pipe structure has been properly bedded and jointed. The excavation shall be backfilled only with approved material. Backfill is divided into two major categories:

1. Embedment is the material upon which the pipe rests; and which covers sewer and water lines.
2. Trench backfill material is the material required to fill the trench from the top of the embedment to ground elevation or subgrade or a street.

- B. Compaction: Compaction of all backfill material shall be performed in a manner that shall not crack, crush and/or cause the installed pipe to be moved from the established grade and/or alignment, as shown on the plans. Satisfactory density shall be obtained at various depths on all backfill material as indicated from random selected test points prior to the required exfiltration or pressure tests that are to be performed on lines being constructed. The required densities shall be at not less than the optimum moisture of the material.

1. Densities - areas subjected to or influenced by vehicular traffic. The trench backfill shall be mechanically compacted to the top of the subgrade in six-inch lifts to at least 95 percent of maximum density as determined by ASTM D698. Moisture content shall be within minus 2 to plus 4 of optimum. The embedment shall be compacted to a density as specified under the description of the embedment required.
2. Densities - areas not subjected to or influenced by vehicular traffic. The trench backfill shall be placed in layers into more than 10 inches in depth (loose measurement) and shall be compacted by whatever means the Contractor chooses, to a density comparable with the adjacent undisturbed material. The embedment shall be compacted to a density as specified under the description of the embedment required.
3. Special situations. In areas specifically designated in the plans and specifications, the entire backfill shall be backfilled and compacted to the density specified.
4. Limitations. Densities as specified shall be obtained as the project progresses. No more than 75 percent of the pipe installation on the project is to be completed until specified compaction and density requirements have been ascertained on backfill material for at least 25 percent of the pipe laid.
5. Compaction methods. The method of compaction shall be left to the discretion of the Contractor with the following exception, unless otherwise specified, provided the degree of compaction is obtained and provided that the pipe is not damaged in the process. Compaction of any backfill material by flooding or jetting shall not be permitted. Hand-operated mechanical tampers may be used.
6. Embedment. The type of embedment to be used for storm sewers, sanitary sewers or water mains shall be as on the plans.

3.4 DISPOSAL OF EXCESS MATERIAL:

- A. Excess Excavated Material (soil material free of trees, stumps, logs, brush, roots, rubbish and other objectionable matter which has been accepted by the Owner): Remove excess excavated material from the construction site before Pre-final Inspection. Approved excess material shall be deposited on the Owners property outside the perimeter road as indicated by the Drawings or as directed by the Owner.
- B. Waste Material (soil material including trees, stumps, logs, brush, roots, rubbish and other objectionable matter which has not been accepted by the Owner): Remove waste material from the project site before Pre-final Inspection. Legally dispose of material at a licensed site or with written and notarized permission from the property owner for a private disposal site. All costs associated with waste material removal and disposal shall be paid for by the Contractor.

3.5 TESTING

- A. Laboratory Testing and Inspection Services: As specified in Section 014600 - Testing Laboratory Services.

END OF SECTION

SECTION 312500
EROSION CONTROL

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Work included in this Section, while not inclusive but listed as a guide, shall include:
 - 1. Furnishing of all labor, tools, equipment and incidentals required to complete the work.
 - 2. Layout of work.
 - 3. Installation of mulch berm.
 - 4. Placement of riprap.
 - 5. Erosion Control matting.
 - 6. Clean-up.

1.2 RELATED SECTIONS

- A. Coordinate the work of this Section with the Work of other Sections as required to properly execute the Work and as necessary to maintain satisfactory progress of the Work of other Sections. Other Sections containing related work include but are not limited to the following:
 - 1. Site Clearing - Section 311000
 - 2. Earth Moving – Section 312000

1.3 REFERENCES

Meet requirements and recommendations of applicable portions of Standards listed.

- A. ASTM D698 - Laboratory Compaction Characteristic of Soil Using Standard Effort (12,400 lb/ft;).
- B. ASTM D4318 - Liquid Limit, Plastic Limit and Plasticity Index of Soils.
- C. Texas Department of Transportation Standard Specifications for Construction of Highways, Streets, and Bridges, 2014, TxDOT.

1.4 SUBMITTALS

- A. General: Submit the following in accordance with Conditions and Section 013300
- B. Product data for drainage piping specialties.
- C. Product data for geotextiles and erosion control matting.
- D. Product data for soil retention blankets.
- E. Product data for compost mulch.

1.5 SUMMARY

- A. This work shall consist of furnishing, installing, maintaining, and removing devices to prevent silt leaving the site, either thru inlets or by overland flow around inlets. The quantities of temporary silt fence shown on the plans may be increased or decreased based on weather, construction procedures, and actual site conditions that occurs during construction of the

project. Such variations in quantity will not be considered as alterations in the details of construction or a change in the character of the work.

PART 2 – PRODUCTS

2.1 GEOTEXTILES

- A. This specification provides criteria for wire-supported geotextile silt fence as well as a self-supporting geotextile silt fence.
- B. Fibers used in the manufacture of geotextiles shall consist of long-chain synthetic polymers, composed of at least 85% by weight polyolefins, polyesters, or polyamides. They shall be formed into a network such as that the filaments or yarns retain dimensional stability relative to each other, including selvages. The geotextile shall be specific for its intended purpose. The geotextile shall be free from any treatments or coating which might adversely alter its physical properties after installation.
- C. Geotextile rolls shall be furnished with suitable wrapping for protection against moisture and extended ultraviolet exposure prior to placement. Each roll shall be labeled or tagged to provide product identification sufficient for inventory and quality control purposes. Rolls shall be stored in a manner which protects them from the elements.
- D. Posts: Either wood, steel, or synthetic posts may be used. Posts shall have a minimum length of 36 in. plus burial depth and be of sufficient strength to resist damage during installation and to support applied loads.
- E. Support Fence: Wire or other support fences shall be at least 32 in. high and strong enough to support applied loads.
- F. Prefabricated Fence: Prefabricated fence systems may be used provided they meet all of the above material requirements.

2.2 GEOTEXTILES

- A. This specification provides criteria for geotextiles used in erosion control devices other than silt fence.
- B. Fibers used in the manufacture of geotextiles shall consist of long-chain synthetic polymers, composed of at least 85% by weight polyolefins, polyesters, or polyamide. They shall be formed into a network such as that the filaments or yarns retain dimensional stability relative to each other, including selvages. The geotextile shall be specific for its intended purpose. The geotextile shall be free from any treatments or coating which might adversely alter its physical properties after installation.
- C. Geotextile rolls shall be furnished with suitable wrapping for protection against moisture and extended ultraviolet exposure prior to placement. Each roll shall be labeled or tagged to provide product identification sufficient for inventory and quality control purposes. Rolls shall be stored in a manner which protects them from the elements.

2.3 SOIL RETENTION BLANKET

- A. Short Term Protection:
 - 1. Description. This item shall govern for providing and placing wood, straw or coconut fiber mat, synthetic mat, paper mat, jute mesh or other material as a soil retention blanket for

erosion control on slopes or ditches for short term protection or seeded or sodded areas as shown on the plans..

2. Soil Retention Blankets. Samples of all soil retention blankets shall be submitted to the Architect prior to use. A current list of qualified materials may be obtained by writing to the Director of Maintenance and Operations, Texas Department of Transportation, 125 E. 11th Street, Austin, Texas 78701-2483. Materials shall be approved by the Architect.

B. Long Term Protection.

Geotextiles.

1. General. Geotextiles are woven or non-woven synthetic fabrics which are designed to be used for erosion control and soil stabilization applications.
2. Geotextiles used in Erosion Control and Stabilization Applications: The fabric conform to the following average roll minimum values (lot mean-2 standard deviations), as determined by Federal Highway Administration Task Force 25 guidelines cited below, measured in the weakest direction:

Designation	Topic	Erosion			Stabilization			
		PR	UPR		LOADING			
					Low	Med.	Hi	VHI
ASTM D 4632	Grab Strength(lbs)	90	200		90	130	180	27
ASTM D 4632	Grab Elongation	15%	15%		NA	NA	NA	NA
ASTM D 4533	Trapezoidal Tear(lbs)	30	50		30	40	50	75
ASTM D 751	Burst (psi)	140	320	145	210	290	430	
ASTM D 751	Puncture (psi)	40	80		30	40	75	110
ASTM D 4751	Equivalent Opening Size (EOS) (mm)-soil retention							

For Soils in Which:

50% or less passes a #200 mesh sieve
 More than 50% passes a #20 mesh sieve
 ASTM D 4491 Permeability (k)

EOS:

Greater than a #30 sieve
 Greater than a #50 sieve

Type of Application

Critical/Severe:
 Normal Applications:

Required Permeability

k (fabric) > 10k (soil)
 k (fabric) > k (soil)

*PR: Protected Application (used in conjunction with a buffer)

UPR: Unprotected Application (used with no protective buffer)

3. Fasteners. Fasteners shall conform to the manufacturer's recommendations.

2.4 NOT USED

2.5 TOPSOIL

The topsoil shall be fertile soil, be easily cultivated, be free from objectionable material, have relatively high erosion resistance and be readily able to support the growth of planting, seeding or sodding.

2.6 SOD

The sod shall consist of live, growing Bermuda grass, Buffalo grass, St. Augustine grass where

shown on the plans, or other acceptable grass secured from sources which are approved by the Architect. Bermuda grass sod, St. Augustine grass sod, or other grasses as shown on the plans, shall have a healthy virile root system of dense, thickly matted roots throughout the soil of the sod for a minimum thickness of 1 inch. The Contractor shall not use sod from areas where the grass is thinned out, nor where the grass roots have been dried out by exposure to the air and sun to such an extent as to damage its ability to grow when transplanted.

2.7 FERTILIZER

- A. Specification Submittal. Submit a sample label or specification of the fertilizer proposed to be used for the Owners approval.
 - 1. General: Fertilizer shall be a commercial product, uniform in composition, free flowing and suitable for application with approved equipment. Fertilizer shall be delivered to the site in fully labeled original containers. Fertilizer which has been exposed to high humidity and moisture, has become caked or otherwise damaged, making it unsuitable for use, shall be rejected.
 - 2. Initial Planting Application. Fertilizer for the initial planting application shall be of an organic base containing by weight the following (or other approved) percentages of nutrients: 15-10-5 (N-P-K); also containing 1-15 percent sulphate and traces of iron and zinc as required and approved by the Owner.
 - 3. Post Planting Application. Fertilizer for the post planting application shall be a chemical base fertilizer containing by weight the following percentages of nutrients: 21-0-0 (N-P-K) ammonium sulphate; or the nitrogen equivalent of 33-0-0 ammonium nitrate.

PART 3 - EXECUTION

3.1 MULCH BERMS

- A. The Contractor shall install a mulch berm as shown on the plans, and at other locations as required. Fence construction shall be adequate to handle the stress from sediment loading.
- B. It is the Contractors responsibility to maintain the integrity of mulch berms as long as they are necessary to contain sediment runoff. The Contractor shall inspect all mulch berms after each rainfall and at least daily during prolonged rainfall. Any deficiencies shall be immediately corrected by the Contractor. In addition, the Contractor shall make a daily review of the location of the mulch berms in areas where construction activities have changed the natural contour and drainage runoff to ensure that the silt fences are properly located for effectiveness. Where deficiencies exist, additional mulch berms shall be installed. Should the mulch berm become damaged or otherwise ineffective while the barrier is still necessary, it shall be repaired promptly.
- C. Sediment deposits shall either be removed when the deposit reaches approximately one-half of the height of the mulch berm or a second mulch berm shall be installed.

The mulch berm shall remain in place as long as needed. Upon removal, the Contractor shall remove and dispose of any excess silt accumulations, dress the area to give a pleasing appearance, and vegetate all bare areas the berm materials will remain the property of the Contractor and may be used at other locations provided the materials meet their intended purpose.
- D. The designated area shall be cleared of all trees, brush, shrubbery, plants, etc., not indicated on the plans to be preserved. Concrete shall be removed where indicated. Trees and brush designated to be left in place shall be carefully trimmed as directed and shall be protected from scarring, barking or other injuries during construction operations. Pruned limbs over two inches in diameter shall be treated by painting the exposed ends with an approved asphaltic material. Unless otherwise indicated on the plans, trees and stumps shall be cut off or otherwise removed as close to the natural ground as practicable on areas which are to be covered by at

least three feet of embankment. On areas required for borrow sites and materials sources, stumps, roots, etc., shall be removed to the complete extent necessary to prevent such objectionable matter becoming mixed with the material to be used in construction.

3.2 SOIL RETENTION BLANKET

Soil retention Blankets shall be installed in accordance with Manufacturers recommendations.

3.3 NOT USED

3.4 HYDRO MULCHING

Seed or seed mixture, in the quantity specified, shall be uniformly distributed over the areas shown on the plans where directed. Seed and fertilizer to be distributed as a water slurry, and the mixture shall be applied to that area to be seeded within 30 minutes after all components are placed in the equipment. After planting, the seed shall be raked or harrowed into the soil to a depth of approximately 1/4 inch (6mm). The planted area shall then be rolled with a smooth roller, developing 15 to 25 psi (100 to 170 kp) contact pressure upon the planted surface area and giving smooth surface without ruts or tracks. After compacting is completed, the planted area shall be watered sufficiently to assure uniform moisture from the surface to a minimum of six inches (150 mm) in depth.

END OF SECTION

SECTION 313116
TERMITE CONTROL

PART 1 - GENERAL

- 1.1 RELATED DOCUMENTS
 - A. Provisions established within General and Supplementary Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.
- 1.2 **SECTION INCLUDES**
 - A. **Soil treatment below structural slabs and at foundation perimeter for subterranean insects**
- 1.3 QUALITY ASSURANCE
 - A. **Applicator:** Company specializing in soil treatment for termite control with **10 years documented experience** installing specified product.
 - B. **Materials:** Provide certification that toxicants conform to specified requirements.
 - C. **Material Packaging:** Manufacturer's labels and seals identifying content.
- 1.4 REGULATORY REQUIREMENTS
 - A. Conform to applicable requirements of authorities having jurisdiction for application licensing and authority to use toxicant chemicals.
- 1.5 SUBMITTALS
 - A. Submit product data and manufacturer's installation instruction under provisions of Section 013300.
 - B. Indicate toxicants to be used, composition by percentage, dilution schedule, and intended application rate.
- 1.6 **WARRANTY**
 - A. **Provide 5 year warranty for material and installation** under provisions of Section 017800.
 - B. **Warranty: Cover against invasion or propagation of subterranean termites, damage to building or building contents caused by termites, and repairs to building or building contents so caused.**
 - C. **Inspect work annually and report in writing to Owner.**
 - D. Owner reserves right to renew warranty for an additional 5 years after the initial 5 year period.

PART 2 - PRODUCTS

- 2.1 MANUFACTURERS
 - A. **Acceptable Manufacturers and Products:** Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. **Termiticides:**
 - a. Aventis Environmental Science USA LP; Termidor
 - b. Bayer Corporation; Premise 75
 - c. Dow AgroSciences LLC; Equity
 - d. FMC Corporation, Agricultural Products Group; Dragnet SFR
 - e. Syngenta; Altriset
 - B. Substitutions: Submit in accordance with Section 016000.

2.2 SOIL TREATMENT

- A. **Termiticide:** Provide an EPA-registered termiticide complying with requirements of authorities having jurisdiction, in an aqueous solution formulated to prevent termite infestation. Provide quantity required for application at the label volume and rate for the maximum termiticide concentration allowed for each specific use, according to product's EPA-Registered Label.

2.3 MIX DILUTION

- A. Dilute toxicant chemical as recommended by manufacturer.

PART 3 - EXECUTION

3.1 INSPECTION/PREPARATION

- A. Verify the soil surfaces are unfrozen, sufficiently dry to absorb toxicant, ready to receive treatment.
- B. Beginning of application means acceptance of soil conditions.

3.2 APPLICATION

- A. **General: Comply with the most stringent requirements of authorities having jurisdiction and with manufacturer's written instructions for EPA-Registered Label for products preparation before beginning application of termite control treatment.** Remove all extraneous sources of wood cellulose and other edible materials such as wood debris, tree stumps and roots, stakes, formwork, and construction waste wood from soil within and around foundations.
- B. Verify the soil surfaces are unfrozen, sufficiently dry to absorb toxicant, ready to receive treatment.
- C. Beginning of application means acceptance of soil conditions.
- D. **Apply toxicant no more than 12 hours prior to installation of vapor barrier under slab-on-grade.**
- E. Apply toxicant in accordance with manufacturer's instructions.
- F. **Apply extra treatment to structure penetrations, pipe, ducts, expansion joints, and other soil penetrations.**
- G. Apply as a coarse spray to ensure uniform distribution.
- H. Coordinate soil treatment at foundation perimeter with finish grading and landscaping work to avoid disturbance of treated soil. **Retreat disturbed treated soil.**
- I. Do not apply soil treatment solution until excavating, filling and grading operations are completed, except as otherwise required in construction operations. To insure penetration, do not apply soil treatment to excessively wet soils or during inclement weather.
- J. Post signs in the areas of application, warning workers that soil poisoning has been applied. Remove signs when areas are covered by other construction.

3.3 RETREATMENT

- A. If inspection identifies the presence of termites, retreat soil and retest.
- B. Use same toxicant as for original treatment.

END OF SECTION

SECTION 31 63 29

DRILLED PIERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Dry-installed drilled piers.
- B. Work Included
 - 1. Furnish all labor and materials required to construct drilled concrete piers complete including layout, excavation of shafts, excavation of belled bottoms, temporary steel casings, fabrication and installation of reinforcing steel, furnishing and placing concrete, setting anchor bolts and removal of spoil.
- C. Related Sections include the following:
 - 1. Division 3 Section "Cast-in-Place Concrete" for general structural and building applications of concrete.
 - 2. Division 5 Section "Structural Steel" for anchor rods installed in drilled piers.

1.3 UNIT PRICES

- A. Basis of Bids: Base bids on indicated number of drilled piers; design length from top elevation to bottom of shaft and diameter of shaft.
- B. Basis for Payment: Payment for drilled piers will be made on actual net volume of drilled piers in place and approved. Actual length and shaft diameter may vary to coincide with elevations where satisfactory bearing strata are encountered, and with actual bearing value of bearing strata determined by an independent testing and inspecting agency. Adjustments will be made on net variation of total quantities, based on design dimensions for shafts.
 - 1. Unit prices include labor, materials, tools, equipment, and incidentals required for excavation, trimming, shoring, casings, dewatering, reinforcement, concrete fill, and other items for complete drilled-pier installation.
 - 2. See Division 1 Section "Unit Prices" for list of unit prices.
- C. Contract price shall be based on base lengths of piers shown on the Drawings. Unit prices shall be as follows:

1. Unit prices per linear foot for piers longer or shorter than base lengths.
2. Unit prices per linear foot for casing. Measurement for payment shall be from top of pier to top of bearing stratum.

D. The cost of casings shall be included as an alternate price.

E. Unit prices shall include all labor and materials including overhead and fees for drilled concrete piers. Adjustments to the Contract shall be based on total linear feet greater than or less than the sum of the base lengths of each pier size. Additional penetration in the bearing stratum greater than the specified penetration shall not be included in determination of increases or decreases of pier lengths related to adjustments in the Contract.

1.4 SUBMITTALS

A. Submittals for Review:

1. Shop Drawings: Indicate dimensioned plan layout, dowel and anchor bolt setting plans including templates, drilled pier shaft sizes, casing sizes, top elevation and details of reinforcing steel.

B. Submittals for Information:

1. Pier Drilling Log: Report of drilled concrete pier construction including actual elevations of top and bottom of each pier, elevation of bearing stratum, penetration into bearing stratum, deviations of pier centerline and plumbness, shaft size, presence of water, use of temporary casing, placement of concrete, and time of start and finish of excavation

C. Product Data: For each type of product indicated.

D. Design Mixes: For each class of concrete. Include revised mix proportions when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1. Laboratory Test Reports: For evaluation of concrete materials and mix design.

E. Record drawings at Project closeout according to Division 1 Section "Closeout Procedures."

1.5 QUALITY ASSURANCE

A. Installer: Company specializing in performing the work of this Section with minimum three projects in similar soil and rock conditions, and with similar shaft sizes, depths, and quantities.

B. Drilled-Pier Standard: Comply with provisions in ACI 336.1, "Reference Specifications for the Construction of Drilled Piers," unless modified in this Section.

C. Survey Work: Engage a qualified land surveyor or professional engineer to perform surveys, layouts, and measurements for drilled piers. Before excavating, lay out each drilled pier to lines and levels required. Record actual measurements of each drilled pier's location, shaft diameter, bottom and top elevations, deviations from specified tolerances, and other specified data.

1. Record and maintain information pertinent to each drilled pier and cooperate with Owner's testing and inspecting agency to provide data for required reports.

- D. Testing Agency Qualifications: Qualified according to ASTM C 1077 and ASTM E 329 to perform material evaluation tests and to design concrete mixes, as documented according to ASTM E 548.
- E. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination."

1.6 PROJECT CONDITIONS

- A. Existing Utilities: Locate existing underground utilities before excavating drilled piers. If utilities are to remain in place, provide protection from damage during drilled-pier operations.
 - 1. Should uncharted or incorrectly charted piping or other utilities be encountered during excavation, adapt drilling procedure if necessary to prevent damage to utilities. Cooperate with Owner and utility companies in keeping services and facilities in operation without interruption. Repair damaged utilities to satisfaction of utility owner.
- B. Site Information: A geotechnical report has been prepared for this Project and is referenced elsewhere in the Project Manual for information only.
 - 1. Information regarding site conditions is provided for the convenience of the Contractor and is not a warranty that the information represents site conditions that may be encountered. The Owner shall not be responsible for interpretations or conclusions drawn from the information provided by the Contractor.
 - 2. Additional borings or other exploratory work may be conducted by the Contractor at no cost to the Owner.

PART 2 - PRODUCTS

2.1 STEEL REINFORCEMENT

- A. Reinforcing Bars: ASTM A 615/A 615M, Grade 60, deformed.
- B. Plain-Steel Wire: ASTM A 82, as drawn.
- C. Deformed-Steel Wire: ASTM A 496.
- D. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain. Cut bars true to length with ends square and free of burrs.
- E. Bar Supports: Furnish spacers to maintain required concrete cover to sides and bottom of excavation.
 - 1. Shaftspacer Systems, Foundation Technologies, Inc., Tucker, Georgia.
 - 2. "Centraligner" and "Hijacker", Pieresearch, Arlington, Texas.

2.2 CONCRETE MATERIALS

- A. Provide concrete materials in accordance with Division 3 "Cast-in-Place Concrete."

2.3 STEEL CASINGS

- A. Steel Pipe Casings: ASTM A 283/A 283M, Grade C; or ASTM A 36/A 36M, carbon-steel plate, with joints full-penetration welded according to AWS D1.1.

2.4 CONCRETE MIX

- A. Prepare design mixes according to ACI 211.1 and ACI 301 for each type and strength of concrete determined by either laboratory trial mix or field test data bases.
 - 1. Use a qualified testing agency for preparing and reporting proposed mix designs for laboratory trial mix basis.
- B. Proportion mixes according to ACI 211.1 and ACI 301 to provide normal-weight concrete with the following properties:
 - 1. Compressive Strength (28 Days): As specified.
 - 2. Minimum Slump: As specified.
 - 3. Do not air entrain concrete for drilled piers.
- C. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than Portland cement according to ACI 301 limits as if concrete were exposed to deicing chemicals.
- D. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.
- E. Concrete-mix design adjustments may be considered if characteristics of materials, Project conditions, weather, test results, or other circumstances warrant. Resubmit and obtain approval of proposed changes to concrete-mix proportions.

2.5 CONCRETE MIXING

- A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M, and furnish batch ticket information.
 - 1. Do not add water to concrete mix after mixing.
 - 2. Maintain concrete temperature to not exceed 95 deg F.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, vibration, and other hazards created by drilled-pier operations.

3.2 EXCAVATION

- A. Unclassified Excavation: Excavation is unclassified and includes excavation to bearing elevations regardless of character of materials or obstructions encountered.

1. Obstructions: Unclassified excavation includes removal of unanticipated boulders, concrete, masonry, or other subsurface obstructions.
 2. Obstructions: Removal of unanticipated boulders, concrete, masonry, or other unforeseen obstructions that cannot be removed by conventional augers fitted with soil or rock teeth, drilling buckets, or underreaming tools attached to drilling equipment of size, power, torque, and downthrust necessary for the Work, will be paid according to Contract provisions for changes in the Work.
- B. Prevent surface water from entering excavated shafts. Conduct water to site drainage facilities.
- C. Excavate shafts for drilled piers to indicated diameters and elevations. Remove loose material from bottom of excavation.
1. Excavate bottom of drilled piers to level plane within 1:12 tolerance.
 2. Remove water from excavated shafts before concreting.
- D. Notify and allow Owner's testing and inspecting agency to test and inspect bottom of excavation prior to placing reinforcement and concrete. If unsuitable bearing stratum is encountered, make adjustments to drilled piers as determined by Architect.
1. Do not excavate shafts deeper than elevations indicated, unless approved by Architect.
 2. Additional authorized excavation will be paid according to Contract provisions for changes in the Work.
- E. Excavate shafts for closely spaced drilled piers and those occurring in fragile or sand strata, only after adjacent drilled piers are filled with concrete and allowed to set.
- F. Temporary Casings: Install watertight steel casings of sufficient length and thickness to prevent water seepage into shaft; to withstand compressive, displacement, and withdrawal stresses; and to maintain stability of shaft walls.
1. Remove temporary casings, maintained in plumb position, during concrete placement and before initial set of concrete.
- G. Tolerances: Construct drilled piers to remain within ACI 336.1 tolerances.
1. Maximum Variation From Vertical: One percent of length.
 2. Maximum Variation From Design Top Elevation: Plus 1 inch to minus 3 inches.
 3. Maximum Out-of-Position: One twenty-fourth of the shaft diameter or 3 inches, whichever is less.
 4. If location or out-of-plumb tolerances are exceeded, provide corrective construction. Submit design and construction proposals to Architect for review before proceeding.
- H. Inspection: Each drilled pier must be inspected and tested by Owner's testing and inspecting agency before placing concrete.
1. Provide and maintain facilities with equipment required for testing and inspecting excavations. Cooperate with testing and inspecting personnel to expedite the Work.
 2. Notify Architect and testing agency at least six hours before excavations are ready for tests and inspections.

3.3 STEEL REINFORCEMENT

- A. Comply with recommendations in CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.
- B. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy bond with concrete.
- C. Fabricate and install reinforcing cages symmetrically about axis of shafts in a single unit.
- D. Accurately position, support, and secure reinforcement against displacement during concreting. Maintain minimum cover to reinforcement.
- E. Use templates to set anchor bolts, leveling plates, and other accessories furnished in work of other Sections. Provide blocking and holding devices to maintain required position during final concrete placement.
- F. Protect exposed ends of extended reinforcement, dowels, or anchor bolts from mechanical damage and exposure to weather.

3.4 CONCRETE PLACEMENT

- A. Place concrete in continuous operation and without segregation immediately after inspection and approval of shaft by Owner's independent testing and inspecting agency.
 - 1. Concrete shall be placed within the time limit stated on the Drawings.
 - 2. Construct a construction joint if concrete placement is delayed more than one hour. Level top surface of concrete and insert joint dowel bars. Before placing remainder of concrete, clean surface laitance, roughen, and slush concrete with commercial bonding agent or with sand-cement grout mixed at ratio of 1:1.
- B. Dry Method: Place concrete to fall vertically down the center of drilled pier without striking sides of shaft or steel reinforcement.
 - 1. Where concrete cannot be directed down shaft without striking reinforcing, place concrete with chutes, tremies, or pumps. Use tremies where a drop of more than 25'-0" is required.
 - 2. Vibrate top 60 inches of concrete.
- C. Coordinate withdrawal of temporary casings with concrete placement to maintain at least a 60-inch head of concrete above bottom of casing.
 - 1. Vibrate top 60 inches of concrete after withdrawal of temporary casing.
- D. Screed concrete at cutoff elevation level and apply scoured, rough finish. Where cutoff elevation is above the ground elevation, form top section above grade and extend shaft to required elevation.
- E. Protect concrete work, according to ACI 301, from frost, freezing, or low temperatures that could cause physical damage or reduced strength.
 - 1. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.

2. Do not use calcium chloride, salt, or other mineral-containing antifreeze agents or chemical accelerators.
- F. When hot-weather conditions exist that would seriously impair quality and strength of concrete, place concrete according to ACI 301 to maintain delivered temperature of concrete at no greater than 90 deg F.
1. Place concrete immediately on delivery. Keep exposed concrete surfaces and formed shaft extensions moist by fog sprays, wet burlap, or other effective means for a minimum of seven days.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to sample materials, perform tests, and submit reports during excavation and concrete placement for drilled piers.
- B. A drilled-pier report will be prepared by Owner's testing and inspecting agency for each drilled pier as follows:
1. Actual top and bottom elevations.
 2. Top of rock elevation.
 3. Description of soil materials.
 4. Description, location, and dimensions of obstructions.
 5. Final top centerline location and deviations from requirements.
 6. Variation of shaft from plumb.
 7. Shaft excavating method.
 8. Design and tested bearing capacity of bottom.
 9. Depth of rock socket.
 10. Levelness of bottom and adequacy of cleanout.
 11. Ground-water conditions and water-infiltration rate, depth, and pumping.
 12. Description, diameter, and top and bottom elevations of temporary or permanent casings.
 13. Description of soil or water movement, sidewall stability, loss of ground, and means of control.
 14. Date and time of starting and completing excavation.
 15. Inspection report.
 16. Position of reinforcing steel.
 17. Concrete placing method, including elevation of consolidation and delays.
 18. Elevation of concrete during removal of casings.
 19. Locations of construction joints.
 20. Remarks, unusual conditions encountered, and deviations from requirements.
 21. Concrete testing results.
- C. Soil Testing: Bottom elevations, bearing capacities, and lengths of drilled piers indicated have been estimated from available soil data. Actual elevations and drilled-pier lengths and bearing capacities will be determined by Owner's testing and inspecting agency. Final evaluations and approval of data will be determined by Architect.
- D. Concrete: Sampling and testing of concrete for quality control per Section 03 30 00.

3.6 DISPOSAL OF MATERIALS

- A. Remove surplus excavated material and slurry and legally dispose of it off Owner's property.

END OF SECTION 31 63 29

SECTION 321313

PORTLAND CEMENT CONCRETE PAVING

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Work included in this Section, while not at all inclusive but listed as a guide, shall include:
 - 1. Furnish all labor, tools, equipment and incidentals to complete the work.
 - 2. Concrete paving, integral curbs, and miscellaneous other uses.
 - 3. Sawed joints.
 - 4. Sealing of Joints.

1.2 RELATED SECTIONS

- A. Coordinate the work of this Section with the Work of other Sections as required to properly execute the Work and as necessary to maintain satisfactory progress of the work of other Sections. Other Sections containing related work include but are not limited to the following:
 - 1. Site Preparation - Section 311000
 - 2. Pavement Markings - Section 321723
 - 3. Sidewalks and Driveways Approaches - Section 322000
 - 4. Concrete Curbs and Gutters - Section 321600

1.3 QUALITY ASSURANCE

- A. Source Quality Control: Testing and Inspection of Concrete as specified in Section 01410.
- B. Allowable Tolerances: Surfaces true to plane, in longitudinal direction to required grade, within 5/8" in 10 feet, plus or minus, non-cumulative.
- C. Concrete Mix Design Criteria:
 - 1. Contractor shall provide and pay for design of concrete mixes. Design of concrete mixes shall be performed by a testing laboratory selected by Contractor and approved by Architect. Design methods shall be in accordance with ACI 211.
 - 2. For each concrete mix design, make three trial mixes using proposed aggregate, in accordance with ACI 211. Experience Method is acceptable.
 - 3. Check mix designs and revise if necessary wherever changes are made in aggregates or in surface water content of aggregate or workability of concrete.
 - 4. Source Quality Control: Periodically inspect and control concrete mixing and loading of transit mix trucks at batch plant at intervals as agreed to and by Laboratory personnel.
 - 5. Concrete mix designs which are currently being used on TxDOT projects, certified by the concrete supplier are generally acceptable.

1.4 REFERENCE STANDARDS

- A. American Concrete Institute (ACI)
 - 1. ACI 211.1-77 - Recommended Practice for Selecting Proportions for Normal and Heavyweight Concrete.
 - 2. ACI 305-77 - Recommended Practice for Hot Weather Concreting.
 - 3. ACI 306-72 - Recommended Practice for Cold Weather Concreting
 - 4. ACI 315-74, Manual of Standard Practice for Detailing Reinforced Concrete Structures.
- B. American Society for Testing and Materials (ASTM) (latest edition)

1. ASTM A184 - Fabricated Deformed Steel Bar Mats for Concrete Reinforcement.
2. ASTM A185 - Welded Steel Wire Fabric for Concrete Reinforcement
3. ASTM A615 - Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
4. ASTM C33 - Concrete Aggregates
5. ASTM C94 - Ready-Mix Concrete
6. ASTM C150 - Portland Cement
7. ASTM C171 - Sheet Materials for Curing Concrete
8. ASTM C260 - Air-Entraining Admixtures for Concrete
9. ASTM C309 - Liquid Membrane - Forming Compound for Curing Concrete
10. ASTM C494 - Chemical Admixtures for Concrete
11. ASTM C618 - Fly Ash and Raw or Calcined Natural Pozzolan for use as a Mineral Admixture in Portland Cement Concrete.
12. ASTM C1549 - C1549-02 Standard Test Method for Determination of Solar Reflectance Near Ambient Temperature Using a Portable Solar Reflectometer
13. ASTM D1190 - Concrete Joint Sealer, Hot-Poured Elastic Type,
14. ASTM D1751 - Preformed Expansion Joint Fillers for Concrete Paving and Structural Construction (non-extruding and resilient bituminous types).
15. ASTM D1752 - Preformed Sponge Rubber and Cork Expansion Joint Fillers for Concrete Paving and Structural Construction.

- C. Texas Department of Transportation (TxDOT) 2014 Standard Specification for Construction of Highways, Streets and Bridges.

1.5 SUBMITTALS

- A. General: Submit in accordance with Section 013300
- B. Mix Designs: Submit copies of each laboratory trial mix design. Record of previous satisfactory performance for the proposed mix design may be submitted in lieu of above.
- C. Product Data: Submit Manufacturer's descriptive literature and installation instructions for specified products.
- D. Certificates: Submit Manufacturer's certification that materials meet specification requirements.

1.6 JOB CONDITIONS

- A. Environmental Conditions: Except by written authorization of Owner, no concrete shall be placed when the air temperature is less than 40°F (4°C) and falling, but may be placed when the temperature is above 35°F (2°C) and rising, temperature taken in shade away from artificial heat. No concrete shall be placed in rain, sleet, snow or on a frozen subgrade.
- B. Allowable Concrete Temperatures:
 1. Cold Weather: Maximum and Minimum, ASTM C94, conform to ACI 306.
 2. Hot Weather: Conform to ACI 305.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Portland Cement: ASTM C150, Type 1.
- B. Fly Ash: The use of fly ash will be permitted when the amount and type has been established by laboratory data. The maximum amount allowed shall not exceed 20 percent of absolute volume of the specified cement content.

C. Aggregates: ASTM C33

1. Coarse aggregate: Coarse aggregate shall be washed and shall consist of durable particles of gravel, crushed blast furnace slag, crushed stone or combinations thereof and shall be free from frozen material or injurious amounts of salt, alkali, vegetable matter or other objectionable material either free or as an adherent coating. When white Portland cement is specified, the coarse aggregates used in the concrete shall be light colored. Quality shall be reasonably uniform throughout. Coarse aggregate shall not contain more than 0.25 percent by weight of clay lumps, nor more than five (5.0) percent by weight of laminated and/or friable particles when tested in accordance with Test Method Tex-413-A. Coarse aggregate from each source shall have a wear of not more than 40 percent when tested in accordance with Test Method Tx-410 A.

Unless otherwise shown on the plans, coarse aggregate from each source will be subjected to five (5) cycles of both the sodium sulfate and the magnesium sulfate soundness test in accordance with Test Method Tex-411-A. When the loss is greater than 12 percent with sodium sulfate and/or 18 percent with magnesium sulfate, further testing will be required prior to acceptance or rejection of the material. A satisfactory record under similar conditions of service and exposure will be considered in the evaluation of material failing to meet these requirements.

When tested in accordance with Test Method Tex-401-A, the coarse aggregate, including combinations of aggregates when used, shall conform to the gradation requirements shown in Table 1.

TABLE 1
COARSE AGGREGATE GRADATION CHART

Aggregate Grade No.	Nominal Size In.	Percent Retained on Each Sieve								
		2-1/2 in.	2 in.	1-1/2 in.	1 in.	3/4 in.	2 in.	3/8 in.	No. 4	No. 8
1	2	0	0-20	15-50		60-80			95-100	
2 (467)*	1-1/2		0	0-5		30-65		70-90	95-100	
3	1-1/2		0	0-5		10-40	40-75		95-100	
4 (57)*	1			0	0-5		40-75		90-100	95-100
5 (67)*	3/4				0	0-10		45-80	90-100	95=100
6 (7) *	2					0	0-10	30-60	85-100	95-100
7	3/8						0	5-30	75-100	
8	3/8						0	0-5	35-80	90-100

Numbers in parenthesis indicate that these gradations conform to corresponding ASTM gradation in ASTM C33

The loss of decantation in accordance with Test Method Tex-406-A plus the allowable

weight of clay lumps shall not exceed one (1) percent, or the value shown on the plans, whichever is smaller. In the case of aggregates made primarily from the crushing of stone, if the material is finer than the 200 sieve is definitely established to be the dust of fracture, essentially free from clay or shale, as established by Part III of Test Method Tex-406-A, the percent may be increased to 1.5.

2. Fine aggregate: Fine aggregate shall be washed and consist of clean, hard, durable and uncoated particles of natural or manufactured sand or a combination thereof, with or without a mineral filler. When white Portland cement is specified the fine aggregate used in the concrete shall be light colored. It shall be free from frozen material or injurious amounts of salt, alkali, vegetable matter or other objectionable material and it shall not contain more than 0.5 percent of weight of clay lumps. When the aggregate is subjected to the color test for organic impurities in accordance with Test Method Tex-408-A, the test result shall not show a color darker than standard.

Unless otherwise shown on the plans, the acid insoluble residue of fine aggregate used in concrete subject to direct traffic shall not be less than 60 percent by weight when tested in accordance with Test Method Tex-612-J.

When tested in accordance with Test Method Tex-401-A, the fine aggregate or combinations of aggregates, including mineral filler, shall conform to the gradation requirements shown on Table 2.

TABLE 2

FINE AGGREGATE GRADATION CHART

Aggregate Grade No.	Percent Retained on Each Sieve							
	3/8 in.	No. 4	No. 8	No. 16	No. 30	No. 50	No. 100	No. 200
1	0	0 to 5	0 to 20	15 to 50	35 to 75	65 to 90	90 to 100	97 to 100

Where manufactured sand is used in lieu of natural sand, the percent retained on the No. 200 sieve shall be 94 to 100.

Where the sand equivalent value is greater than 85, the retainage on the No. 50 sieve may be 65 to 94 percent.

Fine aggregates will be subjected to the Sand Equivalent Test (Test Method Tex-203-F). The sand equivalent shall not be less than 80 unless otherwise shown on the plans.

For all classes of concrete the fineness modulus shall be between 2.30 and 3.10 as determined by Test Method Tex-402-A.

C. NOT USED

- D. Mortar and Grout: Mortar and grout shall consist of one (1) part Portland cement, two (2) parts finely graded sand and sufficient water to provide the desired consistency. Mortar may contain admixtures.

Mortar shall have a consistency such that the mortar can be easily handled and spread by trowel. Grout shall have a consistency such that the grout will flow into and completely fill all voids.

When required to prevent color difference, white cement shall be added to produce the color required. When shown on the plans or in the specifications, or when required by the architect, latex adhesive conforming to the requirements of Departmental Material Specification D-9-8110 shall be added to the mortar.

E. Storage of Materials:

1. Cement, Fly Ash and Mineral Filler: All cement, fly ash and mineral filler shall be stored in well ventilated weatherproof buildings or approved bins, which will protect them from dampness or absorption of moisture. Each shipment of packaged cement shall be kept separated to provide easy access for identification and inspection.
2. Aggregates: The method of handling and storing concrete aggregates shall prevent contamination with foreign materials. If the aggregates are stored on the ground, the sites for the stockpiles shall be clear of all vegetation and shall be level. The bottom six (6) inch layer of aggregate shall not be disturbed or used without recleaning.

When conditions require the use of two (2) or more sizes of aggregates, the aggregates shall be separated to prevent intermixing. Where space is limited, stockpiles shall be separated by physical barriers. Aggregates from different sources shall be stored in different stockpiles unless the aggregates are pre-blended.

Methods of handling aggregates during stockpiling and their subsequent use shall be such that segregation will be minimized.

All aggregate shall be stockpiled at least 24 hours to reduce the free moisture content. In order to control absorption, stockpiles shall be sprinkled.

To assure uniform concrete, aggregate stockpiles shall be maintained at reasonable uniform moisture content.

3. Admixtures. Admixtures shall be stored in accordance with TxDOT Item 437, Concrete Admixtures.

F. Measurement of Materials:

Except as noted below, the measurements of materials used in batches of concrete shall be by weight.

Water may be measured by volume or weight.

Cement and fly ash shall be weighed separately from other materials. Weighing of sacked cement will not be required. When sacked cement is used, the quantity of cement per batch shall be based upon using full bags of cement. Batches involving use of fractional bags will not be permitted.

G. Admixtures:

1. Air entraining agents: ASTM C260.
2. Cement dispersing agents: ASTM C494.

H. Water: Clean and potable.

I. Reinforcing Steel:

1. Bar mats: ASTM A184, Grade 60.
 2. Deformed billet steel: ASTM A615, Grade 60.
- J. Welded wire fabric: ASTM A185.
- K. Dowels and Sleeves: Plain round bar dowels, sized as detailed, conforming to reinforcing steel requirements, coated with bituminous paint on one-half or length. Provide sleeves as detailed, closed at one end, and allowing one inch movement at closed end.
- L. Supports: Provide chair spacers and other required supports in accordance with requirements of ACI 315.
- M. Joint Assemblies: Metal positioning and supporting devices for expansion and contraction joint assemblies (such as welded wire bar chairs, bar stakes, etc.) Shall be as shown on the plans or may be approved similar devices of equivalent greater strength. The support devices shall secure the joint assembly and dowels within the allowable tolerances while providing no restraint against joint movement. Dowels used in joint assemblies shall be secured in parallel position by a transverse metal brace or may be secured by approved other devices. The devices shall provide positive mechanical connection between the brace and each unit (other than by wire tie) and prevent transverse movement of each load transmission device.
- N. Joint fillers, conforming with ASTM D1751.
- O. Wood Form: Good grade lumber, sound and free of warp, minimum 2 inch nominal thickness, except where extremely short radio of curves require thinner forms.
- P. Curing compound: Liquid membrane, ASTM C309, Type 2 white pigmented.
- Q. Curing sheets: ASTM C171.
- R. Joint Sealing Compound: Hot rubber compound or silicone sealing compound, as per General Notes.
- 2.2 CONCRETE MIX
- A. Concrete Quality: In accordance with approved mix design and following requirements:
1. Slump: 5" maximum for flatwork, 6" maximum for catch basins, etc.
 2. Compressive strength: Not less than 3,000 psi at 28 days or as shown on the plans.
 3. Entrained air: Concrete mix shall contain 5% entrained air plus or minus 1%.
 4. Admixture: Introduce in quantities and according to methods recommended by admixture manufacturer.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Verify that earthwork is completed to correct line and grade.
- B. Check that subgrade is smooth, compacted and free of frost or excessive moisture.
- C. Do not commence work until conditions are satisfactory.

3.2 MAINTAINING SUBGRADE PRIOR TO PLACING CONCRETE

- A. Provide complete drainage of subgrade during entire construction period. On elevated grades,

direct surface water to gutters, paved ditches or drains by proper grading of subgrade.

- B. Maintain subgrade in a smooth, compacted condition at required section and grade until concrete pavement is ready to be placed. Keep subgrade thoroughly wetted down sufficiently in advance of placing concrete to insure a firm moist subgrade condition for at least 2 inches below prepared surface.
- C. Prepare only a sufficient amount of subgrade in advance of placing of concrete to enable work to proceed smoothly and effectively. Avoid placing of equipment or hauling equipment over completed subgrade until placement of concrete has been completed.
- D. The use of sand cushion for subgrade leveling purposes is prohibited.

3.3 INSTALLATION

- A. Forms:
 - 1. Set forms accurately to required grades and alignment
 - 2. Adequately brace to withstand loads applied during concrete placement.
 - 3. Install flexible or curved forms of wood or metal for curves with radius of 300 feet or less.
 - 4. Leave forms in place for a minimum of 12 hours after completion of the finishing operation.
- B. Joint Fillers:
 - 1. At driveway to street connections, accurately shape joint filler to concrete section per Paving Details.
 - 2. Securely fasten filler in place and in contact with subgrade for its entire length. Provide holes for dowel bars not more than 1/8" larger than bar diameter.
 - 3. Where joint sealant or sealing compound is scheduled, provide removable tacked-on strips to provide a recess for sealant or compound.
- C. Reinforcement:
 - 1. Install reinforcing steel in middle of the pavement thickness.
 - 2. Steel shall be free of rust or mill scale, dirt or oil.
 - 3. Reinforcing shall be supported by chairs. Pulling-up reinforcing that is laying on the subgrade while the pour is under way will not be permitted.
- D. Placing and Finishing:
 - 1. Placing: Deposit concrete so that specified slab thickness will be obtained after vibrating and finishing operations. Minimize handling to prevent segregation. Consolidate concrete by suitable means to prevent formation of voids or honeycombs. Exercise care to prevent disturbance of forms.
 - 2. Finishing: After consolidation and screeding, float concrete level to within specified tolerances. Use a straight edge to level and test surface in longitudinal direction to required grade. Finish surface to a gritty texture similar to a heavy broomed finish. Finish edges to provide a smooth dense surface with 1/8" radius.

3.4 JOINTS

- A. Intentional stoppage of concrete placing shall be at planned location of either an expansion joint or construction joint.
- B. When stoppage occurs at an expansion joint, install joint assembly as shown on drawings for an expansion joint, with a bulkhead of sufficient section drilled to accommodate required dowels.

- C. When stoppage occurs at a construction joint, install joint assembly as detailed on drawings for a construction joint.
 - 1. Provide a bulkhead of sufficient section to prevent deflection, or loss of shape of concrete section. Drill bulkhead to permit continuation of longitudinal reinforcing steel through construction joint.
 - 2. Immediately upon unintended stoppage of concrete placing, place available concrete to a line and install bulkhead perpendicular to surface of pavement and at a required elevation. Place and finish concrete to this bulkhead. Remove and dispose of concrete remaining on subgrade ahead of bulkhead.
 - 3. When placing of concrete is resumed before concrete has set to extent that concrete will stand on removal of bulkhead, new concrete shall be rodded with the first; otherwise, carefully preserve joint face.
 - 4. An edge created by a construction joint of this type shall have a joint steel seal space as detailed on drawings.
 - 5. Install standard concrete street header as per City standards when joining old pavement to new pavement, unless otherwise shown on the drawings.
- D. Provide sawed dummy joints spaced apart as indicated on the drawings (approximately 15 ft on center maximum).
 - 1. Saw joints after completion of finishing operations as soon as concrete has hardened to extent necessary to prevent raveling of joint or damage to adjacent concrete surfaces.
 - 2. Saw joints same day that concrete is placed except that sawing of joints in concrete placed late in day may be delayed until morning of following day.
 - 3. In any event, saw joints within 18 hours after placing concrete.
 - 4. Use a power-driven concrete saw made especially for sawing concrete and maintain in good operating condition.
 - 5. Saw blades shall make a clean, smooth cut, producing a groove 1/8" to 3/16" wide and depth equal to 1/4 of slab thickness, minimum one inch depth.
 - 6. Do not cut existing reinforcement.
 - 7. Joints should be continuous across the slab unless interrupted by full-depth, pre-molded joint filler, and should extend completely through curb.
 - 8. Joint openings wider than one-fourth inch shall be cleaned and sealed before opening area to traffic.
- E. Expansion joints or isolation joints shall be used to isolate fixed objects abutting or within the paved area. They shall contain pre-molded joint filler for the full depth of the slab and shall be sealed prior to opening to traffic.

3.5 CURING

- A. Apply membrane curing compound at a uniform rate of approximately 200 square foot per gallon, or as recommended by manufacturer, as soon as finishing operation has been completed and concrete has lost its water sheen.
- B. At contractor's option, curing sheets may be used, held in place with moist sand.
- C. Curing procedure shall protect concrete, including concrete edges and curbs, against loss of moisture and rapid temperature change for a period of not less than 4 days from beginning of curing operation, without damage or marking of finished concrete surface.
- D. Do not allow traffic on concrete for a minimum period of 7 days after placing.

3.6 COLD WEATHER PROTECTION

- A. When concrete is placed in cold weather and the temperature may be expected to drop below

35°F, provide cold weather protection in accordance with ACI 306.

- B. When ambient temperature is expected to fall below 32°F during day or night, cover concrete with protective material to a sufficient depth to prevent freezing of concrete.
- C. Protect concrete from freezing temperatures for a minimum of 5 days after placing.
- D. Remove and replace concrete damaged by frost action.

3.7 SEALING JOINTS

- A. Cleaning joints: Prior to applying joint sealing compound, clean joints with compressed air to obtain a clean and dry surface on face of joints so that sealing material will adhere.
- B. When hot rubber compound is called for in the General Notes:
 - 1. Melt joint sealing compound to proper consistency for pouring using continuous agitator type kettle with calibrated thermometer. Do not heat above 450°F.
 - 2. Continuously apply joint sealing compound full depth of joint recesses and flush with concrete surface, in accordance with manufacturer's directions. Do not apply when ambient temperature is below 35°F.
- C. When silicone sealing compound is called for in the General Notes:
 - 1. Apply sealing compound as per manufacturer's instructions.

3.8 PAVEMENT STRENGTH TEST

- A. During the progress of the work, the Contractor shall cast test cylinders to maintain a check on the compressive strengths of the concrete being placed.
- B. Four test cylinders shall be taken from a representative portion of the concrete being placed for every 100 cubic yards of concrete pavement placed, but in no case shall less than two sets of cylinders be taken from any day's placement.

After the cylinders have been cast, they shall remain on the job site undisturbed for 24 hours and then transported, moist cured, and tested by the Testing Laboratory designated by the Owner.

Two of the cylinders in each set shall be tested in seven days; and then, if in the opinion of the engineer the seven day test results are low enough, the other two cylinders in each set may be tested in 28 days.

If the 28 day test results indicate deficient strength, the Contractor may, at his option and expense, core the pavement in question and have the cores tested by an approved laboratory to override the results of the cylinder tests.

END OF SECTION

SECTION 321600

CONCRETE CURBS AND GUTTERS

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Work included in this Section, while not at all inclusive but listed as a guide, shall include:
 - 1. Furnish all labor, tools, equipment and incidentals to complete the work.
 - 2. Concrete paving, driveway approaches, integral curbs, curbs and gutters, concrete for sidewalks, riprap, manholes, headwalls, steps planters and miscellaneous other uses.
 - 3. Expansion joint fillers.
 - 4. Sawed joints.
 - 5. Sealing of Joints.

1.2 RELATED SECTIONS

- A. Coordinate the work of this Section with the Work of other Sections as required to properly execute the Work and as necessary to maintain satisfactory progress of the work of other Sections. Other Sections containing relate work include but are not limited to the following:
 - 1. Earthwork - Section 312315
 - 2. Pavement Markings - Section 321723
 - 3. Sidewalks and Driveways Approaches - Section 322000
 - 4. Portland Cement Concrete Paving - Section 321313

1.3 REFERENCES

- A. American Society for Testing and Materials, ASTM.
- B. Texas Department of Transportation Standards Specifications for Construction of Highways, Streets and Bridges, 2014, TxDOT.

1.4 PRODUCT HANDLING

- A. Protection:
 - 1. Protect from damage until acceptance.
 - 2. Exclude traffic for 14 days after placement.

1.5 CONTROL

- A. Grade Control: Establish and maintain required lines and grades.
- B. Traffic Control:
 - 1. Maintain vehicular and pedestrian traffic as required for other construction activities.
 - 2. Provide barricades, warning signs, and warning lights as required to control traffic, maintain safety and cause least interruption of work.

PART 2 - PRODUCTS

- 2.1 REINFORCEMENT: As noted on Drawings.
- 2.2 CONCRETE: 3,000 psi at 28 days or as shown in plans.
- 2.3 FORMS:

- A. Steel or wood.
- B. Straight and free of distortion and defects.
- C. Radius Bends: Flexible spring steel or laminated boards.
- D. Form Oil: Non-staining, clear, paraffin base.

2.4 FILLERS AND JOINTS:

Expansion Joints: Premolded joint filler.

- 2.5 FLY ASH: The use of fly ash will be permitted when the amount and type has been established by laboratory data. The maximum amount allowed shall not exceed 20 percent of absolute volume of the specified cement content.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Proof roll prepared subgrade to check for unstable areas requiring additional compaction.
- B. Do not begin work until any discrepancies have been corrected.
- C. Remove loose material from subgrade immediately prior to placing concrete.

3.2 INSTALLATION

- A. Forms:
 - 1. Set to required grades and lines.
 - 2. Brace securely with wood or metal stakes.
 - 3. Leave in place 24 hours after concrete placement.
- B. Automatic Curb and Gutter Machine:
 - 1. May be used at the contractor's option with Owners Representative approval.
 - 2. Machine placement must produce curbs and gutters equal in all respects to formed concrete.
 - 3. If results are not acceptable, remove and replace with formed concrete.
- C. Joints:
 - 1. General:
 - a. Expansion, weakened-plane (contraction) and construction joints; true to line, face perpendicular to surface of curb and gutter.
 - b. Transverse joints: at right angles to curb center line.
 - c. Where joining existing pavement: align transverse joints with existing joints unless otherwise shown.
 - 2. Expansion Joints:
 - a. Locate at 30'-0" o.c. unless otherwise shown.
 - b. Provide where curb abuts manholes, inlets, structures, walks or other fixed objects.
 - c. Extend joint fillers full width and depth of joints.
 - d. Not less than 2 inch or more than 1 inch below finished surface.
 - e. Conform top edge to top profile of curb and gutter.

3. Weakened-plane (Contraction Joints):
 - a. Locate at 10'-0" o.c. unless otherwise shown.
 - b. Embed strips of metal or sealed wood to form joints.
 - c. Set strips in plastic concrete and remove after concrete has hardened.
4. Construction Joints:
 - a. Place at end of all pours.
 - b. Located where placement stops for more than 2 hour except where pours terminate at expansion joints.

3.3 FINISHING

- A. Broom Finish:
 1. Draw fine-hair broom across concrete surface perpendicular to line of traffic.
 2. Repeat if required to provide texture suitable to match exiting curbs.

3.4 CLEANING

- A. When construction traffic is permitted, remove surface stains and spillage of materials as they occur.
- B. Sweep and wash free of stains, discoloration, dirt and other foreign material just prior to final inspection.

END OF SECTION

SECTION 321723
PAVEMENT MARKINGS

PART 1 - GENERAL

1.1 SECTION INCLUDES:

- A. Work included in this Section, while not all inclusive but listed as a guide, shall include:
 - 1. Furnish all labor, materials, services, equipment and appliances required in conjunction with painted pavement markings.
 - 2. Layout all markings.
 - 3. Four inch (4") white color stripping for parking spaces in parking lots as indicated on site plan.

1.2 RELATED SECTIONS

- A. Coordinate the work of this Section with the Work of other Sections as required to properly execute the Work and as necessary to maintain satisfactory progress of the work of other Sections. Other Sections containing related work include but are not limited to the following:
 - 1. Portland Cement Concrete Paving - Section 321313

1.3 REFERENCES

- A. American Society for Testing and Materials, ASTM.
- B. Texas Department of Transportation Standard Specifications for Construction of Highways, Streets and Bridges, 2014, TxDOT.

1.4 QUALITY ASSURANCE

- A. Subcontractor for work of this section shall be of firm specializing in application of pavement markings.

1.5 PROJECT CONDITIONS

- A. Concrete paving and curbs shall have been in place a minimum of 14 days prior to application of pavement markings.
- B. Do not apply marking paint when weather is foggy or rainy, or ambient or pavement temperature are below 40 F, nor when such conditions are anticipated during eight hours after application.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Paint for markings: Equal to Standard Paints, Inc., 1007 W. Commerce Street, Dallas, Texas or Sherwin Williams Traffic Marking Paint, conforming to Fed. Spec. TT-P-115E, Type III, or approved equal.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surface on which pavement markings are to be applied and report any unsatisfactory conditions which will prevent the proper application of markings to the Contractor.

3.2 PREPARATION:

- A. Thoroughly clean surfaces to receive pavement markings. Layout markings in conformance with drawings. Surfaces to receive markings shall be dry.

3.3 APPLICATION

- A. Equipment: Hand operated push-type machines of a type commonly used for application of paint to pavement surfaces. Use hand-operated spray guns in areas where the push-type machines cannot be used.
- B. Application: Apply paint in one coat evenly to clean, dry surfaces. Apply marking paint at not less than rate of one gallon per 100 sq.ft. (equivalent to approximately one gallon for 300 lineal feet of 4" wide strip), to result in uniform complete coverage of surfaces to be painted. Apply paint only when air and surfaces temperatures are above 40 F. Provide guide lines and template necessary to control paint application. Edges of markings shall be sharply outlined.
- C. Protection: Protect newly painted surfaces from damage by vehicles during time required for paint to harden sufficiently to withstand traffic. During period of high wind, discontinue painting operations.

3.4 CLEANING

- A. Cleanup all debris caused by the work of this section, keeping the premises clean and neat at all times.

END OF SECTION

SECTION 331100

WATER CONDUIT INSTALLATION

PART 1 - GENERAL

1.1 SECTION INCLUDES:

- A. Work included in this Section, while not all inclusive but listed as a guide, shall include:
 - 1. Furnishing of all labor, tools, materials, equipment and incidentals required to complete the work.
 - 2. Layout of the work.
 - 3. Installation of water mains, fire hydrants, appurtenances, corrosion protection; and connection to existing system.
 - 4. Sterilization
 - 5. Testing
 - 6. Clean up

1.2 RELATED SECTIONS:

- A. Coordinate the work of this Section with the Work of other Sections as required to properly execute the Work and as necessary to maintain satisfactory progress of the Work of other Sections. Other Sections containing related work include but are not limited to the following:
 - 1. Excavation and Backfill for Conduits - Section 31 23 34

1.3 REFERENCES:

Meet requirements and recommendations of applicable portions of the Standard listed.

- A. American Society for Testing and Materials.
 - 1. ASTM D1784 - Rigid Poly (Vinyl Chloride) (PVC) compounds and Chlorinated Poly (Vinyl Chloride) (PVC) Compounds.
 - 2. ASTM D1785 - Poly (Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80 and 120.
 - 3. ASTM D2241 - Poly (Vinyl Chloride) (PVC) Pressure Rated Pipe (SDR series).
 - 4. ASTM D2466 - Poly (Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40.
- B. American Water Works Association (AWWA):
 - 1. AWWA C105 - Polyethylene Encasement for Ductile Iron Piping for Water and Other Liquids.
 - 2. AWWA C110 - Ductile-Iron and Gray-Iron Fittings, 3 Inches through 48 inches, for Water and Other Liquids.
 - 3. AWWA C151 - Ductile Iron Pipe, Centrifugally Cast in Metal Molds or Sand-Lined Molds, for Water or Other Liquids.
 - 4. AWWA C153 - Ductile Iron Compact Fittings, 3 inches through 16 inches, for Water and Other Liquids.
 - 5. AWWA C502 - Dry-Barrel Fire Hydrants.
 - 6. AWWA C509 - Resilient Seated Gate Valves, for Water and Sewerage Systems.
 - 7. AWWA C550 - Protective Epoxy Interior Coatings for Valves and Hydrants.
 - 8. AWWA C900 - Polyvinyl Chloride (PVC) Pressure Pipe, 4 in. Through 12 in., for Water.
- C. Texas Natural Resource Conservation Commission Rules & Regulations for Public Water Systems, March 1993.

1. Chapter 290.41 Water Sources.
2. Chapter 290.44 Water Distribution

- D. Texas Department of Public Transportation Standard Specifications for Construction of Highways, Streets, and Bridges, 2014, TxDOT.

PART 2 - PRODUCTS

2.1 DUCTILE-IRON PRESSURE PIPE AND FITTINGS:

- A. General. Ductile-iron pressure pipe 3" in diameter and larger shall conform to the current American National Standard for Ductile-Iron Pipe Centrifugally Cast in Metal Molds or Sand-Lined Molds for Water or Other Liquids, AWWA Standard C151 (ANSI A21.51).
- B. Design Requirements. The ductile-iron shall conform in all respects to the specifications for Ductile Iron Castings, ASTM Designation A 536, except the grade shall be as follows unless specified otherwise in the special provisions or in the plans:
- C. Pipe class shall be as shown on the plans.
6" through 12" shall be thickness Class 50. For larger diameters or deeper cover, special design shall be provided.
- D. Joints. All ductile-iron pressure pipe shall be furnished with one of the following types of joints and as described in the proposal or bid request:

<u>Type Joint</u>	<u>AWWA Standard</u>
Push-on	AWWA C111
Mechanical Joint	AWWA C111
Flanged Ends	AWWA C110

Bolts and nuts for mechanical joints or flanged ends (if used underground) shall be of a high-strength low-alloy corrosion-resistant steel and shall conform to High Strength Bolts for Standard Steel Joints, ASTM Designation A 325 (Type 3). All screwed flanges shall be ductile iron.

- E. Coating and Lining. All ductile-iron pipe shall be cement-mortar lined inside in accordance with AWWA Standard C104 (ANSI A21.4).
- F. Fittings. Fittings shall be of ductile iron and shall conform to the current American National Standard for Gray-Iron and Ductile-Iron Fittings, 3 In. through 48 In., for water and Other Liquids, AWWA Standard C110 (ANSI A21.10) or American National Standard for Ductile Iron Compact Fittings, 3 In. through 12 In. for Water and Other Liquids, AWWA Standard C153 (ANSI A21.53), unless otherwise specified in the proposal, special specification or in the plans. All Fittings shall be rated for a minimum of 250 psi working pressure.
- G. Wrapping. Buried pipe and fittings shall be wrapped with 8 mil. polyethylene encasement, AWWA C105.
- H. Underwriter's Approval. Ductile-iron pipe shall be approved by the Underwriters' Laboratories, Inc., and shall be accepted by the State Fire Insurance Commission for use in water distribution systems without penalty. All pipe and fittings shall be new.
- I. Tests. All ductile-iron pipe and fittings shall be tested in accordance with the applicable

provisions of the specifications relating thereto and the class, weight, and casting period shall be shown on each pipe.

- J. Rejection. Ductile-iron and fittings may be rejected for failure to meet all of the requirements of this specification.

2.2 POLYVINYL CHLORIDE (PVC) WATER PIPES:

- A. General.
Un-plasticized polyvinyl chloride (PVC) water pipe shall meet the requirements of AWWA Standard for Polyvinyl Chloride Pressure Pipe, 4 in. through 12 in., for Water AWWA Standard C900, with cast-iron outside dimensions. Laying lengths shall be 20' ± 1".
- B. Thickness Class.
PVC water pipe shall meet the dimension ratios (DR's) and physical dimensions as shown in the following table. The pressure classification refers to the maximum hydrostatic pressure to which the pipe shall be subject in normal operations.

PVC WATER PIPE DIMENSIONS

Nominal Size	O.D.*	Class 200 (SDR14) Min. Wall Thickness	Class150 (SDR18) Min. Wall Thickness
<u>Inches</u>	<u>Inches</u>	<u>Inches</u>	<u>Inches</u>
4	4.800	0.343	.267
6	6.900	0.493	0.383
8	9.050	0.646	0.503
10	11.100	0.793	0.617
12	13.200	0.943	0.733

*Cast iron pipe O.D. dimensions

- C. For sizes 3/4 in. thru 2½ in., pipe shall conform to ASTM D 2411, class 200, solvent weld. Solvent welded sockets shall be schedule 40.
- D. Joints.
PVC water pipe shall be furnished with gasketed joints. Lubricant used for pipe and fittings assembly shall be nontoxic and shall have no detrimental effect to either gasket or pipe.
- E. Fittings.
Fittings for PVC water pipe shall conform to American National Standard for Gray-Iron and Ductile-Iron Fittings, 3 in. through 48 in., For Water and Other Liquids, AWWA Standard C110 (ANSI A21.10), unless otherwise specified in the proposal, special specifications or on the other plans.

Fittings joints shall be mechanical joints. Bolts and nuts for mechanical joints shall be of high-strength, corrosion-resistant, low-alloy steel and shall conform to ASTM Designation A 325 (Type 3).
- F. Approvals.
PVC water pipe shall be approved by the Underwriters' Laboratories and shall be accepted by the State Fire Insurance Commission for use in water distribution systems in cities and towns of Texas. PVC water pipe shall also bear the seal of approval (or "NSF" mark) of the National

Sanitation Foundation testing Laboratory for potable water pipe.

- G. Rejection.
PVC water pipe may be rejected for failure to meet all of the requirements of this specification.
- H. Copper Tubing.
Copper tubing shall conform to ASTM B88 Type L, drawn and tempered.
- I. Solvent Cement.
Solvent Cement shall conform to ASTM D2564 for PVC pipe and fittings.
- J. Valves. (For sizes 3/4 in. thru 2½ in.)
 - 1. Acceptable Manufacturers.
 - a. Rain Bird Sprinkler Mfg. Corp
 - b. The Toro Company
 - c. Spears (Ball Valves)
 - d. Wilkins (Backflow Preventers)

2.3 GATE VALVES:

- A. General. All gate valves 3" through (121.9cm) shall conform to the AWWA Standard for Gate Valves--3 In. through 48 In. NPS--for Water and Sewage Systems, AWWA Standard C509. All gate valves shall be iron body, bronze mounted, double disc, parallel seat, non-rising stem, internal wedging type. Valves must embody the best workmanship and finish. Valve design shall effect minimum torque designs effectively reducing friction and drag through thrust collar design and trackage for gates.

2.4 VALVE BOXES:

Shall be constructed of cast iron and shall be a two piece adjustable sliding type. The cover shall have "W" or "water" cast in the top. Valve boxes shall be the standard catalog products of a reputable manufacturer.

2.5 FIRE HYDRANTS:

- A. General: Fire shall conform to the City of Wichita Falls standard details and specifications.

2.6 DETECTOR TAPE FOR UNDERGROUND FIRE PROTECTION PIPING

- A. Detector tape for identification of on-site fire protection main locations shall be manufactured by Allen Systems, Inc., Wheaton, IL 60187, or approved equal. Detector tape shall consist of a solid aluminum foil core running in the full length and width of the tape and encased in a protective, high visibility, color-coded inert plastic jacket. The detector tape shall conform to the following:
 - 1. Plastic jacket shall be impervious to alkalis, acids, and other chemicals in the soil.
 - 2. Foil core shall have a minimum thickness of 0.35mils.
 - 3. Overall thickness of the tape shall be 5.5mils, minimum.
 - 4. Tensile strength shall be 5,000psi, minimum.
 - 5. Tape width shall be three(3) inch, minimum.
 - 6. Color of tape shall be "Safety Precaution Blue"
 - 7. Tape above fire protection system piping shall be read "Caution Buried Fire Protection System Water Line Below"

- B. Installation of tape shall be twenty-four(24) inches above the pipe.

2.7 CONCRETE FOR THRUST BLOCKING:

- A. Concrete shall be in accordance with Section 03 30 00 "Cast-in-Place Concrete", compressive strength 2500 psi at 28 days.

PART 3 - EXECUTION

3.1 EARTHWORK: Refer to Section 31 20 00

3.2 BEDDING: Pipe shall be bedded as shown on the plans.

3.3 EXCAVATION AND BACKFILL FOR CONDUITS: Refer to Section 31 23 34

A. General.

1. Pipe Handling: All pipe, fittings and specials shall be handled in such a manner as not to damage the material. All dirt and trash shall be removed from the pipe prior to installation. No hooks shall be permitted. When it becomes necessary to deflect the pipe to avoid obstructions, the deflection of each joint must be within the limits provided by the manufacturer. The pipe is to be kept clean during the laying operation and free of all dirt and trash. At the close of each operating day, the open end of the pipe is to be effectively sealed against the entrance of all objects and especially water.
2. Stringing of Pipe: Stringing of pipe in advance of the laying operation shall be restricted to one week's laying and shall be done in such a manner as to create no hazard to nor interference with traffic. Ready access shall be provided to all streets, alleys and driveways. The pipe shall be protected with barricades and warning signs at all times. Any damage to the pipe shall be corrected at the expense of the Contractor.
3. Laying Underground Conduit Pipe: Previous to being lowered into the trench, each pipe shall be carefully inspected; and those not meeting specifications shall be rejected and either destroyed or removed from the job. All lumps or excrescences on the ends of conduit shall be removed before it is lowered into the trench. The pipe and specials shall be so laid in the trench that after the project is completed the interior surface shall conform accurately to the grade and alignment indicated on the plans. Bell holes shall be excavated and all pipe shall be carefully adjusted to fit snugly in cradling or bedding so that the entire length bears on cradling or bedding material with no wedging or blocking to hold up the bell. All pipe shall be laid in the dry, regardless of the type of joint used. Pipes shall be laid with the bell or groove end up grade unless otherwise approved by the engineer and shall be laid with the bell or collar away from the last section placed. Before laying the pipe, the interior of the joints shall be carefully bored smooth and clean and the annular space shall be kept free from dirt, stones or water. Pipe shall be installed and joints made up in complete conformance with the instructions and recommendations regarding proper installation and assembly furnished by the manufacturer. Proper facilities shall be provided for hoisting and lowering the section of the pipe into the trench without disturbing the prepared foundation and the sides of the trench. All pipe shall be so laid that the contact in the joint between two lengths of pipe shall be uniform throughout the circumference of the joint. Where curves in the alignment are indicated on the drawings, standard pipe (short sections of pipe or bevels) shall be used with the outside edge of the joint pulled away from the seat to make a smooth curve. When work is suspended on the line for any reason, the end of the line shall be properly closed with an effective watertight seal or plug manufactured for this purpose.
4. Existing Utilities. Pipe capable of supporting its weight approximately at right angles to the ditch shall not require additional support, unless shown on the plans, other than the

exercise of care in placing new conduit under same and in placing backfill, except when the span is excessive. Existing utilities shall be replaced with cast iron or any suitable piping to convey the contents, supported with concrete or a concrete utility support per details on the plans. After the new utility is laid, the backfill to the base of the concrete support shall be stabilized by the use of cement-stabilized soil. Pipes parallel to and in the edge of cut, shall be supported or rerouted if so indicated on the plans. Utilities parallel to and in edge of cut shall be adequately protected without additional compensation except as set out in the contract and proposal.

3.4 WATER MAIN INSTALLATION:

- A. Description. This work shall include the installation and construction, complete in place, of pipe conduits and fittings as specified herein and in conformity with the lines, grades, dimensions, materials and designs shown on the plans.
- B. Materials: The pipe shall be of the kind and strength shown on the plans and provided in the proposal and contract. Materials for corrosion protection of water conduits and appurtenances shall be of the type as may be called for on the plans or in the special specifications. Any pipe, fitting, solder or flux which is used in the installation or repair of any public water system must be lead-free. For purposes of this section, "lead-free" means solders and flux containing not more than 0.2 percent lead, and pipes and pipe fittings containing not more than 8.0 percent lead.
- C. Laying Water Conduit: All pipe shall be so laid that the contact in the joint between two lengths of pipe shall be uniform throughout the circumference of the joint. Where curves in the alignment are indicated on the drawings, and the curves are flat, standard pipe shall be used with the outside edge of the joint pulled away from the seat to make a smooth curve. Deflection of the joint to form curves shall not exceed the limits of Table 2, AWWA C-600. Where curves are sharp, short sections of pipe, bevels or bends shall be used and blocked. When pipe is cut by the Contractor to insert a valve or fitting, the bell and remaining section may be laid beyond the valve or fitting.
- D. Pipe Joints: All joints in pipe conduits shall be thoroughly cleaned at the time the joint is made.
- E. Rubber Gasket Joints: Rubber gaskets shall conform to the applicable specifications under which the pipe is supplied. Loose gaskets shall be protected from sunlight, contamination and contact with gasoline or fuels.

Rubber gasket joints for water mains consist of our general types:

- 1. Push-on type used for gray or ductile iron, steel and plastic pipe.
- 2. Mechanical type used for gray or ductile iron and fittings for asbestos-cement pipe.
- 3. Rubber and steel joint ring type used for steel cylinder type, reinforced concrete pipe.
- 4. Double rubber gasket couplings used for pressure pipe. Each type, except mechanical, requires the use of a lubricant to facilitate assembly. The lubricant shall be nontoxic, shall not support the growth of bacteria and shall have no deteriorating effects on the gasket. The lubricant shall not impart taste or odor. Care should be taken not to over-use the lubricant since it would then require excess effort to disinfect.

3.5 FIRE HYDRANTS INSTALLATION:

- A. General. Fire hydrants shall be installed as shown on the appurtenance sheets or as directed by the Owner.

- B. Installation. The hydrant shall set truly vertical and be securely braced and blocked on well-compacted or undisturbed soil surrounded by clean gravel or stone (min. of 7 CF) to permit free draining of the hydrant, with the large steam nozzle facing the nearest curb.

3.6 PURGING AND STERILIZATION OF WATER MAINS:

- A. General. Before any newly constructed water main shall be permitted to be placed into service, it shall be purged and tested; or purged, sterilized and tested until the bacterial count within the main meets the Texas Natural Resource Conservation Commission standards.
- B. Procedure. When the entire pipeline or selected sections have been completed, the line or section shall be disinfected according to the following procedures:
 - 1. Pre-sterilization. For convenience in certain locations chlorinated lime (HTH) be placed in the pipe as laid.
 - 2. Sterilization: Sterilization of the main shall be accomplished by the "continuous feed" method or the "slug" method described as follows: The free chlorine amounts shown are minimum. Higher rates may be required by the Engineer. Calcium hypochlorite granules shall be used as the source of chlorine.
 - 3. Continuous Feed Method. If the "continuous feed" method of chlorination is used, the following steps shall be taken:
 - a) Water from the existing distribution system or other approved source of supply shall be made to flow at a constant rate in the newly laid main.
 - b) At a point not more than 10 feet downstream from the beginning of the new main, water entering the new main shall receive a dose of chlorine. Chlorine application shall not cease until the entire main is filled with heavily chlorinated water.
 - c) The chlorinated water shall be retained in the main for at least 24 hours, during which time all valves and hydrants in the section treated shall be operated in order to disinfect the appurtenances. Every effort shall be made to prevent the flow of chlorinated water into mains in active service. At the end of the 24 hour period, the treated water in all portions of the main shall have a residual of at least 10 mg/l free chlorine.
 - d) The heavily chlorinated water shall then be flushed from the main and disposed of in a non-objectionable manner.
 - 4. Slug Method. If the "slug" method of chlorination is used, the following steps shall be taken:
 - a) Water from the existing distribution system or other approved source of supply shall be made to flow at a constant rate in the newly laid main.
 - b) At a point not more than 10 feet downstream from the beginning of the new main, water entering the main shall receive as dose of chlorine such that the water shall have not less than 100 mg/l free chlorine. The chlorine shall be applied continuously and for a sufficient time to develop a solid column or "slug" of chlorinated water that shall expose all interior surfaces to the "slug" for at least three hours.
 - c) As the chlorinated water flows past the fittings and valves, they shall be operated so as to disinfect the appurtenances. Every effort shall be made to prevent the flow of chlorinated water into mains in active service.
 - d) The heavily chlorinated water shall then be flushed from the main and disposed of in a non-objectionable manner.
 - e) Contractor Requirements. The Contractor shall be required, as a minimum, to prepare the main for sterilization and secure same after chlorination is complete. This should include the following:
 - f) In general, this shall consist of furnishing all equipment material and labor to satisfactorily prepare the main for the sterilization method selected. The Contractor

- shall also be required to provide adequate provisions for sampling.
- g) Unless otherwise specified in the special contract documents, the Contractor shall make all necessary taps into the pipe to accomplish chlorination of the new line.
 - h) After satisfactory completion of the sterilization operation, the Contractor shall remove surplus pipe at the chlorination and sampling points, plug the remaining pipe, backfill and complete all appurtenances work necessary to secure the main. Water samples from a suitable tap (not through a fire hydrant) for analysis by the Owner's laboratory, unless otherwise specified in the special provisions or in the plans shall be taken. If the tests show satisfactory quality of water, the line may be placed in service. Unsatisfactory test results shall require a repeat of the disinfection process through retests. The process shall not terminate until a satisfactory sample is obtained.

C. Hydrostatic Test:

- 1. General:
 - a. After pipe has been laid and initial backfill and blocking completed, and while joints and fittings are still exposed, test water lines hydrostatically to a test pressure of 150 psi. Achieve test pressure with compressed air.
 - b. Provide connections, pumps, gauges, meters and other equipment necessary for performance of tests.
- 2. Procedures:
 - a. Before applying specified pressure test, expel all air from the pipe by slowly filling each valved section of pipe with water. Provide taps necessary to expel trapped air.
 - b. Examine all piping, fittings, valves and joints during testing. Fully operate each valve in the test section during testing.
 - c. Test each section for a minimum of 2 hours when joints are exposed, 8 hours when joints are covered.
 - d. Test pipe lines in length between valves or plugs of not more than 1000 feet.
- 3. Maximum Allowable Leakage: Not exceed 12 gallons per inch of pipe diameter per mile of pipe per 24 hours, except replace joints regardless of total leakage quantity where visible leaks occur at exposed joints and where leaks are evident at the surface of joints that are covered.
- 4. Replace defective material with sound material, and repeat test procedures until approved is obtained.

3.7 CLEAN UP:

Upon the completion of the work covered in this Section, the Contractor shall clean up all work areas by removing all debris, surplus material, and equipment from the site. The ground surface shall be restored to its original condition as nearly as possible.

END OF SECTION

SECTION 333100

SANITARY SEWER LINE INSTALLATION

PART 1 - GENERAL

1.1 SECTION INCLUDES:

- A. Work included in this Section, while not all inclusive but listed as a guide, shall include:
 - 1. Furnishing of all labor, tools, equipment and incidentals to complete the work.
 - 2. Layout of the work.
 - 3. Fabrications, construction and installation of sanitary sewer pipe, laterals, manholes, cleanouts and fittings.
 - 4. Testing of completed sanitary sewer line, complete in place with laterals, manholes, cleanouts and fittings.
 - 5. Clean up.

1.2 RELATED SECTIONS:

- A. Coordinate the work of this Section with the Work of other Sections as required to properly execute the Work and as necessary to maintain satisfactory progress of the Work of other Sections. Other Sections containing related work include but are not limited to the following:
 - 1. Excavation and Backfill for Conduits - Section 312334
 - 2. Cast in Place Concrete - Section 033000

1.3 REFERENCES:

Meet requirements and recommendations of applicable portions of the Standard listed.

- A. ASTM A48 - Gray Iron Castings.
- B. ASTM C144 - Aggregate for Masonry Mortar.
- C. ASTM C270 - Mortar for Unit Masonry.
- D. ASTM C478 - Precast Reinforced Concrete Manhole Sections.
- E. ASTM D1248 - Polyethylene Plastics Molding and Extrusion Materials.
- F. ASTM D2241 - Poly Vinyl Chloride (PVC) Pressure Rated Pipe (SDR-Series).
- G. ASTM D3034 - Type PSM Poly (Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
- H. ASTM D3212 - Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals.
- I. ASTM F679 - Poly Vinyl Chloride (PVC), Large Diameter Plastic Gravity Sewer Pipe and Fittings.
- J. American Water Works Association (AWWA): C110 - American National Standard for Ductile-Iron and Gray-Iron Fittings, 3 inches through 48 inches, for Water and Other Liquids.
- K. AWWA C210 - Liquid Epoxy Coating Systems for Interior and Exterior of Steel Water Pipelines.
- L. North Central Texas Council of Governments Standard Specifications for Public Works Construction, Newest Edition, NCTCOG.
- M. Texas Department of Transportation Standard Specifications for Construction of Highways, Streets and Bridges, 2014, TxDOT.

PART 2 - PRODUCTS

2.1 Not Used

2.2 POLYVINYL CHLORIDE (PVC) SEWER PIPE & FITTINGS:

- A. General. PVC Sewer Pipe and Fittings shall conform to the current ASTM Designation D 3034, for 4 inch through 15 inch diameter and ASTM designation F 679 for greater than 15 inches diameter. Engineering evaluations of specific installation requirements is recommended.
- B. Pipe Sizes:
 - 1. For pipe sizes 4 through 15 inches in diameter. The pipe shall be Type PSM SDR-35 or SDR-26 as specified in ASTM Designation D 3034.
 - 2. For pipe sizes greater than 15 inch diameter. The pipe shall be Type T-1 and T-2B as specified in ASTM Designation F 679.
- C. Material. The pipe shall be made of PVC plastic having cell classification of 12454-B, 12454-C or 12364-C and fittings shall be made of PVC plastic having cell classifications of 12454-B, 12454-C or 13343-C as defined in ASTM Designation D 1784.
- D. Installation. Pipe produced to this specification shall be installed in accordance with ASTM Designation D 2321. The internal diameter of the installed barrels of the pipe must not be reduced by more than 5% of its base inside diameter when measured not less than 30 days following completion of installation.
- E. Testing. All pipes shall meet ASTM requirements for flattening, impact resistance, stiffness, joint tightness and extrusion quality as specified in ASTM Designation D 3034 and F 679.

2.3 PRECAST REINFORCED MANHOLE SECTIONS:

- A. General: These specifications cover precast reinforced concrete manhole section conforming to precast reinforced concrete manhole sections, ASTM Designation C 478 (C 478M), with the following additions:
 - 1. All pipes shall be machine made by process which shall provide for uniform placement of zero slump concrete in the form and compaction by mechanical devices which shall assure a dense concrete in the finished product, except that reducer cones may be wet-cast.
 - 2. Aggregate for the concrete shall comply with requirements of the current Concrete Aggregates, ASTM Designation C33, with the additional requirement that the aggregate shall have a minimum of 50 percent of calcium carbonate equivalent.
 - 3. Minimum wall thickness for the manhole risers shall be as listed under Wall "B" in the "Class Tables" of ASTM Designation C76 (C76M).
 - 4. Unless otherwise noted, manhole steps shall be furnished. If required, the steps shall be of the plastic or rubber coated steel type, with a clear cleat space of 10 in. (25.4 cm) minimum that shall support a concentrated load of 300 pounds (136.2 kg).
 - 5. Resilient connectors between reinforced concrete manhole structures and pipes shall meet the requirements of ASTM Designation C 923 or ASTM C 443. The resilient connector shall provide an airtight seal with eliminates infiltration and exfiltration.
- B. Joints: Joints shall conform to the joint specification ASTM Designation C 478 (C 478M).
- C. Coatings and lining: Coatings and liners called for in the specifications or indicated on the plans shall meet the requirements for Item 2.12.19. and shall be installed or applied by the manufacturer.
- D. Lifting devices: Manhole sections and cones may be furnished with lift lugs or lift holes. If lift lugs are provided, they shall be 180 degrees apart. Cast-in-place nuts must have clean threads capable of inserting lugs bolts. The lift lug design must be approved by the engineer. If lift holes are provided, they shall be plugged with a nonmetallic nonshrink grout approved by

the engineer. Field repairs shall not be allowed.

- E. Rejection: Manhole sections shall be subject to rejection on account of failure to conform to any of the requirements specified herein or have defects as follows:
1. Variations in any dimensions exceeding the permissible variation prescribed.
 2. A piece broken out of the bell or spigot or tongue or groove in such size that the water tightness of the joint should be impaired.
 3. Any shattering or flaking of concrete or other conditions indicating an improper concrete mix.
 4. Lack of uniformity in placement steel which might preclude all joints being typical of those tested.
 5. Cracks sufficient to impair the strength, durability or serviceability of the pipe.
 6. Joint sections with spalls, cracks, fractures, or other imperfections that could adversely affect the performance of the joint.

2.4 PREFORMED FLEXIBLE JOINT SEALANT:

- A. General: This specification covers a cold-applied preformed flexible butyl rubber or plastic sealing compound for sealing interior and/or exterior space on concrete sewer pipe and manhole sections, where infiltration or exfiltration is a factor in the design.
- B. Applicable standards: Except as modified or supplemented herein, all preformed flexible joint sealants shall conform to the applicable requirements of the following standard specifications, latest edition:

<u>Standard</u>	<u>Title</u>
SS - S - 210A	Federal Specification
M198	American Association for State Highway and Transportation Officials (AASHTO)

- C. Basis of acceptance: The acceptability of the preformed flexible joint sealant shall be determined by the results of physical tests, by inspection and by approval of its experience record.
- D. Material: The joint sealer shall be supplied in either extruded rope-form of suitable cross-sectional area or flat-tape form and shall be sized as recommended by the manufacturer and approved by the engineer. The joint sealer shall be protected by a suitable removable wrapper. The joint sealer shall not in any way depend on oxidation, evaporation, or any other chemical action for either its adhesive properties or cohesive strength. The joint sealer shall remain totally flexible without shrinking, hardening, or oxidizing regardless of the length of time it is exposed to the elements. The manufacturer shall furnish an affidavit attesting to the successful use of the product as a preformed flexible joint sealant on concrete pipe and manhole sections for a period of at least five years.
- E. Installation of joint sealant: All surfaces to be in contact with the joint sealant shall be thoroughly cleaned of dirt, sand, mud or other foreign matter. A primer shall be applied to all surfaces prior to installing the joint sealant in accordance with recommendations by the manufacturer. The protective paper wrapper shall remain on the joint sealant until immediately prior to placement of the pipe in the trench. After removal of the protective paper wrapper, the joint sealant shall be kept clean. Backfilling of pipe laid with this joint sealer may proceed after the joint has been inspected by the engineer.
- F. Compliance with specifications: If requested by the engineer, the contractor shall provide results of above specified tests to insure product compliance with these specifications or shall

supply an affidavit of compliance from the manufacturer insuring compliance with these specifications.

- G. Rejection: The preformed flexible joint sealant may be rejected for failure to meet any of the requirements of this specification.

2.5 CASTINGS:

- A. General. Steel and iron castings shall meet the requirements specified herein and on the plans and contract documents.
- B. Steel Castings.
1. High-Strength Steel Castings. High-strength steel castings shall meet the requirements of High-Strength Steel Castings for Structural Purposes, ASTM A 148, Grade as specified.
 2. Mid Steel Castings. Mild steel castings shall meet the requirements of High-Strength Steel Castings for Structural Purposes, ASTM A 14, Grade as specified.
- C. Iron Castings.
1. Material. Casting shall conform to the following ASTM Designations as applicable.

<u>MATERIAL</u>	<u>ASTM</u>	<u>GRADE</u>
Gray Iron Castings	A 48	Class 25 Minimum
Gray Iron Castings for Valves, Flanges, and Pipe Fittings	A126	Class B

2. Workmanship. All casting shall be true to pattern in form and dimension, free from pouring faults, sponginess, cracks, blow holes and other defects in positions affecting strength and value for the service intended. Angles shall be filleted, and arises shall be sharp and true.
 3. Coatings. Castings shall be coated with hot or cold applied tar as appropriate.
 4. Rockers and Bearing Plates. Rockers and bearing plates shall be cast iron of the type and grade indicated on the plans and contract documents.
- D. Rejection. Any metal or material specified in this section may be rejected for failure to meet all of the provisions of this specification or for any defect causing said metal or material to be unusable for its intended use.

PART 3 - EXECUTION

3.1 GENERAL:

- A. Pipe Handling. All pipe, fittings and specials shall be handled in such a manner as not to damage the material. All dirt and trash shall be removed from the pipe prior to installation. Hooks shall not be permitted. When it becomes necessary to deflect the pipe to avoid obstructions, the deflection of each joint must be within the limits provided by the manufacturer.
- B. Stringing of Pipe. Stringing of pipe in advance of the laying operation shall be restricted to one day laying and shall be done in such a manner as to create no hazard or interference with traffic. Ready access shall be provided to all streets, alleys and driveways. The pipe shall be protected with barricades and warning signs at all times. Any damage to the pipe shall be corrected at the expense of the contractor.

- C. Laying Underground Conduit Pipe. Previous to being lowered into the trench, each pipe shall be carefully inspected; and those not meeting specifications shall be rejected and either destroyed or removed from the job. All lumps on the ends of conduit shall be removed before it is lowered into the trench. The pipe and specials shall be so laid in the trench that after the project is completed the interior surface shall conform accurately to the grade and alignment indicated on the plans. Bell holes shall be excavated and all pipe shall be carefully adjusted to fit snugly in cradling or bedding so that the entire length bears on cradling or bedding material with no wedging or blocking to hold up the bell. All pipe shall be laid in the dry, regardless of the type of joint used.

Pipes shall be laid with the bell or groove end up grade and shall be laid with the bell or collar away from the last section placed.

Before laying the pipe, the interior of the joints shall be carefully bored smooth and clean and the annular space shall be kept free from dirt, stones or water. Pipe shall be installed and joints made up in complete conformance with the instructions and recommendations regarding proper installation and assembly furnished by the manufacturer. Proper facilities shall be provided for hoisting and lowering the section of the pipe into the trench without disturbing the prepared foundation and the sides of the trench. All pipe shall be so laid that the contact in the joint between two lengths of pipe shall be uniform throughout the circumference of the joint. Where curves in the alignment are indicated on the drawings, standard pipe (short sections of pipe or bevels) shall be used with the outside edge of the joint pulled away from the seat to make a smooth curve.

When work is suspended on the line for any reason, the end of the line shall be properly closed with an effective watertight seal or plug manufactured for this purpose.

- D. Existing Utilities. Pipe capable of supporting its weight approximately at right angles to the ditch shall not require additional support, other than the exercise of care in placing new conduit under same and in placing backfill, except when the span is excessive.

Pipes parallel to and in the edge of cut, shall be supported or rerouted if so indicated on the plans. Utilities parallel to and in edge of cut shall be adequately protected without additional compensation except as set fourth in the contract and proposal.

3.2 INSTALLATION:

- A. Sewer Lateral Connections. Sewer lateral lines shall be constructed as required and shown on the plans.
- B. Sanitary Sewer Joints. When specified in the special provisions or in the plans, a test tee shall be installed at the end of the service line, with the branch in a vertical position.
1. Rubber Gasket Joints. Rubber gaskets shall conform to applicable specifications under which the pipe is supplied. Loose gaskets shall be protected from sunlight, contamination and contact with gasoline or fuels. On pipe for which the gasket is not fixed in place by the manufacturer, the bell-and-spigot or tongue-and-groove shall be thoroughly cleaned by wire brushing and wiping until clean and dry. On pipe which does not require the rubber gasket to be cemented in place, the rubber gasket shall be placed in position on the spigot ring just prior to laying the pipe. The lower edge of the gasket shall be placed under the spigot in the seat and stretched evenly upward on each side to fit over the top of the spigot; and the rubber gasket shall fit snugly and not have uneven tensile stresses. After checking to be sure that the bell-and-spigot are

thoroughly clean, the inside surface of the bell shall be lubricated with a suitable solution (flax soap) to facilitate the telescoping of the joint. Petroleum lubrication shall not be permitted. The spigot end of the pipe shall be entered into the bell of the adjoining pipe and forced into position. Exceptional care shall be taken in making the field joint. Bumping of the pipe shall not be permitted. On small pipe, if the bottom of the trench is firm enough, a bar having a blade on the end may be pushed into the ground, then the bar may be used as a level to push the pipe home. However, if trench conditions are too unstable, or are in rock, it shall be necessary to use mechanical means to bring the pipe together positively. Each joint shall be partially backfilled or suitably blocked to prevent creeping. Unless otherwise specified in the special provisions or in the plans, for all sizes of concrete pipe larger than 24 inches (.6M) in diameter, the inside annular space provided for that purpose shall be completely filled with a plastic portland cement mortar (composed of 1 part cement to 2 1/2 parts sand); or preformed flexible joint sealant in rope form; or troweling type. Where the pipe has been corrosion protected, and an annular space is open, only the bottom half of the inside annular space shall be filled with mortar; and a ready-mix cold-pour compound shall be used in the upper half, as hereinbefore described, that is resistant to acid, alkalis, and gases and is compatible with rubber. The joint shall be finished smoothly and all surface materials removed.

2. Chemically Welded Joints. The joint materials shall conform to the applicable specifications under which the pipe is supplied. The joint shall be installed per recommendations of the manufacturer. The ditch embedment should be to grade, with the advance bell hole scooped out prior to laying so that the pipe shall be to grade as the joint is made.
3. Compression Joints. The joint materials shall conform to the applicable specifications under which the pipe is supplied. The bells and spigots must be thoroughly clean. Extreme care must be exercised to prevent damage to the joint. The spigot end shall be inserted into the bell and pushed home after a suitable lubricant, as recommended by the pipe manufacturer, is applied. Petroleum lubrication shall not be permitted. The ditch embedment should be to grade, with the advance bell hole scooped out prior to laying so that the pipe should be to grade as the joint is made.

3.3 TESTING AND INSPECTION:

In order to ascertain that the main shall perform the function for which it was designed and constructed, performance tests shall be routinely executed. Tests can be made by one of two methods. Infiltration or exfiltration tests may be made on sections as they are completed to assure that performance is satisfactory. Manholes shall be tested by infiltration or exfiltration. Tunneled, bored or jacked sections of all pipes shall be tested by exfiltration only. Testing shall be performed by the contractor in the presence of the owner's representative after all backfilling and compaction are complete. All sections between manholes or between a manhole and a dead end shall be tested separately. In the making of all tests, the contractor shall furnish the required equipment and labor. Tests may be repeated until each sewer individually meets the specifications as to quantity of allowable infiltration or exfiltration as set out below. All testing work shall be included in the bid price.

- A. Infiltration Test. The total seepage in infiltration of ground water as determined by test shall in no case exceed 50 gallons per inch of normal diameter of pipe per mile (0.2 cubic meters per centimeter of nominal diameter per kilometer) over a 24-hour period; and shall be the same regardless of piping material used. The allowable leakage of each manhole, or other structure, shall be as specified on the plans. An infiltration test or tests shall be made on all sections of the project where air testing could not be adequately performed and on each manhole individually before placing the system in service and before any connections are made to other sewers. If the quantity of the effluent into the sewer or sewers is in excess of the maximum

quantity as hereinafter specified, the joints shall be repaired or the sewer relayed, if necessary, or other remedial construction shall be performed by and at the expense of the contractor, in order to reduce the quantity of ground water infiltration to an amount within limits as specified. The test shall be made by utilizing ground water, if any, or flooding a section at a time. Observation from jetting is not acceptable.

1. Using Existing High Ground Water. Where the natural ground water, after well points are removed, is above the top of the pipe for a section, the flowing of water in the pipe and the rate of seepage and infiltration for the section so submerged can be measured.
 2. Flooding By Sections. Backfill shall be brought up to at least a foot (30cm) over the pipe on the section to be tested. More cover may be required on larger pipes to prevent the pipe from floating out of grade. Dams or dikes are placed tightly around pipe at either end and the ditch filled with water to an average depth of four feet (1.2M) over the pipe. Flow at the lower end is measured for the section so submerged. Dikes shall be placed around each manhole; and the area adjacent to the manhole shall be flooded to the top of the manhole and the flow into the manhole measured.
 3. Flushing or Jetting of Backfill. During jetting to settle the backfill, the flow at the lower manhole shall provide a control indication of possible infiltration which should be corrected.
- B. Exfiltration. A section of pipe below a manhole is bulkheaded at either end with a 6" (15cm) pipe inserted into lower bulkhead and by use of a 90-degree bend. The 6" (15cm) pipe is set in a vertical position. A 2" (5cm) vent pipe is inserted in lower end and extended upward four feet (1.2M). The 6" (15cm) pipe is filled with water, filling the sewer line until all air is forced out through the vent tube. When the water levels are level in the 2" (.5cm) and 6" (15cm) pipes, the drop in the 6" pipes (15cm) due to exfiltration over a specific time shall be measured and the loss of water due to exfiltration calculated. This amount shall be reduced by 25 percent to obtain equivalent infiltration over a specific time and the loss of water due to exfiltration calculated. Conditions encountered in construction may vary this procedure slightly, but essentially this method shall be used.

3.4 SEWER APPURTENANCES:

- A. Description. This section shall govern for the construction of all miscellaneous sanitary sewer structure such as junctions, transitions, special concrete manholes, creek crossings, river crossings and utility supports; and for the construction of appurtenances such as manholes, cleanouts, deep-cut connections, wyes, stoppers and bulkheads, fittings and such other miscellaneous structures or appurtenances which may be shown on the plans.
- B. Connections of pipe sewer to existing sewers or sewer appurtenances shall be as shown on the plans or as directed by the engineer. Connections shall be made to prevent the occurrence of bi-metallic corrosion or any other corrosion that can result by joining incompatible materials. The bottom of the existing structure shall be mortared or concreted if necessary, to eliminate any drainage pockets by the new connection, and in general accord with details for the new structure as shown on the plans. Where the sewer is connected into old structures which are to remain in service, any damage to the structure resulting from the work of making the connection shall be restored by the contractor to the satisfaction of the engineer.
- C. Creek Crossings. Creek crossings using pier construction shall be made in accordance with the details shown on the plans.
- D. Laterals. Laterals shall be located as indicated on the plans or as directed by the engineer. Details of construction shall be as shown on the plans.

The lateral shall be of the same pipe material as the main.

Laterals to property shall be marked under the ground surface by placing green metallic plastic tape with the word "SEWER" printed on the tape at regular intervals. One end of the tape shall be placed at the end of the lateral; the other end shall be just under the ground surface projecting at least one foot (30 cm) back of the proposed or existing curb.

3.5 MANHOLES:

Sanitary sewer manholes shall be fabricated in different configurations to meet with specific needs required in the sanitary sewer system.

- A. General. Unless otherwise specified, manholes shall have an inside diameter of four feet (1.2 M). Manholes constructed in advance of paving projects shall be constructed with the top of the concrete portion of the manhole 23 inches below the final finished grade. The ring and cover shall be placed on a built-up section of brick and mortar. Manholes shall be watertight. The type and size, if other than four feet inside diameter, shall be shown on the plans for each location.
 - 1. Cast-In-Place. The base, wall and cone shall be Type 1 concrete poured and vibrated to assure a monolithic structure. Construction joints with waterstops must be approved by the engineer.
 - 2. Precast. The base shall be 3600 psi concrete. The precast sections shall be of the bell-and-spigot design incorporating tapped O-ring gaskets, or tongue-and-groove with premolded joint sealing compound. Lift holes may be used but must be filled with nonshrink grout after the section is in place. Combination of joints shall be selected to minimize the number of individual segments. Long joints shall be used in the bottom and shorter segments utilized for top adjustments.
 - 3. Drop. Drop manholes shall be constructed in accordance with details on the plans. The construction is the same as that for a cast-in-place manhole with special provisions incorporated to provide drop piping.
 - 4. Steps, Rings and Covers. Installation of steps, rings and covers shall be shown on the plans. Manhole steps shall only be used if specified on the plans or in the contract document. Where manhole steps are not used, the contractor shall furnish a ladder for access for inspection. Manhole covers shall be detailed on the plans.
- B. Special Requirements.
 - 1.
 - (a) Flow Channel. When specified in the special provisions or in the plans, the sanitary sewer pipe shall be laid through the manhole stations where possible, prior to concreting, so that the full depth of the pipe is embedded in concrete to form the flow channel.
 - (b) Flow Channel Alternate. Where pipe cannot be used through the manhole due to intersecting flow channels, flow channels equivalent to the top of pipe shall be formed with concrete then trowel to a smooth, even finish with a steel trowel.
 - (c) Manhole Bottom. The manhole bottom from wall line to flow channels shall be sloped and troweled smooth on a grade of one inch per foot (2.5cm per 30cm) with a liberal radius applied at flow channel intercepts.

2. First Full Joint. The first full joint of pipe extending from the manhole shall be cradled in concrete to the pipe joint in the same pour as that for the manhole base slab as shown on the plans.
3. Pick Slots. For all manhole installations in the streets, the manhole covers shall be provided with pick slots in lieu of pick holes. If the rim elevation above surrounding ground is prohibited by land use or other reasons, a cover with a pick slot as described for use in street locations shall be used.

3.6 CLEANOUTS:

- A. Construction Methods. Cleanouts shall be constructed in accordance with the plans and these specifications for materials and construction.

END OF SECTION

SECTION 334100

STORM SEWER LINE INSTALLATION

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Work included in this Section, while not all inclusive but listed as a guide, shall include:
 - 1. Furnishings of all labor, tools, equipment and incidentals to complete work.
 - 2. Layout of the work.
 - 3. Installation of atrium drains, culverts, and appurtenances including head walls.
 - 4. Trench safety.
 - 5. Testing.
 - 6. Clean up.

1.2 RELATED SECTIONS

- A. Coordinate the work in this Section with the Work of other Sections as required to properly execute the Work and as necessary to maintain satisfactory progress of the Work of other Sections. Other Sections containing related work include but are not limited to the following:
 - 1. Excavation and Backfill for Conduits - Section 312334

1.3 REFERENCES

Meet requirements and recommendations of applicable portions of the Standard listed.

- A. ASTM C76 - Reinforced Concrete Storm Drain and Sewer Pipe.
- B. ASTM D1784 - Rigid Polyvinyl (PVC) Compounds and Chlorinated Polyvinyl (CPVC) Compounds.
- C. ASTM D3350 - Polyethylene Plastics Pipe and Fittings
- D. ASTM D1785 - Plastic Pipe, Schedules 40, 80 and 120.
- E. Texas Department of Transportation Standard Specifications for Construction of Highways, Streets and Bridges, 2014 TxDOT.

1.4 SUBMITTALS

- A. General: Submit the following in accordance with Conditions of Contract and Section 013300.
- B. Pipe Certifications: Manufacturers certification that pipe or precast units meets the requirement of these specifications.

1.5 PROJECT CONDITIONS

- A. Verify that storm sewerage system piping may be installed in compliance with original design and referenced standards.
- B. Locate existing storm sewerage piping and structures that are to be abandoned and closed.

PART 2 - PRODUCTS

2.1 PIPE AND FITTINGS

- A. General. Provide pipe and pipe fitting materials compatible with each other and as indicate on the drawings. Where more than one type of materials or product is indicated, selection is installers option.
- B. PVC Sewer Pipe and Fittings for sizes 4 thru 15 inches in diameter are SDR26: ASTM D 3034, SDR 35, for solvent cement or elastomeric gasket joints.
 - 1. Solvent Cement: ASTM D 2564.
 - 2. Gasket: ASTM 477, elastomeric seal.
- C. PVC Sewer Pipe and Fittings for sizes greater than 15 inches in diameter: ASTM F 679, T-1A or T-1B wall thickness, bell and spigot, for elastomeric gasket joints.
- D. Reinforced Concrete Sewer Pipe and Fittings: ASTM C 76 of the class shown on the plans.
- E. HDEP Storm Sewer Pipe and Fittings: ASTM D 3350

2.2 MANHOLES

- A. Precast Concrete Manholes: ASTM C 478, precast reinforced concrete, of depth indicated with provision for rubber gasket joints.
 - 1. Base Section: 6-inch minimum thickness for floor slab and 4-inch minimum thickness for walls and base riser section, and having a separate base slab or base section with integral floor.
 - 2. Riser Sections: 4-inch minimum thickness, 48-inch diameter, and lengths to provide depth indicated.
 - 3. Top Section: Eccentric cone type, unless concentric cone or flat-slab-top type is indicated. Top of cone to match grade rings.
 - 4. Grade Rings: Provide 2 or 3 reinforced concrete rings, of 6 to 9 inches total thickness and match 24-inch diameter frame and cover.
 - 5. Gaskets: ASTM C 443, rubber.
 - 6. Steps: Cast into base, riser, and top sections sidewall at 12 to 16 inch intervals.
 - 7. Pipe Connectors: ASTM C 923, resilient, of size required, for each pipe connecting to base section.
 - 8. Channel and Bench: Concrete.
- B. Cast-in-Place Manholes: Reinforced concrete of dimensions and with appurtenances indicated.
 - 1. Bottom, Walls and Top: Reinforced concrete.
 - 2. Channel and Bench: Concrete.
 - 3. Steps: Cast into sidewall at 12 to 16-inch intervals.
- C. Manholes Steps: Wide enough for an adult to place both feet on one step and designed to prevent lateral slippage off the step. Material shall be steel-reinforced plastic.
- D. Manhole Frames and Covers: ASTM A 536, Grade 60-40-18, heavy duty, ductile iron, 24-inch inside diameter by 7 to 9-inch riser with 4-inch minimum width flange, and 26-inch diameter cover, indented top design, with lettering STORM SEWER cast into cover.

2.3 CATCH BASINS

- A. Precast Concrete Catch Basins: ASTM C 478 or ASTM C 858, precast reinforced concrete, of

depth indicated. Sections shall have provisions for rubber gasket joints. Base section slab shall have minimum thickness of 6 inches, riser sections shall have minimum thickness of 4 inches and be 48 inches inside diameter, and top section and grade rings shall match 24-inch frame and grate, unless otherwise indicated.

1. Base Section: Base riser section and separate and base slab, or base riser section with integral floor.
 2. Riser Sections: Sections shall be of lengths to provide depth indicated.
 3. Top Section: Flat slab type with opening to match grade rings.
 4. Grade Rings: Provide 2 or 3 reinforced concrete rings, of 6 to 9 inches total thickness.
 5. Gaskets: ASTM C 443, rubber.
 6. Step: Cast into riser sidewall at 12 to 16-inc intervals.
 7. Pipe connectors: ASTM C923, resilient, of size required, for each pipe connecting to base section.
 8. Channel and Bench: Concrete.
- B. Cast-in-Place Catch Basins: Reinforced concrete of dimensions and with appurtenances indicated.
1. Bottom, Walls and Top: Reinforced concrete.
 2. Channel and Bench: Concrete.

- C. Curb Inlets: Precast concrete, brick or other materials, of dimensions conforming to the plans.

2.4 JOINTING MATERIALS

Unless otherwise specified on the plans the Contractor shall have the option of making the joints using any of the materials described herein. For all jointing materials except mortar, the Contractor shall furnish by the Manufacturers Certificate of Compliance.

- A. Mortar: Mortar shall consist of one (1) part cement, two (2) parts sand and sufficient water to make a plastic mix.
- B. Cold Applied, Plastic Asphalt Sewer Joint Compound. This material shall consist of natural and/or processed asphalt base, suitable volatile solvents and inert filler. The consistency is to be such that the ends of the pipe can be coated with a layer of the compound up to one-half inch thick by means of a trowel. The joint compound shall cure to a firm, stiff plastic condition after application. The material shall be of a uniform mixture and any small separation occurring in the container shall be stirred to a uniform mix before use.

This material shall meet the following requirements when tested in accordance with Test Method Tex-5267-C:

Asphalt Base, 100% - % Volatiles -	
% Ash, % by weight.....	28-45
Volatiles, 212 F Evaporation, 24 h,	
% by weight.....	10-26
Mineral Matter, determined as Ash,	
% by weight.....	30-55
Consistency, Cone Penetration,	
150 q, 5 sec, 77F.....	150-275

- C. Rubber Gaskets: These gaskets shall conform to ASTM C361 or C443. The design of the joints and permissible variations in dimensions shall be in accordance with ASTM C443. The Contractor shall furnish by the Manufacturer's Certificate of Analysis
- D. Cold Applied Preformed Plastic Gaskets. Preformed plastic gaskets shall be suitable for

sealing joints of tongue and groove concrete pipe. The gasket sealing the joint shall be produced from blends of refined hydrocarbon resins and plasticizing compounds reinforced with inert mineral filler and shall contain no solvents, irritating fumes or obnoxious odors. The gasket joint sealer shall not depend on oxidizing, evaporating, or chemical action for its adhesive or cohesive strength, and shall be supplied in extruded rope-form of suitable cross section. The size of the plastic gasket joint sealer shall be in accordance with the manufacturer's recommendations and be of sufficient size to properly seal the joint. The plastic gasket joint sealer shall be so constructed as to provide evidence of proper installation either by means of "squeeze-out" of the gasket material on the inside or outside around the complete pipe joint circumference or by means of tabs, projections or other such indicators placed at established intervals around the circumference of the pipe joint. Plastic gasket joint sealers shall be Type 1 or Type 2. Type 1 gaskets shall meet the "squeeze-out" requirements and Type 2 gaskets shall meet the requirements for tabs, projections or other indicators. The gasket joint sealer shall be protected by a suitable wrapper designed that when removed, the jointing material maintains integrity.

The chemical composition of the gasket joint sealing compound for Type 1 and 2, as shipped, shall meet the following requirements:

<u>COMPOSITION TEST</u>	<u>METHOD</u>	<u>ANALYSIS</u>
Bitumen, Petroleum Plastic Content % by weight	ASTM D4	50-70
Ash-Inert Mineral Matter % by weight	Tex-526-C	30-50
Volatile Matter, 325 F, % by weight	Tex-506-C	2.0 max.

The gasket joint sealing compound when immersed for 30 days at ambient room temperature separately in five (5) percent solution of caustic potash; a five (5) percent solution of caustic potash; a five (5) percent solution of hydrochloric acid; a five (5) percent solution of sulfuric acid; and a saturated H-S solution, shall show no visible deterioration.

The physical properties of the gasket joint sealing compound as shipped shall meet the following requirements:

<u>PROPERTY REQUIREMENT</u>	<u>TEST METHOD</u>	<u>TYPE 1</u>	<u>TYPE 2</u>
Ductility @ 77 F (cm), min.	Tex-503-C	5.0	5.0
Softening Point °F	Tex-503-C	275	275
<u>Penetration:</u>			
32°F (300g) 60 sec., min.	Tex-502-C	--	65
77°F (150g) 5 sec.	Tex-502-C	50-120	50-120
115°F (150g) 5 sec., max.	Tex-502-C	--	150

- E. Construction Methods: The location of private driveway and side road pipe shall be constructed at locations shown on the plans. Reinforced concrete pipe culverts and sewers shall be constructed in accordance with the plans and requirements of this Item.
- F. Excavation. All excavation shall be in accordance with the requirements of Section 02316, Excavation and Backfill for Conduits, except where tunneling or jacking methods are shown on the plans.

2.5 OUTFALLS

- A. General: Construct of cast-in-place reinforced concrete pipe, head wall, apron, tapered sides, and with rip rap, as indicated.

2.6 CONCRETE AND REINFORCEMENT

- A. Concrete: Portland cement mix, 3,000 psi., ASTM C94, Ready-Mixed concrete.
 - 1. Cement: ASTM C 150, Type II.
 - 2. Fine Aggregate: ASTM C 33, sand.
 - 3. Coarse Aggregate: ASTM C 33, crushed gravel.
 - 4. Water: potable.
- B. Reinforcement : Steel conforming to the following:
 - 1. Fabric: ASTM A 185, welded wire fabric, plain.
 - 2. Reinforcement Bars: ASTM A 615, Grade 60, deformed.

PART 3 - EXECUTION

3.1 PREPARATION OF FOUNDATION FOR BURIED STORM SEWERAGE SYSTEMS

- A. Grade trench bottom to provide a smooth, firm, stable and rock-free foundation, throughout the length of the pipe.
- B. Remove unstable, soft and unsuitable materials at the surface upon which pipes are to be laid, and backfill with bedding material to indicated level.
- C. Provide embedment as shown on the plans.
- D. Shape bottom of trench to fit bottom of pipe. Fill unevenness with tamped bedding material. Dig bell holes at each pipe joint to relieve the bells of all loads and to ensure continuous bearing of the pipe barrel on the foundation.

3.2 GENERAL INSTALLATION

- A. General Locations and Arrangements: Drawings (plans and details) indicate the general location and arrangement of the underground storm sewerage system piping. Location and arrangement of piping layout take into account many design considerations, install the piping as indicated, to the extent practical.
- B. Install piping beginning at low point of systems, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves and couplings in accordance with manufacturers recommendations for use of lubricants, cements and other installation requirements. Maintain swab or drag in line and pull past each joint as it is completed.
- C. Use manholes or catch basins for changes in direction, except where a fitting is indicated. Use fittings for branch connections, except where direct tap into existing sewer is indicated.
- D. Use proper size increasers, reducers, and couplings, where different size or material of pipes and fittings are connected. Reduction of the size of piping in the direction of flow is prohibited.
- E. Extend storm sewerage system piping to connect to building storm drains, of sizes and in locations indicated.
- F. Tunneling: Install pipe under streets or other obstructions that cannot be disturbed by tunneling,

jacking or a combination of both.

3.3 PIPE AND TUBE JOINT CONSTRUCTION AND INSTALLATION

- A. Join and install PVC pipe as follows:
 - 1. Solvent cement joint pipe and fittings, joining with solvent cement in accordance with ASTM D 2855 and ASTM F 402.
 - 2. Pipe and gasketed fittings, joining with elastomeric seals in accordance with ASTM D 3212.
 - 3. Installation in accordance with ASTM D 2321.
- B. Join concrete pipe and fittings with rubber gaskets in accordance with ASTM C 443, and install piping in accordance with applicable provisions of ACPA Concrete Pipe Installation Manual.
- C. Join different types of pipe with standard manufactured couplings and fittings intended for that purpose.

3.4 MANHOLES

- A. General: Install manholes complete with accessories as indicated. Form continuous concrete or split pipe section channel and benches between inlets and outlets. Set tops of frames and covers flush with finish surface where manholes occur in pavements. Elsewhere, set tops 3 inches above finish surface, unless otherwise indicated.
- B. Place precast concrete manhole sections as indicated and install in accordance with ASTM C 891.
- C. Construct cast-in-place manholes as indicated.
- D. Provide rubber joint gasket complying with ASTM C 443 at joint of sections.
- E. Apply bituminous mastic coating at joints of sections.

3.5 CATCH BASINS

- A. Construct catch basins to sizes and shapes indicated.
- B. Set frames and grates to elevations indicated.

3.6 OUTFALLS

- A. Construct outfalls of the type and material as indicated on the plans.

3.7 TAP CONNECTIONS

- A. Make connections to existing piping and underground structures so that finished work will conform as nearly as practicable to the requirement specified for new work.
- B. Use commercially manufactured wye fittings for piping branch connections. Remove section of existing pipe, install wye fitting into existing piping, and encase entire wye fitting plus 6-inch overlap, with not less than 6 inches of 3000-psi 28 day compressive strength concrete.
- C. Make branch connections from side into existing 24-inch or larger piping or to underground structures by cutting opening into existing unit sufficiently large to allow 3 inches of concrete to be packed around entering connection. Cut end of connection pipe passing through pipe or

structure wall to conform to shape of and be flush with inside wall, unless otherwise indicated. On outside of pipe or structure wall, encase entering connection in 6 inches of concrete for minimum length of 12 inches to provide additional support of collar from connection to undisturbed ground.

1. Provide concrete that will attain minimum 28-day compressive strength of 3000 psi, unless otherwise indicated.
2. Use epoxy bonding compound as interface between new and existing concrete and piping materials.

- D. Protect existing piping and structures to prevent concrete or debris from entering while making tap connections. Remove debris, concrete, or other extraneous materials that may accumulate.

3.8 CLOSING ABANDONED STORM, SEWERAGE SYSTEM

- A. Abandoned Piping: Close open ends of abandoned underground piping that is indicated to remain in place. Provide sufficiently strong closures to withstand hydrostatic or earth pressure that may result after ends of abandoned utilities have been closed.

1. Close open ends of concrete or masonry utilities with not less than 8-inch-thick brick masonry bulkheads.
2. Close open ends of piping with threaded metal caps, plastic plugs, or other acceptable methods suitable for size and type of material being closed. Wood plugs are not acceptable.

- B. Abandoned Structures: Remove structure and close open ends of the remaining piping or remove top of structure down to not less than 3 feet below final grade; fill structure with stone, rubble, gravel or compacted dirt, to within 1 foot of top of structure remaining and fill with concrete.

3.9 FIELD QUALITY CONTROL

- A. Cleaning: Clear interior of piping and structures of dirt and other superfluous material as work progresses. Maintain swab or drag in piping and pull past each joint as it is completed.

1. In large, accessible piping, brushes and brooms may be used for cleaning.
2. Place plugs in ends of uncompleted pipe at end of day or whenever work stops.
3. Flush piping between manholes, if required by local authority, to remove collected debris.

- B. Interior Inspection: Inspect piping to determine whether line displacement or other damage has occurred.

1. Make inspections after pipe between manholes and manhole locations has been installed and approximately 2 feet of backfill is in place, and again at completion of project.
2. If inspection indicates poor alignment, debris, displaced pipe, infiltration or other defects, correct such defects and inspect.

END OF SECTION
